DICTIONARY

OF

MUSIC AND MUSICIANS

M

MAAS, Joseph, born Jan. 30, 1847, at Dartford; began his career as a chorister at Rochester Cathedral, and was taught singing by J. L. Hopkins, the organist, and later by Mme. Bodda-Pyne. He was for some time a clerk in Chatham dockyard, but went to Milan in 1869, and studied under San Giovanni. He made his début at one of Leslie's concerts, Feb. 26, 1871, and sang 'Annabell Lee' in the place of Sims Reeves, with great success, 'inasmuch as he was not only compelled by unanimous desire to repeat it, but there was a strong attempt to induce him to sing it a third time, which, however, he had the good sense to resist.' He played the hero in 'Babil and Bijou' at Covent Garden, August 29, 1872; he then went to America, and played in Miss Kellogg's English Opera Company. He reappeared in England at the Adelphi under Carl Rosa, as Gontran on the production of Brüll's 'Golden Cross,' March 2, 1878, and was engaged by Rosa for three years as his principal tenor both at Her Majesty's and in the provinces. His principal parts were Rienzi on its production at Her Majesty's, Jan. 27, 1879; Raoul, Feb. 12, 1879; Wilhelm Meister on the production in English of 'Mignon,' Jan. 12, 1880; Radamès on the production in English of 'Aïda,' Feb. 19, 1880; also Faust, Thaddeus, Don César, etc. He played at Her Majesty's in Italian in 1880, and at Covent Garden (as Lohengrin) in 1883. He played under Rosa at Drury Lane in 1883-1885, his new parts being Edgar of Ravenswood, April 19, 1884, and the Chevalier des Grieux on production in London of Massenet's 'Manon,' May 7, 1885. He was very popular on the stage, on account of his very fine voice, which was said to resemble Giuglini's in character, rather than for his dramatic gift, since he was a very indifferent actor. He was equally popular in the concert-room, where he appeared first at the Sacred Harmonic, in the 'Messiah,' April 4, 1879, and at the Philharmonic, May 21, 1879. He sang at all the principal concerts, and at the various Handel and provincial festivals. He sang also in Paris at Pasdeloup's concerts, April 6, 1884, and at Brussels at the Bach and Handel Festival of 1885. His last important engagement was at the Birmingham Festival of 1885, where he sang in Dvořák's 'Spectre's Bride,' August 27, and Stanford's 'Three Holy Children,' August 28, on the production of those works. At the Norwich Festival of the previous year he had introduced 'Apollo's Invocation,' a scena written for him by Massenet. He died in London, Jan. 16, 1886, from a complication of disorders, rheumatic fever, bronchitis, and congestion of the lungs, brought on from a cold taken while fishing. He was buried in West Hampstead Cemetery. Maas's 'greatest triumphs were gained in the concert-room rather than on the stage. For several years he has stood in the very first rank of tenor singers, not only by reason of his magnificent voice, but of his thoroughly finished and artistic style. . . . By his amiable personal character the deceased artist won the esteem and affection of all who had the privilege of his friendship.'[1] A 'Maas Memorial Prize' was established at the Royal Academy of Music. A. C.

MAATSCHAPPIJ TOT BEVORDERING DER TOONKUNST. See Vereeniging Voor Noord-Nederlands Muziekgeschiedenis.

MABELLINI, Teodulo, born at Pistoia, April 2, 1817, was a pupil of the Istituto Reale Musicale in Florence, and when he was only nineteen years of age, his opera, 'Matilda di Toledo,' was given at Florence (1836), with the result that the Grand Duke Leopold II. gave the composer funds to study under Mercadante at Novara. His second opera, 'Rolla,' was given at Turin in 1840 with great success. Mabellini settled in Florence in 1843, becoming conductor of the Società Filarmonica, and eventually court maestro di cappella and conductor at the Pergola (from 1848); from 1859 to 1887 he was professor in his old school, and his death took place in Florence, March 10, 1897. His other operas were: 'Ginevra degli Almieri' (Turin, 1841), 'Il Conte di Savagna' (Florence, 1843), 'I Veneziani a Constantinopoli' (Rome, 1844), 'Maria di Francia' (Florence, 1846), 'Il Venturiero' (with L. Giordani, Leghorn, 1851), 'Baldassare' (Florence, 1852), 'Fiammetta' (Florence, 1857). Two oratorios, 'Eudossia e Paolo' and 'L'Ultimo Giorno di Gerusalemme,' the cantatas, 'La Caccia,' 'Il Ritorno,' 'Elegiaca,' 'Rafaele Sanzio,' 'Lo Spirito di Dante,' are among his more important

[1] *Athenæum*, Jan. 23, 1886.

works, as well as a great quantity of church music. (Baker and Riemann's Dictionaries.)

MACBETH. 1. Tragedy in three acts; words by Rouget de l'Isle and Hix, music by Chelard. Produced at the Académie, Paris, June 29, 1827, without success. In London, King's Theatre, July 4, 1832.

2. Opera in four acts; libretto by Piave, music by Verdi. Produced at the Pergola, Florence, March 17, 1847; at Paris, with alterations, at the Théâtre Lyrique, April 21, 1865.

3. An overture for orchestra in B minor, by Spohr (op. 75).

4. The first act of an opera, 'Macbeth,' was published by von Collin in 1809; and sketches by Beethoven for the overture (D minor, 6–8) and first chorus therein, are given by Nottebohm in *Mus. Wochenblatt*, 1879, No. 10. G.

MACBETH, Music to. Three musicians, of varied eminence, have successively composed music for Sir William Davenant's additions to—rather than alterations of—Shakespeare's tragedy of Macbeth. Sir William designed to increase its attractions for the public by combining with it music, improved scenery, and stage-machinery. He died before he could bring his experiment into practice; but it was carried out by his widow and son, at the new theatre in Dorset Garden in 1672. Downes, who was then, and for many years after, the prompter of the theatre, took advantage of the information he acquired through his position, to write a book, called *Roscius Anglicanus, or an Historical Review of the Stage* (12mo, 1708). In this he says: 'The tragedy of *Macbeth*, altered by Sir William Davenant, being dressed in all its finery, as new clothes, new scenes, machines, as flying for the witches, with all the singing and dancing in it, the first composed by Mr. Lock, the other by Mr. Channell and Mr. Priest, it being all excellently performed, being in the nature of an Opera, it recompensed double the expenses; it proves still a lasting play.'

Downes is the only contemporary authority who refers to the authorship; but the Hon. Roger North, an accomplished musician, remarks generally, 'in music, Matthew Locke had a robust vein,' a criticism peculiarly applicable to the music in 'Macbeth.' Immediately after 'Macbeth,' Matthew Locke composed the instrumental music for Shakespeare's 'Tempest,' produced in 1673; also the vocal music for Shadwell's 'Psyche' in Feb. 1673-74. These were published by him in 1675; but music for witches was not well suited for private use, and the Macbeth music remained in manuscript until after his death in 1677. These three are Locke's only known productions for the theatre, and they were all parodied by a contemporary, one Thomas Duffett. The parody upon 'Macbeth' is 'An Epilogue spoken by Heccate and the three witches, according to the famous Mode of Macbeth,' printed with a farce called 'The Empress of Morocco,' 4to, 1674. That upon 'The Tempest' is entitled 'The Mock Tempest,' 4to, 1675; and that upon 'Psyche' is called 'Psyche Debauch'd,' 4to, 1678. Stage parodies are only written and accepted upon works that have been successful, and although the music in 'Macbeth' was ill adapted for private use, owing to its subject, that of 'Psyche' had a long-continued and widely spread popularity. Two of the vocal pieces, 'The delights of the bottle' and 'All joy to fair Psyche,' were lengthened into penny ballads, to be sung in the streets, and several other ballads which were written to the tune of the first are still extant—such as 'The Prodigal Son,' 'The Wine Cooper's Delight,' etc. Matthew Locke's robust vein is equally characterised in these airs. (See *Popular Music of the Olden Time* (orig. ed.), ii. 498-501.)

The only reason that can be assigned why modern musicians should have doubted Matthew Locke's authorship of the music in 'Macbeth' is that a manuscript score of it exists in the handwriting of Henry Purcell. His autograph seems to have been tolerably well ascertained. First, Dr. Philip Hayes recorded his judgment by writing on the manuscript 'Purcell's score of y^e^ music in Macbeth, also the score from whence it was printed under Mat. Lock's name.' It may be conceded that the score is in Purcell's handwriting, and that it is the one from which Dr. Boyce had then printed the music for the first time, assigning its composition to Mat. Locke. The present possessor of this MS. is Dr. W. H. Cummings, one of the most careful of antiquaries, as well as one intimately acquainted with Purcell's style, and with his numerous works. The means of judging equally well of Locke's music for the theatre, are not to be had, for want of examples, especially if 'Macbeth' is to be deducted from them. But there remains the inexorable logic of dates to prove that, although the manuscript be in Purcell's handwriting, he could not have been the composer of a work which was produced on the stage when he was only in his fourteenth year. Henry Purcell was born in 1658, and died in Nov. 1695, aged thirty-seven. A sufficient reason for Purcell's having made a transcript of it is to be found in the fact that he was called upon to write music of a somewhat similar character to that in 'Macbeth,' for the sorceress in 'Dido and Æneas,' with 'choral responses and wild laughter of the infernal spirits.' There was a certain amount of conventionality, but not amounting to plagiarism, in the treatment of demoniacal music. This has been remarked in the music to Middleton's play of 'The Witch,' in Eccles's music to 'Macbeth' and in Purcell's own music to 'Dido and Æneas.' Of the last, G. Hogarth says: 'The little duet in this scene, between two of the witches, "But ere we this perform," is remarkable for its ingenuity of contrivance, and easy flow of melody; and the full chorus

which follows, and concludes the scene, has the broad simplicity of Matthew Locke (*Memoirs of the Musical Drama*, i. 151). Sir John Hawkins states that Purcell wrote the music to 'Dido and Æneas' 'at the age of nineteen,' and that he composed it for the Mr. Josias Priest, who was concerned in the production of 'Macbeth' with Locke. But Sir John was mistaken as to Purcell's age, and as to 'Dido and Æneas' having been performed at Priest's house in Leicester Fields. [The latest evidence is in favour of some date between 1688 and 1690. See PURCELL.] The study of sacred and of chamber music had so predominated in Purcell's musical education, that with all his genius, when first writing for the stage, he would naturally desire a dramatic model to improve upon. This was easily to be obtained through Mr. Priest, whose connection with the theatre would enable him to borrow Locke's score to be copied. Dr. W. H. Cummings submitted the 'Macbeth' MS. to Mr. Netherclift, the well-known expert, 'who came to the conclusion that it had a certain boyish resemblance to facsimiles of Purcell's after-writings, but not sufficient of itself for him to form a decided judgment as to the identity of authorship.' This 'boyish resemblance' is precisely what might have been expected under the circumstances above detailed. Every young composer requires some model to start upon, just as the early works of Beethoven remind us of his model, Mozart.

Eccles's music for 'Macbeth' is to be found in score in the British Museum (Add MS. No. 12,219). It was brought out at Drury Lane Theatre in 1696. As this was the year after Purcell's death, the date disposes of the myth of Purcell's having had any hand in after-improving it. As Eccles's music is not *the* music of 'Macbeth,' it must stand or fall upon its own merits. It was much admired by W. Linley, who edited 'Dramatic Songs' in, or for, Shakespeare's plays; but in the more trustworthy judgment of Dr. Cummings, 'it abounds in wearisome and uninteresting imitative phrases'; and again the same authority says, 'Eccles could not have been the author of the music accredited to Locke; the former is so extremely laboured and diffuse, the latter so much more dramatic and effective in its conciseness and simplicity' (*Concordia*, Nov. 27, 1875).

(See also *Musical Times*, 1882, p. 259, where Dr. W. H. Cummings states the arguments which have brought him to the belief that the 'Macbeth' Music is by Purcell.)

Of Richard Leveridge's claim, it is sufficient to say that he composed new music for the 2nd act of 'Macbeth' in or about 1708. It has since passed completely into oblivion, and there is no need to say anything more about it. W. C.

MACBETH, ALLAN, born in Greenock, March 13, 1856, received his musical education chiefly in Germany, studying at the Leipzig Conservatorium under F. Richter, Jadassohn, and Reinecke in 1875-76. In 1880 he was appointed conductor to the Glasgow Choral Union, but resigned the post in 1887. He has been organist of various churches in Edinburgh and Glasgow, being appointed to St. George's-in-the-Fields Established Church in 1884. He was appointed principal of the music school connected with the Glasgow Athenæum in 1890. Mr. Macbeth, in spite of much occupation of his time in teaching (pianoforte and singing), has found leisure for composition, for which he has a decided gift. He has written a number of pleasing pianoforte pieces, besides two or three orchestral movements played at the Choral Union Concerts, and since transcribed for piano. As a song-writer, Mr. Macbeth has generally been very successful, and he has besides ably arranged for voices several Scots melodies, as well as written some original part-songs. [His cantata, 'The Land of Glory,' won a prize given by the Glasgow Society of Musicians, and was performed in 1890. Some other cantatas, short orchestral pieces, and chamber music, are among his works, as well as incidental music to a play 'Bruce (Lord of the Isles).'] He has an operetta in MS., 'The Duke's Doctor.' W. H[E].

MACCARTHY, MAUD, violinist, was born on July 4, 1884, at Clonmel, Ireland. She showed musical proclivities at a very early age, but was not sent to a musical college, her parents preferring to place her under the direction of Señor Arbós. With him she studied from the age of eight to the age of fifteen, and made her début in London in 1894, after which followed two years of further study uninterrupted by a single public performance. Thus leisure was always allowed to her for the maturing of her musical gifts, and a style formed from which the note of feverish effort is absent, and which therefore lends itself well to the interpretation of classical compositions. She plays practically the whole violin repertoire, including the concertos of Beethoven, Brahms, and Tchaikovsky, and has performed frequently since 1896 at the principal orchestral concerts in London, at the Saturday Concerts at the Crystal Palace, and (during her American tour) with the Boston Symphony Orchestra, New York Philharmonic Society, etc. Her hand is so small that her violins have to be specially mounted for her, but she shows no want of power or of technical mastery. She formerly played upon a Peter Guarneri violin, but at present uses a Nicolo Gagliano. W. W. C.

MACCUNN, HAMISH, son of James MacCunn, shipowner, of Greenock, born there, March 22, 1868, showed an early aptitude for music, and on the opening of the Royal College of Music in 1883, won a scholarship for composition. He was a pupil there of Sir Hubert Parry, and resigned his scholarship in 1886.

An overture (see below) was given at the Crystal Palace in Oct. 1885, but it was not until 1887 that his name became widely known, from the success of his overture, 'Land of the Mountain and Flood,' produced at the same place. It was at once evident that the young composer had a strongly individual note of his own, and in quick succession other orchestral works were brought forward, for the most part at the Crystal Palace, where his first cantata, 'Lord Ullin's Daughter,' was given on Feb. 18, 1888. In that year he was commissioned to write a cantata for the Glasgow Choral Union; this was 'The Lay of the Last Minstrel,' given at Glasgow, Dec. 18, 1888, and at the Crystal Palace, Feb. 16, 1889. 'Bonny Kilmeny' had been given at one of Paterson's concerts in Edinburgh three days before; and in 1888 he was appointed a professor at the Royal College, a position which he held until 1894. A series of orchestral concerts was given in the same year in the studio of John Pettie, R.A., whose daughter he married in 1889. In 1894 his opera, 'Jeanie Deans,' was produced by the Royal Carl Rosa Company in Edinburgh, and performed in London by the same company, after much success throughout the provinces, on Jan. 22, 1896. He was for some years connected with this company as conductor, and has had much experience in operatic and other conducting. He directed the production in English of many of the later works of Wagner, including 'Tristan' and 'Siegfried,' as well as the stock repertory. After the death of Sullivan, during the last seasons of the Savoy Theatre as a home of English light opera, he conducted the run of 'Merrie England' and 'A Princess of Kensington.' Since the dispersal of the company, he has conducted various musical comedies and similar things. His compositions show a strongly national colouring, and certain sides of Scottish music, particularly those which deal with the more intimate and tender emotions, had scarcely been brought into the world of artistic or 'composed' music until his time. The following is a list of his principal works:—

OPERAS, etc.

'Jeanie Deans' (libretto by Joseph Bennett), in four acts, Lyceum Theatre, Edinburgh, Nov. 15, 1894.

'Diarmid': Grand opera in four acts, libretto by the Duke of Argyll (then Marquis of Lorne), Covent Garden Theatre, Oct. 23, 1897. This is understood to be part of a projected trilogy, the rest of which has not yet seen the light.

'The Masque of War and Peace' (libretto by Louis N. Parker), given at a single special performance for the benefit of the Household Troops, Her Majesty's Theatre, Feb. 13, 1900.

'The Golden Girl,' musical comedy, written by Captain Basil Hood; produced at the Prince of Wales's Theatre, Birmingham, August 5, 1905 (not yet performed in London).

CANTATAS, BALLADS, etc. (for Choir and Orchestra).

'Lord Ullin's Daughter,' Crystal Palace, Feb. 18, 1888.

'The Lay of the Last Minstrel,' with soli, Glasgow Choral Union, Dec. 18, 1888; Crystal Palace, Feb. 16, 1889.

'Bonny Kilmeny,' with soli, Paterson's Concerts, Edinburgh, Dec. 15, 1888, and at the Crystal Palace, March 8, 1889.

'The Cameronian's Dream,' with baritone solo, Paterson's Concerts, Edinburgh, Jan. 27, 1890; Crystal Palace, Dec. 6, 1890.

'Queen Hynde of Caledon,' with soli, Glasgow Choral Union, Jan. 28, 1892; Crystal Palace, March 5, 1892.

'The Death of Parcy Reed,' for male chorus and orchestra, not yet performed.

'The Wreck of the Hesperus,' produced with pictorial illustrations at the Coliseum Theatre, August 28, 1905.

ORCHESTRAL OVERTURES, etc.

'Cior Mhor,' Crystal Palace, Oct. 27, 1885.

'The Land of the Mountain and Flood,' Crystal Palace, Nov. 5, 1887.

'The Ship o' the Fiend,' Henschel Concerts, Feb. 21, 1888; Crystal Palace, April 21, 1888.

'The Dowie Dens o' Yarrow,' Crystal Palace, Oct. 13, 1888.

'Highland Memories,' three descriptive pieces, Crystal Palace, March 13, 1897, and at the Philharmonic on May 20 of the same year.

These overtures, etc. were frequently played at other concerts besides those mentioned, and were stock pieces for several years.

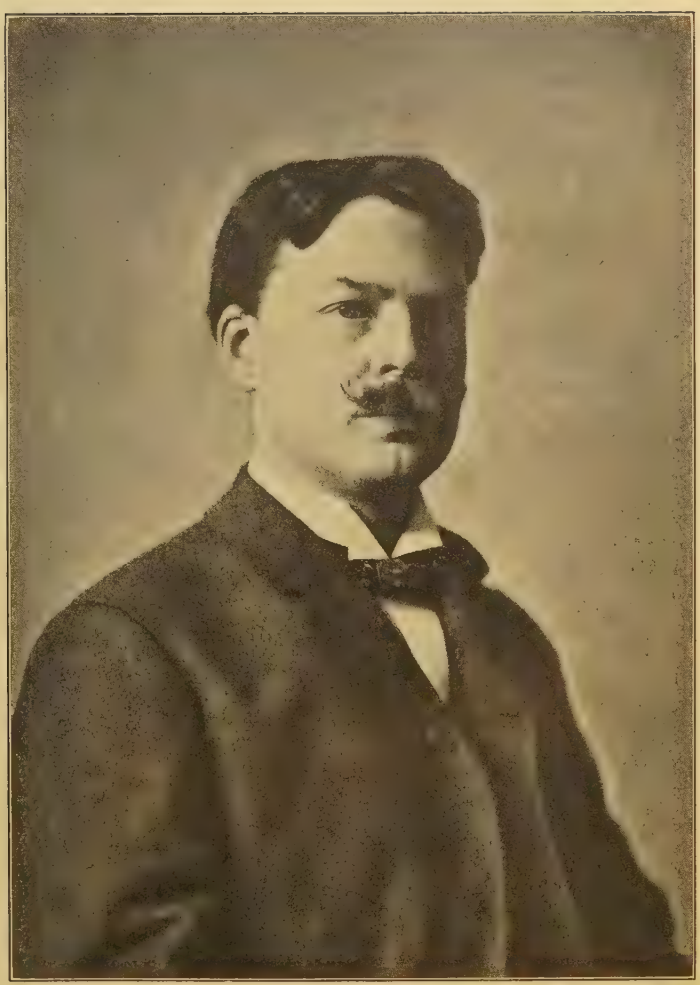
Psalm VIII., for chorus and organ, was performed at the Glasgow Exhibition of 1901.

Nine part-songs, six original pieces, 'Scotch Dances' for piano solo, three pieces for violoncello and piano, extra numbers for various musical comedies, and about eighty songs, are also among MacCunn's published works. M.

M'DONALD, Malcolm, a Scottish composer of Strathspeys of some note during the latter part of the 18th century. Little is known of his personal history save that he was associated with the Gow family, and that he lived (and probably died) at Inver, the birthplace of Niel Gow. A footnote in *The Beauties of Niel Gow* states that he played the violoncello in Gow's band at Edinburgh. His published collections of Strathspey reels number four. The first in oblong folio was published in 1788; 2nd in folio, *circa* 1789; 3rd folio, *circa* 1792; a 4th folio, *circa* 1797. F. K.

M'DONALD, Peter, a Scottish minister and son of one, born in the Manse of Durness in Sutherland, N.B., April 22, 1729. He was educated at St. Andrews, and ordained minister of Kilmore in Argyleshire, Oct. 12, 1756. He remained in this position for sixty-nine years, and died Sept. 25, 1824. He was one of a musical family, and was a skilled performer on the violin. He is deserving of remembrance for his valuable work (the first attempt at such a gathering), a 'Collection of Highland Vocal Airs,' issued in Edinburgh in 1783. In his preface he mentions that a number of the melodies were noted down by his brother Joseph (born Feb. 26, 1739, died 1762), also a clever musician, who left Scotland for India in 1760. Joseph was the author of a *Treatise on the Theory of the Scots Highland Bagpipe*, which forms part of a work, a *Collection of Bagpipe Music*, published in Edinburgh in 1808. F. K.

MacDOWELL, Edward Alexander, American composer and pianist, born in New York City, Dec. 18, 1861. He is descended from a Quaker family of Scotch-Irish extraction that emigrated to America about the middle of the 18th century. As a boy he studied the pianoforte with Juan Buitrago, a South American, and Pablo Desvernine, a Cuban, and for a brief space with Teresa Carreño, a native of Venezuela. The nationality of these early teachers is recorded to enable the curious to study or speculate on the influences which, with the varied training received in Europe, may have helped to shape the artistic character of MacDowell, who, though entitled to rank with contemporary composers of the highest class irrespective of country, is yet specially significant as a representative of the best that America has produced in music. His European studies were varied. In 1876 he became a pupil of Savard in composition, and



EDWARD ALEXANDER MacDOWELL

Marmontel in pianoforte at the Paris Conservatoire. For three years he remained under French influences, then exchanged them for German, going first to Stuttgart to Lebert; but wearying of that teacher's pedagogic methods, in less than a month, he went to Wiesbaden, where he studied with Louis Ehlert during the summer months of 1882. In the autumn he joined the pianoforte class of Karl Heymann at the Conservatorium, and the class in composition under Joachim Raff, director of the institution. The admiration which he felt for Raff's music, and the attachment which sprang up between master and pupil were among the strongest influences which shaped his creative career, and speak out of much of his music, especially the first suite for orchestra, op. 42. On Heymann's departure from the Conservatorium MacDowell was a candidate for the position vacated by him, but failed of appointment, ostensibly because of his youthfulness, probably because of his adherence to the romantic ideals exemplified in Heymann's playing. Thereupon he went to Darmstadt as chief teacher at the Conservatorium there. The duties were onerous, and the compensation inadequate. MacDowell had made up his mind to stay in Germany as a country more congenial to his artistic nature than his native land. He returned to Frankfort as a private teacher. In 1882, at the instance of Raff, he went to Weimar to visit Liszt. He played his first concerto for that master with D'Albert at the second pianoforte, and was invited to take part in the approaching meeting of the Allgemeiner Deutscher Musikverein at Zurich. There he played his first Pianoforte Suite. Raff died shortly after, and MacDowell set up a home in Wiesbaden, where he devoted himself to composition for four years, that is, till 1887. Then he went to America, settled in Boston, taught and gave concerts, producing his two pianoforte concertos with the Boston Symphony Orchestra in Boston, and the Theodore Thomas Orchestra in New York. [The second concerto was played by the composer at the Philharmonic Concert, London, on May 14, 1903.] In 1896 he was called to Columbia University in New York to fill the chair of music,—a new foundation. He remained professor at the institution until January 1904, when he resigned the post because of a disagreement with the faculty touching the proper footing of music and the fine arts in the curriculum. For two years he was conductor of the Mendelssohn Glee Club, one of the oldest and best male choruses in the United States. Princeton University and the University of Pennsylvania conferred on him the degree of Mus. Doc. Mr. MacDowell's career ended in the spring of 1905, when overwork and insomnia, the consequence of morbid worry over disagreeable experiences, brought on what eminent medical specialists pronounced to be a hopeless case of cerebral collapse.

When Mr. MacDowell went to Boston he gave a healthy impulse to American composition, chiefly through the performances of his works which had been stimulated by his return to his native land, but also by the attitude which he assumed as to the proper treatment of the American composer by the American public and press. He expressed himself as opposed to their segregation for the purpose either of laudation or condemnation. Naturally this came somewhat easier to him than to some of his fellows. He had grown artistically into man's estate in Germany, and had won quite as much recognition there as he found waiting for him in America when he returned thither. It deserves to be said that he found his position upheld by the majority of American musicians worthy of association with him. As a composer MacDowell is a romanticist. He believes in poetical suggestion and programmatic titles. But a musical cartoonist he is not. He aims at depicting the moods of things, and the moods awakened by things rather than the things themselves. He is fond of subjects and titles which, like those of his master Raff, smack of the woods;—not the greenwood of the English ballads, but the haunted forests of Germany, in which nymphs and dryads hold their revels and kobolds frolic. The supernaturalism which is an ineradicable element of German romanticism, breathes through his first suite for orchestra. In his second suite, entitled 'Indian,' he makes use of aboriginal American idioms, forming his principal themes out of variants of Indian melodies,—a harvest-song, war-song, and women's dance of the Iroquois, and a love-song of the Iowas. A similar device is practised in the first of his 'Woodland Sketches' for pianoforte, op. 51, which has a melody of the Brotherton Indians as its theme. Mr. MacDowell was contemporaneous with Dvořák in thus calling attention to the existence of native American folk-song elements capable of use in a characteristic body of artistic music, though, unlike the composer of the symphony 'From the New World,' he never permitted himself to be influenced by the melodic idioms of the negro slave. His 'Indian' suite, op. 48, first played by the Boston Symphony Orchestra in New York in Jan. 1896, was fully sketched before Dvořák's symphony appeared, though it was not performed till three years afterwards, the composer wishing to become better acquainted with what to him, as well as the world, was a new kind of music. As for the rest: great concentration, refined and highly emotionalised harmonisation, exalted poetical feeling and a spirit of breezy freshness are the characteristics chiefly to be found in Mr. MacDowell's compositions for the pianoforte. He withheld his first eight numbered works from his publishers, and subsequently destroyed them. His published works are as follows:—

WORKS WITH OPUS NUMBERS

Op.
9. Two Old Songs.
10. First Modern Suite for Pianoforte.
11 & 12. Album of five Songs.
13. Prelude and Fugue for Pianoforte.
14. Second Modern Suite for Pianoforte.
15. First Concerto, in A minor, for Pianoforte and Orchestra.
16. Serenata for Pianoforte.
17. Two Fantastic Pieces for Concert Use, for Pianoforte.
18. Barcarolle in F and Humoreske in A for Pianoforte.
19. Wald-Idyllen, for Pianoforte.
20. Three Poems for Pianoforte, four hands.
21. Moon Pictures, after H. C. Andersen, for Pianoforte, four hands.
22. 'Hamlet and Ophelia,' Two Poems for Orchestra.
23. Second Concerto in D minor for Pianoforte and Orchestra.
24. Four Compositions for Pianoforte.
25. 'Lancelot and Elaine,' Symphonic Poem for Orchestra.
26. 'From an Old Garden'; six Songs.
27. Three Songs for Male Chorus.
28. Six Idyls after Goethe, for Pianoforte.
29. 'Lamia'; third symphonic Poem for Orchestra.
30. 'The Saracens' and 'Lovely Alda'; two Fragments from the 'Song of Roland,' for Orchestra.
31. Six Poems after Heine for the Pianoforte.
32. Four Little Poems, for Pianoforte.
33. Three Songs.
34. Two Songs.
35. Romance for Violoncello with Orchestral Accompaniment.
36. Etude de Concert, for Pianoforte.
37. 'Les Orientales'; Three Pieces for Pianoforte.
38. 'Marionettes'; Six Little Pieces for the Pianoforte.
39. Twelve Studies for the Pianoforte.
40. Six Love Songs.
41. Two Songs for Male Chorus.
42. Suite No. 1, for Orchestra.
43. Two Northern Songs for Mixed Chorus.
44. Barcarolle; Song for Mixed Chorus.
45. Sonata Tragica (No. 1), for Pianoforte.
46. Twelve Virtuoso Studies for the Pianoforte.
47. Eight Songs.
48. Second ('Indian') Suite for Orchestra.
49. (Some dances published in a Boston Collection.)
50. Second Sonata, 'Eroica,' for Pianoforte.
51. 'Woodland Sketches' for Pianoforte.
52. Three Choruses for Male Voices.
53. Two Choruses for Male Voices.
54. Two Choruses for Male Voices.
55. 'Sea Pieces' for Pianoforte.
56. Four Songs.
57. Third Sonata, 'Norse,' for Pianoforte.
58. Three Songs.
59. Fourth Sonata, 'Keltic,' for Pianoforte.
60. Three Songs.
61. 'Fireside Tales,' for Pianoforte.
62. 'New England Idyls' for Pianoforte.

WORKS WITHOUT OPUS NUMBERS

Two Songs from the Thirteenth Century, for Male Chorus.
Six little Pieces after Sketches by J. S. Bach, for Pianoforte.
Technical Exercises for the Pianoforte (Two Books).
Columbia College Songs.
Many Transcriptions of old harpsichord music.

H. E. K.

[A very enthusiastic monograph on MacDowell, by Lawrence Gilman, was published by John Lane in London and New York in 1906.]

MACE, THOMAS, born at Cambridge about 1619, was one of the clerks of Trinity College, Cambridge, and author of a remarkable book published (in small folio, 272 pp., besides 18 pp. of prefatory matter) in 1676, entitled *Musick's Monument; or, A Remembrancer of the best Practical Musick, both Divine and Civil, that has ever been known to have been in the world*, the first part of which treats of the then condition of parochial psalmody and cathedral music and the means of improving their performance; the second of the lute, including directions for choosing, tuning, repairing, performing on and composing for the instrument, with a full explanation of the tablature and numerous lessons; and the third of the viol and of music generally, with other curious matter. The book is written in a quaint, familiar style, intermingled with a profusion of strangely compounded terms, and produces a striking impression of the author's love of his art and his devout and amiable disposition. It was published by subscription at 12s. per copy in sheets. A lengthy epitome of it is given in Hawkins's *History*, pp. 727-733, Novello's edition. A few scanty biographical particulars are culled from it, viz. that Mace married in or shortly after 1636; that before the marriage his wife resided in Yorkshire, he in Cambridge; that in 1644 he was in York during the siege of the city by the Parliamentary army; that in consequence of having broken both arms he was compelled to make a shake upon the lute in an irregular manner; that he invented a 'table organ' (described in his book, with an engraving) to accompany a 'consort of viols'; that in consequence of partial deafness, rendering the soft tones of the lute inaudible to him, he in 1672 invented a lute of fifty strings, which he termed the Dyphone, or Double Lute; that he had a family, and that his youngest son, John, learned in 1672 to play well upon the lute almost solely by the perusal of the MS. of his book [see IMMYNS, JOHN]; that the writing of the work was not commenced until after Christmas, 1671, and it was licensed for publication May 5, 1675; and lastly that owing to his increased deafness, which we may presume prevented him pursuing his profession, he was in somewhat straitened circumstances. Hawkins asserts that Mace was born in 1613, evidently arriving at that conclusion from the inscription beneath the portrait (engraved by Faithorne after Cooke) prefixed to his book, 'Ætat. suæ. 63.' The date of his death is not known, but 1709 is conjectured. See an important advertisement in the Bagford Collection (Harl. MS. 5936 (384)). [Mace was further responsible for another quaint work, *Profit, conveniency and pleasure to the whole Nation, being a short rational discourse lately presented to His Majesty concerning the Highways of England*, etc. 1675. A copy is in the British Museum. F. K.]

W. H. H.

M'EWEN, JOHN BLACKWOOD, born at Hawick, April 13, 1868, educated at the Glasgow High School, the Glasgow University, and the Royal Academy of Music. He has the degree of M.A. of Glasgow, and is a F.R.A.M. He was professor and lecturer at the Glasgow Athenæum, in 1896-98, and has been a professor of harmony and composition at the Royal Academy of Music from the latter year. His works are numerous and important, but though many have been performed, only a few are published; among these are a piano sonata in E minor, a string quartet in A minor, six Highland dances for violin and piano, and two sets of part-songs. His choral works include a 'Scene from *Hellas*' for female chorus and orchestra, 'The Last Chantey' for chorus and orchestra, and a setting of Milton's Hymn on the Nativity, for soprano solo, chorus and orchestra. For orchestra he has written two overtures, a suite in E, a symphony in A minor, a concerto for viola, and three Highland dances for strings. Two other string quartets, in F and E minor respectively, are to be mentioned,

as well as two compositions, 'Graih my Chree' and 'Romney's Remorse,' for recitation with musical accompaniment, the former being laid out for string quartet, drum and piano. M'Ewen's music belongs to the ultra-modern school, and much of it is strongly tinged with Scottish characteristics. M.

MACFARREN, Sir George Alexander, Mus. D., son of George Macfarren, dramatist, was born in London, March 2, 1813. In early life he displayed partiality for music, but did not regularly commence its study until 1827, when he became a pupil of Charles Lucas. In 1829 he entered the Royal Academy of Music, and made composition his principal study, learning also the pianoforte and trombone; and in 1834 he was appointed one of its professors. On Oct. 27, 1834, he produced at the Society of British Musicians his first important work, a Symphony in F minor, and in 1836 his fine Overture 'Chevy Chase.' In August 1838 his 'Devil's Opera,' produced at the English Opera House, Lyceum, at once drew public attention to him. In 1840 he produced at Drury Lane an 'Emblematical Tribute on the Queen's Marriage,' and also edited, for the Musical Antiquarian Society, Purcell's opera, 'Dido and Æneas.' In 1843 he became secretary of the Handel Society, for which he edited 'Belshazzar,' 'Judas Maccabaeus,' and 'Jephthah.' In Jan. 1845 he directed the successful production of Mendelssohn's 'Antigone' at Covent Garden Theatre. In 1846 his opera, 'Don Quixote,' was successfully produced at Drury Lane, and in 1849 his opera 'Charles II.' was given at the Princess's. His serenata, 'The Sleeper Awakened,'' was brought out at the National Concerts at Her Majesty's Theatre in 1851, and in the same year he composed his fine cantata, 'Lenora.' His beautiful cantata, 'May Day,' was written for the Bradford Festival, 1856, and his cantata, 'Christmas,' was composed in 1859. He then resumed the composition of opera, and brought out 'Robin Hood' at Her Majesty's Theatre in 1860, with great success. This was followed by 'Freya's Gift,' masque, and 'Jessy Lea,' opera, 1863; 'She stoops to conquer,' 'The Soldier's Legacy,' and 'Helvellyn,' operas, 1864. Several more operas remained in MS. and Macfarren also wrote music for a number of farces and melodramas. Macfarren's eyesight had at a comparatively early age become impaired; the malady increased year by year, until it terminated in total blindness. But this calamity did not diminish his exertions; and with extraordinary energy he continued to perform his duties as a professor at the Royal Academy of Music, and to compose, dictating his compositions to an amanuensis. On Oct. 23, 1873, his oratorio, 'St. John the Baptist,' was produced at the Bristol Festival with marked success. On March 16, 1875, he was elected Professor of Music at Cambridge on the death of Sterndale Bennett, and greatly distinguished himself by the manner in which he performed the duties of the office. In April following he accumulated the degrees of Bachelor and Doctor of Music. In 1876 he was appointed Principal of the Royal Academy of Music. 'The Resurrection,' oratorio, was produced at the Birmingham Festival in 1876; 'Joseph,' oratorio, at the Leeds Festival in 1877; 'The Lady of the Lake,' a cantata, at Glasgow, on Nov. 15, 1877; the music to 'Ajax' was performed with the play at Cambridge in 1882; the oratorio 'King David' was produced at the Leeds Festival of 1883, and in that year Macfarren was knighted. Besides the beforementioned works his compositions are very numerous; they include a cathedral service, anthems, chants, and psalm tunes, and 'Introits for the Holy Days and Seasons of the English Church,' 1866; 'Songs in a Cornfield,' 1868; 'Shakspere Songs for 4 voices,' 1860-64; Songs from Lane's 'Arabian Nights,' and Kingsley's and Tennyson's poems; very many songs (among which the beautiful 'Pack, clouds, away,' with clarinet obligato, is perhaps the best known), duets, etc.; overtures to 'The Merchant of Venice,' 'Romeo and Juliet,' 'Hamlet,' 'Chevy Chase' (already mentioned), and 'Don Carlos'; symphonies, string quartets, and a quintet; a concerto for violin and orchestra; and sonatas for pianoforte alone and in combination with other instruments. He harmonised the airs in Chappell's *Popular Music of the Olden Time*, and arranged 'Moore's Irish Melodies,' 1859, and Scotch Songs. He was eminent as a writer on music and music critic, having produced *Rudiments of Harmony*, 1860, and *Six Lectures on Harmony*, 1867; Analyses of oratorios, etc., for the Sacred Harmonic Society, 1853-57; and of orchestral works for the programme-books of the Philharmonic Society, 1869-71; also many articles in *The Musical World* and lives of musicians for the *Imperial Dictionary of Universal Biography*. He lectured at the Royal and London Institutions. His *Addresses and Lectures* were published in 1888. He died Oct. 31, 1887, his last published work being an Andante and Rondo in E for violin and organ, contained in the *Organist's Quarterly Journal* for Oct. 1887. A cantata for female voices, 'Around the Hearth,' was published posthumously. He was buried in the Hampstead Cemetery; his life, by H. C. Banister, appeared in 1891. His industry and fertility under the greatest drawbacks were marvellous. His great kindness, and his readiness to communicate the stores of his capacious and retentive memory to all who required them, endeared him to a large circle of friends and admirers.

Natalia Macfarren, his wife, contralto singer and able teacher, is well known by her translations of opera libretti and other works.

Walter Cecil Macfarren, his brother, born August 28, 1826, chorister of Westminster Abbey under James Turle from 1836 to 1841, and pupil of the Royal Academy of Music from

1842 to 1846, studied the pianoforte under W. H. Holmes, and composition under his brother, G. A. Macfarren, and Cipriani Potter. He was a professor of the pianoforte at the Academy from 1846 to 1903, and conductor of its concerts from 1873 to 1880. He was elected a director of the Philharmonic Society in 1868, and its treasurer in 1876. He composed two Church Services and a number of chants and hymn-tunes; a symphony in B flat, produced at Brighton, 1880; overtures, 'A Winter's Tale' (1844); 'Taming of the Shrew' (1845); 'Beppo' (1847); 'Pastoral' (1878); 'Hero and Leander' (Brighton Festival, 1879); 'Henry V.' (Norwich Festival, 1881); 'Othello' (Queen's Hall, 1896); a pianoforte concerto; sonatas for pianoforte alone and in combination with other instruments; songs both sacred and secular; many madrigals and part-songs; and numerous pieces of all kinds for pianoforte. He has edited Mozart's pianoforte works, Beethoven's sonatas, and the extensive series of pianoforte pieces known as 'Popular Classics.' [He died Sept. 2, 1905, and was buried at St. Pancras Cemetery, East Finchley, on Sept. 7. A biographical article appeared in the *Musical Times* for Jan. 1898, and a volume of Reminiscences was published in 1905.] W. H. H.

M'GIBBON, William, a musician residing in Edinburgh in the earlier half of the 18th century. Little is known of his biography save what is related of him and of other Scottish musicians by William Tytler of Woodhouselee, who contributed to the *Transactions of the Society of Antiquaries of Scotland*, vol. i. 1792, some personal remembrances of them. He was born near the end of the 17th century, and was the son of Matthew M'Gibbon, who was a hautboy player in Edinburgh. William was early sent to London, and studied the violin under William Corbett. On his return to Edinburgh he was appointed leader of the orchestra in the Gentlemen's Concerts, and held the post for a long period. He was considered an excellent performer. In 1740, M'Gibbon published 'Six Sonatos [*sic*] or Solos for a German Flute or Violin. Edin.: R. Cooper for the author, 1740,' ob. folio. A copy of this now very rare publication was sold at the Taphouse Sale, July 1905. Another of his compositions is 'Six Sonatas for two German Flutes, compos'd by Mr. Wm. M'Gibbon of Edinburgh.' Lond.: J. Simpson, royal 8vo. His most important work, however, was a valuable collection of Scots Tunes, in three oblong folio volumes, of great value in the study of Scots music. These were issued in Edinburgh, and originally published in 1742, 1746, and 1755, though there are several later reprints. He died in Edinburgh, Oct. 3, 1756, and was buried in Greyfriars' Churchyard, having bequeathed the whole of his effects to the Royal Infirmary. He is mentioned in a verse by Robert Ferguson, the poet, and a portrait of him occurs in the title-page of *Flores Musicae* (Edin.: J. Clark, 1773), which is reproduced in Glen's *Early Scottish Melodies*, 1900. F. K.

M'GLASHAN, Alexander, an Edinburgh musician and performer on the violoncello and violin during the latter half of the 18th century. From his stately appearance and dress he was nicknamed 'King M'Glashan.' He was in the habit of giving fashionable concerts at St. Cecilia's Hall, near the Cowgate, and issued three important books of Scottish national airs, of great value in tracing the history of these melodies, viz.: 'A Collection of Strathspey Reels' (1780), 'A Collection of Scots Measures' (1781), and 'A Collection of Reels' (1786), all in oblong folio, and published by Stewart of Edinburgh. He died May 1797, and was buried in Greyfriars' Churchyard. F. K.

M'GUCKIN, Barton, born July 28, 1852, at Dublin, began his career as a chorister at Armagh Cathedral. He received instruction from R. Turle, then organist there, in singing, organ, violin, and pianoforte. He became first tenor at St. Patrick's Cathedral, Dublin, in 1871, and was for a time a pupil of Joseph Robinson. He sang at one of the Philharmonic concerts in Dublin in 1874, and in the following year made his début at the Crystal Palace Concerts, July 5, 1875, after which he went to Milan and studied under Trevulsi. He reappeared with success at the same concerts, Oct. 28, 1876, where he first appeared as an oratorio singer in the 'Lobgesang,' Nov. 3, 1877. He made his début on the stage as Thaddeus under Carl Rosa at Birmingham, Sept. 10, 1880; at Dublin as Wilhelm Meister, May 9, 1881; in the same part at Her Majesty's, Jan. 20, 1882, and as Moro on the production in England of 'The Painter of Antwerp,' an English version of Balfe's Italian opera 'Pittore e Duca,' Jan. 28, 1882. He remained in Rosa's company both in London and the provinces until the summer of 1887, and became a great favourite both as a singer and actor. His most important parts are Lohengrin, Faust, and Don José; in new operas he created at Drury Lane the parts of Phœbus ('Esmeralda'), March 26, 1883; Orso ('Colomba'), April 9, 1883; Waldemar ('Nadeshda'), April 16, 1885; Guillem de Cabestanh ('Troubadour'), June 8, 1886; Oscar ('Nordisa'), May 4, 1887; at Edinburgh, Renzo on the production in English of Ponchielli's 'Promessi Sposi,' and at Liverpool, Des Grieux ('Manon'), Jan. 17, 1885. He sang in opera in America in 1887-88, and rejoined the Carl Rosa Company from 1889 to 1896, adding to his repertory the part of Eleazar in 'La Juive,' and that of Thorgrim in Cowen's opera of that name, April 22, 1890. In 1889 he sang Lohengrin in Italian at Covent Garden with success. Mr. M'Guckin is extremely popular in the concert-room, and has sung at the Phil-

harmonic, the Crystal Palace, the Popular and Oratorio Concerts, and at the Handel and provincial festivals. [After a successful tour in Ireland in 1903, he was appointed (in Sept. 1905) musical director of the Dublin Amateur Operatic and Choral Society. W. H. G. F.] A. C.

MACICOTATICUM, or MACHICOTAGE. A species of ornamentation applied to Plain-song melodies, by means of extraneous notes inserted between those of the true Canto fermo, after the manner of what, in modern music, would be called *fioritura*. To the once prevalent custom of *Machicotage* in France are to be attributed many of the corruptions observable in Gallican Office Books before the modern careful revisions. The *Processionale Parisiense* (Paris, 1787) directs that the melodies shall be *machicotée* by the Clergy, and continued by the Choir '*sine macicotatico*'; and in former times the Ecclesiastics entrusted with the duty of so singing them were called *Maceconici* or *Machicots*. W. S. R.

MACIRONE, Clara Angela, born Jan. 21, 1821, in London, of an ancient Roman family. From 1839 to 1844 she studied at the Royal Academy of Music—the pianoforte under Cipriani Potter and W. H. Holmes, composition under Lucas, and singing under Negri. On leaving the Academy the Council presented her with a special testimonial, and appointed her a Professor of the Pianoforte and an Associate. On June 26, 1846, she gave a concert at the Queen's Concert Rooms, Hanover Square, when in addition to a creditable début as a pianist, she appeared as the composer of a Benedictus, sung by Pischek, for which, in a letter dated April 3, 1847, she received the congratulations of Mendelssohn. From 1872 to 1878 she was head music-mistress at Aske's School for Girls, Hatcham, and later at the High School for Girls, Baker Street. In addition she conducted a vocal society, the 'Village Minstrels,' at her then residence, Park Village West, N.W. She is now living in retirement. Among her works may be named a Te Deum, an anthem, several part-songs, a suite for pf. and violin in E minor (played at the Musical Artists' Society, Nov. 16, 1889, by herself and Mlle. Gabrielle Vaillant), pianoforte pieces, and songs from the English, German, and Italian poets, etc. (Brown and Stratton, Baker, and personal information to the writer.) A. C.

MACKAY, Angus, a famous Highland piper, who collected and published some interesting pipe melodies taken down from traditional sources. The book is now rare, and its title runs: 'A Collection of Ancient Piobaireachd or Highland pipe music,' folio, 1838. Another of his works is 'The Piper's Assistant.' He was piper to Queen Victoria, and was accidentally drowned in the Nith, near Dumfries, March 21, 1859. F. K.

MACKENZIE, Sir Alexander Campbell, born August 22, 1847, in Edinburgh, was the fourth musician of his family in direct descent. His great-grandfather belonged to the Forfarshire Militia Band; his grandfather, John Mackenzie (1797-1852), was a violinist in Aberdeen and Edinburgh; and his father, Alexander Mackenzie (1819-57), was also a violinist, pupil of Sainton and Lipinski. He edited the 'National Dance Music of Scotland,' and was leader of the band at the Theatre Royal in Edinburgh. A. C. Mackenzie was educated at Hunter's School, and when only ten years old, was sent to study music at Schwarzburg-Sondershausen in Germany on the recommendation of a member of Gung'l's band named Bartel. Here he was a pupil of K. W. Uhlrich for the violin, and for theory, of Eduard Stein, the conductor of the Sondershausen Ducal orchestra. The boy played second violin in the orchestra, and took part in many performances of the most advanced music, Liszt, Berlioz, and the then extant works of Wagner being his daily bread. In 1862 he returned to Edinburgh, and soon afterwards came to London intending to take lessons from Sainton; but on his advice Mackenzie entered for the King's Scholarship at the Royal Academy of Music, and won it in December of the same year, remaining at the Academy till 1865. Besides Sainton, who taught him the violin, his masters were Charles Lucas for harmony and counterpoint, and F. N. Jewson for piano. While at the Academy, Mackenzie played in various theatre orchestras, and thereby acquired experience of orchestral work at first hand. On the conclusion of his course at the Academy, Mackenzie returned to Edinburgh, where he quickly became known as an excellent violinist; he also gave chamber concerts, at which Schumann's pianoforte quartet and quintet were given for the first time in Scotland. He was appointed conductor of the Scottish Vocal Music Association in 1873, and meanwhile fulfilled many teaching engagements, and officiated as precentor in St. George's Church. He found time to compose some chamber music, a PF. trio and string quartet (as yet unpublished), besides a pianoforte quartet in E flat, published by Kahnt of Leipzig as op. 11.

Hans von Bülow had seen the proof-sheets at the German publishers', and had made inquiries about the composer. When he came to Glasgow and Edinburgh in 1877-78, he made Mackenzie's personal acquaintance, and accepted his overture, 'Cervantes' (performed at Sondershausen in 1877), for performance at Glasgow, where it was given on Dec. 17, 1879. As Mackenzie added to his other labours by playing in the orchestra of the Birmingham Festivals of 1864, 1867, 1870, and 1873, it is not surprising that his health was affected by the strain of his work. He wisely went abroad, and settled in Florence in order to devote himself to composition. For about ten years, in fact until his appointment

to the Royal Academy of Music, Florence was his residence for at least part of the year; but as time went on, his importance in regard to music in London steadily increased, and at last he was obliged to live altogether in England. From the commencement of his residence in Florence dates the first of his more important choral works, the cantata, 'The Bride,' performed at the Worcester Festival of 1881. Each year after this saw some work of large calibre, and many festival and other commissions followed rapidly. In 1885-86 Mackenzie was appointed conductor of Novello's Oratorio Concerts, and introduced many important works to London audiences. It was primarily in order to hear his 'Saint Elizabeth' under Mackenzie's direction that Liszt paid his final visit to England in 1886, and Mackenzie renewed his old friendship with the composer. By this time, his second Scottish Rhapsody called 'Burns,' the opera, 'Colomba,' and 'The Rose of Sharon,' an oratorio composed for the Norwich Festival of 1884, had raised Mackenzie to a high position among English composers, and on the death of Sir George Macfarren he was appointed to succeed him as principal of the Royal Academy of Music. He undertook the duties of the post on Feb. 22, 1888. He conducted the Royal Choral Society occasionally during the lifetime of Sir Joseph Barnby, on whose death he directed the concerts for the remainder of the season. In 1892 he was appointed conductor of the Philharmonic Society, and during his tenure of the post, which he resigned in 1899, introduced Tchaikovsky's Pathetic Symphony to London, as well as Borodin's Symphony in B minor. In 1903 he undertook a tour in Canada, in the course of which he conducted concerts of British music in all the most important towns of the Dominion. He received the Mus.D. degree from St. Andrews, in 1886; Cambridge in 1888; Edinburgh in 1890; that of D.C.L. from Glasgow, 1901, and the M'Gill University in 1903; and that of LL.D. from Leeds in 1904. He received the gold medal for art and science from the Grand Duke of Hesse in 1884, and the Saxe-Coburg and Gotha Order for Arts and Science in 1893. He is a corresponding member of the Istituto Reale Musicale of Florence, and a member of the Royal Swedish Academy. In 1895 he was knighted. He has lectured repeatedly at the Royal Institution and elsewhere.

It is peculiarly difficult in a few words to attempt the appreciation of Mackenzie's music. Like that of many other admirable composers, it has earned the epithet 'academic' from certain critics who are fond of employing that word as a term of indefinite abuse. But the work of an 'academic' musician would surely always reach, yet seldom or never surpass, one dead level of merit; but with Mackenzie, as with all men of an ardent temperament, his best things surpass some of his others by a distance that is hard to estimate. He is at his best in dealing with subjects of a strongly imaginative or romantic kind, and naturally his Scottish extraction makes northern themes, whether musical or poetical, thoroughly congenial to him. In the two Scottish Rhapsodies, 'The Cottar's Saturday Night,' the 'Pibroch' violin suite, some of the 'Marmion' and 'Ravenswood' music, the violin pieces, 'From the North,' and the Scottish pianoforte concerto, op. 55, a very high poetical standard is reached; in the orchestral ballad of 'La Belle Dame sans Merci,' the 'Story of Sayid,' and throughout the opera of 'Colomba,' he shows himself a master of powerful and sustained imaginative effort; and in a lighter vein, the 'Britannia' overture, the comic opera, 'His Majesty,' and the orchestral suite, 'London Day by Day,' tell of a genuine gift of distinctly musical humour, which in the case of the second of these works, was just a little too subtle for the audience for which it was intended. Of his larger sacred compositions, the highest place may possibly be claimed for his fine 'Veni Creator.' A complete list of Mackenzie's works is appended:—

UNPUBLISHED WORKS, WITHOUT OPUS NUMBERS

(With places and dates of first performance.)

Trio, pf. and strings, in D (Classical Chamber Concerts, Edinburgh, 1874).
String Quartet in G (Do. 1875).
Overture to a Comedy (played under Julius Tausch at Düsseldorf, 1876).
Overture, 'Cervantes' (played under Max Erdmannsdörfer, Sondershausen, 1877, and under Bülow, Glasgow, 1879).
Scherzo for orchestra (Glasgow, 1878).

WITH OPUS NUMBERS

Op.
1-7. Songs and pianoforte pieces.
8. Seven Part-Songs.
9. Rustic Scenes for pf.
10. Larghetto and Allegretto for Violoncello.
11. Quartet for pf. and strings in E flat (Classical Chamber Concerts, Edinburgh).
12. Songs.
13. Five pieces for pianoforte.
14. Drei Lieder von H. Heine.
15. Trois Morceaux pour piano.
16. Three Songs.
17. Three Songs, by Christina Rossetti.
18. Three Songs.
19. Three Anthems.
20. Six Pieces for pf.
21. Rhapsodie Ecossaise, for orchestra, No. 1 (Glasgow, under Manns, Jan. 1880).
22. Three Vocal Trios.
23. 'In the Scottish Highlands,' for pf.
24. 'Burns,' second Scottish Rhapsody (Glasgow, under Manns, 1881).
25. Cantata, 'The Bride' (Worcester Festival, 1881).
26. Cantata, 'Jason' (Bristol Festival, 1882).
27. Three Organ Pieces.
28. Opera, 'Colomba' (Drury Lane, Carl Rosa Company, April 9, 1883).
29. Orchestral Ballad, 'La Belle Dame sans Merci' (Philharmonic, 1883).
30. Oratorio, 'The Rose of Sharon' (Norwich Festival, 1884).
31. Five Songs.
32. Concerto for violin (Birmingham Festival, 1885, played by Sarasate).
33. Opera, 'The Troubadour' (Drury Lane, Carl Rosa Company, June 8, 1886).
34. Cantata, 'The Story of Sayid' (Leeds Festival, 1886).
35. Three Songs by Shakespeare.
36. Jubilee Ode (Crystal Palace, 1887).
37. Six Pieces for violin (including 'Benedictus'), (Monday Popular Concerts, played by Lady Hallé, 1888).
38. Ode, 'The New Covenant' (Glasgow Exhibition, 1888).
39. 'The Cottar's Saturday Night,' for chorus and orchestra.
40. Overture, 'Twelfth Night' (Richter Concerts, 1888).
41. Cantata, 'The Dream of Jubal' (Liverpool Philharmonic, 1889).
42. Suite for violin, 'Pibroch' (Leeds Festival, played by Sarasate, 1889).
43. Prelude, Entr'actes, and Songs for 'Marmion' (Glasgow, 1889; songs only published).
44. Spring Songs.
45. Music to 'Ravenswood' (Lyceum Theatre, 1890).

Op.
46. 'Veni Creator,' for chorus, solo quartet, and orchestra (Birmingham Festival, 1891).
47. (*a*) Highland Ballad for violin and orch. (Westminster Orchestral Society, 1893). (*b*) Barcarolle and Villanelle for violin.
48. Two Choral Odes for Buchanan's 'Bride of Love' (1893).
49. Oratorio, 'Bethlehem' (Royal Choral Society, 1894).
50. Three Sonnets of Shakespeare.
51. 'Phœbe,' comic opera by B. C. Stephenson (not performed).
52. Overture, 'Britannia' (Royal Academy of Music Commemoration Concert, May 17, 1894).
53. 'From the North,' nine pieces for violin and pf. (three of them were scored and played at the Philharmonic, 1895).
54. Three Songs.
55. Scottish Concerto for pf. and orch. (Philharmonic, played by Paderewski, 1897).
56. Comic Opera, 'His Majesty' (Savoy Theatre, Feb. 20, 1897).
57. Overture, Entr'actes, and Incidental Music to 'The Little Minister' (Haymarket Theatre, Nov. 6, 1897).
58. Three Preludes and Vocal Music to 'Manfred' (written for the Lyceum Theatre, but not performed). (Nos. 2 and 3, 'Pastoral' and 'Flight of Spirits,' performed at the London Musical Festival, 1899. No. 1, 'Astarte,' performed at Arthur Newstead's Concert, Dec. 12, 1904.)
59. Five Recitations with pf. accompaniment.
60. Six Rustic Songs.
61. Preludes, Entr'actes, and Incidental Music to 'Coriolanus' (Lyceum Theatre, April 15, 1901).
62. Opera, 'The Cricket on the Hearth,' in three acts (Julian Sturgis, not yet produced; the overture was played at the Philharmonic, July 2, 1902).
63. Coronation March.
64. Suite for orchestra, 'London Day by Day' (Norwich Festival, 1902).
65. 'The Knights of the Road,' operetta (Palace Theatre, Feb. 27, 1905).
66. Cantata, 'The Witch's Daughter' (Leeds Festival, Oct. 1904).
67. Canadian Rhapsody for orchestra (Philharmonic, 1905).

In addition to these there are many songs without opus numbers; also the following:—

Morris Dance and Processional March for orchestra.
'Firm in her native strength,' for chorus and orchestra.
'With wisdom, goodness, grace,' part-song.
'To Singers,' part-song.
The 'Willow Song,' from 'Othello.'
'Indian Rêverie,' song (published in *Punch*, Jan. 7, 1903).

M.

MACKINTOSH, JOHN, born in London, 1767, an eminent performer on the bassoon, who from 1821 to 1835 held the first place in all the principal London and provincial orchestras. He produced a full, rich, and powerful, but somewhat coarse tone. [He died in London, March 23, 1844.] His son ALPHONSO was a violinist. W. H. H.

MACKINTOSH, ROBERT, a Scottish musician and famous composer of Strathspey reels, etc., nicknamed 'Red Rob.' He was from the Highlands (probably from the Vale of Athole), and was established as a musician in Skinner's Close, Edinburgh, in 1773. At various addresses in the northern capital he advertised himself as teacher of the violin, and he organised concerts; ultimately conducting the orchestra at the Theatre Royal. He removed to London in 1803, and died there in Feb. 1807. He was a clever violinist, and his Scottish dance music is of considerable merit. He published four books of compositions and arrangements as under:—'Airs, Minuets, Gavottes, and Reels' (1783); 'Sixty-eight new Reels' (1792); a second book (1793); 'A Third Book of Sixty-eight new Reels' (1796); and 'A Fourth Book of new Strathspey Reels,' *circa* 1804-5; all, except the last, which was published in London, being issued in Edinburgh, in folio. It is said that Mackintosh gave the first professorial lessons on the violin to Nathaniel Gow, on the latter's first coming to Edinburgh.

ABRAHAM MACKINTOSH, his son, was born in Edinburgh, June 15, 1769, and followed his father's profession. He published 'Thirty new Strathspey Reels,' Edinburgh, folio (1792), and some other works. He removed about the beginning of the 19th century to Newcastle-on-Tyne, where he was established in 1807 as a musician and a teacher of dancing. For many interesting details of the Mackintosh family, see the late Mr. John Glen's work, 'The Glen Collection of Scottish Dance Music,' book i., 1891. F. K.

MACKLEAN, CHARLES, a violinist and composer who, living in Edinburgh in 1737, published in that year 'Twelve Solos or Sonatas for a Violin and Violoncello,' op. prima. R. Cooper, for the author, 1737. It is doubtful whether he is the same Charles M'Lean mentioned on the title-page of 'A Collection of Favourite Scots Tunes . . . by the late Mr. Chs. M'Lean and other eminent Masters,' ob. folio, *circa* 1772. This last-named collection is of some antiquarian interest. F. K.

M'LEOD, PETER, according to *Brit. Mus. Biog.*, was born at West Calder, Midlothian, May 8, 1797, and died at Bonnington, near Edinburgh, Feb. 10, 1859. He published several collections of original airs to the words of Scottish poets, as 'Original National Melodies of Scotland' (1838), 'Original Scottish Melodies,' 'New National Songs, the melodies never before published,' etc., and was the composer of many now favourite Scots songs, 'Oh! why left I my hame?' being among the most famous of these. His collection of 'Original Scottish Melodies' was published with a view to the completion of the Burns Monument in Edinburgh, and the profits of it enabled this to be effected. F. K.

M'MURDIE, JOSEPH, Mus.B., born in 1792 in the parish of St. Bride, London, graduated at Oxford in 1814. He was a pupil of Crotch, and composed many glees (principally for the Concentores Sodales) and songs, and made numerous arrangements for the pianoforte. He was for some time a director of the Philharmonic Society. He died at Merton, Surrey, Dec. 23, 1878. W. H. H.

MAÇON, LE. Opéra-comique in three acts; words by Scribe and Delavigne, music by Auber. Produced at the Opéra Comique, May 3, 1825; in England at the St. James's Theatre, March 13, 1850. G.

MACPHERSON, CHARLES, born in Edinburgh, May 10, 1870, the son of the burgh engineer and city architect. He entered the choir of St. Paul's Cathedral in 1879, and remained there till 1887, when he was appointed choirmaster under Dr. Pearce at St. Clement's, Eastcheap. Sir George Martin gave him organ-lessons during his residence in London. After holding the post of private organist to the late Sir Robert Menzies, at Weem, Perthshire, and Mme. de Falbe, Luton Hoo, Bedfordshire, in succession, he was appointed in 1895 sub-organist of St. Paul's. He had entered the Royal Academy

of Music in 1890, and had won the Charles Lucas prize in 1892, becoming A.R.A.M. in 1896. He is now teacher of harmony and counterpoint in the same institution. His compositions include a setting of Psalm cxxxvii. for choir and orchestra; nine anthems and other church music; three Gaelic melodies, accompanied on strings and harp; an overture, 'Cridhe an Ghaidhil,' played at the Crystal Palace in 1895; a Highland suite for orchestra; another suite, 'Hallowe'en'; a quartet for piano and strings in E flat; and two movements of a sextet for wind instruments. His glee, 'There sits a bird,' gained the prize given in 1893 by the Bristol Orpheus Glee Society. M.

MACPHERSON, Charles Stewart, born at Liverpool, March 29, 1865, was educated at the City of London School, won the 'Sterndale Bennett' open scholarship at the Royal Academy of Music, entering that institution in 1880. He was a pupil of Sir G. A. Macfarren for composition, and of Walter Macfarren for the pianoforte. He gained the Balfe scholarship in 1882, the Charles Lucas medal for composition in 1884, and the Potter exhibition in 1885. At the conclusion of his studentship in 1887 he was appointed Professor of Harmony and Composition, and an Associate of the institution, becoming a Fellow in 1892. He was appointed organist of Immanuel Church, Streatham Common, in 1885, and in the same year became conductor of the Westminster Orchestral Society, a post which he held until 1902. He also conducted the Streatham Choral Society from 1886 to 1904. In 1898 he was appointed examiner to the Associated Board of the R.A.M. and R.C.M., and in that capacity visited Canada, Australia, New Zealand, and Ceylon in 1900. In 1903 he succeeded Mr. Corder as Professor of Composition at the Royal Normal College for the Blind, and was appointed a member of the Board of Musical Studies in the University of London. He has lectured at the Royal Academy, the Normal College, and elsewhere. His works include a symphony in C, 1888; two overtures, and short pieces for orchestra, mostly written for the Westminster Orchestral Society. More important than these is a remarkably beautiful Mass in D for solo, choir, and orchestra, produced at St. James's Hall, May 1898. Many songs, pianoforte pieces, and services have been published; and 'Concerto alla fantasia' for violin and orchestra, was played at the Queen's Hall Promenade Concert, in 1904. His theoretical works are: *Practical Harmony*; *350 Exercises in Harmony, etc.*; *Evolution of Musical Design*; *Practical Counterpoint*, and *Rudiments of Music*. M.

MACQUE, Jean de, a Flemish musician, pupil of Philip de Monte, who settled in Italy, living from 1576 to 1582 in Rome, and from 1586 in Naples. Only in 1610 is he definitely named as being choirmaster to the Royal Chapel in Naples. His publications extend from 1576 to 1613, and consist almost entirely of madrigals, of which there were two Books *a* 6, six *a* 5, two *a* 4, one *a* 4, five, six, and two Books entitled 'Madrigaletti e Napolitane,' *a* 6. Some of these are now lost, and several have parts missing. A considerable number of his madrigals and a few motets were received into the various collections of the time. Two were adapted to English words in Yonge's 'Musica Transalpina' of 1588, and Morley's 'Italian Madrigals' of 1598. J. R. M.

MADIN (*recte* Madden), Henri, born at Verdun, of Irish parents (from Eyrecourt, Co. Galway), in 1698, developed a taste for music at an early age. His uncle, Rev. Dr. Ambrose Madden, of Loughrea, was advanced to the bishopric of Kilmacduagh (Ireland) on the nomination of the Pretender, James III., in 1705. In 1730 we find Henri Madden a cleric, and maître de musique in the Cathedral of Tours, a position which he vacated in 1737 for the more important one of deputy chapel-master to the King. He published a treatise on counterpoint in 1742, and in 1744 was nominated maître de chapelle to the King, in succession to Campra (see Campra, André). Not only was he a good theorist, but he was also a successful choir-trainer, and composed many popular motets. His death occurred at Versailles in 1748, aged fifty. W. H. G. F.

MADRIGAL (Ital. *Madrigale*, *Madriale*, *Mandriale*). The derivation of the word has so hopelessly perplexed all who have attempted to trace it to its source that, until some new light shall be thrown upon the subject, further discussion would seem to be useless. We must, therefore, leave our readers to form their own judgment upon the four theories which have been most generally accepted; namely, (1) that the word is derived from the Italian, *madre* (mother), and signifies a poem addressed—as is said to have been the case with the first madrigals—to Our Lady; (2) that it comes from the Greek word, *μάνδρα* (Lat. and Ital. *mandra*, a sheepfold), and was suggested by the generally pastoral character of the composition; (3) that it is a corruption of the Spanish word, *madrugada* (the dawn), and is used in Italian as the equivalent of *Mattinata* (a Morning Song); (4) that it owes its origin to the name of a town situated in Old Castile. On one point, however, all authorities are agreed: viz. that the name was first given to a certain kind of poem, and afterwards transferred to the music to which it was sung—which music was always, during the best periods of art, written for three or more voices, in the ancient Ecclesiastical Modes, and without instrumental accompaniment.

Our actual knowledge of the condition of the Madrigal before the invention of printing is sadly imperfect; but, in the absence of positive evidence, analogy leaves us little cause to doubt

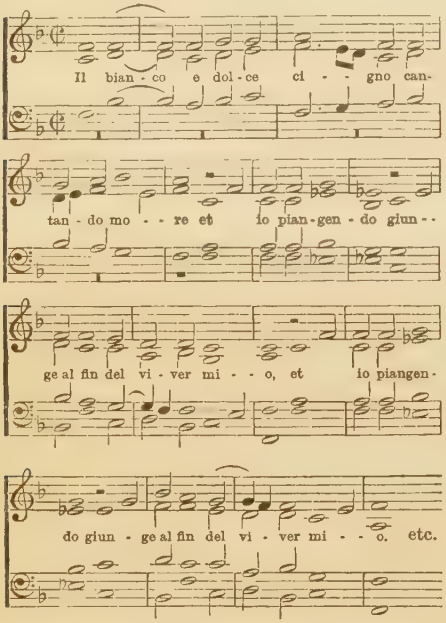
that its earlier phases must have corresponded, as closely as we know its later ones to have done, with those of the Motet—for the application of Discant to secular melody must have suggested the one no less surely than its association with Plain-song gave birth to the other. The originators of this process were, in all probability, the Troubadours and Minnesingers, who so strongly influenced the progress of popular music in the Middle Ages; and there is reason to believe that the rarity of early MS. records is due to the fact that they were accustomed to sing their Discant extempore—or, as it was formerly called, *alla mente*. But long before this first glimmering of science resulted in the invention of Counterpoint the age of chivalry had passed away, and the minstrels, as a corporate body, had ceased to exist. Hence, the farther development of the Madrigal devolved upon the ecclesiastical musicians, who cherished it tenderly and brought all the resources of their art to bear upon it; treating it, technically, exactly as they treated their compositions for the Church, though, in the æsthetic character of the two styles—founded on an instinctive perception of the contrast between sacred and profane poetry—they observed a marked difference. This we may readily understand from the description left us by Thomas Morley, who, writing in 1597, tells us, that, 'As for the Musicke, it is next unto the Motet, the most artificiall and to men of Vnderstanding the most delightfull. If therefore you will compose in this Kind you must possesse your selfe with an amorus humor (for in no cõposition shall you proũe admirable except you put on, and possesse your selfe wholy with that vaine wherein you compose) so that you must in your Musicke be waũering like the wind, sometime wanton, sometime drooping, sometime graũe and staide, otherwhile effeminat, you may maintaine points and reũert them, vse triplaes, and shew the uttermost of your varietie, and the more varietie you show the better shall you please.' In the 16th century these directions were observed to the letter—so closely, that it would be difficult to give a more graphic sketch of polyphonic music in its secular dress than that conveyed by Morley's quaint expressions.

The most ancient specimen of secular polyphonic music now known to exist is the famous canon, 'Sumer is icumen in,' preserved, among the Harleian MSS., in the British Museum. Its extreme antiquity is, indeed, indisputable; but it can scarcely be called a Madrigal, notwithstanding the rustic character of its words. The true Madrigal is unquestionably the offspring of the great Flemish school. We hear of it, in the Low Countries, as early at least as the middle of the 15th century, when it was already well known to the Netherlanders in the form of a polyphonic song, often of very elaborate construction, and always written in strict conformity with the laws of the old Church Modes. These characteristics—which it retained to the last in all countries and through all scholastic changes—are unmistakable signs of its close relationship to the Motet, of which we have also ample proof, in the certainty that it originated in counterpoint on a Canto fermo. As a general rule, this Canto fermo was naturally supplied by the melody of some popular Chanson; but, just as we sometimes find a popular melody intruding itself into the Mass, so in these early Madrigals we are occasionally startled by the apparition of some well-known fragment of severe Ecclesiastical Plain-song; as in Agricola's *Belle sur toutes*, in which the lighter theme is almost profanely contrasted with that of *Tota pulchra es, Maria*—a combination which Ambros naïvely compares to the song of a pair of lovers, who quietly carry on their discourse in the two upper parts, while a holy monk lectures them in the bass.

For the earliest published copies of these interesting works we are indebted to Ottaviano dei Petrucci—the inventor of the process by which music was first printed from movable types—whose three collections, entitled *Harmonice musices Odhecaton. A.* (Venice, 1501), *Canti B. numero Cinquanta B.* (*ib.* 1501), and *Canti C. nº cento cinquanta C.* (*ib.* 1503), were long supposed to be lost, and now only exist in the form of unique copies of the first and second, preserved in the Library of the Liceo Filarmonico at Bologna, and a splendidly bound exemplar of the third in the Hofbibliothek at Vienna. In these precious volumes we find a copious selection from the secular works of Busnois, Okeghem, Johannes Tinctor, Hobrecht, Regis, Caron, Josquin des Prés, Alexander Agricola, Brumel, Pierre de la Rue, and twenty-nine other writers, whose Chansons illustrate the first period in the history of the Flemish Madrigal—a period no less interesting than instructive to the critical student, for it is here that we first find science and popular melody working together for a common end.

The second period, though its printed records date only thirty-five years later, shows an immense advance in art. Its leading spirits, Jacques Arcadelt, Philipp Verdelot, Giaches de Wert, Huberto Waelrant, and some other writers of their school, were not only accomplished contrapuntists, but had all learned the difficult art of restraining their ingenuity within due bounds, when simplicity of treatment was demanded by the character of the words they selected for their theme. Hence, they have left us works, which for purity of style and graceful flow of melody can scarcely be exceeded. Arcadelt, though a true Fleming by taste and education as well as by birth, spent much of his time in Italy, and published his First Book of Madrigals at Venice in 1538, with such success, that within eighty years it ran through no less than

sixteen editions. Five other books followed containing, besides his own works, a number by other celebrated writers, among whom, however, he stands his ground nobly. From a copy of the fourth edition of the First Book, preserved in the British Museum, we transcribe a few bars of one of the loveliest Madrigals he ever wrote—*Il bianco e dolce cigno*—which, we should imagine, needs only publication in an attainable form in order to become a favourite with every Madrigal Society in England.[1]



Il bian - co e dol - ce ci - - gno can-
tan - do mo - - re et io pian - gen - do giun - -
ge al fin del vi - ver mi - - o, et io piangen -
do giun - ge al fin del vi - ver mi - - o. etc.

The few concluding bars of this contain some imitations, the smoothness of which is perfectly delicious :—

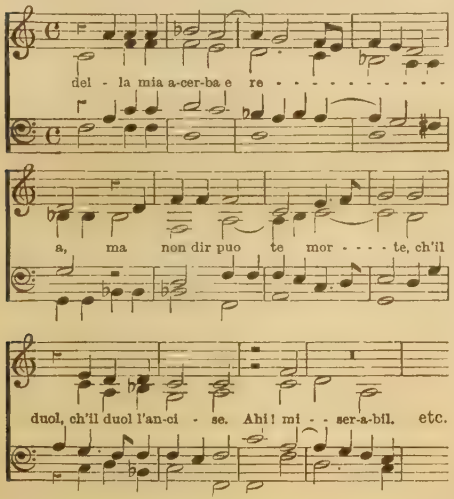
Though a far less prolific writer than Arcadelt, Waelrant was a true genius and a true disciple of the good old Flemish school. His *Symphonia Angelica* printed at Antwerp in 1594 contains compositions by some of the best of his contemporaries; but none more beautiful than his own *Vorrei morire*—well known in England and frequently sung, as 'Hard by a fountain,' though the English words make no attempt to convey the meaning of the original Italian. Of Verdelot's numerous works, very few, unhappily, have been handed down to us with all the parts complete; we possess, however, quite enough of his writings to prove that, like his great contemporary, Giaches de Wert, he was deeply imbued with the national style; which, from first to last, was clear in its construction, smooth in its flow of melody, euphonious in its harmonic combinations, and, though less rich in contrapuntal embroidery than the later Italian schools, never wanting either in interest or in animation. The last great composer by whom this peculiar style was cultivated, in northern Europe, was Orlando di Lasso, who, though his fame rests chiefly upon his ecclesiastical music, has left us many books of splendid madrigals, which may almost be said to form, of themselves, a third period. With him, the school of the Netherlands came to an end. But long before his death the Madrigal had been transplanted to other countries; and in Italy especially, it took firm root, and bore abundant fruit.

The first really great Italian Madrigal-writer was Costanzo Festa, whose delicious *Quando ritrovo la mia pastorella*, printed in Arcadelt's Third Book, has enjoyed a greater degree of popularity, in England, under its familiar title, 'Down in a flowery vale,' than any other work of the kind that ever was imported hither.[2] This fine composition bears evident traces of the Flemish manner; as do, more or less, all the works belonging to what may be called the first Roman Period. In the second period this foreign influence was entirely destroyed, and the true Roman style inaugurated by the appearance of Palestrina's 'Primo libro di Madrigali a quattro voci,' in 1555, followed by a 'Libro secondo,' in 1586, and two books of 'Madrigali spirituali,' in 1581, and 1594—the year of the great composer's death. It may be well said, that in these four volumes Palestrina has shown his command over all styles. The character of the 'Madrigali spirituali'—more serious than that of the Chanson, but less so than that of the motet—shows a deep appreciation of the difference which should always subsist between ordinary sacred music and music intended to be actually used in the services of the church. The spirit of the secular madrigals changes every moment with the sense of the words. The second volume (that of 1586)

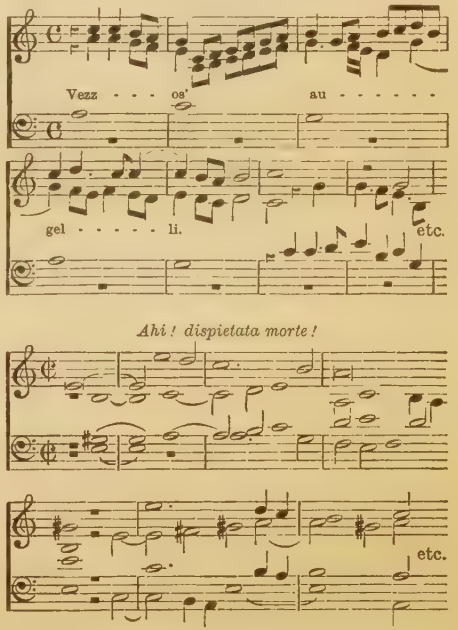
[1] The only modern edition with which we are acquainted is transposed a third, and adapted to English words in which no translation of the original Italian is attempted; consequently, the Music and the Poetry are at cross purposes from beginning to end.

[2] In the English edition—admirably translated by Thomas Oliphant—the time of the movement has been very unjustifiably changed from four minims to four crotchets in a measure.

contains a more than usually beautiful example —*Alla riva del Tebro*—in which the grief of a despairing lover is described in discords as harsh as any that we are accustomed to hear in the works of the most modern composers. Yet every one of these discords is prepared and resolved, in accordance with the strictest laws of counterpoint; and these very laws are used as vehicles for the expression of all that music can ever be made to express. For instance, the lovely cadence at the word *morte*, when sung with the necessary *ritardando*, tells, more plainly than any verbal explanation could possibly have done, how all such woes as those alluded to are healed for ever by death :—



Such works as these naturally excited the emulation of contemporary composers, and led each one to do his best for the advancement of a style so new and captivating. Palestrina's example was worthily imitated by his successor in office, Felice Anerio, whose three volumes of 'Madrigali spirituali,' printed at Rome in 1585, were succeeded by two books of secular madrigals of exquisite beauty, and a charming set of Canzonette for three and four voices issued in 1603. Francesco Anerio, and the brothers, Giovanni Maria and Bernardino Nanini, contributed a large store of volumes of equal merit. Ruggiero Giovanelli turned his genius to good account; and the Roman school, now in its highest state of perfection, boasted many other madrigalists of superlative excellence. Foremost among these stood Luca Marenzio, who devoted his best energies to the advancement of secular art, producing nine books of madrigals for five voices between the years 1580 and 1589, six, for six voices, within a very few years afterwards, and many later ones, all of which were so well appreciated that, even during his lifetime, he was honoured with the well-earned title of *Il più dolce Cigno d' Italia*. The style of this 'Sweetest Swan' was, by nature, a little less grave than that of Palestrina; but, like that great master, he possessed the happy faculty of accommodating it to all possible circumstances, and did so with such unvarying success, that he may be justly regarded as the most satisfactory representative of the third Roman period. His little madrigal, *Vezzosi augelli*, scored by P. Martini, in the second volume of his *Saggio di Contrappunto*, is a miracle of prettiness, and contrasts strangely enough with the deep sadness displayed in the opening bars of his *Ahi! dispietata morte!*



But it was not in Rome alone that the Madrigal was cultivated with success. It found an equally congenial home in Venice, where it was first introduced by Adrian Willaert, who, though by birth and education a Fleming, did so much for the city of his adoption that he is universally represented as the founder of the great Venetian school. His influence, and that of his countryman and faithful disciple, Ciprian de Rore, may be traced throughout its entire course, from beginning to end. Even in the works of Giovanni Croce it is clearly perceptible, notwithstanding the marked individuality which places the stamp of independent genius on everything he wrote. Andrea Gabrieli, and his nephew, Giovanni, Fra Costanzo Porta, and Orazio Vecchi, were all deeply imbued with the same spirit; Hans Leo Hasler carried it to Nuremberg, where it wrought a good and lasting work; and Gastoldi—believed by Morley to have been the inventor of the 'Fa la'—was really no more than the exponent of an idea which had already been freely used by Willaert,

and more than one of his immediate followers. It may, in truth, be said that Flemish art failed to attain its full maturity, until it was transplanted from the Netherlands to Venice. All honour to the great republic for developing its rich resources. It was a glorious trust committed to her; and she fulfilled it nobly.

In Florence the Madrigal attained a high degree of popularity—at first in the form of the Frottola, which, Cerone tells us, is to be distinguished from the true madrigal by the poverty of its contrapuntal artifices—afterwards, in the more fully developed productions of Francesco Corteccia, Matteo Rampollini, Pietro Masacconi, and Baccio Moschini. But its course here was brought to an untimely close by a growing passion for instrumental accompaniment which entirely destroyed the old Florentine love for pure vocal music. In Naples it flourished brilliantly; though rather in the shape of the Villanella—the Neapolitan equivalent of Gastoldi's Fa la—than in a more serious guise. In France it was but slightly prized, notwithstanding the number of Chansons adapted, by the early Netherlanders, to well-known specimens of French popular poetry; and in Germany it failed to supplant the national taste for the *Volkslied*, with which it had very little in common, and which, before the middle of the 16th century, was itself pressed into the service of the all-absorbing Chorale. But in England it took root as firmly as ever it had done, either in Rome or in Venice, and gave rise to a national school which is well able to hold its own against any rival. The old canon, 'Sumer is icumen in,' has been cited as a proof that polyphonic music originated in England. This position cannot be maintained. The beginnings of Counterpoint have, hitherto, eluded all inquiry. But we have already shown that the Madrigal was invented in the Netherlands; and that the first published fruits of its discovery were issued at Venice in 1501. The first polyphonic songs that appeared in England were printed by Wynkyn de Worde in 1530, in a volume of the existence of which neither Burney nor Hawkins seems to have been aware, though it contains a highly interesting collection of works, both sacred and secular, by Taverner and other English composers. No second collection appeared till 1571, when a volume of much inferior merit was printed for Thomas Whythorne by John Daye. In 1588, William Byrd issued his first book of 'Psalmes, Sonets, and Songs of sadnes and pietie': and, in the same year, Nicholas Yonge—a merchant, who obtained a rich store of madrigals from his Italian correspondents—published, under the title of 'Musica Transalpina,' a volume containing more than fifty pieces, selected from the works of Noe Faigneant, Rinaldo del Mel, Giaches de Wert, Cornelius Verdonck, Palestrina, Luca Marenzio, and several more of the best Flemish and Italian composers of the day. In the preface to this volume the word *Madrigal* is used (to the best of our belief) for the first time in England. The compositions selected by the worthy merchant are all adapted to English verses, in which, though the diction is sometimes sufficiently uncouth, the rhythm and sense of the original Italian are often carefully imitated; and to the zeal of their enthusiastic collector, who had them constantly sung at his house, we are mainly indebted for the favour with which, from that time forth, the Madrigal was universally received in this country. Nine years later Yonge ventured upon a second collection. Meanwhile, Byrd had already published another volume of original compositions, under the title of 'Songs of sundrie natures,' in 1589; in 1590, Thomas Watson had edited a 'Sett of Italian Madrigalls Englished, not to the sense of the originall dittie, but after the affection of the Noate'; and between 1593 and 1595 Thomas Morley had produced two books of Canzonets, one of 'Madrigals to foure Voyces,' and one of Ballets. The number of publications, therefore, was increasing rapidly.

By this time the Madrigal had fairly established itself as a national institution; and English composers did all that in them lay to bring it to perfection. The most noted among them seemed never tired of producing new works. Simultaneously with Yonge's second collection—that is, in 1597—appeared two original sets of great importance, one by Thomas Weelkes, the other by George Kirbye. In the same year Morley issued a third and fourth volume of Canzonets; and John Dowland delighted all Europe with his 'First Booke of Songes or Ayres of foure parts.' Wilbye's first book appeared in 1598, and Bennet's in 1599. In 1601 Morley edited a famous volume entitled 'The Triumphes of Oriana,' containing Madrigals for five and six voices, by Michael Este, Weelkes, Bennet, Hilton, Wilbye, and sixteen other composers besides himself. [See ORIANA.] Michael Este published a volume of his own in 1604, another in 1606, and a third in 1610. Bateson's two books were issued in 1604 and 1618. Dowland's second book appeared in 1600, his third in 1603, and his 'Pilgrimes Solace' in 1612. Thomas Ford printed two books of 'Musicke of sundrie Kindes' in 1607, and Wilbye his second book in 1609; Orlando Gibbons produced his first (and only) volume of 'Madrigals and Motets' in 1612; and even as late as 1630—exactly a century after the publication of Wynkyn de Worde's curious volume—a book of 'Mottects' (all really Madrigals, though with instrumental accompaniments *ad libitum*) was given to the world by Martin Pierson.

Rich collections of these rare old editions—including many volumes which we have not

space to particularise—are preserved in the Libraries of the British Museum, the Sacred Harmonic Society, and the Universities of Oxford and Cambridge ; and many of the most popular madrigals have been reprinted in a modern form over and over again.[1] It is difficult to decide upon the comparative merits of particular works, where the general standard of excellence is so high, and the number so great. An endless variety of styles is observable, even to the most superficial inquirer ; but careful analysis proves this to be rather the result of individual feeling, than an index to the prevailing taste at any given epoch. The history of the school, therefore, must be comprised, like our notice of the Venetian Madrigal, within the limits of a single period ; and we shall best illustrate it by selecting a few typical works for separate criticism.

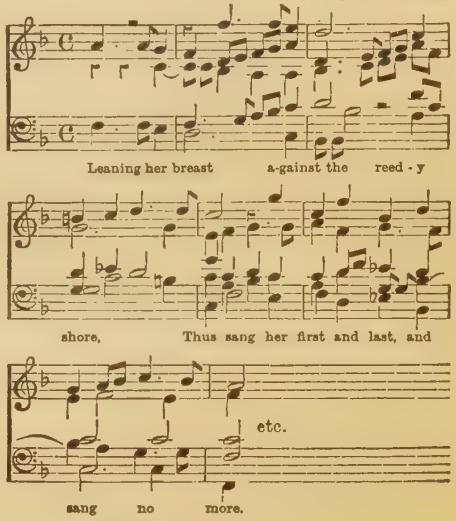
Byrd's madrigals are sometimes constructed upon a very elaborate plan, and abound in points of ingenious and delightful imitation, as do those of Weelkes, Cobbold, and Wilbye, and their contemporaries, Kirbye and Bateson—witness the following beautiful passage from the last-named composer's contribution to 'The Triumphes of Oriana'—

In Heaven lives O - ri - a - na, etc.
In Heaven lives O - ri - a - - - - -
In Heaven lives, etc.
In Heaven lives
- na, etc.
In Heaven lives, etc.
In, etc.
In Heaven lives, etc.

Morley, Hilton, and Michael Este preferred a lighter vein, and produced some of the most delicious Fa las which remain to us. Among those who affected 'Ayres' and Canzonets, John Dowland incontestably holds the first place. His 'Awake, sweet Love' and 'Now, oh ! now, I needs must part,' are gems of art—perfect in their simplicity, yet no less masterly in design than tender in expression. Orlando Gibbons and a charming composer of earlier date—Richard Edwards—wrote like born Netherlanders. A more interesting comparison than that between the two following examples, and the extracts already given from Arcadelt's *Bianco e dolce Cigno* can scarcely be imagined.

The Silver Swan.

ORLANDO GIBBONS.



In going to my naked bed.

RICHARD EDWARDES (1560).

After the second decade of the 17th century, no work of any lasting reputation was produced, and the style soon fell into neglect. Under the Stuart dynasty polyphonic song lost much of its popularity, and the civil war crushed out all artistic feeling ; but art lived on, and in due time the Madrigal, forgotten in Flanders, and replaced in Italy by a new kind of chamber music with instrumental accompaniment, merged gradually in England into the Glee—a kind of composition cultivated in no other country, and of far higher æsthetic value than its German representative, the Part-song. The writer who

[1] It is much to be regretted that so few modern editors think it worth while to mention the source whence their reprints are derived : or even to give the original names of Flemish or Italian Madrigals. Still more deeply to be deplored is the mischievous system of transposition, now so common, which frequently destroys all trace of the composer's intention, and always prevents the tyro from ascertaining the Mode in which a given Madrigal is written. As Madrigals must always be sung without accompaniment, transposition in the book is wholly unmeaning, and helps no one.

—no doubt unconsciously—helped, more than any other, to prepare the way for this great change was Thomas Ford, whose lovely canzonets, 'Since first I saw your face,' and 'There is a Ladie sweete and kind,' hold a position as nearly as possible midway between the Madrigal and the Glee, breathing all the spirit of the one, while introducing progressions only permissible in the other. It is, however, worthy of remark—though the fact seems, hitherto, to have escaped notice—that intervals, forbidden by the strict laws of Counterpoint, were tolerated in England at an earlier period than on the continent. Wilbye used the diminished triad with a boldness which would have made Anerio's hair stand on end. Such licenses as these once permitted, the substitution of modern tonalities for the Ecclesiastical Modes followed as a matter of course—and this accomplished, the change from the Madrigal to the Glee was complete. [The art of madrigal-writing, in abeyance since the death of Pearsall, has revived in modern times; the collection printed in celebration of Queen Victoria's Diamond Jubilee, under the title of 'Choral Songs in Honour of Her Majesty Queen Victoria' (1899), contains thirteen examples by various English composers, many of which are excellent specimens of the form.]

Having traced the history of the Madrigal thus far, it remains only to say a few words as to the manner of its performance.

It is absolutely indispensable that it should be sung without any instrumental accompaniment whatever; and, unlike the Glee (which is always performed by solo voices), it is most effective when entrusted to a moderately full, but not too numerous chorus. Changes of tone, embracing every shade of difference between *ff* and *ppp*, and introduced, sometimes by the most delicate possible gradations, and sometimes in strongly marked contrast, will be continually demanded, both by the character of the music and the sense of the words; and remembering how earnestly Morley insists upon 'varietie,' the student will be prepared to learn that *ritardandi* and *accelerandi* will be scarcely less frequently brought into requisition. Nevertheless, strict mechanical precision must be secured at any cost. The slightest uncertainty, either of intonation or of rhythm, will suffice to ruin everything; and to draw the line fairly between intensity of expression and technical perfection is not always an easy matter. There is, indeed, only one way of overcoming the difficulty. To imagine Damon regulating his love-lorn ditty by the tick of a metronome would be absurd. The place of the metronome, therefore, must be supplied by a conductor capable of fully sympathising either with Damon's woes or Daphne's fond delights, but wholly incapable of showing the least indulgence to his singers, who must learn to obey the rise and fall of his baton, though it move but a hair's-breadth in either direction. W. S. R.

MADRIGAL SOCIETY. Founded in 1741 by John Immyns, a member of the Academy of Ancient Music, the Madrigal Society enjoys the distinction of being the oldest musical association in Europe. Its first meetings were held at the Twelve Bells in Bride Lane, whence it removed to the Anchor and Crown, Whitefriars, as proved by the earliest minute-book in the Society's library, dated 1744. In 1745 the Society removed to the Founders' Arms, Lothbury, where rules were adopted limiting the number of members to sixteen, with an admission fee of 8s. and a subscription of 3s. per quarter. Having returned for a time to the Twelve Bells, its original home, the Society afterwards migrated to the Queen's Arms, Newgate Street, in 1748, when the rules were revised. One rule enacted 'That all musical performances shall cease at half an hour after ten o'clock, unless some of the members shall be cheerfully incited to sing catches, in which case they shall be indulged half an hour, and no longer.' Numerous fines were imposed for such offences as the retention of books from the Society's library; and any member eating his supper, or a part thereof, during practice time was to forfeit sixpence, to be applied to buying ruled paper. The performance on each night was to be divided into two 'acts,' with an interval of half an hour, and in each act four madrigals were to be sung. Between 1750 and 1757 additional rules were adopted, by one of which each member, to whose turn it came to serve as President, was bound to present a score and parts of a madrigal ready for performance, or 'to forfeit a penny extraordinary to the plate' every night until he did so. By another rule any gentleman who had been educated in, or at the time belonged to, any cathedral or choir was to be admitted to visit the Society at his pleasure; and a similar privilege was accorded to any of 'the gentlemen of the Academy of Ancient Music.' Membership was confined to persons belonging to cathedral choirs, or those 'vouched for by two or more members of the Society as being capable of singing their part in concert both in time and in tune'; and others proposed for election were required, by way of probation, to sing between the acts their proper parts in an ancient madrigal for three or four voices, or some two-part song to be sung with double voices. The Society at this time (1749-50) met every Wednesday evening, and consisted of twenty-one members, who subscribed 4s. 6d. a quarter. According to Sir John Hawkins (who was himself a member) 'most of them were mechanics, some weavers from Spitalfields, others of various trades and occupations, who were well versed in the practice of Psalmody, and who, with a little pains and the help of the ordinary solmisation, which many of them

were very expert in, became soon able to sing almost at sight a part in an English or even an Italian madrigal. They also sang catches, rounds, and canons, though not elegantly, yet with a degree of correctness that did justice to the harmony; and, to vary the entertainment, Immyns would sometimes read, by way of lecture, a chapter from Zarlino, translated by himself. They were men not less distinguished by their love of vocal harmony than by the harmless simplicity of their tempers and by their friendly disposition towards each other.' At times they took country excursions, and the minutes record that on Whit-Monday, 1751, 'the party proceeded up the river, breakfasting at Wandsor (Wandsworth), dining at Richmond, besides stopping to whet their whistles at Mortlack (Mortlake).' In 1764 Mr. Immyns died. In 1768 the subscription was raised to 8s. a quarter, the number of members being about thirty, and it was agreed to hold an entertainment for their friends once at least every year. In 1769 the Society removed to the Feathers Tavern, Cheapside; in 1775 to the King's Arms, Cornhill; in 1778 they were at the Half Moon, Cheapside, and the London Tavern; in April 1792, at the King's Head in the Poultry; in May 1792, at the Globe, Fleet Street; and in 1795 removed to the Crown and Anchor, when the charge for supper, 'on account of the advance in wine,' was raised to 2s. 6d. for members, 4s. for visitors, and 3s. for professors. Festival dinners were held in 1798, 1802, 1803, and 1809, and were continued at intervals, and in 1876 ladies dined at the festival for the first time. In 1814 the subscription was raised to £3, and in 1816 the charge for supper, including a pint of wine, was fixed at 6s. On Sept. 27, 1821, the supper meeting, after being held for eighty years, gave place to a monthly dinner, held, successively, at the Freemasons' Tavern, Willis's Rooms, and the Holborn Restaurant during the season, which then lasted from October to July, but now numbers six meetings, commencing in November. In 1811 was offered for the first time a prize of a silver cup, value ten guineas, 'for the best madrigal in not less than four nor more than six parts, the upper part or parts to be for one or two treble voices. The character of the composition to be after the manner of the madrigals by Bennet, Wilbye, Morley, Weelkes, Ward, Marenzio, and others, and each part to contain a certain melody either in figure or imitation; therefore, a melody harmonised will be inadmissible.' W. Beale's 'Awake, sweet muse,' and W. Hawes's 'Philomela' were selected for a final ballot from fourteen compositions sent in, which included S. Wesley's 'O sing unto my roundelay,' and W. Linley's 'Ah me, quoth Venus.' The prize was given to Beale. The earlier members included Immyns, the founder, by profession an attorney, afterwards appointed lutenist to the Chapel Royal and amanuensis to Dr. Pepusch; Dr. John Worgan, organist and composer; Sir John Hawkins, the musical historian (elected 1752); Rev. C. Torriano and Jonathan Battishill, the composer (elected 1757); E. T. Warren, editor of the Glee Collection (1762); Dr. Arne and his son Michael, and Luffman Atterbury, composer of the glee 'Come, let us all a-Maying go' (1765); Theodore Aylward, one of the assistant directors at the Handel Commemoration of 1784 (1769); Joah Bates, the conductor of the Handel Commemoration (1774); Dr. B. Cooke, organist of Westminster Abbey (1778); James Bartleman (1793); J. P. Street, Librarian and many years Father of the Society; R. J. S. Stevens, the Gresham Professor, and W. Horsley, the glee-writer (1798); Reg. Spofforth, the glee-writer, and Robert Cooke, master of the Westminster choristers (1802); W. Beale (1805); Dr. Callcott (1806); W. Hawes and W. Linley (1809); G. E. Williams, organist of Westminster Abbey (1814); Sir J. L. Rogers, Bart., and T. Greatorex, organist of Westminster Abbey (1819); J. T. Cooper (1825); Jonathan Nield, Rev. W. J. Hall (1828); P. J. Salomons, (1829); Vincent Novello and Thomas Oliphant, afterwards secretary (1830); J. W. Hobbs, J. Calkin (1831); G. Cooper, deputy organist of St. Paul's, James Turle, organist of Westminster Abbey (1832). Up to 1820 the members presided in rotation, but in that year it was resolved to appoint Sir J. L. Rogers as permanent president. The office has since been filled by Lord Saltoun, 1842-53; Sir George Clerk, Bt., 1853-66; Prince Dhuleep Singh, 1867-71; Thomas Oliphant, 1871-73; Hon. and Rev. H. Legge, 1874-77. [The Earl Beauchamp was appointed in 1878, and succeeded in 1892 by the Duke of Beaufort, on whose retirement in 1896 Mr. Otto Goldschmidt was appointed. Sir A. Sullivan was president for the last year of his life, 1899-1900. Lord Alverstone succeeded him in 1901, and was succeeded by Sir Frederick Bridge in 1904. In Nov. 1905 Mr. J. Edward Street, the Hon. Secretary (see below), was appointed President.] The Librarians have been: J. P. Street, 1792-1848; John Bishop, 1849-70; C. D. Budd, 1871-78; J. C. Meek, 1879-88, E. Ernest Cooper, 1888. The conductors or musical directors permanently appointed since W. Hawes, 1809-46, have been: James Turle, 1846-49; James King, 1849-54; Cipriani Potter, 1855-70; Otto Goldschmidt, 1871-77; Sir John Stainer, 1878-87; Sir J. F. Bridge, 1887 to the present time. Dr. John Hullah, Sir J. F. Bridge, and Mr. Eaton Faning, were assistant conductors since 1878. Under the present rules the Society consists of forty members, elected by ballot, the subscription (including dinner fees) being five guineas, and for professional members three guineas. C. M.

[From 1881 two prizes, Mr. T. Molineux's of £10 and the Society's of £5, were awarded

annually until 1889, and triennially from 1891. Mr. Kellow J. Pye was treasurer until 1893, being succeeded by Mr. Chas. T. D. Crews, who still holds the office. The office of hon. sec., held from July 1871 by Mr. J. Edward Street, is now filled by his son, Mr. Oscar W. Street.]

MAELZEL, JOHANN NEPOMUK, born Aug. 15, 1772, at Ratisbon, son of an organ-builder. In 1792 he settled in Vienna, and devoted himself to teaching music, and to constructing an automaton instrument of flutes, trumpets, drums, cymbals, triangle, and strings struck by hammers, which played music by Haydn, Mozart, and Crescentini, and was sold for 3000 florins. His next machine was the Panharmonicon, like the former, but with clarinets, violins, and violoncellos added. It was worked by weights acting on cylinders, and was exhibited in Vienna in 1804. Maelzel then bought Kempelen's Chessplayer; and took it with the Panharmonicon to Paris. The Chessplayer he afterwards sold to Eugène Beauharnais. He next constructed a Trumpeter, which played the Austrian and French cavalry marches and signals, with marches and allegros by Weigl, Dussek, and Pleyel. In 1808 he was appointed court mechanician, and about that time made some ear trumpets, one of which Beethoven used for years. In 1812 he opened the 'Art Cabinet,' among the attractions of which were the Trumpeter and a new and enlarged Panharmonicon; and soon afterwards made public a musical chronometer, an improvement of a machine by Stöckel, for which he obtained certificates from Beethoven and other leading musicians. Maelzel and Beethoven were at this time on very friendly terms. They had arranged to visit London together, and Maelzel had meantime aided the great master in his impecuniosity by urging on him a loan of 50 ducats in gold. In order to add to the attractions of the Panharmonicon, which they proposed to take with them, Maelzel conceived and sketched in detail the design[1] of a piece to commemorate the battle of Vittoria (June 21, 1813), which Beethoven composed for the instrument. While it was being arranged on the barrel, Maelzel further induced him to score it for the orchestra, with the view to obtain funds for the journey; and it was accordingly scored, and performed at a concert on Dec. 8, 1813, the programme of which consisted of the Symphony No. 7; the marches of Dussek and Pleyel, by the automaton, and the Battle-piece. The concert was repeated on the 12th, and the two yielded a net profit of over 4000 florins. At this point Beethoven took offence at Maelzel's having announced the Battle-piece as his property, broke completely with him, rejected the Trumpeter and his marches, and held a third concert (Jan. 2, 1814) for his own sole benefit. After several weeks of endeavour to arrange matters, Maelzel departed to Munich with his Panharmonicon, including the Battle-piece, and also with a full orchestral score of the same, which he had obtained without Beethoven's concurrence and caused to be performed at Munich. Beethoven on this entered an action against him in the Vienna courts, and it is his memorandum of the grounds of the action, as prepared for his advocate, which is usually entitled his 'deposition.'[2] He further addressed a statement[3] to the musicians of London, entreating them not to countenance or support Maelzel. The action came to nothing, and Maelzel does not appear to have gone to London. He stopped at Amsterdam, and there got from Winkel, a Dutch mechanic, the idea of employing a new form of pendulum as a metronome. He soon perfected the instrument, obtained a patent for it, and in 1816 we find him in Paris established as a manufacturer of this metronome, under the style of 'Mälzl et Cie.' Winkel claimed it as his invention, and the claim was confirmed, after examination, by the Dutch Academy of Sciences. A wish to repurchase Kempelen's Chessplayer and to push his Metronome took him back to Munich and Vienna in 1817. Beethoven's good word was of more consequence than any one else's, and knowing Maelzel's cleverness, Beethoven's amenability to a good companion, and the fact that the performance on which the lawsuit was grounded having taken place out of Austria, the action could not lie, it need not surprise us to find that the suit was given up, and the costs divided equally. After this Maelzel travelled much, and even reached the United States, where he passed the rest of his life, except a voyage or two to the West Indies, exhibiting the Chessplayer, the Conflagration of Moscow, and his other curious inventions.[4] He was found dead in his berth on board the American brig *Otis*, July 21, 1838. Maelzel was evidently a sharp, shrewd, clever man of business, with a strong propensity to use the ideas of others for his own benefit.

For the details of his Metronome see the article under that head. It was entirely different from the Stöckel-Mälzel 'Chronometer,' and it was upon the latter and not upon the Metronome, that Beethoven wrote the catch which is connected with the Allegretto of his Symphony No. 8. A. W. T.

MÄNNERGESANGVEREIN, an association of men formed for the cultivation of singing in four parts—two tenors and two basses. They sprang from the Liedertafeln, and the most important were founded by Dr. A. Schmid, in Vienna (1845), and by Franz Weber in Cologne, The latter visited England in the spring of 1860. and sang before the Queen at Windsor. The Cologne Choral Union also gave a set of ten

concerts in St. James's Hall in June 1883. (See LIEDERTAFEL.) F. G.

MÄSSIG. 'In moderate time'; the German equivalent of Moderato, used much by Schumann, as in the sixth of the fugues on the name Bach, and constantly throughout the Album. 'Im mässigen Tempo,' occurs in the fourth figure of op. 72, 'Sehr mässig' in the Lager-scene, No. 3 of op. 76. He uses 'Mässig durchaus energisch' as the translation of 'Moderato con energia' in the second movement of the Fantasia in C, op. 17. M.

MAESTOSO. 'With majesty,' or in a dignified way. It is used either alone, as a direction of time, in which case it indicates a pace rather slower than andante, or, combined with other indications of tempo, as a guide to the expression. Beethoven uses it frequently in both these ways. It occurs alone in the Pianoforte Sonata, op. 111, first movement, in the Namensfeier overture, op. 115, Quartet in E♭, op. 127, etc.; also in Pizarro's song at the end of Act I. of 'Fidelio,' 'Auf euch, auf euch, nur will ich bauen.' In the final chorus of that opera, 'Wer ein holdes Weib errungen,' the direction originally stood Maestoso vivace, but was afterwards changed to Allegro ma non troppo. The first movement of the Choral Symphony is marked Allegro ma non troppo, un poco maestoso; the passage in the last movement to the words 'Seid umschlungen Millionen' is Andante maestoso; and the four bars of 3–4 time immediately before the final Prestissimo are marked Maestoso simply. Mendelssohn uses Allegro maestoso frequently, as in 'Elijah' 'I am he that comforteth,' and 'Be not afraid,' and in 'St. Paul' very often. He uses Moderato maestoso in 'Then did Elijah the prophet.' Maestoso con brio occurs as the equivalent of the German 'Rauschend und festlich' in Schumann's Novelette, No. 5. M.

MAESTRO, master. This word is almost exclusively applied to the great classical composers, but occasionally it is used of the very highest class of executive musicians, though even in this case it may be taken as implying an appreciation of their compositions rather than of their performances. It is seldom applied to teachers as such, but refers almost always to composers of note.

Maestro di cappella is the exact Italian equivalent to the German term Capellmeister, or conductor.

Maestro dei putti (master of the boys) is an office which was founded in 1538 (not, as is generally supposed, in the Papacy of Julius II. which was much earlier), and which was first held by Arcadelt. Its duties are to teach singing to the boys of St. Peter's, in Rome, and more or less to superintend the choir arrangements. It thus represents our 'Choirmaster.' [See ARCADELT, vol. i. p. 101.]

Maestro al cembalo is an officer at the Opera, next in importance to the conductor, and occasionally taking his place. His duties consist of superintending the rehearsals of the music, and accompanying at them. This post was held by Handel at Hamburg, when he was quite young [see HANDEL, vol. ii. p. 280], and afterwards by Mattheson. M.

MAGADA, or MAGAS (Greek), the semicircular wooden bridge fixed at one or both ends of the monochord. The name was also applied to the movable bridge inserted below the string of the monochord to mark the harmonic intervals (Boethius, iv. 18), and generally to the bridge in stringed instruments (Philostratus, 778). [See MONOCHORD.] J. F. R. S.

MAGADIS, an ancient Greek instrument, our knowledge of which is almost wholly derived from a passage in the fourteenth book of Athenaeus, in which the scattered references to it in Greek literature are brought together. Athenaeus died in A.D. 194. The instrument had then long been obsolete, and the doubts which existed as to its exact form and structure are no nearer solution at the present day. From the conflicting statements of the authorities quoted, some of whom identify it with the Pectis, others with the Sambuca and others again with the Psaltery, it would seem that the magadis was an instrument of the dulcimer type, provided with a bridge (magas) or bridges so placed that octaves could be played on adjoining strings. It was introduced from the East through the Lydians, and was in use in Greece as early as the 6th century B.C., when Anacreon speaks of playing on a magadis of twenty strings. According to Aristoxenus it was played without a plectrum. The characteristic of the instrument was the production of sounds in octaves, and consequently we find the name also applied to a species of double flute, also said to be of Lydian origin, on which octaves could be played, and a verb magadizein signifying to play in octaves on any instrument (Pseudo-Aristotle, 18). J. F. R. S.

MAGGINI, GIO. PAOLO, a celebrated Italian violin-maker, born in Brescia in 1581; died in the same place about 1628. According to information culled from the Brescian State Archives, Maggini's family came originally from Botticino, a village in the neighbouring hills of Brescia. His grandfather, Bartolommeo de Maggini, lived and died at Botticino, but after his death his son Zovan or Giovanni, migrated with his wife Giulia, to Brescia, where Paolo, their second son, was born. The Brescian Income Tax papers for 1568 state that Gio. Paolo's elder brother was a shoemaker, but no mention is made of his father following any profession or trade. In all probability he was a retired farmer with private means. Nothing is known of Gio. Paolo's childhood, or what caused him to adopt the profession of violin-making, but a legal document, signed by him in 1602, proves two things clearly: first, that his signature is that of a person of

scanty education, and, secondly, that at the age of twenty-one he was working in Brescia as an apprentice under Gasparo da Salò. On Jan. 20, 1615, he married Maddalena Anna, daughter of Messer Faust Forrestio, and after his marriage he and his wife settled in a house in the Contrada del Palazzo Vecchio del Podesta. In this home, with the assistance of his apprentice, Jacopo de Lanfranchini, Maggini built up a very successful business in the manufacture of citharas, violoncellos, violas, and violins. In 1626 he prospered still more, and acquired a second house and shop in the Contrada delle Bombasaire, whither he removed with his wife and family. He also purchased property in the hills and plains surrounding Brescia, and a residential farm-house and land, which abutted upon the grandfather's old home near the village of Botticino. The date of his death is conjectural. After 1626 the Brescian Income Tax papers cease to mention his name, and in 1632 he was undoubtedly dead, as, in a schedule presented in that year by his son Carlo, he uses the formula 'Filius quondam Johannis Pauli.' Although documentary evidence proves that Maggini's wife died on Nov. 24, 1651, and was buried in the church of St. Agatha, all research for the certificate of her husband's death and burial has been in vain. The only reasonable inference is that as the town of Brescia was ravaged by an excessively severe plague in 1632, Maggini was one of its victims, and being taken to one of the 'pest-houses' which were organised for the sick, at the public expense, died away from home, without any note of his death or burial being made.

As a maker, Maggini's name is associated with many progressive innovations in the construction of the violin, and especially in the method of cutting the wood. In his earliest work these alterations are not discernible, as he was still under the influence of Gasparo da Salò, whose inaccuracy of modelling, rough workmanship, and dark brown varnish he at first copied. But when he once cast aside the methods of his veteran master, and of the old school of viol makers, Maggini created an era in the history of violin-making, which has deservedly immortalised his name. He was among the first makers who discarded the then customary method of cutting the soft pine-wood used for the bellies of violins in what is termed 'slab fashion,' *i.e.* parallel with the upward growth of the tree, and instead, adopted the practice of using the wood the straight way of the grain, brought about by cutting it wedge-ways out of the tree from the bark inwards to the core (see VIOLIN-MAKING). He was almost, if not quite the earliest maker to use corner blocks and linings such as are now employed, and he modulated his thicknesses with far more intention and accuracy than any of his predecessors. Maggini's purfling is beautifully executed. His instruments are mostly ornamentally or double purfled, but there are some violins of his bearing the single line. Three of these, and one viola are known to exist. Many of his violins bear a purfled or painted conventional design upon the back, but as his violin model advanced in originality and perfection, so he gradually discarded the customary ornamentation so dear to the ancient viol-makers, probably having discovered that this practice only served to muffle the tone of his instruments. His violins are large in size, and are made of the best materials. The model is quite original, and bears no resemblance to the Amati pattern; the varnish on his best instruments is orange-yellow, the *ff* holes are clearly cut, the lower circles, in contradistinction to those of Stradivarius, being always smaller than the upper ones, a feature peculiar to Maggini. The scroll is well cut, but shorter than that of other makers, and for this reason appears to be wider than it really is. The labels are placed close to the centre of his instruments; they are in *black roman type*, and, like those of his master da Salò, are *undated*.

Maggini was not a prolific maker, the result of his life's work, as represented by extant instruments, numbering about fifty violins and under two dozen tenors and violoncellos. For this reason authentic specimens of his work are scarce. Some of his finest fiddles have been in the hands of Ole Bull, Léonard, Vieuxtemps, and de Bériot, who possessed two fine examples, one of which he picked up in an old curiosity shop in Paris for 15 francs. This instrument now belongs to the Prince Caraman de Chimay, and is considered of high value. An excellent summary of Maggini's contributions to the development of violins, violas, and violoncellos is given in Lady Huggins's *Gio. Paolo Maggini*, published by the firm of Hill & Sons.

No authentic pupils of Maggini have come to light. None of his seven children followed their father's profession; his only surviving son, Carlo Francesco, became a silk merchant, but the Maggini influence can be clearly traced both in the Guarnerius and the 'Long Strad' models. In modern times few makers have been more copied, both honestly and dishonestly. Fine copies were made by Bernard Simon Fendt and Remy (two French makers who settled in London); by Darches, and N. F. Vuillaume in Belgium; by Gand (père), Bernadel, Chanot, and Vuillaume in Paris, and at Mirecourt, where it is one of the favourite models.

E. H-A.

MAGGIORE. This word, the Italian equivalent of our 'major,' is used as a supplementary guide in passages of music where a change is made from the minor to the major mode, generally to the tonic, not the relative major, since in that change a careless reader might disregard the correction of the minor signature. Such a change as that from C minor to C major, even when the three naturals are used to annul the previous three flats, might conceivably be overlooked, were it not for the warning 'maggiore.' But such external aids to the reading of music are of rather doubtful utility. M.

MAGIC FLUTE. See ZAUBERFLÖTE.

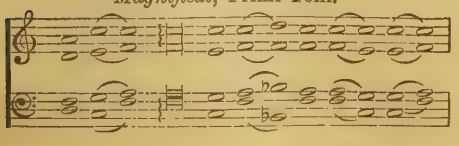
MAGNARD, LUCIEN DENIS GABRIEL ALBÉRIC, born in Paris, June 9, 1865, was educated at the Lycée Condorcet for a legal career. After passing the grade of 'licencié,' he discovered that his musical faculty was too strong to be resisted, and entered the Conservatoire, under Dubois and Massenet, gaining the first prize for harmony in 1888. On leaving the Conservatoire he pursued his studies with Vincent d'Indy, and has since become one of the most remarkable of modern French composers, distinguished for his boldness and sincerity. He has written the following for orchestra: three symphonies, opp. 4, 6, 11; a suite in ancient style, op. 2; a 'chant funèbre,' op. 9; an overture, op. 10; 'Hymne à la Justice,' op. 14; 'Hymne à Vénus,' op. 17. Among his works for chamber music are a quintet for piano and wind, op. 8; a violin sonata, op. 13; a string quartet, op. 16; and a trio for piano and strings, op. 18. His dramatic works are: 'Yolande,' op. 5, one-act, Brussels, 1892; 'Guercœur,' op. 12, in three acts, not yet given. The libretti of both are by the composer himself. G. F.

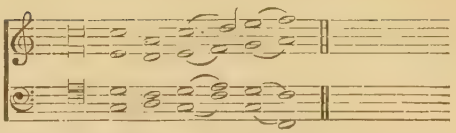
MAGNIFICAT. The 'Song of the Blessed Virgin Mary' has been used as the Vesper Canticle of the Church from time immemorial; and the Evening Office has always been so constructed as to lead up to it as its chief point of interest.

In Plain-song services it is sung to the same Tones as the Psalms, but to a different form, with more elaborate intonations and mediations (see PSALMODY).

After the invention of Discant a custom arose of singing *Magnificat* in alternate verses of Plain-song and *Faux Bourdon*. Sometimes the *Faux Bourdon* was simply a harmonised psalm-tone, with the melody in the tenor, as in the following example of a very beautiful

Magnificat, Primi Toni.

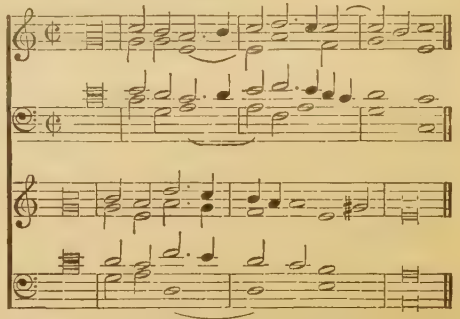




'Use' which has long been traditional in French Cathedrals.

Sometimes the Plain-song was contrasted with an original *Faux Bourdon*, written in the required Mode, but not, like the former example, on the actual melody of the psalm-tone. Dr. Burney, during his visit to Rome, met with an exceedingly interesting MS. collection of *Faux Bourdons* of this description, by some of the greatest masters of the 16th century. From his autograph transcription of this volume—now preserved under the name of *Studij di Palestrina*, in the Library of the British Museum—we extract the following beautiful example by Giovanni Maria Nanini.[1]

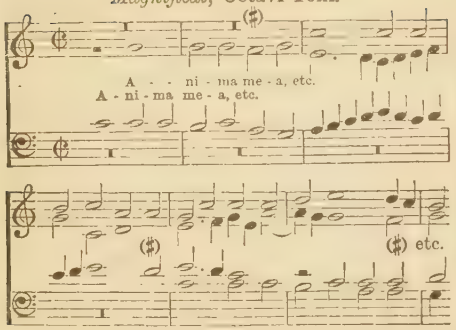
Ton. IV.



These two methods of singing *Magnificat* are so wonderfully effective that it is difficult to choose between them; and, happily, they are both so easy that no choir need fear to attempt them. But the development of the idea did not rest here. It is scarcely possible to name any great church composer who has not illustrated the text of the canticle with original music over and over again. Palestrina published a volume, in 1591, containing two settings in each of the first eight Modes, and has left nearly as many more in MS. His favourite plan was to treat the alternate verses, only, in complex imitation and closely-interwoven fugal points, leaving sometimes the even and sometimes the odd verses to be sung in unisonous Plain-song, in the manner already described. The following extract from one of the finest compositions in the series will serve to exemplify his usual mode of treatment.

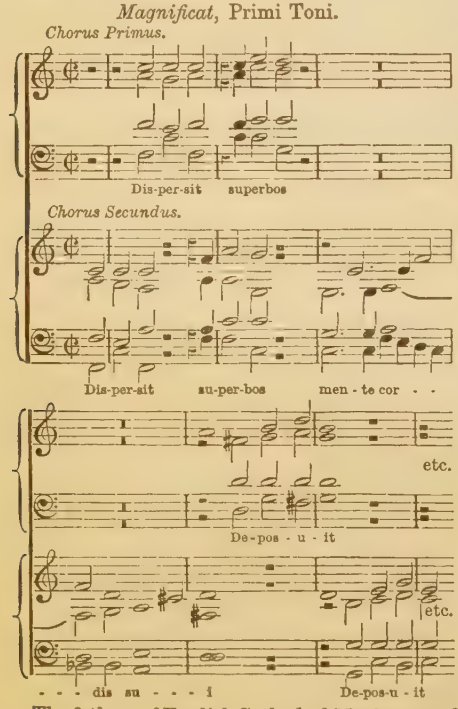
[1] It will be seen that Nanini has ended his Chant with the harmony of the Dominant, instead of that proper to the Final of the Mode. A similar peculiarity is observable in many other *Faux Bourdons* adapted by the old masters to alternate verses of Canticles and Psalms. The reason of this is self-evident. One or other of the subsidiary cadences of the Mode is employed, in order that its true Final Cadence may be reserved for the conclusion of the Antiphon which is to follow. The Sistine *Miserere* may be cited as the exception which proves the rule. It ends with the proper Final Cadence, because, in the office of *Tenebrae*, it is always sung without an Antiphon [see ANTIPHON].

Magnificat, Octavi Toni.



This method was also adopted by Francesco Suriano, Orlando di Lasso, and many other writers; but Felice Anerio, Luca Marenzio, Giovanni Gabrieli, and some of the most noted of their contemporaries, treated the canticle in polyphony throughout, frequently disposing their voices in two or more antiphonal choirs. A fine example of this later style is preserved in Gabrieli's eight-part *Magnificat* in the First Mode.

Magnificat, Primi Toni.



The fathers of English Cathedral Music treated *Magnificat* in a manner peculiarly their own—clear in design, pure, solemn, and richly harmonious, but differing in no wise from their rendering of the other canticles, and demanding no slower pace than the rest. The finest of these, which may well bear comparison with the works of the great Flemish and Italian Schools, are to be found in the 'Services' of Tallis, Byrd, Farrant, Tomkins, Bevin, Batten, and Orlando Gibbons. Their number is comparatively small; but it is to be feared that many invaluable compositions of the Elizabethan era have been lost to us, through the spoliation of Cathedral libraries, during the civil wars. After the Restoration the style rapidly deteriorated; and, notwithstanding the efforts of a few talented composers—especially Creyghton and Croft—who conscientiously followed the precepts of the earlier school, it sank, eventually, so low that even the platitudes of Kent and Jackson fail to represent its latest stages of degradation. Happily the number of fine examples still remaining is quite sufficient for all practical purposes, and all are now published in cheap and easily accessible forms.

The text of *Magnificat* has also been grandly illustrated by Bach, Mendelssohn, and other composers of the modern school in the Oratorio style, with full orchestral accompaniments. For some particulars respecting the history of a *Magnificat* of this description, which has given rise to discussions of more than ordinary interest, see ERBA (vol. i. p. 787); HANDEL (vol. ii. p. 286); and ISRAEL IN EGYPT (vol. ii. p. 514). W. S. R.

MAGPIE MADRIGAL SOCIETY, THE. In 1885 and 1886 Mr. (now Sir) Alfred Scott Gatty collected a small choir to sing choruses and glees at the concerts which the then Viscountess Folkestone (now Helen Countess of Radnor) was giving for charitable purposes. These practices proved so popular that in November 1886 a society was founded under the name of 'The Magpie Minstrels,' its object being, to quote the Society's minutes—'to give Concerts for charitable purposes, the nature of which shall be left to the discretion and selection of the Committee.'

Mr. Lionel Benson was then and still is conductor, and the numbers which in the first instance were limited to 80, rose by rapid degrees to nearly 200. In 1889 H.R.H. Princess Louise, Duchess of Argyll (then Marchioness of Lorne) honoured the Society by becoming its President, attending the practices, and taking part in the Concerts. In 1889 the first Invitation Concert was given, and since then one Charity Concert and one Invitation Concert have been given annually. Upwards of £3500 has been handed over to various Charitable Institutions. At first 'The Magpies' were associated at their concerts with 'The Wandering Minstrels' Amateur Orchestral Society' also conducted by Mr. Lionel Benson. The name of the society was altered from 'The Magpie Minstrels' to 'The Magpie Madrigal Society' in 1896. In order to encourage good vocal part-writing 'a cappella' the society has, from time to time, given prizes for competition among the students of the Royal College of

Music, and Royal Academy, with, on the whole, satisfactory results, and the prize works have always been performed at the Invitation Concerts. Many of the best known Madrigals have been included in the programmes, but a special feature has been the introduction, for the first time, of many fine works of all schools, hitherto unknown in this country, which have probably rested in oblivion, as far as England is concerned, since the 16th and 17th centuries, the period in which they were written. Most of them have been unearthed and edited specially for the use of the choir by its conductor. Among them may be mentioned numerous Madrigals, Motets, Chansons, Villanelle, etc., by Orlando di Lasso, J. P. Sweelinck, Josquin des Prés, Claude Lejeune, Francis Regnart, Orazio Vecchi, Luca Marenzio, Quintiani, Vittoria, Arcadelt, Verdelot, Willaert, Clemens, Claudin, Certon, Franck, Hassler, Jannequin, Ciprian de Rore, Crequillon, Goudimel, Giovanelli, Garnier, Hesdin, Costeley, Tessier;—nearly all of which were sung with the original French, German, Italian, and Latin words to which they were written. Among modern composers prominence has been given to the unaccompanied choral works of Brahms, very nearly all of which have been performed by the society at one time or another; and some of the unaccompanied choral works of Peter Cornelius were introduced to the English public for the first time by this choir.

Many compositions of great merit have been specially written for the society by Sir Hubert Parry (who was elected President of the Society in 1906), Sir Charles Stanford, Dr. C. H. Lloyd, Dr. Alan Gray, Mr. Henschel, Mr. R. Vaughan-Williams, Dr. Eaton Faning, Miss Maude White, Dr. Arthur Somervell, and Mr. J. Blumenthal. S. H. W.

MAGYAR (Hungarian) MUSIC. The most important part of the national music of Hungary is so called because it proceeds from the Magyar portion of the inhabitants. 'The so-called Hungarian style of music,' says the writer of two excellent articles on this subject in the *Monthly Musical Record* for February and March 1877, 'as it has come to be recognised, cannot by any means be regarded as indigenous, but may most properly be briefly defined as the product of a commixture of several races. More than one-fourth[1] of the population of Hungary proper (*i.e.* Transleithan Hungary, as it has come to be called since its union with the Austrian empire in 1869) consists of Magyars, the descendants of the ancient Scythians of the Tartar-Mongolian stock, who, after wandering from the Ural mountains to the Caspian Sea, and thence to Kiev, established themselves in Hungary in the 9th century. The remainder of the population is made up of Slavs, Germans, Wallachians, Jews, and Gipsies. Of this mixed population, the Magyars, as the dominant lords of the soil, and the Gipsies, as the privileged musicians of the country, are in the main to be regarded as the joint originators of the national style.'

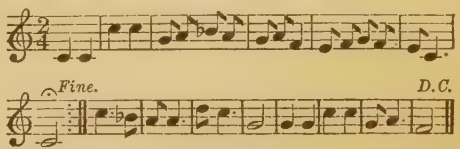
[1] The proportion appears to be more like one half than a quarter.

The union of these two latter races resulted in the combination of their musical characteristics. That of the Magyar music is the peculiarity of its rhythms, and that of the Gipsy music is the presence of turns, embellishments, and 'grace-notes' added to and built upon the melody, and eventually becoming a most important feature in it. [See an essay by Carl Engel, on *The Music of the Gipsies* in the *Musical Times* for 1880, pp. 219, 274, 332, 389.]

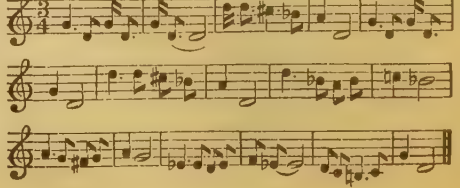
This latter peculiarity, together with the scale which is characteristic of the music of Hungary in common with many other nations of Eastern Europe—a scale with two superfluous seconds, or the harmonic minor with a sharp fourth—

seem to indicate an Asiatic origin. (The ordinary European scales are also in use.) These two chief characteristics will be examined in order.

I. The rhythms, of Magyar origin.—The great distinctive feature of the bar-rhythms is *syncopation*, generally consisting of the accentuation of the second quaver in the bar of 2–4 time (the rhythm known as *alla zoppa*, 'in a limping way'), but sometimes extending over larger spaces, as in No. 2 of the 'Ungarische Tänze' of Brahms, bars 1–2, 5–6, etc., where the syncopation extends over two bars. Even where the melody is without syncopation, the accompaniment almost always has it. The phrase-rhythms are not confined to strains of 4 and 8 bars, but phrases of 3, 5, 6, 7, and 8 bars are not unfrequently to be met with. As examples of 3- and 6-bar rhythms may be cited the third and first of Brahms's 'Ungarische Tänze,' and of 7-bar rhythm, the first part of the following melody:—



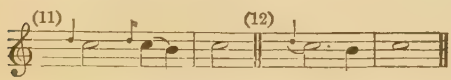
3–4 time, and consequently 6–8, is almost unknown in genuine Magyar music, although some modern Hungarian composers have introduced it in slow movements. The following very fine 'Hallgató' is referred to triple time by the best authorities; it is a 'Lassú' or slow movement, but is not intended for the dance—



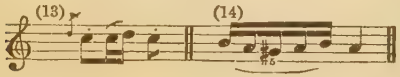
In the 'Lassú' the actual value of the notes depends far more upon the accentuation of the words sung, than is the case in the quicker movements. A very beautiful rhythm of seven in a bar (written, for greater clearness, as a bar of 3-4 followed by a bar of common time) occurs in the 'Hungarian Song' on which Brahms has written variations, op. 21, No. 2.

II. The turns and embellishments added to the melody, of Gipsy, and hence Oriental, origin.—This peculiarity has been observed by travellers in India, who say that in the performance of the natives any embellishments and 'fioriture' are permitted to be introduced at the will of the performer, provided only that the time of the melody remains intact. The following is a list of the most characteristic turns and 'grace-notes' used in Hungarian music, given by the writer above mentioned:—

and the double cadence



to which may be added



But the importance of Hungarian music lies not so much in its intrinsic beauty or interest, as in the use made of it by the great classical masters, and the influence which it exercises on their works. The first composer of note who embodies the Hungarian peculiarities is Haydn. The most obvious instance of course is the well-known 'Rondo all' Ongarese,' or 'Gipsy Rondo,' in the Trio No. 1 in G major; but besides this avowedly Hungarian composition there are many passages in his works which show that the years during which he held the post of conductor of Prince Esterhazy's private (and almost entirely Hungarian) band, were not without their effect. Instances of this may be found in many of the 'Salomon symphonies' (the Symphony in B♭, No. 9), etc. (see further, *A Croatian Composer*, by W. H. Hadow, 1897). The composer who has made the greatest use of Hungarian characteristics is Schubert. Constantly throughout his works we come upon a peculiarity which at once tells us of its nationality. The C major Symphony (No. 9) for instance, the A minor string quartet, and the Fantasia in C major, op. 15, are full of Hungarian feeling and character, while almost all the peculiarities of the Hungarian style are present in the splendid 'Divertissement à la hongroise' (op. 54).

In the work of three men, belonging to two very different schools, Hungarian characteristics are most commonly and most skilfully used. It is enough to cite the names of Liszt, Brahms, and Joachim, to bring to the mind of every reader the use made by each of them of Hungarian forms and themes. We may think it only natural that the first and the last of these should, being natives of Hungary, have a natural love for their national music, as we see in the 'Legend of St. Elizabeth,' the symphonic poem 'Hungaria,' the fourteen 'Rhapsodies Hongroises,' by Liszt, and the noble Hungarian violin concerto of Joachim, which is a splendid instance of the combination of national characteristics with the classical forms. In the case of Brahms, however, there is no national prejudice to which the partiality for the Hungarian element might be ascribed, and yet here we meet with many Magyar characteristics, not only in the 'Ungarische Tänze,' which are nothing more than transcriptions for the piano of the wild performance of the Hungarian bands (according to the best authorities on this subject), but also in the Sextets for strings, the G minor quartet for pianoforte and strings, the pianoforte variations, etc.

The following are some of the most important Magyar compositions.

Dances.—The Csárdás (the name derived from Csárda, an inn on the Puszta (plain), where this dance was first performed). It was introduced into Hungary from Bohemia by Csermák, and was very quickly adopted as a national dance. Every Csárdás consists of two movements,—a 'Lassú,' or slow movement, andante maestoso, and a 'Friss,' or 'quickstep,' allegro vivace. These two alternate at the will of the dancers, a sign being given to the musicians when a change is wished.

The 'Kör-táncz,' or Society-Dance, of which a part consists of a *Toborzó*, or Recruiting dance. A great number of these were arranged or composed by Lavotta.

The 'Kanász-táncz,' or Swineherd's Dance, is danced by the lower classes only.

Operas.—Among national Magyar operas—*i.e.* operas of which the libretti are founded on national historic events, and the music is characterised by Magyar rhythms, etc.—may be mentioned 'Hunyady László,' 'Báthori Maria,' 'Bánk Bán,' and 'Brankovics,' by Franz Erkel, and the comic opera 'Ilka,' by Doppler. Besides these two composers, the names of Mocsonyi, Császár, Fáy, and Bartha, may be given as examples of operatic writers.

Songs.—Many collections of Népdal, or popular songs, have been published. The best col-

lection is that of Gyula Káldy, containing songs of the first part of the 19th century; the seven volumes of Bartalus, and the collection made in the middle of the 18th century by Adám Horváth, are of value. Panna Czinka's collection of gipsy melodies may also be mentioned. One tune, 'Repülj Fecském,' has been made widely known by Remenyi's adaptation of it for the violin.

The famous national tune, the 'Rákoczy March,' was, in its original form, a lament for the hero Rákoczy, played on the tárogató—an instrument resembling a cor anglais—about the end of the 18th century. It was arranged as a march early in the 19th century by Scholl, the conductor of a military band at Nagyvárad, and was heard in this form by Berlioz, who introduced it into his 'Damnation de Faust,' with the result that it made a furore all over Europe.

The National Hymn of Hungary is called 'Szózat,' or 'Appeal.'

Many of the best of the national songs of Hungary have become widely popular in England since the publication of Mr. F. Korbay's admirable arrangement of them with English words.

That the Magyars know how to value their own national music may be shown by the existence at Budapest of a National Conservatorium, and of the Royal Academy of Music, of which Liszt was the first Director; there are two national theatres, one for opera and the other for drama, besides the 'Népszinház,' or People's Theatre. The interest in folk-song has borne excellent fruit in Hungary, where phonographic records have been made of many thousands of traditional tunes, and preserved in the National Museum at Budapest.

The chief musical periodical of Hungary is the *Zenevilág*, edited and carried on by Pongrác Kacsoh. (Information from Messrs. Arthur Diósy, Béla Bartók, etc.) M.

MAHILLON, Charles, & Co., wind-instrument makers. This firm was founded at Brussels by C. Mahillon (born 1813, died 1887), in 1836. Three of his sons entered the business, Victor (see below), Joseph, who conducts the Brussels business, and Fernand, manager of the London branch established in 1884, in Leicester Square, and removed in 1887 to Oxford Street.

Mahillon, Victor, of the firm of wind-instrument makers, above mentioned, a writer of important works on acoustics and musical instruments, and the honorary and zealous custodian of the Museum of the Brussels Conservatoire, was born in that city, March 10, 1841. After studying music under some of the best professors there, he applied himself to the practical study of wind-instrument manufacture, and was taken into his father's business in 1865. He started a musical journal *L'Écho Musical* in 1869, and continued it until 1886, when his time became too much occupied to attend to its direction. In 1876 he became the honorary curator of the museum of the Conservatoire, which, begun with Fétis's collection of 78 instruments, was, through his special knowledge and untiring energy, increased (1888) to upwards of 1500! An important contribution to it, of Indian instruments, has been a division of the fine collection of the Rajah Sir Sourindro Mohun Tagore, between the Brussels Conservatoire and the Royal College of Music, London. M. Victor Mahillon has published two very important works, besides three synoptical tables of harmony, voices and instruments. The first is *Les Éléments d'Acoustique musicale et instrumentale*, an octavo volume published in 1874, which gained for him at Paris in 1878 the distinction of a silver medal. The other is the catalogue of the Conservatoire, which appeared in volumes annually from 1877, and is of the highest interest. As well as these noteworthy works he contributed to the ninth edition of the *Encyclopædia Britannica* several historical and technical articles of great value upon wind instruments, both wood and brass. As soon as M. Victor Mahillon could introduce a workshop into the Conservatoire he did so, and he had reproductions made of many rare instruments which, through their antiquity, or the neglect of former owners, had become too much deteriorated for purposes of study. Among these reproductions the Roman Lituus and Buccina in the Music Loan Collection at Kensington, in 1885, will be remembered as prominent objects of interest in the fine selection contributed under M. Mahillon's auspices by the Brussels Conservatoire. He has reproduced from authentic sources the complete families of wind instruments that were in use in the 16th and 17th centuries.

M. Victor Mahillon's services to the Inventions Exhibition of 1885, in the above-named contribution of instruments to the Loan Collection, and the historical concerts under his direction performed by professors and students of the Brussels Conservatoire, at which several rare instruments were actually played upon in contemporary compositions, were so highly appreciated by the Executive Council of that Exhibition that a gold medal was awarded to him. A. J. H.

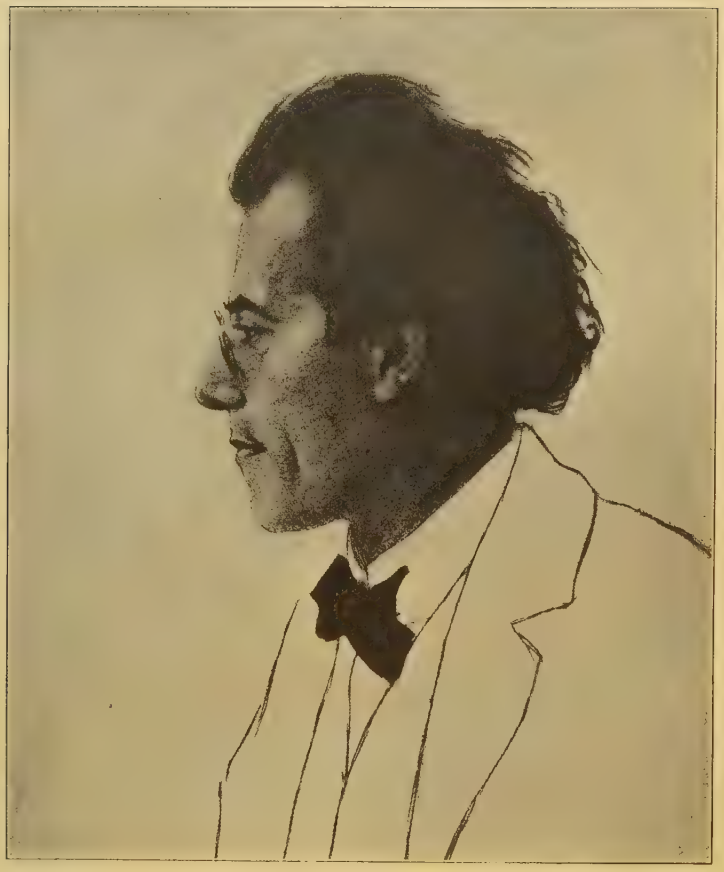
MAHLER, Gustav, born July 7, 1860, at Kalischt in Bohemia, was educated at the Gymnasium at Iglau, at Prague, and at the University of Vienna, where he was also a pupil of the Conservatorium, from 1877. From 1880 he conducted in various theatres in different towns of Austria, and in 1883 was appointed second capellmeister at Cassel, becoming first capellmeister at Prague as Seidl's successor two years afterwards. It was in the latter capacity that he became intimately acquainted with the classical masterpieces and with the advanced modern compositions. In 1886 he went to

Leipzig as coadjutor to Nikisch, in whose stead he conducted the opera for six months. In 1888 he undertook the direction of the opera at Pesth, and raised the standard of the performances to a high level. In 1891 he was appointed first capellmeister in the Stadttheater of Hamburg, and remained there until in May 1897 he was appointed Hofcapellmeister, and in October was called to succeed Wilhelm Jahns as director of the Hofoper in Vienna, and Richter as director of the Philharmonic Concerts. From 1898 to 1900 he also conducted the Gesellschafts-Concerte. He conducted the German opera at Covent Garden in 1892. He is one of the most distinguished of living conductors, excelling especially in the music of Wagner. The possessor of a strong will and wonderful energy, he imposes his own will upon the performers under him, and obtains very remarkable results. As a composer he is highly esteemed, although both his operatic experiments, 'Die Argonauten,' and 'Rübezahl,' belong to his earlier period, and have not made their mark. His six symphonies are in D, 1891; C, 1895; F, 1896; the fourth, 1901; the fifth, in D minor, called the 'Riesensymphonie,' 1904; and a sixth, 1906. The first symphony was played at the Promenade Concert of Oct. 21, 1903; and the fourth, a curious amalgam of extreme simplicity of theme with elaborate workmanship, ending with a soprano solo in the finale, at the Promenade Concert of Oct. 25, 1905. A set of 'Humoresken,' for orchestra, and a cantata, 'Das klagende Lied,' are among Mahler's most important compositions; they are published under the auspices of the 'Gesellschaft zur Förderung deutscher Wissenschaft, Litteratur und Kunst in Böhmen.' He also finished Weber's operatic fragment, 'Die drei Pintos' (produced in 1888 at Leipzig). Mahler's career is the subject of a pamphlet by Ludwig Schiedermair (Leipzig, Seemann's Nachfolger), from which much of the above information is taken. M.

MAHOON, Joseph (or MOHOON), a London harpsichord and spinet-maker near the middle of the 18th century. His name is present on the harpsichord figured in Hogarth's *Rake's Progress*, Plate II. 1735. In Rider's *Court Register* for 1759 he is entered as, 'Joseph Mohoon, harpsichord maker to the king.' F. K.

MAHU, Stephan, a German composer, who flourished in the earlier part of the 16th century, is said to have been a singer in the chapel of the Archduke Ferdinand at Vienna, though this is only a conjecture from the fact of some of his compositions being received into Joanelli's *Thesaurus* of 1568. His works appeared only in collections. Ambros and others speak highly of a set of lamentations *a* 4-6, which appeared in Joanelli, and have since been republished by Commer. Mahu's other works consist chiefly of a few contrapuntal settings *a* 4 and 5 of German songs, sacred and secular, in Ott, Rhaw, and Foster's collections. His secular songs, Eitner as well as Ambros judges very favourably. The former describes a setting of 'Ach hilf mich Leid und sehnlich Klag,' *a* 5, as excellent both in technique and expression (see *Monatshefte für Musikgeschichte*, xxvi. 57). He also gives in shortened notes a characteristic setting of an old Tanzlied in triple time, 'Es ging ein wolbezogner Knecht.' Ott's *Liederbuch* of 1544 reprinted in 1872, contains four songs by Mahu, three sacred and one secular. From the text of one of the sacred songs, 'Lobt Gott ihr Christen all,' being a fierce diatribe against Roman abuses, as well as from the fact of Mahu having contributed a setting *a* 5 of Luther's 'Ein' feste Burg' to Rhaw's *Geistliche Gesänge*, 1544, we may conclude that Mahu was more Lutheran in his sympathies than Roman. J. R. M.

MAICHELBECK, Franz Anton, was born in 1702 at Reichenau near Constance, and was sent by some generous patrons to Rome to complete his musical training. He is afterwards described as being Professor of the Italian language and Praesentiarius of the Minster at Freiburg-im-Breisgau. By Praesentiarius would appear to be meant a prebendary or beneficed priest on the staff of a collegiate or cathedral church. Fétis took it to mean a 'beadle,' and mistakenly described Maichelbeck as 'bedeau de la cathédrale de Freyberg'; and unfortunately Eitner, in his *Quellen-Lexikon*, has adopted Fétis's mistake, though it was corrected, and the word itself sufficiently explained, in an article by E. von Werra in Haberl's *Kirchenmusikalisches Jahrbuch*, 1897, pp. 28-30. The whole staff of a collegiate church was denominated Praesentia. Maichelbeck's works are of some importance in the history of clavier-music. He cultivated the lighter Italian homophonic style, which influenced the earlier development of the clavier sonata. His opus 1 is entitled 'Die auf dem Clavier spielende und das Gehör vergnügende Cäcilia, das ist viii Sonaten, so nach der jetzigen welschen Art, Regel- und Gehör-mässig ausgearbeitet' . . . Augsburg 1736. These eight sonatas are partly suites, having dance movements intermingled with adagios, allegros, capriccios, and toccatas. The whole work shows the study of Italian models. For some illustrative quotations see Seiffert, *Geschichte der Claviermusik*, Bd. i. pp. 332-34. The only other known published work of Maichelbeck is his opus 2 entitled 'Die auf dem Clavier lehrende Cäcilia' . . . Augsburg, 1737. The first two parts of this work are theoretical, but the third part consists of preludes, fugues, and versetts on the eight church tones, which, however, are treated not in any proper organ style, but in the lighter and more florid clavier style. Maichelbeck died June 14, 1750. J. R. M.



GUSTAV MAHLER

MAID OF ARTOIS, THE. A grand opera in three acts ; words by Bunn, music by Balfe. Produced at Drury Lane, May 27, 1836. G.

MAID OF HONOUR, THE. A comic opera in three acts ; words by Fitzball, music by Balfe. Produced at Drury Lane, Dec. 20, 1847. G.

MAILLARD, Jean, a French composer of the earlier part of the sixteenth century, is said to have been a pupil of Josquin des Près. Several Masses by him were published separately by Le Roy and Ballard of Paris from 1557 to 1559, one of which, entitled 'Je suis desheritée,' has a peculiar history, and is of interest because of its connection with a work of Palestrina. It was republished by the same French firm, and almost about the same time, as being the work of another French composer, Nicholas de Marle, and there might thus have been considerable doubt as to its authorship, but it was also copied, probably at some earlier date, into the Choir-books of the Sistine Chapel at Rome, and there ascribed to Maylard. It thus became known to Palestrina, who adopted the themes of Maillard's Mass for a Mass of his own, which was afterwards published as No. 3 'sine nomine,' of the sixth book of his Masses 1592 (see Haberl's Preface to vol. xv. of Palestrina's Works, complete edition of Breitkopf & Härtel, also his Catalogue of the Music of the Sistine Chapel, p. 28). 'Je suis desheritée' was in fact a popular French song, on which many musicians, including Lassus and Gombert, but especially French writers, composed Masses, and this may account for the confusion between Marle and Maillard, as Marle may also have composed a Mass on it which was confused with that of Maillard. The song itself, as set for four voices by Pierre Cadéac, may be seen in Eitner's Selection of Chansons, 1899, No. 11 ; and a comparison of this with Palestrina's Mass will show that the tune, as given by Cadéac partly in the Tenor, but even more completely in the Descant, reappears in all the leading themes of Palestrina's work, and is given complete to start with, in the three divisions of the Kyrie. Palestrina's Mass should thus, equally with that of Maillard, be denominated 'Je suis desheritée,' though Palestrina himself left it without a name, out of deference, no doubt, to the later ecclesiastical scruples against the use of secular names and tunes for works intended for the Church. But there is nothing really secular about the tune, and it is just worth notice that the opening strain of both song and mass is identical with the opening strain of the oldest known German Choral tune, 'Christ ist erstanden.' Other works by Maillard besides the three Masses, *a* 4-5, and a Patrem for eight voices, are magnificats, motets, and chansons which appeared in the various collections of the time. Ambros describes his motets as characterised by a noble and expressive melodious elegance, and reckons him generally as one of the better masters of the French School. A chanson by Maillard which has all this characteristic of melodious elegance, may be seen in Eitner's Selection of Chansons, No. 39. J. R. M.

MAILLART, Louis (called Aimé), born at Paris, March 24, 1817, was a pupil of the Conservatoire, where he studied composition with Halévy and Leborne, and the violin with Guérin. He won the Grand Prix de Rome in 1841, with his 'Lionel Foscari,' and the first of his six operas, 'Gastibelza' (three acts), was successfully produced in 1847. His 'Moulin des Tilleuls' was given at the Opéra-Comique in 1849, and 'La Croix de Marie' in 1852, but the work which has kept his name before the public of those countries in which opéra-comique still flourishes is 'Les Dragons de Villars,' produced at the Opéra Comique in Paris in 1856. His later operas, 'Les Pêcheurs de Catane' (1860), and 'Lara' (1864), were less successful. Maillart also wrote some cantatas, such as 'La Voie sacrée' (1859), 'Le 15 août' (1860), etc. ; he died at Moulins in the department of Alliers, May 26, 1871. G. F.

MAINZER, Joseph, LL.D., was born in 1801[1] at Trêves, where his father was a butcher. He was educated in the Maîtrise of Trêves Cathedral, learnt to play several instruments, and developed considerable musical gifts, then spent some time in the coal mines near Saarbruck, with the view of being an engineer, and at length embraced the ecclesiastical profession, was ordained priest in 1826, and afterwards became Abbé. His first practical introduction to music was as singing-master to the seminary at Trêves, for which he published a *Singschule* or Method (Trêves, 1831). His political tendencies obliged him to leave Germany, and we find him in 1833 at Brussels writing an opera ('Triomphe de la Pologne') and editing the musical portion of *L'Artiste*. His next destination, at the end of 1834, was Paris, where he opened workmen's classes for music and singing, joined the staff of the *Gazette Musicale* and wrote the musical feuilletons for the *National*. Between 1835 and 1841 he published several educational works on music, chiefly for very young beginners, as well as other works, and an opera, 'La Jacquerie,' which was damned on October 10, 1839. He came to England in June 1841, competed for the musical professorship at Edinburgh in 1844, lived in Edinburgh in 1842-1847, and finally established himself at Manchester. In February of that year Hullah had started his classes on Wilhem's system, and Mainzer attempted to follow suit in the north, and with considerable success. His *Singing for the Million*[2] (1842), was at that time well known, and went through many editions. He overworked himself in this cause, and died, much

[1] This date is established by the epitaph at Manchester. Dr. Riemann gives May 7, 1807, as the date of birth.

[2] M. Fétis amusingly infers from this title that Mainzer expected to number a million pupils.

esteemed and regretted, at Manchester, Nov. 10, 1851. He was buried at Rusholme Road Cemetery, Manchester. A periodical started by him in July 1842, and entitled *Mainzer's Musical Times*, was the predecessor and basis of the present *Musical Times*. See the *Musical Herald* for June 1895, and an extended notice in *Chambers's Journal*, Feb. 14, 1852. G.

MAÎTRE DE CHAPELLE, LE. Opéra-comique in two acts, by Ferdinando Paër. Produced at the Théâtre Feydeau, Paris, March 29, 1821. It was afterwards reduced to one act, and has enjoyed great success in France and Germany in this form. An English version was given at the Prince of Wales's Theatre, Feb. 16, 1897.

MAÎTRISE, a term formerly applied in France both to the quarters assigned in cathedrals and collegiate churches to the choristers and their master, and to the institution itself, which originally included a complete education, lay and ecclesiastical. These schools turned out many great men, several rising to be bishops and popes; among the latter Pope Urban IV., a cobbler's son, whose early years were passed in the 'Psallette' at Troyes. Some centuries later, when the Maîtrises had undergone great changes, they were still the only establishments in which even secular musicians could obtain their training. From the Maîtrises the Church obtained choristers, organists, and maîtres de chapelle, and the world its favourite composers. Here also, although instrumental music was neglected, and dramatic music positively forbidden, the regimental bands found their bassoon players, and the lyric theatres their 'clavecinistes-accompagnateurs,' violoncellists, and singers.

A complete account of the Maîtrises would involve a review of the whole history of music anterior to the French Revolution, so we must be content with specifying a few of the masters, composers, choristers, and organists who have reflected honour on these ancient institutions. They were real schools of music, the pupils being maintained at the cost of the chapters. Indeed they much resembled the Conservatorios of Italy, both in their mode of administration, and in the course of instruction given. They were not, however, all organised alike, but varied with local circumstances. Thus in some the boys, the master, and the priests, lived in common, in others separately; in some the maintenance of the children was in the hands of the master, in others there was a regular purveyor. But in all, the main end was the study of music. Before the Revolution there were in France 400 Maîtrises and choirs, with as many maîtres de chapelle, maintained either by the chapters of cathedrals and collegiate churches, the curés, or the monasteries. Each Maîtrise contained, on an average, from 25 to 30 persons, and the musicians thus diffused throughout the country numbered in all about 10,000, of whom 4000 were pupils or choristers. There was naturally much rivalry among the different establishments, which was of great benefit to music. To show how great and widely spread was their influence we may name a few of the principal musicians and composers who owed their education and their very varied styles to this one capacious source, before the establishment of opera in France:—Eustache du Caurroy, Intermet, and Claudin (Claude de Sermisy), who flourished under Henri IV.; Veillot, maître of Notre Dame; Hautcousteau, maître of the Sainte Chapelle; Péchon, maître of St. Germain; Frémart, Cosset, Gobert, Boesset, Moulinier, and Michel Lambert, all contemporaries of Chanoine Annibal Gantez, whose *Entretien des musiciens* (Auxerre, 1643, small 12mo, very scarce) contains curious and not very edifying details of the lives of the maîtres de chapelle of his day. Then, with the use of opera, came Cambert, Campra, and Gilles, a pupil of Poitevin, and composer of a celebrated 'messe des morts' performed at the funeral of Rameau, Bernier, a learned contrapuntist, Rameau himself, Gauzargues, and others of less note. Among organists—Marchand, the Couperins, Daquin, who threatened to be a formidable rival to Handel and Rameau, Balbâtre, Charpentier, Séjan, and Boëly. Among composers—Lalande, Montéclair, Blanchard, Mondonville, Floquet, Philidor, Gossec, Grétry, Champein, Méhul, Lesueur, Gaveaux, Boieldieu, and Félicien David. Among singers—Jélyotte, Legros, Larrivée, Lays, and Rousseau, whose voices were first heard in the service of the Church, afterwards delighted the habitués of the opera.

The Maîtrises, though suppressed in 1791, were afterwards reconstituted, on a different footing. The Conservatoire national de musique is now the great nursery of French musicians, but many a church has still its Maîtrise, where the choristers—boys and men—are trained by a maître de chapelle in everything necessary to ensure a good execution of plain-song and sacred music. We have already spoken of Choron's school of music (CHORON), still in existence as the 'École Niedermeyer.' Niedermeyer and D'Ortigue also founded a periodical called *La Maîtrise*, specially devoted to sacred music. It survived only four years, but to it we refer the reader for further details. Besides Gantez's work already mentioned, another book, also published in 1643 by Jean de Bordenave, a Canon of Béarn, *L'Estat des églises collégiales et cathédrales*, contains much information, though impaired by its want of method and arrangement. G. C.

MAJESTÄTISCH. 'Majestic'; in a dignified manner. This is used as the equivalent of Maestoso by Beethoven in No. 5 of the 6 Lieder von Gellert, 'Die Ehre Gottes in der Natur.'

The whole direction is 'Majestätisch und erhaben' (majestic and sublime). The word also occurs as a direction in a song of Schubert's called 'Liedesend.' M.

MAJO, Gian Francesco di, born at Naples about 1740, was the son of Giuseppe de Majo (1698-1772), who was maestro di cappella to the King of the Two Sicilies in the early part of the 18th century, and wrote various church and chamber compositions; the son was a pupil of Padre Martini, and first appeared as an opera composer in 1759, with 'Riccimero' at Naples; this was followed at short intervals by many others, written either by himself alone or in collaboration. 'Cajo Fabricio' was given at Naples in 1760, and the same year saw the production of 'Astrea placata'; in 1761 'L'Almeria' was given at Leghorn; in 1762 'Artaserse'; 'Ipermestra' in 1763; and in 1764 'Alcide negli Orti Esperidi' in Vienna; 'Adriano in Siria' was given in Rome about 1766; 'Ifigenia in Tauride' is of uncertain date; and his last, 'Eumene,' of which he only finished one act, was completed by Insanguine, and produced at Naples in 1771. Among the operas that have music by di Majo in them are 'Agamemnon,' 'Cleofide,' 'Demofoonte,' and 'Ezio.' Two arias by him are quoted in Marx's *Gluck und die Oper*. Many cantatas and church music are mentioned in the *Quellen-Lexikon*. The composer died at Rome, Jan. 18, 1771. M.

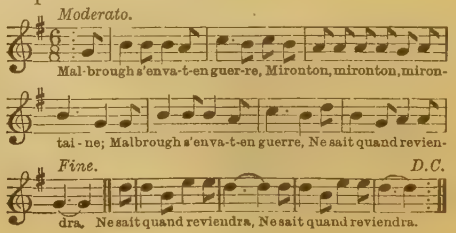
MAJOR. When intervals have two forms which are alike consonant or alike dissonant, these are distinguished as major and minor, the former being always a semitone greater than the latter. Thus thirds and sixths have two forms, which are both consonant, and are respectively called major and minor. Seconds, sevenths, and ninths have each two forms, which are dissonant, and are similarly distinguished as major and minor. The major, however, is not always the greatest form of an interval, for, under certain circumstances, some intervals are capable of further extension, and are then described as 'augmented' or 'superfluous,' as augmented seconds or augmented or superfluous sixths. The major forms of concords are such as contain a major third from the root note, and these are both more harmonious and better defined than the minor concords; for, in the first place, the major third agrees with the fourth harmonic of the fundamental tone, and, in the second, the combinational tones of the chord for the most part only double notes already existing in the chord. Whereas in the minor concords the minor third does not correspond with any of the really perceptible harmonics of the root note, and the triad cannot in any position be free from false combinational tones. It is mainly for these reasons that the major chord is so often found at the conclusion of a piece of music in a minor mode in the works of the earlier masters, from Josquin des Prés up to Mozart. [See Harmony, vol. ii. p. 307; Tierce de Picardie.]

The most important and best defined scale of modern music is called 'major,' because it has a major third from the tonic in the ascending series; whence in former times it was common to distinguish the scale or mode by the terms 'greater' or 'lesser' third, as, 'in the key of G with the greater third,' where one would now say 'G major.' This major scale is the natural diatonic series of modern music, represented by the series starting from C. It is fundamentally the most perfect for harmonic purposes, as it presents the greatest number of concords, and the larger proportion of these in their most harmonious form; and it also provides most perfectly and simply the means of making the tonal relationship intelligible; since, as Helmholtz points out, 'the tones (of the scale) are constituents of the compound tone of the tonic, or the fifth above or the fifth below it. By which means all the relations of tones are reduced to the simplest and closest relationship existing in any musical system—that of the fifth.' This scale corresponds to the Greek Lydian and the Ecclesiastical Ionian Mode.

The term 'major' is also used in a theoretical sense of tones, to distinguish the interval of a tone which has the ratio 9 : 8 from that which has the ratio 10 : 9, which is called a minor tone. For example, in the key of C, C–D is a major tone and D–E a minor tone, and the difference between them is a comma. C. H. H. P.

MAJORANO. See Caffarelli.

MALBROUGH, or MALBROOK. The date of this celebrated French song, and the names of the authors of both words and music, are doubtful; but there is reason to believe that the couplets called 'Mort et convoi de l'invincible Malbrough' were improvised on the night after the battle of Malplaquet (Sept. 11, 1709), in the bivouac of Maréchal de Villars, at Quesnoy, three miles from the field of battle. The name of the soldier, who perhaps satirised the English general as a relief to his hunger, has not been preserved, but in all probability he was well acquainted with the lament on the death of the Duke of Guise, published in 1566. In fact, the idea, the construction, and many details in the two songs are very similar, though the rhythm and position of the rhymes are different, and they cannot be sung to the same music. The following is the air, admirably adapted to the words:—



Moderato.
Mal-brough s'en-va-t-en guer-re, Mironton, mironton, miron-
tai-ne; Malbrough s'en-va-t-en guerre, Ne sait quand revien-
Fine.
D.C.
dra. Ne sait quand reviendra, Ne sait quand reviendra.

Chateaubriand, hearing the tune sung by Arabs in Palestine, suggested that it had been carried there by the Crusaders, either in the time of Godfrey de Bouillon, or in that of Louis IX. and Joinville ; but no musician can entertain this idea for a moment. The breadth of the phrasing, the major mode, and the close on the dominant, are as characteristic of the popular tunes of the time of Louis XIV. as they are unlike the unrhythmical melodies of the Middle Ages.

It is not surprising that neither words nor music are to be found in the many collections of both ; nowadays the merest trifles appear in print, but formerly all songs were sung from memory. It would probably have died out had not Madame Poitrine used it as a lullaby for the infant dauphin in 1781. Marie Antoinette took a fancy to her baby's cradle-song, and sang it herself, and 'Malbrough s'en va-t-en guerre' was soon heard in Versailles, Paris, and at length throughout France. Beaumarchais introduced it into his *Mariage de Figaro* (1784), which still further contributed to its popularity. It then became a favourite air for couplets in French vaudevilles ; and Beethoven brings it into his 'Battle Symphony' (1813) as the symbol of the French army. The air is now equally popular on both sides of the Channel. Many an Englishman, who would be puzzled to recognise Marlborough under the guise of Malbrook, is familiar with the tune to the convivial words, 'We won't go home till morning' and 'For he's a jolly good fellow.'

The piece was made the subject of an opéra-bouffe in four acts, words by Siraudin and Busnach, music by Bizet, Jonas, Legouix, and Delibes, brought out at the Athénée, Dec. 13, 1867. [The first English use of the air which the present writer can trace is a setting of it to a satirical song relative to the siege of Gibraltar. mentioning the incidents of the defeat of the combined Spanish and French forces on Sept. 13, 1782. The song was undoubtedly written about that date, and the tune selected in a spirit of derision. Its title runs, 'D'Artois' return from Gibraltar, translated from the French and adapted to the Malbro' air.' The first verse, out of many, is :—

D'Artois returns from Spain,
O what a rare campaign (bis).
We thought that with a look
He would the place have took,
But the thunder of his wrath
Was not a cracker worth, etc., etc.

It was published first as a half sheet by Preston, and afterwards included in a folio work issued by that publisher, *The Beauties of Music and Poetry*, circa 1790.

From this period the air quickly gained popularity in England, mostly, however, as an instrumental piece for the flute or violin. It is found in Aird's *Selection*, vol. iii. [1788], and in most violin and flute collections of shortly before the close of the 18th century. It was also frequent as a harpsichord lesson with variations ; and Charles Dibdin, in his *Musical Tour*, 1788, speaks of young ladies 'hammering Malbrouk out of tune.' About 1790 an English song, 'The Maid of Primrose Hill,' was adapted to the air, and after this time numerous others now forgotten. About 1830, 'We won't go home till morning,' the second verse of which is 'For he's a jolly good fellow,' turned the delicate and rather melancholy French air into a convivial channel, and with this song it is now always associated in England.] G. C. ; with additions by F. K.

MALCOLM, Alexander, born in Edinburgh, 1687, was author of *A Treatise of Musick, Speculative, Practical and Historical*, 8vo, Edinburgh, 1721 ; second edition, 8vo, London, 1730 ; a well-executed work. An ill-made abridgement by an 'eminent musician,' appeared in London, 1776. In 1721 one Mitchell published 'An Ode on the Power of Musick,' dedicated to Malcolm, the greater part of which is prefixed to the two editions of the Treatise. W. H. H. His work is the first important treatise on the theory of music issued in Scotland. Prior to it are, the few leaves of general instructions in the Aberdeen *Cantus* (1662, 1666, 1682), and a thin folio volume entitled *An Introduction to the Knowledge and Practice of Musick*, by A. B., 1717. The copy, probably unique, was sold at the Taphouse sale in 1905, and had bound up with it a contemporary manuscript essay on *The Institutions of Musick wherein are sett forth the practicall principles of Musicall Composition.* Another manuscript treatise is of the 16th century, and written in the Scottish dialect. It is mentioned by Hawkins and belonged to him ; it is now in the British Museum.

Malcolm's work is in octavo, and the first edition contains 608 pp. with engraved musical examples ; it was issued at 'Edinburgh, printed for the author, 1721.'

Hawkins and later writers speak in the highest terms of its merits. The book was dedicated to the 'directors of the Royal Academy of musick' (*i.e.* the manager of the Italian Opera), who are named individually.

It is advertised as just issued, in the *Edinburgh Evening Courant* of Nov. 6, 1721, and from this advertisement we learn that the author then lived 'in the Cowgate, opposite Burnet's Close.' F. K.

MALEK ADEL. An opera seria in three acts ; words by Count Pepoli, music by Michael Costa. Produced at the Théâtre Italien, Paris, Jan. 14, 1837, and in London at Her Majesty's, May 18, 1837. G.

MALHERBE, Charles Théodore, born in Paris, April 21, 1863, on the completion of his literary and legal studies (having reached the grade of 'licencié') took up music and studied

various branches of composition, with Danhauser, Wormser, and Massenet. From 1881 he contributed to various musical publications, and in 1896 was appointed 'archiviste-adjoint' to the Paris Opéra, and in 1899 succeeded Nuitter as archiviste. His private collection of musical autographs is one of the richest in the world, after those of the public libraries of Berlin, Vienna, London, and Paris. The following may be mentioned among Malherbe's works on music: Notices of 'Esclarmonde' (1889) and 'Ascanio' (1890); the *Catalogue bibliographique des œuvres de Donizetti* (1897). In collaboration with M. A. Soubies: *L'Œuvre dramatique de R. Wagner* (1886); *Précis d'histoire de l'Opéra-Comique* (1887); *Mélanges sur R. Wagner* (1891); *Histoire de la seconde Salle Favart* (two vols., 1892 and 1893, crowned by the Institut), etc. He has composed several opéras-comiques and incidental music for 'Les yeux clos' (Odéon, 1896), orchestral and chamber music, as well as numerous transcriptions. G. F.

MALIBRAN, Maria Felicita, one of the most distinguished singers the world has ever seen, was born March 24, 1808, at Paris, where her father, Manuel Garcia, had arrived only two months before. When three years old she was taken to Italy, and at the age of five played a child's part in Paër's 'Agnese,' at the 'Fiorentini,' Naples. So precocious was she that, after a few nights of this opera, she actually began to sing the part of 'Agnese' in the duet of the second Act, a piece of audacity which was applauded by the public. Two years later, she studied *solfeggi* with Panseron, at Naples; and Hérold, happening to arrive about the same time, gave her her first instruction on the piano. In 1816 Garcia took her to Paris with the rest of his family, and thence to London in the autumn of 1817. Already speaking fluently Spanish, Italian, and French, Maria picked up a tolerable knowledge of English in the two and a half years she spent in London. Not long after, she learned German with the same facility. Here, too, she had good teaching on the piano, and made such rapid progress that, on her return to Paris in 1819, she was able to play J. S. Bach's clavier-works, which were great favourites with her father. In this way she acquired sound taste in music.

At the early age of fifteen she was made by her father to learn singing under his own direction; and, in spite of the fear which his violent temper inspired, she soon showed the individuality and originality of her genius. Two years had barely elapsed when (1824) Garcia allowed her to appear for the first time before a musical club which he had just established. There she produced a great sensation, and her future success was confidently predicted. Two months later, Garcia returned to London, where he was engaged as principal tenor; and here he set on foot a singing-class, in which the education of Maria was continued, if not completed. Fétis says that it was in consequence of a sudden indisposition of Mme. Pasta, that the first public appearance of Maria was unexpectedly made; but this account is not the same as that given by Ebers or by Lord Mount-Edgcumbe. The latter relates that, shortly after the repair of the King's Theatre, 'the great favourite Pasta arrived for a limited number of nights. About the same time . . . it became necessary to engage a young singer, the daughter of the tenor Garcia, who had sung here for several seasons. She was as yet a mere girl, and had never appeared on any public stage; but from the first moment of her appearance she showed evident talents for it both as singer and actress. Her extreme youth, her prettiness, her pleasing voice, and sprightly easy action, as Rosina in "Il Barbiere di Siviglia," in which part she made her début, gained her general favour; but she was too highly extolled, and injudiciously put forward as a *prima donna*, when she was only a very promising débutante, who in time, by study and practice, would in all probability, under the tuition of her father, a good musician, but (to my ears at least) a most disagreeable singer, rise to eminence in her profession. Ebers says, 'her voice was a contralto, and managed with great taste.' Her début took place June 7, 1825. She was immediately afterwards engaged for the remainder of the season (about six weeks) at £500. On July 23, she sang Felicia in the first performance of Meyerbeer's 'Crociato.' At the end of the season, Garcia went, with his daughter, to the provincial festivals, and then embarked for New York. In this new sphere Maria rapidly improved, and acquired confidence, experience, and the habit of the stage. She appeared in 'Otello,' 'Romeo,' 'Don Giovanni,' 'Tancredi,' 'Cenerentola,' and in two operas written for her by her father, 'L'amante astuto,' and 'La Figlia dell' aria.' She had scarcely made her début when the enthusiasm of the public knew no bounds; and, in the midst of her popularity, Garcia gave her in marriage to M. Malibran, an elderly and seemingly wealthy French merchant, in spite of her repugnance to the union. This marriage, celebrated March 25, 1826, was as unhappy as it was ill-assorted; a year had hardly elapsed before the young wife found herself, on Malibran's bankruptcy, free to leave him, and she at once seized the opportunity. In September 1827 she had returned to France. Preceded by a bright reputation, she began by reaping a harvest of applause in private concerts, followed in January 1828 by a great and genuine success, at Galli's benefit, in 'Semiramide.' Her genius for dramatic singing was at once recognised, though her style was marred by a questionable taste in her choice of ornament. This she had, in Paris, the best opportunity of correcting, both by the advice of kindly critics and the

example of accomplished singers. Engaged for the season at the Italian opera, she made her début, April 8. The public, at first doubting, soon welcomed her as a really great singer, and were particularly struck with wonder and delight at the novelty and originality of her style. In the season of 1829 Malibran made her reappearance in London, where she shared the applause of the public with Sontag, and the same result followed her singing with that artist at Paris in the autumn. She was principal soprano at the Gloucester Festival of 1829, and when engaged again at the Italian Opera in Paris in January 1830, she was paid frs. 1075 for each representation. This was less than she had received from Laporte in London, for he had given her frs. 13,333·33 a month, an odd sum, unless it meant frs. 40,000 for three months; and she stipulated only to appear twice a week, making each of those appearances cost frs. 1666·66, or about £66. Though she certainly continued to draw no higher salary at the Paris Opera in 1830 and 1831, and her charge for singing at private concerts in London, 1829, was only twenty-five guineas, yet Alfred Bunn engaged her, soon after, for nineteen nights at £125 per night, *payable in advance*.

Sontag, marrying and retiring from the stage early in 1830, left Malibran mistress of the field, and henceforth she had no rival, but continued to sing each season in London and Paris with ever-increased éclat. In 1830 an attachment sprang up between her and Charles de Bériot the violinist; and this ended only with her life. They built in 1831 a handsome villa at Ixelles, a suburb of Brussels, to which they returned after every operatic campaign. In the summer of 1832 a sudden inspiration took this impulsive artist to Italy in the company of Lablache, who happened to pass through Brussels; and an Italian tour was improvised, which was a sort of triumphal progress. Milan, Rome, Naples, and Bologna were visited with equal success.

Malibran retired to Brussels in Dec. 1832, and her son, Charles Wilfrid, was born Feb. 12, 1833. In the following spring she came to London, and sang at Drury Lane, in English Opera, receiving frs. 80,000 for forty representations, with two benefits which produced not less than frs. 50,000. The prices offered to her increased each year to an unprecedented extent. She received at the Opera in London, during May and June 1835, £2775 for twenty-four appearances. Sums, the like of which had not been heard of before in such cases, were paid to her at the provincial festivals in England, and her last engagement at Naples was for frs. 80,000 for forty nights, with 2½ benefits, while that which she had accepted at Milan from the Duke Visconti, the director of La Scala, was, exclusively of some other profitable conditions, frs. 450,000 for 185 performances, viz. seventy-five in 1835-36, seventy-five in 1836-37, and thirty-five in the autumn of 1838.

Having played here in English versions of 'Sonnambula' and 'Fidelio,' Malibran returned to Naples, where she remained until May 1834, proceeding then to Bologna, and thence to Milan. She soon came back, however, to London for a flying visit; and was singing at Sinigaglia in July. On the 11th of the next month she went to Lucca, where her horses were taken from her carriage, which was drawn to her hotel by enthusiastic admirers after her last appearance. She next went to Milan, where she signed the above-mentioned contract, and thence to Naples where she sang at the Fondo in 'Otello,' and at the San Carlo, Dec. 4, 1834, in Rossi's 'Amelia.' Persiani's 'Ines de Castro' was produced at the San Carlo for her in the same winter. Here she met with an accident, her carriage being upset at the corner of a street; and she suffered injuries which prevented her from appearing in public for a fortnight. Even then, she made her first appearance with her arm in a sling, which added to the interest of the occasion. From Naples she went, in the same triumphant manner, to Venice, her arrival being announced by fanfares of trumpets. There she was besieged with fresh enthusiasm, which followed her in her return to Paris and London. She returned in August to Lucca.

At this juncture her marriage was annulled by the Courts at Paris, and on March 26, 1836, she married de Bériot, with whom she returned immediately to Brussels.

In the following April, once more in London, Mme. Malibran de Bériot had a fall from her horse. She was dragged some distance along the road, and received serious injuries to her head, from which she never entirely recovered; but her wonderful energy enabled her for a time to disregard the consequences of this accident. She returned to Brussels, from whence she went to Aix-la-Chapelle, and gave two concerts there with de Bériot. In September she had come to England again, for the Manchester Festival,—at which her short, brilliant life came to an end. She had arrived, with her husband, after a rapid journey from Paris, on Sunday, Sept. 11, 1836. On the following evening she sang in no less than fourteen pieces. On the Tuesday, though weak and ill, she insisted on singing both morning and evening. On Wednesday, the 14th, her state was still more critical, but she contrived to sing the last sacred music in which she ever took part, 'Sing ye to the Lord,' with thrilling effect; but that same evening her last notes in public were heard, in the duet, with Mme. Caradori Allan, 'Vanne se alberghi in petto,' from 'Andronico.' This was received with immense enthusiasm, the last movement was encored, and Malibran actually accomplished the task of repeating it. It was her last effort. While the concert-room still

rang with applause, she was fainting in the arms of her friends ; and, a few moments later, she was conveyed to her hotel [the Morley Arms, Matlock.] Here she died, after nine days of nervous fever, in the prostration which naturally followed upon the serious injuries her brain had received from the accident which had befallen her in the midst of a life of perpetual excitement. She died on Friday, Sept. 23, 1836, about twenty minutes before midnight, under the care of her own doctor, a homœopath, Belluomini, who had declined to act with the two regular physicians who had at first attended her. Two hours after her death de Bériot was, with Belluomini, in a carriage on his way to Brussels, to secure the property of his late wife. She was buried on

Oct. 1, in the south aisle of the collegiate church, Manchester. She was but twenty-eight years of age when she died. Her remains were, soon afterwards, removed to Brussels, where they were reinterred in the cemetery of Laeken, where a mausoleum was erected by de Bériot, containing a bust of the great singer by the celebrated sculptor Geefs.

It is difficult to appreciate the charm of a singer whom one has never heard. In the case of Maria Malibran it is exceptionally difficult, for the charm seems to have consisted chiefly in the peculiarity of *timbre* and unusual extent of her voice, in her excitable temperament which prompted her to improvise passages of strange audacity upon the stage, and on her strong musical feeling which kept those improvisations nearly, but not quite, always within the bounds of good taste. That her voice was not faultless, either in quality or uniformity, seems certain. It was a contralto, having much of the soprano register superadded, and with an interval of dead notes intervening, to conceal which she used great ingenuity, with almost perfect success. It was, after all, her mind that helped to enslave her audience ; without that mental originality her defective vocal organ would have failed to please where, in fact, it provoked raptures.

Many portraits of Malibran have appeared, none very good. A large one, after Hayter, representing her with a harp, as 'Desdemona,' is usually accounted the best ; but it is only indifferent. Another, by R. J. Lane, A.R.A., showing her made up as 'Fidalma,' and then, afterwards, in a stage-box, in her usual dress, is much better. It is this latter portrait which we have engraved.

Several biographies have appeared of this extraordinary person, with anecdotes of whom it would be easy to fill a volume ; that which was written by the Comtesse Merlin is little better than a romance. Malibran composed and published many nocturnes, songs, and chansonnettes ; some of the unpublished pieces were collected and published by Troupenas at Paris under the name of 'Dernières Pensées musicales de Marie-Félicité Garcia de Bériot,' in 4to. J. M. ; with corrections from E. Heron-Allen's *Contributions towards an accurate biography of De Bériot and Malibran* (*De Fidic. Opuscula*, op. vi.)

MALINCONIA, LA. The name attached by Beethoven to a very romantic intermezzo or introduction, of forty-four bars' length, between the Scherzo and the Finale of his String Quartet in B♭, op. 18, No. 6. The time is Adagio, and the direction given is 'Questo pezzo si deve trattare colla più gran delicatezza.' The theme of the Malinconia appears twice in the Finale, much in the same way that the Andante does in that of the Quintet, op. 29. G.

MALLINGER, Mathilde, born Feb. 17, 1847, at Agram, Croatia, was first taught singing there by her father, a professor of music, and Professor Lichtenegger, later by Gordigiani and Vogl at the Prague Conservatorium from 1863 to 1866, and finally by Richard Lewy at Vienna. On the recommendation of Franz Lachner she was engaged at Munich, where she made her début as Norma, Oct. 4, 1866. She was the original Eva in the 'Meistersinger,' June 21, 1868. She made her débuts at Berlin as Elsa, April 6, and Norma, April 9, 1869. She was an excellent actress and a great favourite, married the Baron Schimmelpfennig von der Oye at Berlin, and remained there during her whole musical career until 1882. On leave of absence she played with success at Vienna, Munich, etc., and in Italian opera at St. Petersburg and Moscow, but with indifferent success. Her parts included Donna Anna, Fidelio, Jessonda, Valentine, Leonora ('Trovatore'), Iphigenia, Euryanthe, Susanna, Zerlina, Mrs. Ford, etc. About 1871 a certain section of the Berlin public tried to establish her claim as leading singer as against Pauline Lucca, the then reigning favourite. Endless quarrels ensued on their account, which culminated at a performance of the 'Nozze,' Jan. 27, 1872, where they were both playing. On Lucca's entry as Cherubino she was hissed—in

consequence of which she broke her contract in the following autumn and left for America. In 1890 Mme. Mallinger became professor of singing in the Conservatorium of Prague, and in 1895 returned to Berlin to teach in the Eichelberg Conservatorium. A. C.

MALTEN (properly MÜLLER), THÉRÈSE, born at Insterburg, Eastern Prussia, June 21, 1855, was taught singing by Gustav Engel of Berlin. She made her début as Pamina and Agatha at Dresden in 1873, where she remained for thirty years as principal soprano, retiring at last on a pension. Her parts include Armida, Iphigenia, Fidelio, Jessonda, Genoveva, Leonora ('Trovatore'), Margaret; the heroines of Wagner; the Queen of Sheba in Goldmark's opera of that name; the Princess Marie in Kretschmer's 'Folkunger' on its production in 1874; Fulvia on the production of Hofmann's 'Arminius' in 1877, etc. On leave of absence she has played in London, Berlin, Vienna, etc. In August 1882 she appeared at Bayreuth as Kundry, at the instance of Wagner, who had a very high opinion of her ability, again in 1884, and at Munich, where she played the same part in private before King Ludwig, from whom she received the gold medal of Arts and Science.

She made a great impression on her début at Drury Lane under Richter as Fidelio, May 24, 1882, and during the season as Elsa, May 27; Elizabeth, June 3, and Eva, June 7. She reappeared in England at the Albert Hall on the production of 'Parsifal,' Nov. 10 and 15, 1884; at a Richter Concert in 1886; and at the Bristol Festival of 1896.

She possesses a voice of extraordinary compass, with deep and powerful notes in the lower register. She is an admirable actress, being especially successful in Wagner's operas. She was appointed chamber singer to the King of Saxony in 1880, and was also chosen by Wagner to play Isolde at Bayreuth in 1883, though the performance did not take place owing to the death of the composer. She has practically retired from the exercise of her art for some years. A. C.

MALVEZZI, CRISTOFANO, born at Lucca (June 27, 1547, according to Riemann), was in 1571 a canon at the church of San Lorenzo in Florence, and on the death of Francesco Corteccia succeeded him as maestro di cappella to the Grand Duke of Tuscany. He is chiefly known as the editor of a collection of dramatic intermezzi which were performed on the occasion of the marriage of the Grand Duke Ferdinand with Christina of Lorraine in 1589. The work was published in fourteen part-books for voices and instruments under the title, *Intermedii et concerti, fatti per la commedia rappresentata in Firenze nelle nozze del . . . Ferdinando Medici e Madama Cristiana di Lorena . . .* Venice, 1591. It is remarkable as a foreshadowing of the attempts made, a few years later, towards the creation of a proper dramatic music by means of vocal monody with instrumental accompaniment. It is only a foreshadowing, however, as the pieces are all written in a simple madrigal style for 3, 4, 5, 6, 8 voices with dialoghi for 6 to 15 voices. The instruments employed are chiefly lutes and viols of different kinds with trombones and organ. Only in the larger pieces are all the instruments employed with the voices. Besides the editor himself the composers represented are Luca Marenzio, Jacopo Peri, Emilio de' Cavalieri, and Giovanni Bardi, the three latter becoming afterwards the creators of the later Monodic style. The piece composed by Luca Marenzio is entitled 'Il Combattimento d'Apolline col Serpente.' From this a madrigal chorus for four voices, 'O valoroso Dio,' is reprinted by Kiesewetter in his *Schicksale und Beschaffenheit des weltlichen Gesanges*, 1841, who also gives three other pieces by Peri, Cavalieri, and Archilei, which, though written in the simplest four-part counterpoint, were sung by one voice with one or two instruments playing the other parts. Other works by Malvezzi are a book of madrigals *a* 5, Venice, 1583, and one *a* 6, Venice, 1584, also a book of Ricercari *a* 4, 1577. A canzona by him transcribed from Schmid's organ-tablature book, 1607, is given in Ritter's *Geschichte des Orgelspiels*, No. 9. See also Ritter, p. 27. J. R. M.

MANCHESTER. Of the musical associations in Manchester, by far the oldest, and, for its past influence upon the progress of music in the city, by far the most important, is that of the Gentlemen's Concerts. The date of the formation of these concerts is uncertain; but the overture to Handel's 'Julius Cæsar,' taken from a programme of the year 1745, held a commemorative place at the opening concert given in 1903. [The concerts, in their early days, were a meeting-place of Jacobites; see the *Monthly Review* for Dec. 1905, art. 'Underground Jacobitism,' by R. E. Francillon, p. 21.] The orchestra appears to have had an amateur origin; and it maintained a partially amateur constitution till the conductorship of it fell to Sir (then Mr.) Charles Hallé, in February 1850. Previous to this appointment the first violin filled the double position of leader and conductor. For special performances of choral and other larger works, the services of special conductors were secured; and in that position the names of Mazas, Schira, Julius Benedict, and, more frequently, Sir George Smart preceded that of Mr. Hallé.

For quite a century the concerts were the means of introducing the best contemporary art and artists to the town. They were also chiefly concerned in initiating and carrying out the great Musical Festival of the year 1828; and the still more memorable Festival of the year 1836—the last of its kind ever held in Manchester, and the one upon which the death of

Malibran conferred a pathetic interest. When the Manchester Art Treasures Exhibition of the year 1857 was inaugurated, its directors found in Mr. Charles Hallé, and the orchestra of the Gentlemen's Concerts, a ready means of constituting a band worthy of its fine surroundings. Local zeal saved this band from dispersal when the Exhibition closed. A permanent organisation was created; a series of winter concerts was arranged; and the Hallé orchestra and the Hallé concerts are thus accounted for. In the year 1830 the subscribers took possession of their new building, known as the Gentlemen's Concert Hall. Here the society's concerts were continuously held till the site was absorbed in that of the Midland Hotel. Under the terms of the sale a large hall, capable of seating 900 persons, was constructed—with a separate entrance—within the hotel. In this hall the concerts were resumed in the season 1903-4, having been held in the interval of the building, in the Manchester Town Hall. Eight concerts are given during the season. Since the establishment of the Hallé orchestra, the band has been constituted from that source, with the same conductor, and the same leader. Dr. Hans Richter consequently succeeded Sir Charles Hallé in the former position. The concerts are less strenuous and exploring than those of the Hallé concerts, and choral works are not performed; but the assemblies have a socially intimate character from the limitations of the subscription list.

The Hallé Concerts, it has been said, were established in the year 1857. From that date they were conducted with remarkable energy and worthiness of aim by Sir Charles Hallé, till his death in 1895, one break in the sequence occurring in the year 1860 (no concerts were given from April 18, 1860, to October 17, 1861). On the death of Sir Charles, the concerts for the season were conducted by Sir Arthur Sullivan, Sir C. Villiers Stanford, Sir Joseph Barnby, Dr. F. H. Cowen, Sir A. C. Mackenzie, Dr. Brodsky, Mr. George Henschel, and Mr. R. H. Wilson the chorus-master. Dr. Cowen conducted through the following season of 1896-97. Since that date the conductorship has been permanently in the hands of Dr. Richter. In the meantime a society of guarantors had been formed to continue the concerts; and under this administration, and Dr. Richter's direction, the concerts have sustained and enhanced their own fame and the city's musical reputation. The orchestra consists of 100 performers. The chorus numbers 400. Twenty concerts are given each season in the large Free Trade Hall; and the band also fulfils engagements in Leeds, Bradford, Sheffield, Huddersfield, Newcastle, Burnley, and other towns in the North.

Many efforts have from time to time been made in behalf of chamber music in Manchester, but all—including those of Sir Charles Hallé himself—failed of sustained support. The Brodsky Quartet, however, established by Dr. Brodsky in 1896, has won appreciation, and the annual concerts, six in number, and exclusively instrumental, are amongst the most artistically and popularly successful given during the musical season. The balance of the receipts is devoted to the assistance of the students of the Royal Manchester College of Music, of which institution Dr. Brodsky is the Principal, in succession to Sir Charles Hallé. The college was founded in 1893 by an equal display of generosity and energy on the part of wealthy citizens. Her Majesty the Queen is the patroness of the institution, which possesses a charter. Manchester and neighbouring towns contribute to its funds, both directly, and by means of scholarships. The college is in close affiliation with the Manchester University. Several of the teachers of the former hold lectureships in the latter; and the college students pass to the Bachelor's and Doctor's degrees in music, at the University. The fees are £30 per annum, in three terms; and a full course of study is obligatory upon each student.

The place once occupied by the Hargreaves Choral Society, and the Manchester Choral Society, both founded in 1840, may be said to be filled, now, by the Manchester Philharmonic Choral Society, established by Mr. G. Brand Lane in 1880, and trained and conducted by him. The society has a singing membership of 600. From these, a chorus is selected which takes part in Mr. Lane's subscription concerts. Six of these concerts are given each season. On choral evenings the band is furnished from the Hallé orchestra.

The Manchester Vocal Society was formed in 1867, largely on the initiative of the late J. St. J. B. Joule, and the late Henry Wilson its first director—for conductor in the ordinary sense of the term, the society has never had. Mr. Wilson was succeeded in 1885 by Dr. Henry Watson, who still directs. The choir consists of some fifty selected voices, and includes some of the best vocal talent, amateur and professional, in the district. It gives four public concerts during the season, and in its accumulated repertory are a large number of important works, old and new, which through its concerts have been heard for the first time in Manchester. A special feature of the society's work is its unaccompanied part-singing.

The Gentlemen's Glee Club, an offshoot from the Gentlemen's Concerts, was established in 1830. Its constitution was modelled on that of the London Glee Club. Six meetings are held during the session, in October to March inclusive. To commemorate the seventy-fifth year of its existence, a brief history of the Club has been published.

The series of public concerts at the Schiller Anstalt, four in number, are often made

specially important by the new chamber music they introduce, and by the representative character of the artists and composers who appear at them.

Manchester possesses two specially fine organs —one by Cavaillé-Col, in the Town Hall, and one by Messrs. Henry Willis & Son, at the Whitworth Hall of the Manchester University. Dr. J. Kendrick Pyne, the city organist, gives occasional recitals on the latter, and regular Saturday evening recitals on the former. For the Henry Watson Music Library, see LIBRARIES, vol. ii. p. 708. H. W.

MANCHICOURT, PIERRE DE, French-Flemish composer of the earlier part of the 16th century, was born at Berthune in Artois. In 1539 he is described as Phonascus or choir-master of Tournai Cathedral, and some time before 1556 received a canonry at Arras. He is said to have lived afterwards at Antwerp. His compositions, fairly numerous, chiefly motets and chansons with a few masses, mostly appeared in the miscellaneous collections of the time. Some volumes, however, contain works exclusively or almost exclusively by Manchicourt; a book of motets, nineteen in all, *a* 4-6, was published by Attaignant in 1539, another book of motets containing 14 *a* 5-6, was published by Phalèse at Louvain in 1564. This latter volume was dedicated by Manchicourt to Antoine Perrenot, Bishop of Arras, known afterwards as Cardinal Granvelle, and probably it was to him that the composer owed his canonry at Arras. In 1545 Tylman Susato of Antwerp published a book of twenty-nine chansons by Manchicourt. One of these chansons, 'Sortez mes pleurs,' has been reprinted in Commer's *Collectio*, tom. xii. Eitner, in the *Quellen-Lexikon*, speaks in the highest terms of a motet, 'Vidi Speciosam,' *a* 8, taken from the *Thesaurus* of Montanus and Neuber, 1564; but none of Manchicourt's motets have yet been reprinted in modern score. J. R. M.

MANCINELLI, LUIGI, born at Orvieto, Feb. 5, 1848. He was six years old when he began to study the piano under the direction of his father, a distinguished amateur. At the age of twelve he went to Florence to be a pupil of Professor Sbolci, one of the most talented Italian violoncellists. The boy showed great aptitude for the violoncello, and his progress was very rapid. While studying with Sbolci, he had a short course in harmony and counterpoint from Mabellini. These were the only lessons he ever had; he has acquired his knowledge of composition from the study of the works of the great masters without any guide.

Mancinelli's professional career began in Florence, where he was for a time one of the first violoncello players in the orchestra of La Pergola. He was engaged in the same capacity at the Apollo in Rome in 1874, when this theatre, by unexpected circumstances, was left without a conductor. The impresario Jacovacci, a popular and energetic manager, in order not to stop the performances, thought of trying the ability of his first violoncellist, of whom he had heard favourable reports; and so Mancinelli was suddenly raised from the ranks to appear as a conductor. 'Aïda' was the first opera conducted by him, and, as everything went off satisfactorily, from that performance there was a new conductor in Italy.

Thanks to his first successful attempt, in the following year Mancinelli was engaged to be the musical director at Jesi during the fêtes of Spontini's centenary. On this occasion he revived Spontini's 'La Vestale,' and the admirable execution of this grand work reflected on the conductor, who was re-engaged for the direction of the orchestra of the Apollo. In 1876 Mancinelli had his first success as a composer with his Intermezzi to 'Messalina,' a drama by Pietro Cossa. The following year he wrote Intermezzi to the 'Cleopatra' of the same author.

Mancinelli left Rome in 1881 for Bologna, where he was engaged to be the Principal of the Liceo Musicale, and at the same time the conductor of the Teatro Comunale, and the Maestro di Cappella of San Petronio, the old basilica of the famous university town. During his stay there he composed two Masses and many other sacred pieces, introduced several improvements in the Liceo, organised a symphony and quartet society, and was the first to acquaint the Bolognese with vocal and instrumental music by foreign composers. In 1884 he gave the first performance of his opera, 'Isora di Provenza,' which was received with great applause.

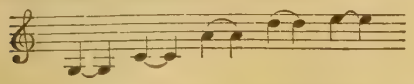
After five years he left Bologna, attracted, perhaps, to other countries by the prospect of pecuniary improvement in his position. During the season of 1886 he visited London, and gave a concert, in which he conducted classical works and some of his own compositions. The success of this concert brought him an invitation to write an oratorio for the next Norwich Festival, and the engagement to conduct the Italian Opera during the Jubilee season at Drury Lane. His powers as a conductor received full recognition; and his oratorio 'Isaias,' executed at Norwich in October 1887, was unanimously praised. He was re-engaged by Harris as conductor for the season of 1888 at Covent Garden, and has revisited London annually almost ever since. His opera, 'Ero e Leandro,' first performed in concert-form at the Norwich Festival of 1896, was presented on the stage at Madrid, Nov. 30, 1897, and at Covent Garden on July 11, 1898. From 1888 to 1895 Mancinelli held the place of musical director and conductor at the Theatre Royal of Madrid. He was co-director of the operatic enterprises carried on by Harris at the Metropolitan Opera, New York. His oratorio, 'Saint Agnes,' was given at the Norwich Festival of 1905. F. RE.

MANCINI, Francesco, an Italian composer, born at Naples in 1674. At first a pupil at the Conservatorio di San Loreto he, in 1728, became principal master. He wrote at least twenty operas for performance in Naples, but his opera, 'Hydaspes' (*q.v.*) or 'l' Idaspe Fedele,' produced in London, May 23, 1710, makes his name best known to English musicians. He also composed some oratorios, and his reputation in Italy was very high. He died at Naples in 1739. The *Dictionary of Musicians*, 1827, gives the date of his birth as 1691, but this is probably incorrect. F. K.

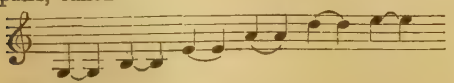
MANCINUS, Thomas, born 1550 at Schwerin, in Mecklenburg, was cantor at the Dom-Schule (Cathedral School) at Schwerin from 1572 to 1578; in 1584 became a member of the chapel of the Duke of Brunswick at Wolfenbüttel, and in 1587 was appointed capellmeister. He was afterwards employed as librarian to the Duke, and died at Wolfenbüttel about 1620 (Kade gives the date 1612). He is the author of two simple settings of the Passion according to St. Matthew and St. John, first published in 1620, and since reprinted in Schöberlein's *Schatz des liturgischen Gesanges*. With the exception of a book of German secular songs *a* 4 and 5, his other works are mostly occasional compositions for weddings and funerals, in the form of motets and madrigals, with Latin or German texts. See *Quellen-Lexikon*. J. R. M.

MANDOLINE (Ital. *Mandolino*) is a small and very beautifully formed stringed instrument of the lute kind, with deeper convexity of back than the lute. It is, as its name implies, less in size than the Mandóla or Mandóra, a much scarcer instrument. Mándola, or Mándorla, signifies 'almond,' and it has been supposed that the shape of the instrument has given it the name. But this cannot be accepted, since the almost universal use of the syllable 'Man' unchanged, or changed by phonetic variation to 'Ban,' 'Pan,' 'Tan,' etc., for the first syllable of names of lute instruments from East to West, removes it to a wider etymological field.

There are two varieties of Mandoline, the Neapolitan and the Milanese; the former having four pairs of strings, the latter usually five. The Milanese 'Mandurina' is tuned



There is one at South Kensington with six pairs, tuned



The Milanese variety, however, is rare in comparison with the Neapolitan, the tuning of which is like that of the violin, in fifths. The lowest pair of strings is of gut, spun over with silver or copper, like a guitar first string; the next of steel also spun over; the second and first pairs are of steel only. Mahillon, in the Catalogue of the Musical Instruments in the Brussels Conservatoire, p. 245, says that the lowest pair is of gut, the third pair of steel, the second pair of copper, and the first pair of gut. Berlioz recommends that the G strings should be of gut spun with wire, the D strings of brass, the A, of steel, and the E, of thin gut. The Mandoline is

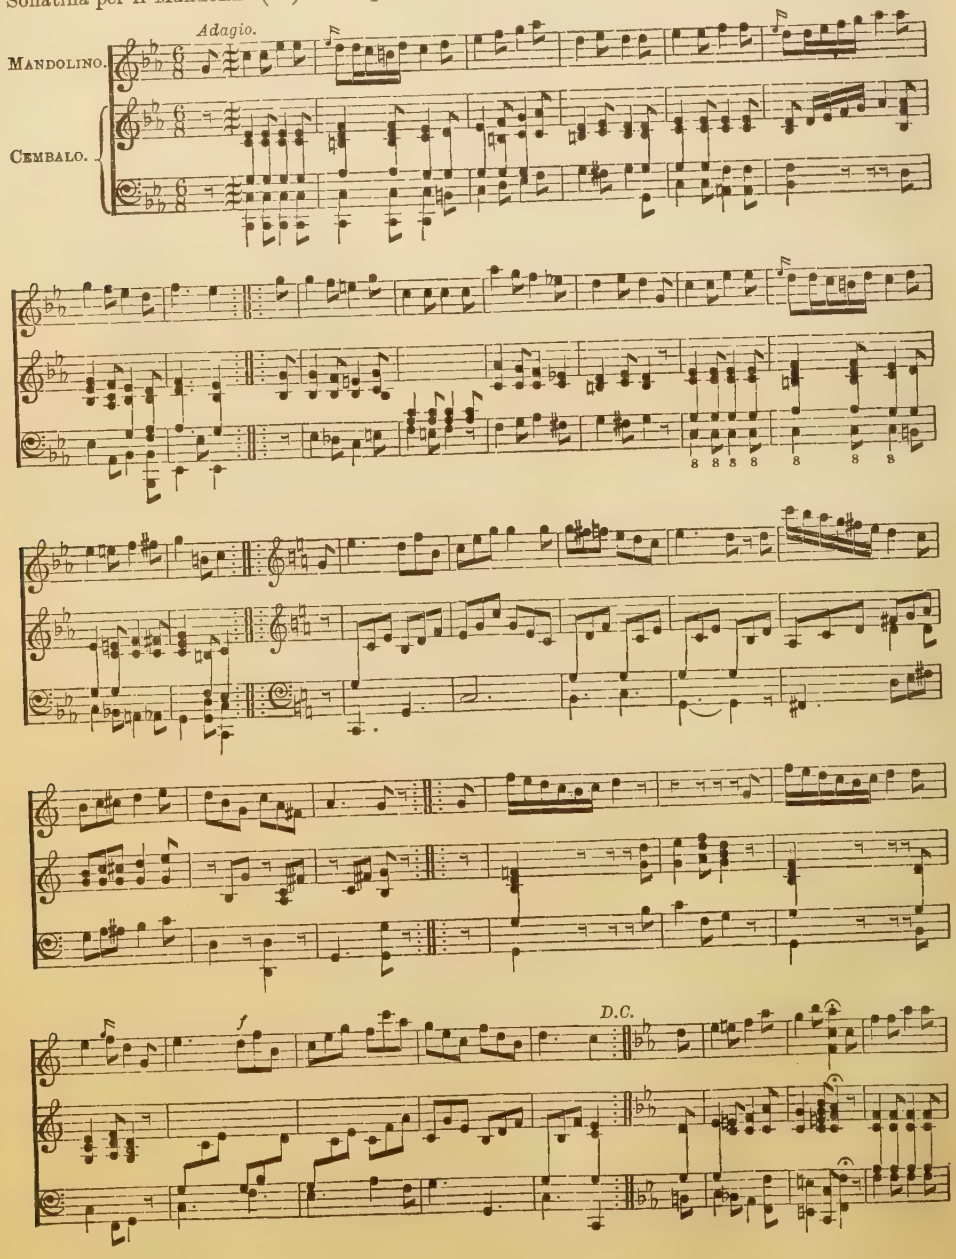
played with a plectrum of tortoiseshell, whalebone, horn, or ostrich-quill, more or less flexible, which is held in the right hand, the left being employed to stop the strings, for which purpose there are seventeen frets across the finger-board. The scale of the instrument is three octaves and one note, from the G below the treble stave to the octave of A above it. The Serenade in Mozart's 'Don Giovanni,' 'Deh vieni,' was written to be accompanied by the Mandoline, and Grétry wrote a charming accompaniment for it in the serenade in 'L'amant jaloux.' There is a song with mandoline accompaniment in Michael Arne's 'Almena' (1764).

In the former song the *pizzicato* of the violins is of a different colour of tone, and offers but a poor substitute.

The Mandoline is not, however, the correct instrument. Don Juan would have played a Bandurria, a kind of half guitar and truly national Spanish instrument, sometimes incorrectly called a Mandoline. The back of the bandurria is flat; it has only in common with the Mandoline that it is played with a plectrum of tortoiseshell, called in Spanish 'pua,' and that it is the practice to insert a plate of the same substance in the belly below the sound-hole to prevent the plectrum scratching. The bandurria has twelve strings tuned in pairs, the higher three notes of catgut, the lower of silk overspun with metal. It is tuned much more deeply than the Mandoline. The compass is in all three octaves.

Our illustration is from an instrument formerly in the possession of Carl Engel.

Beethoven's friend Krumpholz was a virtuoso on the Mandoline, and this probably explains the fact of Beethoven's having written a piece for the instrument (Thayer, ii. 49). The autograph is to be found in the volume of MS. sketches and fragments preserved in the British Museum, Add. MS. 29,801. Though entitled 'Sonatina per il Mandolina (*sic*). Composta da L. v. Beethoven,' it is only in one movement, and was probably printed for the first time in the first edition of this Dictionary. Together with an adagio in E flat for mandoline and harpsichord, it is contained in the supplementary volume of Beethoven's works in Breitkopf & Härtel's complete edition. It will be observed that the phrase with which the Trio (C major) begins is the same which Beethoven afterwards used in the Allegretto of op. 14, No. 1.



MANERIA. A term applied in the early Middle Ages to certain systematic arrangements of the scale, analogous to the Mixed Modes of a somewhat later period. The roots of the several systems comprised in the series corresponded with the finals of the Modes; each system comprehending one Authentic and one Plagal Mode; consequently, the number of the Maneria was only half that of the Modes themselves. They were named and numbered in a barbarous mixture of Greek and Latin, thus:—Modes I. and II. were called Authentus et Plaga, Proti; III. and IV., Authentus et Plaga, Deuteri; V. and VI., Authentus et Plaga, Triti; and VII. and VIII., Authentus et Plaga, Tetarti: *i.e.* the Authentic and Plagal of the First, Second, Third, and Fourth Maneria. When the number of Modes was increased the pedantic faction affected to regard the Maneria of A and C as duplicates of the First and Second at a different pitch; and hence originated the confusion mentioned in DODECACHORDON. Afterwards, the necessary existence of six Maneria for the Twelve Modes was freely acknowledged. W. S. R.

MANIER (Ger.), lit. 'manner'; derived, like our word 'manner,' through the French *manière*, 'a manner,' and *manier*, 'to handle,' from the Latin *manus*, 'a hand.' It has two entirely distinct meanings, one dealing with the æsthetics of music, the other with its technicalities. In the first of these connections the word signifies 'mannerism,' or the faulty adherence to some peculiarity in style, bringing such peculiarity into undue prominence. It is the abuse of individuality, without which quality no great thing can be accomplished in any art.

The second meaning of the word is the same as the French *agrémens*, ornaments introduced into, and built upon, the melody, whether indicated by small notes, or marks, or added at the will of the performer. [See AGRÉMENS, vol. i. p. 52, where the subject is fully treated.] J. M.

MANN, ARTHUR HENRY, Mus.D., was born at Norwich, May 16, 1850, and was a chorister in the cathedral under Dr. Buck. He was a Fellow of the College of Organists in 1871, and took the Mus.B. degree at Oxford in 1874 and that of Mus.D. in 1882. He held the post of organist at St. Peter's, Wolverhampton, from 1870; at Tettenhall Parish Church from 1871; and was appointed to Beverley Minster in 1875. In the following year he was elected organist and director of the choir at King's College, Cambridge. Here his work as a choir-trainer has borne good fruit. His more ambitious compositions include an oratorio, 'Ecce Homo,' 1882; and a 'Te Deum,' 1887, besides services, anthems, etc. He has written numerous hymn-tunes, which have become widely known, and has edited several successful hymn-books, as well as bringing out an edition of Tallis's famous 'Forty-part Song' (1888). He is an earnest student of the work of Handel, and made a minute study of the sketches, etc., in the Fitzwilliam Museum, contributing an important section on them to the *Catalogue of Music*, published in 1893. In 1894 the discovery of the original wind parts of the 'Messiah' in the Foundling Hospital—in which he was partly concerned—was followed by a performance of the oratorio with a reconstructed score, in King's College Chapel. He was appointed choirmaster of the Norwich Festival in 1902. (*Brit. Mus. Biog.*) M.

MANNERS, CHARLES (real name Southcote Mansergh), was born Dec. 27, 1857, in London, the son of Colonel Mansergh, R.H.A. and J.P. for Cork and Tipperary. He was taught singing at the Academies of Music in Dublin and London, at the latter for a short time by Shakespeare, and later in Italy. In 1881 he began his career as a chorus-singer, and joined Carte's travelling company. On Nov. 25, 1882, he made a successful début as Private Willis on the production of 'Iolanthe' at the Savoy Theatre. He next sang in the provinces with the Carl Rosa Company, and appeared in 1890 at Covent Garden as Bertram in 'Roberto.' On Oct. 17, 1892, he sang the part of Prince Gremin on the production in England of Tchaikovsky's 'Eugene Oniegin' under Lago at the Olympic Theatre, and later as the King in 'Lohengrin.' In 1893 he sang in America. From 1894 to 1896 he was engaged by Harris both for English and Italian opera, also by Hedmondt in the autumn of 1895, notably as the King in 'Maritana,' Mephistopheles, etc. His voice is a *basso cantante* of remarkably fine quality. In 1896-97 he undertook a successful English opera tour in South Africa. On his return he established the Moody-Manners Opera Company, and has made extensive tours in the

provinces, with three separate companies, the principal company being 115 in number, with a repertory of thirty operas. In 1902 and 1903, he gave two seasons at Covent Garden, and in 1904 a longer one at Drury Lane. In the latter year and in 1906, with characteristic generosity, he gave an operatic festival, without personal profit, at Sheffield, in aid of funds for the foundation of a university in that town. By giving prizes for the best operas produced by British composers, and by giving opportunities to provincial amateurs of seeing great operas, the Moody-Manners Company has already had a good influence on contemporary music.

His wife, *née* FANNY MOODY, was born Nov. 23, 1866, at Redruth, Cornwall. She was taught singing by Mme. Sainton-Dolby at her private Academy. On April 25, 1885, she sang the principal soprano music in her mistress's last composition, 'Florimel,' a cantata for female voices, at a Memorial Concert at Prince's Hall, under Sainton. In February 1887 she made her début as Arline in the 'Bohemian Girl' at Liverpool with the Carl Rosa Company, and on April 30 appeared very successfully as Micaëla at Drury Lane. After singing in the provinces with that company for three years she reappeared at Drury Lane in 1890 as Mignon, Margaret, etc. She was married to Mr. Manners on July 5, 1890, and in October sang in Italian as Margaret and Alice. In 1892 she was the original English Tatiana in Tchaikovsky's opera above mentioned. She has accompanied her husband on all his tours, and has sung in his London seasons, in addition to parts mentioned, Elizabeth, Elsa, Brünnhilde in 'Siegfried,' Juliet; Sept. 26, 1902, the heroine on the production of Pizzi's 'Rosalba' at Covent Garden; Sept. 22, 1903, Militza on the production at Covent Garden of M'Alpin's 'Crescent and the Cross,' founded on Coppée's 'Pour la Couronne,' which won the £250 prize offered by the artists; on June 17, 1904, she sang the part of Senta in the revival of 'The Flying Dutchman,' at Drury Lane, etc. The possessor of a pleasant light soprano voice, an actress and singer of great charm, Madame Fanny Moody excels in the poetic and pathetic parts associated with Christine Nilsson. A. C.

MANNS, SIR AUGUST, born of poor parents at Stolzenburg, near Stettin, in North Germany, March 12, 1825. His first teacher was the village-musician at the neighbouring village of Torgelow, from whom he learnt the violin, clarinet, and flute. His next instruction was received from Urban, the town-musician of Elbing, near which his parents had removed, and to whom he was apprenticed. Here he had regular practice in an orchestra, especially that of the Dantzig opera company during its annual visits to Elbing; and this led to his entering one of the regimental bands of Dantzig as first clarinet, while he played among the first violins at the theatre. He now began to arrange and compose for the band, and generally to take a prominent part in the music of the place. In 1848 the regiment was transferred to Posen, and here Manns was noticed by Wieprecht, and through his assistance transferred himself from the military band to Gung'l's orchestra in Berlin, and was at length advanced to the post of conductor and solo-violin player at Kroll's Garden —the Crystal Palace of Berlin. Here, under Gyer, he worked hard at harmony and composition, and produced much dance music and other pieces which were very popular. After the destruction of Kroll's establishment by fire in 1851, Mr. Manns was chosen by Herr von Roon (the well-known war-minister), then in command of a crack infantry regiment at Königsberg, to be his bandmaster. Colonel von Roon, though not himself a musician, was very anxious that the band of his regiment should shine in the service. He accordingly gave his bandmaster every opportunity of display. At his instance Beethoven's Symphonies (not at that time so universally known as they are now) were arranged for the band, and in other ways the music of the regiment was made very prominent. It was soon afterwards moved from Königsberg to Cologne, and there enjoyed a still greater reputation. Manns, however, longed for a wider field, and wisely leaving to others the department of composition, in which his abilities were quite sufficient to have ensured him considerable success, he fortunately accepted, in the spring of 1854, an engagement as subconductor in the band of the Crystal Palace, then a wind band only, under Herr Schallehn. This position he gave up in October, and after following his profession at Leamington and Edinburgh (in Mr. Wood's opera band) he became conductor of the summer concerts at Amsterdam in 1855, and finally, in the autumn of that year, was engaged as conductor of the Crystal Palace band, a post upon which he entered on Oct. 14, 1855. The music at the Crystal Palace was at that time in a very inchoate condition, the band was still a wind band, and the open Centre Transept was the only place for its performances. Under the efforts of the new conductor things soon began to mend. He conducted a 'Saturday Concert' in the 'Bohemian Glass Court' the week after his arrival; through the enlightened liberality of the directors the band was changed to a full orchestra, a better spot was found for the music, adjoining the Queen's rooms (since burnt) at the north-east end, and at length, through the exertions of Robert Bowley, then General Manager, the concert-room was enclosed and roofed in, and the famous Saturday Concerts began, and were continued with a constant advance, both in the value and variety of the selections and the delicacy and spirit of the performances, until 1901. Manns's duties

as conductor, both of the daily music and of the Saturday concerts, as well as of the numerous *fêtes* and extra performances, where music had to be arranged for large combined masses of wind and string, were naturally very arduous. Mendelssohn (in a letter from Leipzig dated Feb. 27, 1841) says, 'I have conducted fifteen public performances since Jan. 1; enough to knock up any man.' What would he have said if he had had to do this with all the added difficulties caused by the calls of the London season on his musicians, and with two band-performances to arrange and conduct every day as well? Manns has therefore only rarely taken engagements outside the Crystal Palace. In 1859 he conducted the Promenade Concerts at Drury Lane, and the Winter Series at Glasgow in 1879 and following years. In 1883 he replaced Sir Michael Costa as conductor of the Handel Festival, and conducted the subsequent festivals until 1900. He conducted the Sheffield Festivals of 1896 and 1899. [He was knighted in 1903.]

In a remarkable article in the *Times* of April 28, 1847, it is said that 'the German conductor makes the orchestra express all the modifications of feeling that an imaginative soloist would give voice to on a single instrument.' It is to this power of wielding his band that Manns accustomed his audience during the years of his conductorship. In addition to the many qualities necessary to produce this result he is gifted with an industry which finds no pains too great, and with a devotion which not only makes him strictly loyal to the indications of the composer, but has enabled him to transcend the limits of a mere conductor, and to urge on his audience music which, though at first received with enthusiasm only by a few, has in time amply justified his foresight by becoming a public necessity. It is not too much to say that his persistent performance of the works of Schumann—to name but one composer out of several—in the early part of his career at Sydenham, has made the London public acquainted with them years before they would otherwise have become so. [The younger English composers, from Sullivan downwards, had good reason to be grateful to Manns, who brought forward English works at a time when the regular English conductors were too timid to venture on them.] G.

MANON LESCAUT. The Abbé Prévost's famous romance has attracted many opera-composers.

1. Ballet in three acts, by Halévy. Produced at the Opéra, Paris, May 3, 1830.

2. Opera, by Balfe. Produced in Paris, 1836.

3. Opéra-comique, in three acts, by Auber, libretto by Scribe. Produced at the Opéra Comique, Paris, Feb. 23, 1856.

4. Manon. Opera in three acts, libretto by Meilhac & Gille, music by Massenet. Produced at the Opéra-Comique, Paris, Jan. 19, 1884, and in English by the Carl Rosa Company, at Liverpool, Jan. 17, 1885, and at Drury Lane Theatre, May 7, 1885. In French at Covent Garden, May 19, 1891.

5. Manon Lescaut. Opera in four acts, libretto anonymous, music by Giacomo Puccini. Produced at Turin, Feb. 1, 1893, and at Covent Garden, May 14, 1894.

MANTIUS, EDUARD, a tenor singer of great reputation in Northern Germany, was born at Schwerin, Jan. 18, 1806. He studied law, first in 1825, at the university of Rostock, and afterwards at Leipzig. It was at the latter place that his fine voice attracted general attention and that he began to study singing under Pohlenz. After having sung with great success at a festival at Halle, conducted by Spontini, he went to Berlin, and by his interpretation of the tenor parts in Handel's oratorios (Samson, Judas, etc.), soon became the declared favourite of the Berlin public. How much his talent was appreciated in the house of the Mendelssohn family may be gathered from many passages in the published letters and other books relating to Mendelssohn. It was Mantius who sang the principal tenor part in the Liederspiel, 'Die Heimkehr aus der Fremde' ('Son and Stranger'), at the celebration of the silver wedding of the elder Mendelssohns (Devrient, p. 89). In 1830 he made his first appearance on the stage at Berlin as Tamino in the 'Zauberflöte.' In 1857 he gave his farewell performance as Florestan in 'Fidelio.' During twenty-seven years he had appeared in no less than 152 characters. After quitting the stage he devoted himself with much success to teaching, and he died at Ilmenau, in Thuringia, July 4, 1874. Mantius not only had an exceptionally fine voice, which he knew how to use in a truly artistic and musical manner, but was also a remarkably good actor. His representations of the tenor parts in Mozart's and Gluck's operas were justly regarded as models of their kind. P. D.

MANTUA. The earliest Academy in Mantua for poetry and music was that of the 'Invaghiti,' founded in 1568 by Cesare Gonzaga, Duke of Mantua, and Signor di Guastalla. It always remained under royal patronage, and was one of the largest and most flourishing in Italy. In 1494, previous to the founding of this Academy, there was a magnificent theatre in Mantua, in which was represented one of the earliest Italian dramas—the 'Orfeo' of Angelo Poliziano. This pastorale was composed in two days at the instance of Francesco Gonzaga, Duke of Mantua. In the 17th century, says Muratori, music, and more especially theatrical music, was held in high esteem; the attention of every one was directed to gorgeous musical entertainments, and more especially the courts of Modena and Mantua tried to outshine each other in magnificence. Their respective Dukes,

Ferdinando Gonzaga and Francesco d'Este, vied in obtaining the best musicians and most highly prized singers for their court. It was the custom to pay a sum of not less than 300 scudi to the best actors, and there was no stint of expenditure on orchestra, costumes, or scenery and lighting (*Annali d'Italia*, 1690). C. M. P.

MANUAL (from *manus*, 'a hand'), a clavier, or set of keys, to be played by the hands. The term is used chiefly in reference to the organ, where the keyboards for the hands and the keyboard for the feet have, for convenience, to be distinguished by some brief and suggestive name. Clavier (from *clavis*, a key) simply means a keyboard, without reference to the members of the body with which it is to be played. E. J. H.

MANUALITER. A direction of fairly frequent occurrence in the organ works of Bach and his contemporaries, indicating that the passage or piece so inscribed is to be played upon the manuals alone, the direction 'pedaliter' being used at the entry of the pedal.

MANZUOLI, Giovanni, was born at Florence about 1725. Having acquired a reputation in Italy, he repaired, in 1753, to Madrid, where he was engaged at a high salary by Farinelli. In 1764 and 1765 he came to London, and, by his performance, 'the serious opera acquired a degree of favour to which it had seldom mounted since its first establishment in this country' (Burney). His voice was the most powerful soprano that had been heard on our stage since the time of Farinelli, and his style was full of taste and dignity. The applause he earned was hearty and unequivocal; 'it was a universal thunder.' Other singers had more art and feeling; none possessed a sweeter or fuller organ. As to execution, he had none; but he was a good actor, though unwieldy in figure, and ill-made. Nor was he young; but the sensation he excited seems to have been irresistible. All the composers struggled to have the honour of writing for him; even Dr. Arne composed his unsuccessful 'Olimpiade' for the popular singer. Manzuoli, however, left England at the end of the season, and did not return. In the same year he was at Vienna, and he shortly afterwards retired to his native place, with the title of 'Singer to the Court of the Grand Duke of Tuscany.'

In a letter of Mozart's,[1] his first after starting on his Italian tour, Jan. 7, 1770, he says of a singer whom he heard, 'canta un poco Manzuolisch ed a una bellissima voce forte ed è già vecchio,' etc. Burney heard him again, in September of that year, taking part in a service in a convent near Florence, and was delighted, though the voice seemed less powerful, even in a small church, than when he was in England. His name occurs once more, in one of the elder Mozart's letters, written in the following August, 'Manzuoli often visits us'; and he is included among 'the singers, not only celebrated in their profession, but good-hearted and sensible people.' He took part in the 'Serenata' composed by the young Mozart in honour of the nuptials of the Archduke Ferdinand, at Milan, Oct. 17, 1771, and was encored in one of his songs. Mozart writes again, Nov. 24, 1771: 'Herr Manzuoli, the *musico*, who has always been considered and esteemed as the best of his class, has in his old age given a proof of his folly and arrogance. He was engaged at the Opera for the sum of 500 gigliati (ducats), but as no mention was made of the *Serenata* in the contract, he demanded 500 ducats more for singing in it, making 1000. The court only sent him 700 and a gold box (and enough too, I think), but he returned the 700 ducats and the box, and went away without anything. I don't know what the result of this history will be,—a bad one, I fear!' A good portrait of Manzuoli was engraved by G. B. Betti, after a design by L. Betti. Among his pupils was the celebrated Coltellini. J. M.

[1] In the collection of the present writer.

MAOMETTO SECONDO. Opera by Rossini. Produced at San Carlo, Naples, during the Carnaval of 1820; adapted and extended as Le Siège de Corinthe. G.

MAPLESON, James Henry, a well-known London impresario. He was a student at the Royal Academy, appeared in public as a singer, and for some time played among the violas in the orchestra. Later he was assistant to Mr. E. T. Smith at Her Majesty's Theatre, and when Mr. Smith announced, in 1861, his intention of abandoning Italian Opera, Mr. Mapleson took the Lyceum, and commenced his career as a manager. He opened there on June 5, 1861; and on the 15th produced Verdi's 'Ballo in Maschera' for the first time in England. His first season at Her Majesty's was 1862, when Trebelli made her début in England; the burning of Her Majesty's drove him to Drury Lane in 1868. He joined Mr. Gye in 1869; the coalition lasted two seasons, and in 1871 he returned to Drury Lane. On April 28, 1877, he reopened Her Majesty's Theatre, and had a few seasons there with varying success. 'Colonel' Mapleson, as he was called, was in the habit of taking his company to the United States in the intervals of the London season. *The Mapleson Memoirs*, an amusing volume of reminiscences, appeared in 1888, and Mapleson died Nov. 14, 1901, in London. G.

MARA, Gertrude Elisabeth, one of the greatest singers of the 18th century, was born at Cassel, Feb. 23, 1749. Her mother died soon after the birth of this child, and her father, a poor musician, named Schmeling, is said to have adopted the plan of securing his little daughter in an arm-chair, while he attended to his affairs. From this cause, it appears, she fell into a rickety state, from which it was long ere she recovered, if indeed she ever recovered entirely. Schmeling

GERTRUDE ELIZABETH MARA

contrived to increase his income by mending musical instruments, and the little Gertrude one day got hold of a violin, and began to draw musical sounds from it, being then only four years old. For this she was punished by her father; but the temptation was too strong to be resisted, and she seized every opportunity of practising on such instruments as she could find, whenever Schmeling's back was turned. He found her, however, before long, to his astonishment, playing on a violin, on which she had mastered a scale. Struck with her genius, he gave her a few lessons, and found her so apt a pupil that, not long afterwards, he was able to play duets with her before a few amateurs. But even now, in her fifth year, the poor child could not stand without support, and her father was obliged to carry her to the place where she was to play. By favour of an amateur, Schmeling and his child were enabled to visit the fair at Frankfort, where the little girl's performance excited great wonder. A subscription was set on foot, a better education was given to her, and when she had reached the age of nine her health had improved, and she was able to proceed to Vienna with her father, and there give some concerts. The English ambassador advised Schmeling to take the child to England, advice on which the poor musician, furnished with letters of introduction by the ambassador, gladly acted. He soon obtained the patronage of many noble and influential persons, including the Queen, for his wonderful child. The little girl, petted and admired by all the great ladies, was, however, persuaded by them to give up the violin, which they thought an unfeminine instrument, and was encouraged to sing. Her voice was already resonant and clear, but she had, of course, had no instruction. Schmeling, by the help of her protectresses, placed the young Gertrude under the tuition of the *musico* Paradies. She made rapid progress, but it soon became necessary to remove her from the power of her profligate instructor.

Returning to Cassel, Schmeling found it impossible to get an engagement for his daughter, as he had hoped, at the Court; for the King would not hear of any but Italian singers. Hiller now received her into his music-school, at Leipzig, where she remained for five years. In 1771 she came out from this academy, with a voice remarkable for its extent and beauty, a great knowledge of music, and a brilliant style of singing. She was the first great singer that Germany had produced. Her education had been formed on the music of Hasse, Graun, Benda, Jommelli, Pergolesi, Porpora, and Sacchini; but Hasse, with his vocal passages and facile style, was her favourite master. Her voice extended from the g' to e'''. She made her début in an opera of Hasse's at Dresden, and was successful. With difficulty, the King, Frederick II., was persuaded to hear her; and, though strongly prejudiced against her on account of her nationality, he was immediately converted by her singing an air of Graun's at sight, and finally engaged her for life to sing at Court, with a salary of fr. 11,250. Here she profited by the hints of Concialini and Porporino, and perfected her singing of slow and legato airs.

In was at this juncture that, in spite of all advice, and although the King twice refused his consent, she married the violoncellist, Mara. She soon discovered her folly, and regretted it when too late. This part of her life was extremely unhappy; she was made miserable on the one hand by the excesses of a debauched and dissipated husband, and on the other by the tyranny of a king who allowed her no liberty or indulgence. On one occasion, she was actually brought from her bed, by his orders, transmitted through an officer and guard of soldiers, and forced to sing at the Opera, though complaining, truly or untruly, of indisposition. She at length succeeded in escaping to Dresden, where she was detained by the Prussian ambassador. Frederick, however, who had lost some front teeth, and could no longer play the flute, cared now but little for music, and gave her a tardy permission to annul her engagement. Mme. Mara, free at last, arrived in 1780 at Vienna, where Storace was playing in *opera buffa*, for which the Emperor had a great liking. This was not Mara's line, and she was coldly received. Provided, however, with a letter to Marie-Antoinette from the Empress, she passed through Germany, Holland, and Belgium, singing at various places on her way. At Munich Mozart heard her, but was not favourably impressed. He wrote, Nov. 13, 1780, 'Mara has not the good fortune to please me. She does too little to be compared to a Bastardella (yet this is her peculiar style), and too much to touch the heart like a Weber [Aloysia], or any judicious singer.' He tells a story of her and her husband a few days later (letter of Nov. 24), which shows both of them in a very unpleasant light, as behaving with foolish effrontery and pretension. She was again at Vienna in March 1781, and Mozart mentions her as giving a concert there. She reached Paris in 1782. Here she found the celebrated Todi, and a rivalry immediately sprang up between these two singers, which divided society into factions, as when Handel and Buononcini, or Gluck and Piccinni, were opposed to each other by amateurs incapable of admiring both. Many anecdotes are told of the Mara and Todi dispute, among which one has become famous. At a concert where both singers appeared, an amateur asked his neighbour, 'Quelle était la meilleure': to which the other replied, 'C'est Mara.' 'C'est bien Todi' (bientôt dit) was the punning answer.

Two years later, in the spring of 1784, Mara made her first appearance in London, where her

greatest successes awaited her. She was engaged to sing six nights at the Pantheon. Owing to the general election, she sang to small audiences, and her merits were not recognised until she sang at Westminster Abbey, in the Handel Commemoration, when she was heard with delight by nearly 3000 people. She sang in the repeated Commemoration in 1785, and in 1786 made her first appearance on the London stage in a serious pasticcio, 'Didone Abbandonata,' the success of which was due entirely to her singing. In March 1787 Handel's opera of 'Giulio Cesare' was revived for a benefit, and Mara played in it the part of Cleopatra, which Cuzzoni had sung in 1724. It was so successful that it was constantly repeated during the season. Mara again took a leading part in the Festival in Westminster Abbey in 1787, and she remained connected with the opera in London till 1791, after which, though she sang occasionally on the stage, and even in English ballad operas, she was more frequently heard in concerts and oratorios. For these she was better suited, as her figure was not good enough for the theatre, nor was she a good actress. It is, indeed, not impossible that her stage-presence was still to some extent spoiled by the disease which crippled her as a child; and there is a caricature in which she is shown, singing at a 'Wapping Concert' *seated* (Feb. 28, 1786), with the following apology below:—

> Madam Mary . . . begs her Polite Audience will excuse her sitting during the Performance, as she contracted in her infancy a Disorder called Le Genoue Inflexible, or (Stiff Knee) which prevents her standing, even in the most Sacred Pieces of Music—her Enemies call it Pride, but it must appear only malice, when she could not rise before their Majesties; or at the Sacred Name of Jehovah.

There is, again, a letter of Mara's extant,[1] in which she apologises for not being able even to sit on a platform throughout a concert, a thing she had never been able to do, owing to the heat and fatigue, which she could not bear. Her health was, in fact, never strong. She had, however, the advantage of knowing our language, which she had learnt in childhood, during her first visit to England; and she is said to have gained large sums here by her oratorio-singing.

In 1788 she was singing in the Carnival at Turin, and the following year at Venice. She returned to London in 1790, and went to Venice again in 1791. Coming once more to London in the next season, she remained here for ten years. After this time, she found her voice losing strength, and she quitted England in 1802, after enjoying a splendid benefit of over £1000 at her farewell concert. She sang without effect at Paris, where she had the misfortune to come after Grassini; and then, after passing through Germany, Mara retired to Moscow, where she bought a house.

[1] In the collection of the present writer.

Her worthless husband, and her numerous lovers,—among whom the last was a flute player named Florio,—had helped her to spend the immense sums which she had earned, until she found herself without means, and compelled to support herself by teaching. By following this occupation, she acquired a small competence, which was again lost to her (1812) in the fire of Moscow, which destroyed the merchant's house in which she had placed it. Forced to begin once more to seek a means of subsistence, when almost sixty-four years old, Mara travelled in Livonia, where she was kindly received, and settled in Revel. She now supported herself again for about four years by teaching, and then formed the strange desire to revisit London, the scene of her former glory. Here she arrived in 1819 (according to Fétis), though Lord Mount-Edgcumbe puts her visit before the burning of Moscow. In any case, the poor old woman, announced in a mysterious manner by Messrs. Knyvett as 'a most celebrated singer whom they were not at liberty to name,' appeared at the King's Theatre, when it was discovered that not a shred of her voice remained,—and never appeared again. She returned to Livonia, and died at Revel, Jan. 20, 1833, at the advanced age of eighty-four, soon after receiving from Goethe a poem for her birthday, 'Sangreich war dein Ehrenweg' (Weimar, 1831).

A life of Mara, by G. C. Grosheim, was published at Cassel in 1823, and a more interesting one by Rochlitz in his *Für Freunde der Tonkunst*, vol. i. The best portrait of her was engraved (oval) by J. Collyer, after P. Jean, 1794. J. M.

MARAIS, Marin (1656-1728), was born at Paris, March 31, 1656. At an early age he entered the choir of the Sainte-Chapelle, where he was a pupil of Chaperon. He learnt the bass viol from Hottemann (or Hautmann) and his pupil Sainte-Colombe. After studying six months with the latter his master dismissed him, saying that he could teach him nothing further. In 1685 he entered the Royal Band as a soloist; he was also a member of the orchestra of the Académie Royale de Musique, where he studied composition under Lully, sharing with Colasse the direction of the orchestra. In 1686 he published his first book of 'Pièces de Viole'; he was then living in the Rue du Jour, near St. Eustache. In the same year he produced at court, before the Dauphiness, an 'Idylle Dramatique.' In April 1693, he brought out at the Académie de Musique a setting of A. Houdart de la Motte's 'Alcide,' in which he collaborated with Louis de Lully. The work was revived in 1705, 1716, and 1744. With the same collaborator he wrote a 'Pantomime des Pages,' part of the score of which is preserved at Berlin. His other writings for the stage were 'Ariane et Bacchus' (words by Saint-Jean), produced in 1696;

'Alcione' (words by Houdart de la Motte), 1706; and 'Séméle' (words by the same poet), 1709. The most successful of his operas was 'Alcione,' a representation of a storm in which was long much admired. In 1692 he published a set of 'Pièces en Trio pour les Flûtes, Violon et Dessus de Viole.' A second book of 'Pièces de Viole' appeared in 1701; a third in 1711 (when he was living in the Rue de la Harpe); a fourth in 1717 and a fifth in 1725. Reprints of some of these exist. In 1723 he published a set of 'Sinfonies' for violin, viol, and harpsichord, entitled 'La Gamme.' About 1725 Marais retired to his house in the Rue de Lourcine, where he occupied himself with horticulture. He still, however, gave lessons two or three times a week at a room in the Rue du Battoir. He died Aug. 15, 1728, and was buried in the Church of St. Hippolyte in the Quartier Saint-Marcel. The parish was suppressed in 1791, and shortly afterwards the church was destroyed. No trace of it now remains, but the name is preserved in the Rue Saint-Hippolyte. At his death Marais left in MS. a 'Te Deum' (written and performed on the convalescence of the Dauphiness) and some Concertos for violin and bass viol, written for the elector of Bavaria. At an early age Marais married Catherine Damicourt, who survived him. By her he had nineteen children, four of whom (three sons and a daughter) were also violists. On one occasion he presented his three musician sons to Louis XIV., before whom the children and their father gave a concert, while a fourth boy turned over the leaves of the music. One of his daughters married a musician named Bernier. Marais improved the bass viol by adding a seventh string, and by increasing the sonority of the three lower strings by covering or twisting them. There is a painting of 'M. Marais, musicien,' in the museum at Blois, and there also exists a mezzotint of Marin Marais, painted and engraved by A. Bouys and published in 1704. In this he is represented seated, full length, with his bass viol across his knees. The seven strings and the covering of the lower strings of the instrument have evidently been emphasised by the artist. Of his musician sons, the name of Jean Louis Marais occurs in the imprint of the fourth and fifth books of 'Pièces de Violes,' together with that of Roland Marais, the only one who attained any distinction. He published (in 1711) a *Nouvelle Méthode de Musique*, and in 1725 became a solo violist in the Royal Band, probably succeeding to his father's post. Quantz heard him in 1726, and praises him as a great performer. He published (in 1735 and 1738) two books of 'Pièces de Viole,' but nothing is known as to his biography. W. B. S.

MARBECK, or MERBECKE, JOHN, born 1523, lay clerk, and afterwards (from 1541) organist of St. George's Chapel, Windsor; was arrested [in March 1542-43], together with three other inhabitants of the town, on a charge of heresy, *i.e.* favouring the principles of the Reformation. Their papers were seized, and notes on the Bible and an English Concordance in Marbeck's handwriting were found, and he was, moreover, charged with having copied an epistle of Calvin against the Mass. He and his three fellows were tried [on July 26, 1544] and condemned to the stake, but, whilst the sentence was immediately carried into execution against the others, Marbeck, owing to the favour of Gardiner, Bishop of Winchester, and the interposition of Sir Humphrey Foster, one of the Commissioners, obtained a pardon. [Owing to a curious mistake, the fact of his pardon was omitted in Foxe's *Acts and Monuments*.] He indulged his opinions in secret until the death of Henry VIII., but afterwards avowed them, and in 1550 published his Concordance, and also the work by which he is best known, *The Boke of Common Praier noted*, being an adaptation of the plain chant of the earlier rituals to the first liturgy of Edward VI. In the same year he took the degree of Mus. D. at Oxford. He was still organist in 1565. Marbeck escaped the Marian persecution, and afterwards published *The Lives of Holy Saincts*, etc., 1574; *The Holie Historie of King Dauid*, etc., 1579; *The Ripping up of the Pope's Fardel*, 1581; *A Booke of Notes and Commonplaces*, etc., 1581; *Examples drawn out of Holy Scriptures*, etc., 1582; *A Dialogue between Youth and Olde Age*, 1584. He died at Windsor about 1585, His *Boke of Common Praier noted*, was reprinted in facsimile by Whittingham for Pickering in 1844; an edition by Rimbault was issued in 1845, and a reprint was included in vol. ii. of Dr. Jebb's *Choral Responses and Litanies*, 1857. A hymn for three voices by Marbeck is given in Hawkins's *History*, and portions of a mass for five voices by him, 'Per arma justitiae,' are contained in vol. vi. of Burney's Musical Extracts (Brit. Mus. Add. MS. 11,586.) Additions from *Dict. of Nat. Biog.*; West's *Cath. Org.*; C. F. A. Williams's *Degrees in Music*, etc. W. H. H.

MARCATO (Ital.). 'In a marked, decisive manner.' The principal use of this direction is to draw the attention to the melody or subject when it is in such a position that it might be overlooked, as for instance, 'Il basso ben marcato,' in Chopin's Krakowiak, op. 11; or when there are two subjects both of which are to be brought prominently forward, as in the Ninth Symphony of Beethoven (last movement) where the two subjects come together in 6-4 time, the words being 'Freude, schöner Götterfunken,' and 'Seid umschlungen,' etc.; and in the Études Symphoniques of Schumann, No. 2, 'Marcato il canto' and 'Marcato il tema.' Beethoven also uses 'Queste note ben marcato' (*sic*) in the string quartet, op. 18, No. 6, slow movement, and 'Melodia marcata,' in the Trio, op. 9, No. 2.

'Marcatissimo' is used by Chopin, Étude,

op. 25, No. 11, at the end, by Schumann in the last movement of the Sonata in F♯ minor, op. 11, and in No. 8 of the Études Symphoniques. The latter composer is the only one of note who uses this direction at the beginning of a movement, to denote the character of the whole. This he does frequently, as 'Allegro marcato,' in the third of the Intermezzi, op. 4; and 'Ben marcato,' in Nos. 1 and 3 of the Romances, op. 28. As a rule Marcato is coupled with a certain degree of force, as in Schumann's first Novelette, 'Marcato con forza (Markirt und kräftig)'; but in the Sonata, op. 14 (last movement), we find 'Leggiero marcato,' and near the end, 'Leggierissimo marcando.' The sign which is equivalent to Marcato is < over the separate notes, but this refers to the notes themselves, and Marcato to the whole passage. M.

MARCELLO, Benedetto, eminent composer, a Venetian of noble birth, son of Agostino Marcello and Paola Capello, born July 31, or August 1, 1686. He was highly educated, and had great natural gifts for music, and was a pupil of Lotti and Gasparini. The violin was his first instrument, but he soon gave his whole attention to singing and composition. His father, objecting to the time thus occupied, sent him from home to study law, but on his death Benedetto returned to Venice, and contrived to combine the practice of music with his professional avocations. He held important government posts, was a member of the Council of Forty in 1711, and afterwards Provveditore of Pola (1730). Here he remained eight years, when his health having been ruined by the climate he became Camerlengo at Brescia, and there died July 24, 1739. His monument in the church of S. Giuseppe states his age to have been fifty-two years, eleven months, and twenty-three days.[1] He was elected Cavaliere of the Filarmonici of Bologna in 1812, and was also a member of the Pastori Arcadi of Rome. In his youth he was wild, but sobered down in middle life. His great work, in eight volumes, folio, 'Estro poetico-armonico, Parafrasi sopra i primi 50 Psalmi, Poesia di Girolamo Giustiniani,' appeared in two parts of twenty-five Psalms each (Venice, 1724-27). They are composed for one, two, three, and four voices, with figured basses, and occasionally with two violins and violoncello obbligati; and for expression far surpass any other work of the kind. Dr. Burney, in his notice of Marcello (*Hist.* iv. 543), considers that they have been overpraised, and that even in the composer's day his airs and themes were neither new nor original. In spite, however, of this judgment it is not too much to say that, as a whole, they constitute one of the finest productions of musical literature. An English edition, edited by Avison and Garth, was published in London in 1757 in 8 vols.; a second in Italian soon after (Venice); and a third by Valle (1803-8). Marcello also composed instrumental concertos (1701), and 'Canzoni madrigaleschi' (Bologna, 1717); besides 'Calista in Orsa,' pastoral (libretto printed in 1725, music unpub.); 'La Fede riconosciuta,' opera (Vicenza, 1702); 'Arianna,' cantata; and 'Giuditta,' oratorio, all to his own words. As a poet he was above the average, and furnished the libretto for Ruggieri's 'Arato in Sparta' (Venice, 1709). In 1720 he published a satirical pamphlet, *Il Teatro alla Moda*, reprinted in 1727, 1733, 1738 (Venice), and 1741 (Florence). The Library of St. Mark in Venice contains a MS. *Teoria Musicale*; the Royal Library of Dresden ancient copies of two cantatas, 'Timotheus,' to his own Italian translation of Dryden's poem, and 'Cassandra'; the Court Library of Vienna many autographs and other works, including the cantatas 'La Morte d'Adone,' 'Clori e Daliso,' and 'La Stravaganza'; and the Royal Library of Brussels 'Il Trionfo della musica nel celebrarsi la morte di Maria Vergine,' an oratorio for six voices and chorus. This score was once in the possession of Fétis, who speaks highly of its expression, pathos, and effective instrumentation. Rossini has borrowed one of the most prominent themes in his overture to the 'Siege of Corinth' note for note from Marcello's 21st Psalm. For Marcello's *Lettera Famigliare*, see Lotti. [A full catalogue of his works is in the *Monatshefte für Musikgesch.* vol. 23 (1891), pp. 187-197, supplemented in the *Quellen-Lexikon.*] F. G.

[1] Both Eitner and Riemann overlook this definite statement, and give the date of birth, like that of death, as July 24.

MARCH (Ger. *Marsch*; Fr. *Marche*; Ital. *Marcia*), a form originally associated with military movements, and afterwards imported into the music of the stage, the orchestra, the chamber, and the oratorio. In ancient times the sound of instruments was used as a means of stimulating the action of large numbers of people, whether in processes of labour requiring consentaneous effort, or as a means of exciting ardour in armies advancing to battle by the tones of 'the shrill trump, the spirit-stirring drum, the ear-piercing fife'—equally familiar being Milton's reference to the effect of the sound 'of trumpets loud and clarions,' and the influence on a mighty host of 'Sonorous metal blowing martial sounds.' Like most forms, however, in instrumental music, the development of the March followed that of vocal music. We find Marches in the early operas, in the stage works of Lully, and later in those of Handel and Rameau. In harpsichord music, too, it appears at a comparatively early date, the 'Suites des Pièces' of the French composer Couperin offering examples.

Of the Military March as now understood, as a strictly rhythmical and harmonised composition, written for a band of wind instruments,

and intended not only to stimulate courage but also to ensure the orderly advance of troops, it does not appear that any examples are extant earlier than about the middle of the 17th century, and these seem to have originated during the Thirty Years' War, and are to be traced to the form of the *Volkslied*; war-songs, in which patriotic and military ardour was expressed lyrically, having long preceded the exclusive use of instruments for that purpose. A good specimen of the old German military march is that which Meyerbeer introduced in his 'Ein Feldlager in Schlesien,' and afterwards, with other portions of that work, in his 'L'Étoile du Nord,' in the camp scene of which the fine old 'Dessauer March' stands prominently out from the elaborations with which the composer has surrounded it.

The earliest instance of the march form in regular rhythmical phrasing seems to be the well-known and beautiful Welsh tune, the national Cambrian war-song, 'The March of the Men of Harlech.' This melody [which seems to have appeared first in print in Jones's *Relicks of the Welsh Bards*, 1794, and bears many marks of dating from no earlier than the 18th century] is stated by Llwyd, the 'Bard of Snowdon,' to have originated during the siege of Harlech Castle in 1468. If this be so, Dr. Crotch was justified in saying (in his *Specimens of Different Kinds of Music*) 'the military music of the Welsh is superior to that of any other nation'—*i.e.* reading the remark with reference to the war-songs of the period.

In England the Military March would seem to have been of later development. Sir John Hawkins, however, in his *History of Music*, says: 'It seems that the old English march of the foot was formerly in high estimation, as well abroad as with us; its characteristic is dignity and gravity, in which respect it differs greatly from the French, which, as it is given by Mersennus, is brisk and alert.' On this subject Sir John quotes a *bon mot* of Sir Roger Williams, a soldier of Queen Elizabeth's time, in answer to the French Marshal Biron's remark that 'the English march being beaten by the drum was slow, heavy, and sluggish'; the reply being, 'That may be true, but, slow as it is, it has traversed your master's country from one end to the other.' Hawkins (writing in 1776) speaks of 'the many late alterations in the discipline and exercise of our troops, and the introduction of fifes and other instruments into our martial music'; and, in reference to an earlier condition thereof, quotes, from Walpole's *Catalogue of Royal and Noble Authors*, a warrant of Charles I. to the following effect:—'Whereas the ancient custome of nations hath ever bene to use one certaine and constant forme of March in the warres, whereby to be distinguished one from another. And the March of this our nation, so famous in all the honourable atchievements and glorious warres of this our kingdom in forraigne parts (being by the approbation of strangers themselves confest and acknowledged the best of all marches) was through the negligence and carelessness of drummers, and by long discontinuance so altered and changed from the ancient gravity and majestie thereof, as it was in danger utterly to have bene lost and forgotten. It pleased our late deare brother prince Henry to revive and rectifie the same by ordayning an establishment of one certaine measure, which was beaten in his presence at Greenwich, anno 1610. In confirmation whereof wee are graciously pleased, at the instance and humble sute of our right trusty and right well-beloved cousin and counsellor Edward Viscount Wimbledon, to set down and ordaine this present establishment hereunder expressed. Willing and commanding all drummers within our kingdome of England and principalitie of Wales exactly and precisely to observe the same, as well in this our kingdome, as abroad in the service of any forraigne prince or state, without any addition or alteration whatsoever. To the end that so ancient, famous, and commendable a custome may be preserved as a patterne and precedent to all posteritie,' etc. etc.—This document also contains the following notation[1]—

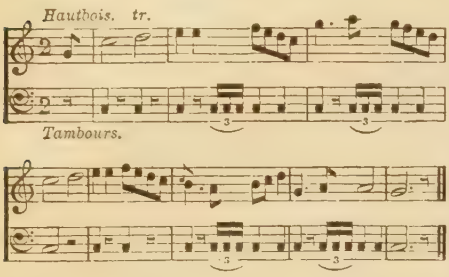
subscribed 'Arundell and Surrey. This is a true copy of the original, signed by his Majestie. Ed. Norgate, Windsor.'

The primary (indeed absolute) importance of the drum in the early form of the March is very evident. Rousseau, in his *Dictionnaire de Musique*, in his article on that subject, thus defines it:—'Marche: Air militaire qui se joue par des instrumens de guerre, et marque le métre et la cadence des Tambours, laquelle est proprement la Marche.' The same author, writing towards the close of the 18th century, speaks

[1] The notes are lozenge-shaped in the original.

of the superiority of the German military music, and says that the French troops had few military instruments for the infantry excepting fifes and drums; and very few marches, most of which were 'très malfaites.' Rousseau gives—as follows—the first part of the March of the Musketeers of the King of France, as illustrating 'L'accord de l'air et de la Marche.'

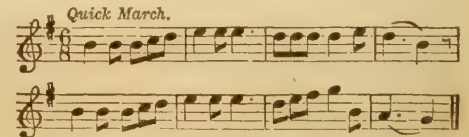


In its earlier instrumental form the German March had two reprises, each of eight, twelve, or even sixteen bars, and its melodic origin would seem to have been influenced by the national dance called the 'Allemande,' in 2–4 time. The modern March is now usually in common time—four crotchets in a bar—consisting of reprises of four, eight, or even sixteen bars, with a subsidiary movement entitled a 'Trio' (generally in the dominant or subdominant key), which occupies a similar place to that of the Trio associated with the Minuet or Scherzo of a symphony; that is, following the March, which is repeated after it. With the ordinary (Parade) March, about seventy-five steps go to the minute; with the Quick March (Germ. *Geschwind Marsch*; Fr. *Pas redoublé*) about 108; while the Storming March (Germ. *Sturm Marsch*; Fr. *Pas de charge*) implies about 120 steps per minute, these being measured by rapid beats of the drum.

Military Marches, intended of course to stimulate hopeful enthusiasm, are generally written in a bright major key, trumpets, drums, and other instruments of percussion being prominently used; and Funeral Marches in a solemn minor one—a remarkable exception to the latter rule being offered by the Dead March in 'Saul,' the key of which is C major. 'The stormy music of the drum' is still an important element in all the pieces used at the parade or on the battle-field; as it exercises a commanding influence on rhythmical precision, as already indicated. Formerly, as above indicated, that instrument was the all-essential feature in the March, instead of being, as afterwards, subsidiary in a musical sense. [Want of space prevents the full discussion of the later development of the march-form by later composers, from Beethoven to Wagner; the 'Marcia Funebre' in the former's Eroica Symphony, and the 'Kaisermarsch,' 'Huldigungsmarsch,' etc., of the latter will occur to every reader's memory.]

The March usually begins with a crotchet before the commencing phrase, as in Handel's Marches in 'Rinaldo' (1711), in 'Scipio,' the Occasional Overture, etc. There are, however, numerous instances to the contrary, as in Gluck's March in 'Alceste,' that in Mozart's 'Die Zauberflöte,' and Mendelssohn's Wedding March, which latter presents the unusual example of beginning on a chord remote from the key of the piece. A March of almost equal beauty is that in Spohr's Symphony, 'Die Weihe der Töne,' and here (as also in the March just referred to) we have an example of a feature found in some of the older Marches—the preliminary flourish of trumpets, or FANFARE [see vol. ii. pp. 5, 6].

There is also, as already said, a description of march in half time—2–4 (two crotchets in a bar), called with us the Quick March—*Pas redoublé, Geschwind Marsch.* Good specimens of this rhythm are the two Marches (Pianoforte duets) by Schubert, No. 3, op. 40, and No. 1, op. 51, in the latter of which we have also the preliminary fanfare. The march form in pianoforte music has indeed been used by several modern composers; by Beethoven in his three Marches for two performers (op. 45); and the Funeral March in his Sonata, op. 26; and, to a much greater extent, by Franz Schubert in his many exquisite pieces of the kind for four hands, among them being two (op. 121) in a tempo (6–8), sometimes, but not often, employed in the march style; another such specimen being the 'Rogues' March,' associated for more than a century (probably much longer) with army desertion. This is also in the style of the Quick March, the tune being identical with that of a song once popular, entitled 'The tight little Island'—it having, indeed, been similarly employed in other instances. The following is the first part of this March, whose name is better known than its melody:—



Besides the March forms already referred to, there is the Torch-dance [see FACKELTANZ, vol. ii. p. 3*a*], which, however, is only associated with pageants and festivities. These and military marches being intended for use in the open air, are of course written entirely for wind instruments, and those of percussion; and in the performance of these pieces many regimental bands, British and foreign, have arrived at a high degree of excellence. [Among modern English marches, that in Parry's music to 'The Birds' of Aristophanes (sometimes used as a wedding-march), and the two entitled

'Pomp and Circumstance' by Elgar, deserve mention.] H. J. L.

MARCHAND, Louis, a personage whose chief claim to our notice is his encounter with Bach, and, as might be imagined, his signal defeat. He was born at Lyons, Feb. 2, 1669.[1] He went to Paris at an early age, became renowned there for his organ-playing, and ultimately became court organist at Versailles. A confusion between him and Jean Louis Marchand of Auxerre (b. 1679) has led to much uncertainty as to the tenure of various posts as organist (see the *Quellen-Lexikon*). By his recklessness and dissipated habits he got into trouble and was exiled in 1717. The story goes, that the king, taking pity on Marchand's unfortunate wife, caused half his salary to be withheld from him, and devoted to her sustenance. Soon after this arrangement, Marchand coolly got up and went away in the middle of a mass which he was playing, and when remonstrated with by the king, replied, 'Sire, if my wife gets half my salary, she may play half the service.' On account of this he was exiled, on which he went to Dresden, and there managed to get again into royal favour. The King of Poland offered him the place of court organist, and thereby enraged Volumier, his capellmeister, who was also at Dresden, and who, in order to crush his rival, secretly invited Bach to come over from Weimar. At a royal concert, Bach being incognito among the audience, Marchand played a French air with brilliant variations of his own, and with much applause, after which Volumier invited Bach to take his seat at the harpsichord. Bach repeated all Marchand's showy variations, and improvised twelve new ones of great beauty and difficulty. He then, having written a theme in pencil, handed it to Marchand, challenging him to an organ competition on the given subject. Marchand accepted the challenge, but when the day came it was found that he had precipitately fled from Dresden, and, the order of his banishment having been withdrawn, had returned to Paris, where his talents met with more appreciation, and where he became organist of St. Honoré. He now set up as a teacher of music, and soon became the fashion, charging the then unheard-of sum of a louis d'or a lesson. In spite of this, however, his expensive habits brought him at last to extreme poverty, and he died in great misery, Feb. 17, 1732. His works comprise 2 vols. of pieces for the harpsichord, and one for the organ, and an opera, 'Pyramus et Thisbe,' which was never performed.

His ideas, says Fétis, are trivial, and his harmonies poor and incorrect. There is a curious criticism of him by Rameau, quoted in La Borde, *Essai sur la musique* (vol. iii.), in which he says that 'no one could compare to Marchand in his manner of handling a fugue'; but, as Fétis shows, this may be explained by the fact that Rameau had never heard any great German or Italian organist. M.

MARCHAND, Marguerite. See Danzi, vol. i. p. 662.

MARCHESI, Luigi, or Lodovico, sometimes called Marchesini, was born at Milan, 1755. His father, who played the horn in the orchestra at Modena, was his first teacher; but his wonderful aptitude for music and his beautiful voice soon attracted the attention of some amateurs, who persuaded the elder Marchesi to have the boy prepared for the career of a sopranist. This was done at Bergamo, and young Marchesi was placed under the *evirato*, Caironi, and Albujo, the tenor, for singing; while his musical education was completed by the Maestro di Cappella, Fioroni, at Milan.

Marchesi made his début on the stage at Rome in 1774, in a female character, the usual introduction of a young and promising singer with a soprano voice and beautiful person. Towards the close of 1775 the Elector of Bavaria engaged Marchesi for his chapel, but his sudden death, two years after, put an end to this engagement, and the young singer went to Milan, where he performed the part of 'second man,' with Pacchierotti as first, and to Venice, where he played second to Millico. He was advanced in that same year to first honours at Treviso. In the next and following years he sang as 'first man' at Munich, Padua, and Florence, where he created a furore by his exquisite singing of 'Mia speranza, io pur vorrei,' a rondo in Sarti's 'Achille in Sciro.' In 1778 he had worked his way to the great theatre of San Carlo, and continued there during two seasons. He was now looked upon as the first singer in Italy, and was fought for by rival *impresarj*. Once more in Milan (1780), he sang in Mysliweczek's 'Armida,' in which he introduced the famous rondo of Sarti, which all Italy had been humming and whistling since he sang it at Florence, and also an air by Bianchi, almost as successful, 'Se piangi e peni.' His portrait was engraved at Pisa, and the impressions were quickly bought up. He now sang in turn at Turin, Rome, Lucca, Vienna, and Berlin, always with renewed éclat; and he went in 1785 to St. Petersburg with Sarti and Mme. Todi. The rigorous climate of Russia, however, filled him with alarm for his voice, and he fled rapidly back to Vienna, where he sang in Sarti's 'Giulio Sabino.'

We next find him (1788) in London, singing in the same opera by Sarti, having just completed an engagement at Turin. His style of singing now seemed (to Burney) 'not only elegant and refined to an uncommon degree, but often grand and full of dignity, particularly in the recitatives and occasional low notes.

[1] Spitta, in his *Life of Bach*, gives the date 1671, as an inference from an old engraving. But see Fétis (s.v.) who quotes an article in the *Magazin Encyclopédique*, 1812, tom. iv. p. 341, where this point is thoroughly investigated, and a register of Marchand's birth given.

Many of his graces were new, elegant, and of his own invention; and he must have studied with intense application to enable himself to execute the divisions and running shakes from the bottom of his compass to the top, even in a rapid series of semitones. But beside his vocal powers, his performance on the stage was extremely embellished by the beauty of his person and the grace and propriety of his gestures. From this time till 1790 he continued to delight the English, appearing meanwhile at short intervals in the various capitals and chief cities of Europe. In 1794 he sang at Milan in the 'Demofoönte' of Portogallo, and was described in the cast as 'all' attual servizio di S. M. il Re di Sardegna.' This memorable occasion was that of the début of Mme. Grassini. He continued to sing at Milan down to the spring of 1806, when he left the stage, and passed the remainder of his life in his native place, honoured and loved. He composed some songs, published in London (Clementi), at Vienna (Cappi), and at Bonn (Simrock). An air, written by him, 'In seno quest' alma,' was also printed.

A beautiful portrait of Marchesi was engraved (June 1790) by L. Schiavonetti, after R. Cosway; and a curious caricature (now rare) was published under the name of 'A Bravura at the Hanover Square Concert,' by J. N[ixon], 1789, in which he is represented as a conceited coxcomb, bedizened with jewels, singing to the King, Prince of Wales, and courtiers.

Marchesi died at Milan, his native place, Dec. 18, 1829. J. M.

MARCHESI, Mathilde de Castrone, *née* Graumann, born March 26, 1826, at Frankfort-on-the-Main. The daughter of a wealthy merchant, she was very highly educated, but in 1843, her father having lost his fortune, she adopted the musical profession. She studied singing at Vienna with Nicolai; but in 1845 went to Paris to learn from Garcia. Here she took lessons in declamation from Samson, Rachel's master, and had the advantage of hearing all the first singers of the age—Persiani, Grisi, Alboni, Duprez, Tamburini, Lablache. Her own aptitude for teaching was already so remarkable that Garcia, whilst prevented by the effects of an accident from giving his lessons, handed over his whole clientèle for the time to his young pupil. In 1849 Mlle. Graumann removed to London, where she obtained a high standing as a concert singer. Her voice was a mezzo-soprano, and her excellent style never failed to please. She has sung successfully in Germany, Belgium, Holland, Switzerland, France and the United Kingdom. She married Signor Salvatore Marchesi (see below), in 1852, and in 1854 accepted the post of professor of singing at the Vienna Conservatoire, the vocal department of which was then in its infancy. But she soon won high distinction for it and herself. Among her pupils at this period were Mlles. Ilma de Murska, Fricci, Kraus, and others who have since become famous. She resigned her appointment in 1861, and removed with her husband to Paris, where pupils came to her from far and wide. At this time appeared her 'École de Chant.' Rossini, in acknowledging the dedication of a volume of 'Vocalizzi,' extols her method as an exposition of the true art of the Italian school of singing, inclusive of the dramatic element; and specially valuable when, he complains, the tendency is to treat the vocal art as though it were a question of the capture of barricades! In 1865 she accepted a professorship at the Cologne Conservatoire, but resigned it in 1868 to return to Vienna to resume her post as teacher of singing at the Conservatoire, which she held for ten years. Among her famous scholars there, were Mlles. d'Angeri and Smeroschi, Mme. Schuch-Proska, and Etelka Gerster. She resigned her appointment at the Conservatoire in 1878, but continued for some time to reside and teach in Vienna, where her services to art have met with full recognition. A pupil of hers having created a *furore* at a concert, the public, after applauding the singer, raised a call for Mme. Marchesi, who had to appear and share the honours. From the Emperor of Austria she received the Cross of Merit of the first class, a distinction rarely accorded to ladies; and she holds decorations and medals from the King of Saxony, the Grand Duke of Saxe Weimar, the Emperor of Germany, and the King of Italy. She is a member of the St. Cecilia Society in Rome, and of the Academy of Florence. In 1881 she returned to Paris, where she has prepared many of the greatest singers of the younger generation for the public career, notably Mme. Melba. She has published a grand practical Method of singing, and twenty-four books of vocal exercises. Her reminiscences were published in 1897, as *Marchesi and Music*. B. T. [Her daughter, Blanche, to whom the book is dedicated, was at first trained as a violinist, but from 1881 devoted herself to singing, and, until her marriage with Baron A. Caccamisi, assisted her mother in teaching. In 1895 she appeared at Berlin and Brussels, and on June 19, 1896, gave a vocal recital in the small Queen's Hall, London. Since then she has lived in England and has enjoyed great success as a concert-singer. She made an operatic début at Prague in 1900 as Brünnhilde in 'Die Walküre,' and has occasionally appeared on the stage with the Moody-Manners Company. A. C.]

MARCHESI, Salvatore, Cavaliere de Castrone, Marchese della Rajata, husband of Mme. M. Marchesi, a baritone singer and teacher, was born at Palermo, Jan. 15, 1822. His family belonged to the nobility, and his father was four years Governor-General of Sicily. In 1838 he entered the Neapolitan Guard, but, for political reasons, resigned his commission in

1840. Whilst studying law and philosophy at Palermo, he took lessons in singing and composition from Raimondi; and he continued his musical studies at Milan, under Lamperti and Fontana. Having participated in the revolutionary movement of 1848, he was forced to seek shelter in America, where he made his début, as an operatic singer, in 'Ernani.' He returned to Europe to take instruction from Garcia, and settled in London, where, for several seasons, he was favourably known as a concert-singer. He married Mlle. Graumann in 1852, and with her made numerous concert tours in England, Germany, and Belgium, appearing also in opera with success, both in England and on the continent. He has held posts as teacher of singing at the Conservatoires of Vienna and Cologne, and was appointed chamber singer to the court of Saxe Weimar, 1862. From the King of Italy he has received the orders of the Knights of St. Maurice and St. Lazarus. Signor Marchesi is known also as the composer of several German and Italian songs, and as the Italian translator of many French and German libretti—'Medea,' 'La Vestale,' 'Iphigenia,' 'Tannhäuser,' 'Lohengrin,' etc. He has published various writings on music, and some books of vocal exercises. B. T.

MARCHESINI. [See LUCCHESINA and MARCHESI, LUIGI.]

MARCHETTI, FILIPPO, was born at Bolognola in the province of Macerata on Feb. 26, 1831. The date of his birth has been incorrectly stated in several books of reference, but the publication of his birth certificate in the *Gazzetta Musicale* of Feb. 6, 1902, has set the question finally at rest. He showed no special devotion to the art of music in his earliest years, but at the age of twelve he began to study with a master named Bindi, and in his fifteenth year he determined to make music his profession. In 1850 his parents sent him to Naples, where he was admitted as a paying student at the Real Collegio di San Pietro a Majella. His principal instructor there was Carlo Conti, with whom he studied counterpoint and composition. In 1854 Marchetti left Naples and returned home, where he devoted himself to the composition of an opera, 'Gentile da Verano,' the libretto of which was written by his brother Raffaele. This work was produced at the Teatro Nazionale, Turin, in February 1856, with so much success that the impresario of the theatre hastened to secure the performing rights of a second opera, 'La Demente,' upon which Marchetti was then engaged. 'La Demente' was produced at the Teatro Carignano, Turin, on Nov. 27, 1856, and in the following year it was revived at Rome and at Jesi. It was well received at both places, but Marchetti was still far from having established his position in the world of music, and he found it impossible to persuade any impresario to produce his next opera, 'Il Paria,' which in fact has never been performed or published. Marchetti fell back upon the composition of ballads and romances, of which he wrote many at this period of his career, though even these he found much difficulty in recommending to the good graces of publishers. Several years passed in fruitless struggles to obtain a hearing, and the composer began to despair of ever attaining the wished-for success. In the year 1862 he was recommended by his brother to move his quarters from Rome to Milan, which was the real centre of musical life in Italy, and where opportunities for distinction were more frequently presented to struggling genius. In Milan Marchetti made the acquaintance of a young poet named Marcelliano Marcello, who persuaded him to undertake the composition of a new version of 'Romeo and Juliet,' the libretto of which he had himself arranged from Shakespeare's tragedy. Marchetti hesitated to attack a subject which had already been treated by Bellini and many other composers, and his diffidence would probably have been augmented had he known that Gounod was at the same time hard at work upon an opera founded upon the same subject. Marcello, however, succeeded in overcoming Marchetti's scruples, and the new 'Romeo e Giulietta' was produced at Trieste on Oct. 24, 1865. Its success at first was only moderate, but when it was revived two years later at the Teatro Carcano at Milan it was very favourably received, in spite of the formidable rivalry of Gounod's 'Roméo et Juliette,' which was being given at La Scala at the same time. With 'Ruy Blas,' his next work, which was produced at La Scala, Milan, on April 3, 1869, Marchetti reached the zenith of his achievement. 'Ruy Blas,' written to a libretto taken by D'Ormeville from Victor Hugo's drama, speedily became popular in Italy, and in process of time carried the composer's fame across the Alps. It was performed with no little success at Her Majesty's Theatre, under the management of Mapleson, on Nov. 24, 1877, Mlle. Salla appearing as the Queen, Mlle. de Belocca as Casilda, Mme. Lablache as Donna de la Cueva, Signor Fancelli as Ruy Blas, and Signor Galassi as Don Sallustio. After 'Ruy Blas' Marchetti never succeeded in winning the popular suffrages. His two remaining works, 'Gustavo Wasa' (Scala, Milan, Feb. 7, 1875), and 'Don Giovanni d' Austria' (Teatro Regio, Turin, March 11, 1880), made little impression. After 1880 Marchetti wrote no more for the stage, but devoted his energies entirely to teaching. In 1881 he was appointed President of the Reale Accademia di Santa Cecilia in Rome, and in 1885 he undertook the onerous duties of Director of the Liceo Musicale in the same city, a post which he held until his death on Jan. 18, 1901. Marchetti's fame as a composer was short-lived. Changes in musical taste soon made 'Ruy Blas' seem old-fashioned, and in his

later works the composer showed no power of adapting his style to the requirements of modern audiences. He may be described as a typical Italian composer of the second rank. In his music the influence of Verdi is not unnaturally supreme, but unfortunately it is the Verdi of earlier days, not the composer of 'Aïda' and the Manzoni Requiem, who served as Marchetti's model. Marchetti's capacity for sheer musical invention was limited ; but in 'Ruy Blas,' his most careful and most meritorious work, the musicianship is often admirable, the orchestration effective without vulgarity, while the composer displays a commendable feeling for characterisation, notably exemplified in the music allotted to the three female characters. R. A. S.

MARCHETTUS of Padua, a musical theorist of the early part of the 14th century. Of his life nothing is known except that he was in the service of Rainier, Prince of Monaco, and that some of his works were written at Cesena and Verona. He was the author of two treatises, the *Lucidarium in arte musicae planae* and the *Pomerium artis musicae mensurabilis*, both of which are printed in the third volume of Gerbert's *Scriptores*. The dedications of these two books point to their having been completed later than 1309, though the Milan manuscript of the *Lucidarium* is said to be dated 1274 and the Vatican manuscript of the *Pomerium*, 1283. The *Lucidarium* is remarkable for the chromaticism employed and for the division of the whole tone either into three-fifths and two-fifths (diatonic and enharmonic semitones) or into four-fifths and one-fifth (chromatic semitone and diesis). The *Pomerium* is of great interest as marking the transition from the Franconian system of notation, in which the shortest musical note admitted was the semibreve, equal to one-third of a breve, to the 'ars nova' of Philip de Vitry and his successors, in which the minim and semiminim were differentiated and brought into the scheme of perfection and imperfection. Marchettus meets the growing need for notes of smaller value by reckoning any number of semibreves from two to twelve to the breve, and distinguishes their values by the addition or omission of tails above or below: see Wolf, *Geschichte der Mensural-Notation*, 1904, p. 30. He also points out the differences between Italian and French notation. An epitome of the *Pomerium* entitled *Brevis Compilatio Magistri Marchetti Musici de Padua in arte musice mensurate pro rudibus et modernis* is printed in the third volume of Coussemaker's *Scriptores* from a 14th-century manuscript at St. Dié, which also contains the *Lucidarium*, the *Ars Mensurabilis Musice* of Franco, and other musical treatises. Fétis's manuscript containing the *Lucidarium*, the *Pomerium*, and the *Brevis Compilatio*, is now in the Royal Library at Brussels. Other manuscripts are at Florence, at Pisa, and in the monastery of Einsiedeln.

Marchettus deserves credit for his attempt to amplify the means of musical expression, but his system of notation was too complex to become of practical utility, and was soon displaced by the bolder and simpler methods of the 'ars nova.' He suffered the penalty of failure, and met with much abuse at the hands of some of his successors. In 1410 Prosdocimus de Beldemandis wrote an *Opusculum contra theoricam partem sive speculativam Lucidarii Marcheti Patavini*, of which there is a manuscript copy at Bologna. In it he asserts that Marchettus was altogether ignorant of theory, and scoffs at his presumption in posing as a scientific musician. Joannes Carthusiensis wrote that Marchettus deserved a schoolboy's whipping; and in the *Musices Opusculum* of Nicolaus Burtius (Bologna, 1487) the worst that the author can say of his opponent, Ramis de Pareia, is that he 'imitated the crass stupidity and fatuity of Marchettus.' J. F. R. S.

MARCHISIO, The Sisters, both born at Turin—Barbara, Dec. 12, 1834, Carlotta, Dec. 6, 1836—were taught singing there by Luigi Fabbrica, and both made their débuts as Adalgisa, the elder (who afterwards became a contralto) at Vienna in 1856, the younger at Madrid. They played at Turin in 1857-58, and made great success there as Arsace and Semiramide ; also on a tour through Italy, and at the Paris Opera on the production of 'Semiramis,' July 9, 1860. They first appeared in England with great success at Mr. Land's concerts, St. James's Hall, Jan. 2 and 4, 1862, in duets of Rossini and Gabussi, and made a concert tour through the provinces with Mr. Willert Beale. They also made a success in 'Semiramide' at Her Majesty's, May 1, 1860, on account of their excellent duet singing, though separately their voices were coarse and harsh, their appearance insignificant, and they were indifferent actresses. Carlotta played the same season Isabella in 'Robert,' June 14, and Donna Anna, July 9. They sang also at the Crystal Palace, twice at the New Philharmonic, at the Monday Popular, etc. They sang together for some time abroad. Carlotta married a Viennese singer, Eugen Kuhn (1835-75), who sang with her in concerts, and at Her Majesty's in 1862 under the name of Coselli, and who afterwards became a pianoforte manufacturer at Venice. She died at Turin, June 28, 1872. Barbara, we believe, retired from public life on her marriage. A. C.

MARÉCHAL, Charles Henri, born in Paris, Jan. 22, 1842, worked at first at solfège with A. Chevé and E. Batiste, studied the piano with Chollet, and harmony with B. Laurent ; finally, at the Conservatoire, studied the organ with Benoist, counterpoint with Chauvet, and composition with Victor Massé. In 1870 he obtained the Grand Prix de Rome with the cantata, 'Le jugement de Dieu.' He was

chorus-master at the Théâtre Lyrique in 1867, and was appointed in 1896 inspector of musical education. His first important composition was a sacred piece, 'La Nativité,' in 1875, but he afterwards devoted himself entirely to the theatre, for which he wrote the following: 'Les Amours de Catherine' (one act, Opéra-Comique, 1876); 'La Taverne des Trabans' (three acts, gained the Prix Monbinne in 1876, produced Opéra-Comique, 1881); 'L'Étoile' (one act, 1881); 'Déidamie' (two acts, Opéra, 1893); 'Calendal' (four acts, Rouen, 1894); 'Ping-Sin' (1895); 'Daphnis et Chloé' (three acts, Théâtre Lyrique, 1899); incidental music for 'L'Ami Fritz' (Comédie Française, 1876), 'Les Rantzau,' 'Smilis,' 'Crime et Châtiment,' etc. For the concert-room he has written 'Les Vivants et les Morts,' for vocal quartet with orchestra (1886); 'Le Miracle de Naim,' sacred drama (1887); 'Esquisses vénitiennes' (1894), and 'Antar' (1897), both for orchestra. He has also published many choral and instrumental compositions. G. F.

MARENZIO, Luca. The oldest account we can find of this great Italian composer is given by O. Rossi,[1] in 1620. It tells us of Marenzio's birth at Coccaglia, a small town on the road between Brescia and Bergamo, of the pastoral beauty of his early surroundings, and the effect they may have had in forming the taste of the future madrigal composer, of the patronage accorded him by great princes, of his valuable post at the court of Poland, worth 1000 scudi a year, of the delicate health which made his return to a more genial climate necessary, of the kind treatment he received from Cardinal Cintio Aldobrandino at Rome, of his early death in that city, and burial at S. Lorenzo in Lucina. The same author gives an account of Giovanni Contini, organist[2] of the cathedral at Brescia, and later in the service of the Duke of Mantua, under whose direction Marenzio completed his studies, having for his fellow-pupil Lelio Bertani,[2] who afterwards served the Duke of Ferrara for 1500 scudi a year, and was even asked to become the Emperor's chapel-master.

Donato Calvi, writing in 1664,[3] anxious to claim Marenzio as a native of Bergamo, traces his descent from the noble family of Marenzi, and finds in their pedigree a Luca Marenzo. He adds further details to Rossi's account, how the King of Poland knighted the composer on his departure, how warmly he was welcomed by the court of Rome on his return, how Cardinal C. Aldobrandino behaved like a servant rather than a patron to him. We also learn that he died August 22, 1599, being then a singer in the Papal chapel, and that there was a grand musical service at his funeral.

In the next account Brescia again puts in a claim, and Leonardo Cozzando[4] asserts that Marenzio was born at Cocaglio, that his parents were poor, and that the whole expense of his living and education was defrayed by Andrea Masetto, the village priest. To Cozzando we are also indebted for a special article on Marenzio's great merits as a singer, and after reading of him under the head of Brescian composers, we find him further mentioned under 'Cantori.'[5]

A fourth account, quite independent of these, and one of the earliest of all, is that given by Henry Peacham, published in 1622.[6] Of the composers of his time, Byrd is his favourite, Victoria and Lassus coming next. Then of Marenzio he says:—

> For delicious Aire and sweete Invention in Madrigals, *Luca Marenzio* excelleth all other whosoever, having published more Sets than any Authour else whosoever: and to say truth, hath not an ill Song, though sometime an oversight (which might be the Printer's fault) of two *eights* or *fifts* escape him; as betweene the *Tenor* and *Base* in the last close, of, *I must depart all haplesse*: ending according to the nature of the Dittie most artificially, with a Minim rest. His first, second, and third parts of *Thyrsis, Veggo dolce mio ben che fæ hoggi mio Sole Cantava*, or *sweete singing Amaryllis*,[7] are Songs, the Muses themselves might not have beene ashamed to have had composed. Of stature and complexion, hee was a little and blacke man: he was Organist in the Popes Chappell at *Rome* a good while, afterward hee went into *Poland*, being in displeasure with the Pope for overmuch familiaritie with a kinswoman of his (whom the Queene of *Poland*, sent for by *Luca Marenzio* afterward, she being one of the rarest women in *Europe*, for her voyce and the Lute:) but returning, he found the affection of the Pope so estranged from him, that hereupon hee tooke a conceipt and died.

The above accounts agree in all important points, and even the descent from a noble Bergamese family is not inconsistent with the parents' poverty and their residence at Coccaglia. Marenzio certainly died at a comparatively early age, in 1599, and we may, therefore, place his birth about 1560, though not later, for he began to publish in 1581. On the 10th of April in that year he was in Venice, dedicating his first book of madrigals (*a* 6) to Alfonso d'Este, Duke of Ferrara. He was in Rome, Dec. 1, 1582,[8] on April 24,[9] and Dec. 15,[10] 1584, was chapel-master to the Cardinal d'Este in the same year,[11] and was still in the same city on July 15, 1585.[12]

We do not think he went to Poland just yet, but we have no more publications for some years. Marenzio probably received his appointment soon after the accession of Sigismund III. (1587),

and is said to have kept it for two years, either from 1588 to 1590, or from 1591 to 1593.

He was back in Rome in 1595, writing to Dowland, July 13,[1] and to Don Diego de Campo, Oct. 20,[2] and in the same year is said to have been appointed to the Papal chapel.[3] It was now that he lived on such familiar terms with Cardinal Aldobrandino, the Pope's nephew, and taking this into account Peacham's tale may have some truth in it, and Marenzio may have fallen in love with a lady belonging to his patron's family. If, however, he died of a broken heart, as is suggested, it must have been caused simply by the Pope's refusal to allow a marriage.

Marenzio's principal works are:—9 books of madrigals (*a* 5), 6 books (*a* 6), each book containing from 13 to 20 nos., and 1 book (*a* 4) containing 21 nos.; 5 books of 'Villanelle e Arie alla Napolitana,' containing 113 nos. (*a* 3) and 1 (*a* 4); 2 books of four-part motets, many of which have been printed in modern notation by Proske;[4] 1 mass (*a* 8), and many other pieces for church use. [See the list in the *Quellen-Lexikon.*] The first five books of madrigals *a* 5 were printed 'in uno corpo ridotto,' in 1593, and a similar edition of those *a* 6 in 1594. These books, containing 78 and 76 pieces respectively, are both in the British Museum. Marenzio's works were introduced into England in 1588, in the collection entitled 'Musica Transalpina' (1588); and two years afterwards a similar book was printed, to which he contributed 23 out of 28 numbers.[5] His reputation here was soon established, for in 1595 John Dowland, the lutenist, 'not being able to dissemble the great content he had found in the profered amity of the most famous Luca Marenzio,' thought the mere advertisement of their correspondence would add to the chance of his own works being well received. Burney does not hesitate to say that the madrigal style was brought to the highest degree of perfection by Marenzio's superior genius, and that the publication of the 'Musica Transalpina' gave birth to that passion for madrigals which became so prevalent among us when our own composers so happily contributed to gratify it.[6]

Thus it came to pass that Luca Marenzio became bound up in our own musical history, and few foreign musicians of the 16th century have been kept so constantly before the English public. The Madrigal Society became a home for his works more than 150 years ago, and they are continually sung by much younger societies. 'To guard faithfully and lovingly the beautiful things, and to reverence the great masters, of olden times, is quite a part of the English character, and one of its most beautiful traits.'[7] J. R. S.-B.

MARESCHALL, SAMUEL, born at Tournay, in May 1554, was town and university organist at Basle from 1577 to his death some time after 1640. In 1606 he published at Basle a choralbuch for four voices, containing Lobwasser's German versified translation of the Psalter with the original French tunes as in Goudimel, the melody, however, in the soprano, also some additional German hymns and tunes. Some of his settings are given in Winterfeld and Schöberlein. In MS. there exist a large number of his organ arrangements of some of these French psalm tunes, and other French and German songs. See *Quellen-Lexikon.* J. R. M.

MARGHERITA. [See EPINE, vol. i. p. 784.]

MARIA ANTONIA WALPURGA (or WALPURGIS), electress of Saxony, daughter of the elector of Bavaria, afterwards the Emperor Charles VII. born July 18, 1724, at Munich, learnt music from Giovanni Ferrandini, Porpora, and finally Hasse. She was a member of the Arcadian Academy in Rome, and the initials of her academical name, 'Ernelinda Talia Pastorella Arcada' were used by her to sign her compositions. The most important of these were two operas, 'Il trionfo della fedeltà,' performed at Potsdam in 1753 before Frederick the Great, and furnished with additional numbers by him, Hasse, Graun, and Benda; and 'Talestri Regina dell' Amazone,' performed in 1763. Both were published by Breitkopf & Härtel, the former in 1756 being one of the first printed with their newly invented types, and the latter appearing in 1765. The electress died at Dresden, April 23, 1780. (*Quellen-Lexikon.*) See also the *Monatshefte für Musikgesch.* vol. xi. p. 167. M.

MARIA DI ROHAN. Opera in three acts; music by Donizetti. Produced at Vienna, June 5, 1843; at the Théâtre Italien, Paris, Nov. 20, 1843, and in London, Covent Garden, May 8, 1847. G.

MARIANI, ANGELO, born at Ravenna, Oct. 11, 1822, began to study the violin when quite young, under Pietro Casolini; later on he had instruction in harmony and composition from a monk named Levrini, of Rimini, who was a celebrated contrapuntist. He was still in his teens when he left home to see the world, and for a certain time he continued to appear, as a soloist in concerts and as a first violin player in orchestras. He was at the Liceo Filarmonico at Bologna, where he had instruction from Rossini. It was in 1844, at Messina, that he assumed the baton,—which after all was only the bow of his violin, for at that time the conductor of an Italian orchestra was named *Primo Violino direttore dell' orchestra.*

After several engagements in different theatres in Italy, Mariani was appointed, in 1847, conductor of the Court Theatre at Copenhagen. While there he wrote a Requiem Mass for the funeral of Christian VIII. At the beginning of 1848 he left Denmark and went to Italy to fight in the ranks of the volunteers for the freedom of his country. At the end of the war he was called to Constantinople, where his ability won him the admiration of the Sultan, who made him many valuable presents; and Mariani, as a mark of gratitude, composed a hymn which he dedicated to him. In Constantinople also he wrote two grand cantatas, 'La Fidanzata del guerriero' and 'Gli Esuli,' both works reflecting the aspirations and attempts of the Italian movement. He returned to Italy in 1852, landing at Genoa, where he was at once invited to be the conductor of the Carlo Felice. In a short time he reorganised that orchestra so as to make it the first in Italy. His fame soon filled the country and spread abroad; he had offers of engagements from London, St. Petersburg, and Paris, but he would never accept them; he had fixed his headquarters in Genoa, and only absented himself for short periods at a time, to conduct at Bologna, at Venice, and other important Italian towns. Mariani exercised an extraordinary personal fascination on all those who were under his direction. He was esteemed and loved by all who knew him. For him, no matter the name of the composer, the music he conducted at the moment was always the most beautiful, and he threw himself into it with all his soul. Great masters as well as young composers were happy to receive his advice, and he gave it in the interest of art and for the improvement of the work. At rehearsal nothing escaped him in the orchestra or on the stage.

In 1864 Mariani was the director of the grand fêtes celebrated at Pesaro in honour of Rossini, and was himself greeted enthusiastically by the public, which was in great part composed of the most eminent musicians of the world. On Nov. 1, 1871, he introduced 'Lohengrin' at the Comunale of Bologna, and, thanks to his efforts, the opera was such a success that it was performed through the season several times a week—and he had only *nine* orchestral rehearsals for it! On this occasion Richard Wagner sent him a large photograph of himself, under which he wrote *Evviva Mariani.*

A cruel illness terminated the life of this great musician on Oct. 13, 1873, at Genoa, the town which had seen the first dawn of his world-wide celebrity. The day of Mariani's funeral was a day of mourning for the whole of Genoa. His body was transported to Ravenna at the request of the latter city. The Genoese municipality ordered a bust of him to be placed in the vestibule of the Carlo Felice; all the letters written to him by the leading composers and literary men of the day to be preserved in the town library; the portrait sent by Wagner hung in one of the rooms of the Palazzo Civico; and his last baton placed by the side of Paganini's violin in the civic museum.

Besides the works already named, and other orchestral pieces, he published several collections of songs, all of which are charmingly melodious:—'Rimembranze del Bosforo,' 'Il Trovatore nella Liguria,' 'Liete e tristi rimembranze,' 'Otto pezzi vocali,' 'Nuovo Album vocale.'

Mariani was the prince of Italian conductors; out of Italy he might have found his equal, but not his superior. F. RZ.

MARIMBA, THE, a curious instrument (said to possess great musical capabilities) in use in the southern parts of Mexico. In type it is of the wooden harmonica species, but is much larger, of more extended range, and has a sound-box to each note. Its compass is five octaves extending upwards from A. A large table-like frame, five or six feet in length, on legs supports a graduated series of strips of hard and well-seasoned wood. Below each of these is fixed an oblong cedar box equally graduated in size. The box, which serves as a resonator, is entirely closed except at the top, but has a small hole covered with thin bladder at the lower end. The wooden note being struck with a drumstick has its vibrations increased by the resonator with the addition of a peculiar buzzing sound. The instrument, which also bears another name, 'Zapotecano,' is to be played by four performers, each armed with a pair of drumsticks varying in size and weight, the heads generally of soft crude indiarubber. A description, with illustrations from photographs, is to be seen in the *Musical Times* for May 1901.

The marimba is also known in Africa, where it is formed in a similar, but rather more primitive fashion, gourds taking the place of the wooden sound-boxes. F. K.

MARIMON, MARIE, born about 1835 in Paris (*Grande Encyclopédie*), was taught singing by Duprez, and made her début at the Lyrique as Hélène on the production of Semet's 'Demoiselle d'Honneur,' Dec. 30, 1857; as Zora in 'La Perle du Brésil,' and Fatima in 'Abu Hassan,' May 11, 1859. She next played at the Opéra-Comique, Catarina in 'Les Diamans de la Couronne,' July 30, 1860; Maïma in Offenbach's unsuccessful 'Barkouf,' Dec. 24, 1860; Zerline in 'La Sirène' with Roger, Nov. 4, 1861, and Giralda in 1862. She returned to the Lyrique, and afterwards played at Brussels. On her return to Paris in 1869 she made a very great success at the Athénée in French versions of Ricci's 'Follia a Roma' and 'Crispino,' and Verdi's 'Masnadieri,' Feb. 3, 1870. She played at Drury Lane in Italian in 1871-72, and at Covent Garden, in the autumn of the first year, Amina, wherein she made her début; May 4,

1871, Maria ('La Figlia'), Rosina, Norina, and Astrifiammante. She made at first a great success solely on account of her beautiful voice, her brilliant execution and certainty of intonation. She did not maintain the hopes excited at her début, since it was discovered that she was a very mechanical actress, and totally devoid of charm. The only part she really played well was Maria. Nevertheless she became a very useful singer at Covent Garden, 1874-77, in all the above parts, Donna Elvira, Margaret of Valois, etc.; at Her Majesty's in 1878 and 1880, in Dinorah, etc.; at the Lyceum in 1881. She sang with success in the English provinces, Holland, Russia, America, and elsewhere. She reappeared in Paris at the Lyrique as Giralda, Oct. 21, 1876; as Suzanne in Gautier's unsuccessful 'La Clé d'Or,' Sept. 14, 1877, and Martha, and at the Italian Opera in the last part Jan. 3, 1884. Soon afterwards she retired and settled in Paris as a teacher of singing, where she now resides. A. C.

MARINI, Biagio, born at Brescia, was employed as a violinist in Venice in 1617, was director of the music at Sant' Eufemia in Brescia in 1620; in 1622 he entered the service of Ferdinand Gonzaga at Parma, and in 1626 was maestro della musica to the Duke of Bavaria. He was at Düsseldorf about 1640, and in 1653 was maestro to the Accademia della Morte at Ferrara, and in the following year to Santa Maria della Scala at Milan. He is said by Fétis to have died at Padua, where he was a member of the Academy of the Occulti; the date of his death is given in Cozzando's *Libreria Bresciana* as 1660. He was the earliest of those Italian violinists who wrote music, and his works are considered as being among the earliest concerted instrumental compositions in existence. The following is a list of the most important :—

Op.
1. Affetti musicali. . . . Symfonie, Canzon, Sonate, Balletti, Arie, Brandi, Gagliarde e Corenti, a 1, 2, 3 (for violins, cornets, and other sorts of instruments). Venice, 1617.
2. Madrigale et Symfonie, a 1, 2, 3, 4, 5. Venice, 1618.
3. Arie, Madrigali et Corenti, a 1, 2, 3. Venice, 1620. (These two books contain vocal as well as instrumental pieces.)
5. Scherzi e Canzonette a 1 e 2 voci. Parma, 1622.
6. Le Lagrime d' Erminia in stile recitativo. Parma, 1623.
7. Canto per le musiche di camera concerti, a 4-6 voci, ed instromenti. Venice, 1634.
8. Sonate Symphonie Canzoni Pass' emezzi, Baletti, Corenti, Gagliarde, e Ritornelli a 1-6 voci, per ogni sorte d' instrumenti . . . con altre curiose e moderne inventioni. Venice, 1626.
9. Madrigaletti, a 1-4 voci. Venice, 1635. (The only known copies of this and of 7 are in the Christ Church Library, Oxford.)
13. Compositioni varie per musica di camera, a 2-5 voci. Venice, 1641.
15. Corona melodica ex diversis sacrae musices floribus concinnata, 2-6 voc. ac instrumentis. Antwerp, 1644.
16. Concerto terzo delle musiche da camera a 3-6 e più voci. Milan, 1649.
18. Salmi per tutti le solennità dell' anno . . . ad. 1-3 voci. Venice, 1653.
20. Vespri per tutte le festività dell' anno, a 4 voci. Venice, 1654.
21. Lacrime di Davide sparse nel Miserere concertato in diversi modi a 2-4 e più voci. Venice, 1655.
22. Per ogni sorte d' istromento musicale diversi generi di Sonate da chiesa e da camera, a 2-4. Venice, 1655.

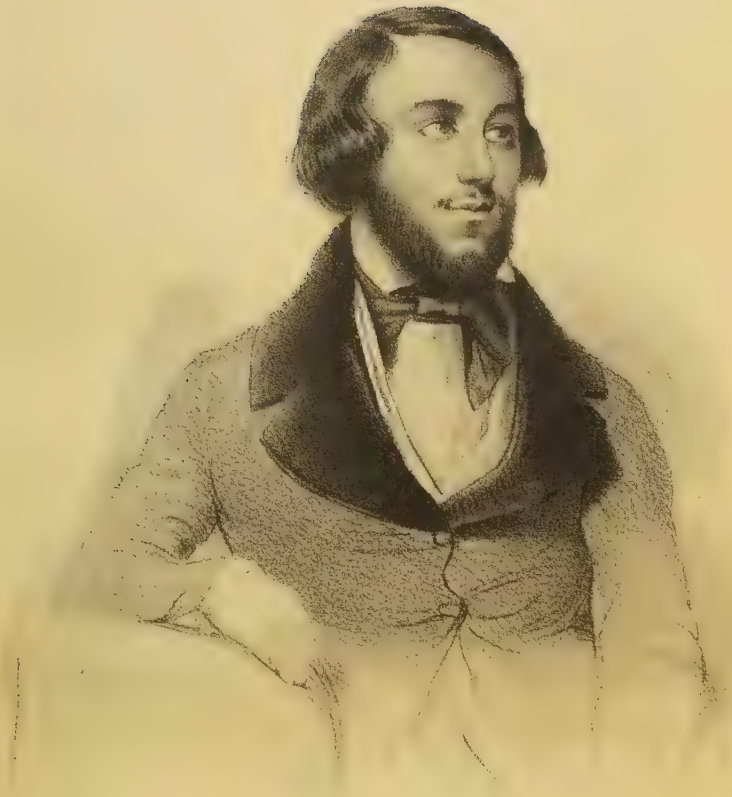
(*Quellen-Lexikon*, etc.) M.

MARINO FALIERO. Opera seria, in two acts; music by Donizetti. Produced at the Théâtre Italien, in 1835; in London, King's Theatre, May 14, 1835. G.

MARIO, Cavaliere di CANDIA, the greatest operatic tenor of his generation, was of an old and noble family. [Authorities differ as to the place and date of birth, but while Cagliari is generally accepted for the former (as against Genoa and Turin), the latter must be considered unsettled as yet. The earliest date, 1808, is supported in Riemann's *Lexikon*; the latest, 1812, appeared in the original edition of this work; and as Baker's *Biog. Dict. of Musicians* is the only book that gives the day, Oct. 17, the year there given, 1810, seems likely to be correct.] His father had been a general in the Piedmontese army; and he himself [after ten years in the Turin Military Academy] was an officer in the Piedmontese Guard, when he first came to Paris in 1836, and immediately became a great favourite in society. Never was youth more richly gifted for the operatic stage; beauty of voice, face, and figure, with the most winning grace of Italian manner, were all his. But he was then only an amateur, and as yet all unfitted for public singing, which his friends constantly suggested to him, even if he could reconcile his pride with the taking of such a step. Tempted as he was by the offers made to him by Duponchel, the director of the Opera,—which are said to have reached the sum of frs. 1500 a month, a large sum for a beginning,—and pressed by the embarrassments created by expensive tastes, he still hesitated to sign his father's name to such a contract; but was finally persuaded to do so at the house of the Comtesse de Merlin, where he was dining one evening with Prince Belgiojoso and other well-known amateurs; and he compromised the matter with his family pride by signing only the Christian name, under which he became afterwards so famous,—Mario.

He is said to have spent some time in study, directed by the advice of Michelet, Ponchard, and the great singing-master, Bordogni; but it cannot have been very long nor the study very deep, for there is no doubt that he was a very incomplete singer when he made his first appearance. This was on Nov. 30, 1838, in the rôle of 'Robert le Diable.' Notwithstanding his lack of preparation and want of habit of the stage, his success was assured from the first moment when his delicious voice and graceful figure were first presented to the French public. Mario remained at the Académie during that year, but in 1840 he passed to the Italian Opera, for which his native tongue and manner better fitted him.

In the meantime, he had made his first appearance in London, where he continued to sing through many years of a long and brilliant career. His début here was in 'Lucrezia Borgia,' June 6, 1839: but, as a critic of the time observed, 'the vocal command which he afterwards gained was unthought of; his acting did not then get beyond that of a southern man with a strong feeling for



MARIO, CAVALIERE DI CANDIA

the stage. But physical beauty and geniality, such as have been bestowed on few, a certain artistic taste, a certain distinction,—not exclusively belonging to gentle birth, but sometimes associated with it,—made it clear, from Signor Mario's first hour of stage-life, that a course of no common order of fascination was begun.'

Mario sang, after this, in each season at Paris and in London, improving steadily both in acting and singing, though it fell to his lot to 'create' but few new characters,—scarcely another beside that of the 'walking lover' in 'Don Pasquale,' a part which consisted of little more than the singing of the serenade 'Com' è gentil.' In other parts he only followed his predecessors, though with a grace and charm which were peculiar to him, and which may possibly remain for ever unequalled. 'It was not,' says the same critic quoted above (Mr. Chorley), 'till the season of 1846 that he took the place of which no wear and tear of time had been able to deprive him.' He had then played Almaviva, Gennaro, Raoul, and had shown himself undoubtedly the most perfect stage-lover ever seen, whatever may have been his other qualities or defects. His singing in the duet of the fourth Act of the 'Ugonotti,' raised him again above this; and in 'La Favorita' he achieved, perhaps, his highest point of attainment as a dramatic singer.

Like Garcia and Nourrit, Mario attempted 'Don Giovanni,' and with similarly small success. The violence done to Mozart's music partly accounts for the failure of tenors to appropriate this great character; Mario was unfitted for it by nature. The reckless profligate found no counterpart in the easy grace of his love-making; he was too amiable in the eyes of the public to realise for them the idea of the 'Dissoluto Punito.'

As a singer of 'romances' Mario has never been surpassed. The native elegance of his demeanour contributed not a little to his vocal success in the drawing-room; for refinements of accent and pronunciation create effects there which would be inappreciable in the larger space of a theatre. Mario was not often heard in oratorio, but he sang 'Then shall the righteous,' in 'Elijah,' at the Birmingham Festival of 1849, and 'If with all your hearts,' in the same oratorio, at Hereford, in 1855. For the stage he was born, and to the stage he remained faithful during his artistic life. To the brilliance of his success in opera he brought one great helping quality, the eye for colour and all the important details of costume. His figure on the stage looked as if it had stepped out of the canvas of Titian, Veronese, or Tintoretto. Never was an actor more harmoniously and beautifully dressed for the characters he impersonated,—no mean advantage, and no slight indication of the complete artistic temperament.

For five-and-twenty years Mario remained before the public of Paris, London, and St. Petersburg, constantly associated with Mme. Grisi. In the earlier years (1843-46) of that brilliant quarter of a century, he took the place of Rubini in the famous quartet, with Tamburini and Lablache; this, however, did not last long; and he soon remained alone with the sole remaining star of the original constellation, Mme. Grisi. To this gifted prima donna Mario was united, after the dissolution of her former marriage; and by her he had three daughters. He left the stage in 1867, and retired to Paris, and then to Rome, where he died, Dec. 11, 1883. About 1880 it became known that he was in reduced circumstances, and his friends got up a concert in London for his benefit. J. M.

MARIONETTE-THEATRE, a small stage on which puppets, moved by wires and strings, act operas, plays, and ballets, the songs or dialogue being sung or spoken behind the scenes. The repertoires included both serious and comic pieces, but mock-heroic and satiric dramas were the most effective. Puppet-plays,[1] in England and Italy called 'fantoccini,' once popular with all classes, go back as far as the 15th century. From that period to the end of the 17th century Punch was so popular as to inspire Addison with a Latin poem, 'Machinae gesticulantes.' In 1713 a certain Powell erected a Punch theatre under the arcade of Covent Garden, where pieces founded on nursery rhymes, such as the 'Babes in the Wood,' 'Robin Hood,' and 'Mother Goose,' were performed; later on they even reached Shakespeare and opera. About the same period Marionette-theatres were erected in the open spaces at Vienna, and these have reappeared from time to time ever since.[2] Prince Esterhazy, at his summer residence, Esterház, had a fantastically decorated grotto for his puppet-plays, with a staff of skilled machinists, scene-painters, play-wrights, and above all a composer, his capellmeister Haydn, whose love of humour found ample scope in these performances. His opera 'Philemon und Baucis' so delighted the Empress Maria Teresa, that by her desire Prince Esterhazy had the whole apparatus sent to Vienna for the amusement of the Court. In London, fantoccini were playing between the years 1770 and 1780 at Hickford's large Rooms in Panton Street, Haymarket, Marylebone Gardens, and in Piccadilly. In Nov. 1791 Haydn was present at one of these performances[3] in the elegant little theatre called Variétés Amusantes, belonging to Lord Barrymore, in Savile Row. He was much interested, and wrote in his diary, 'The puppets were well-managed, the singers bad, but the orchestra tolerably good.' The playbill may be quoted as a specimen.

[1] See Strutt's *Sports and Pastimes of the People of England*, London, 1830.
[2] In 1877 Raupach's *Müller und sein Kind*, and the *Ring des Nibelungen* were performed there and elsewhere by puppets.
[3] See Pohl's *Haydn in London*, p. 162.

FANTOCCINI

Dancing and music.

Overture, Haydn.	Spanish Fandango.
A comedy in one act, 'Arlequin valet.'	Concertante, Pleyel.
Overture, Piccini.	A comedy in one act, 'Les Petits Riens,' the music by Sacchini and Paisiello.
The favourite opera (5th time) 'La buona Figliuola,' the music by Piccini, Giordani and Sarti.	To conclude with a Pas de deux à-la-mode de Vestris and Hillisberg.

Leader of the band: Mr. Mountain.

First hautboy: Sgr. Patria.

To begin at 8; the doors open at 7 o'clock.

The theatre is well aired and illuminated with wax.

Refreshments to be had at the Rooms of the theatre. Boxes, 5/. Pit, 3/.

A critic in *The Gazetteer* says:—'So well did the motion of the puppets agree with the voice and tone of the prompters, that, after the eye had been accustomed to them for a few minutes, it was difficult to remember that they were puppets.'

Fantoccini are by no means to be despised even in these days. They give opportunity for 'many a true word to be spoken in jest'; they show up the bad habits of actors, and form a mirror in which adults may see a picture of life none the less true for a little distortion. [The vogue of the marionette-theatre lasted longer in Italy (where it was generally managed by English performers) than elsewhere; they are occasionally still to be seen there and elsewhere, but the performances of regular plays is now rarer than exhibitions of single dancing dolls. At the 'Théâtre Guignol' the same kind of entertainment maintained its popularity for many years in the Champs Elysées, Paris.] C. F. P.

MARITANA. Opera in three acts, founded on Don César de Bazan; words by Fitzball, music by W. V. Wallace. Produced at Drury Lane by Bunn, Nov. 15, 1845. G.

MARKNEUKIRCHEN. A small town in the kingdom of Saxony, which like Mittenwald in Bavaria, and Mirecourt in Lorraine, is one of the principal centres for the manufacture of cheap modern bow and other instruments. The corner-stone of the present flourishing trade was laid by the formation of a Guild, or Incorporated Society of Violin-makers in 1677, which was on a par, in its exclusiveness and discipline, with the ancient 'Meistersingers' and their prototypes the 'Minnesingers.' Just as the foundation of the Mittenwald industry was laid by Mathias Klotz in 1684, so the renown and prosperity which characterise the Markneukirchen of to-day have undoubtedly sprung from this old Guild. A record of the names of the original 'Masters' of the art together with those subsequently admitted, is to be found in *The Arts and Crafts book of the Worshipful Guild of Violinmakers of Markneukirchen* which extends from 1677 to 1772, and has been translated into English. It opens with the words: 'In the name of the Holy Trinity, Amen!' and then proceeds to give the twelve names of the religious exiles, principally from Graslitz, who, rather than renounce their worship of God in the reformed Lutheran manner, left their homes and the perplexities of sectarian bigotry, and as 'Fundatores,' or Pioneers, settled in Markneukirchen, 'under the direction and inspiration of God.' The list opens with the name of Christian Reichel, whose family boasted more 'Master-workers' in the space of 100 years than any other. In the present day this name appears less prominently than formerly, a circumstance due to the great fire of 1840, which drove the principal branches of the family to remove themselves and their capital to other lands. But though far from home, they still preserved a faithful attachment to their fellow-countrymen, and were instrumental in enlarging the trade connection of their native town with foreign countries. In 1851 the brothers Reichel won the gold medal in Tilsit for their gut strings manufactured there, and exhibited in London at the first International Exhibition. Besides Christian Reichel the 'Fundatores' were his brother Johann Caspar Reichel, and Caspar Schönfelder, Caspar Hopf, Johann Gottfried Bopel, Johann Adam Bopel, David Rudest, Johann Georg Poller, Johann Schönfelder, Johann Adam Kurzendorffer, Johann Georg Schönfeld, and David Schönfeld. The two Reichels, H. G. Poller, C. Schönfelder, and C. Hopf acted as Head Masters of the Guild.

After this follow records of admissions down to 1772 of some seventy 'Masters' belonging to some thirty-one families, among whom one notices Adam Voigt in 1699, Christoph Adam Richter in 1708, ten Reichels, eight Schönfelders and so on. A Master was bound to own a house, in which his banquet, given on his admission to the Guild, took place at which all existing Masters and their wives were present. The records are often quaint. On the admission of Johann Adam Nurnberger in 1761, it is recorded that 'he had half a mind to marry the youngest daughter of Master Johann Reichel the elder. On this consideration the fees on admission to mastership were reduced to 10 thalers, 16 groschen. In the event of his neither marrying the lady under consideration, nor any other Master's daughter, the sum of 31 thalers was assessed upon him as a deferred payment.' Vested interests were uppermost in the considerations of this patriarchal Guild.

The earliest instruments made by the Guild were constructed according to the fundamentary rules which had been laid down by Tieffenbrugger, or Duiffoprugcar, who flourished in the year 1510. But later, as the Society grew in wealth and power, and the apprentices could travel and see the chief centres of instrument manufacture in Italy, new methods and ideas were brought to the home workmen, who gathered them up and used them to strengthen each his own individuality. They became

possessed of valuable Italian instruments which, once recognised and used as models, became accessible to all the Arts and Craftsmen in the town, and beyond this, by reason of their rule of exacting a diploma work from every new candidate for membership, a certain standard of artistic excellence was maintained by the Guild. This traditional spirit of original art makes itself felt to this day in the studios of Markneukirchen, where violins of genuine German make are constructed, and sold at high prices, while in the other factories are turned out mere imitations of the most celebrated Italian masters.

E. Bachmann: *Bericht über die Fachschule für Instrumentenbauer in Markneukirchen* (Markneukirchen, 1883). *The Arts and Crafts Book of the Worshipful Guild of Violin-makers of Markneukirchen.* From the year 1677 to the year 1772. Extracted and analysed by Dr. Richard Petong. Translated and edited by Edward and Marianna Heron-Allen. (London, 1894.) *Old Violins*, Rev. H. R. Haweis. (London, 1893.) E. H-A.

MARKULL, Friedrich Wilhelm, born Feb. 17, 1816, at Reichenbach near Elbing, Prussia. He studied composition and organ-playing under Friedrich Schneider, at Dessau; became in 1836 principal organist at the Marienkirche at Danzig, and conductor of the 'Gesangverein' there. Markull enjoyed a high reputation as a pianist, and gave excellent concerts of chamber music, besides acting as critic for the *Danziger Zeitung*. [His compositions include three operas, 'Maja und Alpino,' or 'Die bezauberte Rose' (1843); 'Der König von Zion' (1848); 'Das Walpurgisfest' (1855); two oratorios, 'Johannes der Täufer' and 'Das Gedächtniss der Entschlafenen,' produced by Spohr at Cassel in 1856, the 86th Psalm, several symphonies, numerous works for organ, voice, and piano, a 'Choralbuch' (1845), and arrangements.] H. S. O.

MARPURG, Friedrich Wilhelm, eminent writer on music, born Nov. 21, 1718, at Marpurgshof, near Seehausen, in Brandenburg. [The date of birth was discovered in the registers of Seehof in Wendemark by Dr. W. Thamhayn (see the *Quellen-Lexikon*).] Little is known of his musical education, as Gerber gives no details, although Marpurg furnished him with the history of his life. Spazier (*Leipzig musik. Zeitung*, ii. 553) says that in 1746 he was secretary to General Rothenburg [er Bodenberg] in Paris, and there associated with Voltaire, Maupertuis, D'Alembert, and Rameau; and Eberhard remarks that his acquaintance with good society would account for his refined manners and his tact in criticism. The absence in his works of personality and of fine writing, then so common with musical authors, is the more striking as he had great command of language and thoroughly enjoyed discussion. His active pen was exercised in almost all branches of music—composition, theory, criticism, and history. Of his theoretical works the most celebrated are—the *Handbuch bey dem Generalbasse und der Composition*, founded on Rameau's system (3 parts, 1755-62, Berlin); *Der critische Musicus an der Spree* (Berlin, 1750), containing, on p. 129, a lucid explanation of the old Church Modes; the *Anleitung zur Singecomposition* (Berlin, 1758), and the *Anleitung zur Musik* (Berlin, 1763), both still popular: the *Kunst das Clavier zu spielen* (1750); the *Versuch über die musikalische Temperatur* (Breslau, 1776), a controversial pamphlet intended to prove that Kirnberger's so-called fundamental bass was merely an interpolated bass; and the *Abhandlung von der Fuge*, 62 plates (Berlin, 1753-54; 2nd edition, 1806; French, Berlin, 1756), a masterly summary of the whole science of counterpoint at that period, with the solitary defect that it is illustrated by a few short examples, instead of being treated in connection with composition. This Marpurg intended to remedy by publishing a collection of fugues by well-known authors, with analyses, but he only issued the first part (Berlin, 1758). Of his critical works the most important is the *Historisch-kritische Beyträge*, 5 vols. (Berlin, 1754-78). Among the historical may be specified a MS. *Entwurf einer Geschichte der Orgel*, of which Gerber gives the table of contents; and the *Kritische Einleitung in die Geschichte der . . . Musik* (Berlin, 1759). A *jeu d'esprit*, *Legende einiger Musikheiligen von Simeon Metaphrastes dem Jüngeren* (Cologne, 1786), appeared under a pseudonym. Of compositions he published, besides collections of contemporary music, '6 Sonaten für das Cembalo' (Nuremberg, 1756); 'Fughe e capricci' (Berlin, 1777); and 'Versuch in figurirten Chorälen,' vols. 1 and 2; 'Musikalisches Archiv,' an elucidation of the *Historisch-kritische Beyträge*, was announced, but did not appear. [Other works and editions are given in the *Quellen-Lexikon*.]

Marpurg died May 22, 1795, in Berlin, where he had been director of the government lottery from 1763. F. G.

MARRIAGE OF FIGARO. See Nozze di Figaro.

MARSCHALL, Samuel. See Mareschall.

MARSCHNER, Heinrich August, celebrated German opera-composer, born August 16, 1795, at Zittau in Saxony. He began to compose sonatas, Lieder, dances, and even orchestral music, with no further help than a few hints from various musicians with whom his beautiful soprano voice and his pianoforte-playing brought him into contact. As he grew up he obtained more systematic instruction from Schicht of Leipzig, whither he went in 1813 to study law. Here also he made the acquaintance of Rochlitz, who induced him to adopt music as a profession. In 1816 he travelled with Count Thaddäus von Amadée, a Hungarian, to Pressburg and Vienna, where he made the acquaintance of Kozeluch and of Beethoven, who is said to have advised him to compose sonatas, symphonies, etc., for practice. In

Pressburg he composed 'Der Kyffhäuserberg,' 'Saidor,' 'Heinrich IV. und Aubigné.' Weber produced the last at Dresden, July 19, 1820, and Marschner was in consequence appointed in 1823 joint-capellmeister with Weber and Morlacchi of the German and Italian Opera there. He was appointed musikdirector in 1824, but resigned on Weber's death in 1826, and after travelling for some time, settled in 1827 at Leipzig as capellmeister of the theatre. Here he produced 'Der Vampyr' (March 28, 1828), his first romantic opera, to a libretto by his brother-in-law Wohlbrück, the success of which was enormous in spite of its repulsive subject. In London it was produced, August 25, 1829, in English, at the Lyceum, and ran for sixty nights, and Marschner had accepted an invitation to compose an English opera, when Covent Garden Theatre was burnt down. His success here doubtless led to his dedicating his opera 'Des Falkner's Braut' to King William IV., in return for which he received a gracious letter and a golden box in 1833. His attention having been turned to English literature, his next opera, 'Der Templer und die Jüdin' (produced at Leipzig, Dec. 1829), was composed to a libretto constructed by himself and Wohlbrück from 'Ivanhoe.' The freshness and melody of the music ensured its success at the time, but the libretto, disjointed and overloaded with purely epic passages which merely serve to hinder the action, killed the music. In 1831 Marschner was appointed Court Capellmeister at Hanover, where he produced 'Hans Heiling' (May 24, 1833) to a libretto by Eduard Devrient, which had been urged upon Mendelssohn in 1827 (Devrient's *Recollections*, p. 40). This opera is Marschner's masterpiece. Its success was instantaneous and universal, and it retains to this day an honourable place at all the principal theatres of Germany. In 1836 it was performed under his own direction at Copenhagen with marked success, and he was offered the post of Generalmusikdirector in Denmark, an honour which the warmth of his reception on his return to Hanover induced him to decline. After 'Hans Heiling'—owing chiefly to differences with the management of the theatre—Marschner composed little for the stage, and that little has not survived. He was pensioned, with the title of Generalmusikdirector, in 1859, and died at Hanover, Dec. 14, 1861. A monument was erected to him at Hanover in 1877. Besides the operas already mentioned he composed 'Schön Ell' (incidental music) (1822); 'Der Holzdieb' (Dresden, 1825); 'Lucretia' (Danzig, 1826); 'Des Falkner's Braut' (Leipzig, 1832; Berlin, 1838); 'Der Bäbu' (Hanover, 1837); 'Das Schloss am Aetna' (Berlin, 1838); 'Adolf von Nassau' (Hanover, 1843); 'Austin' (1851). He also composed incidental music for von Kleist's play 'Die Hermannsschlacht,' and published over 180 works of all kinds and descriptions; but principally Lieder for one and more voices, still popular; and choruses for men's voices, many of which are excellent and great favourites. An overture, embodying 'God save the King,' is mentioned as being performed in London at a concert on the occasion of the baptism of the Prince of Wales (now King Edward VII.), Jan. 25, 1842.

As a dramatic composer of the Romantic school, Marschner ranks next to Weber and Spohr, but it is with the former that his name is most intimately connected, though he was never a pupil of Weber's. The strong similarity between their dispositions and gifts, the harmonious way in which they worked together, and the cordial affection they felt for each other, are interesting facts in the history of music. Marschner's favourite subjects were ghosts and demons, whose uncanny revels he delineated with extraordinary power, but this gloomy side of his character was relieved by a real love of nature and out-door life, especially in its lighter and more humorous characteristics. He worked with extreme rapidity, which is the more remarkable as his scores abound in enharmonic modulations, and his orchestration is unusually brilliant and elaborate. Such facility argues an inexhaustible store of melody, and a perfect mastery of the technical part of composition. A. M.

MARSEILLAISE, LA. The words and music of this popular French hymn are the composition of Claude Joseph Rouget de Lisle, a captain of engineers, who was quartered at Strasburg when the volunteers of the Bas Rhin received orders to join Luckner's army. Dietrich, the Mayor of Strasburg, having, in the course of a discussion on the war, regretted that the young soldiers had no patriotic song to sing as they marched out, Rouget de Lisle, who was of the party, returned to his lodgings,[1] and in a fit of enthusiasm composed, during the night of April 24, 1792, the words and music of the song which has immortalised his name. With his violin he picked out the first strains of this inspiriting and truly martial melody; but being only an amateur, he unfortunately added a symphony which jars strangely with the vigorous character of the hymn itself. The following copy of the original edition, printed by Dannbach of Strasburg under the title 'Chant de guerre pour l'armée du Rhin, dédié au Maréchal Lukner' (*sic*), will be interesting from its containing the symphony, which has been since suppressed, and from an obvious typographical error, the crotchet marked * being evidently intended for a quaver.

The 'Chant de Guerre' was sung in Dietrich's house on April 25, copied and arranged for a military band on the following day, and performed by the band of the Garde Nationale

[1] In the Maison Böckel, No. 12, Grande Rue.

at a review on Sunday, the 29th. On June 25 a singer named Mireur sang it at a civic banquet at Marseilles with so much effect that it was immediately printed, and distributed to the volunteers of the battalion just starting for Paris. They entered Paris on July 30, singing their new hymn; and with it on their lips they marched to the attack on the Tuileries on August 10, 1792. From that day the 'Chant de guerre pour l'armée du Rhin' was called 'Chanson' or 'Chant des Marseillais,' and, finally, 'La Marseillaise.' The people, shouting it in the streets, probably altered a note or two; the musicians, Edelmann, Grétry, and most of all Gossec, in their accompaniments for pianoforte and orchestra, greatly enriched the harmonies, and soon the 'Marseillaise,' in the form we have it now (which need hardly be quoted), was known from one end of France to the other.

The original edition contained only six couplets; the seventh was added when it was dramatised for the Fête of the Fédération, in order to complete the characters—an old man, a soldier, a wife, and a child—among whom the verses were distributed. Rouget de Lisle had been cashiered for expressing disapproval of the events of August 10, and was then in prison, from which he was only released after the fall of Robespierre, on the ninth Thermidor (July 28), 1794. The following fine stanza for the child was accordingly supplied by Dubois, editor of the *Journal de Littérature*:—

> Nous entrerons dans la carrière,
> Quand nos aînés n'y seront plus;
> Nous y trouverons leur poussière
> Et la trace de leurs vertus.
> Bien moins jaloux de leur survivre
> Que de partager leur cercueil,
> Nous aurons le sublime orgueil
> De les venger ou de les suivre.

Dubois also proposed to alter the concluding lines of the sixth stanza:—

> *Que* tes ennemis expirants
> *Voient* ton triomphe et notre gloire

to

> Dans tes ennemis expirants
> Vois ton triomphe et notre gloire.

These are minute details, but no fact connected with this most celebrated of French national airs is uninteresting.

That Rouget de Lisle was the author of the words of the 'Marseillaise' has never been doubted—indeed Louis Philippe conferred a pension upon him; but it has been denied over and over again that he composed the music. Strange to say, Castil-Blaze (see *Molière musicien*, vol. ii. pp. 452-454), who should have recognised the vigour and dash so characteristic of the French, declared it to have been taken from a German hymn.

In F. K. Meyer's *Versailler Briefe* (Berlin, 1872) there is an article upon the origin of the 'Marseillaise,' in which it is stated that the tune is the same as that to which the Volkslied 'Stand ich auf hohen Bergen' is sung in Upper Bavaria. The author of the article heard it sung in 1842 by an old woman of seventy, who informed him that it was a very old tune, and that she had learnt it from her mother and grandmother. The tune is also said to exist in the Credo of a MS. Mass composed by Holtzmann in 1776, which is preserved in the parish church of Meersburg. (See the *Gartenlaube* for 1861, p. 256.) Subsequent inquiry (August 1879) on the spot from the curate of Meersburg has proved that there is no truth in this story.

Fétis, in 1863, asserted that the music was the work of a composer named Navoigille, and reinforces his statement in the second edition of his *Biographie Universelle*. Georges Kastner (*Revue et Gazette Musicale*, Paris, 1848) and several other writers, including the author of this article (see Chouquet's *L'Art Musical*, Sept. 8, 1864–March 9, 1865), have clearly disproved these allegations; and the point was finally settled by a pamphlet, *La Vérité sur la paternité de la Marseillaise* (Paris, 1865), written by A. Rouget de Lisle, nephew of the composer, which contains precise information and documentary

evidence, establishing Rouget de Lisle's claim beyond a doubt. The controversy is examined at length by Loquin in *Les mélodies populaires de la France*, Paris, 1879. The 'Marseillaise' has been often made use of by composers. Of these, two may be cited—Salieri, in the opening chorus of his opera, 'Palmira' (1795), and Grison, in the introduction to the oratorio 'Esther' (still in MS.), both evidently intentional. Schumann slyly alludes to it in the 'Faschingsschwank aus Wien,' uses it in his song of the Two Grenadiers with magnificent effect, and also introduces it in his Overture to 'Hermann und Dorothea.'

A picture by Pils, representing Rouget de Lisle singing the 'Marseillaise,' is well known from the engraving. [The best account of the song is to be found in Tiersot's *Chanson Populaire*, pp. 281-286.] G. C.

MARSH, ALPHONSO, son of Robert Marsh, one of the musicians in ordinary to Charles I., was baptized at St. Margaret's, Westminster, Jan. 28, 1627. He was appointed a Gentleman of the Chapel Royal in 1660. Songs composed by him appear in 'The Treasury of Musick' (1669), 'Choice Ayres and Dialogues' (1676), and other publications of the time. He died April 9, 1681. His son ALPHONSO was admitted a Gentleman of the Chapel Royal, April 25, 1676. Songs by him are contained in 'The Theater of Music' (1685-87), 'The Banquet of Musick' (1688-92), and other publications. He died April 5, 1692, and was buried April 9, in the west cloister of Westminster Abbey. W. H. H.

MARSH, JOHN, born at Dorking, 1752, a distinguished amateur composer and performer [was articled to a solicitor at Romsey in 1768], resided at Salisbury (1776-81), Canterbury (1781-86), and Chichester (1787-1828), in each of which places he led the band at the subscription concerts and occasionally officiated for the cathedral and church organists. He composed two services, many anthems, chants, and psalm tunes, glees, songs, symphonies, overtures, quartets, etc., and organ and pianoforte music, besides treatises on harmony, thorough-bass, etc. He died in 1828. A fully detailed account of his career is given in the *Dictionary of Musicians*, 1824, but it does not possess sufficient interest to be repeated here. W. H. H.

MARSHALL, WILLIAM, a Scottish musician, born at Fochabers in Banffshire, Dec. 27, 1748. As a boy he entered the service of the Duke of Gordon, rising, during a thirty years' residence in the family, to the posts of butler, house-steward, and factor. He taught himself the violin, and became the best amateur performer of his day. His compositions, which are Strathspeys and a similar class of Scottish violin music, have been held in much favour, the best known being 'The Marquis of Huntley's,' and 'Miss Admiral Gordon's' Strathspeys; the latter being the air to which Burns wrote 'Of a' the airts the wind can blaw.' He married in 1773, and had a family, dying in his 85th year at Dandaleith, May 29, 1833. A number of his compositions appear in the Gow publications, but Stewart of Edinburgh issued a couple of small collections of his Strathspeys in 1781. A third and much fuller collection was published in 1822 and a later one, after his death, in 1847. An excellent portrait of Marshall is extant, engraved by Turner; it is reproduced in *The Glen Collection of Scottish Dance Music*, book ii., 1895, where there is also much interesting information concerning him. F. K.

MARSHALL, WILLIAM, Mus.D., son of William Marshall of Oxford, music-seller, born there 1806, was a chorister of the Chapel Royal under John Stafford Smith and William Hawes. He was appointed organist of Christ Church Cathedral and St. John's College, Oxford, in 1825, and was also organist of All Saints' Church from 1839. He graduated as Mus.B. Dec. 7, 1826, and Mus.D. Jan. 14, 1840. He resigned his Oxford appointments in 1846, and afterwards became organist of St. Mary's Church, Kidderminster. He was author of *The Art of Reading Church Music* (1842), the composer of some church music and songs, and editor (jointly with Alfred Bennett) of a collection of chants, 1829, and also editor of a book of words of anthems, 1840, fourth edition, 1862. He died at Handsworth, August 17, 1875.

His younger brother, CHARLES WARD MARSHALL, born 1808, about 1835 appeared, under the assumed name of Manvers, on the London stage as a tenor singer, with success. In 1842 he quitted the theatre for concert and oratorio singing, in which he met with greater success. After 1847 he withdrew from public life. He died at Islington, Feb. 22, 1874. W. H. H.

MARSICK, MARTIN PIERRE JOSEPH, violinist, was born on March 9, 1848, at Jupille, near Liège. At the age of eight he entered the Liège Conservatoire, studying under Desiré Heynberg, and gaining, two years later, the first prize in the preparatory class. In 1864 he secured the gold medal of the institution for 'exceptional merit.' In the following year and until 1867 he was pupil of Léonard (violin) and Kufferath (composition), and in 1868-69 of Massart at the Paris Conservatoire, the expense of his musical training being defrayed by a music-loving lady of distinction. In 1870-71 he was the recipient of a stipend from the Belgian government, and was enabled to proceed to Berlin to study under Joachim. Thus exceptionally equipped, he made a successful début, in 1873, at the 'Concerts populaires' in Paris, travelled a good deal in various European countries, founded a Quartet at Paris in 1877 with Rémy, Von Waefelghem, and Delsart, and in 1892 was appointed violin professor at the Conservatoire in succession to Massart. In 1895-96 he toured in the United States, and

has occasionally visited England, but without achieving in either country a great popular success. The possessor of a faultless technique, a good all-round musician, and by no means lacking in fire, his playing does not indicate a passion for beauty such as one marks in a great genius of the violin. His compositions include three concertos and a number of smaller pieces for the violin. W. W. C.

MARSON, GEORGE, called Mus.B. (although no trace of his degree is to be found), contributed to 'The Triumphes of Oriana,' 1601, the five-part madrigal 'The nimphes and shepheards.' He composed services and anthems, some of which are still extant in MS. W. H. H.

MARTEAU, HENRI, Professor of the Violin at the Geneva Conservatoire, born at Rheims, March 31, 1874. His father was an amateur violinist and President of the Philharmonic Society of Rheims; his mother, an accomplished pianist, a pupil of Madame Schumann. Sivori first discovered Henri Marteau's talent, and presented him with a violin, at the same time persuading his parents to allow him to study it as a profession. His first master was Bunzl, a pupil of Molique, his second, Léonard. In 1884, when only ten years of age, he appeared under Richter at the Vienna Philharmonic Society, and elsewhere in Germany and Switzerland; in the year following he was chosen by Gounod to play the violin obbligato of a piece composed for the Joan of Arc Centenary celebration at Rheims. In July 1888 he appeared at a Richter concert in London. In 1892 he gained the first prize at the Paris Conservatoire, and Massenet wrote a concerto expressly for him. He toured in America with success in 1893 and 1898, and in Russia in 1897-99. Having studied composition with Théodore Dubois, he brought out a cantata, 'La voix de Jeanne d'Arc,' for soprano, chorus, and orchestra, in 1896. Baker's *Biog. Dict. of Musicians*; Henry C. Lahee's *Famous Violinists of To-day and Yesterday*, Boston, U.S.A., 1899. E. H-A.

MARTELÉ, and MARTELLATO (Ital.), from *marteler* and *martellare*, to 'hammer'; said of notes struck or sung with especial force, and left before the expiration of the time due to them. Notes dashed, dotted, or emphasised by > or *fz.*, are Martelées or Martellate in execution. The term Martellement is sometimes employed for acciaccatura. J. H.

In violin, violoncello, and viola music this sign is used to indicate a detached hammered style of bowing. The effect is usually produced by a series of short quick *up* and down strokes at the point of the bow, without allowing the bow to leave the strings. The stick is held firmly, and the thumb pressed in the direction of the index finger, as each note is played. The arm should remain quite loose, and care should be taken to give a stronger pressure to the up bow than the down bow, or else the Martelé will become uneven. C. Schroeder's *Catechism of Violin Playing* (Leipzig, 1889; London, 1895); Carl Courvoisier's *Technique of Violin Playing* (Cologne, 1878; London, 1880); H. W. and G. Gresswell's *How to Play the Fiddle* (London, 1886). O. R.

MARTHA. Opera in three acts; music by Flotow. Produced at Vienna, Nov. 25, 1847. It was an extension of LADY HENRIETTE, in which Flotow had only a third share. The alterations in the book are said to have been made by St. Georges, and translated into German by Friedrich. It was produced in Italian at Covent Garden, as 'Marta,' July 1, 1858; in English at Drury Lane, Oct. 11, 1858, and in French at the Théâtre Lyrique, Dec. 16, 1865. The air of 'The Last Rose of Summer' is a prominent motif in this opera. G.

MARTIN, SIR GEORGE CLEMENT, born Sept. 11, 1844, at Lambourne, Berks, received instruction in organ-playing from Mr. J. Pearson and Sir John (then Dr.) Stainer, also in composition from the latter during the time he was organist there at the parish church. He was appointed private organist to the Duke of Buccleuch, at Dalkeith, in 1871; Master of the Choristers, St. Paul's Cathedral, in 1874, deputy organist at the same on the death of George Cooper in 1876, and organist on the resignation of Stainer in 1888. He received the degrees of Mus.B., Oxon., in 1868, Fellow of the College of Organists in 1875, and Mus.D. (degree conferred by the Archbishop of Canterbury) in 1883, and was appointed the same year teacher of the organ at the Royal College of Music, which post he has since resigned. His compositions include Morning and Evening Communion and Evening Service in C for voices and orchestra; Communion Service in A, Magnificat and Nunc Dimittis in A, for the same; the same in B♭ for voices, organ, and military band; the same in G for voices and orchestra; 7 anthems; also a variety of compositions for parochial use; songs, part-songs, etc. His most important work is the 'Te Deum' sung on the steps of St. Paul's at the Diamond Jubilee of Queen Victoria, 1897, shortly after which event he received the honour of knighthood. (See *Musical Times* for July 1897, p. 441.) A. C.

MARTIN, GEORGE WILLIAM, born March 8, 1828, received his early musical education in the choir of St. Paul's Cathedral under William Hawes. He was professor of music at the Normal College for Army Schoolmasters; music master at St. John's Training College, Battersea (1845-53), and organist of Christ Church, Battersea, in 1849. He composed many glees, madrigals, and part-songs, for some of which he was awarded prizes, and edited and published cheap arrangements of the popular oratorios and other works of Handel, Haydn, and others. For some years he directed performances given under the name of the National

Choral Society, which was begun in 1860. He had an aptitude for training choirs of school children, and conducted many public performances by them. He edited the *Journal of Part Music* in 1861-62, and did much to make good music popular. He died in great poverty at Bolingbroke House Hospital, Wandsworth, April 16, 1881. W. H. H.

MARTIN, JONATHAN, born 1715, was a chorister of the Chapel Royal under Dr. Croft. On quitting the choir he was placed under Thomas Roseingrave for instruction on the organ, and soon attained such proficiency as to be able to act as deputy for his master at St. George's, Hanover Square, and for Weldon at the Chapel Royal. On June 21, 1736, he was admitted organist of the Chapel Royal on the death of Weldon, and promised 'to compose anthems or services for the use of His Majesty's Chapel, whenever required by the Subdean for the time being.' Probably he was never called upon to fulfil his promise, as his only known composition is a song in Rowe's tragedy, 'Tamerlane,' 'To thee, O gentle sleep.' He died of consumption, April 4, 1737, and was buried April 9, in the west cloister of Westminster Abbey. W. H. H.

MARTIN Y SOLAR, VICENTE, born at Valencia about 1754 (whence he was known in Italy as 'Lo Spagnuolo'), was a choir-boy in the cathedral of his native town, and afterwards organist at Alicante. On the advice of an Italian singer, named Giuglietti, he went to Florence, where he was commissioned to write an opera for the next Carnival. His 'Ifigenia in Aulide' was accordingly brought out in 1781. Soon after this he produced a new opera, 'Astartea,' in Lucca, as well as a ballet, 'La Regina di Golconda.' In 1783 'La Donna festeggiata' and 'L'accorta cameriera' were brought out at Turin, and in the following year 'Ipermestra' at Rome. In 1785 he went to Vienna, where he became acquainted with Da Ponte, who wrote for him the libretto of 'Il burbero di buon cuore,' produced Jan. 4, 1786. Here as elsewhere he speedily became the fashion, his operas, 'La capricciosa corretta,' 'L' arbore di Diana,' and 'Una cosa rara' following one another in quick succession. This last work, produced Nov. 11, 1786, for a time threw 'Figaro' (produced six months before) into the shade. [See MOZART.] In the autumn of the following year 'Don Juan' appeared, and Martin unwittingly obtained immortality at the hands of his rival, since a theme from 'Una cosa rara' makes its appearance in the second finale of Mozart's masterpiece. (See also Köchel's Catalogue, pp. 582, 583.) In 1788 Martin was appointed director of the Italian Opera at St. Petersburg, where he brought out 'Gli sposi in contrasto,' and a cantata 'Il sogno.' In 1801 the fashion for Italian opera passed away for a time, and a French opera took its place. Martin, thus deprived of his post, employed the rest of his life in teaching. He died in May 1810.[1] A mass, a 'Domine salvum fac,' and another opera 'L'île de l'amour,' are mentioned in the *Quellen-Lexikon*, and the latter is stated to have been produced in Florence about 1784. M.

MARTINES, or MARTINEZ, MARIANNE, daughter of the master of the ceremonies to the Pope's Nuncio, born May 4, 1744, at Vienna. Metastasio, a great friend of her father's, lived for nearly half a century with the family, and undertook her education. Haydn, then young, poor, and unknown, occupied a wretched garret in the same house, and taught her the harpsichord, while Porpora gave her lessons in singing and composition, her general cultivation being under Metastasio's own care. Of these advantages she made good use. Burney, who knew her in 1772,[2] speaks of her in the highest terms, specially praising her singing; and she also won the admiration of both Hasse and Gerbert. After the death of the parents, and of Metastasio, who left them well off, she and her sister gave evening parties, which were frequented by all the principal artists. On one of these occasions Kelly[3] heard Marianne play a 4-hand sonata of Mozart's with the composer. Latterly Marianne devoted herself to teaching talented pupils. In 1773 she was made a member of the Musical Academy of Bologna. In 1782, the Tonkünstler Societät performed her oratorio 'Isacco,' to Metastasio's words. She also composed another oratorio, 'Santa Elena al Calvario,' a mass, and other sacred music; Psalm, to Metastasio's Italian translation, for four and eight voices; solo-motets, arias, and cantatas, concertos, overtures, and symphonies, and harpsichord sonatas, two of which were reprinted by E. Pauer. The Gesellschaft der Musikfreunde possesses the autographs of many of these works. Marianne expired on Dec. 13, 1812, a few days after the death of her younger sister Antonie. C. F. P.

MARTINI, GIOVANNI BATTISTA, or GIAMBATTISTA, commonly called Padre Martini, one of the most important scientific musicians of the 18th century, born at Bologna, April 24, 1706; was first taught music by his father Antonio Maria, member of a musical society called 'I Fratelli.' Having become an expert violinist, he learned to sing and play the harpsichord from Padre Predieri, and counterpoint from Antonio Riccieri, a castrato of Vicenza, and composer of merit. At the same time he studied philosophy and theology with the monks of San Filippo Neri. Having passed

[1] The article in Mendel's *Lexikon* contains several gross mistakes, such as the statement that 'Don Juan' was brought out before 'Una cosa rara,' (in which case it would have been difficult for Mozart to have used one of the themes from the latter opera in the former!), and the inclusion, among works by him, of the book of canons with pianoforte accompaniment, published by Birchall in London, and edited by Cianchettini. These are by Padre Martini.

[2] See *Present State of Music in Germany*, i. 311-13, 352, 354, 369.

[3] Kelly's mistakes of detail are innumerable. He gives the name 'Martini,' and imagining Marianne to be the sister of her father—'a very old man' and 'nearly his own age'—speaks of her as 'in the vale of years,' though still 'possessing the gaiety and vivacity of a girl.' She was barely forty.

his noviciate at the Franciscan convent at Lago, he was ordained on Sept. 11, 1722, and returning to Bologna in 1725 became maestro di cappella of the church of San Francesco. Giacomo Perti held a similar post at San Petronio, and from him Martini received valuable advice on composing church-music, at the same time laying a scientific foundation for the whole theory of music by a conscientious study of mathematics with Zanotti, a well-known physician and mathematician. He thus gradually acquired an extraordinary and comprehensive mass of knowledge, with an amount of literary information far in advance of his contemporaries. His library was unusually complete for the time,[1] partly because scientific men of all countries took a pleasure in sending him books. Burney, whose own library was very extensive, expressed his astonishment at that of Martini, which he estimates to contain 17,000 vols. (*Present State of Music in France and Italy*, p. 195). After his death a portion found its way to the court library at Vienna; the rest remained at Bologna in the Liceo Filarmonico. His reputation as a teacher was European, and scholars flocked to him from all parts, among the most celebrated being Paolucci, Ruttini, Sarti, Ottani, and Stanislao Mattei, afterwards joint founder of the Liceo Filarmonico. These he educated in the traditions of the old Roman school, the main characteristic of which was the melodious movement of the separate parts. Martini was also frequently called upon to recommend a new maestro di cappella or to act as umpire in disputed questions. He was himself occasionally involved in musical controversy; the best-known instance being his dispute with Redi about the solution of a puzzle-canon by Giovanni Animuccia, which he solved by employing two keys in the third part. This, though approved by Pitoni, was declared by Redi to be unjustifiable. To prove this point Martini, therefore, wrote a treatise maintaining that puzzle-canons had not unfrequently been solved in that manner, and quoting examples. Another important controversy was that held with Eximeneo [see vol. i. p. 797]. In spite of these differences of opinion his contemporaries describe him as a man of great mildness, modesty, and good nature, always ready to answer questions, and give explanations. It is difficult to think without emotion of the warm welcome which he, the most learned and one of the oldest musicians of his country, bestowed on Mozart when he visited Bologna in 1770 as a boy of fourteen, or to resist viewing it as a symbol of the readiness of Italy to open to Germany that vast domain of music and tradition which had hitherto been exclusively her own. His courtesy and affability brought the Bolognese monk into friendly relations with many exalted personages, Frederick the Great and Frederick William II. of Prussia, Princess Maria Antonie of Saxony, and Pope Clement XIV. among the number. He suffered much towards the close of his life from asthma, a disease of the bladder, and a painful wound in the leg; but his cheerfulness never deserted him, and he worked at the fourth volume of his *History of Music* up to his death, which took place in 1784—on October 3, according to Moreschi, Gandolfi, and Della Valle; on August 4, according to Fantuzzi. His favourite pupil Mattei stayed with him to the last. Zanotti's requiem was sung at his funeral, and on Dec. 2, the Accademia Filarmonica held a grand function, at which a funeral mass, the joint composition of thirteen maestri di cappella, was performed, and an 'Elogio' pronounced by Lionardo Volpi. All Italy mourned for him, and a medallion to his memory was struck by Tadolini. He was a member of two Accademie, the 'Filarmonici' of Bologna, and the 'Arcadici' of Rome, his assumed name in the latter being Aristoxenus Amphion.

Martini's two great works are the *Storia della Musica* (3 vols. Bologna, 1757, 1770, 1781), and the *Esemplare ossia Saggio . . . di contrappunto* (2 vols., Bologna, 1774, 1775). The first is a most learned work; each chapter begins and ends with a puzzle-canon, the whole of which were solved and published by Cherubini. The three volumes all treat of ancient music; the music of the Middle Ages down to the 11th century was to have been the subject of the fourth volume, which he did not live to finish. A report having sprung up that the completed MS. was in the Minorite convent at Bologna, Fétis obtained access to the library through Rossini, but found only materials, of which no use has yet been made. The *Saggio* is a most important collection of examples from the best masters of the ancient Italian and Spanish schools, and a model of its kind. Besides a number of small treatises and controversial writings (for list see Fétis) Martini left masses and other church music in the style of the time. The following were printed:—'Litaniae,' op. 1 (1734); 'XII Sonate d'intavolatura,' op. 2 (Amsterdam, Le Cène, 1741), excellent and full of originality; 'VI Sonate per organo e cembalo' (Bologna, 1747). 'Duetti da Camera' (Bologna, 1763). The Liceo of Bologna, possesses the MSS. of a mass, a requiem, etc., three oratorios, 'San Pietro' (two separate compositions), 'Il sagrifizio d'Abramo,' and 'L'Assunzione di Salomone al trono d'Israello'; a farsetta 'La Dirindina'; and three Intermezzi, 'L'Impresario delle Canarie,' 'Don Chisciotto,' and 'Il Maestro di Musica.' A requiem (103 sheets), and other church compositions are in Vienna. Pauer, in his 'Alte Klaviermusik,' gives a gavotte and ballet of Martini's. Farrenc has published twelve sonatas in the 'Trésor musical,' and other works are given by Lück,

[1] He had ten copies of Guido d'Arezzo's *Micrologus*.

Körner, Ricordi, etc. [see the *Quellen-Lexikon*]. The best of many books on his life and works is the *Elogio* of Pietro Della Valle (Bologna, 1784). F. G.

MARTINI IL TEDESCO ('the German'), the name by which the musicians of his time knew JOHANN PAUL AEGIDIUS SCHWARTZENDORF, born Sept. 1, 1741, at Freistadt, in the Upper Palatinate, who was organist of the Jesuit seminary at Neustadt, on the Danube, when he was ten years old. From 1758 he studied at Freiburg, and played the organ at the Franciscan convent there. When he returned to his native place, he found a stepmother installed at home, and set forth to seek his fortune in France, notwithstanding his complete ignorance of the language. At Nancy he was befriended, when in a penniless condition, by the organ-builder Dupont, on whose advice he adopted the name by which he is known. From 1761 to 1764 he was in the household of King Stanislaus, who was then living at Nancy. After his patron's death Martini went to Paris, and immediately obtained a certain amount of fame by successfully competing for a prize offered for the best march for the Swiss Guard. At this time he wrote much military music, as well as symphonies and other instrumental works. In 1771 his first opera, 'L'amoureux de quinze ans,' was performed with very great success, and after holding various appointments as musical director to noblemen, he was appointed conductor at the Théâtre Feydeau, when that establishment was opened under the name of Théâtre de Monsieur for the performance of light French and Italian operas. Having lost all his emoluments by the decree of Aug. 10, 1792, he went to live at Lyons, where he published his *Mélopée moderne*, a treatise on singing. In 1794 he returned to Paris for the production of his opera 'Sapho,' and in 1798 was made inspector of the Conservatoire. From this post he was ejected in 1802, by the agency, as he suspected, of Méhul and Catel. At the restoration of 1814 he received the appointment of superintendent of the Court music, and wrote a Requiem for Louis XVI., which was performed at St. Denis, Jan. 21, 1816. Very shortly afterwards, on Feb. 10 of the same year, he died. Besides the operas mentioned above he wrote 'Le rendez-vous nocturne' (1773); 'Henri IV.' (1774); 'Le droit du Seigneur' (1783); 'L'amant sylphe' (1795); 'Annette et Lubin' (1789); 'Camille ou le souterrain' (1796); and 'Ziméo' (1800). In the department of church music he wrote several masses, psalms, requiems, etc. [see the *Quellen-Lexikon*]. A cantata written for the marriage of Napoleon with Marie Louise exists, besides much chamber music, but Martini's best-known composition is probably the charming song, 'Plaisir d'amour.' M.

MARTUCCI, GIUSEPPE, pianist, orchestral conductor and composer, was born at Capua, Jan. 6, 1856. He was taught the elements of music by his father, a military bandmaster, and made, as a child, some stir in Naples by his clever performances on the piano. At the age of eleven he was admitted to the R. Conservatorio in that city. Here he devoted five years to the study of the pianoforte under Beniamino Cesi, whose training was supplemented by lessons in theory and composition with Carlo Costa, Paolo Serrao, and Lauro Rossi. He left the Conservatorio in 1872; but after two years passed in teaching and playing in public he returned to it as professor, gaining the post by competition. Having appeared with remarkable success at concerts in Rome and Milan, Martucci undertook, in 1875, a tour through France, Germany, and England. In London, where he played at Arditi's Concert, St. George's Hall, June 14, the character of his reception warranted a stay of four months; he also played in Dublin. On the occasion of a second visit to Paris in 1878 he was heard by Rubinstein, who not only expressed the highest opinion of his executive talent, but honoured Martucci as a composer by directing a performance of his Concerto in B♭ minor with Cesi at the piano. The work was also played in after years by Eugen d'Albert at the Berlin Philharmonic. Martucci's progress at home was marked by his association with the Quartetto Napoletano, whose performances he directed during eight years, and still further by his appointment as conductor of the orchestral concerts instituted by the Prince d'Ardore, a choice fully justified by his enterprise in introducing classical and modern masterpieces before unheard in Naples. He also took his orchestra from Naples to Turin, where he gave a series of performances during the exhibition of 1884. Nominated director of the Liceo Musicale at Bologna in 1886, Martucci continued his concerts in other towns. His programmes, broadly eclectic, sometimes included the works of Hubert Parry, Stanford, and other English composers, for whom he professes a sincere admiration. During his residence in Bologna he made his only appearance as orchestral conductor in a theatre to direct the first performance in Italy of Richard Wagner's 'Tristan und Isolde' (1888). After an absence of sixteen years he was once more recalled to the scene of his early labours, having been named director of the R. Conservatorio in Naples, March 5, 1902. He is a member of the Accademia Reale of Naples, Commendatore della Corona d' Italia and Cavaliere dei S.S. Maurizio e Lazzaro. Martucci occupies a place in the front rank of pianoforte virtuosi. As an author his style has been formed on the best classical models. His works are remarkable for their finish, and often display considerable originality. In writing for the pianoforte his intimate knowledge of its resources produces effects of a quite exceptional kind.

His very numerous compositions include:—

Symphony No. 1 in D minor (op. 75) played at the Royal College of Music, London, March 18, 1898. A detailed analysis is in *Riv. Mus. Ital.*, iii. 125.
Symphony No. 2 in F major (op. 81).
Concerto in B flat minor for piano and orchestra (op. 66).
Four piccoli pezzi for orchestra.
Poemetto Lirico, 'La Canzone dei Ricordi,' for voice and orchestra.
Quintet for piano, two violins, viola, and violoncello (op. 45).
Trio No. 1 in C for piano, violin, and violoncello (op. 59).
Trio No. 2 in E flat for piano, violin, and violoncello (op. 62) (played at one of Hallé's Concerts, St. James's Hall, May 17, 1889).
Sonata for violoncello and piano (op. 52).
Three pieces for violoncello and piano (op. 69).
Due Romanze for violoncello (op. 72).
Three pieces for violin and piano (op. 67).
Momento Musicale e Minuetto for two violins, viola, and violoncello.
'Pagine Sparse,' melodies for voice and piano (op. 68).
'Due Sogni,' for voice and piano (op. 68 bis).
Six volumes of compositions for pianoforte.
Variations for two pianofortes.
Fantasia for two pianofortes (op. 32).
Two pieces for pianoforte: 'Capriccio' and 'Toccata' (op. 77).
Three pieces for piano solo: 'Novelletta,' 'Notturno,' and 'Scherzo' (op. 76).
Two pieces for piano: 'Serenata' and 'Gavotta' (op. 73).
'Trèfle a quatre feuilles' (op. 74).
Three little pieces for pianoforte solo: 'Serenata,' 'Minuetto,' 'Capriccio' (op. 78).
Three little pieces for pianoforte solo: 'Preludio,' 'Canzonetta,' 'Saltarello' (op. 79).
Due Capricci for pianoforte (op. 80).
Unpublished compositions:—
Oratorio, 'Samuel.'
Concerto for piano and orchestra in D minor.
Sonata for organ.
Numerous pianoforte transcriptions of classical works, and Raccolta of sixteen pieces for piano by classical authors transcribed for violoncello and pianoforte.

H. A. W.

MARTY, EUGÈNE GEORGES, born in Paris, March 16, 1860, was a pupil of the Conservatoire, where he obtained the first prize in solfège in 1875, the first in harmony in 1878, and the Grand Prix de Rome in 1882 with his cantata, 'Edith.' In 1892 he was appointed chorus-master at the Théâtre Eden, and in the same year was made director of the vocal ensemble classes at the Conservatoire, a post he resigned in 1904; he was chorus-master at the Opéra in 1893, and conducted the Opéra-Comique in 1900. From June 12, 1901, he has been conductor at the Conservatoire. Marty has written much, and has been much influenced by his master, Massenet. We may mention: 'Ballade d'Hiver' (1885); 'Balthazar' overture (1887); a suite, 'Les Saisons' (1888); a symphonic poem, 'Merlin enchanté,' all for orchestra; 'Lysic,' a one-act pantomime (1888); 'Le Duc de Ferrare,' three-act opera, Théâtre Lyrique (1899); 'Daria,' two-act opera (Opéra, Jan. 27, 1905); songs, and pianoforte pieces, etc. G. F.

MARTYRS, LES. Opera in four acts; words by Scribe, music by Donizetti. Produced at the Académie, April 10, 1840; at the Royal Italian Opera, London, as 'I Martiri,' April 20, 1852. The work was an adaptation of 'Poliuto,' a former Italian opera of Donizetti's. G.

MARX, ADOLPH BERNHARD, learned musician and author, born May 15, 1799 (or 1795, according to Riemann), at Halle, son of a physician, learned harmony from Türk, studied law, and held a legal post at Naumburg. His love of music led him to Berlin, where he soon gave up the law, and in 1824 he founded, with Schlesinger the publisher, the *Berliner Allgemeine Musikalische Zeitung*. This periodical, which only existed seven years, did important service in creating a juster appreciation of Beethoven's works in North Germany, a service to which Beethoven characteristically refers in a letter[1] to Schlesinger, Sept. 25, 1825. His book on the same subject, however, *Beethoven's Leben und Schaffen* (Berlin, 1859; 2nd ed., 1865; 5th, 1901), is a fantastic critique, too full of mere conjecture and misty æstheticism. In 1827 he received his doctor's diploma from the university of Marburg, and was made 'Docent,' or tutor, in the history and theory of music, at the university of Berlin. He became Professor in 1830, and in 1832 Musikdirector of the university choir. In 1850 he founded with Kullak and Stern the 'Berliner Musikschule,' afterwards the 'Berliner Conservatorium,' and now the 'Sternsche Conservatorium' but withdrew in 1856 (Kullak having resigned in 1855), and henceforth devoted himself to his private pupils and to his work at the University. He died in Berlin, May 17, 1866. His numerous works are of unequal merit, the most important being the *Lehre von der musikalischen Composition*, four vols. (Breitkopf & Härtel, 1837, 1838, 1847). His *Gluck und die Oper* (Berlin, two vols. 1863) contains many ingenious observations, but is of no historical value. The others are *Über Malerei in der Tonkunst* (1828), *Über die Geltung Händelschen Sologesänge*, etc. (1829), *Allgemeine Musiklehre* (1839), *Die alte Musiklehre* (1842), *Die Musik des 19. Jahrhundert*, etc. (1855), *Anleitung zum Vortrag Beethovenschen Klavierwerke* (1863), *Erinnerungen* (1865), and a posthumous work, *Das Ideale und die Gegenwart* (1867). Besides what he did for Beethoven's music, Marx deserves credit for bringing to light many little-known works of Bach and Handel. His compositions are not remarkable; neither his oratorios 'Johannes der Täufer,' 'Moses,' and 'Nahid und Omar,' nor his instrumental music, obtaining more than a 'succès d'estime.' His opera, 'Jery und Bätely,' was performed at Berlin in 1827, and a *melodram*, 'Die Rache wartet,' in 1829. Nevertheless some particulars given in his *Erinnerungen* (Berlin, 1865) as to his manner of composing are well worth reading, as indeed is the whole book for its interesting picture of the state of music in Berlin between 1830 and 1860. With Mendelssohn he was at one time extremely intimate, and no doubt was in many respects useful to him; but his influence diminished as Mendelssohn grew older and more independent. F. G.

MARXSEN, EDUARD, born July 23, 1806, at Nienstädten near Altona, where his father was organist. He was intended for the church, but devoted himself to music, which he studied at home and with Clasing of Hamburg. He then assisted his father till the death of the latter in 1830, when he went to Vienna, and took lessons

[1] Nohl, *Briefe*, No. 368.

in counterpoint from Seyfried, and the pianoforte from Bocklet. He also composed industriously, and on his return to Hamburg gave a concert (Oct. 15, 1834) at which he played eighteen pieces of his own composition. He subsequently lived at Hamburg in great request as a teacher. Brahms was his most illustrious pupil. Of his sixty or seventy compositions, one for full orchestra called 'Beethoven's Schatten' was performed in 1844 and 1845 at concerts in Hamburg. He died at Altona, Nov. 18, 1887. F. G.

MARYLEBONE GARDENS. This once celebrated place of entertainment was situated at the back of and appurtenant to a tavern called 'The Rose of Normandy' (or briefly 'The Rose'), which stood on the east side of High Street, Marylebone, and was erected about the middle of the 17th century. The earliest notice of it is in *Memoirs by Samuel Sainthill*, 1659, printed in *The Gentleman's Magazine*, vol. 83, p. 524, where the garden is thus described: 'The outside a square brick wall, set with fruit trees, gravel walks, 204 paces long, seven broad; the circular walk 485 paces, six broad, the centre square, a Bowling Green, 112 paces one way, 88 another; all except the first double set with quickset hedges, full grown and kept in excellent order, and indented like town walls.' It is next mentioned by Pepys, May 7, 1668: 'Then we abroad to Marrowbone and there walked in the garden, the first time I ever was there, and a pretty place it is.' Long's bowling green at the Rose at Marylebone, half a mile distant from London, is mentioned in the *London Gazette*, Jan. 11, 1691-92. Count de Tallard, the French ambassador, gave a splendid entertainment before leaving England to the Marquis of Normanby (afterwards Duke of Buckinghamshire) and other persons of note 'at the great Bowling Green at Marylebone,' in June 1699. About that time the house became noted as a gaming-house much frequented by persons of rank; Sheffield, Duke of Buckinghamshire, was a constant attendant, and, as Quin told Pennant, gave, every spring, a dinner to the chief frequenters of the place, at which his parting toast was 'May as many of us as remain unchanged next spring meet here again.' It was he who was alluded to in Lady Mary Wortley Montagu's oft-quoted line, 'Some dukes at Marybone bowl time away.' Gay, in his 'Beggar's Opera,' 1727, makes Marylebone one of Macheath's haunts, and mentions the 'deep play' there. Prior to 1737 admission to the gardens was gratuitous, but in that year Daniel Gough, the proprietor, charged 1s. each for admission, giving in return a ticket which was taken back in payment for refreshments to that amount. In 1738 Gough erected an orchestra and engaged a band of music 'from the opera and both theatres,' which performed from 6 to 10 o'clock, during which time they played eighteen pieces. In August 'two Grand or Double Bassoons, made by Mr. Stanesby, junior, the greatness of whose sound surpass that of any other bass instrument whatsoever; never performed with before,' were introduced. In 1740 an organ was erected by Bridge. In 1746 robberies had become so frequent and the robbers so daring that the proprietor was compelled to have a guard of soldiers to protect the visitors from and to town. In 1747 Miss Falkner appeared as principal singer (a post she retained for some years), and the admission to the concert was raised to 2s. In 1748 an addition was made to the number of lamps, and Defesch was engaged as first violin, and about the same time fireworks were introduced. In 1751 John Trusler became proprietor; 'Master (Michael) Arne' appeared as a singer, balls and masquerades were occasionally given, the doors were opened at 7, the fireworks were discharged at 11, and 'a guard was appointed to be in the house and gardens, and to oblige all persons misbehaving to quit the place.' In 1752 the price of admission was reduced to 6d., although the expense was said to be £8 per night more than the preceding year. In 1753 the bowling green was added to the garden, and the fireworks were on a larger scale than before. In 1758 the first burletta performed in the gardens was given; it was an adaptation, by Trusler junior and the elder Storace, of Pergolesi's 'La Serva Padrona,' and for years was a great favourite. The gardens were opened in the morning for breakfasting, and Miss Trusler made cakes which long enjoyed a great vogue. In 1762 the gardens were opened in the morning gratis, and an organ performance given from 5 to 8 o'clock. In 1763 the place passed into the hands of Thomas (familiarly called Tommy) Lowe, the popular tenor singer, the admission was raised to 1s. and Miss Catley was among the singers engaged. In the next year the opening of the gardens on Sunday evenings for tea-drinking was prohibited; and in October a morning performance, under the name of a rehearsal, was given, when a collection was made in aid of the sufferers by destructive fires at Montreal, Canada, and Honiton, Devonshire. Lowe's management continued until 1768, when he retired, having met with heavy losses. In 1769 Mr. (afterwards Dr.) Arnold became proprietor, and engaged Mrs. Pinto (formerly Miss Brent), Master Brown, and others as vocalists, Pinto as leader, Hook as organist and music director, and Dr. Arne to compose an ode. In 1770 Barthélemon became leader, and Mrs. Barthélemon, Bannister and Reinhold were among the singers. A burletta by Barthélemon, called 'The Noble Pedlar,' was very successful. In 1771 Miss Harper (afterwards Mrs. John Bannister) appeared, Miss Catley reappeared, and several new burlettas were produced. In 1772 Torrè, an eminent Italian pyrotechnist, was engaged, and the fireworks became a more

prominent feature in the entertainments, to the great alarm of the neighbouring inhabitants, who applied to the magistrates to prohibit their exhibition, fearing danger to their houses from them. Torrè, however, continued to exhibit during that and the next two seasons. But the gardens were losing their popularity; in 1775 there appear to have been no entertainments of the usual kind, but occasional performances of Baddeley's entertainment, 'The Modern Magic Lantern,' deliveries of George Saville Carey's 'Lecture upon Mimicry,' or exhibitions of fireworks by a Signor Caillot. In 1776 entertainments of a similar description were given, amongst which was a representation of the Boulevards of Paris. The gardens closed on Sept. 23, and were not afterwards regularly opened. In or about 1778 the site was let to builders, and is now occupied by Beaumont Street, Devonshire Street, and part of Devonshire Place. The tavern, with a piece of ground at the back, used as a skittle alley, continued to exist in nearly its pristine state until 1855, when it was taken down, and rebuilt on its own site and that of an adjoining house, and on the ground behind it was erected the Marylebone Music Hall. [A list of names of artists who appeared at Marylebone Gardens is given, with dates, in J. T. Smith's *Book for a Rainy Day*.] W. H. H.

MASANIELLO. The name in England of Auber's opera, LA MUETTE DE PORTICI. Opera in five acts; words by Scribe and Delavigne, music by Auber. Produced at the Académie, Feb. 29, 1828, and performed there 471 times up to Oct. 28, 1873. In England it was first performed, under the name of 'Masaniello,' at Drury Lane, in English (three acts), May 4, 1829; in Italian, at Covent Garden (three acts). March 15, 1849; at Her Majesty's, April 10, 1851, as 'La Muta di Portici.' G. [An earlier opera on the same subject was based on a contemporary account of the rebellion at Naples under Tommaso Annello; D'Urfey was the author, and Samuel Ackeroyde (or Akeroyde) the principal composer. It was printed in 1700, with the title, 'The famous history of the rise and fall of Massaniello, in two parts.' The songs remained in favour through the early part of the 18th century.]

MASCAGNI, PIETRO, was born at Leghorn Dec. 7, 1863. His father, who was a baker, intended his son to be a lawyer, and discouraged his attempts to learn the rudiments of music. The budding composer, compelled to prosecute his musical studies by stealth, entered himself surreptitiously as a pupil at the Istituto Luigi Cherubini, where his principal instructor was Alfredo Soffredini. In due course Mascagni's father found out how his son was spending his leisure time, and the musical career of the future composer of 'Cavalleria Rusticana' would thereupon have come to an untimely close, had it not been for the intervention of an amiable uncle, who came forward and offered to adopt the young musician. Transferred to his uncle's house Mascagni devoted himself in earnest to music, and the firstfruits of his labours appeared in the shape of a symphony in C minor for small orchestra, and a *Kyrie* written to celebrate the birthday of Cherubini, both of which were performed at the Istituto in 1879. These were followed after two years by 'In Filanda,' a cantata for solo voices and orchestra, which was favourably mentioned in a prize-competition instituted by the International Exhibition of Music at Milan. These successes reconciled Mascagni's father to the idea of making his son a musician; and at the death of his uncle in 1881 the boy returned to his father's house, when he was allowed to pursue his musical studies in peace. His next composition was a setting of a translation of Schiller's 'Ode to Joy,' which was performed at the Teatro degli Avvalorati with so much success that Count Florestano de Larderel, a wealthy amateur, offered on the spot to pay for the composer's education at the Milan Conservatoire. Mascagni's career at Milan was not a success. In spite of the sympathy and encouragement of his teachers, among whom were Amilcare Ponchielli and Michele Saladino, he found the course of regular study insupportable. For some time he chafed silently against the trivial round of counterpoint and fugue, and eventually took French leave of his professors, joined a travelling operatic company in the capacity of conductor, and turned his back upon Milan to seek his fortune elsewhere. For many years he led a life of obscurity and privation, travelling through the length and breadth of Italy with one company after another. He had no spare time for composition, but doubtless gained much valuable experience in practical orchestration. After many wanderings Mascagni married and settled at Cerignola near Foggia, where he managed to make a meagre livelihood by giving pianoforte lessons and managing the municipal school of music. From this obscurity he was suddenly rescued by the success of his one-act opera 'Cavalleria Rusticana,' which won the first prize in a competition instituted in 1889 by the publisher Sonzogno, and was produced at the Costanzi Theatre in Rome, May 18, 1890. The libretto was founded by Signori Menasci and Targioni-Tozzetti upon a well-known story of Sicilian village life by Giovanni Verga. The opera was received at its first performance with tumultuous applause, and the next day Mascagni awoke to find himself famous. Italy lost her head over 'Cavalleria.' Mascagni was greeted as the successor of Verdi. Medals were struck in his honour. He was welcomed back to his native Leghorn with illuminations and torchlight processions, and the King of Italy presented him with the order of the Crown of Italy, an honour not accorded to Verdi until

he had reached middle life. 'Cavalleria' at once made the tour of Italy, and speedily crossed the Alps. It was produced in Berlin in the summer of 1890, and in London, at the Shaftesbury Theatre, under the management of Signor Lago in October 1891. It was first performed in Paris at the Opéra-Comique, Jan. 19, 1892. Everywhere its success was unquestionable. The public, tired, perhaps, of long-winded imitations of Wagner, welcomed the crisp action and direct emotional appeal of the little work, and, for the moment the vulgarity of the music was condoned for the sake of the admirably constructed libretto. 'Cavalleria' became the fashion, and was responsible for a mushroom crop of one-act melodramas, each one more squalid in subject than the last, which bore a tolerably close resemblance to the shilling 'shocker' of ephemeral literature, and boasted a corresponding artistic value. Since the days of 'Cavalleria' Mascagni's fame has steadily declined. His next work, 'L'Amico Fritz' (Teatro Costanzi, Rome, Oct. 31, 1891), an adaptation of Erckmann-Chatrian's well-known novel, made by Signor Daspuro under the anagram of P. Suardon, had more refinement than 'Cavalleria,' and was more carefully written, but the composer scarcely attempted to fit his grandiose Italian manner to the exigencies of an Alsatian idyll, and the woefully undramatic character of the libretto prevented the opera from winning more than a *succès d'estime*. 'I Rantzau' (Teatro della Pergola, Florence, Nov. 10, 1892), another adaptation from Erckmann-Chatrian, by Signori Menasci and Targioni-Tozzetti, was even less successful than 'L'Amico Fritz,' the dulness of the libretto and the absurdly inflated style of the music being equally responsible for its failure. 'Guglielmo Ratcliff' (Scala, Milan, Feb. 1895) was a work of the composer's student days, subsequently revised and rewritten. The composer had conceived the extraordinary notion of setting to music a literal and unabbreviated translation of Heine's gloomy tragedy, which was alone sufficient to doom the work to failure, and his music did little to relieve the tedium of the libretto. No less decisive was the failure of 'Silvano' (Scala, Milan, March 1895), a feeble and half-hearted bid for popularity in the composer's most hackneyed 'Cavalleria' manner. Meanwhile (1895) Mascagni had been appointed director of the Conservatoire at Pesaro, where his next opera, 'Zanetto,' was produced March 2, 1896. 'Zanetto' is an operatic version of François Coppée's famous one-act play 'Le Passant.' It is slight in structure, being scored only for strings and harp, but has considerably more refinement of thought and expression than is customary in Mascagni's work. 'Iris' (Teatro Costanzi, Rome, Nov. 22, 1898), an opera on a Japanese subject, is handicapped by a singularly unpleasant libretto, but nevertheless has won more favour than any of the composer's works since 'Cavalleria.' It shows much skill in the handling of the orchestra, and is in many ways the most artistic of Mascagni's operas; but its lack of original invention is conspicuous, and though it has won considerable success in Italy, it could hardly prove acceptable to audiences capable of recognising its glaring plagiarisms from the works of Wagner. Whatever may be thought of Mascagni as a composer, he is admittedly a master of the art of *réclame*, and his idea of producing his next work, 'Le Maschere' (Jan. 17, 1901), simultaneously in seven different cities, was a piece of audacious impertinence, probably unparalleled in the history of the stage. Unfortunately no amount of advertisement could galvanise 'Le Maschere' into a success. At Milan, Venice, Verona, Naples, and Turin it was soundly hissed, while at Genoa the audience would not even allow the performance to be finished. Only at Rome was it received with any degree of favour, and even there it soon passed into oblivion. Mascagni's latest work 'Amica' (Monte Carlo, March 1905), though produced in more modest fashion, shared the same fate as its predecessor. Apart from his operas and the youthful works already mentioned Mascagni has written a cantata for the Leopardi centenary, which was performed at Recanati in 1898, and incidental music for Mr. Hall Caine's play *The Eternal City*, which was produced at His Majesty's Theatre in October 1902.

Of late years Mascagni has won some fame as a conductor, chiefly owing to repeated tours with a specially chosen orchestra through the cities of Europe and America. A protracted tour in the United States in 1903 cost him his place at Pesaro. The authorities of that institution, after repeated endeavours to recall their errant director to his duties, not unnaturally determined to replace him by a musician who set the fulfilment of his official engagements above the fascinations of self-advertisement.

Mascagni's reputation rests almost entirely upon 'Cavalleria Rusticana,' which still holds the stage in spite of fifteen years of uninterrupted popularity, and the rivalry of a host of imitations. As has already been said, it owes much to its direct if somewhat brutal libretto, but the music undeniably shows a natural instinct for theatrical effect, and it boasts plenty of catchy, commonplace tunes. Nevertheless it is easy to trace in it the germs of what in Mascagni's later works developed into intolerable mannerisms, his pompous, inflated and melodramatic manner of treating simple situations, his vulgar love of mere noise, and his lack of real rhythmic and melodic fertility, ill disguised by attempted excursions upon new paths of expression. The speedy exhaustion of a shallow vein of musical invention, together with the carelessness engendered by a dangerously sudden success, and fostered by the foolish adulation of partisans, is

responsible for the complete collapse of what at one time seemed a talent of bright promise for the future of Italian music. R. A. S.

MASCHERONI, Edoardo, was born at Milan on Sept. 4, 1857 (not 1855, as has been erroneously stated in previous sketches of his career). As a boy he showed no special aptitude for music, and was sent to the Liceo Beccaria, where he distinguished himself particularly in mathematics. As he grew up he developed a marked taste for the study of literature, and joined the little band of enthusiasts, among whom were De Marchi, Pozza, G. Mazzucato, and Borghi, who founded the journal, *La vita nuova*, to which he contributed numerous articles on literary subjects. But with manhood came the consciousness that music was to be his career, and he placed himself under Boucheron, a composer and teacher well known in Milan at the time, with whom he worked assiduously for several years. In his younger days Mascheroni composed much music of various kinds, but as time went on he became persuaded that his real vocation lay in conducting. He made his first serious essay in this branch of his art in 1883, when he was engaged as conductor at the Teatro Goldoni at Leghorn. From Leghorn Mascheroni moved to Rome, where he had been appointed conductor of the Teatro Apollo. Here he remained seven years, gaining each year in experience and reputation, so that at last he might fairly claim to be considered the leading Italian conductor of his day, a claim which was tacitly recognised in 1893 by his being chosen to produce and conduct Verdi's 'Falstaff' at La Scala. Mascheroni is still a conductor, but of late he has won fresh laurels as a composer. During his Roman period he wrote a good deal of chamber music, which was performed with much applause, and an Album for pianoforte of his won a prize in a *Concorso* at Palermo. But his masterpiece at that time was the Requiem for solo voices, chorus, and orchestra, which he wrote in memory of the death of Victor Emmanuel. So profound an impression did this work create, that the composer was commissioned by the royal family to write another Requiem for voices only, for exclusive performance in the royal chapel, where it was at once performed. In spite of his success in conducting other men's music, Mascheroni did not himself tempt fortune on the stage until his 'Lorenza' was produced at the Teatro Costanzi, Rome, on April 13, 1901. The success of this work was very great, and since its initial triumph it has been produced at Brescia, Barcelona, Valencia, Buenos Ayres, and other towns, and has always won conspicuous favour. 'Lorenza' may be described as a Calabrian version of the story of Judith and Holofernes, though in this case the Judith, so far from slaying her brigand Holofernes, falls in love with him, and ends by disguising herself in his cloak, and by being shot in his place by the soldiers who come to capture the bandit chief. Mascheroni's score overflows with thoroughly Italian melody, and shows considerable knowledge of dramatic effect, which from a conductor of his experience was only to be expected. He is now (Feb. 1906) putting the finishing touches to a new opera, entitled 'La Perugina.' R. A. S.

MASINI, Angelo, born at Forlì in 1845, is perhaps the only Italian tenor who has ever won a very high position without having appeared on the operatic stage in England. He came to this country in 1875 as a member of the famous quartet, which, under the composer's own direction, sang at the Albert Hall in Verdi's Requiem Mass, the other singers being Mme. Stoltz, Mme. Waldmann, and Signor Medini. At that time Masini was looked upon as the first of the younger tenors of Italy, and in 1876 he sang the part of Rhadamès when, with Verdi himself conducting, 'Aïda' was produced for the first time in Paris. This performance added greatly to his reputation, and in 1879 Mapleson engaged him to sing at Her Majesty's Theatre. A stupid *contretemps*, however, for which Masini was himself solely responsible, prevented his appearance. The story is fully set forth in the *Mapleson Memoirs*. It was arranged that Masini should make his début as Faust in company with Nilsson, Trebelli, and Faure, but, owing to a misunderstanding he missed a rehearsal, and then hurriedly left London. This blunder proved a bar to his future career in England, as Mapleson had an injunction against him for breach of contract—compromised at last by the payment of £200. In Madrid, Buenos Ayres, and elsewhere, however, Masini sang with the utmost success, and gained both fame and fortune. He was for many seasons the leading tenor at the Italian Opera at St. Petersburg, resigning his position at last for the reason that he could no longer withstand the severe climate. At St. Petersburg, late in his career, he sang Lohengrin to the Elsa of Sigrid Arnoldson. That Masini at his best was a tenor of exceptional gifts cannot be doubted. Distinguished singers, who appeared with him at St. Petersburg, have spoken of him in enthusiastic terms. His voice —very high in range—was rather light in quality, but on the testimony of Manuel Gomez, the well-known clarinet player, who heard him in his prime at Madrid, it was quite equal to the requirements of exacting dramatic parts. Mr. Gomez also speaks of the extreme charm with which he sang the Duke's music in 'Rigoletto.' It was stated at the time that before the production of 'Falstaff' in Milan, Verdi offered to write a romance for Masini if he would undertake the part of Fenton. However nothing came of the proposal. Possibly Masini thought that, even with a song thrown in, it was a poor compliment to offer him a small part, and no set-off against the distinction Verdi had conferred

on his great rival, Tamagno, by selecting him for Otello, and writing the music of that character specially for his voice. Masini is still living. S. H. P.

MASNADIERI, I,—*i.e.* The Brigands,—an opera in four acts; libretto by Maffei, from Schiller's 'Die Räuber,' music by Verdi. Produced at Her Majesty's Theatre, London, July 22, 1847, Verdi conducting, and Jenny Lind acting. An experiment had been made by Mercadante eleven years before on a libretto adapted from the same play, under the title of 'I Briganti,' produced at the Italiens, Paris, March 22, 1836. G.

MASON, John, Mus.B., was admitted clerk of Magdalen College, Oxford, in 1508, graduated Feb. 12, 1509, and was in the same year appointed instructor of the choristers and chaplain of Magdalen College. Wood says he was in much esteem in his profession. He was collated prebendary of Pratum minus, July 21, and of Putston minor, July 22, 1525, and treasurer of Hereford Cathedral, May 23, 1545. He is mentioned by Morley in his *Introduction* as one of those whose works he had consulted. He died in 1547 [or 1543. See *Degrees in Music*, p. 65.] W. H. H.

MASON, Lowell, Mus.D., born at Medfield, Massachusetts, Jan. 24, 1792, died at Orange, New Jersey, August 11, 1872. He was self-taught, and in his own words 'spent twenty years of his life in doing nothing save playing on all manner of musical instruments that came within his reach.' At sixteen he was leader of the choir in the village church, and a teacher of singing classes. At twenty he went to Savannah in Georgia, as clerk in a bank, and there continued to practise, lead, and teach. In the course of these labours he formed, with the help of F. L. Abel, a collection of psalm tunes based on Gardiner's 'Sacred Melodies'—itself adapted to tunes extracted from the works of Haydn, Mozart, and Beethoven. [See Gardiner, vol. ii. 144*b*.] This collection was published by the Handel and Haydn Society of Boston in 1822 under the title of 'the Handel and Haydn Society's collection of Church Music,' Mason's name being almost entirely suppressed. The book sold well; it enabled the Society to tide over the period of its youth, and establish itself as one of the characteristic institutions of Boston, it initiated a purer and healthier taste for music in New England, and it led to Mason's removal to Boston and to his taking 'a general charge of music in the churches there,' in 1827. He then became president of the society; but as his object was not so much the cultivation of high-class music as the introduction of music as an essential element of education in the common schools, he soon left it and established (with G. J. Webb) the Boston Academy of Music in 1832. He founded classes on the system of Pestalozzi, and at length in 1838 obtained power to teach in all the schools of Boston. At the same time he founded periodical conventions of music teachers, which have been found very useful, and are now established in many parts of the States. He also published a large number of manuals and collections which have sold enormously and produced him a handsome fortune. He visited Europe first in 1837 with the view of examining the methods of teaching in Germany, and embodied the results in a volume entitled *Musical Letters from Abroad* (New York, 1853). He was for long closely connected with the Public Board of Education of Massachusetts, his kindness and generosity were notorious, and he was universally admired and esteemed. His degree of Doctor in Music, the first of the kind conferred by an American college, was granted by the New York University in 1835. The last years of his life were spent at Orange in New Jersey, the residence of two of his sons. He formed a very fine library, which he collected far and wide, regardless of expense. [The list of his popular collections of secular and sacred music is given in Baker's *Biog. Dict. of Musicians.*]

Of his sons, William, born at Boston, Jan. 24, 1829, received a liberal education in music, and after a successful début at Boston in 1846, and a period of study at Leipzig in 1849, under Moscheles, Hauptmann, and Richter, and at Weimar, under Liszt, was long recognised as a leading pianist in New York. He founded chamber-music concerts with Theodore Thomas and others in 1854, and received the degree of Mus.D. from Yale University in 1872. Many graceful compositions and valuable instruction-books for the piano are of his authorship; special interest attaches to his *Memories of a Musical Life* (New York, 1901), which contains a valuable account of the Weimar circle in 1853. A. W. T.

MASON, Mathias, groom of the chamber to James I., is mentioned in Dowland's 'Varietie of Lute Lessons' (1610) as having invented three frets for the lute.

MASON, Rev. William, son of a clergyman, born at Hull, 1724, graduated at Cambridge, B.A. 1745, M.A. 1749; took orders 1755, became rector of Aston, Yorkshire, in 1754, and afterwards prebendary (1756), canon residentiary and precentor (1763) of York Minster. He was appointed chaplain to Lord Holderness in 1754 and to the king in 1757. In 1782 he published a book of words of anthems, to which he prefixed a *Critical and Historical Essay on Cathedral Music* (another edition, 1794). He also wrote essays *On Instrumental Church Music*, *On Parochial Psalmody*, and *On the Causes of the Present imperfect Alliance between Music and Poetry*. He composed some church music, the best known of which is the short anthem 'Lord of all power and might.' He was author of several poems, and of two tragedies, 'Elfrida'

and 'Caractacus,' and was the friend and biographer of the poet Gray. He also invented an instrument called the 'Celestina.' He died at Aston, April 5, 1797. W. H. H.

MASQUE. The precursor of the opera: a dramatic entertainment, usually upon an allegorical or mythological subject, and combining poetry, vocal and instrumental music, scenery, dancing, elaborate machinery, and splendid costumes and decorations—which was performed at Court or at noblemen's houses on festive occasions, the performers being usually persons of rank. Masques were frequently exhibited at the courts of James I. and Charles I., and vast sums were lavished upon their production. The Masque of the Inner Temple and Gray's Inn, presented in Feb. 1612-13, on the marriage of the Princess Elizabeth to the Elector Palatine of the Rhine, cost £1086 : 8 : 11.[1] The principal author of those masques was Ben Jonson, whose genius was peculiarly fitted to a style of composition which afforded him ample opportunity of displaying his erudition. Beaumont, Chapman, Samuel Daniel, Campion, Shirley, Heywood, and Carew, also employed their talents upon masques, as did a greater than they, Milton, whose 'Comus' was represented at Ludlow Castle in 1634. Inigo Jones devised the machinery and designed the costumes for the Court masques;[2] Laniere and others painted the scenery; and Ferrabosco, Campion, H. and W. Lawes, Ives, Laniere, Locke, C. Gibbons, and others composed the music. Two of Ben Jonson's masques—'The Masque of Queens,' 1610, and 'The Twelfth Night's Revels,' 1606, were printed from his autograph MSS. in the British Museum by the Shakespeare Society at the end of Cunningham's *Life of Inigo Jones*. After the Restoration what were called masques were occasionally given at Court, but they appear to have been rather masked or fancy dress balls than dramatic entertainments. An exception was Crowne's masque, 'Calisto; or, the Chaste Nymph,' performed at court by the princesses and courtiers, Dec. 15 and 22, 1675. In the 18th century masques were not unfrequently to be seen on the public stage. The 'pantomimes' produced by Rich (for most of which Galliard composed the music) were really masques with harlequinade scenes interspersed. More recently masques have been performed on occasion of royal weddings; thus 'Peleus and Thetis,' a masque, formed the second act of the opera 'Windsor Castle,' by William Pearce, music by J. P. Salomon, performed at Covent Garden on the marriage of the Prince of Wales, 1795, and 'Freya's Gift,' masque by John Oxenford, music by G. A. Macfarren, was produced at the same house on the marriage of the present King, 1863. Soon after the death of Sir Walter Scott in 1832, 'The Vision of the Bard,' masque by James Sheridan Knowles, was produced at Covent Garden. [In 1887, in honour of Queen Victoria's Jubilee, 'The Masque of Flowers' was revived at Gray's Inn, and was again performed in 1897 for the Diamond Jubilee. A masque by Campion was given at the Guildhall School of Music under the title of 'The Golden Tree,' by the Worshipful Company of Musicians, June 29, 1905. See *Musical Times* for 1900, p. 248.] W. H. H.

[1] In regarding these figures the difference in the value of money then and now must be borne in mind.

[2] Many of his sketches for this purpose are in the possession of the Duke of Devonshire.

MASS (Lat. *Missa*; from the words, '*Ite, missa est*'—'Depart! the assembly is dismissed'—sung, by the Deacon, immediately before the conclusion of the Service. Ital. *Messa*; Fr. *Messe*; Germ. *Die Messe*). The custom of singing certain parts of the Mass to music of a peculiarly solemn and impressive character has prevailed, in the Roman Church, from time immemorial.

The old plain-song has been already described under GREGORIAN MUSIC (see vol. ii. p. 235); but before coming to harmonised music there are some late plain-song Masses to take into account. For the so-called 'Missa de Angelis' see below.

After the invention of Counterpoint composers delighted in weaving these and other old Plain-song melodies into polyphonic Masses, for two, four, six, eight, twelve, or even forty voices; and thus arose those marvellous schools of ecclesiastical music, which, gradually advancing in excellence, exhibited, during the latter half of the 16th century, a development of art, the æsthetic perfection of which has never since been equalled. The portions of the Service selected for this method of treatment were the *Kyrie*, the *Gloria*, the *Credo*, the *Sanctus*, the *Benedictus*, and the *Agnus Dei*; which six movements constituted—and still constitute—the musical composition usually called the 'Mass.' A single Plain-song melody—in technical language a *Canto fermo*—served, for the most part, as a common theme for the whole; and from this the entire work generally derived its name—as *Missa 'Veni sponsa Christi'*; *Missa 'Tu es Petrus'*; *Missa 'Iste confessor.'* The *Canto fermo*, however, was not always a sacred one. Sometimes—though not very often during the best periods of art—it was taken from the refrain of some popular song; as in the case of the famous *Missae 'L'Homme armé,'* founded upon an old French love-song—a subject which Josquin des Prés, Palestrina, and many other great composers have treated with wonderful ingenuity. More rarely an original theme was selected; and the work was then called *Missa sine nomine*, or *Missae brevis*, or *Missa ad Fugam*, or *ad Canones*, as the case might be; or named after the Mode in which it was composed, *Missa Primi Toni*, *Missa Quarti Toni*, *Missa Octavi Toni*; or even, from the number of voices employed, as *Missa Quatuor Vocum*. In some few instances—

generally very fine ones—an entire Mass was based upon the six sounds of the Hexachord, and entitled *Missa ut, re, mi, fa, sol, la,* or *Missa super Voces Musicales.*

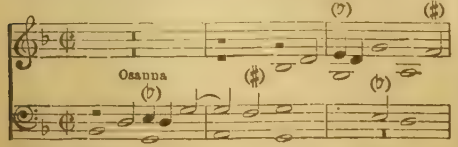
Among the earliest Masses of this description, of which perfect and intelligible copies have been preserved to us, are those by Du Fay, Dunstable, Binchoys, and certain contemporaneous writers, whose works characterise the First Epoch of really practical importance in the history of Figured Music — an epoch intensely interesting to the critic, as already exhibiting the firm establishment of an entirely new style, confessedly founded upon novel principles, yet depending for its materials upon the oldest subjects in existence, and itself destined to pass through two centuries and a half of gradual, but perfectly legitimate development. Dufay, who may fairly be regarded as the typical composer of this primitive School, was a tenor singer in the Pontifical Chapel, between the years 1428 and 1437. His Masses, and those of the best of his contemporaries, though hard and unmelodious, are full of earnest purpose, and exhibit much contrapuntal skill, combined, sometimes, with ingenious fugal treatment. Written exclusively in the ancient ecclesiastical modes, they manifest a marked preference for Dorian, Phrygian, Lydian, and Mixolydian forms, with a very sparing use of their Æolian and Ionian congeners. These Modes are used, sometimes at their true pitch ; sometimes transposed a fourth higher—or fifth lower—by means of a B♭ at the signature ; but never under any other form of transposition, or with any other signatures than those corresponding with the modern keys of C or F —a restriction which remained in full force as late as the first half of the 17th century, and was even respected by Handel, when he wrote, as he sometimes did with amazing power, in the older scales. So far as the treatment of the *Canto fermo* was concerned, no departure from the strict rule of the Mode was held to be, under any circumstances, admissible ; but a little less rigour was exacted with regard to the counterpoint. Composers had long since learned to recognise the demand for what we should now call a Leading-note, in the formation of the *Clausula vera* or True Cadence—a species of Close invested with functions analogous to those of the Perfect Cadence in modern music. [See vol. i. pp. 434, 435.] To meet this requirement they freely admitted the use of an accidental semitone in all Modes (except the Phrygian) in which the seventh was naturally minor. But in order that, to the eye, at least, their counterpoint might appear no less strict than the *Canto fermo*, they refrained, as far as possible, from indicating the presence of such semitones in their written music, and, except when they occurred in very unexpected places, left the singers to introduce them, wherever they might be required, at the moment of performance. Music so treated was called *Cantus fictus* ; and the education of no chorister was considered complete until he was able, while singing it, to supply the necessary semitones correctly, in accordance with certain fixed laws, a summary of which will be found in the article Musica Ficta. For the rest, we are able to detect but little attempt at expression ; and very slight regard for the distinction between long and short syllables. The verbal text, indeed, was given in a very incomplete form ; the word *Kyrie* or *Sanctus*, written at the beginning of a movement, being generally regarded as a sufficient indication of the composer's meaning. In this, and other kindred matters, the confidence reposed in the singer's intelligence was unbounded—a not unnatural circumstance, perhaps, in an age in which the composer himself was almost always a singer in the choir for which he wrote.

Even at this remote period, the several movements of the Mass began gradually to mould themselves into certain definite forms, which were long in reaching perfection, but, having once obtained general acceptance, remained, for more than a century and a half, substantially unchanged. The usual plan of the *Kyrie* has already been fully described. [See Kyrie.] The *Gloria*, distinguished by a more modest display of fugal ingenuity, and a more cursive rendering of the words, was generally divided into two parts, the *Qui tollis* being treated as a separate movement. The *Credo*, written in a similar style, was also subjected to the same method of subdivision, a second movement being usually introduced at the words, '*Et incarnatus est,*' or '*Crucifixus,*' and, frequently, a third, at '*Et in Spiritum Sanctum.*' The design of the *Sanctus*, though more highly developed, was not unlike that of the *Kyrie* ; the '*Pleni sunt coeli*' being sometimes, and the *Osanna* almost always, treated separately. The *Benedictus* was allotted, in most cases, to two, three, or four solo voices ; and frequently assumed the form of a Canon, followed by a choral *Osanna.* In the *Agnus Dei*—generally divided into two distinct movements—the composer loved to exhibit the utmost resources of his skill ; hence, in the great majority of instances, the second movement was written, either in Canon or in very complex Fugue, and, not unfrequently, for a greater number of voices than the rest of the Mass.

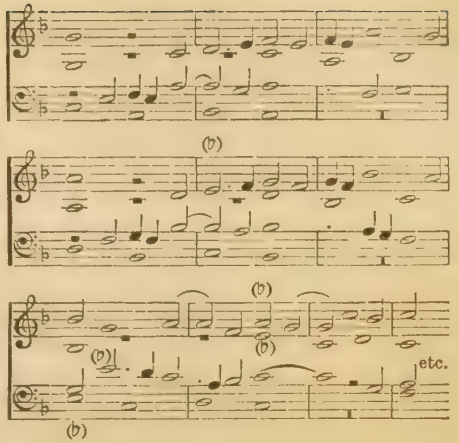
The best-known composers of the Second Epoch were Okeghem, Obrecht, Caron, Gaspar, the brothers De Fevin, and some others of their school, most of whom flourished between the years 1430 and 1480. As a general rule, these writers laboured less zealously for the cultivation of a pure and melodious style, than for the advancement of contrapuntal ingenuity. For the sober fugal periods of their predecessors, they

substituted the less elastic kind of imitation, which was then called Strict or Perpetual Fugue, but afterwards obtained the name of Canon; carrying their passion for this style of composition to such extravagant lengths, that too many of their works descended to the level of mere learned enigmas. Okeghem, especially, was devoted to this particular phase of art, for the sake of which he was ready to sacrifice much excellence of a far more substantial kind. Provided he could succeed in inventing a Canon, sufficiently complex to puzzle his brethren, and admit of an indefinite number of solutions, he cared little whether it was melodious or the reverse. To such canons he did not scruple to set the most solemn words of the Mass. Yet his genius was certainly of a very high order; and, when he cared to lay aside these extravagances, he proved himself capable of producing works far superior to those of any contemporary writer.

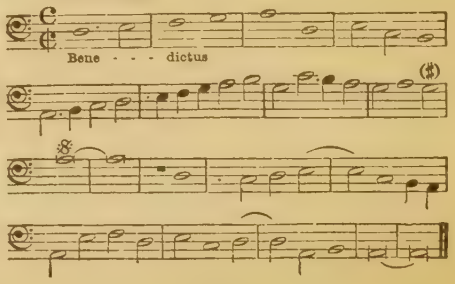
The Third Epoch was rendered remarkable by the appearance of a master, whose fame was destined to eclipse that of all his predecessors, and even to cast the reputation of his teacher, Okeghem, into the shade. Josquin des Prés, a singer in the Pontifical Chapel from 1471 to 1484 and afterwards Maître de Chapelle to Louis XII., was, undoubtedly, for very many years, the most popular composer, as well as the greatest and most learned musician in Christendom. And his honours were fairly earned. The wealth of ingenuity and contrivance displayed in some of his Masses is truly wonderful; and is rendered none the less so by its association with a vivacity peculiarly his own, and an intelligence and freedom of manner far in advance of the age in which he lived. Unhappily, these high qualities are marred by a want of reverence which would seem to have been the witty genius's besetting sin. When free from this defect, his style is admirable. On examining his Masses one is alternately surprised by passages full of unexpected dignity, and conceits of almost inconceivable quaintness—flashes of humour, the presence of which, in a volume of Church Music, cannot be too deeply regretted, though they are really no more than passing indications of the genial temper of a man whose greatness was far too real to be affected, either one way or the other, by a natural light-heartedness which would not always submit to control. As a specimen of his best and most devotional style, we can scarcely do better than quote a few bars from the *Osanna* of his Mass, *Faysans regrés*[1]—



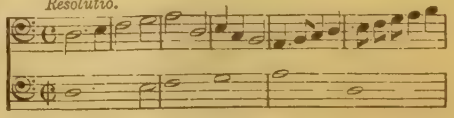
[1] The accidentals in this and the following examples, are all supplied in accordance with the laws of *Cantus fictus*.

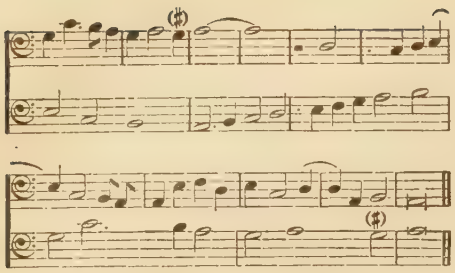


The religious character of this movement is apparent from the very first bar; and the ingenuity with which the strict Canon is carried on, between the Bass and Alto, simultaneously with the Fugue between the Tenor and Treble, is quite forgotten in the unexpected beauty of the resulting harmonies. Perhaps some portion of the beauty of our next example—the *Benedictus* from the *Missa 'L'Homme armé'*—may be forgotten in its ingenuity. It is a strict Canon, in the Unison, by Diminution; and, though intended to be sung by two voices, is printed in one part only, the singer being left to find out the secret of its construction as best he can—



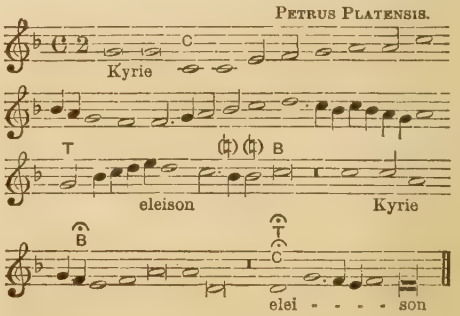
A hint at the solution of this enigma is given to the initiated by the double Time-signature at the beginning. [See INSCRIPTION.] The intention is, that it should be sung by two bass voices in unison, both beginning at the same time, but one singing the notes twice as quickly as the other; thus—





This diversity of Rhythm is, however, a very simple matter compared with many other complications in the same Mass, and still more, in the *Missa* '*Didadi,*' which abounds in strange proportions of Time, Mood, and Prolation, the clue whereto is afforded by the numbers shown on the faces of a pair of dice! Copious extracts from these curious Masses, as well as from others by Gombert, Clemens non Papa, Mouton, Brumel, and other celebrated composers, both of this and the preceding epoch, will be found in the *Dodecachordon* of Glareanus (Basle, 1547), a work which throws more light than almost any other on the mysteries of ancient counterpoint.

Of the numerous composers who flourished during the Fourth Epoch—that is to say, during the first half of the 16th century—a large proportion aimed at nothing higher than a servile imitation of the still idolised Josquin; and, as is usual under such circumstances, succeeded in reproducing his faults much more frequently than his virtues. There were, however, many honourable exceptions. The Masses of Carpentrasso, Morales, Cipriano di Rore, Vincenzo Ruffo, Claude Goudimel, Adriano Willaert, and, notably, Costanzo Festa, are unquestionably written in a far purer and more flowing style than those of their predecessors; and even the great army of Madrigal writers, headed by Arcadelt and Verdelot, helped on the good cause bravely, in the face of a host of charlatans whose caprices tended only to bring their art into disrepute. Not content with inventing enigmas '*Ad omnem tonum,*' or '*Ung demiton plus bas*'—with colouring their notes green, when they sang of grass, or red, when allusion was made to blood—these corrupters of taste prided themselves upon adapting, to the several voice-parts for which they wrote, different sets of words totally unconnected with each other; and this evil custom spread so widely that Morales himself did not scruple to mix together the text of the Liturgy and that of the '*Ave Maria*'; while a Mass is still extant in which the Tenor is made to sing '*Alleluia*' incessantly from beginning to end. When the text was left intact, the rhythm was involved in complications which rendered the sense of the words utterly unintelligible. Profane melodies, and even the verses belonging to them, were shamelessly introduced into the most solemn compositions for the Church. All the vain conceits affected by the earlier writers were revived with tenfold extravagance. Canons were tortured into forms of ineffable absurdity, and esteemed only in proportion to the difficulty of their solution. By a miserable fatality, the Mass came to be regarded as the most fitting possible vehicle for the display of these strange monstrosities, which are far less frequently met with in the Motet or the Madrigal. Men of real genius fostered the wildest abuses. Even Pierre de la Rue—who seems to have made it a point of conscience to eclipse, if possible, the fame of Josquin's ingenuity—wrote his Missa, '*O salutaris Hostia,*' in one line throughout; leaving three out of the four voices to follow the single part in strict Canon. In the *Kyrie* of this Mass—which we reprint in modern notation from the version preserved by Glareanus[1]—the solution of the enigma is indicated by the letters placed above and below the notes. C shows the place at which the Contra-tenor is to begin, in the interval of a Fifth below the Superius. T indicates the entrance of the Tenor, an Octave below the Superius; B, that of the Bass, a Fifth below the Tenor. The same letters, with pauses over them, mark the notes on which the several parts are to end. The reader who will take the trouble to score the movement, in accordance with these directions, will find the harmony perfectly correct, in spite of some harshly dissonant passing-notes; but it is doubtful whether the most indulgent critic would venture to praise it for its devotional character.



It is easy to imagine the depths of inanity accessible to an ambitious composer in his attempts to construct such a Canon as this, without a spark of Pierre de la Rue's genius to guide him on his way. Such attempts were made every day; and, had it not been that good men and true were at work, beneath the surface, conscientiously preparing the way for a better state of things, art would soon have been in a sorry plight. As it was, notwithstanding all these extravagances, it was making real progress. The dawn of a brighter day was very near at hand; and the excesses of the unwise only served to hasten its appearance.

The Fifth Epoch, extending from the year

[1] *Dodecachordon*, p. 445, ed. 1547.

1565 to the second decade of the following century, and justly called 'The Golden Age of Ecclesiastical Music,' owes its celebrity entirely to the influence of one grave, earnest-minded man, whose transcendent genius, always devoted to the noblest purposes, and always guided by sound and reasonable principles, has won for him a place, not only on the highest pinnacle of fame but also in the inmost hearts of all true lovers of the truest art.

The abuses to which we have just alluded became, in process of time, so intolerable, that the Council of Trent found it necessary to condemn them in no measured terms. In the year 1564 Pope Pius IV. commissioned eight Cardinals to see that certain decrees of the Council were duly carried out. After much careful deliberation the members of this Commission had almost determined to forbid the use of any polyphonic music whatever in the services of the Church; but, chiefly through the influence of Card. Vitellozzo Vitellozzi, and S. Carlo Borromeo, they were induced to suspend their judgment until Palestrina, then Maestro di Cappella of S. Maria Maggiore, should have proved, if he could, the possibility of producing music of a more devotional character, and better adapted to the words of the Mass, and the true purposes of religion, than that then in general use. In answer to this challenge, the great composer submitted to the Commissioners three Masses, upon one of which—first sung in the Sistine Chapel, on the 19th of June 1565, and since known as the *Missa Papae Marcelli*[1]—the Cardinals immediately fixed, as embodying the style in which all future Church music should be composed. It would be difficult to conceive a more perfect model. In depth of thought, intensity of expression, and all the higher qualities which distinguish the work of the Master from that of the pedant, the *Missa Papae Marcelli* is universally admitted to be unapproachable; while, even when regarded as a monument of mere mechanical skill, it stands absolutely unrivalled. Yet, except in the employment of the Hypoionian Mode[2]—a tonality generally avoided by the older composers—it depends for its effect upon the introduction of no new element whatever, either of construction or of form. Avoiding all show of empty pedantry, and carefully concealing the consummate art with which the involutions of its periods are conducted, it freely uses all the old contrivances of Fugue, and, in the second *Agnus Dei*, of closely interwoven Canon; but always as means towards the attainment of a certain end—never in place of the end itself. And this entire subjugation of artistic power to the demands of expression is, perhaps, its most prominent characteristic. It pervades it throughout, from the first note to the last. Take, for instance, the *Christe eleison*, in which each voice, as it enters, seems to plead more earnestly than its predecessor for mercy—

It is impossible, while listening to these touchingly beautiful harmonies, to bestow even a passing thought upon the texture of the parts by which they are produced; yet the quiet grace of the theme at (*a*), and the closeness of the imitation to which it is subjected, evince a command of technical resources which Handel alone could have hidden, with equal success, beneath the appearance of such extreme simplicity. Handel has indeed submitted a similar subject to closely analogous treatment—though in quick time and with a very different expression—in the opening *Tutti* of his Organ Concerto in G; and it is interesting to note that the exquisitely moulded close at (*b*), so expressive, when sung with the necessary *ritardando*, of the confidence of hope, has been used by Mendelssohn, interval for interval, in the Chorale, 'Sleepers wake!' from 'Saint Paul,' to express the confidence of expectation.

[1] It is difficult to understand why Palestrina should have given it this name, ten years after the death of Pope Marcellus II. The reader will find the whole subject exhaustively discussed in the pages of Baini (tom. 1, sez. 2. cap. 1 *et seq*) [but see vol. ii. p. 690, where grave doubts are cast on the account given above, on Baini's authority].

[2] The preface to a certain German edition of the *Missa Papae Marcelli* erroneously describes the work as written in the Mixolydian Mode. The *Crucifixus* and *Benedictus* are undoubtedly Mixolydian: but the Mass itself is, beyond all question, written in the Fourteenth, or Hypoionian Mode, to the tonality, compass, and cadences of which it conforms throughout.

We have selected this particular passage for our illustration principally for the sake of calling attention to these instructive coincidences; but in truth every bar of the Mass conceals a miracle of art. Its subjects, all original, and all of extreme simplicity, are treated with an inexhaustible variety of feeling which shows them, every moment, in some new and beautiful light. Its six voices—Soprano, Alto, two Tenors of exactly equal compass, and two Basses matched with similar nicety—are so artfully grouped as constantly to produce the effect of two or more antiphonal choirs. Its style is solemn and devotional throughout; but by no means deficient in fire, when the sense of the words demands it. Baini truly calls the *Kyrie* devout; the *Gloria* animated; the *Credo* majestic; the *Sanctus* angelic; and the *Agnus Dei* prayerful. Palestrina wrote many more Masses, of the highest degree of excellence; but none, not even *Assumpta est Maria*, so nearly approaching perfection in every respect as this. He is known to have produced, at the least, ninety-five; of which forty-three were printed during his lifetime; and thirty-nine more within seven years after his death; while thirteen are preserved in manuscript [1] among the archives of the Pontifical Chapel, and in the Vatican Library. The effect produced by these great works upon the prevailing style was all that could be desired. Vittoria and Anerio in the great Roman School, Gabrieli and Croce in the Venetian, Orlando di Lasso in the Flemish, and innumerable other Masters, brought forward compositions of unfading interest and beauty. Not the least interesting of these is a Mass for five voices, in the transposed Æolian Mode, composed by our own great William Byrd, probably about 1588. This valuable work was edited, in 1841, for the Musical Antiquarian Society, by Dr. Rimbault, from a copy, believed to be unique, and now safely lodged in the Library of the British Museum. It may fairly lay claim to be classed as a production of the 'Golden Age'; it is entirely free from the vices of the Fourth Epoch, and, notwithstanding a certain irregularity in the formation of some of the Cadences, exhibits unmistakable traces of the Roman style; a style, the beauties of which were speedily recognised from one end of Europe to the other, exercising more or less influence over the productions of all other schools, and thereby bringing the music of the Mass, during the latter half of the 16th century, to a degree of perfection beyond which it has never since advanced.

The Sixth Epoch was one of universal decadence. In obedience to the exigencies of a law with the operation of which the art-historian is only too familiar, the glories of the 'Golden Age' had no sooner reached their full maturity than they began to show signs of incipient decay. The bold unprepared discords of Monteverde, and the rapid rise of instrumental Music, were alike fatal to the progress of the polyphonic schools. Monteverde, it is true, only employed his newly invented harmonies in secular music; but what revolutionist ever yet succeeded in controlling the course of the stone he had once set in motion! Other composers soon dragged the unwonted dissonances into the service of the Church; and, beyond all doubt, the unprepared seventh sounded the death-knell of the polyphonic Mass. The barrier between the tried and the untried, once broken down, the laws of counterpoint were no longer held sacred. The old paths were forsaken; and those who essayed to walk in the new wandered vaguely, hither and thither in search of an ideal, as yet but very imperfectly conceived, in pursuit of which they laboured on, through many weary years, cheered by very inadequate results and little dreaming of the effect their work was fated to exercise upon generations of musicians then unborn. A long and dreary period succeeded, during which no work of any lasting reputation was produced; for the Masses of Carissimi, Colonna, and the best of their contemporaries, though written in solemn earnest, and interesting enough when regarded as attempts at a new style, bear no comparison with the compositions of the preceding epoch; while those arranged by Benevoli (1602-72) and the admirers of his school, for combinations of four, six, eight, and even twelve distinct choirs, were forgotten, with the occasions for which they were called into existence. Art was passing through a transitional phase, which must needs be left to work out its own destiny in its own way. The few faithful souls who still clung to the traditions of the past were unable to uphold its honours; and with Gregorio Allegri, in 1652, the 'School of Palestrina' died out. Yet not without hope of revival. The laws which regulated the composition of the polyphonic Mass are as intelligible to-day as they were three hundred years ago; and it needs but the fire of living genius to bring them once more into active operation, reinforced by all the additional authority with which the advancement of modern science has from time to time invested them.

Before quitting this part of our subject for the consideration of the later schools it is necessary that we should offer a few remarks upon the true manner of singing Masses, such as those of which we have briefly sketched the history; and, thanks

[1] One of these, *Tu es Petrus*, was printed, for the first time, 1869, in Schrems's continuation of Proske's *Musica Divina* (Ratisbon, Fr. Pustet).

to the traditions handed down from generation to generation by the Pontifical Choir, we are able to do so with as little danger of misinterpreting the ideas of Palestrina or Anerio, as we should incur in dealing with those of Mendelssohn or Sterndale Bennett.

In the first place it is a mistake to suppose that a very large body of voices is absolutely indispensable to the successful rendering, even of very great works. On ordinary occasions no more than thirty-two singers are present in the Sistine Chapel—eight Sopranos, and an equal number of Altos, Tenors, and Basses; though, on very high festivals, their number is sometimes nearly doubled. The vocal strength must, of course, be proportioned to the size of the building in which it is to be exercised; but whether it be great or small, it must on no account be supplemented by any kind of instrumental accompaniment whatever. Every possible gradation of tone, from the softest imaginable whisper, to the loudest *forte* attainable without straining the voice, will be brought into constant requisition. Though written always, either with a plain signature, or with a single flat after the clef, the music may be sung at any pitch most convenient to the choir. The time should be beaten in minims; except in the case of 3–1, in which three semibreves must be counted in each bar. The *Tempo*—of which no indication is ever given, in the old part-books—will vary, in different movements, from about 𝅗𝅥=50 to 𝅗𝅥=120. On this point, as well as on the subject of *pianos* and *fortes*, and the assignment of certain passages to solo voices, or semi-chorus, the leader must trust entirely to the dictates of his own judgment. He will, however, find the few simple rules to which we are about to direct his attention capable of almost universal application; based, as they are, upon the important relation borne by the music of the Mass to the respective offices of the Priest, the Choir, and the Congregation. To the uninitiated, this relation is not always very clearly intelligible. In order to make it so, and to illustrate, at the same time, the principles by which the old masters were guided, we shall accompany our promised hints by a few words explanatory of the functions performed by the Celebrant and his ministers during the time occupied by the choir in singing the principal movements of the Mass—functions, the right understanding of which is indispensable to the correct interpretation of the music.

High Mass—preceded, on Sundays, by the Plain-song, *Asperges me*—begins, on the part of the celebrant and ministers, by the recitation, in a low voice, of the Psalm, *Judica me Deus*, and the *Confiteor*; on that of the choir, by the chaunting, from the Gradual, of the Introit appointed for the day. [See INTROIT.]

From the Plain-song Introit, the choir proceed at once to the *Kyrie*; and this transition from the severity of the Gregorian melody to the pure harmonic combinations of polyphonic music is one of the most beautiful that can be imagined. The *Kyrie* is always sung slowly and devoutly (𝅗𝅥=56-66), with the tenderest possible gradations of light and shade. The *Christe*, also a slow movement, may often be entrusted, with good effect, to solo voices. The second *Kyrie* is generally a little more animated than the first, and should be taken in a quicker time (𝅗𝅥=96-112). The *Kyrie* of Palestrina's *Missa brevis* is one of the most beautiful in existence, and by no means difficult to sing, since the true positions of the *crescendi* and *diminuendi* can scarcely be mistaken. [See KYRIE.]

While the choir are singing these three movements, the Celebrant, attended by the Deacon and Subdeacon, ascends to the Altar, and, having incensed it, repeats the words of the Introit and *Kyrie*, in a voice audible to himself and his Ministers alone. On the cessation of the music, he intones, in a loud voice, the words, *Gloria in excelsis Deo*, to a short Plain-song melody, varying with the nature of the different festivals, and given, in full, both in the Missal and the Gradual. [See INTONATION.] This Intonation, which may be taken at any pitch conformable to that of the Mass, is not repeated by the Choir, which takes up the strain at *Et in terra pax*.

The first movement of the *Gloria* is, in most cases, a very jubilant one (𝅗𝅥=100-120); but the words *adoramus te*, and *Jesu Christe*, must always be sung slowly, and softly (𝅗𝅥=50-60); and sometimes the *Gratias agimus*, as far as *gloriam tuam*, is taken a shade slower than the general time, in accordance with the spirit of the rubric which directs that, at these several points, the Celebrant and Ministers shall uncover their heads, in token of adoration. After the word *Patris*, a pause is made. The *Qui tollis* is then sung, Adagio (𝅗𝅥=56-66); with *ritardandi* at *miserere nobis* and *suscipe deprecationem nostram*. At the *Quoniam tu solus*, the original quick time is resumed, and carried on, with ever-increasing spirit, to the end of the movement; except that the words *Jesu Christe* are again delivered slowly and softly as before. The provision made, in the *Missa Papae Marcelli*, for the introduction of these characteristic changes of tempo is very striking, and points clearly to the antiquity of the custom.

The Celebrant now recites the collects for the day; the Subdeacon sings the Epistle, in a kind of monotone, with certain fixed Inflexions; the choir sings the Plain-song Gradual, followed by the Tract, or Sequence, according to the nature of the Festival; and the Deacon sings the Gospel, to its own peculiar Tone. [See GRADUAL; TRACT; SEQUENCE; INFLEXION.] If there be a sermon, it follows next in order; if not, the Gospel is immediately followed by the Creed.

The words *Credo in unum Deum* are intoned by the Celebrant, to a few simple notes of Plain-

song, which never vary—except in pitch—and which are to be found both in the Gradual and the Missal. [See INTONATION.] The Choir continue, *Patrem omnipotentem*, in a moderate Allegro, more stately than that of the *Gloria* (♩=96-112), and marked by the closest possible attention to the spirit of the text. A *ritardando* takes place at *Et in unum Dominum*; and the words *Jesum Christum* are sung as slowly and as softly as in the *Gloria* (♩=50-60). The quicker time is resumed at *Filium Dei*; and a grand *forte* may generally be introduced, with advantage, at *Deum de Deo*, and continued as far as *facta sunt*—as in Palestrina's *Missa 'Assumpta est Maria,'* and many others. After the words *de coelis*, a long pause takes place, while the congregation kneel. The *Et incarnatus est* then follows, in the form of a soft and solemn Adagio (♩=54-63), interrupted, after *factus est*, by another pause, long enough to enable the people to rise from their knees in silence. The *Crucifixus* is also a slow movement; the return to the original Allegro being deferred until the *Et resurrexit*. In the *Missa Papae Marcelli*, and many other very fine ones, this part of the *Credo* is written for four solo voices; but the necessity for an acceleration of the time at the *Et resurrexit* is very strongly marked. In the beautiful *Missa brevis* already mentioned, the Basses lead off the *Et resurrexit*, in quick time, while the Soprano and Alto are still engaged in finishing a *ritardando*—a very difficult, though by no means uncommon point, which can only be overcome by very careful practice.

Another change of time is sometimes demanded, at *Et in Spiritum Sanctum*; but more generally the Allegro continues to the end of the movement; interrupted only at the words *simul adoratur*, which are always sung Adagio, and *pianissimo*, while the Celebrant and Ministers uncover their heads.

The *Credo* is immediately followed by the Plain-song *Offertorium* for the day. But as this is too short to fill up the time occupied by the Celebrant in incensing the Oblations, and saying, *secreto*, certain appointed prayers, it is usually supplemented, either by a motet or a grand voluntary on the Organ. [See MOTET; OFFERTORIUM.] This is followed by the Versicle and Response called the *Sursum corda*, and the Proper Preface, at the end of which a bell is rung and the *Sanctus* is taken up by the choir.

The *Sanctus* is invariably a Largo, of peculiar solemnity (♩=56-72). Sometimes, as in Palestrina's very early Mass, *Virtute magna*, the *Pleni sunt coeli* is set for solo voices. Sometimes it is sung in chorus, but in a quicker movement, as in the same composer's *Missa Papae Marcelli*, and *Aeterna Christi munera*—involving, in the last-named Mass, a difficulty of the same kind as that which we have already pointed out in the *Et resurrexit* of the *Missa Brevis*. The *Osanna*, though frequently spirited, must never be a noisy movement. In the *Missa Brevis*, so often quoted, it is continuous with the rest of the *Sanctus*, and clearly intended to be sung *pianissimo*—an extremely beautiful idea, in perfect accordance with the character of this part of the Service, during which the Celebrant is proceeding, *secreto*, with the prayers which immediately precede the Consecration of the Host. After the Elevation, which takes place in silence, the choir begin the *Benedictus* in soft, low tones, almost always entrusted to solo voices. The *Osanna*, which concludes the movement, is, in the great majority of cases, identical with that which follows the *Sanctus*. The *Paternoster* is sung by the Celebrant to a Plain-song melody contained in the Missal. After its conclusion the choir sings the last movement of the Mass—the *Agnus Dei*—while the Celebrant is receiving the Host. The first division of the *Agnus Dei* may be very effectively sung by solo voices, and the second, in subdued chorus (♩=50-72), with gentle gradations of *piano* and *pianissimo*, as in the *Kyrie*. When there is only one movement it must be sung twice; the words *dona nobis pacem* being substituted, the second time, for *miserere nobis*. The *Agnus Dei* of Josquin's *Missa 'L'Homme armé'* is in three distinct movements.

The Choir next sings the Plain-song *Communio*, as given in the Gradual. The Celebrant recites the prayer called the Post-Communion. The Deacon sings the words, *'Ite, missa est,'* from which the service derives its name. And the rite concludes with the *Domine salvum fac*, and prayer for the reigning sovereign.

The ceremonies we have described are those peculiar to High or Solemn Mass. When the service is sung by the Celebrant and choir, without the assistance of a Deacon and Subdeacon, and without the use of incense, it is called a *Missa cantata* or Sung Mass. Low Mass is said by the Celebrant alone, attended by a single server. According to strict usage no music whatever is admissible at Low Mass; but in French and German village churches, and even in those of Italy, it is not unusual to hear the congregations sing hymns or litanies appropriate to the occasion, though not forming part of the service. Under no circumstances can the duties proper to the choir, at High Mass, be transferred to the general congregation.

It is scarcely necessary to say that the music of every Mass worth singing will naturally demand a style of treatment peculiar to itself; especially with regard to the *Tempi* of its different

movements. A modern editor tells us that more than four bars of Palestrina should never be sung, continuously, in the same time.[1] This is, of course, an exaggeration. Nevertheless, immense variety of expression is indispensable. Everything depends upon it; and though the leader will not always find it easy to decide upon the best method, a little careful attention to the points we have mentioned will, in most cases, enable him to produce results very different from any that are attainable by the hard dry manner which is too often supposed to be inseparable from the performance of ancient figured music.

Our narrative was interrupted, at a transitional period, when the grand old mediæval style was gradually dying out, and a newer one courageously struggling into existence, in the face of difficulties which sometimes seemed insurmountable. We resume it, after the death of the last representative of the old *régime*, Gregorio Allegri, in the year 1652.

The most remarkable composers of the period which we shall designate as the Seventh Epoch in the history of the vocal Mass — comprising the latter part of the 17th century and the earlier years of the 18th — were Alessandro Scarlatti, Leo, and Durante; men whose position in the chronicles of art is rendered somewhat anomalous, though none the less honourable, by the indisputable fact that they all entertained a sincere affection for the older school, while labouring with all their might for the advancement of the newer. It was, undoubtedly, to their love for the masters of the 16th century that they owed the dignity of style which constitutes the chief merit of their compositions for the Church; but their real work lay in the direction of instrumental accompaniment, for which Durante especially did more than any other writer of the period. His genius was, indeed, a very exceptional one. While others were content with cautiously feeling their way, in some new and untried direction, he boldly started off with a style of his own, which gave an extraordinary impulse to the progress of art, and impressed its character so strongly upon the productions of his followers that he has been not unfrequently regarded as the founder of the modern Italian school. Whatever opinion may be entertained on that point it is certain that the simplicity of his melodies tended, in no small degree, to the encouragement of those graces which now seem inseparable from Italian art; while it is equally undeniable that the style of the Cantata, which he, no less than Alessandro Scarlatti, held in the highest estimation, exercised an irresistible influence over the future of the Mass.

The Eighth Epoch is represented by one single work, of such gigantic proportions and so exceptional a character that it is impossible either to class it with any other or to trace its pedigree through any of the schools of which we have hitherto spoken. The artistic status of John Sebastian Bach's Mass in B minor — produced in the years 1733-38 — only becomes intelligible when we consider it as the natural result of principles, inherited through a long line of masters, who bequeathed their musical acquirements, from father to son, as other men bequeath their riches; principles upon which rest the very foundations of the later German schools. Bearing this in mind, we are not surprised at finding it free from all trace of the older ecclesiastical traditions. To compare it with Palestrina's *Missa Papae Marcelli* — even were such a perversion of criticism possible — would be as unfair to either side as an attempt to judge the masterpieces of Rembrandt by the standard of Fra Angelico. The two works are not even coincident in intention; for it is almost impossible to believe that the one we are now considering can ever have been seriously intended for use as a church service. Unfitted for that purpose, as much by its excessive length as by the exuberant elaboration of its style, and the overwhelming difficulty of its execution, it can only be consistently regarded as an Oratorio; so regarded, it may be safely trusted to hold its own, side by side with the greatest works of the kind that have ever been produced in any country or in any age. Its masterly and exhaustively developed fugues; its dignified choruses, relieved by airs and duets of infinite grace and beauty; the richness of its instrumentation, achieved by means which most modern composers would reject as utterly inadequate to the least ambitious of their requirements; above all, the colossal proportions of its designs — these, and a hundred other characteristics into which we have not space to enter, entitle it to rank as one of the finest works, if not the very finest, that the great cantor of the Thomasschule has left, as memorials of a genius as vast as it was original. Whether we criticise it as a work of art, of learning, or of imagination, we find it equally worthy of our respect. It is, moreover, extremely interesting as an historical monument, from the fact that, in the opening of its *Credo*, it exhibits one of the most remarkable examples on record of the treatment of an ancient *Canto fermo* with modern harmonies, and an elaborate orchestral accompaniment. [See INTONATION.] Bach often showed but little sympathy with the traditions of the past. But in this, as in innumerable other instances, he proved his power of compelling everything he touched to obey the dictates of his indomitable will.

While the great German composer was thus patiently working out his hereditary trust, the disciples of the Italian school were entering upon a Ninth Epoch — the last which it will be our duty to consider, since its creative energy is

[1] The only other composer, ancient or modern, with regard to whose works such a remark could have been hazarded, is Chopin — the unfettered exponent of the wildest dreams of modern romanticism. So strangely does experience prove that 'there is nothing new under the sun!'

probably not yet exhausted—under very different conditions, and influenced by principles which led to very different results. If we have found it necessary to criticise Bach's wonderful production as an Oratorio, still more necessary is it that we should describe the Masses of this later period as Sacred Cantatas. Originating beyond all doubt with Durante, treated with infinite tenderness by Pergolesi and Jommelli, endowed with a wealth of graces by the genius of Haydn and Mozart, and still further intensified by the imaginative power of Beethoven and Cherubini, their style has steadily kept pace, step by step, with the progress of modern music; borrowing elasticity from the freedom of its melodies, and richness from the variety of its instrumentation; clothing itself in new and unexpected forms of beauty, at every turn; yet never aiming at the expression of a higher kind of beauty than that pertaining to earthly things, or venturing to utter the language of devotion in preference to that of passion. In the Masses of this era we first find the individuality of the composer entirely dominating that of the school—if, indeed, a school can be said to exist at all in an age in which every composer is left free to follow the dictates of his own unfettered taste. It is impossible to avoid recognising, in Haydn's Masses, the well-known features of the 'Creation' and the 'Seasons'; or in those of Mozart the characteristic features of his most delightful operas. Who, but the composer of 'Dove sono i bei momenti,' or the finales to 'Don Giovanni,' and the 'Flauto Magico,' could ever have imagined the *Agnus Dei* of the first Mass, or the *Gloria* of the second? Still more striking is the identity of thought which assimilates Beethoven's *Missa solemnis* to some of the greatest of his secular works, notwithstanding their singular freedom from all trace of mannerism. Mozart makes himself known by the refinement of his delicious phrases; Beethoven by the depth of his dramatic instinct—a talent which he never turned to such good account as when working in the absence of stage accessories. We are all familiar with that touching episode in the 'Battle Symphony,' wherein the one solitary fifer strives to rally his scattered comrades by playing *Malbrouk s'en va-t-en guerre*—a feat, which, by reason of the thirst and exhaustion consequent upon his wound, he can only accomplish in a minor key. No less touching, though infinitely more terrible, is that wonderful passage of drums and trumpets in the *Dona nobis pacem* of the Mass in D, intended to bring the blessings of peace into the strongest possible relief, by contrasting them with the horrors of war.

Whether or not the peace to which our attention is thus forcibly directed be really that alluded to in the text, in no wise affects the power of the passage. All that Beethoven intended to express was his own interpretation of

the words; and it is in his own strong language, and not in that of the schools, that he expresses it. Cherubini makes equal use of the dramatic element; more especially in his magnificent *Requiem Mass* in D minor [see REQUIEM], his grand Mass, in the same key, and his famous Mass in A, written for the Coronation of Charles X.; but, always in a way so peculiarly his own, that the touch of his master hand stands everywhere confessed. In all these great works, and innumerable others by Weber, Schubert, Hummel, Niedermeyer, Rossini, and Gounod, we find the dramatic form of expression entirely superseding the devotional; uncompromising realism triumphing over the idealism of the older schools; the personal feelings and experiences of the masters over-riding the abstract sense of the text. This circumstance makes it extremely difficult to assign to these creations of genius a true æsthetic position in the world of art. Church services in name, they have certainly failed, notwithstanding

their universally-acknowledged beauties, in securing for themselves a lasting home in the Church. That their use has been tolerated, rather than encouraged, in Rome itself is proved by the significant fact that not one single note of any one of them has ever once been heard within the walls of the Sistine Chapel. And the reason is obvious. They cast Ecclesiastical tradition to the winds; and, substituting for it the ever-varying sentiment of individual minds, present no firm basis for the elaboration of a definite Church style, which, like that of the 16th century, shall prove its excellence by its stability. Yet, in the midst of the diversity which naturally ensues from this want of a common ideal, it is instructive to notice one bond of union between the older masters and the new, so strongly marked that it cannot possibly be the result of an accidental coincidence. Their agreement in the general distribution of their movements is most remarkable. We still constantly find the *Kyrie* presented to us in three separate divisions. The *Qui tollis* and *Et incarnatus est* are constantly introduced in the form of solemn Adagios. The same *Osanna* is almost always made to serve, as in the *Missa Papae Marcelli*, as a conclusion both to the *Sanctus* and the *Benedictus*. And in this vitality of typical form we find a convincing proof—if one be necessary—that the broad æsthetic principles of Art are immutable and calculated to survive, through an indefinite period, the vicissitudes of technical treatment in widely differing Schools. [It is curious to note that the concluding remarks of the above article are in complete sympathy with the reform in church music which found expression in the famous 'motu proprio' of Pope Pius X. in 1903.]

It will be convenient to classify certain recognised kinds of Masses in this place, thus:—

Missa Brevis is a Mass of moderate length, intended rather for use on ordinary occasions, than on festivals of very great solemnity.

The subjects of the Missa Brevis are almost always original; as in the charming example by Andrea Gabrieli, printed, on the authority of a valuable MS. copy, in the first volume of Proske's *Musica Divina*. This rule, however, is not universal. Palestrina's *Missa Brevis*—a work of unapproachable beauty, and perfectly complete in all its parts, notwithstanding the comparatively short time it occupies in performance—is founded upon *Canti fermi* derived from the melody of *Audi filia*, a Plain-song *Tractus*, which has also been very finely treated in a Mass of earlier date by Claude Goudimel.

Missa de Angelis. The name generally given to a very beautiful Plain-song Mass, in Mode XIII., prescribed in the Ratisbon Gradual, for use 'In Festis Solemnibus,' and appended to the Mechlin Gradual, as a *Missa ad libitum*. Judging from the internal evidence afforded by the freedom of its phrasing, and the Mode in which it is written, the *Missa de Angelis* would seem to be by no means the oldest Mass of this class now in use [it has its roots back in the 15th century, though in its usual form it exhibits all the degradation of the 17th or 18th]; its antiquity is, however, great enough to have obliterated all trace of its history, and even of the origin of the name by which it is now generally designated, and under which it is perhaps more frequently sung than any other Mass of its kind, both in its original form, and in the English translation used at St. Alban's, Holborn, St. Mary's, Paddington, and other London churches in which Gregorian services are encouraged.

The number of the older Masses to which allusion has been made is very small. The Ordinarium Missae in the Ratisbon Gradual, published under the authority of the Congregation of Rites, contains: the *Missa in Tempore Paschali* in Modes VII. and VIII.; a very fine *Missa in Duplicibus*, beginning in Mode I., and another in Mode VIII.; a *Missa Beatae Mariae* beginning in Mode I., and another in Mode VIII.; the *Missa in Dominicis* in Modes I. and II.; the *Missae in Festis Semiduplicibus* and *In Festis Simplicibus*, both beginning in Mode VIII.; the well-known *Missa pro Defunctis*, beginning in Mode I., and including the famous *Dies irae* in Modes I. and II.; and some smaller Masses sung in Advent and Lent, during Octaves and on Ferial Days. The Mechlin Gradual also gives another *Missa ad libitum* in Mode XIII., and yet another in Modes VII. and VIII.

Some editions of the Paris Gradual add to these a spurious *Missa Regia*, professedly in Mode I., but really in the modern key of D minor, composed by Dumont, Maître de Chapelle to Louis XIV., in acknowledged imitation of the older unisonous Masses, but in utter ignorance of the principles upon which they are constructed, and without a trace of appreciation of their true style or sentiment. This Mass was once very popular in France, and much sung in the Paris churches; but since the revival of the taste for pure ecclesiastical music it has wisely been discarded in favour of the older Masses which it was intended to displace.

Missa Sine Nomine. A Mass, composed upon original subjects, in place of a Plain-song *Canto fermo*. Examples will be found among the works of Josquin des Prés, Palestrina, and other composers of the 15th and 16th centuries.

Missa Super Voces Musicales (*Missa Do, Re, Mi, Fa, Sol, La*). A Mass in which the six sounds of the Hexachord are used as a *Canto fermo*. [See Hexachord.] Splendid specimens of the style are extant, by Josquin des Prés, Palestrina, and Francesco Suriano. W. S. R.

MASSART, Joseph Lambert, a famous violin teacher, professor at the Paris Con-

servatoire, born at Liège, July 19, 1811, died in Paris, Feb. 13, 1892. Massart received his first instruction in violin-playing from an amateur named Delavau, who was so impressed with the talent displayed by his pupil, that he persuaded the municipal authorities of Liège to grant him a scholarship which would enable him to study in Paris. On his arrival in the city Massart sought admission, as a student, to the Conservatoire, but was refused by the then director, Cherubini, on account of his being a foreigner. Notwithstanding this first rebuff, Massart's gifts were soon recognised by Rudolph Kreutzer, who willingly undertook the task of developing the young artist's talents. Although Massart became a fine executant under Kreutzer's tuition, yet, on account of his excessive shyness he never attained much fame as a public player. An instance of his modesty is related by Sir Charles Hallé in his Autobiography: Massart and Liszt were bracketed together to play the 'Kreutzer Sonata' at a concert. Scarcely had they played a couple of bars, when a voice in the Hall shouted 'Robert le Diable!' referring to Liszt's recently composed and successful Fantasia on airs from that Opera. The request was repeated by other members of the audience until the sonata was drowned in the tumult. Liszt rose and said: 'I am always the humble servant of the public, will you hear the Fantasia before, or after the Sonata?' Renewed cries of 'Robert!' greeted his speech, upon which Liszt half turned to Massart and with a wave of his hand dismissed him from the platform, without apology. The Fantasia roused the audience to such a pitch of frenzy, that when Massart upon its completion dutifully returned to the platform his performance of the 'Kreutzer Sonata' fell entirely flat. In 1843 the Paris Conservatoire appointed him professor of the violin, and in this position his energy and thoroughness gained for him a world-wide renown. Among his many famous pupils were: Henri Wieniawski, Lotto, Pablo de Sarasate, Martin Marsick, and Teresina Tua. Massart was an excellent quartet player, and together with his wife Louise Aglae Marson,—who succeeded Farrenc as professor of piano at the Paris Conservatoire—gave many delightful Chamber music concerts.

MASSÉ, Felix Marie (known as Victor), born at Lorient, March 7, 1822; entered the Conservatoire at twelve, obtained the first prizes for piano, harmony, and fugue, and in 1844, after some years' study with Halévy, the 'Grand prix de Rome' for composition. His cantata 'Le Rénégat' was given three times at the Opéra (Feb. 1845), a rare event. During his stay in Rome he composed a 'Messe Solennelle,' performed at the church of St. Louis des Français (May 1, 1846), a careful and clever work, though wanting in religious sentiment—never Massé's strong point. The unpublished score is in the library of the Conservatoire. After his two years in Rome he travelled through Italy and Germany, and returned to Paris, where he was much appreciated in society. Publishers readily accepted his 'Mélodies' and 'Romances,' and he gained access to the stage with little delay. 'La Chambre gothique' (Opéra-Comique, 1849), and 'La Chanteuse voilée,' one act (Opéra-Comique, Nov. 26, 1850), were followed by 'Galathée,' two acts (April 14, 1852), and 'Les Noces de Jeannette' (Feb. 4, 1853), a charming lyric comedy in one act. These early successes justified the hope that in Massé the French stage had found a composer as fruitful and melodious, if not as original, as Auber; but his later efforts were less fortunate. 'La Reine Topaze' (Dec. 27, 1856) indeed succeeded completely, and has kept the boards, but 'La Fiancée du Diable' (June 3, 1854), 'Miss Fauvette' (Feb. 13, 1855), 'Les Saisons' (Dec. 22, 1855), 'Les Chaises à porteurs' (April 28, 1858), 'La Fée Carabosse' (March 7, 1859), 'Mariette la Promise' (1862), 'La Mule de Pedro' (March 6, 1863), 'Fior d'Aliza' (Feb. 5, 1866), and 'Le Fils du Brigadier' (Feb. 25, 1867), though fairly received, soon disappeared. Some, however, contain good music, especially 'Les Saisons' and 'Fior d'Aliza.' In 1860 he became chorus-master to the Académie de Musique, and in 1866 succeeded Leborne as professor of composition at the Conservatoire—gratifying appointments, as showing the esteem of his brother artists, although the work they entailed left him little time for composition. On June 20, 1872, he was elected to the Institut as successor to Auber.

After a long period of silence Massé produced 'Paul et Virginie,' three acts (Nov. 15, 1876; given in Italian at Covent Garden Opera-house, June 1, 1878). In spite of its success and its evident ambition, this opera seems less original and less homogeneous in style than 'Galathée' or 'Les Noces de Jeannette,' and its best parts, as in all his operas, are the short pieces and the simple romances.

To complete the list of his operas we may mention 'La Favorita e la Schiava' (Venice, 1855), and 'Le Cousin Marivaux' (Baden, 1857); also two drawing-room operettas 'Le Prix de Famille' and 'Une loi Somptuaire' (published in 1879). He published three sets of twenty songs each, selected from his numerous romances. Many of these are charming little pieces. In 1877 he was made an officer of the Legion of Honour. G. C.

A painful illness compelled him to resign his post at the Académie in 1876, and rendered him totally incapable of active work. During seven years of suffering his only consolation lay in composition, and in this way his opera, 'La Mort de Cléopâtre,' intended for the Opéra, was

written. After his death, which took place in Paris on July 5, 1884, a representation of the work took place at the Opéra-Comique in the composer's honour (April 25, 1885), though the reception of 'Paul et Virginie' did not hold out much hope of success for a work evidently written in the same style and aiming too high. Although the composer's death was sufficiently recent to secure a favourable reception for this misnamed 'grand opera,' yet the composition was an evident failure, consisting as it did of misplaced pretension, and an ambitious imitation of Gounod's methods, in which Massé had lost what little remained to him of his original grace and charm. In spite of this change in his style, and though he must rank as a musician of the second order, there is at times in some of his songs a personal charm, a sober gaiety, and a gentle emotion. It was when he composed a song without having in view any particular interpretation, and when nothing more was required of him, that he could write most freely and could give the exact relation between the music and the words, a quality in which he originally excelled, and in which he resembled the school of Grétry. His ideal, which was on the whole a just one, did not exceed the limits of an exact feeling for prosody, and it is by those compositions of his in which the laws of metre are most faithfully observed that he is most likely to be for a short time remembered. A. J.

MASSENET, Jules Frédéric Emile, born at Montaud, near St. Etienne, May 12, 1842, was educated at the Paris Conservatoire, where he won the first piano prize in 1859; the second prize for fugue in 1862; the first prize for fugue, and the 'Prix de Rome' in 1863, with 'David Rizzio.' On his return from Italy, through the influence of Ambroise Thomas, his 'La Grand'tante' was produced at the Opéra-Comique (April 3, 1867). Even in this first attempt Massenet showed himself a skilled and graceful musician. Some 'Suites d'orchestre' performed at the 'Concerts populaires' attracted attention for their new and ingenious effects. It was only, however, after the Franco-German war that he rose to the first rank among young French composers by the production of 'Don César de Bazan,' opéra-comique in three acts and four tableaux (Nov. 30, 1872); incidental music to the tragedy 'Les Erinnyes' (Jan. 6, 1873); and an oratorio 'Marie Magdeleine' (April 11, 1873). He next composed 'Eve' (March 18, 1875), an oratorio something in the style of Gounod's 'Gallia'; more 'Suites d'orchestre'; an 'Ouverture de Concert,' and the overture to 'Phèdre'; a 'saynète,' 'Berangère et Anatole' (1876); a number of melodies for one and two voices; pianoforte music for two and four hands; choruses for four equal voices; 'Le Roi de Lahore' (April 27, 1877), opera in four acts and six tableaux; and 'Narcisse,' a cantata with orchestral accompaniment. On May 22, 1880, he conducted his oratorio, 'La Vierge,' at the first historical concert at the Opéra. He produced at Brussels his religious opera 'Hérodiade,' Dec. 19, 1881, which succeeded for one season only in that city, and failed in Paris, where it was represented at the Opéra Italien (Théâtre des Nations, Feb. 1, 1884), after being partly rewritten by the composer. It enjoyed more favour many years afterwards at the Théâtre de la Gaîté, and even penetrated into England, being given in a somewhat garbled version, at Covent Garden, as 'Salome,' July 6, 1904. On Jan. 19, 1884, the opera 'Manon' was produced at the Opéra-Comique, and on Nov. 30, 1885, 'Le Cid' at the Opéra. In the former the composer tried the experiment of connecting the numbers of an opéra-comique by a slightly orchestrated accompaniment to the dialogue, which was not sung, as in the case of *recitativo secco*, but spoken as usual. To the works of this period are to be added three new Orchestral Suites, Nos. 5-7, Scènes Napolitaines, Scènes Alsaciennes, and Scènes de Féerie (Concerts du Châtelet, 1880, 1882, 1883); incidental music to Sardou's 'Théodora' and 'Le Crocodile' (Porte St. Martin, 1884 and 1886); a short work for voice and orchestra, 'Biblis'; and various 'Poèmes' for voice and piano. In October 1878, Massenet replaced Bazin as professor of advanced composition at the Conservatoire, holding the position until 1896. In 1876 he was decorated with the Légion d'Honneur, becoming an officer in 1888, and in 1878 was elected a member of the Académie des Beaux-Arts in place of Bazin, and to the exclusion of Saint-Saëns, who was generally expected to be the new member, as he was introduced in the first rank by the musical section. This was one of the rare occasions on which the entire Académie has not observed the order of presentation established by the section to which the new member is to belong. Massenet was only thirty-six at the time, and was the youngest member ever elected to the Académie des Beaux-Arts, for Halévy, who was the most remarkable previous example of what may be called 'Academic precocity,' was thirty-seven when he entered the Institute in 1836.

The dramatic works of Massenet's later life are as follows:—'Esclarmonde,' lyric drama in four acts (Opéra-Comique, May 15, 1889); 'Le Mage,' opera in five acts (Opéra, March 16, 1891); 'Werther,' opera in three acts (Vienna, Feb. 16, 1892); 'Le Carillon,' one-act ballet (Vienna, Feb. 21, 1892); 'Thaïs,' lyric comedy in three acts (Opéra, 1894); 'Le Portrait de Manon,' opéra-comique in one act (Opéra-Comique, May 8, 1894); 'La Navarraise,' lyric drama in two acts (London, Covent Garden, June 20, 1894, Brussels later in the same year, and Paris, 1895); 'Sapho,' lyric play in five acts (Opéra-Comique, Nov. 27, 1897); 'Cendrillon,' fairy tale in four acts (Opéra-Comique,

May 1899); 'Grisélidis,' in three acts and a prologue (Opéra-Comique, Nov. 20, 1901); Incidental music to 'Phèdre' (Th. Sarah-Bernhardt, 1901); 'Le Jongleur de Notre-Dame,' 'miracle' in three acts (Monte Carlo, Feb. 18, 1902; Covent Garden, June 14, 1906); 'Chérubin,' 'comédie chantée,' in three acts (Opéra-Comique, Feb. 14, 1905); and 'Ariane' in five acts (in preparation, 1906). 'La Terre Promise' in three acts, is to be added to the number of his oratorios (produced in the church of St. Eustache, Paris, March 15, 1900); and a concerto for piano and orchestra was given at the Concerts du Conservatoire, Feb. 8, 1903, with M. Diémer in the solo part.

Massenet's prolonged and widespread success is one of the puzzling phenomena of modern musical history; he has been always careful to choose subjects for his operas which conformed strictly to the taste of the Parisian public for the moment, and has succeeded to a considerable extent in imparting different characters to his successive works, in spite of the undoubted fact that his own weak and sugary style remains unmistakable in one and all. While those who look a little below the surface find his music inexpressibly monotonous, casual hearers are surprised by his superficial versatility, and he has won for himself a remarkable position among French composers which he can hardly be held to deserve, considering the number of more original and powerful composers who could be named among his countrymen. When 'Manon' and 'Le Cid' were new, M. Adolphe Jullien, writing in the appendix to the original edition of this Dictionary, said that 'Neither had left a very permanent mark'; but even at this distance of time both operas keep their place in the repertories of the theatres to which they respectively belong; and the former has become in some sort a classic. The writer already quoted goes on to say, 'The only music that can endure is that in which are displayed strong convictions and a firm resolution not to yield to public caprice; while Massenet's works, especially his later compositions, which are written without any fixed ideal, and in view of immediate success, scarcely survive the day of their birth, nor do they deserve to survive it.' Whether or no we agree as to their deserts, the fact remains that they have survived, by a very considerable interval of time, the day of their birth; but few of the real lovers of music will expect any of them to remain among the compositions that keep their popularity after the death of the author, and it is probable that, as in the case of Gounod, and some others of exceptional success in their own day, the enormous vogue of Massenet's music will not outlast his own life. (The above is mainly based on the articles contributed to vol. ii. and the appendix, of the original edition of this Dictionary, by MM. Gustave Chouquet and Adolphe Jullien respectively; and upon information from G. F.) M.

MASSOL, Jean Étienne Auguste, born 1802 at Lodève, Hérault, was taught singing at the Paris Conservatoire in 1823-25, and gained a first prize there. He made his début at the Opera as Licinius ('Vestale'), Nov. 17, 1825, and remained there until Oct. 8, 1845. He first played second tenor parts in several new operas—Rodolphe ('Tell'); Herald ('Robert'); Kalaf (in Cherubini's 'Ali Baba'); Tavannes ('Huguenots'); Quasimodo (in Louise Bertin's 'Esmeralda'); Forte Braccio (in Halévy's 'Guido et Ginevra'); Mocenigo ('Reine de Chypre'); and the baritone parts of Tell and Jolicœur ('Philtre'), etc. He played for a time in Brussels, London, etc., and returned as principal baritone to the Opéra in 1850, where he remained until his farewell benefit, Jan. 14, 1858. The Emperor was present on that occasion, immediately after the attempt made on his life by Orsini on his arrival at the theatre. His best new parts were Reuben (Auber's 'Enfant Prodigue'), Dec. 6, 1850, and Ahasuerus (Halévy's 'Juif Errant'), April 23, 1852. He was a good singer, admirably suited for heroic drama, having the proper figure and height, and a splendid voice. 'In secondary characters no one was Massol's superior, and when he played the principal parts he did so with the happiest results. Thus he made the success of the Juif Errant. . . . His Quasimodo did him the greatest honour. . . .' (Jules Janin in the *Débats*.) He became for a time Director of the Royal Theatres at Brussels; he subsequently went into business, and, retiring, resided at Versailles, and finally in Paris, where he died Oct. 30, 1887.

While a member of the Brussels Company he made his début at Drury Lane in 1846, as De Nevers, July 17, as Jolicœur, August 10, etc. He sang at concerts in 1848, and appeared once at Covent Garden as Alphonso XI., July 4. Roger, in his 'Carnet d'un ténor,' has recorded that Massol did not understand Italian, and uttered the most horrible jargon. He sang his first air too low, but otherwise obtained a success, which was partly due to the way in which he had paid court to the journalists and other influential persons, and to his knowledge of artistic cookery. He played there in 1849-1850 Pietro ('Masaniello'), De Nevers, Kilian ('Freischütz'), etc.; at Her Majesty's in 1851, Reuben, on the production of 'L'Enfant Prodigue,' June 12; the Baron de Beaumanoir (Balfe's 'Quatre Fils Aymon'), August 11, etc. According to the *Athenæum*, June 14, his Reuben had a patriarchal dignity and pathos, and he sang better in that opera than in any other. A. C.

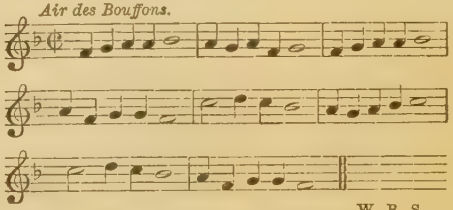
MASSON, Elizabeth, born 1806, was taught singing by Mrs. Henry Smart, sen., and in Italy by Mme. Pasta. She made her first appearance in public at Ella's second subscription concert,

JULES FRÉDÉRIC EMILE MASSENET

in the Argyll Rooms, March 11, 1831, and sang afterwards at the Antient Concerts, March 16, 1831, and at the Philharmonic, March 11, 1833; she sang frequently at those Societies' concerts during a public career of about twelve years, and revived there forgotten airs of Handel, Purcell, Pergolesi, Gluck, Mozart, etc. She was in great request at private concerts, since she possessed, apart from her musical attainments, great talents and accomplishments, and was an excellent linguist. She sang occasionally in oratorio, viz. at the festival in Westminster Abbey, 1834, and at the Sacred Harmonic Society where she took the parts of Solomon, Nov. 22, 1839, and Storge on the revival of 'Jephtha,' April 7, 1841. She afterwards devoted herself to teaching and composition. She wrote many songs to the words of Scott, Byron, Adelaide Procter, etc., and edited a series of 'Original Jacobite Songs' (Lonsdale, 1839), and 'Songs for the Classical Vocalist' (Leader & Cock, first series of twelve songs, 1845; a second series, 1860), which enjoyed a well-deserved popularity. She founded the Royal Society of Female Musicians in 1839, and was its hon. treasurer until her death, Jan. 9, 1865. On its amalgamation with the Royal Society of Musicians in 1866, F. J. Masson, her brother, gave a donation of 200 guineas to the latter society in remembrance of her. 'As a singer this lady was never rated as high as she deserved to be, because her voice, which was a mezzo-soprano, had no remarkable power nor charm. But it had been thoroughly trained under the example and influence of Madame Pasta, and its owner's reading of music, intelligence, expression, and finish, were thoroughly appreciated by all those select connoisseurs who valued style and understanding beyond greater natural powers than hers turned to poor account. As a professor Miss Masson was widely and deservedly in request. Apart from her profession, she was at once conscientious, energetic, and refined, and had withal that racy originality of character which will make her long remembered and missed. In brief, she was a good artist, in part because she was a good woman and a gentlewoman.'[1] A. C.

MATASSINS, MATACINS, or MATACHINS —also called *Bouffons*—a dance of men in armour, popular in France during the 16th and 17th centuries. It was probably derived from the ancient Pyrrhic dance, although the name has been traced to an Arabic root. Jehan Tabourot in his *Orchésographie* (Langres, 1588) gives a long and interesting account of this dance, with six illustrations of the different positions, of the dancers, 'qui sont vestus de petits corcelets, auec fimbries és espaules, et soubs la ceinture, une pente de taffetats soubz icelles, le morion de papier doré, les bras nuds, les sonnettes aux iambes, l'espee au poing droit, le bouclier au poing gaulche.' The Matassins were four in number, generally all men, but sometimes two men and two women. They danced several distinct figures, between which they performed mimic fights with one another. Molière has introduced Matassins into his comédie-ballet of 'M. de Pourceaugnac,' and the dance is said to have been common at Bordeaux, Marseilles, and Strasburg as late as 1735. The following, according to Tabourot, is the air which usually accompanied the dance.

Air des Bouffons.



W. B. S.

MATELOTTE, a Dutch sailors' dance somewhat similar to the English hornpipe. The dancers wore wooden shoes, and their arms were interlaced behind their backs. The music of the Matelotte consists of two parts in 2–4 time, and is remarkable for its short decided rhythm. There is a sabot dance in Lortzing's 'Czaar und Zimmermann,' but it is not a true Matelotte, being written in waltz time. The following example is quoted by Schubert, *Die Tanzmusik* (Leipzig, 1867): it is there attributed to the 17th century, but no information is given as to whether it is a genuine dance tune or merely an adaptation. We quote the first strain only:—

Allegretto.

W. B. S.

MATERNA, Amalie (Frau Friedrich), a distinguished prima donna in German opera, was born July 10, 1845, at St. Georgen, Styria, where her father was a schoolmaster. Her first stage appearances were made at the Thalia-Theater, Gratz, about 1864. She married soon afterwards Karl Friedrich, a popular German actor, and together with him was engaged at the suburban Karlstheater, Vienna, where she sang for some time in operetta. But her qualifications for the higher lyrical walks could not long remain undiscovered, and in 1869 she made her début at the Imperial Opera House as Selika in the 'Africaine,' with signal success, at once winning for herself the high position she has since maintained among opera-singers of the German school. With a soprano voice of unusual volume, compass, and sustaining power, a fine

[1] *Athenæum*, Jan. 14, 1865.

stage presence, and much musical and dramatic intelligence, Frau Materna left nothing to be desired in certain rôles, such as the great Wagner parts, and the Queen in Goldmark's 'Königin von Saba.' At the Wagner Festival at Bayreuth, 1876, she may be said to have earned a world-wide reputation by her really magnificent impersonation of Brünnhilde in the Nibelungen Trilogy, an exceptional part for which she was exceptionally qualified. She sang in England with great success at the Wagner concerts at the Albert Hall in 1877. She was the first exponent of the part of Kundry in 'Parsifal,' on July 28, 1882, at Bayreuth, and she retired on April 23, 1897. B. T.

MATHER, Samuel, son of William Mather (born 1756, organist of St. Paul's church, Sheffield, from 1788 to his death in 1808), was born in 1783. In 1799 he was appointed organist of St. James's church, Sheffield, and in 1808 succeeded his father at St. Paul's. In 1805 he was chosen bandmaster of the Sheffield Volunteers. In 1806 he was engaged in establishing the Yorkshire Amateur Concerts, which were for many years given triennially at that town, Leeds and York alternately, and in 1814 established the Yorkshire Choral Concert. He composed both sacred and secular music, and edited a book of psalm and hymn tunes. He died at Edinburgh, May 26, 1824. W. H. H.

MATHIEU, Emile, born at Lille, Oct. 16, 1844, was the son of musical parents, his father having been eminent as a singer and as director of the theatre at Antwerp, while his mother was a professor of singing in the Académie des Beaux-Arts at Louvain. Emile Mathieu began his studies very early at the Brussels Conservatoire, and in 1869 obtained the second 'prix de Rome' with his cantata, 'La Mort du Tasse,' which was performed four years afterwards in Brussels. In 1881 he was appointed director of the Académie de Musique at Louvain, and in 1891 moved from there to Ghent, where he succeeded Adolphe Samuel as director of the Conservatoire Royal. His compositions include a Te Deum for soli, chorus, and orchestra; six Ballads from Goethe for voice and piano; three descriptive poems, 'Le Hoyoux,' 'Freyir,' and 'Le Sorbier,' for soli, chorus, and orchestra. For the stage he has composed a series of dramatic works, of which, for the most part, he has written the words himself: 'Richilde,' in four acts (the leading part created by Mme. Rose Caron at the Théâtre de la Monnaie in 1888); 'L'Enfance de Roland' (1889); and three opéras-comique, dating from his earlier years—'Georges Dandin' (after Molière), given at Brussels in 1879; 'L'Échange' (Liège, 1863); and 'Le Bernoise' (Brussels, 1885) to a poem by M. Lucien Solvay. M. K.

MATHILDE DI SHABRAN. Opera buffa, in three acts; the music by Rossini. Produced at the Apollo Theatre, Rome, in the Carnival of 1821, and at the Théâtre Italien, Paris, 1857; in London at the King's Theatre, July 3, 1823. G.

MATILDA OF HUNGARY. A dramatic opera in three acts; libretto by Alfred Bunn, music by W. Vincent Wallace. Produced at Drury Lane, Feb. 22, 1847.

MATINS (Lat. *Matutinae*; *Officium matutinum*). The first division of the Canonical Hours.

The office of Matins, as set forth in the Roman Breviary, opens with the series of Versicles and Responses beginning with the 'Domine, labia mea aperies,' followed by the Psalm 'Venite, exultemus,' with its proper Invitatorium, and the hymn appointed for the day. The remainder of the service is divided into portions called Nocturns, of which three are generally sung, on Sundays and festivals, and one only on ferial days.

The First Nocturn consists either of three or twelve Psalms, sung with three proper Antiphons, which on certain festivals are doubled—that is to say sung entire both before and after the Psalm. On ferial days and festivals of minor solemnity, each Antiphon is sung entire after the Psalm, but the first few words of it only at the beginning. The Psalms are followed by the Paternoster, Absolution, and Benediction; and these by the First, Second, and Third Lessons for the day, each succeeded by its proper Responsorium or Respond.

Three Psalms, with their proper Antiphons, are sung, in like manner, in the Second Nocturn; which concludes with the Fourth, Fifth, and Sixth Proper Lessons and Responds.

In the Third Nocturn three more Psalms are followed by the Seventh, Eighth, and Ninth Lessons and Responds; the place of the ninth Responsory being generally, but not always, supplied by the Hymn, 'Te Deum Laudamus.'

The Third Nocturn is immediately followed by the Office of Lauds; which, indeed, may be regarded as the natural corollary of the Service. In ancient times, the First Nocturn was sung soon after midnight; but the whole office is now generally sung 'by anticipation'—that is to say, on the afternoon or evening of the day before that for which it is appointed. The Plain-song Music used, both at Matins and Lauds, will be found in the Antiphonal and the 'Directorium Chori.' [See Lauds; Antiphon; Invitatorium.]

In the First Prayer-Book of King Edward VI., the name of 'Mattins' is given to the Service now called 'The Order for Morning Prayer,' which is derived, in about equal degrees, from the Latin Offices of Matins and Lauds. W. S. R.

MATRIMONIO SEGRETO, IL. An opera buffa in two acts; libretto by Bertatti, adapted from Colman's 'Clandestine Marriage,' music by Cimarosa. Produced at Vienna in 1792; in Paris, May 10, 1801; in London, King's

Theatre, Jan. 25, 1803. In English at Covent Garden, Nov. 1, 1842, and with new translation by W. Grist, at the Crystal Palace, Dec. 13, 1877. G.

MATTEI, Filippo, (commonly known as 'Pipo'), a violoncellist in London, and performer at the operas given by the Royal Academy of Musick in the theatres in the Haymarket in the early 18th century. His claim to remembrance is based exclusively on Handel's MS. conducting score of the opera 'Muzio Scevola' (in the possession of Dr. W. H. Cummings) in which 'Pipo' is mentioned as the composer of the first act, usually, and with more probability, assigned to Attilio Ariosti, the second and third being by Buononcini and Handel respectively. See Chrysander's *G. F. Händel*, vol. ii. p. 56, where the opera, 'Arsace, overo Amore e Maestà,' is attributed to him. M.

MATTEI, Stanislao, Abbate, pupil of Martini, and master of Rossini, born at Bologna, Feb. 10, 1750. Though of humble parentage (his father was a locksmith) he was sent to the Latin school. Having been present accidentally at a service in the Minorite Convent, he was so enchanted with the music that he became a constant attendant, and thus attracted the notice of Padre Martini, by whose advice he entered upon his noviciate. Master and pupil became tenderly attached, and as soon as Mattei had been ordained he became the Padre's confessor, and remained with him till his death. He acted as Martini's deputy from 1770, and succeeded him as maestro di cappella. From 1776 his compositions were produced in the service. On the suppression of the monasteries in 1798, he went to live with his aged mother, and began an active career as a teacher. From this time he was known as the Abbate Mattei. Later he became maestro di cappella of San Petronio, and professor of counterpoint at the Liceo from its foundation in 1804. Among his pupils were Rossini, Morlacchi, Donizetti, Perotti, Robuschi, Palmerini, Bertolotti, Tadolini, Tesei, and Pilotti, who succeeded him at San Petronio. He lived in complete retirement, accessible only to his pupils, and died May 12, 1825. He was president of the 'Filarmonici' in 1790 and 1794, and was a member of the Subalpine Académie, and of the 'Institut de France' (Jan. 24, 1824). He had a thorough practical acquaintance with the old traditions, as may be seen by his *Prattica d' accompagnamento sopra bassi numerati*, three vols. (Bologna, 1788, 1829, 1830), which consists mainly of well-chosen examples, with a few rules. In his explanations to his pupils he does not seem to have been very clear; at least Rossini complained to Fétis in 1841 that he had one stereotyped answer when asked to explain a rule in harmony or counterpoint, 'It is always written thus.' Of his music three masses only are generally known. The libraries of San Giorgio and the Minorite convent in Bologna contain most of his compositions, including eight masses, much church music, and the scores of an intermezzo 'La Bottega del Libraio' and of a 'Passion' performed in 1792. Full particulars of his life are given in the *Vita di Stanislao Mattei* by Filippo Canuti (Bologna, 1829, with portrait). F. G.

MATTEIS, Nicola, an eminent Italian violinist, came to England about 1672. Nothing whatever is known of his antecedents. The earliest notice of him is found in Evelyn's *Diary* under date of Nov. 19, 1674: 'I heard that stupendous violin, Signor Nicholao (with other rare musicians), whom I never heard mortal man exceed on that instrument. He had a stroke so sweet, and made it speak like the voice of a man, and, when he pleased, like a concert of several instruments. He did wonders upon a note, and was an excellent composer. Here was also that rare lutanist, Dr. Wallgrave, but nothing approached the violin in Nicholao's hand. He played such ravishing things as astonished us all.' Roger North also (*Memoirs of Musick*) speaks very highly of his abilities. [See note on p. 122 of Rimbault's edition.] When he first came to England he exhibited many singularities of conduct which he afterwards abandoned. He published here, without date (about 1688) 'Arie, Preludij, Alemande, Sarabande, etc., per il Violino. Libro Primo. Altre Arie, etc., più difficile e studiose per il Violino. Libro Secondo'; also 'Ayres for the Violin, to wit, Preludes, Fuges, Alemands, Sarabands, Courants, Gigues, Fancies, Divisions, and likewise other Passages, Introductions, and Fugues for Single and Double stops with divisions somewhat more artificial for the Emproving of the Hand upon the Basse-Viol or Harpsichord. The Third and Fourth Books.' [This has the date 1685 concealed in the ornamentations of the title-page; other books of the series are dated 1687. The books are in oblong octavo, engraved on copper-plates by T. Greenhill. A set was sold at the Taphouse sale in 1905.] He was likewise author of 'The False Consonances of Musick, or, Instructions for playing a true Base upon the Guittarre, with Choice Examples and clear Directions to enable any man in a short time to play all Musicall Ayres. A great help likewise to those that would play exactly upon the Harpsichord, Lute, or Base-Viol, shewing the delicacy of all Accords, and how to apply them in their proper places. In four parts,'—which even in North's time had become scarce, and is now excessively rare. In 1696 Matteis composed an Ode on St. Cecilia's Day for the then annual celebration in London, and was also one of the stewards of a Cecilian celebration at Oxford. [Another and lesser known work by the same composer is 'A Collection of New Songs set by Mons. Nicola Matteis, made purposely for the use of his Scholars: Fairly engraven on Copper

plates,' two books, 1696, folio, Walsh and Hare. A copy of this was sold at Dr. Rimbault's sale. With 'Symphonies for two flutes by a person of quality, fairly engraved on copper plates,' these songs by Matteis are advertised by Walsh and Hare in the *London Gazette* for May 11, 1696.] A song by him is included in a collection of 'Twelve New Songs,' published in 1699. According to North 'he fell into such credit and imployment that he took a great hous, and after the manner of his country lived luxuriously, which brought diseases upon him of which he dyed.' The date of his death is unknown. He is said to have been the inventor of the half-shift, but it is claimed also for others.

His son, NICHOLAS, was taught the violin by his father, and became an excellent player. He went to Germany and resided for some time at Vienna, [being a member of the court orchestra there from 1700,] but in 1737 returned to England and settled at Shrewsbury as a teacher of languages, as well as of the violin, where Burney learned French and the violin of him. He died there about 1749. [For a fuller account of the Matteis, father and son, see Roger North's *Memoirs of Musick*, p. 125, and Burney's *History*, iii. p. 515, etc.] W. H. H.; with additions in square brackets by F. K.

MATTHESON, JOHANN, German musician and writer, born Sept. 28, 1681, at Hamburg, son of a clerk of excise; as a child showed striking symptoms of versatility, which his parents carefully cultivated. Besides the ordinary education he studied music, and at nine years could play the harpsichord and organ, sing and compose. His ability and versatility were truly extraordinary. A good classical scholar and a proficient in modern languages, a student of law and political science, a fine player both on harpsichord and organ, and thoroughly skilled in theory, an elegant dancer, a master of fence, and a cultivated man of the world. The first step in his changeful career was his appearance in 1696 as a singer (of female parts) in the Hamburg opera, then in its most flourishing condition. In 1699 he produced his first opera, 'Die Pleyaden'; in another, 'Cleopatra' (1704), he took the part of Antony, and after singing his part on the stage, was in the habit of sitting down at the harpsichord to conduct the orchestra. To this period belongs his acquaintance, and the famous duel, with Handel, who came to Hamburg in 1703. Mattheson tells us that he recognised Handel's genius immediately, that they became at once attached, and that their friendship continued, with occasional breaks caused by Mattheson's vanity, during the whole time of Handel's stay in Hamburg (1709) [see HANDEL, vol. ii. p. 280]. He claims to have done Handel an important service by introducing him to the musical world of Hamburg, at that time very celebrated; but he acknowledges that he picked up from him many a 'contrapuntal device.' Handel's 'Nero' (1705) was the last opera in which Mattheson appeared; he then retired from the stage, and declined more than one organist's post which was offered to him. He became tutor to the son of the English envoy, and in 1706 was made secretary of legation. His post was one of labour and responsibility, but he still continued to teach, conduct, compose, and write on musical subjects. In 1715 he was appointed Cantor and Canon of the cathedral; and took an active part in the development of the Church-cantata, so soon after carried to its highest pitch by J. S. Bach [see KIRCHENCANTATEN]. This was the result of an attempt, made more particularly by the Hamburg composers, to vary the monotony of congregational singing by the introduction of airs, duets, choruses, etc., and was considered by the orthodox an impious and sacrilegious innovation. Mattheson supported this 'adapted dramatic' style, as it was called, both as a composer and as a pamphleteer; and even ventured on a further innovation, by introducing female singers into church.

In 1719 he received from the Duke of Holstein the title of Court-Capellmeister. In 1728 he was attacked with deafness, which obliged him to resign his post at the cathedral. Thenceforward he occupied himself chiefly with writing, and died at an advanced age, April 17, 1764. He is said to have resolved to publish a work for every year of his life, and this aim he more than accomplished, for when he died at eighty-three, his printed works amounted to eighty-eight, besides a still larger number of completed MSS.

None of his compositions have survived. With all his cleverness and knowledge he had no real genius; his vocal music was overburdened with declamatory passages—a fault easily explained by his own experience on the stage, but one which is often detrimental and must have been very incongruous in church music. He composed twenty-four oratorios and cantatas; eight operas; sonatas for flute and violin; suites for clavier; arias; *pièces de circonstance* for weddings, funerals, etc. [see the *Quellen-Lexikon* for list]. A 'Passions-Cantate' to words by Brockes deserves attention, not for its intrinsic value, but because the poem was set by nearly all the great composers of the day, including Keiser, Telemann, and Handel.

His books are of far greater value than his compositions. In these, notwithstanding a peculiar self-satisfied loquacity, he shows himself a ready and skilful champion for earnestness and dignity in art, for progress, and for solidity of attainment in the practical part of music. In both branches, theoretical and practical, he attacked and demolished much that was antiquated, furnishing at the same time a great deal that was new and instructive, and bequeathing to posterity a mine of historical

material. He also found time for much other literary work, especially translations (chiefly from English works on politics and jurisprudence), and even translated a small treatise on tobacco. This extraordinary versatility, and his untiring industry, go far to redeem the vanity which animated his character and actions, and continually shows itself in his writings. His autobiography in the *Ehrenpforte* contains an amusingly egotistical description of his manifold labours. His more important books are scarce, and much valued, especially the historical ones, which are the standard sources of information on the state of music at that period, especially in Hamburg. These are *Das neu eröffnete Orchester* (1713), followed by *Das beschützte* and *Das forschende Orchester* (1717 and 1721); *Critica Musica* (1722-25); *Der musikalische Patriot* (1728); and the *Grundlage einer Ehrenpforte* (1740), a collection of biographies of contemporary musicians. The last two are the most important. His theoretical works are the *Exemplarische Organisten Probe* (1719), republished in 1731 as the *Grosse Generalbassschule*; the *Kleine Generalbassschule* (1735); the *Kern melodischer Wissenschaft* (1737); and finally the *Vollkommene Capellmeister* (1739), perhaps his most valuable work. As a controversial writer he was wanting in temper; his 'Ephorus Göttingensis' (1727), directed against Professor Joachim Meyer of Göttingen on the Church-cantata question, is the only work of that class we need specify. [The complete list of his writings is given in the *Quellen-Lexikon.*] A. M.

MATTHIAS, Hermann. See Werrecorensis.

MAUCOTEL, Adolphe, French violin maker, born at Mirecourt, Lorraine, 1820; died 1858. Worked under J. B. Vuillaume in Paris from 1839 to 1844, and then opened a workshop of his own in the Galérie Vivienne. Later he removed to the Rue Croix-des-Petits-Champs, and lastly settled in the Rue Princesse. His instruments are greatly esteemed for their tone, their durability, and their excellent workmanship. He copied the Stradivarius model very successfully, and but for his untimely end should have ranked among the foremost French makers. He committed suicide at the age of thirty-eight, by cutting his throat whilst in a state of feverish delirium. The Paris Conservatoire owns a violoncello by this maker, which is considered to be the finest instrument he ever produced. His brother, Charles Maucotel, was also an excellent violin maker; born at Mirecourt, 1807; died 1860. Pupil of Bloise Mast, of Mirecourt. He went to Paris in 1834 and studied under Gand, after which, in 1850, he established himself in London. Willibald Freiherrn von Lutgendorff's 'Die Geigen und Lautenmacher,' Frankfort A/M, 1904; H. R. Haweis's *Old Violins*, London, 1898. E. H-A.

MAUDUIT, Jacques, French lute player and composer, was born at Paris, Sept. 16, 1557. He succeeded his father as 'greffier des requêtes,' registrar in the courts of justice at Paris, but his talent and reputation as a musician acquired for him in France the title of Père de la Musique. In 1581 he obtained the first prize at the musical competition, which took place yearly at Evreux in Normandy, for the best motets and chansons. A requiem *a* 5 by Mauduit, written for the funeral of the poet Ronsard, was published by the Père Mersenne in the seventh book of his *Harmonie Universelle*, 1636. Ambros speaks slightingly of this work, describing it as a simple Fauxbourdon without any particular merit. In 1570 the poet Antoine Baïf received permission from Charles IX. to found the Académie Françoise de Musique et de Poésie, the original object of which was to bring about a closer union between music and poetry, by making musical rhythm entirely subordinate to the metrical rhythm of prosody. Mauduit would appear to have associated himself with the efforts which Baïf made in this direction, and to have taken part in the concerts which were held in Baïf's house. M. Henry Expert, in his collection entitled *Les Maîtres-musiciens de la Renaissance Française*, has recently republished the 'Chansonnettes Mésurées de Jan-Antoine de Baïf mises en musique à quatre parties par Jacques Mauduit,' Paris, 1586, in which Mauduit has endeavoured to carry out the classical theories of Baïf. They are slight compositions, but graceful enough. After Baïf's death in 1590, the concerts continued to be carried on by Mauduit, but as Brenet says, 'The equilibrium jealously maintained by Baïf, between poetry and music, was broken to the advantage of the latter,' and more freedom was gained for the independent development of music by the greater prominence given to instrumental music (see Michel Brenet, *Les Concerts en France sous l'ancien régime*, 1900, p. 37). Mauduit died August 21, 1627. For the story of his saving Claude Le Jeune's manuscripts from the flames, see Le Jeune, vol. ii. p. 671. J. R. M.

'MAUGARS, Célèbre Joueur de Viole, Musicien du Cardinal de Richelieu, Conseiller, Secrétaire, Interprète du Roi en langue Anglaise, Traducteur de F. Bacon, Prieur de Saint-Pierre Eynac.' This, the commencement of the title of the charming monograph written by Antoine Ernest Roquet under his pseudonym of 'E. Thoinan' (Paris, *Claudin*, 1865), is almost a condensed biography of André Maugars (not Aude, as Fétis, for some unexplained reason, has it), who ranks with Lully (*q.v.*) as a politician-musician at the court of France. The place and date of his birth are unknown, but it may be conjectured that he was born in the latter years of the 16th century. About 1620 he spent four years in England playing the viol at the Court of James I., and the first-fruit of

his sojourn was a translation of Bacon's *Advancement of Learning*, which was published in Paris in 1624 (P. Billaine), under the title *Le Progrez et Avancement aux Sciences divines et humaines*, dedicated to de Lomenie. Soon after this he became a creature of Cardinal Richelieu, useful to that prelate in the capacity of Secretary-Interpreter, in which capacity he served likewise in the Court of Louis XIII., and became a favourite butt of the courtier-wit Bois-Robert, whom he distinguished by a hatred which, though impotent, has passed into history. His political satires, etc., and the story of his various quarrels, may be read in the authorities referred to below. All that we know of his death is the record of Tallemant to the effect that he 'returned to France and died a few years later. On his death-bed he sent to ask forgiveness of his old enemy Bois-Robert.' To this period belongs his pamphlet, reprinted by M. Thoinan, *Response faite à un curieux sur le sentiment de la Musique d'Italie, escrite à Rome le premier Octobre 1639*.

As a violist he was classed by Mersennus with Hottman (*De Instr. Harm.* lib. 1. prop. 30), and his eulogy is similarly expressed by Jean Rousseau in his *Traité de la Viole*. His compositions, which must have been significant, appear wholly lost to posterity, but he himself lauds their excellence with no uncertain voice. P. Saint-Glas, *Divers Traitez d'Histoire de Morale et d'Eloquence* (Paris, 1672). L'Abbé Bordelon's *Les Malades de Belle Humeur ou lettres divertissantes*, etc. (Paris, 1697), reprinted in vol. viii. of *Diversitez Curieuses* (Paris, 1700). Tallemant des Réaux, *Les Historiettes pour servir à l'histoire du XVII siècle*. The notice in Fétis (*Biog. des Mus.*) is inaccurate and incomplete. E. H-A.

MAUREL, Victor, born at Marseilles, June 17, 1848, received instruction at the Paris Conservatoire in singing from Vauthrot, and in opera from Duvernoy, and gained the first prizes in both subjects, co-equal with Gailhard, in 1867. He made his débuts at the Opéra as De Nevers and Conte di Luna in 1868. He was next in Italy, where he played the Cacique on the production of Gomes's 'Guarany' at Milan, March 19, 1870. He made his début at the Royal Italian Opera, London, as Renato, April 21, 1873, made a great success, and was engaged there every year until 1879 inclusive. His parts comprised Don Giovanni, Tell, Almaviva, Hoel, Peter the Great, Valentine, Hamlet, the Cacique; in operas new to England, Telramund, May 8, 1875; Wolfram, May 6, 1876; the Flying Dutchman, June 16, 1877, and Domingo in Massé's 'Paul et Virginie,' June 1, 1878. He reappeared at the French Opéra as Hamlet, Nov. 28, 1879, and also played Amonasro on the production in Paris of 'Aïda,' March 22, 1880. After a tour in Spain, he undertook, in 1883, the management with Corti of the Italian Opera at the Théâtre des Nations (now the Théâtre Sarah-Bernhardt), with disastrous financial results, in spite of a company including Mesdames Marimon, Adler-Devriès, Nevada, and Tremelli, Gayarré, the brothers De Reszke, and himself, and the successful production of Massenet's 'Herodiade,' Feb. 1, 1884. He played at the Opéra-Comique, Peter, Oct. 6, 1885, Falstaff in Thomas's 'Songe d'une Nuit d'Été,' and Zampa, Jan. 19, 1886, with great success. He played again at Covent Garden in 1886, and at Drury Lane for the first time in 1887 in favourite parts. Between these engagements he created, with the greatest success, Iago in Verdi's 'Otello,' Milan, Feb. 5, 1887, and showed himself the best acting baritone on the Italian stage since Faure. [He introduced this fine impersonation to the English public at the Lyceum Theatre on July 5, 1889, and on Feb. 9, 1893, created the part of Falstaff in Verdi's last opera at Milan. Both these parts were sung by him for the first time in Paris in 1894, the latter first in London on June 10, 1895. In 1896 he returned to the Opéra-Comique, where he created the part of Mathias in Erlanger's 'Juif Polonais,' April 11, 1900. For a short time after that he appeared as an actor at non-musical theatres, but returned to the operatic stage and reappeared in London in the part of Rigoletto on Nov. 15, 1904. His *Dix ans de carrière* (1897) was translated into German by Mme. Lilli Lehmann.] A. C.

MAURER, Ludwig Wilhelm, distinguished violinist, born Feb. 8, 1789, in Potsdam, pupil of Haak, Concertmeister to Frederick the Great. At thirteen he appeared with great success at a concert given in Berlin by Mara, and was in consequence admitted to the royal chapel as a probationer. After the battle of Jena (1806) the chapel was dismissed, and Maurer travelled, first to Königsberg and Riga, where he made the acquaintance of Rode and Baillot, and then to Mittau and St. Petersburg, his playing being everywhere appreciated. At Moscow he again met Baillot, through whose good offices he became capellmeister to the Chancellor Wsowologsky, who had a private orchestra. Here he remained till 1817, when he made another successful tour, being particularly well received in Berlin and Paris. In 1832 he returned to Wsowologsky, and stayed till 1845, when after another tour he settled finally in Dresden. The best known of his compositions are a Symphonie concertante for four violins and orchestra, first played in Paris by himself, Spohr, Müller, and Wich in 1838; and three Russian airs with variations (op. 14). Of his operas 'Alonzo' (c. 1830), 'Aloise' (1838), 'Der entdeckte Diebstahl,' and 'Der neue Paris,' the overtures only have been printed. He also published several concertos—one of which was at one time very often played at the Philharmonic Concerts in London—and two collections of quartets (opp. 17 and 26). He

died at St. Petersburg, Oct. 25, 1878. His two sons WSEVOLOD, a violinist, and ALEXIS, a violoncellist, were good musicians who settled in Russia. F. G.

MAXWELL, FRANCIS KELLY (sometimes called John), D.D., chaplain of the Asylum, Edinburgh, published anonymously *An Essay upon Tune, being an attempt to free the scale of music and the tune of instruments from imperfection* (Edinburgh, 1781; London, 1794);—an able work. He died in 1782. W. H. H.

MAY, EDWARD COLLETT, born Oct. 29, 1806, at Greenwich, where his father was a shipbuilder. His first teacher was his brother Henry, an amateur musician and composer of considerable ability. When about fifteen years of age, Thomas Adams, then organist of St. Paul's, Deptford, and an intimate friend of the May family, struck by the promise and intelligence of Edward, offered to take him as a pupil. Subsequently he became a pupil of Cipriani Potter for the pianoforte, and of Crivelli for singing. In 1837 he was appointed organist of Greenwich Hospital, an office he held till the abolition of the institution in 1869. From 1841 to his death he devoted himself enthusiastically and exclusively to the musical teaching of the masses; and it may be safely asserted that to few individuals, of any age or country, have so many persons of all ages and of both sexes been indebted for their musical skill. At one institution alone, the National Society's Central School, more than a thousand teachers and many more children were instructed by him. At Exeter Hall, the Apollonicon Rooms, and subsequently St. Martin's Hall, several thousand adults passed through his classes; while for many years he was the sole musical instructor at the Training Schools, Battersea, St. Mark's, Whitelands, Home and Colonial, and Hockerill; institutions from which upwards of 250 teachers are annually sent forth to elementary schools. After many years' connection with the Institution, May was appointed in 1880 Professor of Vocal Music in Queen's College, London. [He died Jan. 2, 1887.]

His daughter, Florence May, is known in London as a pianoforte player of considerable cultivation and power, and a successful teacher. [She had the great advantage of being a pupil of Johannes Brahms, and has distinguished herself as an interpreter of his music, playing many of his pianoforte works for the first time in England. She has recently completed a biography of the master, two vols., 1905.] J. H.

MAY-QUEEN, THE, A PASTORAL; words by H. F. Chorley, music by W. Sterndale Bennett, written for a festival at Leeds, and produced there Sept. 8, 1858. The overture was composed before the year 1844, and was originally entitled 'Marie du Bois.' It was first performed June 24, 1845, at the composer's own concert at the Hanover Square Rooms. G.

MAYER, CHARLES, celebrated pianist, born March 21, 1799, at Königsberg. His father, a clarinet player, went soon after the boy's birth to St. Petersburg, and four years after to Moscow, where he settled with his family. Charles first learned from his mother, a good pianoforte teacher, and later became a pupil of Field. After the burning of Moscow in 1812 the family fled to St. Petersburg, where the mother became pianoforte teacher, and where the lessons with Field were resumed. The pupil played so exactly like his master that connoisseurs were unable to tell which was at the piano if a screen was interposed. In 1814 Mayer accompanied his father to Paris, where he was well received. He first played his concert-variations on 'God save the King' in Amsterdam. In 1819 he returned to St. Petersburg, where he worked hard and successfully at teaching, and formed as many as 800 pupils. In 1845 he travelled to Stockholm, Copenhagen, Hamburg, Leipzig, and Vienna, but this was his last tour. In 1850 he settled in Dresden, where he taught, gave concerts, and composed up to his death, which took place on July 2, 1862. His pieces reach the astonishing number of 900. Mayer's playing was distinguished by great purity of style and expression, and his compositions are eminently suited to the instrument. They include a concerto with orchestra in D, op. 70; a concerto symphonique, op. 89; and variations and fantasias on opera airs. His 'Polka Bohémienne' in A, was at one time immensely popular. A Mazurka by him in F♯ major was for some time considered to be by Chopin, and as such was included in the first issue of Klindworth's edition. It has been removed from later issues. F. G.

MAYNARD, JOHN, a lutenist, published in 1611 'The XII Wonders of the World, Set and composed for the Violl de Gambo, the Lute and the Voyce to sing the Verse, all three jointly and none severall; also Lessons for the Lute and Base Violl to play alone; with some Lessons to play Lyra-waye alone, or if you will to fill up the parts with another Violl set Lute-way.' The work contains twelve songs severally describing the characters of a Courtier, Divine, Soldier, Lawyer, Physician, Merchant, Country Gentleman, Bachelor, Married Man, Wife, Widow, and Maid; and twelve pavans and galliards for the lute. A curious canon, 'Eight parts in one upon the Plaine Song,' is on the title-page. The composer described himself as 'Lutenist at the most famous Schoole of St. Julian's in Hartfordshire,' and dedicated his work 'To his ever-honoured Lady and Mistris the Lady Joane Thynne, of Cause Castle in Shropshire.' Some organ pieces by one Maynard (presumably the same) are contained in a MS. in the library of the Sacred Harmonic Society. W. H. H.

MAYR, JOHANN SIMON (also called SIMONE MAYER), esteemed opera composer in the

beginning of the 19th century, born June 14, 1761 at Mendorfin Bavaria early showed talent for music which he first learned from his father the village schoolmaster and organist. When about ten he entered the Jesuit seminary at Ingolstadt, but did not neglect his music, either then, or when, after the banishment of the Jesuits, he studied law in Ingolstadt. Having made the acquaintance of a nobleman, Thomas de Bretone of the Oratorio, he went in the same as music master, and was afterwards sent by his patron to Bergamo, to study with Lenzi, maestro di cappella there. Mayr found, however, that his master knew little more than himself, and was on the point of returning to Germany, when Count Pesenti, a canon of Bergamo, provided him with the means of going to F. Bertoni in Venice. Here again his expectations were deceived, but he picked up some practical hints and a few rules from Bertoni, and hard work and the study of good books did the rest. He had already published some songs in Ratisbon; and in Bergamo and Venice he composed masses and vespers. After the success of his oratorio 'Jacob a Labano fugiens,' composed in 1791 for the Conservatorio dei Mendicanti, and performed before a distinguished audience, he was commissioned to compose three more oratorios for Venice ('David,' 'Tobiae matrimonium' and 'Sisara'). For Forlì he wrote 'Jephte' and a Passion. Thrown on his own resources by the sudden death of his patron, he was urged by Piccinni to try the stage, and his first opera 'Saffo, ossia i riti d'Apollo Leucadio' was so well received at the Fenice in Venice (1794) that he was immediately overwhelmed with commissions, and between that date and 1814 composed no less than seventy-seven operas. Indeed it was not till Rossini's success that his fame declined. Many of his melodies were sung about the streets, such as the pretty cavatina 'O quanto l'anima' from 'Lauso e Lidia.' In 1802 he became maestro di cappella of Santa Maria Maggiore in Bergamo, and was so much attached to his work there that he declined not only numerous to London, Paris, Lisbon, and Dresden, but also the post of Censor to the Conservatorio of Milan, his appointment to which had been signed by the Viceroy of Italy in 1807. As professor of composition in the Musical Institute of Bergamo,—founded in 1806, reorganised in 1811—he exercised great and good influence: Donizetti was one of his pupils there. He was the founder of two institutions for decayed musicians and their widows, the 'Società filarmonica di Musica' and the 'Pio Istituto di Bergamo.' [From 1804 onwards he wrote only church music, such as masses, psalms, motets, etc. See *Quellen-Lexikon*.] He had been blind for some years before his death, which took place on Dec. 2 1845. The city of Bergamo erected a monument to him in 1852, and in 1875 his remains and those of Donizetti were removed with much ceremony to the church of Santa Maria Maggiore. The most celebrated of his operas are 'Lodoiska' (1800), 'Ginevra di Scozia' (1801), 'Medea' (1813), and 'Rosa bianca e Rosa rossa' (1814). [98 operas are mentioned in the *Quellen-Lexikon* as still extant.] He is said to have been the first to introduce the crescendo of the orchestra to which Rossini owes so much of his fame. He wrote a small book on Haydn (1809), a biography of Capuzzi the violinist, and poems on his death in 1818; also *La Dottrina degli elementi musicali*, still in MS. in Bergamo. [See the *Zeitschr.* of the *Int. Mus. Ges.* vii. 224, and *Le Guide Musical*, March 11, 1906.] F. G.

MAYSEDER, JOSEPH, violinist and composer, son of a poor painter, born in Vienna, Oct. 26, 1789. Beginning at eight, he learnt the violin from Suche and Wranitzky. Schuppanzigh took a great interest in the lad, and entrusted him with the second violin in his quartet. In 1800 he gave his first concert in the Augarten with brilliant success. He rapidly made his way with the court and nobility, and among musicians. In 1816 he entered the court chapel, in 1820 became solo-violin at the court theatre, and in 1835 was appointed chamber-violinist to the Emperor. The municipality awarded him the large gold 'Salvator Medal' in 1811, and presented him with the freedom of the city in 1817. In 1862 the Emperor bestowed on him the order of Franz-Joseph. In 1815 he gave, with Hummel (afterwards replaced by Moscheles) and Gyrowetz, the so-called 'Duhaston-concerts.' He also gave concerts with Merk the violoncellist, but after 1837 he never appeared in public. He never played abroad; even on his visit to Paris in 1841, he would only play before a select circle of artists, including Ernst, Baudiot, Chevreau, Habeneck, Lafont, and Vieuxtemps. He took a great interest in the string-quartet party which met at Baron Ernst's house (where Beethoven was often present), and afterwards in that at Prince Constantine Czartoryski's (from 1843 to 1846). His many pupils spread his name far and wide. His tone was peculiarly fascinating, and his execution had great breadth and elevation of style. With the exception of a grand mass he composed only chamber music of a style similar to his playing. He published sixty-three works, including concertos, polonaises, variations, five quintets and eight quartets for strings, études and duets for violin, four trios, sonatas, etc. for PF., trio for violin, harp, and horn, etc. Mayseder died universally respected, Nov. 21, 1863. G. F. P.

MAZAS, JACQUES-FERDINAND, French violinist and composer, was born Sept. 28, 1782, at Beziers. He entered the Paris Conservatoire in 1802, and after having studied for three years under Baillot, obtained the first prize

for violin-playing. He had great success at Paris, especially with his performance of a violin-concerto, written for him by Auber, at the Conservatoire. He travelled through a very large part of Europe, and returned in 1829 to Paris, without, however, gaining his former success. In 1837 he left Paris again, and accepted the directorship of a music-school at Cambrai, remaining there till 1841. He died at Béziers in 1849.

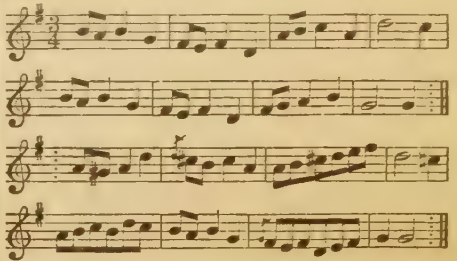
Mazas wrote a large number of brilliant violin pieces, quartets, trios, and duets for stringed instruments (the latter still much valued for teaching purposes), an instruction-book for the violin, and one for the viola. Fétis mentions also two operas (one, 'Le Kiosque,' performed in Paris in 1842), two violin-concertos, and an overture. P. D.

MAZEPPA. (i.) Opera in three acts, libretto from Poushkin's *Poltava*, by Bourenin and others, music by Tchaikovsky. Produced at Moscow and St. Petersburg, almost simultaneously, in 1883; given at the Alexandra Theatre, Liverpool; Comedy Theatre, Manchester; and Grand Theatre, Birmingham, in August and Sept. 1888, by the Russian National Opera Company, and promised for performance in London at what is now the Great Queen Street Theatre, but the enterprise came to an untimely end before the opera could be given.

(ii.) The sixth of Liszt's symphonic poems for orchestra. Originally designed as a pianoforte étude, it was revised and scored for orchestra in 1858.

MAZURKA, Mazourka, Masurek, or Masure, a national Polish dance, deriving its name from the ancient Palatinate of Masovia. Mazurkas were known as early as the 16th century; they originated in national songs[1] accompanied with dancing. They were introduced into Germany by Augustus III., Elector of Saxony and King of Poland (1733-63), and after becoming fashionable in Paris, reached England towards 1845. The Mazurka was naturalised in Russia after the subjugation of Poland, but the Russian dance differs from the Polish in being performed by an indefinite number, while the latter is usually danced by four or eight couples. The Mazurka is remarkable for the variety and liberty allowed in its figures, and for the peculiar steps necessary to its performance. Indeed, the whole dance partakes of the character of an improvisation, even the invention of new steps and figures being allowable. The music (in 3-4 or 3-8 time) consists usually of two or four parts of eight bars, each part being repeated. In the earliest Mazurkas the bass was invariably on one note, usually the tonic. There is generally a strong accent on the third beat of the bar. The tune should also end on the second beat of the bar, but in old Mazurkas there is often no definite conclusion, and the repeats are made *ad libitum*. The *Tempo* is much slower than that of the ordinary waltz. Chopin treated the dance in a new and characteristic manner. He extended its original forms, eliminated all vulgarity, introduced all sorts of Polish airs, and thus retained little more than the intensely national character of the original simple dance tune. (See Karasowski's *Life of Chopin*, chap. vii.; and also the somewhat rhapsodical but still interesting remarks of Liszt in his *Chopin*.) No less than fourteen sets of his Mazurkas have been published, containing fifty-two in all (opp. 6, 7, 17, 24, 30, 33, 41, 50, 56, 59, 63, 67, 68, and one without opus number). Weber gives the title 'Masurik' to the fourth of his six pieces for the PF. à quatre mains (op. 10).

The following example is a simple Mazurka popular in the neighbourhood of Warsaw. The first part of the melody has a vocal accompaniment:—



W. B. S.

MAZZINGHI, Joseph, of an ancient Corsican family, born in London, Dec. 25, 1765, was a pupil of John Christian Bach, under whom he made such progress that, on the death of his father, in 1775, he was, although but ten years of age, appointed organist of the Portuguese Chapel. He then studied under Bertolini, Sacchini, and Anfossi. In 1784 he became musical director and composer at the King's Theatre, and produced the operas of 'Il Tesoro' and 'La Belle Arsène,' besides many songs, duets, etc., for introduction into other operas, and the music for several ballets. The score of Paisiello's opera 'La Locanda' having been consumed in the fire of the Opera House in June 1789, Mazzinghi rescored the work so faithfully as to admit of its continued performance. For the English theatre he set the following pieces:—'A Day in Turkey,' 1791; 'The Magician no Conjuror,' 1792; 'Ramah Droog,' 1798; 'The Turnpike Gate,' 1799; 'Paul and Virginia,' 1800; 'The Blind Girl,' 1801; 'Chains of the Heart,' 1802 (the last five in collaboration with Reeve); 'The Wife of two Husbands,' 1803; 'The Exile,' 1808; and 'The Free Knights,' 1810. The last piece contained the duet, 'When a little farm we

[1] This feature it has retained. Chopin, in a letter of August 26, 1829, says, 'The thought fortunately struck Maciejowski to write four stanzas for a Mazurka, and I set them to music' (Karasowski, i. 80).

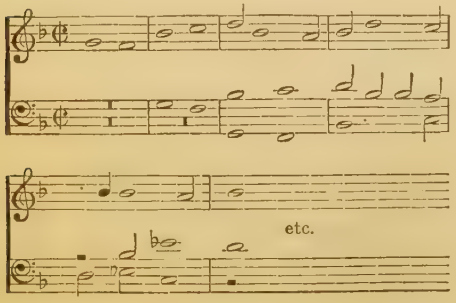
keep,' which for nearly half a century was highly popular and constantly introduced into other pieces.

Mazzinghi was music-master to the Princess of Wales, afterwards Queen Caroline, and had an extensive practice as a teacher of the pianoforte, for which instrument he composed nearly seventy sonatas and arranged a multitude of pieces, besides writing an 'Introduction' to it. His glees, trios, harmonised airs, songs, and other vocal pieces, were legion. His pastoral glee, 'The Wreath' ('Tell me, shepherds'), was long in favour. He likewise composed a mass for three voices, and six hymns. Having about 1830 attained the rank of Count he retired to Bath, where he died, Jan. 15, 1844. [C. F. Pohl, in his *Mozart and Haydn in London*, vol. ii. p. 370, states that Joseph Mazzinghi died in 1839, and that the Mazzinghi who died in 1844 was Thomas, or Tommaso, who was ennobled in 1834. The father of one or both was probably the author of 'Six solos for the violin,' published as op. 1 in London about 1763. See the *Quellen-Lexikon.*] W. H. H.

MAZZOCCHI, Domenico, born at Veja, near Civita Castellana, about the end of the 16th century. He was a pupil of Nanini, and published an opera, 'La Catena d'Adone,' in 1626, a book of five-part madrigals, a set of 'Dialoghi e Sonetti' in 1638, and a volume of 'Musiche sacre' in 1640. In the dedication of this last he states that he has been for twenty years in the service of the family of Aldobrandini Borghese. His claim to notice is mainly for the reason that he seems to have been the first to use the sign for a crescendo and diminuendo, or a 'swell.' His brother, Virgilio Mazzocchi, was from 1628 to 1629 maestro di cappella at St. John Lateran in Rome, and in the latter year was appointed to a similar place in St. Peter's. He held this post until his death in October 1646. In 1640 he published, as op. 1, 'Sacrae flores' for two, three, and four voices, and in 1648, a set of psalms for double chorus was issued (*Quellen-Lexikon*).

MEAN (Old Eng. *Meane*, *Mene*; Lat. *Medius*). 1. An old name for a middle Voice-part, whether Alto or Tenor.

2. A name given to the second instrument



in a Concert of Viols, as in Orlando Gibbons's 'Fantasies in three parts, for Viols,' reprinted by the Musical Antiquarian Society.

3. The name of the second and third strings of the viol—the former being called the Small, and the latter the Great Meane.

4. The title of an ingenious Fugue for the Organ composed by William Blitheman, and printed by Hawkins in the Appendix to vol. v. of his *History* (see above). W. S. R.

MEANTONE. See Temperament.

MEARES, Richard, father and son with the same Christian name. The father was a skilled maker of viols, lutes, and other instruments, and as his labels inform us, lived 'Without Bishop-gate, near to Sr. Paul Pinder's, London.' The earliest of these labels of which the present writer has knowledge is dated 1669; others 1677, etc. Hawkins, who gives an account of father and son (misspelling the name 'Mears'), says that his shop was opposite the Catherine Wheel Inn, without Bishopgate, and that he was advertising in 1688, 'lutes, and viols fretted according to Mr. Salmon's proposal.'

Richard Meares the son is mentioned by Hawkins as a 'whimsical man,' bred up to his father's business, who, 'seeing the slovenly manner in which music was published by Walsh & Hare, and being desirous to participate in so gainful a trade, became their rival.'

A card in the Bagford collection (*Brit. Mus.*) indicates that the younger Meares was first established in Leadenhall Street at the sign of the Golden Viol, but that he is then removed from thence to the north side of St. Paul's Churchyard at the Golden Viol and Hautboy, where he sells all sorts of musical instruments, books and songs 'as also ye best sort of cutlery ware.'

Meares's first publication is stated to be Mattheson's 'Pièces de Clavecin,' which is dated from St. Paul's Churchyard, 1714. After this he became the publisher selected by Handel, during his periodical squabbles with Walsh, to issue his works, partly in conjunction with J. C. Smith. 'Radamisto' is 'printed and sold by R. Meares and C. Smith not to be sold anywhere else in England.' 'Suites de Pièces' and the additional airs in 'Floridant' are others by Handel having Meares's imprint. He published also Corelli's 'Sonatas' and 'Concertos,' Ariosto's 'Coriolanus,' and Dr. Croft's 'Musicus Apparatus Academicus.' One of his late issues is *Introduction to Psalmody*, J. Church, 1723, 8vo. According to Hawkins he was not very successful, and in due course removed to Birchin Lane, and finally to London-house Yard, where he died about 1743. He must not be confused with a typographical music-printer named H. Meere, who printed one or two works for Walsh in 1716 and 1718. F. K.

MEASURE (i.) originally denoted any dance

remarkable for its well-defined rhythm, but in time the name was applied to a solemn and stately dance, of the nature of a Pavan or a Minuet. The dignified character of the dance is proved by the use of the expression 'to tread a measure'; a phrase of frequent occurrence in the works of the Elizabethan dramatists. In the reigns of Elizabeth and James I., Measures were danced at court, and at the public entertainments periodically given by the Societies of Law and Equity. On these occasions the great legal and state dignitaries took part in them, but the custom seems rapidly to have died out under Charles I. It is somewhat remarkable that no trace can be found of any special music to which Measures were danced; this circumstance seems to prove that there was no definite form of dance tune for them, but that any stately and rhythmical air was used for the purpose. W. B. S.

(ii.) In relation to music pure and simple, apart from the dance, the word means the group of beats or main rhythms which are contained between two bar-lines. This is the measure of time, and defines the number of pulsations, such as 2, 3, 4, 6, 9, or other aggregate which is to be taken as the determinate standard or unit by which the multifarious complications of rhythms in an extended piece of music are to be ultimately regulated. [Most American, and some European writers, use the word 'measure' as the equivalent of 'bar' for the notes contained between two bar-lines.] C. H. H. P.

MÉDECIN MALGRÉ LUI, LE. Adapted from Molière by Barbier and Carré, music by M. Gounod. Produced at the Théâtre Lyrique, Jan. 15, 1858. In English, as 'The Mock Doctor,' at Covent Garden, Feb. 27, 1865. G.

Henry Fielding made a ballad opera, 'The Mock Doctor, or the Dumb Lady cured,' acted at Drury Lane in 1732, and often revived afterwards. It was published with the airs of the songs by J. Watts in 1732. F. K.

MÉDÉE. Opera in three acts; words by Hoffmann, music by Cherubini. Produced at the Théâtre Feydeau, March 13, 1797; in London, at Her Majesty's Theatre, in Italian, with recitatives by Arditi, June 6, 1865. G.

MEDESIMO TEMPO, 'in the same time,' is occasionally used in the same way as L'Istesso Tempo, and has the same meaning. M.

MEDIAL CADENCE. See CADENCE, vol. i. p. 441*b*.

MEDIANT (from the Lat. *Medius*, 'middle'). I. One of the three most significant Regular Modulations of the Ecclesiastical Modes, ranking next in importance to the Dominant or Reciting-Note. [See INITIALS, ABSOLUTE, vol. ii. p. 469; MODES, THE ECCLESIASTICAL; MODULATIONS, REGULAR AND CONCEDED.]

The normal position of the Mediant in the Authentic Modes lies as nearly as possible midway between the Final and the Dominant.

In the Plagal Modes the position of the Mediant is governed rather by the necessity for securing a convenient note for the Modulation than by any fixed law.

The following table exhibits, at one view, the Mediants of all the Modes in general use, both Authentic and Plagal:—

Mode I., F.	Mode V., A.	Mode IX., C.
Mode II., E.	Mode VI., D.	Mode X., B.
Mode III., G.	Mode VII., C.	Mode XIII., E.
Mode IV., G.	Mode VIII., F.	Mode XIV., A.

II. In modern music the term Mediant is always applied to the Third of the scale, by reason of its intermediate position, between the Tonic and the Dominant.

The office of this note is extremely important, inasmuch as it determines whether the tonality of the scale is Major or Minor. W. S. R.

MEDIATION (Lat. *Mediatio*). [The inflexion which occurs half-way through a psalm-tone before the point of division marked in the words by a colon. (See INFLEXION.)] Each Tone has, in reality, only one Mediation; though that one exhibits itself, in most cases, in at least three different forms—one used for the Psalms, one for the Introits, and a third commonly called the 'Festal Form,' for the Canticles. Moreover, Tones II., IV., V., VI., and VIII. have each a special form of Mediation, used only when the first half of the verse to which it is sung ends with a monosyllable or Hebrew proper name. For examples of these different forms, see TONES, THE GREGORIAN, under which heading will also be found a detailed account of the connection of the Mediation with the other members of the chant.

In addition to these recognised forms of the Mediation certain others have attained, from time to time, a considerable amount of local popularity, in consequence of the claim put forth by particular Dioceses—especially in France—to a peculiar 'Use' of their own. The utter abolition of such Diocesan Uses—almost all of which can be proved to have originated in a corrupt method of chanting—was one of the objects contemplated by the compilers of the Ratisbon Office-books, as revised by the Sacred Congregation of Rites, and formally sanctioned by the authority of the Holy See. [This object was attained, and a fixed standard was adopted for many years; but the recognition of the Solesmes chant as more authoritative than any other, a recognition expressed in the 'motu proprio' of Pope Pius X., has destroyed the monopoly of the Ratisbon Office-books.] [See MACICOTATICUM.] W. S. R.; with additions by W. H. F.

MEERESSTILLE UND GLÜCKLICHE FAHRT, *i.e.* Calm Sea and Prosperous Voyage, a poem by Goethe, which has been set to music by two great masters.

1. By Beethoven, for chorus and orchestra. Composed in 1815, first performed at the Great Redoutensaal in Vienna on Christmas Day of

that year, and published Feb. 28, 1823, by Steiner. It is dedicated 'to the immortal Goethe.' The reverse of the title-page contains three lines from Voss's translation of the *Odyssey* (viii. 479), thus rendered by Lang and Butcher :—

> For from all men on earth minstrels get their meed of honour and worship ; inasmuch as the muse teacheth them the paths of song, and loveth the tribe of minstrels.

A letter from Beethoven to the publisher, dated June 12, and apparently belonging to the year 1824, calls it a cantata, and asks for the loan of the score, that he 'might write a kind of overture to it.' This intention does not appear to have been carried out.

2. By Mendelssohn, for orchestra only. Written in the summer of 1828, first performed at Berlin, Dec. 1, 1832, remodelled and 'made thirty times as good as before,' and published as op. 27 and No. 3 of his Concert Overtures in 1834. We learn from a passage in his sister's diary[1] that Mendelssohn wished to avoid the form of an introduction and overture, and to throw his work into two companion pictures. G.

MEERTS, Lambert Joseph, distinguished violinist and composer for his instrument, born at Brussels, Jan. 6, 1800 ; died there, May 12, 1863. Pupil of Lafont, Habeneck, and Baillot. At the age of sixteen he became a member of the theatre orchestra in Antwerp. After completing his studies in Paris, he returned to Brussels and established himself as a teacher and performer. In 1835 he was appointed professor of the violin at the Brussels Conservatoire. He wrote several instructive works for the violin, including a series of duets for two violins, each study being founded on a particular rhythm extracted from one of Beethoven's symphonies. (A. Mason Clarke's *Fiddlers Ancient and Modern*, London, 1896.) E. H-A.

MEFISTOFELE. See Faust (iii.), vol. ii. p. 16.

MEHLIG, Anna, a distinguished pianist, was born at Stuttgart, July 11, 1846. She received her musical education at the Conservatorium of her native town, and afterwards spent a year at Weimar studying under Liszt. In 1866 she made her first appearance in England, playing Hummel's Concerto in B Minor at the Philharmonic on April 30. She revisited England each year till 1869 inclusive, playing regularly at the Philharmonic and Crystal Palace and other concerts. She then took a long tour in America, where she met with great success. In 1875 she reappeared in England, playing Chopin's E minor Concerto at the Crystal Palace on Oct. 9, and paid annual visits to London for many years. Her répertoire is large, her power of execution remarkable, and her style is full of refinement and poetry. Since her marriage with Herr Falk of Antwerp she has lived in that city. G.

MÉHUL, Étienne Henri (or Étienne-Nicolas), born June 22, 1763, at Givet in the Ardennes, son of a cook, who was too poor to give him much education. Even in childhood he showed a passion for music, and a remarkable perseverance in overcoming obstacles, and at ten was appointed organist to the convent of the Récollets at Givet. Having learned all that his master, a poor blind organist, could teach him, he was thrown on his own resources, until the arrival, at the neighbouring convent of Lavaldieu, of a new organist, Wilhelm Hauser, whose playing had attracted the attention of the Abbot Lissoir, when visiting the Abbey of Scheussenried in Swabia. The monks of Lavaldieu, wishing to make music a special feature in their services, had a good organ, and the playing of Hauser, who was a sound and good musician, caused quite an excitement in that secluded corner of the Ardennes. Lavaldieu was several leagues from Givet, but Méhul often walked over to hear him ; and at length, with the consent of his father, was admitted into the convent, and became the most diligent, as he was the most gifted, of the eight pupils under Hauser's training. At fourteen he became deputy-organist ; and a distinguished amateur who heard him play was so struck by his evident power of imagination, that he determined to take him to Paris, and in 1778 Méhul bade farewell to the flowers he loved to cultivate, and the instructor who had put him in the way to become a great musician. On his arrival in Paris he at once went to Edelmann for instruction in pianoforte-playing and composition. To earn his bread he gave lessons, and composed two sonatas (1781) which bear no traces of a master mind ; but this was not the line in which he was destined to distinction. In 1779 he was present at the first performance of 'Iphigénie en Tauride,' and the effect produced on one with his cultivated intellect, his love of the beautiful, and passionate though reserved nature, was immense. He expressed his admiration to Gluck himself, who received the young enthusiast graciously, gave him valuable advice, and undertook his instruction in the philosophical and poetical parts of music. Encouraged by the success of a cantata with orchestra composed to one of Rousseau's sacred odes, and produced at the Concert Spirituel in March 1782, he might have gone on writing church music, had not Gluck shown him his true vocation, and directed his attention to the stage. Solely for practice, he composed, one after another, three operas, 'Psyché et l'Amour,' a pastoral by Voisenon previously set by Saint Amans ; 'Anacréon,' the third act of a ballet by Bernard and Rameau, produced in 1757 as 'Les Surprises de l'Amour' ; and 'Lausus et Lydie,' three acts, to a libretto adapted by Valadier from Marmontel. These unpublished

[1] Hensel's *Die Familie Mendelssohn*, i. 194.

ÉTIENNE HENRI MÉHUL

scores are lost, no trace of them being discoverable in any of the public libraries of Paris.

Méhul now felt himself in a position to appear before the public, and Valadier having furnished him with the libretto of 'Cora et Alonzo,' four acts, also taken from Marmontel, the score was soon ready, and accepted by the Académie, but there the matter ended. Tired of waiting, he resolved to try his fortune at another theatre, and having made the acquaintance of Hoffmann he obtained from him the libretto of 'Euphrosine et Coradin, ou le Tyran corrigé,' three acts (Sept. 4, 1790). In this opéra-comique the public recognised at once a force, a sincerity of accent, a dramatic truth, and a gift of accurately expressing the meaning of the words, which were throughout the main characteristics of Méhul's mature genius. Its success was instantaneous; and the duet 'Gardez-vous de la jalousie,' the close of which contains a modulation as unexpected as it is effective, speedily became a favourite throughout France. Henceforth Méhul had ample opportunities of satisfying his productive instinct, and he brought out successively :—

'Cora' (1791); 'Stratonice' (May 3, 1792); 'Le jeune Sage et le vieux Fou' (1793); and the third act of 'Le Jugement de Paris' (the other acts by Haydn and Pleyel); 'Horatius Coclès' and 'Mélidore et Phrosine' (1794); 'La Caverne' (1795), not so successful as Lesueur's on the same subject; 'Doria' and 'Le jeune Henri' (1797); 'Adrien' (June 4) and 'Ariodant' (Oct. 11, 1799); 'Épicure,' with Cherubini (March 14), and 'Bion' (Dec. 27, 1800); 'L'Irato, ou l'Emporté' (Feb. 17, 1801); 'Une Folie' (April 4), 'Le Trésor supposé,' 'Joanna,' and 'L'Heureux malgré lui' (1802); 'Héléna' and 'Le Baiser et la Quittance,' with Kreutzer, Boieldieu, and Nicolo (1803); 'Les deux Aveugles de Tolède' (Jan. 28), 'Uthal' (May 17), and 'Gabrielle d'Estrées' (June 25, 1806); 'Joseph' (Feb. 17, 1807).

Astonishing as it may seem, these twenty-four operas were not the only works Méhul produced within seventeen years. He composed and published in addition many patriotic songs and cantatas, among others the 'Chant national du 14 Juillet,' the 'Chant du Départ,' the 'Chant du Retour,' the 'Chanson de Roland,' and choruses to 'Timoléon' (1794), a tragedy by Joseph Chénier; two ballets, 'La Dansomanie' (1800) and 'Daphnis et Pandrose'; several operettas, and other 'morceaux de circonstance,' such as 'Le Pont de Lodi,' etc., all unpublished except the 'Chant lyrique' for the inauguration of the statue voted to Napoleon by the Institut. [A mass, written for the coronation of Napoleon, but not performed then, was published in Paris in 1879.]

The epoch at which he composed 'Uthal' and 'Joseph' was the culminating point of Méhul's career. He was already a member of the Institut (1795) and a chevalier of the Legion of Honour (1802), and had been inspector of instruction at the Conservatoire from its foundation. His pupils looked up to him and he was a favourite in the best society, but such homage did not blind him to the fact that in science his colleagues Cherubini and Catel were his superiors, owing to his want of early systematic training. This accounts for his laborious efforts to change his style, and excel in more than one department of music. His symphonies, though performed at the Conservatoire, cannot rank with those of Haydn and Mozart; indeed none of his other orchestral works rise to the level of his overtures. Of his ballets 'Le Retour d'Ulysse' (1807), and 'Persée et Andromède' (1810) in which he introduced many pieces from 'Ariodant,' were well received, but 'Les Amazones, ou la fondation de Thèbes' (1811) disappeared after nine performances. An opéra-comique in one act, 'Le Prince Troubadour' (1813), was not more successful, [and in 1814 he collaborated with Paër, Berton, and Kreutzer, in 'L'Oriflamme';] his last work, 'La Journée aux Aventures,' three acts (Nov. 16, 1816), kept the boards for some time. Its success was partly due to its being known at the time that Méhul was dying of consumption. Two months after its production he was sent to Provence, but the change came too late; he returned to Paris, and died there Oct. 18, 1817, aged fifty-four. Besides six unpublished operas composed between 1787 and 1797, he left the unfinished score of 'Valentine de Milan,' a three-act opéra-comique, completed by his nephew and pupil Daussoigne-Méhul (born at Givet, June 10, 1790, died at Liège, March 10, 1875), and produced Nov. 28, 1822.

The most conspicuous quality of Méhul's work as a whole is its absolute passion. This is exemplified most strikingly in 'Stratonice' and 'Ariodant.' Not less obvious are the traces of the various influences under which he passed. Between 'Ariodant' and 'Joseph' must be placed all those repeated attempts to vary his style, and convince his detractors that he could compose light and graceful airs as well as grand, pathetic, and sustained melodies, which cannot be considered as anything but failures, although the ignorant amateurs of the day pronounced 'L'Irato' to be true Italian music. 'Joseph,' which dates from the midst of the Revolution, before the Empire, belongs to a different epoch, and to a different class of ideas. Méhul's noble character, his refined sentiment, and religious tendencies, the traces of his early education, in his perfect acquaintance with the church modes and plain-song, and his power of writing excellent church music, are all apparent in this powerful work, the simplicity, grandeur, and dramatic truth of which will always command the admiration of impartial musicians.

Méhul was not so fortunate as Grétry in finding a poet whose creative faculties harmonised thoroughly with his own; and he was fascinated by any subject—antique, chivalrous, Ossianic, Spanish, patriarchal, or biblical—so long as it afforded him opportunities for local colouring, the importance of which he often exaggerated. His overtures to 'Le Jeune Henri,' 'Horatius Coclès,' 'Timoléon,' and 'Les deux Aveugles de Tolède' are, however, incomparably superior to anything of the kind which preceded them; and most striking are such passages as

the introduction to 'Ariodant,' where three violoncellos and a trombone hold a kind of dialogue, and that in 'Mélidore et Phrosine,' where four horns which have a complete part throughout the score, accompany the voice of a dying man with a kind of smothered rattle. In 'Uthal' the violins are entirely absent, their places being taken by the violas, in order to produce a soft and misty effect. Grétry was shocked at this innovation, and so wearied by its monotony, that he cried on leaving the theatre after the first performance, 'Six francs for a chanterelle (E-string)!'

Though Méhul's new and ingenious combinations were not always successful, and though his melodies were often wanting in that life and dash which rouse an audience, it must be

acknowledged that with all his faults his work bears the stamp of a very individual mind and character, and the impress of that mighty race of 1789, with whom to will was to do, but amongst whose many gifts that of grace was too often wanting. Had he but possessed this fascinating quality, Méhul might have been the Mozart of France. As it is, we cannot withhold our admiration from the man who carried on Gluck's work with even more than Gluck's musical skill, regenerated opéra-comique, and placed himself at the head of the composers of his own time and nation.

The portrait of Méhul which we engrave is taken from a remarkable print by Quenedey, 1808. Quatre-mère de Quincy pronounced his eulogium at the Institut in Oct. 1818, and Vieillard, one of his intimate friends, published an interesting *Notice* of him (Paris, 1859). The library of the Conservatoire contains many of his autographs, several being fragments of unpublished operas. The writer of this article discovered among them 'La Naissance d'Oscar Leclerc,' not elsewhere mentioned, an opéra-comique 'La Taupe,' and an 'Ouverture burlesque' for piano, violin, and reeds, interesting merely as musical curiosities. G. C.

MEIBOM (in Latin MEIBOMIUS), Marcus, learned historian of music, born early in the 17th century at Toenningen in Schleswig-Holstein. Nothing is known of his studies; but his great work, *Antiquae musicae auctores septem graece et latine* (Amsterdam, Elzevir), was published in 1652, and as in those days eminence was rarely attained in early youth, the date of his birth can hardly have been either 1626 or 1630 as commonly stated. The work was dedicated to Queen Christina of Sweden, at whose court he resided for some time. On one occasion, however, while singing at the Queen's request his version of an ancient Greek melody, the whole court burst out laughing, and Meibom, imagining that the Queen's physician Bourdelot was the instigator of this unseemly mirth, gave him a box on the ear, and was in consequence dismissed. He took refuge with Frederick III. of Denmark, who gave him a professorship at Upsala, but he soon returned to Holland. Having endeavoured in vain to find a capitalist who would carry into execution his plan of restoring the ancient triremes, he came to England in 1674 with the view of making arrangements for a new edition of the Old Testament. This project also failed, and returning to Holland, he died at Utrecht in 1711. The book already mentioned is one of the most valuable sources of information on ancient music, and may be considered a precursor of Gerber and Coussemaker. [Its usefulness is much enhanced in the modern reprints, the latest of which is by Karl von Jais (1895).] For his numerous works on music and geometry the reader is referred to Fétis. F. G.

MEILAND, Jacob, born about 1542 at Senftenberg in Saxony, was brought up as a chorister in the Saxon Court Chapel, at Dresden. After attending the University of Leipzig, and spending some time in travelling, he was appointed capellmeister to the Margrave of Anspach, till the dissolution of this chapel in 1574. The rest of his life, to his early death in 1577, Meiland spent chiefly as an invalid at Frankfort-on-the-Main, though busy to the last in bringing out his fairly numerous publications. He was highly thought of in his time as a composer of Latin and German Motets, and considered even the equal of Orlando Lassus. His harmonies are often rugged, after the manner of Orlando. In the composition of German secular songs he was one of the first to introduce into Germany the Italian Villanella style, paying more attention to the rhythmical declamation of the words than to the artifices of counterpoint. His works are:—

1. Cantiones Sacrae, 1564, 17 Nos. *a* 5 and 6.
2. Neue auserlesene teutsche Liedlein, 1569, 15 Nos. *a* 4 and 5.
3. Selectae Cantiones, 1572, 17 Nos. *a* 5 and 6.
4. Sacrae aliquot cantiones latinae et germanicae, 1575, 33 Nos. *a* 4 and 5.
5. Neue auserlesene Teutsche Gessing, 1575, 18 Nos. 4 and 5.
6. Cantiones novae, etc., 1576, 19 Nos. *a* 5.
7. Cygneae cantiones latinae et germanicae, 1590, 22 Nos. *a* 4 and 5.

Other works, including three settings of the Passion, are preserved in MS. Three Latin motets were republished in Commer's *Musica Sacra*, and two German sacred songs *a* 4 are contained in Schöberlein. J. R. M.

MEINARDUS, LUDWIG SIEGFRIED, born Sept. 17, 1827, at Hooksiel (Oldenburg), was at first educated at the Gymnasium at Jever, where his father held an official post. He was intended to study theology, but his musical inclinations could not be resisted, and he was at length allowed to devote himself to the art, his parents imposing the curious condition that he was to become a public performer on some instrument. To this end he took up the violoncello, learning what he could from the Stadtmusikus of the place, who was a violinist. After making himself ill with excessive practice, he returned to school, and it was not till he had finished his studies there that he finally determined, on the advice of Schumann, who had seen some of his compositions, to embrace the profession of a composer. At Christmas, in 1846, he entered the Leipzig Conservatorium, but after half a year, finding that private instruction from Riccius would be more to his advantage, he accordingly remained with him for two years. In 1850 he went to Berlin in order to study with A. B. Marx, but for some reason or other he fell under the suspicions of the police, and was not allowed to remain. He betook himself to Liszt at Weimar, where he stayed some months, after which he went to Erfurt as conductor of a small theatrical company, and subsequently in a similar capacity to Nordhausen. At last he was provided with better credentials, and succeeded in remaining in Berlin. In 1853, having finished his education with Marx, he was appointed conductor of the Singakademie at Glogau, where he remained until, in obedience to a call from Julius Rietz, he went to the Dresden Conservatorium as a teacher in 1865. In 1874 he settled in Hamburg, where he was for many years continuously active as a composer and as critic of the *Hamburger Korrespondent*. In 1887 he moved to Bielefeld, to take up a post as organist, and died there July 12, 1896. His most prominent compositions are the oratorios 'Simon Petrus,' 'Gideon,' 'König Salomo,' 'Luther in Worms,' 'Odrun'; two operas, 'Bahnesa' (three acts, finished 1881) and 'Doktor Sassafras' (neither of them performed); four ballads for chorus, 'Roland's Schwanenlied,' 'Frau Hitt,' 'Die Nonne,' 'Jung Baldurs Sieg'; two symphonies, and many chamber compositions. A memoir of Mattheson, an autobiographical sketch, and collected criticisms, are his most important contributions to literature. M.

MEISTER, ALTE. A collection of forty PF. pieces of the 17th and 18th centuries, edited by E. Pauer, published by Breitkopf & Härtel:—

Rameau. Gavotte and Variations in A minor.
Kirnberger. Fugue (3 parts) in D minor.
Kirnberger. Fugue (2 parts) in D.
Marpurg. Capriccio in F.
Michul. Sonata in A.
J. Ch. Bach. Sonata in C minor.
C. P. E. Bach. Allegro in A.
W. Fr. Bach. Fugue in C minor.
Kuhnau. Sonata in D.
Pad. Martini. Prelude, Fugue, and Allegro in E minor.
J. L. Krebs. Partita in B♭.
Do., Do. E♭.
Mattheson. 4 Gigues.
Couperin. La Bandoline, Les Agrémens.
Paradies. Sonata in D.
Zipoli. Preludio, Corrente, Sarabanda, and Giga in G minor.
Cherubini. Sonata in B♭.
Hässler. Sonata in A minor.
Wagenseil. Sonata in F.
Benda. Largo and Presto in F.
Frohberger. Toccata in D minor.
Sacchini. Sonata in F.
Basse. Allegro in B♭.
W. Fr. Bach. Sonata in C.
Rolle. Sonata in E♭.
Handel. Capriccio in G.
Rameau. La Livri, L'Agaçante, La Timide.
Loeilly. Suite in G minor.
Rossi. Andantino and Allegro in G.
F. Turini. Presto in G minor and Sonata in D♭.
C. P. E. Bach. La Xenophone, Sibylle, La Complaisante, Les Langueurs tendres.
Graun. Gigue in B♭ minor.
Matielli. Gigue, Adagio, and Allegro.
Sarti. Allegro in G.
Grazioli. Sonata in G.
D. Scarlatti. 2 Sonatas.
Mattheson. Suite in C minor.
Couperin. La Bersan, L'Ausonienne, Les Charmes, Le Bavolet flottant.
Schobert. Minuet and Allegro molto in E♭.
Muffat. Gigue in B♭ and Allegro spiritoso in D. G.

MEISTERSINGER (Germ. Master-singers). The name given to the guilds of poet-musicians which flourished in the 14th–16th centuries in various towns of Germany. The founder of the first guild is supposed to have been Heinrich von Meissen, called Frauenlob, who instituted a company at Mainz in 1311. As to the original signification of the name, authorities are divided, but it seems fairly certain that as in other crafts the grades of apprentice, journeyman, and master were differentiated, so the members of these guilds passed successively through the stages of Schüler, Schulfreund, Sänger, Dichter, and Meister. For a list of famous meistersingers, the chief of whom was Hans Sachs, see SONG. The guild was a kind of counterpart, in what would now be called the middle classes of German society, to the MINNESINGER, who were exclusively of noble birth. Various books on the history of both bodies have been written, but there is none which gives so vivid and accurate a picture of the craft as is to be seen in Wagner's comedy in music (see below). M.

MEISTERSINGER VON NÜRNBERG, DIE. An opera in three acts; words and music by Richard Wagner, completed in Oct. 1867, and first performed at Munich, June 21, 1868, under the direction of Von Bülow. [The overture was first performed at Leipzig, Nov. 1, 1862. The first performance in England took place under Richter, at Drury Lane, May 30, 1882; it was given at Covent Garden, in an Italian version, by G. Mazzucato, July 13, 1889, and by the Carl Rosa Company at Manchester in an English version, April 16, 1896. In 1888 it was given for the first time at Bayreuth, where it has occasionally figured in the festival programmes since, as in 1892 and 1899. See Weissheimer's *Erlebnisse mit Richard Wagner*.] G.

MEL, RINALDO DEL, 'Gentilhuomo Fiamengo,' and distinguished composer of the 16th century. The date of his birth is not known, but his nationality is assured, not only by the above title, which appears on more than one of his works, but by his own words, 'la natione nostra Fiammengo.' [In the 'Sacrae Cantiones' of 1589, he implies that Schlettstadt in Lorraine

was his birthplace.] He is not to be confused with Gaudio Mell, a name which Adami,[1] Liberati,[2] and Martini[3] give to Goudimel. [See vol. ii. p. 206.] Having served Sebastian, King of Portugal, and his successor, Cardinal don Henriquez, as Chapelmaster, he arrived in Rome in 1580. This change in his career may be accounted for by the annexation of Portugal to Spain in that year. If Philip II. was unwilling to keep up a useless retinue in Lisbon, he would certainly make no exception in favour of 'Flemish gentlemen,' who indeed were never to his liking. [At Rome, Mel entered the service of Cardinal Paleotto.] He presented himself without loss of time to Palestrina, but soon found himself out of his depth on musical subjects, and confessed that Rinaldo's questions could not keep pace with Pierluigi's answers. So the ex-Chapelmaster set himself down to school tasks again, ambitious to become a worthy disciple of that Roman school which he declared was the greatest in Europe.[4] His diploma was soon obtained, for his publications began in 1581, with a first book of motets, *a* 4-8, and between that year and 1595 he published five books of motets and fifteen books of madrigals, besides contributing to various collections which carried his name from Rome to Venice, Nuremberg, Antwerp, and Munich. [See the *Quellen-Lexikon.*]

Up to 1590 he probably lived chiefly in Rome, though we find him at Liège in 1587,[5] where some of his family were in the service of Ernest, Duke of Bavaria, [in whose employ we find the composer in the following year.] In 1591 he was again in the service of Cardinal Gabriel Paleotto, archbishop of Bologna, who had himself some knowledge of music.[6] When the diocese of Sabina was placed under Paleotto's charge in 1591 he founded a college, improved the cathedral at Magliano, and made many changes in the internal government. The appointment of a new maestro di cappella agrees well enough with these facts, and it is in the year 1591 that we hear of Mel's appointment to the cathedral and the new college. He dates from Calvi, a little town near Magliano, March 20, 1593, and from Magliano[7] itself, 1595. From this time his publications cease, and we have no further record of him. He is said to have been already well advanced in life when he left Portugal, and by this time was probably an old man. So we may assume that the end of life was near, and that he did not long survive Palestrina.

Proske prints a Litany in the *Musica Divina*, Ann. II., vol. iii. (Ratisbon, 1869), and Commer's *Musica Sacra* contains seven motets and a litany; the Motet Society published an anthem, 'O praise the Lord,' adapted by Dr. Aldrich from a work of Mel's, in vol. iii. p. 128. J. R. S.-B.

MELBA, Madame (Nellie Porter Armstrong), one of the most celebrated prime donne of our time, was born May 19, 1859,[8] at Burnley on the 'Yarra Braes,' near Melbourne. Her father, David Mitchell, a Scotch contractor, had settled in Australia some years. He was proud of his child's precocious musical talent, and allowed her to sing at a concert in the Richmond (Melbourne) Town Hall when only six years old. She also received instruction in piano, harmony, and composition, and frequently played the organ at the local church. Mr. Mitchell objected, however, to her adopting music as a profession, and when she gave her first public concert he marked his displeasure by closing his house and extinguishing the lights at an early hour. It was only after her marriage in 1882 to Captain Charles Armstrong (son of Sir Archibald Armstrong of King's Co., Ireland) that the young soprano finally determined to follow a musical career; nor did she come to Europe until the spring of 1886, when, after a solitary appearance at Prince's Hall, London (June 1), she went to Paris to study under Madame Marchesi.

Her period of tutelage was rapid and brilliant, for after twelve months' work her teacher pronounced her ready for the stage, and on Oct. 12, 1887, she made her début as Gilda at the Théâtre de la Monnaie, Brussels, under the name of 'Melba,' obviously derived from that of her native city, Melbourne. She achieved instantaneous success, and was soon afterwards engaged by Sir Augustus Harris for his first season of Italian Opera at Covent Garden in 1888, where the new prima donna duly made her appearance as Lucia on May 24.

From the outset the London public was rapturous in its warmth. Calmer critics readily perceived what was still lacking to the equipment of a really great and finished artist; but none could gainsay the uncommon character of Madame Melba's endowments — the extraordinary beauty of her silvery tone, its bright, 'girlish' quality and remarkable evenness throughout a compass of two and a half octaves (*b* flat to *f'''*), and above all the excellence of a method that plainly owed as much to nature as it did to art. In her brilliant execution of the most difficult *fioriture* nothing impressed more than the wonderful flexibility of the organ, unless it was the unfailing ease and perfect sense of restraint with which the singer accomplished her *tours de force*. This rare faculty for using her tone within rather than beyond its true limit of resonant power has remained one of the most striking and beneficial features of

MADAME MELBA
(Nellie Porter Armstrong)

Mme. Melba's method. Once, in America, she was so ill-advised as to essay the part of Brünnhilde in 'Die Walküre.' But it was for a single night only. Fortunately she perceived that disaster must ensue, and took care never to repeat her error.

In the spring of 1889 Mme. Melba made her début at the Paris Opéra, and sang Ophélie with great success to the Hamlet of M. Lassalle. She also prepared the rôles of Marguerite and Juliette under the personal instruction of Gounod, and later in the year undertook both at Covent Garden, where 'Roméo et Juliette' was then performed in French for the first time. In conjunction with MM. Jean and Edouard de Reszke she shared a memorable triumph in these operas, while her vocal and dramatic resources alike manifested a marked advance. Thenceforward she took part regularly in every Covent Garden season without missing a single summer. In 1890 Mme. Melba added to her répertoire the parts of Elsa ('Lohengrin') and Esmeralda (in the French revival of Goring Thomas's charming opera); subsequently Violetta in 'La Traviata,' Michaela in 'Carmen,' Rosina in 'Il Barbiere,' and the Queen in 'Les Huguenots.' In 1894 she created here the rôle of Nedda in 'Pagliacci,' and ten years later that of 'Hélène' in the opera so named, written for her by Camille Saint-Saëns.

Meanwhile, the accomplished artist had extended her renown through many lands. In 1891 she accompanied the De Reszkes to St. Petersburg, by special command of the Czar, and was welcomed there with extraordinary warmth. In 1892 she sang at La Scala, Milan, and followed up her triumphs there with a brilliant tour through Italy. Next year she fulfilled the first of many successful engagements in the United States, making her début with the De Reszkes at Chicago during the 'World's Fair.' In 1894 she sang for the first time at the Handel Festival (Selection Day). In 1902, after an absence of sixteen years, Mme. Melba revisited Australia, making her reappearance in Melbourne on Sept. 27, and subsequently giving concerts at Sydney, Brisbane, Adelaide and many other towns. Her proud fellow-countrymen loaded her with honours of every kind, and altogether the prima donna's return to the land of her birth constituted a veritable 'royal progress.'

At the time this article is penned Mme. Melba continues to hold undisputed sway as the head of her profession. Intelligence, industry, and perseverance, allied to vocal gifts of the highest order, have combined to elevate her to this exalted position; and she is the first singer of British birth who has ever attained it upon the lyric stage as well as the concert platform. H. K.

MELGOUNOV, Julius Nicholaevich, pianist and musical writer, born August 30 (Sept. 12), 1846, at Vetlouga in the Government of Kostroma, died at Moscow, March 19/31, 1893. In his schooldays he took pianoforte lessons with Dreyschock, and at eighteen made his début in St. Petersburg as a pianist. He studied theory with Laroche, and was for a time a student of the Moscow Conservatoire; but he soon left this institution, determined to work out his musical education for himself. About 1875 Melgounov became acquainted with Rudolph Westphal, then professor in the Katkov Lycée at Moscow. Westphal had made a special study of musical rhythm, and was the author of several treatises on this subject. Melgounov was attracted to Westphal's theories, and co-operated with him in bringing out ten of Bach's fugues in a special edition, with a preface entitled: 'The rhythmic execution of Bach's Fugues.' When, shortly afterwards, Westphal gave a series of sixty concerts in Germany, in order to propagate his views upon musical rhythm, Melgounov accompanied him as pianist. He also toured in Russia with the violinist Laub and the violoncellist Carl Davidov. Melgounov's most important work was the elaboration of a more accurate method of noting down the folk-songs. The results of his researches in popular music are published under the following title: 'Russian Songs, written down directly from the singing of the people, transcribed for pianoforte with text; Part I. with the co-operation of Klenovsky, Moscow, 1879; Part II. with the co-operation of Blaramberg, St. Petersburg, 1885.' His leading ideas are as follows: that the folk-songs are based upon two diatonic scales, the major and natural minor, and that the intervals of the latter are exactly the same as those of the major reversed $\left\{\begin{matrix} e & d & c & b & a & g & f\,e \\ 1\text{T.} & 1\text{T.} & \frac{1}{2}\text{T.} & 1\text{T.} & 1\text{T.} & 1\text{T.} & \frac{1}{2}\text{T} \end{matrix}\right.$; that they are sung 'polyphonically,' not, as was once erroneously supposed, in unison; that their harmony is formed by working out the principal melody in independent contrapuntal parts (podgoloski), and unison is only found at the close of the songs, or in their rhythmic sections; that the rhythm is inseparably connected with the text and conforms to the rhythmic principles of the Greeks. Melgounov finds no chromatic or enharmonic changes in the folk-songs, and the perfect fifth is of rare occurrence. By writing down all the secondary parts, Melgounov revealed the entire structure of the songs. As these 'podgoloski' are generally free improvisations, and to write them all down from ear at once is practically impossible, it often happens in Melgounov's songs that all his secondary parts do not harmonise with the principal melody. In the course of the last few years Mme. Eugénie Liniev has carried Melgounov's work much farther, and by the help of the phonograph has obtained some very accurate records of the peasant part-songs, just

as they are sung by the people. Besides the above publication, Melgounov left the following treatises on this subject: 'On Russian National Music' (*Russ. Ethnographical Review*, v. vi.), 'A Correct Method of Writing Down the Folk-songs,' 'The Rhythm of the Slavonic Folk-songs,' etc. R. N.

MELISMA (Gr. Μέλισμα, a 'Song'). Any kind of air or melody, as opposed to recitative or other music of a purely declamatory character. Thus Mendelssohn employs the term[1] in order to distinguish the Mediation and Ending of a Gregorian Tone from the Dominant or Reciting Note. It is more generally, if less correctly, used in the sense of *Fioritura* or even *Cadenza*.

A work by Thomas Ravenscroft, entitled 'Melismata; Musical Phansies fitting the Court, citie, and country humours' (London, 1611), is much prized by collectors. W. S. R.

MELL, Davis, familiarly called Davie Mell. An eminent violinist and clockmaker, born at Wilton, near Salisbury, Nov. 15, 1604, resident in London about the middle of the 17th century and honourably mentioned by Aubrey and Anthony Wood. In the year 1657 he visited Oxford, where, as we learn from Wood's *Diary*, 'Peter Pett, Will. Bull, Ken. Digby, and others of Allsoules, as also A. W. did give him a very handsome entertainment in the Taverne cal'd "The Salutation" in S. Marie's Parish. . . . The Company did look upon Mr. Mell to have a prodigious hand on the Violin, & they thought that no person, as all in London did, could goe beyond him. But, when Tho. Baltzar, an Outlander, came to Oxon. in the next yeare, they had other thoughts of Mr. Mell, who, tho he play'd farr sweeter than Baltzar, yet Baltzar's hand was more quick, & could run it insensibly to the end of the Finger-board.' He succeeded Laniere as Master of the King's Band at the Restoration, and was followed, at the close of 1661, by Thomas Baltzar (*q.v.*). Pieces by him are in Christopher Simpson's 'Division Violin,' 1684.

Aubrey[2] tells a curious story of a child of Mell's, who was cured of a crooked back by the touch of a dead hand. W. S. R.

MELLON, Alfred, born in London, April 17, 1821, lived at first at Birmingham, became a violinist in the opera and other orchestras, and afterwards leader of the ballet at the Royal Italian Opera, Covent Garden. He was next director of the music at the Haymarket and Adelphi theatres, and subsequently conductor of the Pyne and Harrison English Opera Company, which in 1859 produced his opera, 'Victorine,' at Covent Garden; he was conductor of the Musical Society, and of the Promenade Concerts which for several seasons were given under his name at Covent Garden, begun in the Floral Hall, in August 1860. He was a conductor of exceptional attainments; in Sept. 1865 he was chosen conductor of the Liverpool Philharmonic Society. He married Miss Woolgar, the well-known actress. He died March 27, 1867, and was buried in Brompton Cemetery. W. H. H.

MELODISTS' CLUB, THE. A society at one time of much promise, founded in 1825, by admirers of Charles Dibdin, 'for the promotion of ballad composition and melody.' In 1827 and 1828 a library was formed, and prizes offered for songs; and the prize songs were afterwards published in a volume. In 1833 two prizes of ten guineas were offered for songs in the style of Arne, Shield, or Dibdin, and gained by Blewitt and Hobbs. In 1837 prizes of five guineas for words and ten guineas for music of a song; which were gained by Wilson and Hobbs for the song 'Send round the wine.' The object of the Club is well described in the following words of Sir H. Bishop in presenting some music to the Library in 1840: 'It is from my perfect conviction that good and appropriate melody is the chief attribute of excellence in music of every style, from the simple ballad to the most elaborate composition, that I hail the establishment of the Melodists' Club, from its patronage of native genius, and its encouragement of melody, as essentially calculated to aid the cause of the musical art in this country.' The entrance-fee was five guineas, and the subscription eight guineas. Its professional members included Sir George Smart, Braham, Balfe, T. Cooke, Hawes, Sterndale Bennett, and other eminent English musicians. Among the artists who took part in the music in its earlier day were J. B. Cramer, Moscheles, Hummel, Field, Benedict, Lipinski, and many more players of the highest distinction. T. Cooke was musical director, and John Parry hon. secretary. After 1856 it must have ceased to exist. C. M.

MELODRAMA (Fr. *Melodrame*). I. A play—generally of the Romantic School—in which the dialogue is frequently relieved by music, sometimes of an incidental and sometimes of a purely dramatic character.

Such a play was the 'Pygmalion' of Jean Jacques Rousseau, who has been credited, on the strength of it, with having invented the style. The so-called English Operas of the older school—'The Beggar's Opera,' 'The Iron Chest,' 'The Castle of Andalusia,' 'The Quaker,' 'The English Fleet,' 'No Song no Supper,' 'Guy Mannering,' and a hundred others—are all really melodramas. [See English Opera, vol. i. p. 782.] It is difficult, indeed, in the case of English and German pieces with spoken dialogue, to say exactly where Melodrama ends and Opera begins. The line must be drawn somewhere; but unless we adopt the substitution of recitative for dialogue as a final test, its exact position must always remain more or less doubtful. On the other hand, were we to accept this distinction we should be compelled

[1] See his letter to Zelter, dated Rome, June 16, 1831.
[2] *Miscellanies*, under the article 'Miranda.'

to class at least half of the best German Operas as Melodramas—an indignity which was once actually inflicted upon 'Der Freischütz.'

Perhaps we may be justified in giving the name of Opera to those pieces in which the music is the chief attraction, and that of Melodrama to those in which the predominating interest is centred in the dialogue.

II. A peculiar kind of dramatic composition in which the actor recites his part in an ordinary speaking voice, while the orchestra plays a more or less elaborate accompaniment, appropriate to the situation, and calculated to bring its salient points into the highest possible relief. [See DECLAMATION, vol. i. p. 677.]

That the true Melodrama originated in Germany is certain; and there can be equally little doubt that the merit of its invention rests—notwithstanding all the arguments that can be adduced in favour of rival claimants—with Georg Benda, who first used it with striking effect in his 'Ariadne auf Naxos,' produced at Gotha in the year 1774. Since that time it has been employed to far greater advantage in the German schools of composition than in any others, and found more favour with German composers than with those of any other country. The finest examples produced since the beginning of the 19th century are, the Grave-digging scene in 'Fidelio'; the Dream in 'Egmont'; the Incantation scene in 'Der Freischütz'; some scenes in Mendelssohn's 'Midsummer Night's Dream'; Schumann's ballads for declamation, etc. Unhappily the performance of these finely conceived movements is not often very satisfactory. The difficulty of modulating the voice judiciously, in music of this description, is indeed almost insuperable. The general temptation is to let it glide, insensibly, into some note sounded by the Orchestra; in which case the effect produced resembles that of a Recitative, sung hideously out of tune—a perversion of the composer's meaning, which is simply intolerable.

Few artists seem to think this great difficulty worth the trouble of special study. More than one great German singer has, however, succeeded in overcoming it perfectly, and in winning rich laurels by his perseverance; notably Herr Staudigl, whose rendering of the great scene in 'Der Freischütz' was a triumph of melodramatic art. W. S. R.

MELODY is the general term vaguely used to denote successions of single notes which are musically effective. It is sometimes used as if synonymous with Tune or Air, but in point of fact many several portions of either Tunes or Airs may be accurately characterised as 'melody' which could not reasonably be made to carry the name of the whole of which they form only a part. Tunes and airs are for the most part constructively and definitely complete, and by following certain laws in the distribution of the phrases and the balance of the groups of rhythms, convey a total impression to the hearer; but melody has a more indefinite signification, and need not be a distinct artistic whole according to the accepted laws of art, though it is obvious that to be artistic it must conform to such laws as lie within its range. For example, the term 'melody' is often with justice applied to the inner parts of fine contrapuntal writing, and examples will occur to every one in numerous choruses, symphonic movements, and other instrumental works, where it is so perfectly woven into the substance of the work that it cannot be singled out as a complete tune or air, though it nevertheless stands out from the rest by reason of its greater beauty.

Melody probably originated in declamation through recitative, to which it has the closest relationship. In early stages of musical art vocal music must have been almost exclusively in the form of recitative, which in some cases was evidently brought to a very high pitch of expressive perfection, and no doubt merged into melody at times, much as prose in passages of strong feeling occasionally merges into poetry. The lowest forms of recitative are merely approximations to musical sounds and intervals imitating the inflexions of the voice in speaking; from this there is a gradual rise to the accompanied recitative, of which we have an example of the highest melodious and artistic beauty in the 'Am Abend da es kühle war,' near the end of Bach's 'Matthew Passion.' In some cases an intermediate form between recitative and tunes or airs is distinguished as an Arioso, of which we have very beautiful examples in Bach's 'John Passion' and in several of his Cantatas, and in Mendelssohn's 'Elijah.' Moreover, we have opportunities of comparing mere declamatory recitative and melody in juxtaposition, as both Bach and Mendelssohn adopted the device of breaking into melody in especially solemn parts of recitative; as in No. 17 of the 'Matthew Passion' to the words 'Nehmet, esset,' etc., and in Nos. 41 and 44 in 'St. Paul,' near the end of each.

It appears then that recitative and melody overlap. The former, in proportion as it approximates to speech in simple narration or description, tends to be disjointed and unsystematised; and in proportion as it tends, on the other hand, towards being musically expressive in relation to things which are fit to be musically embodied, it becomes melody. In fact the growth of melody out of recitative is by assuming greater regularity and continuity and more appreciable systematisation of groups of rhythms and intervals.

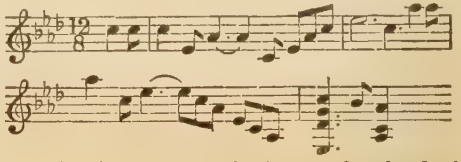
The elements of effect in melody are extremely various and complicated. In the present case it will only be possible to indicate in the slightest manner some of the outlines. In the matter of rhythm there are two things which play a part—the rhythmic qualities of language, and dance rhythms. For example, a language which

presents marked contrasts of emphasis in syllables which lie close together will infallibly produce corresponding rhythms in the national music; and though these may often be considerably smoothed out by civilisation and contact with other peoples, no small quantity pass into and are absorbed in the mass of general music, as characteristic Hungarian rhythms have done through the intervention of Haydn, Schubert, Brahms, and other distinguished composers. [See MAGYAR MUSIC, *ante*, p. 26.]

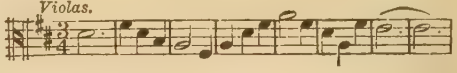
Dance-rhythms play an equally important part, and those rhythms and motions of sound which represent or are the musical counterpart of the more dignified gestures and motions of the body which accompany certain states of feeling, which, with the ancients and some mediæval peoples, formed a beautiful element in dancing, and are still travestied in modern ballets. [See DANCE RHYTHM, vol. i. pp. 657-660.]

In the distribution of the intervals which separate the successive sounds, harmony and harmonic devices appear to have very powerful influence. Even in the times before harmony was a recognised power in music we are often surprised to meet with devices which appear to show a perception of the elements of tonal relationship, which may indicate that a sense of harmony was developing for a great length of time in the human mind before it was definitely recognised by musicians. However, in tunes of barbaric people who have no notion of harmony whatever, passages of melody also occur which to a modern eye look exceedingly like arpeggios or analyses of familiar harmonies; and as it is next to impossible for those who are saturated with the simpler harmonic successions to realise the feelings of people who knew of nothing beyond homophonic or single-toned music, we must conclude that the authors of these tunes had a feeling for the relations of notes to one another, pure and simple, which produced intervals similar to those which we derive from familiar harmonic combinations. Thus we are driven to express their melody in terms of harmony, and to analyse it on that basis; and we are, moreover, often unavoidably deceived in this, for transcribers of national and ancient tunes, being so habituated to harmonic music and to the scales which have been adopted for the purposes of harmony, give garbled versions of the originals without being fully aware of it, or possibly thinking that the tunes were wrong and that they were setting them right. And in some cases the tunes are unmercifully twisted into forms of melody to which an harmonic accompaniment may be adjusted, and thereby their value and interest both to the philosopher and to every musician who hears with understanding ears is considerably impaired. [See IRISH MUSIC.]

Modern melody is almost invariably either actually derived from, or representative of harmony, and is dependent for a great deal of its effect thereupon. In the first place it is immediately representative in one of two ways: either as the upper outline of a series of different chords, and therefore representing changing harmonies; or else by being constructed of different notes taken from the same chord, and therefore representing different phases of permanent harmony. Examples of either of these forms being kept up for any length of time are not very common; of the first the largest number will be found among hymn tunes and other forms of simple note-against-note harmony;—the first phrase of 'Batti batti' approaches it very nearly, and the second subject of the first movement in Beethoven's Waldstein Sonata, or the first four bars of 'Selig sind die Todten' in Spohr's 'Die letzten Dinge' are an exact illustration. Of the second form the first subject of Weber's Sonata in A♭ is a remarkable example:—



since in this no notes foreign to the chord of A♭ are interposed till the penultimate of all. The first subject of the Eroica Symphony in like manner represents the chord of E♭, and its perfectly unadorned simplicity adds force to the unexpected C♯, when it appears, and to its yet more unexpected resolution; the first subject of Brahms's Violin Concerto is a yet further example to the point:—



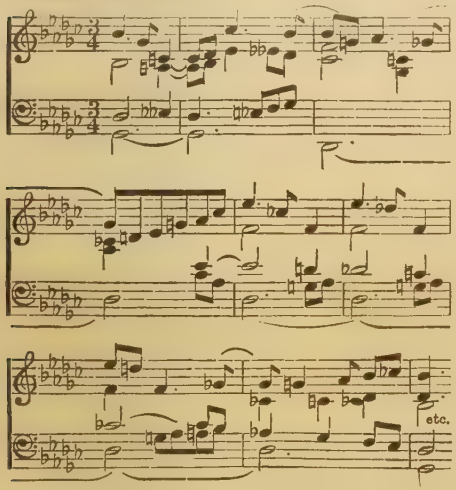
The simplest variation of these forms is arrived at by the interposition of passing notes between notes which are part of the essential chord or chords, as in the following from 'Cet asile aimable,' in Gluck's 'Orphée':—

The notes with asterisks may all be regarded as passing notes between the notes which represent the harmonies.

This often produces successions of notes which are next to each other in the scale; in other words, progression by single degrees, of which we have magnificent examples in some of the versions of the great subject of the latter part of Beethoven's Ninth Symphony, in the second subject of the first movement of his Violin

Concerto, and in the last chorus of Bach's 'Matthew Passion.' When these passing notes fall on the strong beats of the bar they lead to a new element of melodic effect, both by deferring the essential note of the chord and by lessening the obviousness of its appearance, and by affording one of the many means, with suspensions, appoggiaturas, and the like, of obtaining the slurred group of two notes which is alike characteristic of Bach, Gluck, Mozart, and other great inventors of melody, as in the following example from Mozart's Quartet in D major:—

The use of chromatic preparatory passing notes pushes the harmonic substratum still further out of sight, and gives more zest and interest to the melodic outline; as an example may be taken the following from the second Act of 'Tristan und Isolde':—



Along with these elements of variety there are devices of turns and such embellishments, such as in the beginning of the celebrated tune in 'Der Freischütz,' which Agatha sings in the second scene of the second Act:—

Sequences also, and imitations and anticipations, and all the most elaborate devices of resolution, come into play, such as interpolation of notes between the discordant note and its resolution. Further, there are endless refinements of grouping of phrases, and repetition of rhythms and groups of intervals in condensed forms and in different parts of the scale, which introduce an intellectual element even into the department of pure melody.

Lastly, it may be pointed out that the order and character of the successions of harmony which any special form of melody represents has a great deal to do with its importance. Commonplace tunes represent commonplace and trite successions of harmony in a commonplace way, while melody of a higher order usually represents successions which are in themselves more significant and more freely distributed. The giants of art have produced tunes the melody of which may represent the simplest harmonic successions, but they do it in their own way, and the result is proportionate to their powers and judgment. Unfortunately, the material of the simpler order of melody tends to be exhausted, and a large proportion of new melody has to be constructed on a more complicated basis. To take simple forms is often only to make use of what the great masters rejected; and indeed the old forms by which tunes are constructively defined are growing so hackneyed that their introduction in many cases is a matter for great tact and consideration. More subtle means of defining the outlines of these forms are possible, as well as more subtle construction in the periods themselves. The result in both cases will be to give melody an appearance of greater expansion and continuity, which it may perfectly have without being either diffuse or chaotic, except to those who have not sufficient musical gift or cultivation to realise it. In instrumental music there is more need for distinctness in the outline of the subjects than in the music of the drama; but even in that case it may be suggested that a thing may stand out by reason of its own proper individuality quite as well and more artistically than if it is only to be distinguished from its surroundings by having a heavy blank line round it. Melody will always be one of the most important factors in the musical art, but it has gone through different phases, and will go through more. Some insight into its direction may be gained by examination of existing examples, and comparison of average characters at different periods of the history of music, but every fresh great composer who comes is sure to be ahead of our calculations, and if he rings true will tell us things that are not dreamed of in our philosophy. C. H. H. P.

MELOPHONIC SOCIETY, THE, established 1837, 'for the practice of the most classical specimens of choral and other music,' by band and choir, under the management of J. H. Griesbach, H. Westrop, J. Surman, and H. J. Banister. The first performance, on Nov. 23, 1837, at Wornum's Music Hall, Store Street, was the 'Creation,' followed during the season by Beethoven's Mass in C, Romberg's Ode 'The Transient and the Eternal,' 'Judas

Maccabaeus,' and 'St. Paul.' In subsequent years the programmes comprised works of smaller dimensions, including Beethoven's Choral Fantasia. C. M.

MELOPIANO. A grand piano with a *sostinente* attachment, the invention of Signor Caldera, applied in England by Messrs. Kirkman & Son, who secured the sole right to use it here, and made several instruments with it. The principle is original, the apparently sustained sounds being produced by reiterated blows of small hammers placed nearer the wrestplank bridge than the striking-place of the ordinary hammers, and suspended by a bar above and crossing the strings. The bar is kept in tremulous motion by means of a fly-wheel and pedal which the player has to keep going. These additional hammers would cause a continuous sound were it not for the dampers of the ordinary action which govern by simple string communication the checks that keep them still. On pressing down the keys the dampers rise and the checks are withdrawn. A crescendo to the sostinente is obtained by a knee movement which raises the transverse bar, directs the little hammers into closer proximity with the strings, and strengthens their blow. The quick repetition deceives and at the same time flatters the ear by a peculiar charm of *timbre* inherent in steel wire when the sounds can be prolonged. The ordinary hammers are controlled by the performer as usual, and may be accompanied by the attachment, or the damper pedal may be used, for which due provision is made. It will be observed that the Melopiano has a special expression for which special music might be written; but although it has been introduced for many years, it has not come into general use. The cost of the application of this ingenious invention is about thirty guineas. [See also PIANO-VIOLIN and SOSTINENTE PIANO.] A. J. H.

MELUSINE. 'To the legend of the lovely Melusine' is the title of an overture of Mendelssohn's for orchestra, completed at Düsseldorf, Nov. 14, 1833, first performed there in the following July, and published as op. 32, the fourth of the Concert Overtures. In the autograph Mendelssohn spells the name with an *a* —'Melusina.' G.

MENDEL, HERMANN, editor of the largest and most comprehensive dictionary of music that has yet appeared, born at Halle, August 6, 1834. He studied music with energy in Leipzig and Berlin. From 1862 to 1868 he carried on a music business in the latter city, and at the same time wrote in various musical periodicals and took an active part in music generally. His lives of Meyerbeer (1868) and Otto Nicolai have been published separately. In 1870 Mendel started the work already mentioned—*Musikalisches Conversations-Lexikon*—with the help of a large and distinguished staff of writers. He died at Berlin on Oct. 26, 1876, and the Lexicon has been since completed in 11 vols. under the editorship of Dr. August Reissmann, who brought out the twelfth, supplementary, volume in 1883. G.

MENDELSSOHN.[1] JAKOB LUDWIG FELIX MENDELSSOHN-BARTHOLDY was born on Friday, Feb. 3, 1809, at Hamburg, in a house in the thoroughfare now called the Grosse Michaelisstrasse, and at the present time (1906) numbered 54.[2] The family was already well known from Moses Mendelssohn, the grandfather of Felix, 'The Modern Plato,' whose 'Phädon,' a dialogue upon the immortality of the soul, based on the 'Phaedo' of Plato, was translated, long before the birth of his illustrious grandson, into almost every European (and at least one Asiatic) language.[3] Moses was the son of Mendel, a poor Jewish schoolmaster of Dessau, on the Elbe, and was born there Sept. 6, 1729. The name Mendelssohn, *i.e.* 'son of Mendel,' is the ordinary Jewish, oriental way of forming a name. Moses migrated at fourteen years old to Berlin, settled there in 1762, married Fromet, daughter of Abraham Gugenheim, of Hamburg, had many children, of whom six attained maturity, three sons and three daughters, published his 'Phädon' at Berlin in 1767, and died there Jan. 4, 1786. He was a small, humpbacked man, with a keen, eager face, bright eyes, and a humorous mouth. The first peculiarity was

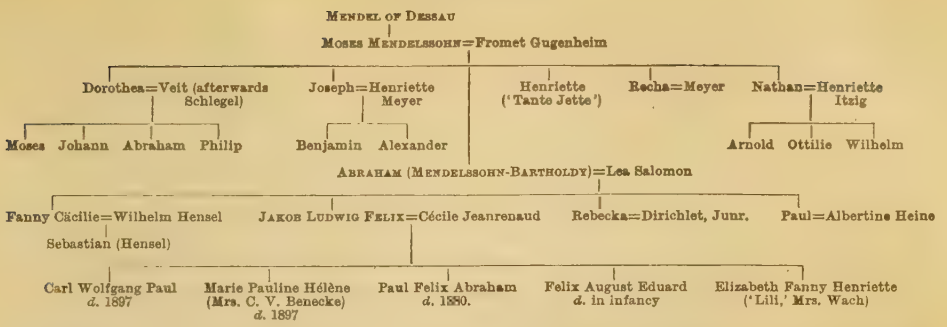
[2] Ferdinand David, destined to become so great a friend of Mendelssohn's, was born in the same house the year after. The house is at the corner of the Brunnenstrasse, and is now (1906), at the instigation of Mr. and Madame Otto Goldschmidt, decorated with a memorial tablet over the front door.

[3] Dutch (Hague, 1769); French, 2 versions (Paris, 1772; Berlin, 1772); Italian, 2 do. (Chur, 1773; Parma, 1800); Danish (Copenhagen, 1779); Hebrew (Berlin, 1786); English (London, 1789); also Russian, Polish, and Hungarian. It is a curious evidence of the slowness with which music penetrated into literary circles in England, that the excellent article on Moses Mendelssohn in the *Penny Cyclopædia*, though published in 1839, makes no mention of Felix, who had then been five times in this country. The 'Phädon' attracted the notice of no less a person than Mirabeau.—*Sur M. Mendelssohn*, etc. London, 1787.

JAKOB LUDWIG FELIX MENDELSSOHN-BARTHOLDY



traceable in his grandchild Fanny, and the bright eyes were one of Felix's most noticeable characteristics. After the death of Moses his widow left Berlin with Joseph, the eldest son, and returned to her native city.

Abraham, the second son, born Dec. 11, 1776, went to Paris, and in 1803 was cashier in Fould's bank there. In 1804 he resigned this post and went into partnership with his elder brother Joseph; married, Dec. 26, 1804, Lea Salomon (born March 26, 1777), of a Jewish family in Berlin, and settled in Hamburg, carrying on his business at the house above mentioned, and having also a house out of town called 'Marten's Mühle.' He remained in Hamburg till 1811, and there were born to him Fanny Cäcilie (Nov. 14, 1805), Jakob Ludwig Felix (Feb. 3, 1809), and Rebecka (April 11, 1811). During the French occupation of Hamburg, life became intolerable, and shortly after Rebecka's birth the whole family escaped in disguise to Berlin, where they started the eminent banking-house, and lived in a large house on the Neue Promenade, in the N.E. quarter of the town, a broad open street or place between the Spree and the Haacksche Markt, with houses on one side only, the other side lying open to a canal with trees, a sufficiently retired spot as late as 1820 for Felix and his friends to play in front of it.[1] There, eleven days after the battle of Leipzig, Abraham's second son and youngest child, Paul, was born (Oct. 30, 1813). The daughters of Moses Mendelssohn, Dorothea and Henriette, became Roman Catholics. Dorothea married Friedrich von Schlegel, and Henriette was governess to Fanny, the only daughter of General Sebastiani, afterwards (1847) so unfortunate as the Duchesse de Praslin. The sons remained Jews; but at length Abraham saw that the change was inevitable, and decided[2] to have his children baptized and brought up as Protestant Christians. This decision was taken on the advice and example of his wife's brother Salomon Bartholdy, to whom also is due the adoption of the name Bartholdy, 'after the former proprietor of the garden belonging to the family.' He himself had taken it, and he urged it on his brother-in-law as a means of distinction from the rest of the family. Salomon was a man of mark. He resided in Rome for some time as Prussian Consul-General; had his villa on Monte Pincio (Casa Bartholdy) decorated with frescoes,[3] by Veit, Schadow, Cornelius, Overbeck, and Schnorr, collected objects of art, and died there in 1827, leaving his fortune to his sister Lea. He was cast off by his mother for his conversion, and was only reconciled long after, at the entreaty of Fanny.[4] At a later date Abraham and Lea were received into the Christian Church at Frankfort, and Lea took the additional names of Felicia Paulina, from her sons.

Abraham Mendelssohn was accustomed to describe his position in life by saying 'formerly[5] I was the son of my father, now I am the father of my son.'[6] But though not so prominent as either, he was a man of strong character, wise judgment, and very remarkable ability. These qualities are strikingly obvious in the success of his method for the education of his children, and in the few of his letters[7] which are published; and they are testified to in a very remarkable manner by his son in many passages of his letters, and in the thorough deference which he always pays to the judgment of his father, not only on matters relating to the conduct of life, but on points of art. Though not, like Leopold Mozart, a technical musician, and apparently having no acquaintance with the art, he had yet an insight into it which many musicians might envy. 'I am often,' says his son, 'quite unable to understand how it is possible to have so accurate a judgment about music without being a technical musician, and if I could only say what I feel in the same clear and intelligent manner that you always do, I would certainly never make another confused speech as long as I live.'[8] Or again, this time after his death, 'not only my father, but . . . my teacher both in art and in life.'[9]

Though apparently cold in his manners, and somewhat stern in his tone, and towards the end perhaps unduly irritable, Abraham Mendelssohn was greatly beloved by his wife and children. Felix, in particular, is described as 'enthusiastically, almost fanatically, fond of him,'[1] and the letters show how close was the confidence which existed between them. Hardly less remarkable was the mother. She was one of those rare persons whose influence seems to be almost in proportion to the absence of any attempt to exert it. Hiller when a boy saw her once, and the impression made upon him by the power of her quiet kindness and gentleness remained fresh in his mind after more than half a century.[2] When her house was thronged with the intellect and wit of Berlin, she was the centre of the circle and the leader of the conversation.[3] Her letters, of which large numbers exist in manuscript, are full of cleverness and character. Her practical sense of the value of money comes out in her letters to Ferdinand David.[4] The education of her children was her great object in life. She was strict—we may now think over strict[5]; but no one who looks at the result in the character of her children can say that her method was not a wise one. They loved her dearly to the end, and the last letters which Felix wrote to her are full of an overflowing tenderness and a natural confidential intimacy which nothing can surpass. Calm and reserved like her husband, she was full of feeling, and had on occasion bursts of passion. Felix's intention to leave Berlin affected her to a 'terrible' degree—a degree which surprised him. He confesses that his yielding to the wishes of the King, after having made up his mind to retire, was due solely to her. 'You think that in my official position I *could* do nothing else. It was not that. It was my mother.'[6]

How far she was herself a pianoforte player we are not told, but the remark which she made after Fanny's birth, 'that the child had got Bach-fugue fingers,' shows that she knew a good deal about the matter. We learn also that she herself for some time taught the two eldest children music, beginning with lessons five minutes long, and gradually increasing the time until they went through a regular course of instruction.[7] For many years Felix and Fanny never practised or played without the mother sitting by them, knitting in hand.

Felix was scarcely three when his family escaped to Berlin. The first definite event of which we hear after this is a visit to Paris by Joseph and Abraham in 1816, for the liquidation of the indemnity to be paid by France to Prussia on account of the war. Abraham took his family with him, and Felix and Fanny, then seven and eleven respectively, were taught the piano by Madame Bigot, a remarkable musician, and apparently an excellent teacher. She was the daughter of a Madame Kiéné, and in 1816 was thirty years old. Miniatures of the four children were taken during this visit, which are still in existence.[8] Soon after their return from Paris to the grandmother's house at the Neue Promenade, where the family still lived, the children's education seems to have begun systematically. Heyse[9] was their tutor for general subjects, Ludwig Berger for the piano, Zelter for thorough-bass and composition, Henning for the violin, and Rösel for landscape. Felix learned Greek with Rebecka, two years his junior, and advanced as far as Æschylus.[10]

On Oct. 28, 1818, he made his first appearance in public at a concert given by a certain Herr Gugel, in which he played the pianoforte part of a Trio for pianoforte and two horns by Woelfl, and was much applauded.[11] The children were kept very closely to their lessons, and Felix is remembered in after-life to have said how much they enjoyed their Sundays, because then they were not forced to get up at 5 o'clock to work. Early in his eleventh year, on April 11, 1819, he entered the singing-class of the Singakademie as an alto, for the Friday practisings. There and elsewhere 'he took his place,' says Devrient,[12] 'amongst the grown-up people in his child's dress, a tight-fitting jacket, cut very low at the neck, over which the wide trousers were buttoned, into the slanting pockets of these the little fellow liked to thrust his hands, rocking his curly head [he had long brown curls] from side to side, and shifting restlessly from one foot to the other.'

With 1820, that is to say with his twelfth year, Felix seems to have begun systematically to compose; at least with that year begins the invaluable series of forty-four volumes, in which Mendelssohn's methodical habits have preserved a collection of autographs or copies of a great part of his works, published and unpublished, down to the time of his death, the majority carefully inscribed with both date and place—which are now deposited in the Royal Library at Berlin.

To the year 1820 are attributable between fifty and sixty movements, including amongst them a Trio for pf. and strings (three movements); a Sonata in F for pf. and violin (three do.); two movements in D minor for the same; two full Sonatas for pf. solo; the beginning of a third in G minor, finished the next year, and published in 1868 (as op. 105); six pieces for pf. solo; three pieces for the same instrument, four hands; four pieces for organ; three songs; two part-songs for men's voices; a cantata, 'In

rührend feierlichen Tönen' ; and a Lustspiel, or little comedy, for voices and pf. in three scenes, beginning 'Ich J. Mendelssohn.' The earliest date is that to the cantata—Jan. 13, 1820. The extraordinary neatness and finish, which characterise Mendelssohn's MSS. to the end, are observable in the earliest of these childish productions, and the mysterious letters L. v. g. G., or H. d. m., so familiar to those who know his latest scores, are usually at the head of each.

Among the pieces for 1821 are five sinfonies for string quartet, each in three movements ; nine fugues for ditto ; the completion of the G minor pf. sonata (op. 105) ; motets for four voices ; a couple of songs ; a couple of études for pf. solo ; two one-act operas, 'Soldatenliebschaft' and 'Die beiden Pädagogen'[1] ; and half a third opera, 'Die wandernden Comödianten.' 1821 was the year of his acquaintance with Weber, then in Berlin for the production of 'Der Freischütz,' and of an enthusiasm on the part of the boy for that romantic composer which he never lost.[2] This, too, was the year of his first visit to Goethe. Zelter took his pupil to Weimar in November, and they passed sixteen days under the old poet's roof.[3]

In 1822 Felix made a second appearance in public of a more serious nature than before, viz. on March 31, at a concert of Aloys Schmitt's, in which he played with Schmitt a duet of Dussek's for two pianos. In the summer the whole family made a tour in Switzerland. Starting on July 6, they went by Cassel (for Spohr), Frankfort, Darmstadt, Schaffhausen, Amsteg, Interlaken, Vevey, and Chamounix ; a large and merry party of ten, besides servants. The tour was taken at great leisure, and on the return two important halts were made—first at Frankfort, to make the acquaintance of Schelble, the conductor of the famous Cäcilien-Verein, whom Felix astonished by extemporising on Bach's motets ; and at Weimar, for a second visit to Goethe.[4]

At Secheron, near Geneva, two songs were written (Sept. 18, 1822) ; and the Pianoforte quartet in C minor, afterwards published as op. 1, was begun to be put on paper (the autograph being marked 'Begun at Secheron, Sept. 20, 1822'), and was finished after the return home. Besides this, the records of these two years (1822 and 1823) contain six more symphonies, Nos. 7, 8, 9, 10, 11, 12 ; six detached pieces for strings ; five concertos for solo instruments with quartet accompaniment, viz. one for violin solo, one for pf. solo, one for pf. and violin, and two for two pfs. ; two quartets for pf. and strings, viz. in C minor (op. 1) and in F minor (op. 2) ; sonata for pf. and violin (op. 4) and for pf. and viola (MS.) ; a fantasia and three other pieces for the organ ; a fugue and fantasia for pf. ; a Kyrie for two choirs ; a psalm, three songs, a piece for contralto solo and strings, in three movements, to Italian text ; two songs for men's voices, and the completion of the fourth opera, 'Die beiden Neffen,' or 'Der Onkel aus Boston,' which was a full-grown piece in three acts. The symphonies show a similar advance. They are in four movements instead of three, as before, and the length of the movements increases. No. 8, in D, written between Nov. 6 and Nov. 27 (1822), after the return from Switzerland, has an *Adagio e grave* before the opening *Allegro*. The slow movement is for three violas and bass, and the finale has a prominent part for the violoncello. This symphony must have pleased the composer or some of his audience in whose judgment he believed, since within a month he began to re-score it for full orchestra. He wrote a new trio for the minuet, and in this form it became Symphony No. 9. The three last of the six are for quintet, and the scherzos of Nos. 10 and 12 are founded on Swiss tunes, in No. 12 with the addition of triangles, cymbals, and drums. The independent violoncello part is conspicuous throughout. This advance in his music is in keeping with the change going on in Felix himself. He was now nearly fourteen, was growing fast,[5] his features and his expression were altering and maturing, his hair was cut short,[6] and he was put into jackets and trousers. His extemporising—which he had begun to practise early in 1821[7]—was already remarkable,[8] and there was a dash of audacity in it hardly characteristic of the mature man. Thus Goethe wished to hear a certain fugue of Bach's, and as Felix could not remember it all, he developed it himself at great length, which he would hardly have done later.[9] After his return home, on Dec. 5, 1822, he appeared at a concert given by Madame Anna Milder, when he played a pianoforte concerto of his own, probably that in A minor with quintet accompaniment.[10]

The same incessant and varied production of previous years marks those of 1822 and 1823. It must not be supposed that the symphonies, operas, quartets, concertos, and other works mentioned were written as exercises only. It had been the custom in the Mendelssohn house for some time past to have musical parties on alternate Sunday mornings, with a small orchestra, in the large dining-room of the house, and the programmes included one or more of Felix's compositions. As a rule the pianoforte part was taken by himself or Fanny, or both, while Rebecka sang, and Paul played the violoncello. But Felix always conducted, even when so small as to have to stand on a stool to be seen ; thus he enjoyed the benefit not only of hearing his compositions played (a benefit for which less fortunate composers—Schubert, for example—have sighed in vain) but of the practice in conducting and in playing before an

audience.[1] The size of the room was not sufficient for a large audience, but on these occasions it was always full, and few musicians of note passed through Berlin without being present.[2] In performing the operettas and operas, no attempt was made to act them. The characters were distributed as far as the music went, but the dialogue was read out from the piano, and the chorus sat round the dining-table. Zelter, in strong contrast to his usual habit of impartial neglect of his pupils, was not only regularly there, but would criticise the piece at the close of the performance, and if he often praised would sometimes blame. The comments of his hearers, however, were received by Felix with perfect simplicity. Devrient has well described how entirely the music itself was his aim,[3] and how completely subordinated were self-consciousness and vanity to the desire of learning, testing, and progressing in his art. These Sunday performances, however, were only one feature of the artistic and intellectual life of the house. Music went on every evening more or less, theatricals, impromptu or studied, were often got up, and there was a constant flux and reflux of young, clever, distinguished people, who made the suppers delightfully gay and noisy, and among whom Felix was the favourite.

In August 1823 Abraham Mendelssohn and his two sons, Felix and Paul, made a journey to Silesia. Felix, aged fourteen, was announced to play at a charity concert at Reinerz, in a pianoforte concerto by Mozart, but the amateur orchestra of the town played so abominably out of time and tune at the rehearsal, that the boy-performer made the schoolmaster announce at the concert that he (Felix) would extemporise instead of playing the concerto: this he did with great success, selecting his themes from Mozart and Weber.[4]

The full rehearsal of his fourth opera, 'Die beiden Neffen,' on his fifteenth birthday, Feb. 3, 1824, was an event in the boy's life. At supper, after the conclusion of the work, Zelter, adopting freemason phraseology, raised him from the grade of 'apprentice,' and pronounced him an 'assistant,' 'in the name of Mozart, and of Haydn, and of old Bach.'[5] A great incentive to his progress had been given shortly before this in the score of Bach's Passion, copied by Zelter's express permission from the MS. transcript in the Singakademie, and given him by his grandmother at Christmas, 1823. The copy was made by Eduard Rietz,[6] who had succeeded Henning as his violin teacher, and to whom he was deeply attached. His confirmation took place about this date, under Wilmsen, a well-known clergyman of Berlin. Preparation for confirmation in Germany is often a long and severe process, and though it may not[7] in Felix's case have led to any increase in church-going, as it probably would in that of an English lad similarly situated, yet we may be sure that it deepened that natural religious feeling which was so strong an element in the foundation of his character.

In the compositions of 1824 there is a great advance. The Symphony in C minor (op. 11)—which we now know as 'No. 1,' but which on the autograph in the library of the Philharmonic Society is marked 'No. XIII.'—was composed between March 3 and 31. The Sestet for pf. and strings (op. 110), the pianoforte quartet in B minor[8] (op. 3), a fantasia for four hands (pf.), and a motet in five numbers are all amongst the works of this year. An important event in the summer of 1824 was a visit of the father, Felix, and Rebecka, to Dobberan, a bathing-place on the shores of the Baltic near Rostock. For the wind-band at the bath-establishment at Dobberan Felix wrote an overture which he afterwards scored for a full military band and published as op. 24. But the chief result of the visit was that he there for the first time saw the sea, and received those impressions and images which afterwards found their tangible shape in the Meeresstille Overture.

Among the great artists who came into contact with Felix at this time was Moscheles, then on his way from Vienna to Paris and London. He was already famous as a player, and Frau Mendelssohn calls him 'the prince of pianists.' He remained in Berlin for six weeks in November and December 1824, and was almost daily at the Mendelssohns'; and after a time, at the urgent request of the parents, and with great hesitation on his own part, gave Felix regular lessons on the pianoforte every other day. Moscheles was then thirty. It is pleasant to read of his unfeigned love and admiration for Felix and his home—'a family such as I have never known before; Felix a mature artist, and yet but fifteen; Fanny extraordinarily gifted, playing Bach's fugues by heart and with astonishing correctness—in fact, a thorough musician. The parents gave me the impression of people of the highest cultivation. They are very far from being over-proud of their children; indeed, they are in anxiety about Felix's future, whether his gifts are lasting, and will lead to a solid, permanent future, or whether he may not suddenly collapse, like so many other gifted children.' 'He has no need of lessons; if he wishes to take a hint from me as to anything new to him, he can easily do so.' Such remarks as these do honour to all concerned, and it is delightful to find Mendelssohn years afterwards, in the full glory of his great fame, referring to these very

[1] It seems that he accompanied the quartet symphonies on the piano. Dorn, in his *Recollections*, expressly says so, and the slow movement of the Symphony No. 10 contains a note in Mendelssohn's own writing, 'Das Klavier mit dem Basse,' which seems to prove it. The practice, therefore, did not end with the 18th century, as has been supposed (Prof. E. Prout, 'On the Growth of the Modern Orchestra,' *Proceedings of the Musical Association*, 1878-79, p. 37).

lessons as having fanned the sacred fire within him and urged him on to enthusiasm.[1]

Moscheles has preserved two of the Sunday morning programmes:—

'Nov. 28. (Sunday) Morning music at the Mendelssohn's:—Felix's C minor quartet; his D major symphony; Concerto by Bach (Fanny); Duet for two pianos in D minor, Arnold.'

'Dec. 12. Sunday music at Mendelssohn's:—Felix's F minor quartet. I played my Duet in G for two pianos. Little Schilling played Hummel's Trio in G.'

Moscheles was followed by Spohr, who came to superintend the first performance at Berlin of his opera 'Jessonda' (Feb. 14, 1825). He was often at the house, and on very intimate terms, though he does not mention the fact in his Autobiography.[2]

One or two accounts by competent judges of Felix's style of playing at this time have been preserved. Hiller was with him in Frankfort in the spring of 1825, and speaks both of his extemporising and of his playing the music of others.[3] With the latter he delighted both Hiller and André (who relished neither his face, his ideas, nor his manners) by playing the *Allegretto* of Beethoven's Seventh Symphony in such a 'powerful orchestral style' as fairly to stop André's mouth. With the former he carried Hiller away by extemporising on Handel's choruses in 'Judas,' as he had done Schelble, in the same room three years before, on subjects from Bach's motets. This time his playing was quite in the vein of his subject; 'the figures which he used were thoroughly Handelian, and the power and clearness of his passages in thirds, sixths, and octaves were really grand, and yet it all belonged to the subject-matter, thoroughly true, genuine, living music, with no trace of display.' Dorn is more explicit as to his accompanying—the duet in 'Fidelio.' 'He astonished me in the passage, "Du wieder nun in meinen Armen!" by the way in which he represented the violoncello and the bass parts on the piano, playing them two octaves apart. I asked him why he chose that striking way of rendering the passage, and he explained it all to me in the kindest manner. How many times since,' says Dorn, 'has that duet been sung in Berlin to the pianoforte, but how rarely has it been accompanied in such a manner!'[4] He rarely played from book, either at this or any other time of his life. Even works like Beethoven's Ninth Symphony, and the sonata in B flat (op. 106), he knew by heart.[5] One of the grounds of Spontini's enmity to him is said to have been a performance of the Ninth Symphony by Felix, without book, before Spontini himself had even heard it, and it is known on the best authority that he played the symphony through by heart only a few months before his death. Here we may say that he had a passion for Beethoven's latest works, his acquaintance with which dated from their publication, Beethoven's last years (1820-27) exactly corresponding with his own growth to maturity. It was almost the only subject on which he disagreed with his father.[6] On the other hand, the devotion of such very conservative artists as David, Rietz, and Sterndale Bennett, to those works, is most probably due to Mendelssohn's influence. Marx[7] challenges his reading of Beethoven; but this is to fly in the face of the judgment of all other critics.

In 1825 the elder Mendelssohn made a journey to Paris, for the purpose of fetching his sister Henriette back to Germany, and took Felix with him. They arrived on March 22. One of the first things he mentions is the astonishment of his relatives at finding him no longer a child.[8] He plunged at once into musical society. Hummel, Onslow, Boucher, Herz, Halévy, Kalkbrenner, Moscheles (on his way back from Hamburg to London, with his bride), Pixis, Rode, Baillot, Kreutzer, Rossini, Paer, Meyerbeer, Plantade, and many more, were there, and all glad to make acquaintance with the wonderful boy. At Madame Kiéné's—Madame Bigot's mother—he played his new pianoforte quartet (in B minor) with Baillot and others, and with the greatest success.

The French musicians, however, made but a bad impression on him. Partly, no doubt, this is exaggerated in his letters, as in his criticism on Auber's 'Léocadie'[9]; but the ignorance of German music—even Onslow,[10] for example, had never heard a note of 'Fidelio'—and the insults to some of its masterpieces (such as the transformation of 'Der Freischütz' into 'Robin des Bois,'[11] and the comparison of a passage in Bach's A minor organ prelude to a favourite duet of Monsigny), and the general devotion to effect and outside glitter—these were just the things to enrage the lad at that enthusiastic age. With Cherubini their intercourse was very satisfactory. The old Florentine was more than civil to Felix, and his expressions of satisfaction (so very rare in his mouth) must have given the father the encouragement which he was so slow to take in the great future of his boy.[12] Felix describes him in a few words as 'an extinct volcano, now and then blazing up, but all covered with ashes and stones.' He wrote a Kyrie '*a 5 voci* and *grandissimo* orchestra' at the instance of Cherubini,[13] which he describes as 'bigger than anything he had yet

[12] Marx (*Errin.* ii. 113, 114) says that the father's hesitation as to his son's future was so great, that, even to a late date, he constantly urged him to go into business. He believed that his son had no genius for music, and that it was all the happier for him that he had not.
[13] *Briefwechsel zwischen Goethe und Zelter in den Jahren 1796 bis 1832* (Berlin, 1834); iv. 35; *G. & M.* p. 49.

done.'[1] The Kyrie seems to have been lost. Through all this the letters home are as many as ever, full of music, descriptions, and jokes—often very bad ones. Here, for instance, is a good professional query: 'Ask Ritz if he knows what *Fes moll* is.'

On May 19, 1825, the father and son left Paris with Henriette ('Tante Jette'), who had retired from her post at General Sebastiani's with an ample pension, and thenceforward resided at Berlin. On the road home they paid a short visit (the third) to Goethe, at Weimar. Felix played the B minor pianoforte quartet (op. 3), and delighted the poet by dedicating it to him.[2] It is a marvellous work for a boy of sixteen, and an enormous advance on either of its two predecessors; but probably no one—not even the composer—suspected that the Scherzo (in F sharp minor, 3-8) was to be the first of a 'family of scherzi which, if he had produced nothing else, would stamp him as an inventor in the most emphatic signification of the word.' It must be admitted that Goethe made him a very poor return for his charming music. Anything more stiff and ungraceful than the verses which he wrote for him, and which are given in *Goethe and Mendelssohn*, it would be difficult to find, unless it be another stanza, also addressed to Felix, and printed in vol. i. p. 477 of the poet's works (Stuttgart, 1860):—

Wenn das Talent verständig waltet,	If Talent reigns with Wisdom great,
Wirksame Tugend nie veraltet.	Virtue is never out of date.
Wer Menschen gründlich konnt' erfreun,	He who can give us pleasure true
Der darf sich vor der Zeit nicht scheun;	Need never fear what time can do;
Und möchtet ihr ihm Beifall geben,	And will you Talent your approval give?
So gebt ihn uns, die wir ihn frisch beleben.	Then give it us who make her newly live.

They were at home before the end of May. The fiery Capriccio in F sharp minor for pf. (afterwards published as op. 5), so full of the spirit of Bach, is dated July 23 of this year, and the score of 'Camacho's Wedding'—an opera in two acts by Klingemann, founded on an episode in 'Don Quixote'—is dated August 10. The Capriccio was a great favourite with him, and he called it *une absurdité*.

The Mendelssohn-Bartholdy family was beginning to outgrow the accommodation afforded by the grandmother's roof, and at the end of the summer of 1825 they removed from No. 7 Neue Promenade to a large house and grounds which had formerly belonged to the noble family of Reck, namely to No. 3 of the Leipziger Strasse, the address so familiar to all readers of Felix's subsequent letters. If we were writing the life of an ancient prophet or poet, we should take the name of the 'Leipzig Road' as a prediction of his ultimate establishment in that town; but no token of such an event was visible at the time. The new residence lay in a part of Berlin which was then very remote, close to the Potsdam Gate, on the edge of the old Thiergarten, or deer park, of Frederick the Great, so far from all the accustomed haunts of their friends, that at first the laments were loud. The house was of a dignified, old-fashioned kind, with spacious and lofty rooms; behind it a large court with offices, and behind that again a beautiful stretch of ground, half park, half garden, with noble trees, lilacs, and other flowering shrubs, turf, alleys, walks, banks, summer-houses, and seats—the whole running far back, covering about ten acres, and being virtually in the country. Its advantages for music were great. The house itself contained a room precisely fitted for large music parties or private theatricals; and at the back of the court, and dividing it from the garden, there was a separate building called the 'Gartenhaus,' the middle of which formed a hall capable of containing several hundred persons, with glass doors opening right on to the lawns and alleys—in short, a perfect place for the Sunday music.[3] Though not without its drawbacks in winter—reminding one of Hensel's almost pathetic description of the normal condition of too many an English house—it was an ideal summer home, and '3, Leipziger Strasse' is in Mendelssohn's mouth a personality, to which he always turned with longing, and which he loved as much as he hated the rest of Berlin. It was identified with the Mendelssohn-Bartholdys till his death, after which it was sold to the state; and the Herrenhaus, or House of Lords of the German government, now stands on the site of the former court and Gartenhaus.[4]

Devrient takes the completion of 'Camacho' and the leaving the grandmother's house as the last acts of Felix's musical minority; and he is hardly wrong, for the next composition was a wonderful leap into maturity.[5] It was no other than the Octet for strings (afterwards published as op. 20), which he finished towards the end of October 1825, and dedicated to Eduard Ritz as a birthday gift. It is the first of his works which can be said to have fully maintained its ground on its own merits, and is a truly astonishing composition for a boy half-way through his seventeenth year. There is a radiance, a freedom, and an individuality in the style which are far ahead of the 13th Symphony, or any other of the previous instrumental works, and it is steeped throughout in that inexpressible captivating charm which is so remarkable in all Mendelssohn's best compositions. The Scherzo especially (G minor, 2-4) is a movement of extraordinary lightness and grace, and the Finale, besides being a masterly piece of counterpoint (it is a fugue),

[1] 'An Dickigkeit alles übertrifft.'
[2] For the details see *G. & M.* p. 50.
[3] *F.M.* i. 142.
[4] The large yew-tree which stood close outside the Gartenhaus and was endangered by the extension of the new building, was preserved by the special order of the Emperor, and although transplanted to another part of the garden, is still vigorous, and as gloomy as a yew should be.
[5] *Dev.* p. 20.

contains in the introduction of the subject of the scherzo a very early instance of 'transformation of themes.' Felix had confided to Fanny[1] that his motto for the scherzo was the following stanza in the Intermezzo of 'Faust':—

Orchester.—(*pianissimo*)

Wolkenzug und Nebelflor	Floating cloud and trailing mist
Erhellen sich von oben;	Bright'ning o'er us hover;
Luft im Laub, und Wind im Rohr.	Airs stir the brake, the rushes shake—
Und Alles ist zerstoben.	And all their pomp is over.

and never was a motto more perfectly carried out in execution. The whole of the last part, so light and airy—and the end, in particular, where the fiddles run softly up to the high G, accompanied only with staccato chords—is a perfect illustration of 'Alles ist zerstoben.' He afterwards instrumented it for full orchestra, but it is hard to say if it is improved by the process.[2] The so-called Trumpet Overture, in C (op. 101), was almost certainly composed this autumn, and was first heard at a concert given by Maurer, in Berlin, on Nov. 2, at which Felix played the pianoforte part of Beethoven's Choral Fantasia.[3] This overture was a special favourite of Abraham Mendelssohn's, who said that he should like to hear it while he died. It long remained in MS. in the hands of the Philharmonic Society, and was not published until many years after the death of the composer. 1826 opens with the string quintet in A (op. 18),[4] which, if not perhaps so great as the octet, is certainly on the same side of the line, and the scherzo of which, in fugue-form, is a worthy companion to its predecessors. The pianoforte sonata in E (op. 6) is of this year (March 22, 1826). So is an interesting-looking Andante and Allegro (June 27), written for the wind-band of a Beer-garden which he used to pass on his way to bathe; the MS. is safe in the hands of Dr. Paul Mendelssohn-Bartholdy's widow at Berlin.

But all these were surpassed by the Overture to 'A Midsummer Night's Dream,' which was composed during the peculiarly fine summer of 1826, under the charming conditions of life in the new garden,[5] and the score of which is signed 'Berlin, August 6, 1826.' It appears to have been the immediate result of a closer acquaintance with Shakespeare, through the medium of Schlegel and Tieck's version, which he and his sisters read this year for the first time. Marx claims to have been much consulted during its progress, and even to have suggested essential modifications.[6] Fanny also no doubt was in this, as in other instances, her brother's confidante, but the result must have exceeded even the fondest wishes of those who knew him best. It is asserted by one who has the best right to judge, and is not prone to exaggeration,[7] 'that no one piece of music contains so many points of harmony and orchestration that had never been written before as does this, and they have none of them the air of experiment, but seem all to have been written with certainty of their success.' In this wonderful overture, as in the Octet and Quintet, the airy fairy lightness, and the peculiar youthful grace, are not less remarkable than the strength of construction and solidity of workmanship which underlie and support them. Not the least singular thing about it is the exact manner in which it is found to fit into the music for the whole play when that music was composed seventeen years later. The *motives* of the overture all turn out to have their native places in the drama.[8] After many a performance as a duet on the piano, the overture was played by an orchestra in the Mendelssohns' garden-house, to a crowded audience, and its first production in public seems to have been at Stettin, in Feb. 1827, whither Felix went in very severe weather to conduct it.[9] With the composition of this work he may be said to have taken his final musical degree, and his lessons with Zelter were discontinued.

'Camacho' had been submitted to Spontini as General-Music-Director in the preceding year by Felix himself. Spontini was then, by an odd freak of fortune, living in a house which had for some time been occupied by the Mendelssohns in the early part of their residence in Berlin, viz. 28, Markgrafen Strasse, opposite the Catholic church. Taking the young composer by the arm, Spontini led him to the window, and pointing to the dome across the street, said, 'Mon ami, il vous faut des idées grandes comme cette coupole.'[10] This from a man of fifty-two, in the highest position, to a boy of seventeen, could hardly have been meant for anything but kindly, though pompous, advice. But it was not so taken. The Mendelssohns and Spontini were not only of radically different natures, but they belonged to opposite parties in music, and there was considerable friction in their intercourse. At length, early in 1827, after various obstructions on Spontini's part, 'Camacho' was given out for rehearsal and study, and on April 29 was produced. The house—not the Opera-house, but the smaller theatre—was crowded with friends, and the applause vehement; at the end the composer was loudly called for, but he had left the theatre, and Devrient had to appear in his stead. Owing to the illness of Blum, the tenor, the second performance was postponed,

[1] *F.M.* i. 154.

[9] *F.M.* i. 156. Felix's MS. letter from Stettin, Feb. 17, 1827, is the first in which his father is addressed as 'Herr Stadtrath.'
[10] 'My friend, your ideas must be grand—grand as that dome.' Marx, *Errin.* i. 247.

and the piece was never again brought forward. Partly from the many curious obstructions which arose in the course of the rehearsals, and the personal criticisms which followed it, partly perhaps from a just feeling that the libretto was poor and his music somewhat exaggerated, but mainly no doubt from the fact that during two such progressive years as had passed since he wrote the piece he had outgrown his work,[1] Felix seems to have so far lost interest in it as not to press for another performance. The music was published complete in pianoforte score by Laue, of Berlin, in 1828.

A nature so keenly sensitive as his could hardly be expected to pass with impunity through such worries as attended the production of the opera. He was so sincere and honest that the sneers of the press irritated him unduly. A year before (in 1826) he had vented his feelings in some lines which will be new to most readers:—

Schreibt der Komponiste ernst, Schläfert er uns ein; Schreibt der Komponiste froh, Ist er zu gemein;	If the artist gravely writes, To sleep it will beguile. If the artist gaily writes, It is a vulgar style.
Schreibt der Komponiste lang, Ist es zum Erbarmen; Schreibt ein Komponiste kurz, Kann man nicht erwarmen.	If the artist writes at length, How sad his hearers' lot! If the artist briefly writes, No man will care one jot.
Schreibt ein Komponiste klar, Ist's ein armer Tropf; Schreibt ein Komponiste tief Rappelt's ihm im Kopf.	If an artist simply writes, A fool he's said to be. If an artist deeply writes, He's mad; 'tis plain to see.
Schreib' er also wie er will, Keinem steht es an, Darum schreib' ein Komponist Wie er will und kann.[2]	In whatsoever way he writes He can't please every man; Therefore let an artist write How he likes and can.

But on the present occasion the annoyance was too deep to be thrown off by a joke. It did in fact for a time seriously affect his health and spirits, and probably laid the foundation for that dislike of the officialism and pretension, the artists and institutions, the very soil and situation of Berlin, which so curiously pervades his letters whenever he touches on that city.[3] His depression was increased by the death of an old friend, named Hanstein, who was carried off this spring, and beside whose deathbed Felix composed the well-known Fugue in E minor for pianoforte (op. 35, No. 1). The chorale in the major, which forms the climax of the fugue, is intended, as we are told on good authority, to express his friend's release.[4] But Felix was too young and healthy, and his nature too eager, to allow him to remain in despondency. A sonata in B flat for pf. (afterwards published as op. 106) is dated May 31, 1827; and on Whitsunday, June 3, we find him at Sakrow, near Potsdam, the property of his friend Magnus, composing the charming Lied, 'Ist es wahr?' which within a few months he employed to advantage in his string quartet in A minor (op. 13). Meantime—on May 2, 1826—he had entered the university of Berlin, where his tutor Heyse was now a professor. For his matriculation essay he sent in a translation in verse of the Andria of Terence, which primarily served as a birthday present to his mother (March 15).[5] This translation was published in a volume, with a preface and essay, and a version of the ninth Satire of Horace, by Heyse.[6] Mendelssohn's translation has been examined by an eminent English scholar, who reports that as a version it is precise and faithful, exceedingly literal, and corresponding closely with the original both in rhythm and metre, while its language, as far as an Englishman may judge of German, is quite worthy of representing the limpid Latin of Terence. Professor Munro also points out that as this was the first attempt in Germany to render Terence in his own metres, it may be presumed to have set the example to the scholars who have since that date, as a rule, translated Plautus and Terence and other kindred Greek and Latin classics in the original metres. It was by no means his first attempt at verse; for a long mock-heroic of the year 1820 has been preserved, called the 'Paphleis,' in three cantos, occupied with the adventures of his brother Paul (Paphlos), full of slang and humour, and in hexameters.

Whether Felix went through the regular university course or not, does not appear, but no doubt the proceeding was a systematic one, and he certainly attended several classes, amongst them those of Hegel,[7] and took especial pleasure in the lectures of the great Carl Ritter on geography. Of his notes of these, two folio volumes, closely written in a hand like copper-plate and dated 1827 and 1828, still exist. Italian he was probably familiar with before he went to Italy; and in later years he knew it so thoroughly as to be able to translate into German verse the very crabbed sonnets of Dante, Boccaccio, Cecco Angiolieri, and Cino, for his uncle Joseph in 1840.[8] Landscape drawing, in which he was ultimately to excel so greatly, he had already worked at for several years. For mathematics he had neither taste nor capacity, and Schubring pathetically describes the impossibility of making him comprehend how the pole-star could be a guide in travelling.

The change into the new house was a great event in the family life. Felix began gymnastics, and became a very great proficient in them. He also learned to ride, and to swim, and with him learning a thing meant practising it to the

[1] 'For God's sake, do not let my old sin of Camacho's Wedding be stirred up again!' (Letter to Wm. Bartholomew, July 17, 1843, *Polko*, 217.) In the same manner in 1835 he protests to Mrs. Voigt against the performance of his C minor Symphony—at least without the explanation that it was written by a boy of barely fifteen. (*Acht Briefe, von Felix Mendelssohn-Bartholdy*, Leipzig, 1871, p. 20.)

Angehängt ist die 9te Satire des Horatius, übersetzt von dem Herausgeber. Berlin, 1826. Bei Ferdinand Dümmler.' The preface is dated 'Berlin, im Juli, 1826.'

[7] One course of these was on Music. Zelter, in *G. & M.* p. 54.

[8] They are given in their place in the later editions of the German version of the Letters.

utmost, and getting all the enjoyment and advantage that could be extracted from it. He was a great dancer, now and for many years after. Billiards he played brilliantly. Skating was the one outdoor exercise which he did not succeed in—he could not stand the cold. The garden was a vast attraction to their friends, and *Boccia* (a kind of bowls) was the favourite game under the old chestnut-trees which overshadowed the central alley. The large rooms also gave a great impetus to the music and to the mixed society which now flocked to the house more than ever. We hear of Rahel and Varnhagen, Bettina, Heine, Holtei, Lindblad, Steffens, Gans, Marx, Kugler, Droysen; of Humboldt, W. Müller,[1] Hegel (for whom alone a card-table was provided), and other intellectual and artistic persons, famous, or to be famous afterwards. Young people, too, there were in troops; the life was free, and it must have been a delightful, wholesome, and thoroughly enjoyable time. Among the features of the garden life was a newspaper, which in summer was called *Garten-zeitung* ('The Garden Times'); in winter *Thee- und Schneezeitung* ('Tea and Snow Times'). It appears to have been edited by Felix and Marx, but all comers were free to contribute, for which purpose pens, ink, and paper lay in one of the summer-houses. Nor was it confined to the younger part of the society, but grave personages, like Humboldt and Zelter even, did not disdain to add their morsel of fun or satire. In all this brilliant interchange of art, science, and literature, Felix, even at this early date, was the prominent figure. It was now as it was all through his life. When he entered the room every one was anxious to speak to him. Women of double his age made love to him, and men, years afterwards, recollected the evenings they had spent with him, and treasured every word that fell from his lips.[2] One who knew him well at this time, but afterwards broke with him, speaks of the separation as 'a draught of wormwood, the bitter taste of which remained for years.'[3]

The latter half of August and the whole of September (1827) were passed in a tour with Magnus and Heydemann[4] through the Harz mountains to Baden-Baden (where his amusing adventures must be read in his letters in *F. M.*), and thence by Heidelberg, where he made the acquaintance of Thibaut[5] and his old Italian music, to Frankfort. At Frankfort he saw Schelble and Hiller, and delighted them with his new A minor string quartet (op. 13)—not then fully written down; and also with the 'Midsummer Night's Dream' overture, which although a year old was still new to the world.

The annoyance about 'Camacho' had vanished with the tour, and Felix could now treat the story as a joke, and take off the principal persons concerned. The A minor quartet (op. 13) was completed directly after his return home, and is dated 'Berlin, Oct. 26, 1827.' Of further compositions this year we know only of the beautiful fugue in E flat for strings (on his favourite old ecclesiastical subject), which after his death was published as the last movement of op. 81. It is dated 'Berlin, Nov. 1, 1827.' Also a 'Tu es Petrus' for choir and orchestra, written for Fanny's birthday (Nov. 14), and published as op. 111. A very comic 'Kindersymphonie' for the Christmas home party, scored for the same orchestra as Haydn's, and a motet for four voices and small orchestra on the chorale 'Christe du Lamm Gottes,' are named by Fanny in a letter.[6] Soon after this their circle sustained a loss in the departure of Klingemann, one of the cleverest and most genial of the set, to London as Secretary to the Hanoverian Legation.

During the winter of 1827 Felix—incited thereto by a complaint of Schubring's, that Bach always seemed to him like an arithmetical exercise—formed a select choir of sixteen voices, who met at his house on Saturday evenings, and at once began to practise the Matthew Passion.[7] This was the seed which blossomed in the public performance of that great work a year later, and that again in the formation of the Bachgesellschaft, and the publication of the B minor Mass and all the Church Cantatas and other works which have proved such mines of wealth. Long and complicated as the Passion is, he must have known it by heart even at that early date; for among other anecdotes proving as much, Schubring, who may be implicitly believed, relates that one evening after accompanying one of the choruses at the piano without book, he said, 'at the twenty-third bar the sopranos have C and not C sharp'!

March, 1828, was occupied by the composition of a long lyric poem (lyrische Dichtung) to words by Levezow, for the Tercentenary Festival of Albert Dürer, at the Singakademie at Berlin, on April 18.[8] It was undertaken at the request of the Akademie der bildenden Künste und dem Künstlervereine, and is written for solo voices, chorus, and orchestra, and contains fifteen numbers. The 'Trumpet Overture' preceded it in performance. Felix was not in love with his task, but as the work grew into shape and the rehearsals progressed, he became reconciled to it; the performance was good, and Fanny's sisterly verdict is that 'she never remembers to have spent a pleasanter hour.'[9] The work remains in MS. at the Singakademie and the Royal

Library at Berlin, and has probably the faults of almost all such compositions. Even Beethoven failed when he had to write to order. Fate, however, had a second task of the same kind in store for Felix, with some curious variations. This time the cantata was for a meeting (or, as we should now call it, a 'congress') of physicians and investigators of natural science, to whom a festival was given by A. von Humboldt as president. Rellstab wrote the words, and Felix was invited to compose the music. It contains seven numbers for solo and chorus. Owing to a whim of Humboldt's the chorus was confined to men's voices, and the orchestra to clarinets, horns, trumpets violoncellos, and basses. The thing came off in September; but no ladies—not even Fanny—were admitted, no report is given in the musical paper; and as there is no mention of it in the MS. Catalogue the autograph has probably vanished. Chopin was present at the sitting of the congress, and saw Mendelssohn with Spontini and Zelter; but his modesty kept him from introducing himself, and their acquaintance was put off to a later date.[1]

Felix had, however, during the summer been occupied in a more congenial task than such *pièces d'occasion* as these, viz. in the composition of the Overture to Goethe's 'Calm sea and prosperous voyage,' on which we find him employed in June (1828). Fanny gives us the interesting information that he especially avoided the form of an Overture with Introduction, and wished his work to stand as two companion pictures.[2] She mentions also his having written pianoforte pieces at this time, including some 'Lieder ohne Worte' (a title not destined to come before the world for some years) and a great Antiphona and Responsorium for four choirs, 'Hora est,' etc., which still remains in MS.

For Christmas he wrote a second Kindersymphonie, which delighted every one so much that it had to be repeated on the spot.[3] He also re-scored Handel's 'Acis and Galatea,' and the 'Dettingen Te Deum,' at Zelter's desire, for the use of the Singakademie.[4] They have since been published, but are not satisfactory specimens of such work. He also wrote the Variations in D for pf. and violoncello (op. 17), dated 'Jan. 30, 1829,' and dedicated to his brother Paul, who was more than a fair violoncello player. The 'Calm sea and prosperous voyage' was finished, or finished as nearly as any score of Mendelssohn's can be said to have been finished, before it was publicly performed and had received those innumerable corrections and alterations and afterthoughts, which he always gave his works, and which in some instances caused the delay of their appearance for years—which in fact prevented the appearance of the Italian Symphony till his removal made any further revision impossible. We have already seen that the basis of the work was furnished by the visit to Dobberan. A MS. letter from that place to Fanny (July 27, 1824) gives her an account of the sea in the two conditions in which it is depicted in the overture.[5]

Felix's little choir had steadily continued their practice of the Passion, and the better they knew the mighty work the more urgent became their desire for a public performance by the Singakademie (300 to 400 voices) under Felix's own care. Apart from the difficulties of the music, with its double choruses and double orchestra, two main obstacles appeared to lie in the way—the opposition of Zelter as head of the Akademie, and the apathy of the public. Felix, for one, 'utterly disbelieved' in the possibility of overcoming either,[6] and with him were his parents and Marx, whose influence in the house was great. Against him, in this opinion, were Devrient, Schubring, Bauer, and one or two other enthusiasts. At length Devrient and Felix determined to go and beard Zelter in his den. They encountered a few rough words, but their enthusiasm gained the day. Zelter yielded, and allowed Felix to conduct the rehearsals of the Singakademie.[7] The principal solo singers of the Opera at once gave in their adhesion; the rehearsals began; Felix's tact, skill, and intimate knowledge of the music carried everything before them, and the public flocked to the rehearsals. On Wednesday, March 11, 1829, the first performance of the Passion took place since the death of Bach; every ticket was taken, and a thousand people were turned away from the doors. Thus in Felix's own words (for once and once only alluding to his descent) 'it was an actor and a Jew who restored this great Christian work to the people.'[8] There was a second performance under Felix on Bach's birthday, March 21. It is probable that these successes did not add to Felix's popularity with the musicians of Berlin. Whether it was his age, his manner, his birth, the position held by his family, or whatever else, certain it is that he was at this time in some way under a cloud. He had so far quarrelled with the Royal Orchestra that they refused to be conducted by him, and concerts at which his works were given were badly attended.[9]

Paganini made his first appearance in Berlin this month (March), gave four concerts, and bewitched the Berliners as he did every one else.[10] He very soon found his way to the Leipziger Strasse.[11] It would be interesting to know if he heard the Passion, and if, like

Rossini, some years later, he professed himself a convert to Bach.

Whistling's *Handbuch* shows that by the end of this year (1829) Felix had published his three pf. quartets; the Sonata for pf. and vn.; the Capriccio for pf. (op. 5); the Sonata for pf. solo; the 'Wedding of Camacho'; and the first two books of Songs. The dedications of these throw an interesting light on some things. The pf. quartets are inscribed respectively to Prince A. Radzivil (a friend of the family, who was present at the first performance of 'Die Beiden Pädagogen' at the Neue Promenade), Zelter, and Goethe; the violin sonata (op. 4) to Eduard Ritz, Felix's favourite violin player; and the seven Characteristic pf. pieces (op. 7) to Ludwig Berger, his pianoforte teacher. The rest have no dedications.

The engagement of Fanny Mendelssohn to William Hensel the painter, of Berlin, took place on Jan. 22, 1829, in the middle of the excitement about the Passion; and on April 10 Felix started for England. He was now twenty. His age, the termination of his liability to military service,[1] the friction just alluded to between himself and the musical world of Berlin —all things invited him to travel, and Zelter[2] was not wrong in saying that it was good for him to leave home for a time. Hitherto also he had worked without fee or reward. He was now to prove that he could make his living by music.[3] But more than this was involved. His visit to England was the first section of a long journey,[4] planned by the care and sagacity of his father, and destined to occupy the next three years of his life. In this journey he was 'closely to examine the various countries, and to fix on one in which to live and work; to make his name and abilities known, so that where he settled he should not be received as a stranger; and lastly to employ his good fortune in life, and the liberality of his father, in preparing the ground for future efforts.'[5] The journey was thus to be to him what the artistic tour of other musicians had been to them; but with the important difference, resulting from his fortunate position in life, that the establishment of his musical reputation was not the exclusive object, but that his journey was to give him a knowledge of the world, and form his character and manners. Music had not been adopted as a profession for Felix without much hesitation, and resistance on the part of some of his relations, and his father was wisely resolved that in so doing nothing should be sacrificed in the general culture and elevation of his son. The reason alleged to have been given by a young Scotch student for going to Oxford, 'To improve myself, and to make friends,' was Mendelssohn's motto, not only during his grand tour but throughout his career.

It was their first serious parting. His father and Rebecka accompanied him to Hamburg. The boat (the *Attwood*) left on the Saturday evening before Easter Sunday, April 18, and it was not till noon on Tuesday, the 21st, that he reached the Custom House, London. The passage was a very bad one, the engines broke down, and Mendelssohn lay insensible for the whole of Sunday and Monday. He was welcomed on landing by Klingemann and Moscheles, and lodged at the house then numbered 103, Great Portland Street, where his landlord was Heinke, a German ironmonger.[6]

It was the middle of the musical season, and on the night of his arrival Malibran made her first reappearance at the Opera, as Desdemona. His account of her, with other letters describing this period, will be found in *Die Familie Mendelssohn* (i. 214-294), in Devrient's *Recollections*, [and in *Letters of Felix Mendelssohn to Ignaz and Charlotte Moscheles* (1888)]. Other singers in London at that time were Sontag, Pisaroni, Mme. Stockhausen, and Donzelli; also Velluti, the castrato, a strange survival of the ancient world, whom it is difficult to think of in connection with Felix Mendelssohn-Bartholdy. De Bériot and Madame Dulcken were among the players. Fétis, too, was in London with the object of delivering his lectures (of which only one was given) on 'La musique à la portée de tout le monde,' in French, to English audiences. Felix was much with Mr. and Mrs. Moscheles, and there met Neukomm, with whom, in everything but his music, he sympathised warmly.

His first appearance before an English audience was at the Philharmonic Concert (then held in the Argyll Rooms, at the upper end of Regent Street, where No. 246 now stands), on Monday evening, May 25, when he conducted his Symphony in C minor. Old John Cramer 'led him to the piano, as if he were a young lady.'[7] The applause was immense, and the Scherzo (scored by him from his Octet for this occasion, in place of the original Minuet and Trio) was obstinately encored against his wish.[8] How deeply he felt the warmth of his reception may be seen from his letter to the Society.[9] He published the symphony with a dedication to the Philharmonic,[10] and they on their part elected him an honorary member of the Society on Nov. 29, 1829. It was thus an English body which gave him his first recognition as a composer.[11] The simple applause of London had

wiped out the sneers and misunderstandings of Berlin. This he never forgot: it recurs throughout his correspondence, and animates his account of his latest visits to us. Near the close of his life he spoke of it as 'having lifted a stone from his heart.'[1] The English had much to learn, and he could laugh heartily at them; but at least they loved him and his music, and were quite in earnest in their appreciation.[2] Five days afterwards, on the 30th, at 2 P.M., he appeared again in the Argyll Rooms at what is vaguely called in the *Times* of June 1, 'The fourth grand concert.' He played the Concertstück of Weber—as the same journal informs us—'with no music before him.' A charming letter,[3] equal to any in the whole collection for its gaiety and bright humour, describes his coming to the rooms early to try the piano—a new Clementi—and his losing himself in extemporising till he was recalled by finding that the audience were taking their seats. Two other concerts must be mentioned:—one by Drouet, the flute-player, on Midsummer Night, at which, most appropriately, the Overture to the 'Midsummer Night's Dream' was given, for the first time in England, and he himself played the E flat Concerto of Beethoven. After the concert the score of the overture was left in the hackney coach by Attwood, and lost.[4] On Mendelssohn's hearing of it, he said, 'Never mind, I will make another.' He did, and on comparing it with the parts no variations were found. The other concert on July 13 was for the benefit of the sufferers from the floods in Silesia.[5] At this the Overture was repeated, and Felix and Moscheles played (for the first and only time in England) a Concerto by the former for two Pianofortes and Orchestra, in E.[6] All this was a brilliant beginning, as far as compositions went; it placed him in the best possible position before the musical society of London, but it did not do much to solve the question of livelihood, since the only commission which we hear of his receiving, and which delighted him hugely, he was compelled for obvious reasons to decline, viz. a festival hymn for Ceylon for the anniversary of the emancipation of the natives!—an idea so comical that he says it had kept him laughing inwardly for two days.[7] A MS. letter of this time (dated June 7) is signed 'Composer to the Island of Ceylon.'

But he found time for other things besides music; for the House of Commons, and picture galleries, and balls at Devonshire House and Lansdowne House, and so many other parties, that the good people at home took fright and thought he was giving up music for society, and would become a drawing-room ornament.[8] The charm of his manner and his entire simplicity took people captive, and he laid a good foundation this year for the time to come.

An amusing little picture of himself and his friends Rosen and Mühlenfeld, coming home late from a state dinner given by the Prussian Ambassador, buying three German sausages, and then finding a quiet street in which to devour them, with a three-part song and peals of laughter between the mouthfuls, shows how gaily life went on outside the concert-room.[9]

At length the musical season was over. Felix and Klingemann left London about July 21, and stopping at York (23rd) and Durham (24th),[10] were in Edinburgh by the 28th.[11] On the 29th they were present at the annual competition of Highland Pipers in the Theatre Royal.[12] On the 30th, before leaving 'the grey metropolis of the north,' they went over Holyrood Palace, saw the traditional scene of the murder of Rizzio, and the chapel, with the altar at which Mary was crowned standing 'open to the sky, and surrounded with grass and ivy, and everything ruined and decayed': 'and I think,' he continues, 'that I found there the beginning of my Scotch Symphony.' The passage which he then wrote down was the first sixteen bars of the Introduction, which recurs at the end of the first movement, and thus forms, as it were, the motto of the work.[13]

From Edinburgh they went to Abbotsford, and thence by Stirling, Perth, and Dunkeld, to Blair-Atholl; then on foot by Fort-William to Tobermory, sketching and writing enormous letters at every step. On the way they visited Fingal's Cave, and Felix, writing 'auf einer Hebride'—'on one of the Hebrides'—August 7, gives twenty bars of music, 'to show how extraordinarily the place affected me.' These twenty bars,[14] an actual inspiration, are virtually identical with the opening of the wonderful Overture which bears the name of 'Hebrides' or 'Fingal's Cave.' Then came Glasgow, and then Liverpool. At Liverpool they went over a new American liner called the *Napoleon*, and Felix, finding a Broadwood piano in the saloon, sat down to it and played for himself and his friend the first movement of Fanny's 'Easter-Sonata'—whatever that may have been. Home was always in his thoughts. Then to Holyhead for Ireland, but the weather was dreadful. He says: 'Yesterday was a good day, for I was only wet through three times.' So he turned back to Liverpool, there said good-bye to Klingemann, and went on by Chester to the house of Mr. John Taylor, a mining engineer, at Coed-du near Holywell. Here he remained for some days,

seeing a very pleasant side of English country life, and making an indelible impression on his hosts; and here he composed the three pianoforte pieces which form op. 16, the first of which in key, tempo, and melody, closely resembles the introduction to the Scotch Symphony.[1] The following letter, written after his death by a member of the Taylor family,[2] gives a good idea of the clever, genial, gay, and yet serious, nature of the man at this happy time of life:—

It was in the year 1829 that we first became acquainted with Mr. Mendelssohn. He was introduced to us by my aunt, Mrs. Austin, who had well known his cousin Professor Mendelssohn, at Bonn. He visited us early in the season in Bedford Row, but our real friendship began at Coed-du, which was a house near Mold in Flintshire, rented for many years by my father, Mr. John Taylor.

Mr. Mendelssohn came down there to spend a little time with us, in the course of a tour in England and Scotland. My father and mother received him kindly, as they did everybody, but his arrival created no particular sensation, as many strangers came to our house to see the mines under my father's management, and foreigners were often welcomed there. Soon, however, we began to find that a most accomplished mind had come among us, quick to observe, delicate to distinguish. There was a little shyness about him, great modesty. We knew little about his music, but the wonder of it grew upon us; and I remember one night when my two sisters and I went to our rooms how we began saying to each other 'Surely this must be a man of genius. . . . We can't be mistaken about the music; never did we hear any one play so before. Yet we know the best London musicians. Surely by and by we shall hear that Felix Mendelssohn-Bartholdy is a great name in the world.'

My father's birthday happened while Mr. Mendelssohn was with us. There was a grand expedition to a distant mine, up among the hills; a tent carried up there, a dinner to the miners. We had speeches and health-drinkings, and Mendelssohn threw himself into the whole thing, as if he had been one of us. He interested himself in hearing about the condition and way of life of the Welsh miners. Nothing was lost upon him. A letter that he wrote to my brother John just after he left Coed-du, charmingly describes the impressions he carried away of that country. Sometimes he would go out sketching with us girls, sitting down very seriously to draw, but making the greatest fun of attempts which he considered to be unsuccessful. One figure of a Welsh girl he imagined to be like a camel, and she was called the camel accordingly. Though he scorned his own drawings, he had the genuine artist-feeling, and great love for pictures. I need not say how deeply he entered into the beauty of the hills and the woods. His way of representing them was not with the pencil; but in the evenings his improvised music would show what he had observed or felt in the past day. The piece called 'The Rivulet,' which he wrote at that time for my sister Susan will show what I mean; it was a recollection of a real actual rivulet.[3]

We observed how natural objects seemed to suggest music to him. There was in my sister Honora's garden a pretty creeping plant, new at that time, covered with little trumpet-like flowers.[4] He was struck with it, and played for her the music which (he said) the fairies might play on those trumpets. When he wrote out the piece (called a Capriccio in E minor) he drew a little branch of that flower all up the margin of the paper.

The piece (an Andante and Allegro) which Mr. Mendelssohn wrote for me, was suggested by the sight of a bunch of carnations and roses.[5] The carnations that year were very fine with us. He liked them best of all the flowers, and would have one often in his button-hole.[6] We found he intended the arpeggio passages in that composition as a reminder of the sweet scent of the flower rising up.

Mr. Mendelssohn was not a bit 'sentimental,' though he had so much sentiment. Nobody enjoyed fun more than he, and his laughing was the most joyous that could be. One evening in hot summer we staid in the wood above our house later than usual. We had been building a house of fir branches in Susan's garden up in the wood. We made a fire, a little way off it, in a thicket among the trees, Mendelssohn helping with the utmost zeal, dragging up more and more wood; we tired ourselves with our merry work; we sat down round our fire, the smoke went off, the ashes were glowing, it began to get dark, but we did not like to leave our bonfire. 'If we had but some music,' Mendelssohn said; 'could any one get something to play on?' Then my brother recollected that we were near the gardener's cottage, and that the gardener had a fiddle. Off rushed our boys to get the fiddle. When it came, it was the wretchedest thing in the world, and it had but one string. Mendelssohn took the instrument into his hands, and fell into fits of laughter over it when he heard the sounds it made. His laughter was very catching, he put us all into peals of merriment. But he somehow afterwards brought beautiful music out of the poor old fiddle, and we sat listening to one strain after another till the darkness sent us home.

My cousin, John Edward Taylor,[7] was staying with us at that time. He had composed an imitation Welsh air, and before breakfast he was playing this over, all unconscious that Mr. Mendelssohn (whose bed-room was next the drawing-room) overheard every note. That night, when we had music as usual, Mr. Mendelssohn sat down to play. After an elegant prelude, and with all possible advantage, John Edward heard his poor little air introduced as the subject of the evening. And having dwelt upon it, and adorned it in every graceful manner, Mendelssohn in his pretty, playful way, bowing to the *composer*, gave all the praise to him.

I suppose some of the charm of his speech might lie in the unusual choice of words which he as a German made in speaking English. He lisped a little. He used an action of nodding his head quickly till the long locks of hair would fall over his high forehead with the vehemence of his assent to anything he liked.

Sometimes he used to talk very seriously with my mother. Seeing that we brothers and sisters lived lovingly together and with our parents, he spoke about this to my mother, told her how he had known families where it was not so; and used the words 'You know not how happy you are.'

He was so far from any sort of pretension, or from making a favour of giving his music to us, that one evening when the family from a neighbouring house came to dinner, and we had dancing afterwards, he took his turn in playing quadrilles and waltzes with the others. He was the first person who taught us gallopades, and he first played us Weber's last waltz. He enjoyed dancing like any other young man of his age. He was then twenty years old. He had written his 'Midsummer Night's Dream' [Overture] before that time. I well remember his playing it. He left Coed-du early in September 1829.

We saw Mr. Mendelssohn whenever he came to England, but the visits he made to us in London have not left so much impression upon me as that one at Coed-du did. I can, however, call to mind a party at my father's house in Bedford Row where he was present. Sir George Smart was there also: when the latter was asked to play he said to my mother, 'No, no, don't call upon the old post-horse, when you have a high-mettled young racer at hand.' The end of it was a duet played by Sir George and Mr. Mendelssohn together. Our dear old master, Mr. Attwood, often met him at our house. Once he went with us to a ball at Mr. Attwood's at Norwood. Returning by daylight I remember how Mr. Mendelssohn admired the view of St. Paul's in the early dawn which we got from Blackfriars Bridge.[8] But the happiest visit to us was that one when he first brought his sweet young wife to see my mother. Madame Felix

[1] Both Allegros are in 6-8, and the Andante is repeated at the end of each. The piece is dated 'Coed-du, Sept. 4,' [1829].

[2] Miss Anne Taylor, afterwards Mrs. Worsley.

[3] This piece was long a favourite of his. A water-colour drawing by Schirmer, inspired by Felix's playing of it, is still in the possession of the family (*Dev.* p. 175). The MS. is headed 'Am Bach,' and the tradition of the Taylors is that it depicts the actual stream, its waterfalls, broad shallows, and other features, that flows near Coed-du.

[4] *Eccremocarpus.*

[5] The account given above of the origin and intention of these three pieces (op. 16) is confirmed by a letter of his own printed in *F.M.* i. 279. The autograph of No. 1 is headed 'Nelken und Rosen in Menge'—Carnations and Roses in plenty.

[6] Compare *Mos.* i. 297.

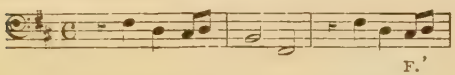
[7] A son of Edward Taylor, Gresham Professor of Music, 1838-63.

[8] [A facsimile reproduction of a pencil-drawing by him of St. Paul's Cathedral, etc. as seen from Blackfriars Bridge, forms the frontispiece of *Musical Haunts in London.*]

Mendelssohn was a bride then, and we all of us said he could not have found one more worthy of himself. And with the delightful remembrance of his happiness then, I will end these fragments.

His head was at this time full of music—the E flat Violin Quartet (op. 12)[1]; an organ piece for Fanny's wedding[2]; the Reformation Symphony, the Scotch Symphony, the Hebrides Overture, as well as vocal music, 'of which he will say nothing.' Other subjects, however, occupied even more of his letters than music. Such were a private plan for a journey to Italy in company with his parents and Rebecka, for which he enters into a little conspiracy with his sister; and a scheme for the celebration of his parents' silver wedding (Dec. 26, 1829), by the performance of three operettas (Liederspiel), his own 'Soldatenliebschaft,' a second to be written by Hensel and composed by Fanny, and the third an 'Idyll' by Klingemann and himself, which when once it entered his head rapidly took shape, and by the end of October appears to have been virtually complete.[3]

By Sept. 10 he was again in London, this time at 35 Bury Street, St. James's, Klingemann's lodgings[4]; on the 14th he finished and signed the E flat Quartet, and on the 17th was thrown from a gig and hurt his knee, which forced him to keep his bed for nearly two months, and thus to miss not only a tour through Holland and Belgium with his father, but Fanny's wedding. Confinement to bed, however, does not prevent his writing home with the greatest regularity. On Sept. 22 he ends his letter with the first phrase of the Hebrides Overture—'aber zum Wiedersehen,



F.'

On Oct. 23 he informs them that he is beginning again to compose—and so on. He was nursed by Klingemann, and well cared for by Sir Lewis and Lady Moller, by Attwood and Hawes (the musicians), the Goschens, and others. His first drive was on Nov. 6, when he found London 'indescribably beautiful.' A week later he went to Norwood to the Attwoods,[5] then back to town for 'the fourteen happiest days he had ever known,' and on Nov. 29 was at Hôtel Quillacq, Calais, on his road home. He reached Berlin to find the Hensels and the Devrients inhabiting rooms in the garden-house. His lameness still obliged him to walk with a stick; but this did not impede the mounting of his piece for the silver wedding,[6] which came off with the greatest success on Dec. 26, and displayed an amount of dramatic ability which excited the desire of his friends that he should again write for the stage.[7] The Liederspiel, however, was not enough to occupy him, and during this winter he composed a Symphony for the tercentenary festival of the Augsburg Confession, which was in preparation for June 25, 1830. This work, in the key of D, is that which we shall often again refer to as the 'Reformation Symphony.'[8] He also wrote the fine Fantasia in F sharp minor (op. 28) for pf., which he called his 'Scotch Sonata'[9]—a piece too little played. A Chair of Music was founded in the Berlin university this winter expressly with a view to its being filled by Mendelssohn. But on the offer being made he declined it, and at his instance Marx was appointed in his stead.[10] There can be no doubt that he was right. Nothing probably could have entirely kept down Mendelssohn's ardour for composition; but it is certain that to have exchanged the career of a composer for that of a university teacher would have added a serious burden to the many occupations which already beset him, besides forcing him to exchange a pursuit which he loved and succeeded in, for one for which he had no turn—for teaching was not his *forte*.[11]

The winter was over, his leg was well, and he was on the point of resuming his 'great journey' in its southern portion, when, at the end of March 1830, both Rebecka and he were taken ill with measles. This involved a delay of a month, and it was not till May 13 that he was able to start.[12] His father accompanied him as far as Dessau, the original seat of the family, where he remained for a few days with his friend Schubring.

He travelled through Leipzig, Weissenfels, and Naumburg, and reached Weimar on the 20th. There he remained a fortnight in the enjoyment of the closest intercourse with Goethe and his family, playing and leading what he calls a mad life—Heidenleben.[13] There his portrait was taken, which, though like, 'made him look very sulky,' and a copy of the score of the Reformation Symphony was made and sent to Fanny. On June 3 he took leave of Goethe for the last time,[14] and went by Nuremberg to Munich, which he reached on June 6.[15] At Munich he made a long halt, remaining till the end of the month; made the acquaintance of Josephine Lang, Delphine Schauroth, and other

[1] *F.M.* pp. 276, 279, 280. The autograph of the Quartet, in the possession of Mr. Rudorf, is dated 'London, Sept. 14, 1829.' Though published as No. 1, it is thus really his second string quartet. See above, p. 118. The quartet was dedicated to 'B[etty] P[istor]'; but after her engagement to Rudorf, Mendelssohn requested David to alter the initials ('durch einen kleinen Federschwanz') to 'B. R.' (see Eckardt's *Ferdinand David*, p. 35). In the same letter he calls it 'Quartet aus S.'

[2] Fanny herself wrote the piece which was actually played at the wedding, Oct. 3, 1829 (*F.M.* i. 296). Felix's piece, however, was finished and written out (*L.* to Fanny, July 25, 1844).

[3] *F.M.* i. 302-304; *Dev.* p. 86.

[4] *F.M.* i. 301.

[5] Op. 16, No. 2, is dated 'Norwood, Surrey, Nov. 18.' There is a MS. letter from the same address, Nov. 15. The house was on Beulah Hill. [A photograph of it is given in *Musical Haunts in London*, p. 5.]

[6] 'Heimkehr aus der Fremde' (The Return from Abroad). It was translated by Chorley as 'Son and Stranger,' and produced at the Haymarket Theatre, July 7, 1851.

[7] *Dev.* p. 94.

[8] For some curious details regarding this see *Dev.* p. 96. Schubring (392b) tells the same story of the Trumpet Overture.

[9] The MS., formerly in Mr. Schleinitz's possession, is entitled 'Sonate écossaise,' and dated 'Berlin, Jan. 29, 1833'; but he played it at Goethe's, May 24, 1830 (*L.* May 25, 1830.)

[10] *Dev.* p. 98.

[11] See a remark in Hauptmann's *Letters to Hauser* (i. 157) in reference to a similar attempt in 1835.

[12] *F.M.* i. 313 (inaccurately August, but corrected in the second edition, from which the English translation was made).

[13] *L.* May 25, 1830. See also letters in *G. & M.*

[14] *G. & M.* p. 70.

[15] *L.* June 6, 1830

interesting persons, and was fêted to an extraordinary extent[1]—'several parties every evening, and more pianoforte playing than I ever recollect'—all which must be read in the letter of Marx, and in his own delightful pages.[2] On June 14, he sends Fanny a little Song without Words (Lied) in A, and on the 26th 'on the birth of her son,' a much longer one in B flat minor, which he afterwards altered, and published as op. 30, No. 2.[3] Both here and at Vienna he is disgusted at the ignorance on the part of the best players—Mozart, Haydn, and Beethoven utterly ignored, Hummel, Field, and Kalkbrenner accepted as classics. He himself played the best music, and with the best effect, and his visit must have marked an epoch in the taste of both places.[4]

From Munich he went through the Salzkammergut, by Salzburg, Ischl, and the Traunsee, to Linz, and thence to Vienna, August 13. Here he passed more than a month of the gayest life[5] with Hauser the singer,[6] Merk the violoncellist, the Pereiras, the Eskeles, and others, but not so gay as to interfere with serious composition—witness a cantata or anthem on 'O Haupt voll Blut und Wunden' (MS.),[7] and an 'Ave Maria' for tenor solo and eight-part chorus (op. 23, No. 2), both of this date. On Sept. 28 we find him at Pressburg, witnessing the coronation of the Crown Prince Ferdinand as King of Hungary[8]; then at Lilienfeld; and by Gratz, Udine, etc., he reached Venice on October 9.

His stay in Italy, and his journey through Switzerland back to Munich, are so fully depicted in the volume of his *Letters from Italy and Switzerland*, that it is only necessary to allude to the chief points. He went from Venice by Bologna to Florence, reaching it on Oct. 22, and remaining there for a week. He arrived in Rome on Nov. 1—the same day as Goethe had done, as he is careful to remark—and he lived there till April 10, 1831, at No. 5, Piazza di Spagna. The latter half of April and the whole of May were devoted to Naples (Sti. Combi, Sta. Lucia, No. 13, on the 3rd floor) and the Bay—Sorrento, Ischia, Amalfi, etc. Here he met Benedict, and renewed the acquaintance which they had begun as boys in Berlin in 1821, when Benedict was Weber's pupil.[9] By June 5 he was back in Rome, and after a fortnight's interval set out on his homeward journey by Florence (June 24), Genoa, Milan (July 7-15), Lago Maggiore and the Islands, the Simplon, Martigny, and the Col de Balme, to Chamouni and Geneva. Thence on foot across the mountains to Interlaken; and thence by Grindelwald and the Furka to Lucerne, August 27 and 28. At Interlaken, besides sketching, and writing both letters and songs, he composed the only waltzes of which—strange as it seems in one so madly fond of dancing—any trace survives.[10] At Lucerne he wrote his last letter to Goethe,[11] and no doubt mentioned his being engaged in the composition of the 'Walpurgisnacht,' which must have brought out from the poet the explanation of the aim of his poem which is printed at the beginning of Mendelssohn's music, with the date Sept. 9, 1831. Then, still on foot, he went by Wallenstadt and St. Gall to Augsburg, and returned to Munich early in September.

Into both the Nature and the Art of this extended and varied tract he entered with enthusiasm. The engravings with which his father's house was richly furnished, and Hensel's copies of the Italian masters, had prepared him for many of the great pictures; but to see them on the spot was to give them new life, and it is delightful to read his rapturous comments on the Titians of Venice and Rome, the gems in the Tribune of Florence, Guido's 'Aurora,' and other masterpieces. His remarks are instructive and to the point; no vague generalities or raptures, but real criticism into the effect or meaning or treatment of the work; and yet rather from the point of view of an intelligent amateur than with any assumption of technical knowledge, and always with sympathy and kindness.[12] Nor is his eye for nature less keen, or his enthusiasm less abundant. His descriptions of the scenery of Switzerland during the extraordinarily stormy season of his journey there are worthy of the greatest painters or letter-writers. Some of his expressions rise to grandeur.

'It was a day,' he says, describing his walk over the Wengern Alp, 'as if made on purpose. The sky was flecked with white clouds floating far above the highest snow-peaks, no mists below on any of the mountains, and all their summits glittering brightly in the morning air, every undulation and the face of every hill clear and distinct. . . . I remembered the mountains before only as huge peaks. It was their height that formerly took such possession of me. Now it was their boundless extent that I particularly felt, their huge broad masses, the close connection of all these enormous fortresses, which seemed to be crowding together and stretching out their hands to each other. Then, too, recollect that every glacier, every snowy plateau, every rocky summit was dazzling with light and glory, and that the more distant summits of the further ranges seemed to stretch over and peer in upon us. I do believe that such are the thoughts of God Himself. Those who do not know Him may here find Him and the nature which He has created, brought strongly before their eyes.'[13] Other expressions are very happy:—'The mountains are acknowledged to be finest after rain, and to-day looked as fresh as if they had just

burst the shell.'[1] Again, in approaching Naples —'To me the finest object in nature is and always will be the sea. I love it almost more than the sky. I always feel happy when I see before me the wide expanse of waters.'

In Rome he devoted all the time that he could spare from work to the methodical examination of the place and the people. But his music stood first, and surely no one before or since was ever so self-denying on a first visit to the Eternal City. Not even for the scirocco would he give up work in the prescribed hours.[2] His plan was to compose or practise till noon, and then spend the whole of the rest of the daylight in the open air. He enters into everything with enthusiasm—it is 'a delightful existence.' Rome in all its vast dimensions lies before him like an interesting problem, and he goes deliberately to work, daily selecting some different object—the ruins of the ancient city, the Borghese Gallery, the Capitol, St. Peter's, or the Vatican. 'Each day is thus made memorable, and, as I take my time, each object becomes indelibly impressed upon me. . . . When I have fairly imprinted an object on my mind, and each day a fresh one, twilight has usually arrived, and the day is over.' Into society he enters with keen zest, giving and receiving pleasure wherever he goes, and 'amusing himself thoroughly and divinely.' 'His looking-glass is stuck full of visiting-cards, and he spends every evening with a fresh acquaintance.'[3] His visits to Horace Vernet and Thorwaldsen, Santini's visits to him; the ball at Torlonia's, where he first saw the young English beauty, and that at the Palazzo Albani, where he danced with her; the mad frolics of the Carnival, the monks in the street (on whom he 'will one day write a special treatise'), the peasants in the rain, the very air and sunshine—all delight him in the most simple, healthy, and natural manner. 'Oh! if I could but send you in this letter one quarter of an hour of all this pleasure, or tell you how life actually flies in Rome, every minute bringing its own memorable delights.'[4] On the other hand, he has no mercy on anything like affectation or conceit. He lashes the German painters for their hats, their beards, their dogs, their discontent, and their incompetence, just as he does one or two German musicians for their empty pretension. The few words which he devotes to Berlioz (who although always his good friend is antagonistic to him on every point) and his companion Montfort, are strongly tinged with the same feeling.[5] On the other hand, nothing can be more genuinely and good-naturedly comic than his account of the attempt to sing Marcello's psalms by a company of dilettanti assisted by a Papal singer.[6]

[6] *L.* March 1, 1831.

This sound and healthy habit of mind it is, perhaps, which excludes the sentimental—we might almost say the devotional—feeling which is so markedly absent from his letters. Strange that an artist who so enjoyed the remains of ancient Italy should have had no love of antiquity as such. At sight of Nisida he recalls the fact that it was the refuge of Brutus, and that Cicero visited him there. 'The sea lay between the islands, and the rocks, covered with vegetation, bent over it then just as they do now. *These* are the antiquities that interest me, and are much more suggestive than crumbling masonwork.' 'The outlines of the Alban hills remain unchanged. There they can scribble no names and compose no inscriptions . . . and to these I cling.' In reference to music the same spirit shows itself still more strongly in his indignation at the ancient Gregorian music to the Passion in the Holy Week services. 'It does irritate me to hear such sacred and touching words sung to such insignificant dull music. They say it is *canto fermo*, Gregorian, etc. No matter. If at that period there was neither the feeling nor the capacity to write in a different style, at all events we have now the power to do so'; and he goes on to suggest two alternative plans for altering and reforming the service. Religious he is, deeply and strongly religious; every letter shows it. It is the unconscious, healthy, happy confidence of a sound mind in a sound body, of a man to whom the sense of God and Duty are as natural as the air he breathes, or the tunes which come into his head, and to whom a wrong action is an impossibility. But of devotional sentiment, of that yearning dependence, which dictated the 130th Psalm, or the feeling which animates Beethoven's passionate prayers and confessions,[7] we find hardly a trace, in his letters or in his music.

He was very fortunate in the time of his visit to Rome. Pope Pius VIII. died while he was there, and he came in for all the ceremonies of Gregory XVI.'s installation, in addition to the services of Holy Week, etc. These latter he has described in the fullest manner, not only as to their picturesque and general effect, but down to the smallest details of the music, in regard to which he rivalled Mozart's famous feat. [See MISERERE.] They form the subject of two long letters to Zelter, dated Dec. 1, 1830,[8] and June 16, 1831; and as all the particulars had to be caught while he listened, they testify in the strongest manner to the sharpness of his ear and the retentiveness of his memory. Indeed it is impossible not to feel that in such letters as these he is on his own ground, and that intense as was his enjoyment of nature, painting, society, and life, he belonged really to none of these things—was 'neither a politician nor a dancer, nor an actor,

[7] See vol. i. p. 251*b*.
[8] This was added to the *Reisebriefe* in a subsequent edition, and is not included in the English translation.

nor a *bel esprit*, but a musician.'[1] And so it proved in fact. For with all these distractions his Italian journey was fruitful in work. The 'Walpurgisnacht,' the result of his last visit to Weimar, was finished, in its first form, at Milan (the MS. is dated 'Mailand, July 15, 1831'); the 'Hebrides,' also in its first form, is signed 'Rome, Dec. 16, 1830.'[2] The Italian and Scotch Symphonies were begun and far advanced before he left Italy. Several smaller works belong to this period—the Psalm 'Non Nobis' (Nov. 15, 1830); the three church pieces which form op. 23; a Christmas Cantata, still in MS. (Jan. 28, 1831); the Hymn 'Verleih' uns Frieden' (Feb. 10); the three motets for the nuns of the Trinità de' Monti at Rome; and although few of these minor pieces can be really said to live, yet they embody much labour and devotion, and were admirable stepping-stones to the great vocal works of his later life. In fact then, as always, he was what Berlioz calls him, 'un producteur infatigable,'[3] and thus obtained that facility which few composers have possessed in greater degree than Mozart and himself. He sought the society of musicians. Besides Berlioz, Montfort, and Benedict, we find frequent mention of Baini, Donizetti, Coccia, and Madame Fodor. At Milan his encounter with Madame Ertmann, the intimate friend of Beethoven, was a happy accident, and turned to the happiest account. There, too, he met the son of Mozart, and delighted him with his father's Overtures to 'Don Juan' and the 'Magic Flute,' played in his own 'splendid orchestral style' on the piano. Not the least pleasant portions of his letters from Switzerland are those describing his organ-playing at the little remote Swiss churches at Engelberg, Wallenstadt, Sargans, and Lindau—from which we would gladly quote if space allowed.

Nor was his drawing-book idle. Between May 16 and August 24, 1831, thirty-five sketches are in the hands of one of his daughters alone, implying a corresponding number for the other portions of the tour. How characteristic of his enormous enjoyment of life is the following passage in a letter written at Sargans, Sept. 2: 'Besides organ-playing I have much to finish in my new drawing-book (I filled another completely at Engelberg); then I must dine, and eat like a whole regiment; then after dinner the organ again, and so forget my rainy day.'

The great event of his second visit to Munich was the production (and no doubt the composition) of his G minor concerto, 'a thing rapidly thrown off,'[4] which he played on Oct. 17, 1831, at a concert which also comprised his Symphony in C minor, his Overture to the 'Midsummer Night's Dream,' and an extempore performance. Before leaving he received a commission to compose an opera for the Munich Theatre.[5] From Munich he travelled by Stuttgart (Nov. 7) and Heidelberg to Frankfort, and thence to Düsseldorf (Nov. 27), to consult Immermann as to the libretto for the Munich opera, and arrange with him for one founded on 'The Tempest.'[6] The artistic life of Düsseldorf pleased him extremely, and no doubt this visit laid the foundation for his future connection with that town.

He arrived in Paris about the middle of December, and found, of his German friends, Hiller and Franck settled there. He renewed his acquaintance with the Parisian musicians who had known him as a boy in 1825, especially with Baillot; and made many new friends, Habeneck, Franchomme, Cuvillon, and others. Chopin, Meyerbeer, Herz, Liszt, Kalkbrenner, Ole Bull, were all there, and Mendelssohn seems to have been very much with them. He went a great deal into society and played frequently, was constantly at the theatre, and as constantly at the Louvre, enjoyed life thoroughly, saw everything, according to his wont, including the political scenes which were then more than ever interesting in Paris; knew everybody; and in fact, as he expresses it, 'cast himself thoroughly into the vortex.'[7] His overture 'Midsummer Night's Dream' was performed at the Société des Concerts (Conservatoire) on Feb. 19, 1832, and he himself played the Concerto in G of Beethoven at the concert of March 18. His Reformation Symphony was rehearsed, but the orchestra thought it too learned, and it never reached performance.[8] His Octet was played in church at a mass commemorative of Beethoven, and several times in private; so was his Quintet (with a new Adagio[9]) and his Quartets, both for strings and for piano. The pupils of the Conservatoire, he writes, are working their fingers off to play 'Ist es wahr?'[10] His playing was applauded as much as heart could wish, and his reception in all circles was of the very best.

On the other hand, there were drawbacks. Eduard Ritz, his great friend, died (Jan. 23) while he was there; the news reached him on his birthday. Goethe, too, died (March 22). The rejection of his Reformation Symphony, the centre of so many hopes,[11] was a disappointment which must have thrown a deep shadow over everything; and no doubt after so much gaiety there was a reaction, and his old dislike to the French character—traces of which are not wanting in a letter to Immermann dated Jan. 11, 1832—returned. In addition to this his health had not latterly been good, and in

March he had an attack of cholera.[1] Though he alludes to it in joke, he probably felt the truth of a remark in the *Figaro* that 'Paris is the tomb of all reputations.'[2] Brilliantly and cordially as he was received, he left no lasting mark there; his name does not reappear in the programmes of the Conservatoire for eleven years, and it was not till the establishment of the Concerts Populaires in 1861 that his music became at all familiar to the Parisians.[3] He himself never again set foot in Paris.

On April 23, 1832, he was once more in his beloved London, and at his old quarters, in Great Portland Street (see p. 121). 'That smoky nest,' he exclaims, amid the sunshine of the Naples summer, 'is fated to be now and ever my favourite residence; my heart swells when I think of it.'[4] And here he was back in it again! It was warm, the lilacs were in bloom, his old friends were as cordial as if they had never parted, he was warmly welcomed everywhere, and felt his health return in full measure. His letters of this date are full of a genuine heartfelt satisfaction. He plunged at once into musical life. The Hebrides Overture was played from MS. parts by the Philharmonic on May 14, and he performed his G minor Concerto, on an Erard piano, at the concerts of May 28 and June 18. He gave a MS. score of his overture to the society, and they presented him with a piece of plate. During his stay in London he wrote his Capriccio brillant in B (op. 22), and played it at a concert of Mori's on May 25.[5] On Sunday, June 10, he played the organ at St. Paul's Cathedral.[6] He also published a four-hand arrangement[7] of the 'Midsummer Night's Dream' Overture with Cramer, and the first Book of the Songs without Words with Novello,[8] and played at many concerts. A more important thing still was the revision of the Hebrides Overture, to which he appears to have put the final touches on June 20 (five weeks after its performance at the Philharmonic), that being the date on the autograph score in possession of the family of Sterndale Bennett, which agrees in all essentials with the printed copy. [In an English letter, written from Attwood's house at Norwood, to Sir George Smart, and dated 'June 6, 1832,' he offers to the Philharmonic Society 'the score of my Overture to the "Isles of Fingal," as a sign of my deep and heartfelt gratitude for the indulgence and kindness they have shown to me during my second visit in this country.' (Brit. Mus. Add. MS. 33,965, fol. 251). The MS. does not, however, appear to be in the Society's library.]

On May 15, Zelter died, and he received the news of the loss of his old friend and teacher at Attwood's house at Norwood. The vision of a possible offer of Zelter's post at the Singakademie crossed his mind, and is discussed with his father; but it was not destined to be fulfilled. Among the friends whom he made during this visit, never to lose till death, were the Horsleys, a family living in the country at Kensington. William Horsley was one of our most eminent glee-writers, his daughters were unusually musical, one of the sons, John Calcott Horsley, became an R.A., and another, Charles Edward Horsley, was for many years a bright ornament to English music. The circle was not altogether unlike his Berlin home, and in his own words[9] he seldom spent a day without meeting one or other of the family. [It was during this visit (in 1832) to London that he played to Vincent Novello Bach's little E minor prelude and fugue for the organ, a circumstance which led to its being published in England (by Novello) before it appeared in any other country, including Germany.[10]]

In July 1832 he returned to Berlin, to find the charm of the summer life in the garden as great as before. His darling sister Rebecka had been married to Professor Dirichlet in May. Another change was that the Devrients had migrated to another place, and Hensel's studios now occupied all the spare space in the garden-house. Immermann's promised libretto was waiting for him on his return, but from the terms in which he asks for Devrient's opinion on it, it is evident that it disappointed him, and we hear no more of the subject.[11] 'St. Paul' was beginning to occupy his mind (of which more anon), and he had not long been back when the election of the conductor for the Singakademie in Zelter's place came on the *tapis*. The details may be read elsewhere[12]; it is enough to say here that chiefly through the extra zeal and want of tact of his friend Devrient, though with the best intentions, Mendelssohn, for no fault of his own, was dragged before the public as an opponent of Rungenhagen; and at length, on Jan. 22, 1833, was defeated by 60 votes out of 236. The defeat was aggravated by a sad want of judgment on the part of the family, who not only were annoyed, but showed their annoyance by withdrawing from the Singakademie, and thus making an open hostility. Felix himself said little, but he felt it deeply. He[13] describes it as a time of uncertainty, anxiety, and suspense, which was as bad as a serious illness; and no doubt it widened the breach in his liking for

[1] *H.* p. 33. Letter to Bärmann, Paris, April 16, 1832, in *Letters of Distinguished Musicians*, p. 406.

[2] Fétis is inaccurate in citing this as Mendelssohn's own expression. See *L.* March 31, 1832.

[3] This want of sympathy, combined with an astonishing amount of ignorance, is amusingly displayed in the following description from the catalogue of a well-known French autograph collector:—'Mendelssohn Bartholdy (Felix) remarquable intelligence, mais cœur egoiste et froid; qui n'ayant pu gravir d'un pas sur les sommets de l'art, s'est refugié dans la musique de chambre.' Can ignorance and confidence go further?

[13] *L.* to Pastor Bauer, March 4, 1833.

Berlin, which had been begun by the rejection of 'Camacho.' He doubtless found some consolation in a grand piano which was forwarded to him in August by Pierre Erard of London.

His musical activity was at all events not impaired. Besides occupying himself with the Sunday music at home, Felix, during this winter, gave three public concerts at the room of the Singakademie in Nov. and Dec. 1832, and Jan. 1833,[1] at which he brought forward his 'Walpurgisnacht,' his Reformation Symphony, his Overtures to the 'Midsummer Night's Dream,' 'Meeresstille,' and 'Hebrides,' his G minor Concerto and his Capriccio in B minor for pf.; besides playing Beethoven's pf. sonatas (opp. 27 and 53) and his G major Concerto, also a Concerto of Bach in D minor—all, be it remembered, novelties at that time even to many experienced musicians. In addition to this he was working seriously at the Italian Symphony. The Philharmonic Society of London had passed a resolution on Nov. 5, 1832, asking him to compose 'a symphony, an overture, and a vocal piece, for the Society,' and offering him a hundred guineas for the exclusive right of performance during two years.[2] Of these the Italian Symphony was to be one, and the MS. score of the work accordingly bears the date 'Berlin, March 13, 1833.' On April 27 he wrote to the Society offering them the symphony with 'two new overtures, finished since last year' (doubtless the 'Fingal's Cave' and the Trumpet Overtures), the extra one being intended 'as a sign of my gratitude for the pleasure and honour they have again conferred upon me.' Graceful and apparently spontaneous as it is, the symphony had not been an easy task. Mendelssohn was not exempt from the lot of most artists who attempt a great poem or a great composition; on the contrary, 'the bitterest moments he ever endured or could have imagined,' were those which he experienced during the autumn when the work was in progress, and up to the last he had his doubts and misgivings as to the result. Now, however, when it was finished, he found that it 'pleased him and showed progress'[3]—a very modest expression for a work so full of original thought, masterly expression, consummate execution, and sunny beauty, as the Italian Symphony, and, moreover, such a prodigious advance on his last work of the same kind![4]

On Feb. 8, 1833, a son was born to the Moscheleses, and one of the first letters written was to Mendelssohn, asking him to be godfather to the child. He sent a capital letter in reply, with an elaborate sketch,[5] and later on he transmitted a cradle song—published as op. 47, No. 6—for his godchild, Felix Moscheles. Early in April he left Berlin for Düsseldorf, to arrange for conducting the Lower Rhine Festival which took place May 26-28. As soon as the details had been completed, he went on to London for the christening of his godchild, and also to conduct the Philharmonic Concert of May 13, when his Italian Symphony was performed for the first time, and he himself played Mozart's D minor piano concerto. This was his third visit. He was there by April 26—again at his old lodgings in Great Portland Street—and on May 1 he played at Moscheles's annual concert a brilliant set of four-hand variations on the Gipsy March in 'Preciosa,' which the two had composed together.[6]

On or after May 16 he left London and returned to Düsseldorf, in ample time for the rehearsal of the Festival, which began on Whitsunday, May 26, and was an immense success. 'Israel in Egypt'[7] was the *pièce de résistance*, and among the other works were Beethoven's Pastoral Symphony and Overture to 'Leonora,' and Felix's own Trumpet Overture. Abraham Mendelssohn had come from Berlin for the Festival, and an excellent account of it will be found in his letters,[8] admirable letters, full of point and wisdom, and showing better than anything else could the deep affection and perfect understanding which existed between father and son. The brilliant success of the Festival and the personal fascination of Mendelssohn led to an offer from the authorities of Düsseldorf that he should undertake the charge of the entire musical arrangements of the town, embracing the direction of the church music and of two associations, for three years, from Oct. 1, 1833, at a yearly salary of 600 thalers (£90).[9] He had been much attracted by the active artistic life of the place when he visited Immermann at the close of his Italian journey, and there appears to have been no hesitation in his acceptance of the offer. This important agreement concluded, Felix returned to London for the fourth time, taking his father with him. They arrived about June 5, and went into the old lodgings in Great Portland Street. It is the father's first visit, and his letters are full of little hits at the fog, the absence of the sun, the Sundays, and other English peculiarities, and at his son's enthusiasm for it all. As far as the elder Mendelssohn was concerned, the first month was perfectly successful, but in the course of July he was laid up with an accident to his shin, which confined him to his room for three weeks, and although it gave him an excellent idea of English hospitality, it naturally threw a damp over the

[1] *A.M.Z.* 1833, pp. 22, 58, 125. The dates are not given of all the concerts, but the second took place on Dec. 1, 1832

[2] See the Beethoven and his answer in *Hogarth*, pp. 59, 60.

[3] *L.* to Pastor Bunsen, April 6, 1833.

[4] It has been said that the step from Mendelssohn's C minor to his A major Symphony is as great as that from Beethoven's No. 2 to the Eroica: and remembering this is probably not exaggerated.

[5] A fac-simile will be found in *Mos.* i. 284.

[6] *Mos.* i. 290. [The duet was published by Cramer.]

[7] It had been performed by the Singakademie of Berlin, Dec. 8, 1831, but probably with re-instrumentation. It was now done as Handel wrote it.

[9] I cannot discover his exact *status* or title at Düsseldorf. In his own sketch of his life (see next page) he styles himself Musical director of the Association for the Promotion of Music in Düsseldorf.

latter part of the visit. His blindness, too, seems to have begun to show itself.[1]

His son, however, experienced no such drawbacks. To his father he was everything. 'I cannot express,' says the grateful old man, 'what he has been to me, what a treasure of love, patience, endurance, thoughtfulness, and tender care he has lavished on me; and much as I owe him indirectly for a thousand kindnesses and attentions from others, I owe him far more for what he has done for me himself.'[2] Only a few letters by Felix of this date have been printed,[3] but enough information can be picked up to show that he fully enjoyed himself. His Trumpet Overture was played at the Philharmonic on June 10, 1833. He played the organ at St. Paul's (June 23), Klingemann and other friends at the bellows, and the church empty—Introduction and fugue, extempore; Attwood's Coronation Anthem, four hands, with Attwood; and three pieces of Bach's.[4] He also evidently played a great deal in society, and his father's account of a mad evening with Malibran will stand as a type of many such.[5] The Moscheleses, Attwoods [see his letters to Attwood, printed in the *Musical Times*, Dec. 1900, pp. 792 and 800], Horsleys, and Alexanders are among the most prominent English names in the diaries and letters.[6] Besides Malibran, Schröder-Devrient, Herz, and Hummel were among the foreign artists in London. On August 4 the two left for Berlin,[7] Abraham having announced that he was bringing home 'a young painter named Alphonse Lovie,' who, of course, was no other than Felix himself.[8] They reached Berlin in due course, and by Sept. 27, 1833, Felix was at his new post.

Düsseldorf was the beginning of a new period in his career—of settled life away from the influences of home, which had hitherto formed so important an element in his existence. At Berlin both success and non-success were largely biassed by personal considerations; here he was to start afresh, and to be entirely dependent on himself. He began his new career with vigour. He first attacked the church music, and as 'not one tolerable mass' was to be found, scoured the country as far as Elberfeld, Cologne, and Bonn, and returned with a carriage-load of Palestrina, Lasso, and Lotti. 'Israel in Egypt,' the 'Messiah,' 'Alexander's Feast,' and 'Egmont' are among the music which we hear of at the concerts. At the theatre, after a temporary disturbance, owing to a rise in prices, and a little over-eagerness, he was well received and successful; and at first all was *couleur de rose*—'a more agreeable position I cannot wish for.'[9] But he soon found that the theatre did not suit him; he had too little sympathy with theatrical life, and the responsibility was too irksome. He therefore, after a few months' trial, in March 1834,[10] relinquished his salary as far as the theatre was concerned, and held himself free, as a sort of 'Honorary Intendant.'[11] His influence, however, made itself felt. 'Don Juan,' 'Figaro,' Cherubini's 'Deux Journées,' were amongst the operas given in the first four months; and in the church we hear of masses by Beethoven and Cherubini, motets of Palestrina's, and cantatas of Bach's, the Dettingen Te Deum, 'and on the whole as much good music as could be expected during my first winter.'[12] He lived on the ground floor of Schadow's house,[13] and was very much in the artistic circle, and always ready to make an excursion, to have a swim, to eat, to ride (for he kept a horse[14]), to dance, or to sleep; was working hard at water-colour drawing, under Schirmer's tuition, and was the life and soul of every company he entered.[15] May 18-20 was the Lower Rhine Festival at Aix-la-Chapelle, conducted by Ferdinand Ries; there he met Hiller,[16] and also Chopin, whose acquaintance he had already made in Paris,[17] and who returned with him to Düsseldorf. During the spring of 1834 he was made a member of the Berlin Academy of the Fine Arts.[18]

Meantime, through all these labours and distractions, of pleasure or business alike, he was composing busily and well. The overture to 'Melusina' was finished Nov. 14, 1833, and tried; the Rondo Brillant for piano and orchestra in E flat (op. 29) on Jan. 29, 1834; 'Infelice,' for soprano and orchestra, for the Philharmonic Society (in its first shape),[19] is dated April 3, and the fine Capriccio for pianoforte in A minor (op. 33, No. 1), April 9, 1834. He had also rewritten and greatly improved the 'Meeresstille' Overture[20] for its publication by Breitkopfs with the 'Midsummer Night's Dream' and 'Hebrides' overtures. A symphony which he mentions as on the road appears to have been superseded by a still more important work. In one of his letters from Paris (Dec. 19, 1831), complaining of the low morale of the opera librettos, he says that if that style is indispensable he 'will forsake opera and *write oratorios*.' The words had

hardly left his pen when he was invited by the Cäcilien-Verein of Frankfort to compose an oratorio on St. Paul.[1] The general plan of the work, and such details as the exclusive use of the Bible and Choral-book, and the introduction of chorales, are stated by him at the very outset. On his return to Berlin he and Marx made a compact by which each was to write an oratorio-book for the other; Mendelssohn was to write 'Moses' for Marx, and Marx 'St. Paul' for Mendelssohn.[2] Mendelssohn executed his task at once, and the full libretto, entitled 'Moses, an Oratorio, composed by A. B. M.,' and signed 'F. M. B., 21 Aug. 1832,' is now in the possession of the family.[3] Marx, on the other hand, not only rejected Mendelssohn's book for 'Moses,' but threw up that of 'St. Paul,' on the ground that chorales were an anachronism. In fact, this singular man's function in life seems to have been to differ with everybody. For the text of 'St. Paul,' Mendelssohn was indebted to his own selection, and to the aid of his friends Fürst and Schubring.[4] Like Handel, he knew his Bible well; in his oratorios he followed it implicitly, and the three books of 'St. Paul,' 'Elijah,' and the 'Lobgesang' are a proof (if any proof were needed after the 'Messiah' and 'Israel in Egypt') that, in his own words, 'the Bible is always the best of all.'[5] He began upon the music in March 1834, not anticipating that it would occupy him long[6]; but it dragged on, and was not completed till the beginning of 1836.

Though only Honorary Intendant at the Düsseldorf theatre, he busied himself with the approaching winter season, and before leaving for his holiday corresponded much with Devrient as to the engagement of singers.[7] September 1834 he spent in Berlin,[8] and was back at Düsseldorf for the first concert on Oct. 23,[9] calling on his way at Cassel, and making the acquaintance of Hauptmann,[10] with whom he was destined in later life to be closely connected. The new theatre opened on Nov. 1. He and Immermann quarrelled as to precedence, or as to the distribution of the duties. The selection of singers and musicians, the bargaining with them, and all the countless worries which beset a manager, and which, by a new agreement he had to undertake, proved a most uncongenial and, moreover, a most wasteful task; so uncongenial that at last, the day after the opening of the theatre, he suddenly 'made a *salto mortale*,' and threw up all connection[11] with it, not without considerable irritability and inconsistency.[12] After this he continued to do his other duties, and to conduct occasional operas, Julius Rietz being his assistant. With the opening of 1835 he received an invitation from Leipzig through Schleinitz, which resulted in his taking the post of Conductor of the Gewandhaus Concerts there. His answers[13] to the invitation show not only how very careful he was not to infringe on the rights of others, but also how clearly and practically he looked at all the bearings of a question before he made up his mind upon it. Before the change, however, several things happened. He conducted the Lower Rhine Festival of 1835 at Cologne (June 7-9). The principal works were Handel's 'Solomon'—for which he had written an organ part in Italy; Beethoven's Symphony No. 8, and Overture op. 124, a 'religious march' and hymn of Cherubini's, and the Morning Hymn of his favourite J. F. Reichardt. The Festival was made more than ordinarily delightful to him by a present of Arnold's edition of Handel in thirty-two vols. from the committee. His father, mother, and sisters were all there. The parents then went back with him to Düsseldorf; there his mother had a severe attack of illness, which prevented his taking them home to Berlin till the latter part of July.[14] At Cassel the father, too, fell ill, and Felix's energies were fully taxed on the road.[15] He remained with them at Berlin till the end of August, and then left for Leipzig to make the necessary preparations for beginning the subscription concerts in the Gewandhaus on Oct. 4. His house at Leipzig was in Reichel's garden, off the Promenade. Chopin visited him during the interval, and Felix had the pleasure of introducing him to Clara Wieck, then a girl of sixteen. His first introduction to Schumann is said to have taken place at Wieck's house on Oct. 3, the day before the Gewandhaus Concert at which Clara played Beethoven's B flat trio (Moscheles' *Life*, i. 301). Later came his old Berlin friend Ferdinand David from Russia to lead the orchestra,[16] and Moscheles from London for a lengthened visit. Mendelssohn's new engagement began with the best auspices. The relief from the worries and responsibilities of Düsseldorf was immense,[17] and years afterwards he refers to it as 'when I first came to Leipzig and thought I was in Paradise.'[18] He was warmly welcomed on taking his seat, and the first concert led off with his 'Meeresstille' Overture.

Rebecka passed through Leipzig on Oct. 14 (1835) on her way from Belgium, and Felix and Moscheles accompanied her to Berlin for a visit of two days, returning to Leipzig for the

next concert. Short as the visit was, it was more than usually gay. The house was full every evening, and by playing alternately, by playing four hands, and by the comical extempore tricks of which the two friends were so fond, and which they carried on to such perfection, the parents, especially the father, now quite blind, were greatly mystified and amused.[1] And well that it was so, for it was Felix's last opportunity of gratifying the father he so tenderly loved and so deeply reverenced. At half-past 10 A.M. on Nov. 19, 1835, Abraham Mendelssohn was dead. He died the death of the just, passing away, as his father had done, without warning, but also without pain. He turned over in his bed, saying that he would sleep a little; and in half an hour he was gone. Hensel started at once for Leipzig, and by Sunday morning, the 22nd, Felix was in the arms of his mother. How deeply he felt under this peculiarly heavy blow the reader must gather from his own letters. It fell on him with special force, because he was not only away from the family circle, but had no home of his own, as Fanny and Rebecka had, to mitigate the loss. He went back to Leipzig stunned, but determined to do his duty with all his might, finish 'St. Paul,' and thus most perfectly fulfil his father's wishes. He had completed the revision of his 'Melusina' Overture on Nov. 17, only three days before the fatal news reached him, and there was nothing to hinder him from finishing the oratorio. He had played in Bach's concerto in D minor for three pianofortes with Clara Wieck and Rakemann at the Gewandhaus Concert on Nov. 9, 1835.

The business of the day, however, had to go on. One of the chief events in this series of concerts was a performance of the Ninth Symphony of Beethoven, Feb. 11, 1836.[2] Another was Mendelssohn's performance of Mozart's D minor Concerto 'as written' (for it seems to have been always hitherto played after some adaptation),[3] on Jan. 29, with cadenzas which electrified his audience. Leipzig was particularly congenial to Mendelssohn. He was the idol of the town, had an orchestra full of enthusiasm and devotion, a first-rate coadjutor in David, who took much of the mechanical work of the orchestra off his shoulders; and, moreover, he was relieved of all business arrangements, which were transacted by the committee, especially by Herr Schleinitz. Another point in which he could not but contrast his present position favourably with that at Düsseldorf was the absence of all rivalry or jealousy. The labour of the season, however, was severe, and he confesses that the first two months had taken more out of him than two years' composing would do.[4] The University of Leipzig showed its appreciation of his presence by conferring on him the degree of Doctor of Philosophy in March.[5]

Meantime Schelble's illness had cancelled the arrangement for producing 'St. Paul' at Frankfort, and it had been secured for the Lower Rhine Festival at Düsseldorf (May 22-24, 1836). The programmes included, besides the new oratorio, the two overtures to 'Leonore,' both in C, 'No. 1' (then unknown) and 'No. 3': one of Handel's Chandos anthems, the 'Davidde penitente' of Mozart, and the Ninth Symphony. 'St. Paul' was executed with the greatest enthusiasm, and produced a deep sensation. It was performed on the 22nd, not in the present large music hall (Kaisersaal), but in the long low room which lies outside of that and below it, known as the Rittersaal, a too confined space for the purpose. For the details of the performance, including an escapade of one of the false witnesses, in which the coolness and skill of Fanny alone prevented a break-down, we must refer the reader to the contemporary accounts of Klingemann, Hiller, and Polko.[6] To English readers the interest of the occasion is increased by the fact that Sterndale Bennett, then twenty years old, and fresh from the Royal Academy of Music, was present. [The earliest known reference to the oratorio of 'Elijah' is of this year. In a letter to Klingemann, dated 'The Hague, August 12, 1836,' he says: 'If you would only give all the care and thought you bestow now upon St. Paul to an Elijah, or a St. Peter, or even an Og of Bashan!'[7]]

Schelble's illness induced Mendelssohn to take the direction of the famous Cäcilien-Verein at Frankfort. Leipzig had no claims on him after the concerts were over, and he was thus able to spend six weeks at Frankfort practising the choir in Bach's 'Gottes Zeit,' Handel's 'Samson,' and other works, and improved and inspired them greatly. He resided in Schelble's house at the corner of the 'Schöne Aussicht,' with a view up and down the Main. Hiller was then living in Frankfort; Lindblad was there for a time; and Rossini remained for a few days on his passage through, in constant intercourse with Felix.[8]

Mendelssohn's visit to Frankfort was, however, fraught with deeper results than these. It was indeed quite providential, since here he met his future wife, Cécile Charlotte Sophie Jeanrenaud, a young lady of great beauty, nearly ten years younger than himself, the second daughter of a clergyman of the French Reformed Church, who had died many years before, leaving his wife (a Souchay by family) and children amongst the aristocracy of the town. The house was close to the Fahrthor, on the quay of the Main.[9] Madame Jeanrenaud was still young and good-

looking, and it was a joke in the family that she herself was at first supposed to be the object of Mendelssohn's frequent visits. But though so reserved, he was not the less furiously in love, and those who were in the secret have told us how entirely absorbed he was by his passion, though without any sentimentality. He had already had many a passing attachment. Indeed being at once so warm-hearted and so peculiarly attractive to women—and also, it should be said so much sought by them—it is a strong tribute to his self-control that he was never before seriously or permanently involved. On no former occasion, however, is there a trace of any feeling that was not due entirely, or mainly, to some quality or accomplishment of the lady, and not to her actual personality. In the present case there could be no doubt either of the seriousness of his love or of the fact that it centred in Mlle. Jeanrenaud herself, and not in any of her tastes or pursuits. And yet, in order to test the reality of his feelings, he left Frankfort, at the very height of his passion, for a month's bathing at Scheveningen near the Hague.[1] His friend F. W. Schadow, the painter, accompanied him, and the restless state of his mind may be gathered from his letters to Hiller.[2] His love stood the test of absence triumphantly. Very shortly after his return, on Sept. 9, the betrothal took place, at Kronberg, near Frankfort[3]; three weeks of bliss followed, and on Oct. 2 he was in his seat in the Gewandhaus, at the first concert of the season. Five days later (Oct. 7), in the distant city of Liverpool, 'St. Paul' was performed for the first time in England, under the direction of Sir George Smart. The season at Leipzig was a good one; Sterndale Bennett, who had come over at Mendelssohn's invitation, made his first public appearance in his own pianoforte concerto in C minor, and the series closed with the Choral Symphony.

His engagement soon became known far and wide, and it is characteristic of Germany, and of Mendelssohn's intimate relation to all concerned in the Gewandhaus, that at one of the concerts, the Finale to 'Fidelio,' 'Wer ein holdes Weib errungen,' should have been put into the programme by the directors with special reference to him, and that he should have been forced into extemporising on that suggestive theme, amid the shouts and enthusiasm of his audience. The rehearsals for the concerts, the concerts themselves, his pupils, friends passing through, visits to his fiancée, an increasing correspondence, kept him more than busy. Sterndale Bennett was living in Leipzig, and the two friends were much together. In addition to the subscription series and to the regular chamber concerts, there were performances of 'Israel in Egypt,' with a new organ part by him, on Nov. 7, and 'St. Paul,' on March 16, 1837. The compositions of this winter are few, and all of one kind, namely preludes and fugues for pianoforte.[4] The wedding took place on March 28, 1837, at the Walloon French Reformed Church, Frankfort. For the wedding tour they went to Freiburg and into the Palatinate, and by the 15th of May had returned to Frankfort.[5] A journal which they kept together during the honeymoon is full of sketches and droll things of all kinds. In July they were at Bingen, Horchheim, Coblenz, and Düsseldorf for some weeks. At Bingen, while swimming across to Assmannshausen, he had an attack of cramp which nearly cost him his life, and from which he was only saved by the boatman. The musical results of these few months were very important, and include the 42nd Psalm, the String Quartet in E minor, (op. 44, No. 2) an Andante and Allegro for pianoforte in E, published posthumously as a Capriccio (op. 118), the second pianoforte Concerto, in D minor, and the three Preludes for the Organ (op. 37); [the fugues appear to have been composed later]. He was also in earnest correspondence with Schubring[6] as to a second oratorio, on the subject of St. Peter.

It must have been hard to tear himself away so soon from his lovely young wife—and indeed he grumbles about it lustily[7]—but he had been engaged to conduct 'St. Paul,' and to play the organ and his new Pianoforte Concerto, at the Birmingham Festival. Accordingly on August 24, he left Düsseldorf for Rotterdam, crossed to Margate in the *Attwood*, the same boat which had taken him over in 1829, and on the 27th is in London, on his fifth visit, at Klingemann's house, as cross as a man can well be.[8] But this did not prevent his setting to work with Klingemann at the plan of an oratorio on Elijah, over which they had two mornings' consultation.[9] Before leaving London for Birmingham, he played the organ at St. Paul's—on Sunday afternoon, Sept. 10—and at Christ Church, Newgate Street, on Tuesday morning, the 12th. It was on the former of these two occasions that the vergers, finding that the congregation would not leave the Cathedral, withdrew the organ-blower, and let the wind out of the organ during Bach's Prelude and Fugue in A minor[10]—'near the end of the fugue,[11] before the subject comes in on the Pedals.'[12] At Christ Church he was evidently in a good vein. He played 'six extempore fantasias,' one on a fugue subject given by old Wesley at the moment, and the Bach Fugue just mentioned and Bach's Toccata. Samuel Wesley—our own

has the following inscription:—'Vendu à Mendelssohn au prix de l'execution d'un nombre indeterminé de Fugues de J. S. Bach, et de la Copie d'un Rondo du même Maître. LAURENS à Montpellier.'

ancient hero, though seventy-one years old—was present and played. It was literally his Nunc dimittis: he died on Oct. 11, 1837, a month from that date. Mendelssohn's organ-playing on these occasions was eagerly watched. He was the greatest of the few great German organ-players who had visited this country, and the English organists, some of them no mean proficients, learned more than one lesson from him. 'It was not,' wrote Dr. Gauntlett, 'that he played Bach for the first time here,—several of us had done that. But he taught us how to play the *slow* fugue, for Adams and others had played them too fast. His words were, "Your organists think that Bach did not write a slow fugue for the organ." Also he brought out a number of pedal-fugues which were not known here. We had played a few, but he was the first to play the D major, the G minor, the E major, the C minor, the short E minor,' etc.[1] Even in those that were known he threw out points unsuspected before, as in the A minor fugue, where he took the episode on the Swell, returning to the Great Organ when the pedal re-enters, but transferring the E in the treble to the Great Organ a bar before the entry of the other parts, with very fine effect.[2] One thing which particularly struck our organists was the contrast between his massive effects and the lightness of his touch in rapid passages. The touch of the Christ Church organ was both deep and heavy, yet he threw off arpeggios as if he were at a piano. His command of the pedal clavier was also a subject of much remark.[3] But we must hasten on.

On the evening of the Tuesday, Sept. 12, he attended a performance of his oratorio 'St. Paul' by the Sacred Harmonic Society at Exeter Hall. He had conducted three rehearsals, but could not conduct the performance itself, owing to the prohibition of the Birmingham committee. It was the first time he had heard 'St. Paul' as a mere listener, and his private journal says that he found it 'very interesting.' His opinion of English amateurs may be gathered from his letter to the Society, with which his journal fully agrees.[4] 'I can hardly express the gratification I felt in hearing my work performed in so beautiful a manner,—indeed, I shall never wish to hear some parts of it better executed than they were on that night. The power of the choruses—this large body of good and musical voices—and the style in which they sang the whole of my music, gave me the highest and most heartfelt treat; while I thought on the immense improvement which such a number of *real amateurs* must necessarily produce in the country which may boast of it.'

On the Wednesday he went to Birmingham, and remained there, rehearsing and arranging, till the Festival began, Tuesday, Sept. 19. At the evening concert of that day he extemporised on the organ, taking the subjects of his fugue from 'Your harps and cymbals sound' ('Solomon'), and the first movement of Mozart's Symphony in D, both of which had been performed earlier in the day; he also conducted his 'Midsummer Night's Dream' overture. On Wednesday he conducted 'St. Paul,' on Thursday evening played his new pianoforte concerto in D minor, and on Friday morning, the 22nd, Bach's Prelude and Fugue ('St. Anne's') on the organ.[5] The applause throughout was prodigious; but it did not turn his head, or prevent indignant reflections on the treatment to which Neukomm had been subjected, reflections which do him honour. Moreover, the applause was not empty. Mori and Novello were keen competitors for the D minor pianoforte concerto, and it became the prize of the latter, at what we should now consider a very moderate figure, before its composer left Birmingham. He travelled up by coach, reaching London at midnight, and was intercepted at the coach-office by the committee of the Sacred Harmonic Society, who presented him with a large silver snuff-box, adorned with an inscription.[6] He then went straight through, arrived in Frankfort on the 27th, and was at Leipzig at 2 P.M. of the day of the first concert, Sunday, Oct. 1. His house was in Lurgenstein's Garden, off the Promenade, the first house on the left, on the second floor.[7] On Oct. 12, 1837, he writes to thank the Gesellschaft der Musikfreunde of Vienna for its diploma of membership. The letter is in the Society's archives.

The next few years were given chiefly to Leipzig. He devoted all his heart and soul to the Gewandhaus Concerts, and was well repaid by the increasing excellence of the performance and the enthusiasm of the audiences. The principal feature of the series 1837-38 was the appearance of Clara Novello for the first time in Germany—a fruit of his English experiences. She sang first at the concert of Nov. 2, 1837, and remained till the middle of January, creating an extraordinary excitement. But the programmes had other features to recommend them. In Feb. and March 1838, there were four historical concerts (1. Bach, Handel, Gluck, Viotti; 2. Haydn, Cimarosa, Naumann, Righini; 3. Mozart, Salieri, Méhul, Romberg; 4. Vogler, Beethoven, Weber), which excited great interest. Mendelssohn and David played the solo pieces, and it is easy to imagine what a treat they must have been. In the programmes of other concerts we find Beethoven's 'Glorreiche Augenblick,' and Mendelssohn's own 42nd Psalm. His Serenade and Allegro giojoso (op. 43)—like his

'Ruy Blas' Overture, a veritable impromptu—was produced on April 2,[1] and his String Quartet in E flat (op. 44, No. 3) on the following day.

His domestic life during the spring of 1838 was not without anxiety. On Feb. 7 his first son was born, afterwards named Carl Wolfgang Paul, and his wife had a very dangerous illness.[2] This year he conducted the Lower Festival at Cologne (June 3-6). He had induced the committee to include a cantata of Bach's,[3] then an entire novelty, in the programme, which also contained a selection from Handel's 'Joshua.' A silver cup (Pokal) was presented to him at the close of the Festival.[4] [The Bach novelty appears to have been a garbled version of the Himmelfahrts cantata, 'Gott fähret auf mit Jauchzen,' though Mendelssohn probably found it in that state. The double chorus—to which he refers in his letter to J. A. Novello as being alone worth the journey from London to Cologne to hear—was 'Nun ist das Heil, und die Kraft.' This information, though not so complete as could be desired, is obtained from a word-book of the festival. See *Musical Times*, June 1906, p. 387, for further details.]

The summer was spent at Berlin, in the lovely garden of the Leipziger Strasse, and was his wife's first introduction to her husband's family.[5] To Felix it was a time of great enjoyment and much productiveness. Even in the early part of the year he had not allowed the work of the concerts to keep him from composition. The String Quartet in E flat just mentioned, the Violoncello Sonata in B flat (op. 45), the 95th Psalm, and the Serenade and Allegro giojoso are all dated during the hard work of the first four months of 1838. The actual result of the summer was another String Quartet (in D; op. 44, No. 1), dated July 24, 1838,[6] and the Andante Cantabile and Presto Agitato in B (Berlin, June 22, 1838). The intended result is a symphony in B flat which occupied him much, which he mentions more than once as complete in his head, but of which no trace on paper has yet been found.[7] He alludes to it in a letter to the Philharmonic Society (Jan. 19, 1839)—answering their request for a symphony—as 'begun last year,' though it is doubtful if his occupations will allow him to finish it in time for the 1839 season. So near were we to the possession of an additional companion to the Italian and Scotch symphonies! The Violin concerto was also begun in this holiday,[8] and he speaks of a Psalm[9] (probably the noble one for eight voices, 'When Israel out of Egypt came'), a Sonata for pianoforte and violin (in F, dated 'Berlin, June 13, 1838,' still in MS.), and other things. He was now, too, in the midst of the tiresome correspondence with J. R. Planché,[10] on the subject of the opera which that gentleman had agreed to write, but which, like Mendelssohn's other negotiations on the subject of operas, came to nothing; and there is the usual large number of long and carefully written letters. He returned to Leipzig in September, but was again attacked with measles,[11] on the eve of a performance of 'St. Paul,' on Sept. 15. The attack was sufficient to prevent his conducting the first of the Gewandhaus Concerts (Sept. 30), at which David was his substitute. On Oct. 7 he was again at his post.[12] The star of this series was Mrs. Alfred Shaw, whose singing had pleased him very much when last in England. Its one remarkable novelty was Schubert's great Symphony in C, which had been brought from Vienna by Schumann, and was first played in MS. on March 21, 1839, at the last concert of the series. [He was very anxious that the Philharmonic Society (London) should perform Schubert's symphony, and, indeed, he sent the parts to London, but without any practical result. See his letters to the Secretary of the Society, W. Watts, in the concert programme-book of Feb. 5, 1880.] During the autumn of 1839 he received from Erard the grand piano which became so well known to his friends and pupils, and the prospect of which he celebrates in a remarkable letter now in the possession of that firm.

'Elijah' is now fairly under way. After discussing with his friends Bauer and Schubring the subject of St. Peter,[13] in terms which show how completely the requirements of an oratorio book were within his grasp, and another subject not very clearly indicated, but apparently approaching that which he afterwards began to treat as Christus[14]—he was led to the contemplation of that most picturesque and startling of the prophets of the Old Testament, who, strange to say, does not appear to have been previously treated by any known composer. Hiller[15] tells us that the subject was suggested by the passage[16] (1 Kings xix. 11), 'Behold, the Lord passed by.' We may accept the fact more certainly than the date (1840) at which Hiller places it. Such a thing could not but fix itself in the memory, though the date might easily be confused. We have already seen that he was at work on the subject in the summer of 1837, and the correspondence printed in the *History of 'Elijah'* shows that much consultation had already taken place upon it between Mendelssohn and himself, and also with Klingemann, and that considerable progress had been made in the construction of the book of the oratorio. Mendelssohn had

drawn up a number of passages and scenes in order, and had given them to Schubring for consideration. His ideas are dramatic enough for the stage! A month later[1] the matter has made further progress, and his judicious dramatic ideas are even more confirmed; but the music does not seem to be yet touched. During the spring of 1839 he finished the 114th Psalm, and wrote the overture to 'Ruy Blas.' This, though one of the most brilliantly effective of his works, was, with a chorus for female voices, literally conceived and executed *à l'improviste* between a Tuesday evening and a Friday morning—a great part of both Wednesday and Thursday being otherwise occupied—and in the teeth of an absolute aversion to the play.[2] The performance took place at the theatre on March 11. A letter to Hiller, written a month[3] after this (Leipzig, April 15), gives a pleasant picture of his care for his friends. A great part of it is occupied with the arrangements for doing Hiller's oratorio in the next series of Gewandhaus Concerts, and with his pleasure at the appearance of a favourable article on him in Schumann's paper, *Neuemusikalische Zeitung*, from which he passes to lament over the news of the suicide of Nourrit, who had been one of his circle in Paris in 1831.

In May (1839) he is at Düsseldorf, conducting the Lower Rhine Musical Festival (May 19-21) —the 'Messiah,' Beethoven's Mass in C, his own 42nd Psalm, the Eroica Symphony, etc. From there he went to Frankfort, to the wedding of his wife's sister Julie to Mr. Schunck of Leipzig, and there he wrote the D minor Trio[4]; then to Horchheim, and then back to Frankfort. On August 21[5] they were at home again in Leipzig, and were visited by the Hensels, who remained with them till Sept. 4, and then departed for Italy. Felix followed them with a long letter[6] of hints and instructions for their guidance on the journey, not the least characteristic part of which is the closing injunction to be sure to eat a salad of brocoli and ham at Naples, and to write to tell him if it was not good.

The summer of 1839 had been an unusually fine one; the visit to Frankfort and the Rhine had been perfectly successful; he had enjoyed it with that peculiar capacity for enjoyment which he possessed, and he felt 'thoroughly refreshed.'[7] He went a great deal into society, but found none so charming as that of his wife. A delightful picture of part of his life at Frankfort is given in a letter to Klingemann of August 1, and still more so in one to his mother on July 3, 1839. Nor was it only delightful. It urged him to the composition of part-songs for the open air, a kind of piece which he made his own, and wrote to absolute perfection. The impulse lasted till the end of the winter, and many of his best part-songs—including 'Love and Wine,' 'The Hunter's Farewell,' 'The Lark'—date from this time. In addition to these the summer produced the D minor pianoforte trio already mentioned, the completion of the 114th Psalm, and three fugues for the organ, one of which was worked into the organ sonata No. 2, while the others remain in MS. [except the fugue in F minor, No. 3 of the set, which was published by Stanley Lucas & Co., London, in 1885.]

[He conducted a Musical Festival at Brunswick (Sept. 6-8), where he first made the acquaintance of H. F. Chorley. Beethoven's symphonies in C minor and A, and Mendelssohn's 'St. Paul,' D minor pf. concerto, and Serenade (pf.) were performed.[8]] On Oct. 2 his second child, Marie, was born. Then came the christening, with a visit from his mother and Paul, and then Hiller arrived. He had very recently lost his mother, and nothing would satisfy Mendelssohn but that his friend should come and pay him a long visit,[9] partly to dissipate his thoughts, and partly to superintend the rehearsals of his oratorio of 'Jeremiah the Prophet,' which had been bespoken for the next series of Gewandhaus Concerts.[10] Hiller arrived early in December, and we recommend his description of Mendelssohn's home life to any one who wishes to know how simply and happily a great and busy man can live. Leipzig was proud of him, his wife was very popular, and this was perhaps the happiest period of his life. His love of amusement was as great as ever, and his friends long recollected his childish delight in the Cirque Lajarre and Paul Cousin the clown.

The concert season of 1839-40 was a brilliant one. For novelties there were symphonies by Lindblad, Kalliwoda, Kittl, Schneider, and Vogler. Schubert's ninth symphony (in C) was played no less than three times,[11] and one concert[12] (Jan. 9, 1840) was rendered memorable by a performance of Beethoven's four Overtures to Leonora ('Fidelio'). Mendelssohn's own 114th Psalm was first performed 'sehr glorios'[13] on New Year's Day, and the new Trio in D minor on Feb. 10. The Quartet Concerts were also unusually brilliant. At one of them Mendelssohn's Octet was given, he and Kalliwoda playing the two violas; at another he accompanied[14] David in Bach's 'Chaconne,' then quite unknown. Hiller's oratorio was produced on

[14] Probably extempore; the published version is dated some years later.

April 2 with great success. Ernst, and, above all, Liszt, were among the virtuosos of this season; and for the latter of these two great players Mendelssohn arranged a soirée at the Gewandhaus, which he thus epitomises: '350 people, orchestra, chorus, punch, pastry, Meeresstille, Psalm, Bach's Triple Concerto, choruses from St. Paul, Fantasia on Lucia, the Erl King, the devil and his grandmother'[1]; and which had the effect of somewhat allaying the annoyance which had been caused by the extra prices charged at Liszt's concerts.

How, in the middle of all this exciting and fatiguing work (of which we have given but a poor idea), he found time for composition, and for his large correspondence, it is impossible to tell, but he neglected nothing. On the contrary, it is precisely during this winter that he translates for his uncle Joseph, his father's elder brother—a man not only of remarkable business power but with considerable literary ability—a number of difficult early Italian poems into German verse. They consist of three sonnets by Boccaccio, one by Dante, one by Cino, one by Cecco Angiolieri, an epigram of Dante's, and another of Gianni Alfani's. They are printed in the later editions of the letters (German version only), and are accompanied by a letter to his uncle Joseph, dated Feb. 20, 1840, describing half-humorously, half-pathetically, the difficulty which the obscurities of the originals had given him amid all his professional labours. With irrepressible energy he embraced the first moment of an approach to leisure, after what he describes as a 'really overpowering turmoil,'[2] to write a long and carefully-studied official communication to the Kreis-Director, or Home Minister of Saxony, urging that a legacy recently left by a certain Herr Blümner should be applied to the formation of a solid music academy at Leipzig.[3] This was business; but, in addition, during all these months there are long letters to Hiller, Chorley, his mother, Fanny, Paul, and Fürst (and remember that only a small part of those which he wrote has been brought within our reach); and yet he managed to compose both the 'Lobgesang' and the 'Festgesang' for the Festival in commemoration of the invention of Printing, which was held in Leipzig on June 25, the former of which is as characteristic and important a work as any in the whole series of his compositions. The music for both these was written at the express request of the Town Council, acting through a committee whose chairman was Dr. Raymond Härtel, and the first communication with Mendelssohn on the subject was made about the end of the previous July. We know from Mendelssohn himself[4] that the title 'Symphonie Cantata' is due to Klingemann, but the words are probably Mendelssohn's own selection, no trace of any communication with Schubring, Bauer, or Fürst being preserved in the published letters or recollections, and the draft of the words having vanished.

The Festival extended over two days, Wednesday and Thursday, June 24 and 25, 1840. On Tuesday evening there was a 'Vorfeier' in the shape of an opera by Lortzing, 'Hans Sachs,' composed for the occasion. At 8 A.M. on Wednesday was a service in the church with a cantata by Richter (of Zittau), followed by the unveiling of the printing-press and statue of Gutenberg, and by a performance in the open market-place of Mendelssohn's 'Festgesang'[5] for two choirs and brass instruments, he conducting the one chorus and David the other. On Thursday afternoon a concert was held in St. Thomas's Church, consisting of Weber's Jubilee Overture, Handel's Dettingen Te Deum, and Mendelssohn's 'Lobgesang.'

Hardly was this over when he went to Schwerin with his wife, to conduct 'St. Paul' and other large works, at a Festival there (July 8-10). On the way back they stopped in Berlin for 'three very pleasant days.'[6] Another matter into which at this time he threw all his devotion was the erection of a monument to Sebastian Bach in front of his old habitat at the 'Thomas School.' The scheme was his own, and he urged it with characteristic heartiness.[7] But dear as the name and fame of Bach were to him, he would not consent to move till he had obtained (from the town council) an increase to the pay of the orchestra of the Gewandhaus Concerts. For this latter object he obtained 500 thalers,[8] and on Aug. 6, gave an organ performance *solissimo* in St. Thomas's church, by which he realised 300 thalers.[9] Even this he would not do without doing his very best, and he describes to his mother how he had practised so hard for a week before 'that he could hardly stand on his feet, and the mere walking down the street was like playing a pedal passage.'[10] After such a six months no wonder that his health was not good, and that his 'physician wanted to send him to some Brunnen instead of a Musical Festival.'[11] To a Festival, however, he went. The 'Lobgesang' had not escaped the attention of the energetic Mr. Moore, who managed the music in Birmingham, and some time before its first performance he had written to Mendelssohn with the view of securing it for the autumn meeting. On July 21, Mendelssohn writes in answer, agreeing to come, and making his stipulations as to the

[1] *L.* to his mother, March 30, 1840.
[2] *Ibid.*
[3] *L.* April 8, 1840.
[4] *L.* to Klingemann, Nov. 18, 1840.
[5] The words of this were by Prof. Pröls of Freiberg (*N.M.Z.* 1840, ii. 7). The 'statue' which is mentioned in the accounts was probably something merely temporary. The second number of the Festgesang, adapted by Dr. W. H. Cummings to the words, 'Hark, the herald angels sing,' is a very favourite hymn-tune in England. [In a letter to his English publisher, Mr. E. Buxton (Ewer & Co.), Mendelssohn says that the tune 'will *never* do to sacred words'! See *Musical Times*, Dec. 1897, p. 810.]

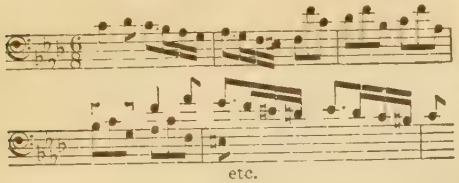
other works to be performed.[1] It was his sixth visit to England.

There was a preliminary rehearsal of the work in London under Moscheles's care. Mendelssohn arrived on Sept. 18,[2] visited all his London friends, including the Alexanders, Horsleys, Moscheles, and Klingemann (with whom he stayed, at 4 Hobart Place, Pimlico), went down to Birmingham with Moscheles on Sunday the 20th and stayed with Mr. Moore. On Tuesday he played a fugue on the organ; on Wednesday, the 23rd, conducted the 'Lobgesang,' and after it was over, and the public had left the hall, played for three-quarters of an hour on the organ.[3] The same day he played his G minor Concerto at the evening concert in the theatre. On Thursday, after a selection from Handel's 'Jephthah,' he again extemporised on the organ, this time in public. The selection had closed with a chorus, the subjects of which he took for his improvisation,[4] combining 'Theme sublime' with 'Ever faithful' in a masterly manner. On his return to town he played on the organ at St. Peter's, Cornhill, on Sept. 30, Bach's noble Prelude and Fugue in E minor, his own in C minor (op. 37, No. 1) and F minor,[5]



etc.

and other pieces, concluding with Bach's Passacaglia. Of this last he wrote a few bars as a memento, which still ornament the vestry of the church.[6] He had intended to give a Charity Concert during his stay in London,[7] after the Festival, but it was too late in the season for this, and he travelled from London with Chorley[8] and Moscheles in the mail-coach to Dover; then an eight-hours' passage to Ostend, and by Liège and Aix-la-Chapelle to Leipzig. It was Moscheles's first introduction to Cécile.

The concerts had already begun, on Oct. 4, but he took his place at the second. The 'Lobgesang' played a great part in the musical life of Leipzig this winter. It was performed at the special command of the King of Saxony at an extra concert in October.[9] Then Mendelssohn set to work to make the alterations and additions which the previous performances had suggested to him, including the scene of the watchman, preparatory to a benefit performance on Dec. 3; and lastly it was performed at the ninth Gewandhaus Concert, on Dec. 16, when both it and the Kreutzer Sonata were commanded by the King and the Crown Prince of Saxony. The alterations were so serious and so universal as to compel the sacrifice of the whole of the plates engraved for the performance at Birmingham. Now, however, they were final, and the work was published by Breitkopf & Härtel early in the following year. Before leaving this we may say that the scene of the watchman was suggested to him during a sleepless night, in which the words 'Will the night soon pass?' incessantly recurred to his mind. Next morning he told Schleinitz that he had got a new idea for the 'Lobgesang.'

With 1841 we arrive at a period of Mendelssohn's life when, for the first time, a disturbing antagonistic element beyond his own control was introduced into it, depriving him of that freedom of action on which he laid such great stress, reducing him to do much that he was disinclined to, and to leave undone much that he loved, and producing by degrees a decidedly unhappy effect on his life and peace. From 1841 began the worries and troubles which, when added to the prodigious amount of his legitimate work, gradually robbed him of the serene happiness and satisfaction which he had for long enjoyed, and in the end, there can be little doubt, contributed to his premature death. Frederick William IV., to whom, as Crown Prince, Mendelssohn dedicated his three Concert-overtures in 1834, had succeeded to the throne of Prussia on June 7, 1840; and being a man of much taste and cultivation, one of his first desires was to found an Academy of Arts in his capital, to be divided into the four classes of Painting, Sculpture, Architecture, and Music, each class to have its Director, who should in turn be Superintendent of the whole Academy. In music it was proposed to connect the class with the existing establishments for musical education, and with others to be formed in the future, all under the control of the Director, who was also to carry out a certain number of concerts every year, at which large vocal and instrumental works were to be performed by the Royal orchestra and the Opera company. Such was the scheme which was communicated to Mendelssohn by Herr von Massow, on Dec. 11, 1840, with an offer of the post of Director of the musical class, at a salary of 3000 thalers (£450). Though much gratified by the offer, Mendelssohn declined to accept it without detailed information as to the duties involved. That information, however, could only be afforded by the Government Departments of Science, Instruction, and Medicine, within whose regulation the Academy lay, and on account of the necessary changes and adjustments would obviously require much consideration. Many letters on the subject passed between Mendelssohn, his brother Paul, Herr von Massow, Herr Eichhorn the Minister, Klingemann,

the President Verkenius, from which it is not difficult to see that his hesitation arose from his distrust of Berlin and of the official world which predominated there, and with whom he would in his directorship be thrown into contact at every turn. He contrasts, somewhat captiously perhaps, his freedom at Leipzig with the trammels at Berlin; the devoted, excellent, vigorous orchestra of the one with the careless perfunctory, execution of the other. His radical, *roturier* spirit revolted against the officialism and etiquette of a great and formal Court, and he denounces in distinct terms 'the mongrel doings of the capital —vast projects and poor performances; the keen criticism and the slovenly playing; the liberal ideas and the shoals of subservient courtiers; the Museum and Academy, and the sand.'

To leave a place where his sphere of action was so definite, and the results so unmistakably good, as they were at Leipzig, for one in which the programme was vague and the results at best problematical, was to him more than difficult. His fixed belief was that Leipzig was one of the most influential and Berlin one of the least influential places in Germany in the matter of music; and this being his conviction (rightly or wrongly) we cannot wonder at his hesitation to forsake the one for the other. However, the commands of a king are not easily set aside, and the result was that by the end of May 1841 he was living in Berlin, in the old home of his family—to his great delight.

His life at Leipzig during the winter of 1840-41 had been unusually laborious. The interest of the concerts was fully maintained; four very interesting programmes, occupied entirely by Bach, Handel, Haydn, Mozart, and Beethoven, and involving a world of consideration and minute trouble, were given. He himself played frequently; several very important new works by contemporaries—including symphonies by Spohr, Maurer, and Kalliwoda, and the Choral Symphony, then nearly as good as new—were produced, after extra careful rehearsals[1]; and the season wound up with Bach's Passion. In a letter to Chorley[2] of March 15, 1841, he says his spring campaign 'was more troublesome and vexatious than ever . . . nineteen concerts since then [Jan. 1], and seven more to come in the next three weeks, not to speak of rehearsals, of which we always had *at least* three in a week.' The amount of general business and correspondence, due to the constant rise in his fame and position, was also alarmingly on the increase. In a letter to his mother, Jan. 25, 1841, he tells of thirty-five letters written in two days, and of other severe demands on his time, temper, and judgment. And when we remember what his letters often are—the large quarto sheet of 'Bath paper,' covered at least on three sides, often over the flaps of the fourth, the close straight lines, the regular, extraordinarily neat writing, the air of accuracy and precision that pervades the whole down to the careful signature and the tiny seal—we shall not wonder that with all this, added to the Berlin worries, he composed little or nothing. 'I have neither read nor written in the course of this music-mad winter,' says he,[3] and accordingly, with one exception, we find no composition with a date earlier than the latter part of April 1841. The exception was a pianoforte duet in A, which he wrote expressly to play with his friend Madame Schumann, at her concert on March 31. It is dated Leipzig, March 23, 1841, and was published after his death as op. 92. As the pressure lessens, however, and the summer advances, he breaks out with some songs, with and without words, and then with the '17 Variations Sérieuses' (June 4), going on, as his way was, in the same rut, with the Variations in E flat (June 25) and in B flat.[4] It was known before he left Leipzig that it was his intention to accept the Berlin post for a year only, and therefore it seemed natural that the 'Auf Wiedersehen' in his Volkslied, 'Es ist bestimmt,' should be rapturously cheered when sung[5] by Schröder-Devrient to his own accompaniment, and that when serenaded at his departure with the same song he should himself join heartily in its closing words.[6] He took his farewell, as we have said, with a performance of Bach's Passion, in St. Thomas's church, on Palm Sunday, April 4, and the appointment of capellmeister to the King of Saxony followed him to Berlin.[7]

For some time after his arrival there matters did not look promising. But he had bound himself for a year. Many conferences were held, at which little was done but to irritate him. He handed in his plan for the Musical Academy,[8] received the title of Capellmeister[9] to the King of Prussia, the life in the lovely garden at the Leipziger Strasse reasserted its old power over him, and his hope and spirits gradually returned. He was back in Leipzig for a few weeks in July, as we find from his letters, and from an Organ prelude in C minor, a perfectly strict composition of thirty-eight bars, written 'this morning' (July 9), on purpose for the album of Henry E. Dibdin of Edinburgh.[10] Dibdin had asked him to compose a psalm-tune. 'I do not know what "a long measure psalm-tune" means,' Mendelssohn writes, in English, 'and there is nobody in this place [Leipzig] at present to whom I could apply for an explanation. Excuse me, therefore, if you receive something else than what you wished.' He then began work in Berlin. The King's desire was to revive some of the ancient

Greek tragedies. He communicated his idea to Tieck, the poet, one of the new Directors; the choice fell on the 'Antigone' of Sophocles, in Donner's new translation; and by Sept. 9[1] Mendelssohn was in consultation with Tieck on the subject. He was greatly interested with the plan, and with the novel task of setting a Greek drama, and worked at it with the greatest enthusiasm. By the 28th of the same month he had made up his mind on the questions of unison, melodrama, etc. The first full stage rehearsal took place on Oct. 22, and the performance itself at the Neue Palais at Potsdam on Oct. 28, with a repetition on Nov. 6. Meantime he had taken a house of his own opposite the family residence. A temporary arrangement had been made for the Gewandhaus Concerts of this winter to be conducted by David, and they began for the season on that footing. Mendelssohn, however, ran over for a short time, after the second performance of 'Antigone,' and conducted two of the series, and the concert for the benefit of the orchestra, returning to Berlin for Christmas.

On Jan. 10, 1842, he began a series of concerts by command of the King, with a performance of 'St. Paul' in the concert-room of the theatre; but, if we may believe Devrient, there was no cordial understanding between him and the band; the Berlin audiences were cold, and he was uncomfortable. 'A prophet hath no honour in his own country.' It must, however, have been satisfactory to see the hold which his 'Antigone' was taking both in Leipzig and Berlin,[2] in each of which it was played over and over again to crowded houses. During the winter he completed the Scotch Symphony, which is dated Jan. 20, 1842. His sister's Sunday concerts were extraordinarily brilliant this season, on account not only of the music performed, but of the very distinguished persons who frequented them; Cornelius, Thorwaldsen, Ernst (a constant visitor), Pasta, Madame Ungher-Sabatier, Liszt, Böckh, Lepsius, Mrs. Austin, are specimens of the various kinds of people who were attracted, partly no doubt by the music and the pleasant *réunion*, partly by the fact that Mendelssohn was there. He made his escape to his beloved Leipzig for the production of the Scotch Symphony, on March 3,[3] but though it was repeated a week later, he appears to have returned to Berlin. For the sixth time he directed the Lower Rhine Festival at Düsseldorf (May 15-17); and passing on to London, for his seventh visit, with his wife, conducted his Scotch Symphony at the Philharmonic, amid extraordinary applause and enthusiasm, on June 13, and played his D minor concerto there on the 27th, and conducted the 'Hebrides' overture, which was encored. [For an amusing and anagrammatic criticism of the latter concert, written by Mr. J. W. Davison, afterwards musical critic of the *Times*, see the *Musical Examiner* of June 17, 1843, reprinted in *Musical Times*, May 1906, p. 322.] The Philharmonic season wound up with a fish dinner at Greenwich, given him by the directors.

On June 12 he revisited St. Peter's, Cornhill. It was Sunday, and as he arrived the congregation were singing a hymn to Haydn's well-known tune. This he took for the subject of his voluntary, and varied and treated it for some time extempore in the happiest and most scientific manner. On the 16th he paid a third visit to Christ Church, Newgate Street, and it was possibly on that occasion that he played an extempore fantasia on 'Israel in Egypt' which positively electrified those who heard it. He also again treated Haydn's hymn, but this time as a fantasia and fugue, entirely distinct from his performance of four days previous.[4] On the 17th, at a concert of the Sacred Harmonic Society at Exeter Hall, mostly consisting of English Anthems, he played the organ twice; first, Bach's so-called 'St. Anne's' Fugue, with the great Prelude in E flat, and, secondly, an extempore introduction and variations on the 'Harmonious Blacksmith,' ending with a fugue on the same theme.[5] After this he and his wife paid a visit to their cousins in Manchester, with the intention of going on to Dublin, but were deterred by the prospect of the crossing. During the London portion of this visit they resided with his wife's relations, the Beneckes, on Denmark Hill, Camberwell. [Here he composed Nos. 30 and 43 of the Songs without Words, also the Kinderstücke, op. 72, known in England as Christmas pieces.[6]] He was very much in society, where he always enjoyed himself extremely, and where his wife was much admired; and amongst other incidents described in his letters to his mother[7] are two visits to Buckingham Palace, the first in the evening of June 20, and the second on the afternoon of July 9, which show how thoroughly Queen Victoria and the Prince Consort appreciated him. On the latter occasion he obtained Her Majesty's permission to dedicate the Scotch Symphony to her.[8]

They left London on July 12, and by the middle of the month were safe at Frankfort, in the midst of their relatives, 'well and happy,' and looking back on the past month as a 'delightful journey.'[9] August was devoted to a tour in Switzerland, he and Paul, with their wives. Montreux, Interlaken, the Oberland, the Furka, Meiringen, the Grimsel, are all mentioned. He walked, composed, and 'sketched furiously'; visited the old scenes, found the old landladies and old guides, always glad to

see him; his health was perfect, his mood gay, and all was bright and happy, save when the spectre of a possible prolonged residence in Berlin intruded its unwelcome form.[1] On Sept. 3 they were at Zurich,[2] on the 5th, 6th, and 7th at the Rigi and Lucerne.[3] While at Zürich he visited the Blind Institution, spent two hours in examining the compositions of the pupils, praised and encouraged them, and finished by extemporising on the piano at great length.[4] On his return, he stayed for a gay fortnight at Frankfort. Hiller, Charles Hallé, and their wives were there, and there was much music made, and a great open-air fête at the Sandhof, with part-songs, *tableaux vivants*, etc. etc.[5] A very characteristic and beautiful letter to Simrock, the music-publisher, urging him to accept some of Hiller's compositions (an appeal promptly responded to by that excellent personage), dates from this time.[6] So well was the secret kept that Hiller never knew of it till the publication of the letter in 1863.

An anecdote of this period may be new to some of our readers. During the summer the King of Prussia had conferred on Mendelssohn, in company with Liszt, Meyerbeer, and Rossini, the great honour of the 'Ordre pour le Mérite,'[7] and the Order itself reached him at Frankfort. He set no store by such distinctions, nor perhaps was its Berlin origin likely to increase the value of this particular one. Shortly after it arrived he was taking a walk with a party of friends across the bridge at Offenbach. One of them (Mr. Speyer) stayed behind to pay the toll for the rest. 'Is not that,' said the toll-keeper, 'the Mr. Mendelssohn whose music we sing at our society?' 'It is.' 'Then, if you please, I should like to pay the toll for him myself.' On rejoining the party, Mr. Speyer told Mendelssohn what had happened. He was enormously pleased. 'Hm,' said he, 'I like that better than the Order.'[8]

He took Leipzig on his way to Berlin, and conducted the opening concert of the Gewandhaus series on Oct. 2 (1842), amid the greatest enthusiasm of his old friends. A week later and he was in Berlin, and if anything could show how uncongenial the place and the prospect were, it is to be found in his letter to Hiller, and even in the Italian *jeu d'esprit* to Hiller's wife.[9] It is as if his very teeth were set on edge by everything he sees and hears there. Nor were matters more promising when he came to close quarters. A proposition was made to him by the minister immediately after his arrival that he should act as superintendent of the music of the Protestant Church of Prussia, a post at once vague and vast, and unsuited to him. At the same time it was now evident that the plans for the organisation of the Academy had failed, and that there was no present hope of any building being erected for the music school. Under these circumstances, anxious more on his mother's account than on his own not to leave Berlin in disgrace, in fact ready to do anything which should keep him in connection with the place where she was,[10] he asked and obtained a long private interview with the King, in which His Majesty expressed his intention of forming a choir of about thirty first-rate singers, with a small picked orchestra, to be available for church music on Sundays and Festivals, and to form the nucleus of a large body for the execution of grand musical works. Of this, when formed, he desired Mendelssohn to take the command, and to write the music for it; meantime he was to be at liberty to live where he chose, and—his own stipulation—to receive half the salary previously granted. The King evidently had the matter very closely at heart. He was, says Mendelssohn, quite flushed with pleasure, could hardly contain himself, and kept repeating 'You can scarcely think *now* of going away.' When kings ask in this style it is not for subjects to refuse them. Moreover Mendelssohn was as much attracted by the King as he was repelled by the official etiquette of his ministers, and it is not surprising that he acceded to the request. The interview was followed up by a letter from His Majesty dated Nov. 22,[11] containing an order constituting the Domchor or Cathedral choir, conferring on Mendelssohn the title of General-Music-Director, with a salary of 1500 thalers, and giving him the superintendence and direction of the church and sacred music as his special province. This involved his giving up acting as Capellmeister to the King of Saxony, and for that purpose he had an interview with that monarch at Dresden, in which he obtained the King's consent to the application of the Blümner legacy to his darling scheme of a Conservatorium at Leipzig.[12]

Thus then 'this long, tedious, Berlin business' was at length apparently brought to an end, and Mendelssohn was back in his beloved Leipzig, and with a definite sphere of duty before him in Berlin, for he had learnt in the meantime that he was at once to supply the King with music to Racine's 'Athalie,' the 'Midsummer Night's Dream,' 'The Tempest,' and 'Œdipus Coloneus.'[13] This, with the proofs of the Scotch Symphony and 'Antigone' to correct, with the 'Walpurgisnacht' to complete for performance, the new Conservatorium to organise, the concerts, regular and irregular, to rehearse and conduct, and a vast and increasing correspondence to be

kept up, was enough for even his deft and untiring pair of hands. He is cheerful enough under it, and although he complains in one letter that composition is impossible, yet in the next letter 'Athalie,' 'Œdipus,' the 'Midsummer Night's Dream,' the 'Walpurgisnacht,' and the new violoncello Sonata (in D) are beginning again to fill his brain, and he finds time to be pleasant over old Madame Schröder, and to urge the claims of his old Meiringen guide to a place in Murray's *Handbook*.[1] In the midst of all this whirl he lost his mother, who died in the same rapid and peaceful manner that his father had done. She was taken ill on the Sunday evening—her husband's birthday—and died before noon on Monday, Dec. 12—so quickly that her son's letter of the 11th could not have reached her.[2] The loss affected him less violently than that of his father had done, perhaps because he was now older and too hard worked, and also because of the home-life and ties by which he was surrounded. But it caused him keen suffering, from which he did not soon recover. It brings into strong relief his love of the family bond, and his fear lest the disappearance of the point of union should at all separate the brothers and sisters; and he proposes, a touching offer for one whose pen was already so incessantly occupied, that he should write to one of the three every week, and the communication be thus maintained with certainty.[3]

The house now became his, but the hesitation with which he accepts his brother's proposal to that effect, lest it should not be acceptable to his sisters or their husbands, is eminently characteristic of his delicate and unselfish generosity.[4] He admits that his mother's death has been a severe trial, and then he drops an expression which shows how heavily the turmoil of so busy a life was beginning to press upon him.—'In fact, everything that I do and carry on is a burden to me, unless it be mere passive existence.' This may have been the mere complaint of the moment, but it is unlike the former buoyant Mendelssohn. He was suffering, too, from what appears to have been a serious cough. But work came to his relief; he had some scoring and copying to do which, though of the nature of

> The sad mechanic exercise,
> Like dull narcotics, numbing pain,

yet had its own charm—'the pleasant intercourse with the old familiar oboes and violas and the rest, who live so much longer than we do, and are such faithful friends,'[5] and thus kept him from dwelling on his sorrow. And there was always so much in the concerts to interest and absorb him. He still clung, though as fastidiously as ever, to the hope of getting an opera-book. A long letter in French to M. Charles Duveyrier, dated Jan. 4, 1843,[6] discusses the merits of the story of Jeanne d'Arc for the purpose, and decides that Schiller's play has preoccupied the ground. At this time he rewrote 'Infelice,' the second published version of which is dated 'Leipzig, Jan. 15, 1843.'

At the concert of Feb. 2, 1843, the 'Walpurgisnacht' was produced in a very different condition from that in which it had been performed at Berlin just ten years before, in Jan. 1833. He had re-written the score 'from A to Z,' amongst other alterations had added two fresh airs, and had at length brought it into the condition in which it is now so well known. On Jan. 12 a Symphony in C minor, by Niels Gade, of Copenhagen, was rehearsed. It interested Mendelssohn extremely, and gave him an opportunity to write a letter[7] full of sympathy and encouragement to the distant and unknown composer, one of those letters which were native to him, but which are too seldom written, and for more of which the world would be all the better. The work was produced on March 2, amid extraordinary applause.

Berlioz visited Leipzig at this time, and gave a concert of his compositions. Mendelssohn and he had not met since they were both at Rome, and Berlioz was foolish enough to suppose that some raillery of his might be lurking in Mendelssohn's memory, and prevent his being cordially welcomed. But he was soon undeceived. Mendelssohn wrote at once offering him the room and the orchestra of the Gewandhaus, on the most favourable terms, and asking him to allow one of his works to be played at the approaching concert (Feb. 22) for the Benefit of the Orchestra.[8] An account of the whole, with copious *souvenirs* of their Roman acquaintance (not wholly uncoloured), will be found in Berlioz's *Voyage Musical*, in the letter to Heller.[9] It is enough here to say that the two composer-conductors exchanged batons, and that if Berlioz did not convert Leipzig, it was not for want of an amiable reception by Mendelssohn and David. [See vol. i. p. 206.] On March 9 an interesting extra concert was given under Mendelssohn's direction, to commemorate the first subscription concert, in 1743.[10] The first part of the programme contained compositions by former Cantors, or Directors of the Concerts—Doles, Bach, J. A. Hiller, and Schicht, and by David, Hauptmann, and Mendelssohn (114th Psalm). The second part consisted of the Choral Symphony.

Under the modest title of the Music School, the prospectus of the Conservatorium was issued on Jan. 16, 1843, with the names of Mendelssohn, Hauptmann, David, Schumann, Pohlenz, and C. F. Becker as the teachers; the first trial was held on March 27, and on April 3 it

was opened in the buildings of the Gewandhaus.[1] Thus one of Mendelssohn's most cherished wishes was at last accomplished. A letter on the subject to Moscheles, dated April 30, is worth notice as showing how practical his ideas were on business matters, and how sound his judgment. On Sunday, April 23, he had the satisfaction of conducting the concert at the unveiling of the monument to Sebastian Bach, which he had originated, and for which he had worked so earnestly.[2] The programme consisted entirely of Bach's music, in which Mendelssohn himself played a concerto. Then the monument was unveiled, and the proceedings ended with Bach's eight-part motet 'Singet dem Herrn.' Such good services were appropriately acknowledged by the Town Council with the honorary freedom of the city (Ehrenbürgerrecht).[3] In the spring of 1843 he made the acquaintance of Joseph Joachim, who came to Leipzig from Vienna as a boy of twelve, attracted by the fame of the new music school, and there began a friendship which grew day by day, and only ended with Mendelssohn's death. [Mendelssohn called Joachim 'der Posaunenengel.' See A. Moser's *Life of Joachim.*]

On May 1 his fourth child, Felix, was born. On account no doubt partly of his wife's health, partly also of his own—for it is mentioned that he was seriously unwell at the dedication of the Bach monument—but chiefly perhaps for the sake of the Conservatorium, he took no journey this year, and, excepting a visit to Dresden to conduct 'St. Paul,' remained in Leipzig for the whole summer. How much his holiday was interfered with by the tedious, everlasting affair of Berlin—orders and counter-orders, and counter-counter-orders—may be seen from his letters,[4] though it is not necessary to do more than allude to them. [For the unveiling of the statue of Friedrich August I. of Saxony at Dresden on June 7, 1843, he and Wagner each contributed a composition. Wagner, then capellmeister at Dresden, confirms the opinion, which he says was formed, that 'his simple, heartfelt composition had entirely eclipsed the complex artificialities of Mendelssohn'! Wagner's piece, for male voices only, was published at Berlin in 1906: Mendelssohn's (still in MS.) is for two choirs of men's voices (tenor and bass) with accompaniment of brass instruments. 'Its complex artificialities' (as Wagner was pleased to call them) consist in the singing of the Saxon national anthem (our 'God save the King') by the second choir as a counter theme to, and concurrently with, the singing of Mendelssohn's original music by the first choir. For further details see *Musical Times*, June 1906, p. 385; *Life of Richard Wagner* by William Ashton Ellis, vol. ii. p. 26; and *Athenæum*, April 14, 1906, p. 459.] By the middle of July he had completed the 'Midsummer Night's Dream' music,[5] had written the choruses to 'Athalie,' and made more than a start with the music to 'Œdipus,' and some progress with a new Symphony[6]; had at the last moment, under a pressing order from Court, arranged the chorale 'Herr Gott, dich loben wir' (Te Deum) for the celebration of the 1000th anniversary of the empire, 'the longest chorale and the most tedious job he had ever had,' and had also, a still harder task, answered a long official letter on the matter of his post, which appeared to contradict all that had gone before, and cost him (in his own words) 'four thoroughly nasty, wasted, disagreeable days.'

He therefore went to Berlin early in August (1843), and on the 6th conducted the music of the anniversary; returned to Leipzig in time to join his friend Madame Schumann in her husband's Andante and Variations for two pianofortes at Madame Viardot's concert on August 19,[7] and on August 25 was pursued thither by orders for a performance of 'Antigone,' and the production of the 'Midsummer Night's Dream' and 'Athalie' in the latter half of September. At that time none of the scores of these works had received his final touches; 'Athalie' indeed was not yet scored at all, nor was a note of the overture written. Then the performances are postponed, and then immediately resumed, at the former dates; and in the end 'Antigone' was given on Sept. 19, in the Neue Palais at Potsdam,[8] and the 'Midsummer Night's Dream' at the same place—after eleven rehearsals[9]—on Oct. 18th, and on the 19th, 20th, and 21st,[10] at the King's Theatre in Berlin. The music met with enthusiastic applause each time; but the play was for long a subject of wonder to the Berliners. Some disputed whether Tieck or Shakespeare were the author; others believed that Shakespeare had translated it from German into English. Some, in that refined atmosphere, were shocked by the scenes with the clowns, and annoyed that the King should have patronised so low a piece; and a very distinguished personage[11] expressed to Mendelssohn himself his regret that such lovely music should have been wasted on so poor a play—a little scene which he was very fond of mimicking.[12] 'Antigone' procured him the honour of membership of the Philologen-Versammlung of Cassel.[13]

Mendelssohn's position at Berlin had now apparently become so permanent that it was

[1] *N.M.Z.* 1843, i. 102. Hauptmann, letter to Spohr, Feb. 6, 1843, says, 'Our music-school is to begin in April, but not on the 1st, Mendelssohn thought that unlucky.'

necessary to make proper provision for filling his place at the Leipzig concerts, and accordingly Ferdinand Hiller was engaged to conduct them during his absence.[1] The first of the series was on Oct. 1. Hiller conducted, and Felix supported his friend by playing his own G minor concerto. Two days afterwards, on Oct. 3, he writes a long communication to the town council of Leipzig, praying for an increase in the salaries of the town-orchestra for their services at the theatre. On Oct. 30 he joined Mme. Schumann and Hiller in the triple concerto of Bach; on Nov. 18 there was a special farewell concert at which he played his new violoncello sonata (op. 58), and which closed with his Octet, he and Gade taking the two viola parts; and by Nov. 25 he had left Leipzig 'with wife and children, and chairs and tables, and piano and everything,'[2] and was in Berlin, settled in the old family house, now his own. On Nov. 30 he conducted the first of the weekly subscription concerts, which he and Taubert directed alternately and at which he often played. With all his aversion to the Berlin musicians he was obliged to acknowledge that, in some respects at least, the orchestra was good. 'What pleases me most,' he says to his old friend and confidant David, 'are the basses, because they are what I am not so much accustomed to. The eight violoncellos and four good double-basses give me sometimes great satisfaction with their big tone.'[3] Then came performances of the 'Midsummer Night's Dream' music, of 'Israel in Egypt,' entertainments and dinners—which amused him notwithstanding all his dislike to aristocrats—and Fanny's Sunday performances. Once immersed in life and music, and freed from official correspondence and worries, he was quite himself. 'He is,' says his sister, 'indescribably dear, in the best of tempers, and quite splendid, as you know he can be in his best times. Every day he astonishes me, because such quiet intercourse as we are having is a novelty to me now, and he is so versatile, and so original and interesting on every subject, that one can never cease to wonder at it.'[4] His favourite resort during his later Berlin life was the house of Professor Wichmann the sculptor, in the Hasenjäger (now Feilner) Strasse. Wichmann's wife was a peculiarly pleasant artistic person, and their circle included Magnus the painter, Taubert, Werder, Count Redern, and other distinguished people, many of them old friends of Mendelssohn's. There, in 1844, he first met Jenny Lind. The freedom of the life in this truly artistic set, the many excursions and other pleasures, delighted and soothed him greatly.

Christmas was kept royally at his house; he was lavish with presents, of which he gives Rebecka (then in Italy) a list.[5] A very characteristic Christmas gift to a distant friend was the testimonial, dated Berlin, Dec. 17, 1843,[6] which he sent to Sterndale Bennett for use in his contest for the professorship of music at Edinburgh University, and which, as it does credit to both these great artists, and has never been published in any permanent form, we take leave to print entire, in his own English.[7]

BERLIN, *Dec.* 17, 1843.

MY DEAR FRIEND,

I hear that you proclaimed yourself a Candidate for the musical Professorship at Edinburgh, and that a testimonial which I might send could possibly be of use to you with the Authorities at the University. Now while I think of writing such a testimonial for you I feel proud and ashamed at the same time—proud, because I think of all the honour you have done to your art, your country, and yourself, and because it is on such a brother-artist that I am to give an opinion—and ashamed, because I have always followed your career, your compositions, your successes, with so true an interest, that I feel as if it was my own cause, and as if I was myself the Candidate for such a place. But there is one point of view from which I might be excused in venturing to give still an opinion, while all good and true musicians are unanimous about the subject: perhaps the Council of the University might like to know what *we German* people think of you, how we consider you. And then, I may tell them, that if the prejudice which formerly prevailed in this country against the musical talent of your Country has now subsided, it is chiefly owing to you, to your compositions, to your personal residence in Germany. Your Overtures, your Concertos, your vocal as well as instrumental Compositions, are reckoned by our best and severest authorities amongst the first standard works of the present musical period. The public feel never tired in listening to, while the musicians feel never tired in performing, your Compositions; and since they took root in the minds of the true amateurs, my countrymen became aware that music is the same in England as in Germany, as every where; and so by your successes here you destroyed that prejudice which nobody could ever have destroyed but a true Genius. This is a service you have done to English as well as German musicians, and I am sure that your countrymen will not acknowledge it less readily than mine have already done.

Shall I still add, that the Science in your works is as great as their thoughts are elegant and fanciful—that we consider your performance on the Piano as masterly as your Conducting of an Orchestra? that all this is the general judgment of the best musicians here, as well as my own personal sincere opinion? Let me only add that I wish you success from my whole heart, and that I shall be truly happy to hear that you have met with it.

Always yours, sincerely and truly,

FELIX MENDELSSOHN BARTHOLDY.

To W. STERNDALE BENNETT, ESQ.

His exertions for his friend did not stop at this testimonial, but led him to write several long letters pressing his claims in the strongest terms, the drafts of which will be found in the 'green books' at Leipzig. The Edinburgh professorship, however, was not bestowed on Bennett.

The compositions of the winter were chiefly for the Cathedral, and include the fine setting of the 98th Psalm (op. 91) for eight-part choir and orchestra, for New Year's Day, 1844; the 2nd Psalm, for Christmas, with chorales and 'Sprüche,' and pieces 'before the Alleluja'; also the 100th Psalm, the 43rd ditto, and the 22nd, for Good Friday, for eight voices, each

with its 'Spruch' or anthem—and seven psalm-tunes or chorales with trombones. At these great functions the church was so full[1] that not even Fanny Hensel could get a place. The lovely solo and chorus, 'Hear my prayer,' for soprano solo, chorus, and organ, belongs to this time. It is dated Jan. 25, 1844, and was written for William Bartholomew, the careful and laborious translator of his works into English, and sent to him in a letter dated Jan. 31.[2] [This letter and the autograph score of the music are now at the Victoria and Albert Museum, South Kensington.] Also the duets 'Maiglöckchen,' 'Volkslied,' and 'Herbstlied' (op. 63, Nos. 6, 5, and 4), and many songs, with and without words. The concerts finished with a magnificent performance of Beethoven's Ninth Symphony on March 27, and on Palm Sunday (March 31) 'Israel in Egypt' was sung in St. Peter's church. The rehearsals for these two difficult works, new to Berlin, had been extremely troublesome and fatiguing.

At the end of February he received a letter from the Philharmonic Society of London, offering him an engagement as conductor of the last six concerts of the season. He looked forward with delight to an artistic position 'of such tremendous distinction,'[3] and one which promised him the opportunity of doing a service to a Society to which he felt personally indebted[4]; and on March 4 he writes 'with a feeling of true gratitude' accepting for five concerts.[5] Meantime the old annoyances and heartburnings at Berlin had returned. Felix had been requested by the King to compose music to the 'Eumenides' of Æschylus, and had replied that the difficulties were immense, and perhaps insuperable, but that he would try; and in conversation with Tieck he had arranged that as the work could only be given in the large new opera-house, which would not be opened till Dec. 15, it would be time enough for him to write his music and decide after his return from England whether it was worthy of performance. Notwithstanding this, he received, as a parting gift, on April 28, a long, solemn, almost scolding, letter from Bunsen,[6] based on the assumption that he had refused to undertake the task, and expressing the great disappointment and annoyance of the King. No wonder that Mendelssohn's reply, though dignified, was more than warm. It appeared to him that some person or persons about the Court disbelieved in the possibility of his writing the music, and had pressed their own views on the King as his, and he was naturally and justifiably angry. A dispute with the subscribers to the Symphony Concerts, where he had made an innovation on ancient custom by introducing solos, did not tend to increase his affection for Berlin.[7]

His presence was necessary on Easter Day (April 7) in the Cathedral, but by the end of the month he had left Berlin with his family. On May 4 they were all at Frankfort, and by the 10th or 11th he himself was settled in London at Klingemann's house, 4 Hobart Place, [Eaton Square, opposite St. Peter's Church, on the south side]. This was his eighth visit. He conducted the Philharmonic Concert of May 13, and each of the others to the end of the series, introducing, besides works already known, his 'Midsummer Night's Dream' music and the 'Walpurgisnacht,' as well as Beethoven's Overture to Leonora, No. 1, the Ruins of Athens, Bach's Suite in D, Schubert's Overture to Fierrabras, and playing Beethoven's Concerto in G (June 24), then almost a novelty to an English audience. He had brought with him Schubert's Symphony in C, Gade's in C minor, and his own Overture to 'Ruy Blas.' But the reception of the first two at the trial by the band was so cold, not to say insulting, as to incense him beyond measure.[8] With a magnanimity in which he stands alone among composers, he declined to produce his own Overture, and it was not publicly played in England till after his death.[9]

With the directors of the Philharmonic his intercourse was most harmonious. 'He attended their meetings, gave them his advice and assistance in their arrangements, and showed the warmest interest in the success of the concerts and the welfare of the Society.'[10] By the band he was received with 'rapture and enthusiasm.'[11] And if during the earlier concerts one or two of the players acted in exception to this, the occurrence only gave Mendelssohn the opportunity of showing how completely free he was from rancour or personal feeling.[12] No wonder that the band liked him. The band always likes a conductor who knows what he is about. His beat, though very quiet, was certain, and his face was always full of feeling, and as expressive as his baton. No one perhaps ever possessed so completely as he the nameless magic art of inspiring the band with his own feeling; and this power was only equalled by his tact and good nature. He always touched his hat on entering the orchestra for rehearsal. He was sometimes hasty, but he always made up for it afterwards. He would run up and down to a distant desk over and over again till he had made the meaning of a difficult passage clear to a player. If this good nature failed, or he had to deal with obstinacy, as a last resource he would try irony—sometimes very severe. Such pains and tact as this are never thrown away.

[10] *Hogarth*, p. 83.
[11] *Mos.* ii. 118. [12] *L.* to Moscheles, June 26, 1846.

The band played as if under a new influence. The season was most successful in a pecuniary sense; Hanover Square Rooms had never been so crammed; as much as 120 guineas were taken on single nights in excess of the usual receipts; and whereas in 1842 the loss had been £300, in 1844, with the interest on capital, etc., nearly £400 were added to the reserve fund.[1] Among the events which combined to render this series of concerts historical were the first appearances at the Society's Concerts of Ernst (April 15), Joachim (May 27),[2] and Piatti (June 24). His playing of the Beethoven G major Concerto on June 24 was memorable, not only for the magnificence of the performance, but for some circumstances attending the rehearsal on the previous Saturday. He had not seen the music of the concerto for two or three years, and 'did not think it respectful to the Philharmonic Society to play it without first looking through it'—those were his words. He accordingly called at Sterndale Bennett's on the Friday night to obtain a copy, but not succeeding, got one from Miss Horsley after the rehearsal on the Saturday. At the rehearsal itself, owing to some difficulty in the band coming in at the end of his cadenza in the first movement, he played it three times over, each time quite extempore, and each time new, and at the performance on the Monday it was again different.[3]

In addition to the Philharmonic, Mendelssohn took part in many other public concerts—conducted 'St. Paul' for the Sacred Harmonic Society on June 28 and July 5, extemporised at the British Musicians, played his own D minor Trio, and his Duet variations (op. 83*a*), and took part twice in Bach's Triple Concerto—once (June 1) with Moscheles and Thalberg, when he electrified the room with his sudden improvisation in the cadenza,[4] and again (July 5) with Moscheles and Döhler. He also finished a scena for bass voice and orchestra, to words from Ossian—'On Lena's gloomy heath,' which he undertook at the request of Henry Phillips in 1842, and which was sung by that gentleman at the Philharmonic, March 15, 1847. On June 12, he and Dickens met for the first time. On June 18 he is at Manchester, writing to Mr. Hawes, M.P., to secure a ticket for the House of Commons.[5] Piatti he met for the first time during this visit, at Moscheles's house, and played with him his new Duo in D. No one had a quicker eye for a great artist, and he at once became attached to that noble player. One of his latest words on leaving England for the last time was, 'I must write a concerto for Piatti.' In fact, he had already composed the first movement.

The enthusiasm for him in London was greater than ever, and all the more welcome after the irritations of Berlin. He was more widely known at each visit, and every acquaintance became a friend. He never enjoyed himself more than when in the midst of society, music, fun, and excitement. 'We have the best news from Felix,' says Fanny during this visit,[6] 'and when I tell you that he has ordered a large *Baum-Kuchen* [a peculiar Berlin cake, looking like a piece of the trunk of a tree] to be sent to London for him, you will know that that is the best possible sign.' 'A mad, most extraordinarily mad time,' says he; 'I never had so severe a time before—never in bed till half-past one; for three weeks together not a single hour to myself in any one day,'[7] etc. 'My visit was glorious. I was never received anywhere with such universal kindness, and have made more music in these two months than I do elsewhere in two years.'[8] But even by all this he was not to be kept from work. He laboured at his edition of 'Israel in Egypt' for the Handel Society; and on official pressure from Berlin—which turned out to be mere vexation, as the work was not performed for more than a year—actually, in the midst of all the turmoil, wrote (in London) the Overture to 'Athalie,' the autograph of which is dated June 13, 1844. Very trying! and very imprudent, as we now see! but also very difficult to avoid. And his power of recovery after fatigue was as great as his power of enjoyment, so great as often no doubt to tempt him to try himself. Three things were in his favour—his splendid constitution; an extraordinary power of sleep, which he possessed in common with many other great men, and of being lazy when there was nothing to do; and most of all that, though excitable to any amount, he was never dissipated. The only stimulants he indulged in were those of music, society, and boundless good spirits.

On July 10 he left London, and on the 13th was in the arms of his wife and children at Soden, near Frankfort. During his absence they had been seriously ill, but his wife had kept the news from him, and when he returned he found them all well, brown, and hearty. For the life of happy idleness which he passed there in the next two months—'eating and sleeping, *without* dress coat, *without* piano, *without* visiting-cards, *without* carriage and horses; but *with* donkeys, *with* wild flowers, *with* music-paper and sketch-book, *with* Cécile and the children'[9]—interrupted only by the Festival which he conducted at Zweibrücken on July 31 and August 1, the reader must be referred to his own charming letters.[10] 'Idleness' does not mean ceasing to compose, so much as composing only when he had a mind to it. And that was often: he had no piano, but he completed the violin Concerto on Sept. 16, after a long and minute correspondence with David, and many of the movements

of the six organ sonatas appear in the MS. Catalogue, with dates ranging from July 22 to Sept. 10.[1] Doubtless, too, he was working at the book of 'Christus,' a new oratorio, the first draft of which he had received from Bunsen on Easter Monday of this year. At this time also he edited a collection of organ pieces by Bach commissioned by the firm of Coventry & Hollier,[2] by whom they were published in London in the spring of 1845.

The pleasure in his simple home life which crops out now and then in these Frankfort letters, is very genuine and delightful. Now, Marie is learning the scale of C, and he has actually forgotten how to play it, and has taught her to pass her thumb under the wrong finger! Now, Paul tumbles about so as to crack their skulls as well as his own. Another time he is dragged off from his letter to see a great tower which the children have built, and on which they have ranged all their slices of bread and jam —'a good idea for an architect.' At ten Carl comes to him for reading and sums, and at five for spelling and geography—and so on. 'And,' to sum up, 'the best part of every pleasure is gone if Cécile is not there.'[3] His wife is always somewhere in the picture.[4]

But the time arrived for resuming his duties at Berlin, and, leaving his family behind him at Frankfort, he arrived there on Sept. 30, alone, and took up his quarters with the Hensels. We are told that before leaving in the spring he had firmly resolved not to return for a permanence; and the extraordinary warmth and brilliance of his subsequent reception in England, both in public and in social circles, and the delights of freedom in Frankfort, when compared with the constraint and petty annoyances of Berlin—the difficulty of steering through those troubled official waters, the constant collisions with the Singakademie, with the managers of the theatre, the clergy, the King, and the Ministers; the want of independence, the coldness of the press, the way in which his best efforts appeared to be misunderstood and misrepresented, and above all the consciousness that he was at the head of a public musical institution of which he did not approve[5]—all these things combined to bring about the crisis. His dislike to the place and the way in which it haunts him beforehand, is really quite plaintive in its persistence —'If I could only go on living for half a year as I have lived the last fortnight (Soden, August 15) what might I not get through? But the constant arrangement and direction of the concerts, and the exertion of it all, is no pleasure to me, and comes to nothing after all.'[6] So he once more communicated with the King, praying to be freed from all definite duties, and from all such commissions as would oblige him to reside in Berlin.[7] To this the King good-naturedly assented; his salary was fixed at 1000 thalers, and he was free to live where he liked. It is easy to understand what a blow this was to his sister,[8] but it was evidently the only possible arrangement for the comfort of the chief person concerned. 'The first step out of Berlin' was to him 'the first step towards happiness.'[9] He remained till the end of November, at the special wish of the King, to conduct a few concerts and a performance of 'St. Paul' (Nov. 25), and the time was taken advantage of by Lvov to commission Hensel to paint a portrait of him, which has been engraved by Caspar, but can hardly be called a favourable likeness. On the 30th he left Berlin amid regret and good wishes, but the coldness of the ordinary musical circles towards him was but too evident.[10]

Very early in December he was in Frankfort, where he found his youngest boy Felix dangerously ill; the child recovered, but only after being in great danger for many weeks. It was probably a relief in the very midst of his trouble to write a long letter to G. A. Macfarren (Dec. 8, 1844),[11] giving him minute directions as to the performance of 'Antigone' at Covent Garden. His own health began to give him anxiety, and his resolution was to remain in Frankfort for the whole year and to have a thorough rest. He had always good spirits at command, looked well, and would rarely confess to any uneasiness. But when hard pressed by those with whom he was really intimate, he confessed that his head had for some months past been in constant pain and confusion. 'I myself am what you know me to be; but what you do not know is that I have for some time felt the necessity for complete rest—*not* travelling, *not* conducting, *not* performing—so keenly that I am compelled to yield to it, and hope to be able to order my life accordingly for the whole year. It is therefore my wish to stay here quietly through winter, spring, and summer, *sans* journeys, *sans* festivals, *sans* everything.'[12] This resolve he was able to carry out for some months of 1845,[13] even to resisting a visit to Leipzig when his Violin Concerto was first played by David, on March 13; and his letters to his sisters show how thoroughly he enjoyed the rest. [At the end of 1844, or the beginning of 1845, he was much gratified at receiving an invitation to conduct a musical festival at New York in 1845; his letter declining the invitation and other information relating to the proposal is given by Mr. H. E. Krehbiel in the *New York Daily Tribune* of Oct. 29, 1905.]

'Antigone' was brought out at Covent Garden on January 2, 1845, under the management of M. Laurent, the orchestra conducted by

G. A. Macfarren. Musically its success was not at first great, owing to the inadequate way in which the chorus was put on the stage. Writing to his sister at Rome on March 25,[1] Mendelssohn says, 'See if you cannot find *Punch* for Jan. 18. It contains an account of "Antigone" at Covent Garden, with illustrations, especially a view of the chorus which has made me laugh for three days. The chorus-master, with his plaid trousers shewing underneath, is a masterpiece, and so is the whole thing, and most amusing. I hear wonderful things of the performance, particularly of the chorus. Only fancy, that during the Bacchus chorus there is a regular ballet with all the ballet-girls!' A woodcut which made Mendelssohn laugh for three days has *ipso facto* become classical, and needs no apology for its reproduction.[2]

The play improved after a short time, and the fact that it ran for forty-five nights (Jan. 2–Feb. 1, Feb. 8–21), and that the management applied to him for his 'Œdipus,'[3] proves that it was appreciated. His letters show how much work he was doing at this time. By April 20 the six Organ Sonatas (op. 65) were in the hands of the copyist, the C minor Trio was finished—'a trifle nasty (*eklig*) to play, but not really difficult—seek and ye shall find'[4]; and the splendid String Quintet in B flat (dated July 8). The sixth book of Songs without Words was shortly to be published, and dedicated to Klingemann's fiancée; a symphony was well in hand (oh that we had got it!), nor had the desire to write an opera by any means left him, 'if only the right material could be found.'[5] He had not forgotten his promise to consider the possibility of setting the choruses of the 'Eumenides' of Æschylus with effect, and a correspondence had taken place between him and the Geheimcabinetsrath Müller, in which, in reply to something very like an offensive innuendo, Mendelssohn stated that in spite of strenuous efforts he had utterly failed to see any way of carrying out the commission to his own satisfaction.[6] The 'Œdipus Coloneus,' the 'Œdipus Rex,' and the 'Athalie,' were, however, finished, and at His Majesty's disposal. The editing of 'Israel in Egypt' had given him considerable trouble, owing apparently to the wish of the council of the Handel Society to print Mendelssohn's marks of expression as if they were Handel's, and also to the incorrect way in which the engraving was executed. These letters are worth looking at,[7] as evidence how strictly accurate and conscientious he was in these matters, and also how gratuitously his precious time was often taken up.

Gade had conducted the Gewandhaus Concerts for 1844-45; but having got rid of the necessity of residing in Berlin, and having enjoyed the long rest which he had proposed, it was natural that Mendelssohn should return to his beloved Leipzig. But in addition to this he had received an intimation from Von Falkenstein as early as June 5, 1845, that the King of Saxony wished him to return to his former position. He accordingly once more took up his residence at Leipzig early in September (this time at No. 3 Königsstrasse, on the first floor)[8] and his reappearance in the conductor's place at the opening concert in the Gewandhaus on Oct. 5 was the signal for the old applause, and for hearty recognition from the audience and the press. The season was rendered peculiarly brilliant by the presence of Madame Schumann, and of Jenny Lind, who made her first appearance in Leipzig at the subscription concert of Dec. 4. Miss Dolby also made her first appearance Oct. 23, sang frequently, and became a great favourite. Among the more important orchestral items of the season 1845-46 were Schumann's Symphony in B flat, and Mendelssohn's Violin Concerto (David), brought forward together on Oct. 23, 1845. [The book of 'Elijah,' too, was progressing fast, and his remarks on it show how

6 *L.* March 12, 1845.
7 There are seven of them, and they are given in the Appendix to *G. & M.* p. 169.
8 The house has since been renumbered, and is now 21. A bronze tablet on the front states that he died there

anxious he was to make it as dramatic as possible.[1] On June 11, 1845, the Committee of the Birmingham Musical Festival invited him to conduct all the performances, and to 'provide a new oratorio, or other music for the occasion.' He declined to conduct the Festival, and added in an English letter: 'Since some time I have begun an oratorio, and hope I shall be able to bring it out for the first time at your Festival.' This proved to be 'Elijah.'[2]]

After the first concert he left for Berlin to produce his 'Œdipus Coloneus,' which was first performed at Potsdam on Nov. 1, and his 'Athalie' at Charlottenburg, both being repeated at Berlin. He returned to Leipzig on Dec. 3, bringing Jenny Lind with him (Rockstro's information), and remained there till the close of the season, taking an active part in all that went on, including her farewell concert on April 12, 1846—the last occasion of his playing in public in Leipzig. At the end of 1845 a formal offer was made to Moscheles, at that time the fashionable pianoforte teacher in London, to settle in Leipzig as Professor of the pianoforte in the Conservatorium. He took time to consider so important an offer, and on Jan. 25, 1846, with a sacrifice of income and position which does his artistic feeling the highest honour, decided in its favour. Mendelssohn's connection with the school was no sinecure. He had at this time two classes—pianoforte and composition.[3] The former numbered about half-a-dozen pupils, and had two lessons a week of two hours each. The lessons were given collectively, and among the works studied during the term were Hummel's 'Septuor'; three of Beethoven's Sonatas; Preludes and Fugues of Bach; Weber's Concertstück and Sonata in C; Chopin's Studies. The composition class had one lesson a week of the same length. The pupils wrote compositions of all kinds, which he looked over and heard and criticised in their presence. He would sometimes play a whole movement on the same subjects, to show how they might have been better developed. Occasionally he would make them modulate from one key to another at the piano, or extemporise on given themes, and then would himself treat the same themes. He was often extremely irritable:—'Toller Kerl, so spielen die Katzen!' or (in English, to an English pupil) 'Very ungentlemanlike modulations!' etc. But he was always perfectly natural. A favourite exercise of his was to write a theme on the blackboard, and then make each pupil add a counterpoint; the task of course increasing in difficulty with each addition. On one occasion the last of the pupils found it impossible to add a single note, and after long consideration shook his head and gave in. 'You can't tell where to place the next note?' said Mendelssohn. 'No.' 'I am glad of that,' was the reply, 'for neither can I.' But in addition to the work of his classes, a great deal of miscellaneous work fell upon him as virtual head of the School. Minute lists of the attendance and conduct of the pupils, drawn up by him, still remain to attest the thorough way in which he did his duty, and we have Moscheles's express testimony[4] that during the overwhelming work of this summer he never neglected his pupils.[5] But it was another ounce added to his load. The fixed labour, the stated hours, when combined with his composition, his correspondence, his hospitality, and all his other pursuits, were too much, and to his intimate friends he complained bitterly of the strain, and expressed his earnest wish to give up all work and worry, and devote himself entirely to his Art—in his own words, to shut himself into his room and write music till he was tired, and then walk out in the fresh air.[6]

Meantime 'Elijah' was fast becoming a realised fact: by May 23, 1846,[7] the first Part was quite finished, and six or eight numbers of the second part written, and a large portion despatched to London to be translated by Bartholomew.[8] 'I am jumping about my room for joy,' he writes to a very dear friend[9] on the completion of Part I. 'If it only turns out half as good as I fancy it is, how pleased I shall be!' And yet, much as the oratorio engrossed him, he was corresponding with Mme. Birch-Pfeiffer about an opera, and writes to the same friend as if the long-desired libretto were virtually within his grasp. At this date he interrupted his work for three weeks to conduct a succession of performances on the Rhine—at Aix-la-Chapelle (the Lower Rhine Festival, May 31–June 2) for the seventh and last time;[10] at Düsseldorf, a soirée; at Liège, on Corpus Christi day, June 11, his hymn 'Lauda Sion,' composed expressly for that occasion, and dated Feb. 10, 1846; and at Cologne the first festival of the German-Flemish association, for which he had composed a Festgesang on Schiller's poem 'An die Künstler' (op. 68). His reception throughout this tour was rapturous, and delighted him. The three weeks were one continued scene of excitement. Every moment not taken up in rehearsing or performing made some demand on his strength. He was in the highest spirits all the time, but the strain must have been great, and was sure to be felt sooner or later. It will all be found in a delightful letter to Fanny of June 27, 1846.[11] On June

[10] On this occasion he discovered the two redundant bars in the Trio of Beethoven's C minor Symphony, which had remained uncorrected, notwithstanding Beethoven's protest to the publishers in 1810. [See *Musical World*, May 26, 1860, p. 328; also Sir George Grove's *Beethoven and his Nine Symphonies* (Novello, 1896), p. 174.]
[11] *F.M.* iii. 239-243. See also Chorley's *Modern German Music*, ii. 320-350.

26 he is again at Leipzig, writing to Moscheles to protest against the exclusion from the band at Birmingham of some players who had been impertinent to him at the Philharmonic in 1844.[1] The summer was unusually hot, and his friends well remember how exhausted he often became over his close work. But he kept his time. The remainder of the Oratorio was in Bartholomew's hands by the latter part of July;[2] the instrumental parts were copied in Leipzig, and rehearsed by Mendelssohn there on August 5. One of the last things he did before leaving was to give his consent to the publication of some of Fanny's compositions, which, owing to his 'tremendous reverence for print,' he had always opposed,[3] and now only agreed to reluctantly.[4] He arrived in London, for the ninth time, on the evening of August 17 or 18, had a trial rehearsal with piano at Moscheles's house, two band-rehearsals at Hanover Square Rooms, went to Birmingham on Sunday the 23rd, had full rehearsals on Monday morning and Tuesday evening, and the Oratorio was performed on the morning of Wednesday, Aug. 26. The Town Hall was densely crowded, and it was observed that the sun burst forth and lit up the scene as Mendelssohn took his place,[5] amid a deafening roar of applause from band, chorus, and audience. Staudigl was the Elijah, and Charles Lockey sang the air 'Then shall the righteous' in a manner which called forth Mendelssohn's warmest praise.[6] 'No work of mine'—says he in the long letter which he wrote his brother the same evening—'no work of mine ever went so admirably at the first performance, or was received with such enthusiasm both by musicians and the public, as this.' 'I never in my life heard a better performance—no nor so good, and almost doubt if I can ever hear one like it again.'[7] No less than four choruses and four airs were encored.[8] The applause at the conclusion of both first and second parts was enormous—almost grotesquely so; and an old member[9] of the band well remembered the eagerness with which Mendelssohn shook hands with all who could get near him in the artists' room, thanking them warmly for the performance. He returned to London with Mr. and Mrs. Moscheles, 'on purpose for a fish dinner at Lovegrove's,' spent four days at Ramsgate with the Beneckes 'to eat crabs,'[10] and on Sept. 6 recrossed the Channel with Staudigl. His visit this time had been one of intense hard work, as any one who knows what it is to achieve the first performance of a great work for solos, chorus, and orchestra, will readily understand. And the strain was unremitting, for, owing partly to Moscheles's illness, he had no relaxation, or next to none. In consequence he was so tired as to be compelled to rest three times between Ostend and Leipzig.[11] It is a sad contrast to the buoyancy of the similar journey ten years before.[12]

But notwithstanding the success of the Oratorio the reader will hardly believe that he himself was satisfied with his work. Quite the contrary. His letter to Klingemann of Dec. 6 shows the eagerness with which he went about his corrections.[13]

The oratorio was then engraved, and published by Simrock of Berlin, and Ewer & Co., London, in June 1847. Meantime Mendelssohn had been again reminded of his duties at Berlin by an urgent command from the King to set the German Liturgy to music. This (still in MS.), and an anthem or motet (published as op. 79, No. 5), both for double choir, are respectively dated Oct. 28 and Oct. 5, 1846. A song for the Germans in Lyons[14]—dear to him as the birthplace of his wife—and a Psalm-tune for the French Reformed Church in Frankfort, are dated the 8th and 9th of the same month. On Oct. 21 the Moscheleses arrive at Leipzig, and Moscheles begins his duties as Professor of pianoforte-playing and composition. Gade again conducted the Gewandhaus Concerts for this season. A trace of Mendelssohn's interest in them remains in a pianoforte accompaniment to the E major Violin Prelude of Bach,[15] which he evidently wrote for David's performance at the Concert of Nov. 12, 1846. The MS. is dated the day before, and is amongst David's papers.[16] During October and November he was very much occupied with the illness of his faithful servant Johann Krebs, to whom he was deeply attached—'mein braver guter Diener,' as he calls him—and whose death, on Nov. 23, distressed him much. It was another link in the chain of losses which was ultimately to drag him down. Fortunately he had again, as at the time of his mother's death, some mechanical work to which he could turn. This time it was the comparison of the original autograph parts of Bach's B minor mass with his (Mendelssohn's) score of the same work.[17] As time went on, however, he was able to apply himself to more independent tasks, and by Dec. 6 was again hard at work on the alterations of 'Elijah.'[18] Since the middle of October he had been in communication with Mr. Lumley,[19] then lessee of Her Majesty's Theatre, London,

as to an opera to be founded by Scribe on 'The Tempest,' already tried by Immermann (see p. 127*b*); and a long correspondence between himself, Scribe, and Lumley appears to have taken place, no doubt exhaustive on his part. It came to nothing, from his dissatisfaction with the libretto,[1] but it was accompanied by extreme and long-continued annoyance, owing to his belief that the opera was announced in London as if he were under a contract to complete it, and that for the season of 1847.[2] He was at this moment more or less committed to the subject of 'Loreley,' on which he had communicated with Geibel the poet as early as the preceding April.[3] Geibel, a friend of Mendelssohn's and a warm admirer of his wife's, was at work on the book and completed it at the beginning of 1847. Mendelssohn occasionally conducted the later Gewandhaus concerts of this season, and some of the programmes were of special interest, such as two historical concerts on Feb. 18 and 25, 1847. One of these gave him the opportunity to write a charming letter to the daughter of Reichardt,[4] a composer for whom he always had a special fondness, and whose Morning Hymn (from Milton) had been performed at the Festival at Cologne in 1835 at his instance.

This was not on the whole a satisfactory autumn. After the extra hard work of the spring and summer, especially the tremendous struggle against time in finishing 'Elijah,' he ought to have had a long and complete rest, like that which so revived him in 1844; whereas the autumn was spent at Leipzig, a less congenial spot than Frankfort, and, as we have shown, in the midst of grave anxiety and perpetual business, involving a correspondence which those only can appreciate who have seen its extent, and the length of the letters, and the care and neatness with which the whole is registered and arranged by his own hands. Knowing what ultimately happened, it is obvious that this want of rest, coming after so much stress, must have told seriously upon him. He himself appears to have felt the necessity of lessening his labours, for we are told that he had plans for giving up all stated and uncongenial duty, and doing only what he felt disposed to do; for building a house in Frankfort,[5] so as to pass the summer there, and the winter in Berlin with his sisters, and thus in some measure revive the old family life to which he so strongly urges his brother-in-law in a remarkable letter of this time.[6] Nothing, however, could stop the current of his musical power. He was at work on 'Christus,' the new oratorio.[7] As capellmeister to the King of Saxony he had to arrange and conduct the Court Concerts at Dresden; and he took a large part in the management of the Gewandhaus Concerts this season, though suffering much from his head, and being all the time under the care of his doctor.[8] How minutely, too, he did his duty at this time as chief of the Conservatorium is shown by a MS. memorandum, dated Jan. 10, 1847, containing a long list of students, with full notes of their faults, and of the recommendations to be made to their professors. His enjoyment of life is still very keen, and his birthday was celebrated with an immense amount of fun. His wife, and her sister, Mrs. Schunck—a special favourite of Mendelssohn's—gave a comic scene in the Frankfort dialect; and Joachim (as Paganini), Moscheles (as a cook), and Mrs. Moscheles, acted an impromptu charade on the word 'Gewandhaus.' Happily no presentiment disturbed them; and the master of the house was as uproarious as if he had fifty birthdays before him. On Good Friday (April 2) he conducted 'St. Paul' at Leipzig, and shortly afterwards—for the tenth, and alas! the last time—was once more in England, where he had an engagement with the Sacred Harmonic Society to conduct three (subsequently increased to four) performances of 'Elijah' in its revised form.[9]

One of those kindnesses which endeared him so peculiarly to his friends belongs to this time. Madame Frege had a son dangerously ill, and was unable to hear the performance of 'St. Paul.' 'Na nun,' said he, 'don't distress yourself; when he gets out of danger I'll come with Cécile and play to you all night.' And he went, began with Beethoven's Moonlight Sonata, and played on for three hours, ending with his own Variations sérieuses. A day or two afterwards, he left, travelled to London with Joachim,[10] and reached the Klingemanns' house on Monday evening, April 12. The performances of 'Elijah' [the first in the revised form of the oratorio] took place at Exeter Hall on the 16th, 23rd, 28th, with a fourth on the 30th. The Queen and Prince Albert were present on the 23rd, and it was on that occasion that the Prince wrote the note in his programme book, addressing Mendelssohn as a second Elijah, faithful to the worship of true Art though encompassed by the idolators of Baal, which has often been printed.[11] In the interval Mendelssohn paid a visit to Manchester for a performance of 'Elijah'[12] [by the Hargreaves Choral Society,] on the 20th, and another to Birmingham, where he rehearsed and conducted the oratorio at the Town Hall on the 27th [for the benefit of Mr. Stimpson, the organist]. He conducted his

'Midsummer Night's Dream' music and Scotch Symphony at the Philharmonic on April 26, and played Beethoven's G major Concerto with even more than his usual brilliancy and delicacy. He probably never played that beautiful concerto —'my old *cheval de bataille*,' as he called it years before—more splendidly than he did on this occasion. To a friend[1] who told him so after the performance he replied: 'I was desirous to play well, for there were two ladies present whom I particularly wished to please, and they were the Queen and Jenny Lind.' A little trait remembered by more than one who heard the performance, is that during the cadenza to the first movement—a long and elaborate one, and, as before (see p. 146*b*), entirely extempore, Costa who conducted, raised his baton, thinking that it was coming to an end, on which Mendelssohn looked up, and held up one of his hands, as much as to say, 'Not yet.'

On May 1 he lunched at the Prussian embassy and played, and also played for more than two hours at Buckingham Palace in the presence of the Queen and Prince Albert only. On the 4th, at the Beethoven Quartet Society, he played Beethoven's thirty-two Variations, without book, his own C minor Trio, and a Song without Words; and the same evening was at the opera at Jenny Lind's début. On the evening of the 5th at the Antient Concert he played on the organ a prelude and fugue on the name of Bach. The morning of the 6th he spent at Lord Ellesmere's picture-gallery, and in the afternoon played to his friends the Bunsens and a distinguished company, including Mr. and Mrs. Gladstone, at the Prussian embassy. He left the room in great emotion, and without the power of saying farewell.[2] The same day he wrote a Song without Words in the album of Lady Caroline Cavendish, and another in that of the Hon. Miss Cavendish, since published as op. 102, No. 2, and op. 85, No. 5, respectively. On the 8th he took leave of the Queen and Prince Albert at Buckingham Palace, and left London the same evening, much exhausted, with the Klingemanns. He had indeed, to use his own words, 'stayed too long here already.'[3] It was observed at this time by one[4] who evidently knew him well, that though in the evening and when excited by playing, he looked as he had done on former visits, yet that by daylight his face showed sad traces of wear and a look of premature old age. He crossed on Sunday, the 9th, to Calais, drove to Ostend, and on the 11th was at Cologne.[5] At Herbesthal, through the extra zeal of a police official, who mistook him for a Dr. Mendelssohn of whom the police were in search, he was stopped on his road, seriously annoyed, and compelled to write a long statement which must have cost him as much time and labour as to compose an overture.

[5] Mrs. Klingemann.

He had been only a day or two in Frankfort when he received the news of the sudden death of his sister Fanny at Berlin on May 14. It was broken to him too abruptly, and acting on his enfeebled frame completely overcame him. With a shriek he fell to the ground, and remained insensible for some time. It was the third blow of the kind that he had received, a blow perhaps harder to bear than either of the others, inasmuch as Fanny was his sister, more of his own age, and he himself was older, more worn, and less able in the then weak state of his nerves to sustain the shock. In his own words, 'a great chapter was ended, and neither title nor beginning of the next were written.'[6]

Early in June, as soon as he had sufficiently recovered to move, the whole family (with Frl. Jung as governess, and Dr. Klengel as tutor) went to Baden-Baden where they were joined by Paul and Hensel; thence by Schaffhausen to Lucerne, Thun, and Interlaken, in and about which they made some stay. To Felix the relief was long in coming. On July 7, though well, and often even cheerful, he was still unable to do any musical work, write a proper letter, or recover a consistent frame of mind. He worked at his drawing with more than usual assiduity at this time. Thirteen large water-colour pictures illustrate the journey, beginning with two views of the Falls of Schaffhausen (June 27 and 29), and ending with one of Interlaken (Sept. 4). Many of them are very highly finished, and all are works which no artist need hesitate to sign. They are on a larger scale than any of his previous sketches, and there is a certainty about the drawing, and a solidity in the perspective, which show how well he understood what he was about. The same love of form that shines so conspicuously in his great symphonies is there, and the details are put in, like the oboe and clarinet phrases in his scores, as if he loved every stroke. They are really beautiful works. In addition to these finished drawings, he sketched a good deal in Indian ink.[7]

In the middle of the month Paul and Hensel returned home, but Felix and his family remained till September.[8] Meantime the world was going on, regardless of private troubles; friends visited him, and plans for music began to crowd round him. Among the former were Professor Graves[9] and his wife, Mr. Grote the historian—old friends, the last of whom had taken a long journey on purpose to see him[10]—and Chorley the musical critic. He had received a request from the Philharmonic Society for a Symphony for 1848; an application to write a piece for the opening of the Philharmonic Hall, Liverpool[11]; had a new Cantata in view for Frankfort, and

something for the inauguration of Cologne Cathedral. 'Elijah' was to be given under his baton both at Berlin (Nov. 3) and Vienna—at the latter with Jenny Lind—and the long-cherished opera exercised its old charm over him. But his nerves were still too weak to bear any noise, and he suffered much from headache and weariness; his piano was 'not for playing, but for trying a chord,' 'it was the very worst he had ever touched in his life,'[1] and he shrank from the organ at Fribourg when proposed to him.[2] The organ in the village church of Ringgenberg, on the lake of Brienz, was his only resource, and it was there that for the last time in his life he touched the organ keys. He put aside the music for Liverpool, 'for the present.' and declined the request of the Philharmonic,[3] on the ground that a work for the Society ought not to bear the least trace of the hurry and bustle in which he would have to live for the rest of the year. At the same time he was much agitated at the state of home politics, which were very threatening, and looked with apprehension on the future of Germany. For himself he returned strongly to the plans already alluded to at the end of 1846, of giving up playing and concert-giving, and other exciting and exacting business, and taking life more easily, and more entirely as he liked.[4]

At length the power of application came, and he began to write music. We shall not be far wrong in taking the intensely mournful and agitated String Quartet in F minor (op. 80) as the first distinct utterance of his distress. This over, he arrived by degrees at a happier and more even mental condition, though with paroxysms of intense grief and distress. The contrast between the gaiety and spirit of his former letters and the sombre, apathetic tone of those which are preserved from this time, is most remarkable, and impossible to be overlooked. It is as if the man were *broken*,[5] and accepted his lot without an idea of resistance. He continually recurred to the idea of retirement from all active life but composition.

Of the music which is due to this time we find, besides the Quartet just mentioned, an Andante and Scherzo in E major and A minor, which form the first movements of op. 81; the fragments of 'Loreley' and of 'Christus'; a Te Deum, Jubilate, Magnificat, and Nunc dimittis for four voices (op. 69), which he began before going to London, and finished in Baden-Baden on June 12, and a few songs, such as 'Ich wandre fort' (op. 71, No. 5). [Mendelssohn appears to have composed the Te Deum fifteen years earlier, though he may have rewritten it in 1847. See his letter (in English) of Aug. 22, 1832, in Brit. Mus., Add. MS. 11,730, fol. 129; printed in *Musical Times*, Oct. 1903, p. 652.]

With the close of the summer the party returned homewards, and on Sept. 17 were again in Leipzig.[6] He found there a new Broadwood grand piano which had been forwarded by the firm during his absence in Switzerland, and is said to have played upon it for several hours. Those who knew him best found him 'unaltered in mind, and when at the piano or talking about music still all life and fire.'[7] During these days he played to Dr. Schleinitz a new string quartet, complete except the slow movement, which was to be a set of Variations—but not yet put on paper. He took leave of Mr. Buxton (Ewer & Co.), one of his English publishers, with the words 'You shall have plenty of music from me; I will give you no cause to complain.'[8] But such moments of vivacity would be followed by great depression, in which he could not bear to speak or to be spoken to even by old friends. He was much changed in look, and he who before was never at rest, and whose hands were always in motion, now often sat dull and listless, without moving a finger. 'He had aged, looked pale and weary, walked less quickly than before, and was more intensely affected by every passing thing than he used to be.' Also he complained of the oppressive air of the town.[9] And yet, not even those most near him appear to have realised the radical and alarming change for the worse which had taken place in his strength.

The Gewandhaus concerts began on Oct. 3, but he took no part in them, and left the conducting to his old colleague Rietz. A friend recollects his saying how happy he was—'as cheerful as a set of organ-passages'—that he had not to make out the programmes. He dreaded all public music, and complained much, though blaming himself as not deserving the happiness he had in his 'dear Cécile' and in the recovery of his boy Felix. He had been to Berlin for a week, very shortly after his return, and the sight of his sister's rooms, exactly as she left them, had agitated him extremely,[10] 'and almost neutralised the benefits of his Swiss retirement.'[11] He had definitely given up the performance of 'Elijah' at Berlin, but was bent on undertaking that at Vienna on Nov. 14,[12] where he was to hear his friend Jenny Lind in the music which he had written for her voice. On the morning of Oct. 9, he called on the Moscheleses and walked with them to the Rosenthal. He was at first much depressed, but it went off, and he became for the moment

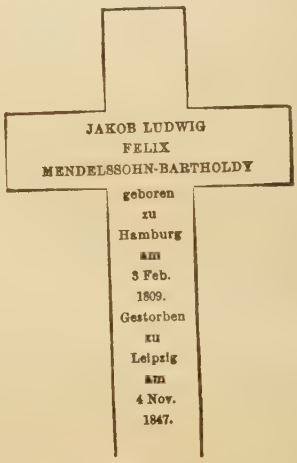
[11] *B.* p. 57.
[12] The last letter stuck into the last (the 29th) of his green volumes is from Fischhoff of Vienna on this subject, and is dated Oct. 29. It must have been received too late to have been read by him.

almost gay. After this he went to Madame Frege's house, and here his depression returned, and worse than before. His object was to consult her as to the selection and order of the songs in op. 71,[1] which he was about to publish—one of the minute matters in which he was so fastidious and difficult to satisfy. She sang them to him several times, they settled the order, and then he said he must hear them once more, and after that they would study 'Elijah'; she left the room for lights, and on her return found him on the sofa shivering, his hands cold and stiff, his head in violent pain. He then went home, and the attack continued; leeches were applied, and by the 15th he had recovered so far as to listen with interest to the details of the reception of Hiller's new opera at Dresden, and actually to make plans for his Vienna journey. On the 25th he writes to his brother in the old affectionate vein. He is taking tonics, but Paul's face would do him more good than the bitterest medicine. He was not, however, destined to speak to him again. On the 28th he was so much better as to take a walk with his wife, but it was too much, and shortly afterwards he had a second attack, and on Nov. 3 another, which last deprived him of consciousness. He lingered through the next day, fortunately without pain, and expired at 9.24 P.M. on Thursday, Nov. 4, 1847, in the presence of his wife, his brother, Schleinitz, David, and Moscheles. During the illness, the public feeling was intense. Bulletins were issued, and the house was besieged by inquirers. After his death it was as if every one in the town had received a blow and sustained a personal loss. 'It is lovely weather here,' writes a young English student[2] to the *York Courant*, 'but an awful stillness prevails; we feel as if the king were dead. Clusters of people are seen speaking together in the streets.' The streets were placarded at the corners with official announcements of his death, as if he had been a great officer of state.

On the Friday and Saturday the public were allowed to see the dead body. On Sunday the 7th it was taken to the Pauliner Church at Leipzig. A band preceded the hearse, playing the Song without Words in E minor (Book 5, No. 3), instrumented by Moscheles; and after this came a student[3] of the Conservatorium with a cushion, on which lay a silver crown formerly presented to Mendelssohn by his pupils, and his Order 'pour le mérite.' The pall was borne by Moscheles, David, Hauptmann, and Gade; the professors and pupils of the Conservatorium, the members of the Gewandhaus orchestra, the chief functionaries of the Corporation and the University, and several guilds and societies accompanied the coffin, and Paul Mendelssohn was chief mourner. In the church the chorale 'To thee, O Lord,' and the chorus 'Happy and blest,' from 'St. Paul,' were sung, a sermon or oration was delivered by Herr Howard, the pastor of the Reformed Congregation, and the service closed with the concluding chorus of Bach's St. Matthew Passion. At 10 P.M. the coffin was conveyed to the Leipzig station and transported by rail to Berlin. On the road, during the night, it was met at Cöthen by the choir of the place, under Thile their director, and at Dessau by Friedrich Schneider, who wiped away the recollection of early antagonisms by a farewell part-song, composed for the occasion, and sung by his choir at the station. The coffin arrived at Berlin at 7 A.M., and, after more funeral ceremonies, was deposited in the enclosed burial-place of the family in the Alte Dreifaltigkeits Kirchhof, close outside the Hallethor. His tombstone is a cross. He rests between his boy Felix and his sister Fanny. His father and mother are a short distance behind.



The fifth Gewandhaus concert, which, it was piously observed, would naturally have ended at the very moment of his death, was postponed till Nov. 11, when, excepting the Eroica Symphony, which formed the second part of the programme, it was entirely made up of the compositions of the departed master. Among them were the Nachtlied of Eichendorf (op. 71, No. 6), sung by Madame Frege.

In London the feeling, though naturally not so deep or so universal as in his native place, was yet both deep and wide. His visits had of late been so frequent, and the last one was so recent, and there was such a vivid personality about him, such force and fire, and such a general tone of health and spirits, that no wonder we were startled by the news of his death. The tone of the press was more that of regret for a dear relation than of eulogy for a

[1] Of the seven songs which he brought, the 'Altdeutsches Frühlingslied,' though put on paper on Oct. 7, was composed in the summer. The 'Nachtlied' was composed and written for Schleinitz's birthday, Oct. 1, and is therefore virtually Mendelssohn's last composition. 'An odd birthday present,' said he to Mme. Frege, 'but I like it much, for I feel so dreary.'

[2] Mr. Thomas Simpson Camidge, son of Dr. Camidge, organist of York Minster.

[3] Mr. de Sentis.

public character. Each writer spoke as if he intimately knew and loved the departed. This is especially conspicuous in the long notices of the *Times* and *Athenæum*, which are full not only of keen appreciation, but of deep personal sorrow. From his private friends I shall only permit myself two quotations. Mrs. Grote, writing nearly thirty years afterwards, names four friends whose deaths had occasioned her the most poignant sorrow of her life; and among these are Felix Mendelssohn, Alexis de Tocqueville, and John Stuart Mill. Mrs. Austin, the aunt of his early friends the Taylors, and herself one of his most intimate allies, in a tribute to his memory as beautiful as it is short, says—

> His is one of the rare characters which cannot be known too intimately. Of him there is nothing to tell that is not honourable to his memory, consoling to his friends, profitable to all men. . . . If I admired him as an artist, I was no less struck by his childlike simplicity and sportiveness, his deference to age, his readiness to bend his genius to give pleasure to the humble and ignorant; the vivacity and fervour of his admiration for everything good and great, his cultivated intellect, refined tastes, and noble sentiments.[1]

Nor was the public regret out of proportion to that of his intimate friends. We are not perhaps prone to be very demonstrative over artists, especially over musicians; but this was a man who had wound himself into our feelings as no other musician had done since Handel. What Handel's songs, the 'Harmonious Blacksmith,' and other harpsichord pieces, had done for the English public in 1740, that Mendelssohn's Songs without Words, and Part-songs, had done in 1840, and they had already made his name a beloved household word in many a family circle both in town and country. He had been for long looked upon as half an Englishman. He spoke English well, he wrote letters and familiar notes in our tongue freely; he showed himself in the provinces; his first important work was founded on Shakespeare, his last was brought out in England, at so peculiarly English a town as Birmingham; and his 'Scotch Symphony' and 'Hebrides Overture' showed how deeply the scenery of Britain had influenced him. And, perhaps more than this, there were in the singular purity of his life, in his known devotion to his wife and family, and his general high and unselfish character, the things most essential to procure him both the esteem and affection of the English people.

The Sacred Harmonic Society, the only Society in London having concerts at that period of the year, performed 'Elijah' on Nov. 17, preceded by the Dead March in 'Saul,' and with the band and chorus all dressed in black. At Manchester and Birmingham similar honours were paid to the departed composer. In Germany commemorative concerts (*Todtenfeier*) were given at Berlin, Vienna, Frankfort, Hamburg, and many other places. His bust was set up in the Theatre at Berlin, and his profile in the Gewandhaus at Leipzig. The first Concert of the Conservatoire at Paris, on Jan. 9, 1848, was entitled 'À la mémoire de F. Mendelssohn-Bartholdy,' and comprised the Scotch Symphony and Hebrides Overture, the Violin Concerto, and airs from 'St. Paul.' Among the very numerous letters of condolence addressed to his widow we will only mention those from Queen Victoria, the King of Prussia, and the King of Saxony.

[1] *Fraser's Magazine*, April 1848, p. 426.

Two works were in the printers' hands at the time of Mendelssohn's death—the Six Songs (op. 71) and the Six Kinderstücke (op. 72), known in England as 'Christmas pieces.' These were quickly published. Then there was a pause, and at length, as he had left no will, Madame Mendelssohn confided to a kind of committee, composed of her husband's most intimate musical friends, the task of deciding which pieces out of the immense mass of MS. music should be published, and of supervising the publication. These gentlemen were Dr. Schleinitz, the acting member of the council of the Conservatorium, David, Moscheles, and Hauptmann, all resident in Leipzig, with Paul Mendelssohn in Berlin, and Julius Rietz in Dresden. The instrumental works then (1847) in MS. embraced the Trumpet Overture (1825) and Reformation Symphony (1830), the Italian Symphony (1833), the Overture to 'Ruy Blas' (1839), two sets of pianoforte variations (1841), the Quintet in B flat (1845), the Quartet in F minor (1847), and fragments of another Quartet in E, Songs without Words, and other pianoforte pieces. The Vocal works comprised the Liederspiel 'Heimkehr aus der Fremde' (1829), the Concert-aria 'Infelice' (1843), the Music to 'Athalie' and to 'Œdipus Coloneus' (both 1845), 'Lauda Sion' (1846), fragments of the opera 'Loreley,' and of the oratorio 'Christus,' on which he had been at work not long before his death, Psalms and Sprüche for voices with and without accompaniment, Songs, and Part-songs.

The work of publication began with 'Lauda Sion,' which appeared as op. 73, in Feb. 1848. This was followed by 'Athalie,' and by other works, down to the four Part-songs which form op. 100, and No. 29 of the posthumous works, which came out in Jan. 1852. Here a pause took place. In the meantime, borne down by her great loss, and also by the death of her third boy, Felix, in 1851, Madame Mendelssohn herself died on Sept. 25, 1853. The manuscripts then came into the hands of Dr. Carl Mendelssohn, the eldest son, and after some years publication re-commenced with the Trumpet Overture, which appeared in 1867, and continued at intervals down to the 'Responsorium et Hymnus' (op. 121), and other works without opus numbers.

Many of the pieces referred to in the above enumeration are included in the series of MS. volumes already mentioned. Forty-four of

these volumes are now deposited in the Imperial Library at Berlin, in pursuance of an arrangement dated Dec. 23, 1877, by which, in exchange for the possession of them, the German government agreed with the Mendelssohn-Bartholdy family to found two perpetual scholarships of 1500 marks (£75) per annum each, tenable for four years, for the education of students of music elected by competition from the music schools of Germany. The Trustees of the Fund are three—the Director of the High School of Music at Berlin, a second nominated by the government, and a third by the family. The first election took place on Oct. 1, 1879, and the successful candidates were Engelbert Humperdinck of Siegburg, and Josef Kotek of Podolia. In addition, Ernst Seyffardt of Crefeld, and Johann Secundus Kruse of Melbourne, Australia, received allowances of 750 marks each out of the arrears of the Fund.

Long before the foundation of the Berlin Scholarships, however, practical steps in the same direction had been taken in England. In Nov. 1847 a resolution was passed by the Sacred Harmonic Society of London for the erection of a public memorial in honour of Mendelssohn. £50 was subscribed thereto by Queen Victoria and Prince Albert, and like sums by the Sacred Harmonic and Philharmonic Societies. Other subscriptions were raised amounting in the whole to over £600. In April 1859, after many negotiations, a model of a statue by Mr. C. Bacon was approved by the subscribers; it was cast in bronze in the following November, and on May 4, 1860, was set up on the Terrace of the Crystal Palace at Sydenham.

A more appropriate memorial was the Mendelssohn Scholarship, originated by Madame Jenny Lind-Goldschmidt in the year 1850, which will be found described under its own heading. [See MENDELSSOHN SCHOLARSHIP.]

In person Mendelssohn was short,[1] not so much as 5 ft. 7 ins. high, and slight of build; in figure lithe, and very light and mercurial. His look was dark and very Jewish; the face unusually mobile, and ever varying in expression, full of brightness and animation, and with a most unmistakable look of genius. After a breakfast with him at B. Hawes's, Thackeray told Richard Doyle (who told the writer), 'His face is the most beautiful face I ever saw, like what I imagine our Saviour's to have been.' Sir Frederick Pollock (*Reminiscences*, i. 215) 'was much struck by his fine face and figure, and the excellence of his conversation.' His complexion was fresh, and showed a good deal of colour. His hair was black, thick, and abundant, but very fine, with a natural wave in it, and was kept back from his forehead, which was high and much developed. By the end of his life, however, it showed a good deal of grey, and he began to be bald. His mouth was unusually delicate and expressive, and had generally a pleasant smile at the corners. His whiskers were very dark, and his closely-shaven chin and upper lip were blue from the strength of his beard. His teeth were beautifully white and regular; but the most striking part of his face were the large dark-brown eyes. When at rest he often lowered the eyelids as if he were slightly short-sighted—which indeed he was; but when animated they gave an extraordinary brightness and fire to his face and 'were as expressive a pair of eyes as were ever set in a human being's head.' They could also sparkle with rage like a tiger's (*Moscheles's Life*, i. 324). When he was playing extempore, or was otherwise much excited, they would dilate and become nearly twice their ordinary size, the brown pupil changing to a vivid black. His laugh was hearty and frequent; and when especially amused he would quite double up with laughter and shake his hand from the wrist to emphasise his merriment. He would nod his head violently when thoroughly agreeing, so that the hair came down over his face. In fact his body was almost as expressive as his face. His hands were small, with taper fingers.[2] On the keys they behaved almost like 'living and intelligent creatures, full of life and sympathy.'[3] His action at the piano was as free from affectation as everything else that he did, and very interesting. At times, especially at the organ, he leant very much over the keys, as if watching for the strains which came out of his finger tips. He sometimes swayed from side to side, but usually his whole performance was quiet and absorbed.[4]

He refused more than once, from motives of modesty, to have his likeness taken.[5] But a great number of portraits were painted and drawn at different times of his life. The best of these, in the opinion of those most capable of judging, is that painted by his friend Professor Edward Magnus at Berlin in the year 1844, and although deficient in that lively speaking expression which all admit to have been so characteristic of him, it may be accepted as a good representation.[6] It is very superior to the various replicas and copies in existence, which are distinguished by a hopeless meek solemnity of look, absolutely impossible in the original, and which, therefore, convey an entirely wrong idea of the face. Madame Goldschmidt with great kindness allowed the portrait to be photographed, and it was the desire of the writer to give a wood engraving of it; but after

[1] He was shorter than Sterndale Bennett, who was 5 ft. 7.

[2] A plaster cast of his hand can be bought.

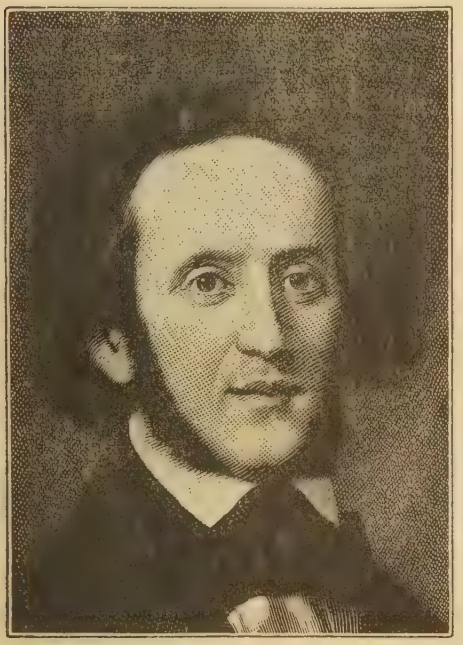
[3] The late Dr. Charles Graves, Bishop of Limerick.

[4] I owe the above description of Mendelssohn's looks chiefly to Mr. John C. Horsley, R.A. Few knew him better, or are more qualified to describe him.

[5] *L.* Dec. 20, 1831; April 3, May 18, 1835.

[6] [This portrait was presented by Magnus himself to Madame Jenny Lind-Goldschmidt, who bequeathed it to Mendelssohn's elder daughter, the late Mrs. C. V. Benecke, in whose family it still remains.]

two attempts to obtain satisfactory reproductions, he was reluctantly compelled to abandon the intention. [By the kindness of the present owner, Mr. C. V. Benecke (see note 6, p. 156), the picture has been photographed again, and



the marked improvement in the art of reproducing pictures has enabled us to fulfil Sir George Grove's natural wish to present readers of the Dictionary with the best portrait of the composer.]

Other portraits worth notice are (1) a pencil sketch taken in 1820, in possession of Mr. C. V. Benecke, lithographed in *Goethe and Mendelssohn*. (2) A half-length taken by Begas in 1821, in the possession of the Paul Mendelssohn-Bartholdy family at Berlin. This is very poorly engraved, both as to resemblance and execution, in *Goethe and Mendelssohn*. The original is probably much idealised, but it is a striking picture. (3) A three-quarter-length, in a cloak, painted by Hildebrand, and engraved as the frontispiece to 'Elijah'; in possession of Herr Killmann of Bonn. (4) A whole length, sitting, and looking to the side, taken by Hensel in 1844, and now in the possession of the Paul M.-B. family. This, though clever as a picture, can hardly convey the man. The hand is perhaps the most remarkable thing in it, and must be a portrait. (5) A profile taken after death by Hensel, and now in possession of Mr. C. V. Benecke. This, which is said by many to be the best representation of him, is fairly engraved as the frontispiece to Lady Wallace's translation of the letters.

A portrait of him in crayons was taken at Weimar for Goethe,[1] which he describes as 'very like, but rather sulky'; another was painted at Rome by Horace Vernet,[2] and another by a painter named Schramm.[3] [Vernet's portrait, painted in return for an extempore fantasia on 'Don Juan,' was reproduced as a supplement to the *Musical Times* of March 1905; (see also Eckardt's *Ferdinand David*, p. 39). The Schramm portrait was reproduced as frontispiece to F. G. Edwards's *History of 'Elijah'* (1896). Another portrait, drawn by Edward Novello (a son of Vincent Novello), was reproduced as a supplement to the *Musical Times* of November 1897.] The sketch by his brother-in-law, taken in 1840, and given as frontispiece to vol. ii. of the *Familie Mendelssohn* must surely be too young-looking for that date. Miniatures of the four children were taken in Paris in 1816, and are now (1906) in the possession of Herr Ernst von Mendelssohn-Bartholdy, Berlin, nephew of the composer.

The bust by Rietschel (engraved as frontispiece to Devrient) and the profiles by Knauer and Kietz are all said to be good. [There is a bust by Peter Hollins (1800-86), a Birmingham artist, now in the City of Birmingham Museum and Art Gallery.]

Not less remarkable than his face was his way and manner. It is described by those who knew him as peculiarly winning and engaging; to those whom he loved, coaxing. The slight lisp or drawl which remained with him to the end made the endearing words and pet expressions, which he was fond of applying to his own immediate circle, all the more affectionate. But outside this immediate circle also he was very fascinating, and it is probable that, devotedly as he was loved at home, few men had fewer enemies abroad. The strong admiration expressed towards him by men of such very different natures as Schumann[4] and Berlioz,[5] both of whom knew him well, shows what a depth of solid goodness there was in his attractiveness. 'His gentleness and softness,' says one of his English friends, 'had none of the bad side so often found with those qualities; nothing effeminate or morbid. There was a great deal of manliness packed into his little body,' as all readers of the early part of this sketch must be aware. Indeed he had a great capacity for being angry. Anything like meanness or deceit, or unworthy conduct of any kind, roused his wrath at once. 'He had a way,' says a very old friend, 'of suddenly firing up on such occasions, and turning on

[3] Possibly taken in 1840; since in Ernst Mendelssohn-Bartholdy's possession is the autograph of three Songs inscribed, 'Dem Maler Schramm zu freundlichem Andenken und mit bestem Dank. F. M. B. Leipzig, d. 4 Nov. 1840.'

[4] *Life of Robert Schumann*, by von Wasielewski. Eng. trans. p. 221; [see also several references in *The Life of Robert Schumann, told in his Letters*, translated by May Herbert, 2 vols., London, 1890].

[5] Letter from Berlioz to Hiller, Rome, Sept. 17, 1831. Berlioz's *Correspondance inédite* (Paris, 1879), p. 88; *Voyage Musical*, Letter 4 in vol. i. 71 *et seq.*

his heel, in a style which was quite unmistakable,' and astonishing to those who only knew his smoother side. Towards thoughtlessness, negligence, or obstinate stupidity he was very intolerant, and under such provocation said things the sting of which must have remained for long after, and which he himself deeply regretted.[1] But these were rare instances, and as a rule his personal fascination secured him friends and kept them firm to him. And to those to whom he was really attached—outside his own family, of which we are not speaking—there could hardly be a better friend. The published letters to General von Webern, to Verkenius, Klingemann, Schubring, Hiller, Moscheles, are charged with an amount of real affection rarely met with, which yet never leads him to sink his own individual opinion on any point which he thought material, as may be seen in many cases. Talent and perseverance he was always ready to encourage, and the cases of Taubert, Eckert, Gade, Joachim, Rietz, Naumann, Sterndale Bennett, Hiller, and the anonymous student whose cause he pleads so earnestly to the King,[2] show how eager he always was to promote the best interests of those whom he believed to be worthy. His warm reception of Berlioz, Liszt, and Thalberg, has been already mentioned, but must be again referred to as an instance of the absence of jealousy or rivalry in his nature, and of his simple wish to give everybody fair play.

The relations of Mendelssohn and Schumann were thoroughly good on both sides. There is a remarkable absence of Schumann's name in Mendelssohn's published letters; but this may have arisen from considerations which influenced the editors, and would possibly be reversed if the letters had been fully given, and if others which remain in MS. were printed. The two men were always good friends. They differed much on some matters of music. Mendelssohn had his strong settled principles, which nothing could induce him to give up. He thought that everything should be made as clear as a composer could make it, and that rough or awkward passages were blemishes, which should be modified and made to sound well. On the other hand, Schumann was equally fixed in the necessity of retaining what he had written down as representing his intention. But such differences of opinion never affected their intercourse; they were always friendly, and even affectionate, and loved to be together. More than one person living remembers the strong interest which Mendelssohn took in 'Paradise and the Peri' on its first appearance, and how anxious he was that his friends should hear it. [See Mendelssohn's letter to Buxton (Ewer & Co.), suggesting the publication in England of 'Paradise and the Peri,' quoted in the letter from Sir George Grove in the *Times* of Sept. 11, 1894; also printed in the *Musical Times*, Nov. 1905, p. 716.] Of Schumann's string quartets he records that they 'pleased him extremely'; and it is surely allowable to infer that it was the expression of his pleasure that made Schumann dedicate them to him. He had a particular love for some of Schumann's songs, and as this feeling was not shared by all the members of his family he would sometimes ask for the 'forbidden fruit,' as a kind of synonym for something peculiarly pleasant. The fact that he placed Schumann among his colleagues at the starting of the Leipzig Conservatorium of itself shows how much he valued him.

On the other hand, Schumann is never warmer or more in earnest than when he is praising Mendelssohn's compositions, as may be seen by many an article in his *Gesammelte Schriften*. He dedicated his string quartets to him, as we have said. He defended him with ardour when attacked; during his last sad years Mendelssohn's name was constantly in his mouth as that of his best friend, and his last clearly expressed wish was that his youngest boy should be called after him. A proof of his affectionate feeling is to be found in the No. 28 of his 'Album für die Jugend' (op. 68), which is inscribed 'Erinnerung (Nov. 4, 1847),' and therefore expresses his feelings at the death of his friend. It is not necessary to discover that definite direct meaning in this touching little piece which Mendelssohn found in all music, in order to recognise sadness tempered by a deep sense of grace and sweetness; the result showing how beautiful was the image which Mendelssohn left in the mind of one so completely able to appreciate him as Schumann.

Nowhere is Mendelssohn's naturalness and naïveté more evident than in his constant reference to his own foibles. The hearty way in which he enjoys idleness, and boasts of it,[3] the constant references to eating and drinking, are delightful in a man who got through so much work, who was singularly temperate, and whose only weakness for the products of the kitchen was for rice milk and cherry pie. In this, as in everything else, he was perfectly simple and natural. 'I do not in the least concern myself as to what people wish or praise or pay for; but solely as to what I myself consider good.'[4] No doubt he was very fortunate in being able to disregard 'what people paid for,' but that he did so is a part of his character.

His fun and drollery were more the result of his high spirits than of any real turn for wit. Unlike Beethoven, he rarely indulges in plays on words, and his best efforts in that direction are the elaborately illustrated programmes and *jeux d'esprit* which are preserved in the albums of some of his friends, and in which caricatures,

[1] He complained bitterly to the late Dr. Charles Graves, Bishop of Limerick, in 1847 of his short temper at rehearsals or with his pupils.

[2] *L.* Berlin, p. 325 of *Letters from 1833-47*, English ed.

[3] *L.* July 14, 1836, and in many others.

[4] *L.* to his mother, Oct. 4, 1837.

verses, puns, and jokes, are mixed up in a very droll fashion. There is much humour in some of his scherzos, but especially in the funeral march for Pyramus and Thisbe in the 'Midsummer Night's Dream' pieces, one of the most comical things in all music. It is much to be regretted that he has left no other specimen of his remarkable power in this direction. Probably he indulged in a good deal of such fun which has not been preserved, since both he and his sister refer to that march as a specimen of a style in which he often extemporised.[1] In mimicry he was great, not only in music but in taking off speech and manner. The most humorous passage that I have met with in his letters is still in MS.—'Dass jenseits auch Musik gemacht werden könne, das glauben Sie ja, und haben mirs oft gesagt. Dann wird's wohl kein schlechtes Instrument geben, wie bei Geyer, und keine dumme Flöte pustet da, und keine Posaune schleppt nach, und nirgends fehlt es, und wankt es, und eilt es, das glaube ich wohl.'[2]

No musician—unless perhaps it were Lionardo da Vinci, and he was only a musician in a limited sense—certainly no great composer, ever had so many pursuits as Mendelssohn. Mozart drew, and wrote capital letters, Berlioz and Weber also both wrote good letters, Beethoven was a great walker and intense lover of nature, Cherubini was a botanist and a passionate card-player, but none of them approach Mendelssohn in the number and variety of his occupations. Both billiards and chess he played with ardour to the end of his life, and in both he excelled. When a lad he was devoted to gymnastics; later on he rode much, swam more, and danced whenever he had the opportunity. Cards and skating were almost the only diversions he did not care for. But then these were diversions. There were two pursuits which almost deserve to rank as work—drawing and letter-writing. Drawing with him was more like a professional avocation than an amusement. The quantity of his sketches and drawings preserved is very large. They begin with the Swiss journey in 1822, on which he took twenty-seven large ones, all very carefully finished, and all dated, sometimes two in one day. The Scotch and Italian tours are both fully illustrated; and so they go on year by year till his last journey into Switzerland in 1847, of which, as already said, fourteen large highly finished water-colour drawings remain, besides slighter sketches. At first they are rude and childish, though with each successive set the improvement is perceptible. But even with the earliest ones there is no mistaking that the drawing was a serious business. The subjects are not what are called 'bits,' but are usually large comprehensive views, and it is impossible to doubt that the child threw his whole mind into it, did his very best, and shirked nothing. He already felt the force of the motto which fronted his conductor's chair in the Gewandhaus—'Res severa est verum gaudium.' Every little cottage or gate is put in with as much care as the main features. Every tree has its character. Everything stands well on its legs, and the whole has that architectonic style which is so characteristic of his music. [Coloured facsimiles of two of his water-colour sketches formed supplements to the *Musical Times* of December 1897, which also contains one of his humorous pen-and-ink sketches, as does the issue of November 1900, p. 723.]

Next to his drawing should be placed his correspondence, and this is even more remarkable. During the last years of his life there can have been but few eminent men in Europe who wrote more letters than he did. Many even who take no interest in music are familiar with the nature of his letters—the happy mixture of seriousness, fun, and affection, the life-like descriptions, the happy hits, the naïveté which no baldness of translation can extinguish, the wise counsels, the practical views, the delight in the successes of his friends, the self-abnegation, the bursts of wrath at anything mean or nasty. We all remember, too, the length to which they run. Taking the printed volumes, and comparing the letters with those of Scott or Arnold, they are on the average very considerably longer than either. But the published letters bear only a small proportion to those still in MS.[3] In fact the abundance of material for the biographer of Mendelssohn is quite bewildering. That, however, is not the point. The remarkable fact is that so many letters of such length and such intrinsic excellence should have been written by a man who was all the time engaged in an engrossing occupation, producing great quantities of music, conducting, arranging, and otherwise occupied in a profession which more than any demands the surrender of the entire man. For these letters are no hurried productions, but are distinguished, like the drawings, for the neatness and finish which pervade them. An autograph letter of Mendelssohn's is a work of art; the lines are all straight and close, the letters perfectly and elegantly formed, with a peculiar luxuriance of tails, and an illegible word can hardly be found. Down to the folding and the sealing everything is perfect. It seems impossible that this can have been done quickly. It must have absorbed an enormous deal of time. While speaking of his correspondence, we may mention the neatness and order

[1] *F.M.* iii. 51, 54. [A 'Bärentanz' is described in *Mus. Times*, Aug. 1892.]

[2] 'That there may be music in the next world I know you believe, for you have often told me so; but there will certainly be no bad pianos there like Geyer's, no stupid puffing flutes, no dragging trombones, no stopping, or wavering, o hurrying—of that I am quite sure.' MS. letter.

[3] In the hands of his family, of Mr. Robi von Mendelssohn (Berlin), Mr. Felix Moscheles, Professor Paul Schubring (Berlin), Mr. Paul David, Mr. Otto Goldschmidt, Miss Preusser, Mr. Euler of Düsseldorf, the Sterndale Bennetts, and others.

with which he registered and kept everything. The forty-four volumes of MS. music, in which he did for himself what Mozart's father so carefully did for his son, have been mentioned. But it is not generally known that he preserved all letters that he received, and stuck them with his own hands into books. Twenty-seven large thick green volumes exist,[1] containing apparently all the letters and memorandums, business and private, which he received from Oct. 29, 1821, to Oct. 29, 1847, together with the drafts of his oratorio books, and of the long official communications which, during his latter life, cost him so many unprofitable hours. He seems to have found time for everything. Hiller tells us how, during a very busy season, he revised and copied out the libretto of his oratorio for him.[2] One of his dearest Leipzig friends has a complete copy of the full score of 'Antigone,' *including the whole of the words of the melodrama*, written for her with his own hand; a perfect piece of caligraphy, without spot or erasure! and the family archives contain a long minute list of the contents of all the cupboards in the house, filling several pages of foolscap, in his usual neat writing, and made about the year 1842. We read of Charles Dickens that 'no matter was considered too trivial to claim his care and attention. He would take as much pains about the hanging of a picture, the choosing of furniture, the superintending of any little improvement in the house, as he would about the more serious business of his life; thus carrying out to the very letter his favourite motto that, What is worth doing at all is worth doing well.'[3] No words could better describe the side of Mendelssohn's character to which we are alluding, nor could any motto more emphatically express the principle on which he acted throughout life in all his work.

His taste and efficiency in such minor matters are well shown in the albums which he made for his wife, beautiful specimens of arrangement, the most charming things in which are the drawings and pieces of music from his own hands. His private account-books and diaries are kept with the same quaint neatness. If he had a word to alter in a letter, it was done with a grace which turned the blemish into a beauty. The same care came out in everything—in making out the programmes for the Gewandhaus concerts, where he would arrange and re-arrange the pieces to suit some inner idea of symmetry or order; or in settling his sets of songs for publication as to the succession of keys, connection, or contrast of words, etc. In fact he had a passion for neatness, and a repugnance to anything clumsy. Possibly this may have been one reason why he appears so rarely to have sketched his music. He made it in his head, and had settled the minutest points there before he put it on paper, thus avoiding the litter and disorder of a sketch. Connected with this neatness is a certain quaintness in his proceedings which perhaps strikes an Englishman more forcibly than it would a German. He used the old-fashioned C clef for the treble voices in his scores to the last; the long flourish with which he ornaments the double bar at the end of a piece never varied. A score of Haydn's Military Symphony which he wrote for his wife bears the words 'Possessor Cécile.' In writing to Mrs. Moscheles of her little girls, whose singing had pleased him, he begs to be remembered to the 'drei kleine Diskantisten.' A note to David, sent by a child, is inscribed 'Kinderpost,' and so on. Certain French words occur over and over again, and are evidently favourites. Such are *plaisir* and *trouble*, *à propos*, *en gros*, and others. The word *hübsch*, answering to our 'nice,' was a special favourite,[4] and *nett* was one of his highest commendations.

But to return for a moment to his engrossing pursuits. Add to those just mentioned the many concerts, to be arranged, rehearsed, conducted; the frequent negotiations attending on Berlin; the long official protocols; the hospitality and genial intercourse, where he was equally excellent as host or as guest; the claims of his family; the long holidays, real holidays, spent in travelling, and not, like Beethoven's, devoted to composition—and we may almost be pardoned for wondering how he can have found time to write any music at all. But on the contrary, with him all this business does not appear to have militated against composition in the slightest degree. It often drove him almost to distraction; it probably shortened his life; but it never seems to have prevented his doing whatever music came before him, either spontaneously or at the call of his two posts at Berlin and Dresden. He composed 'Antigone' in a fortnight, he resisted writing the music to 'Ruy Blas,' he grumbled over the long chorale for the thousandth anniversary of the German Empire, and over the overture to 'Athalie' in the midst of his London pleasures; but still he did them, and in the cases of 'Antigone' and the two overtures it is difficult to see how he could have done them better. He was never driven into a corner.

The power by which he got through all this labour so much of it self-imposed, was the power of order and concentration, the practical business habit of doing one thing at a time, and doing it well. This, no doubt, was the talent which his father recognised in him so strongly as to make him doubt whether business was not his real vocation. It was this which made him sympathise with Schiller in his power of 'supplying' great tragedies as they were wanted.[5] In one way his will was weak, for he always found it hard to say 'No'; but having accepted

the task it became a duty, and towards duty his will was the iron will of a man of business. Such a gift is vouchsafed to very few artists. Handel possessed it in some degree; but with that one exception Mendelssohn seems to stand alone.

Of his method of composing, little or nothing is known. He appears to have made few sketches, and to have arranged his music in his head at first, much as Mozart did. Probably this arose from his early training under Zelter, for the volumes for 1821, 1822, 1823, of the MS. series now in the Royal Library at Berlin appear to contain his first drafts and rarely show any corrections, and what there are are not so much sketches as erasures and substitutions. Devrient and Schubring tell of their having seen him composing a score bar by bar from top to bottom; but this was probably only an experiment or *tour de force*. The fragment of the first movement of a symphony which is given on p. 168, is a good average example of the shape in which his ideas first came on to the paper.

Alterations in a work after it was completed are quite another thing, and in these he was lavish. He complains of his not discovering the necessity for them till *post festum*.[1] We have seen instances of this in the 'Walpurgisnacht,' 'St. Paul,' 'Lobgesang,' 'Elijah,' and some of the Concert-overtures. Another instance is the Italian Symphony, which he retained in MS. for fourteen years, till his death, with the intention of altering and improving the Finale. Another, equally to the point, is the D minor Trio, of which there are two editions in actual circulation, containing several important and extensive differences.[2] This is carrying fastidiousness even farther than Beethoven, whose alterations were endless, but ceased with publication. The autographs of many of Mendelssohn's pieces are dated years before they were printed, and in most, if not all, cases, they received material alterations before being issued.

Of his pianoforte playing in his earlier days we have already spoken. What it was in his great time, at such displays as his performances in London at the Philharmonic in 1842, 1844, and 1847; at Ernst's Concert in 1844, in the Bach Concerto with Moscheles and Thalberg; at the Society of British Musicians in 1844; and the Beethoven Quartet Society in 1847; at the Leipzig Concerts on the occasion already mentioned in 1836; at Jenny Lind's Concert, Dec. 5, 1845, and at many a private reunion at Vincent Novello's, the Horsleys', or the Moscheles' in London, or the houses of his favourite friends in Leipzig, Berlin, or Frankfort—there are still those remaining well able to judge, and in whose minds the impression survives as clear as ever. Of the various recollections with which I have been favoured, I cannot do better than give entire those of Madame Schumann and Ferdinand Hiller. In reading them it should be remembered that Mendelssohn was fond of speaking of himself as a player *en gros*, who did not claim (however great his right) to be a virtuoso, and that there are instances of his having refused to play before great virtuosi.

1. 'My recollections of Mendelssohn's playing,' says Madame Schumann, 'are among the most delightful things in my artistic life. It was to me a shining ideal, full of genius and life, united with technical perfection. He would sometimes take the *tempi* very quick, but never to the prejudice of the music. It never occurred to me to compare him with virtuosi. Of mere effects of performance he knew nothing—he was always the great musician, and in hearing him one forgot the player, and only revelled in the full enjoyment of the music. He could carry one with him in the most incredible manner, and his playing was always stamped with beauty and nobility. In his early days he had acquired perfection of technique; but latterly, as he often told me, he hardly ever practised, and yet he surpassed every one. I have heard him in Bach, and Beethoven, and in his own compositions, and shall never forget the impression he made upon me.'

2. 'Mendelssohn's playing,' says Ferdinand Hiller, 'was to him what flying is to a bird. No one wonders why a lark flies, it is inconceivable without that power. In the same way Mendelssohn played the piano because it was his nature. He possessed great skill, certainty, power, and rapidity of execution, a lovely full tone—all in fact that a virtuoso could desire; but these qualities were forgotten while he was playing, and one almost overlooked even those more spiritual gifts which we call fire, invention, soul, apprehension, etc. When he sat down to the instrument music streamed from him with all the fulness of his inborn genius,—he was a centaur, and his horse was the piano. What he played, how he played it, and that he was the player—all were equally riveting, and it was impossible to separate the execution, the music, and the executant. This was absolutely the case in his improvisations, so poetical, artistic, and finished; and almost as much so in his execution of the music of Bach, Mozart, Beethoven, or himself. Into those three masters he had grown, and they had become his spiritual property. The music of other composers he knew, but could not produce it as he did theirs. I do not think, for instance, that his execution of Chopin was at all to be compared to his execution of the masters just mentioned; he did not care particularly for it, though when alone he played everything good with interest. In playing at sight his skill and rapidity of comprehension were astonishing, and that not

[1] *L.* to Klingemann, Dec. 6, 1846.

[2] The parts of the 'Hebrides' Overture are not in exact accordance with the score of 'Fingals Höhle.' The pianoforte arrangement of the 'Midsummer Night's Dream' Overture published in London is given in notes of half the value of those in the score, published after it in Leipzig; [but the difference here is only apparent].

with pianoforte music only, but with the most complicated compositions. He never practised, though he once told me that in his Leipzig time he had played a shake (I think with the second and third fingers) several minutes every day for some months, till he was perfect in it.'

'His staccato,' says Dr. Joachim, 'was the most extraordinary thing possible for life and crispness. In the Frühlingslied (Songs without Words, No. 30), for instance, it was quite electric, and though I have heard that song played by many of the greatest players, I never experienced the same effect. His playing was extraordinarily full of fire, which could hardly be controlled, and yet was controlled, and combined with the greatest delicacy.' 'Though lightness of touch, and a delicious liquid pearliness of tone,' says another of his pupils,[1] 'were prominent characteristics, yet his power in *fortes* was immense. In the passage in his G minor concerto where the whole orchestra makes a *crescendo*, the climax of which is a 6–4 chord on D (pianoforte alone), it seemed as if the band had quite enough to do to work up to the chord he played.' As an instance of the fulness of his tone, the same gentleman mentioned the five bars of *piano* which begin Beethoven's G major Concerto, and which, though he played them perfectly softly, filled the whole room.

'His mechanism,' says another of his Leipzig pupils,[2] 'was extremely subtle, and developed with the lightest of wrists (never from the arm); he therefore never strained the instrument or hammered. His chord-playing was beautiful, and based on a special theory of his own. His use of the pedal was very sparing, clearly defined, and therefore effective; his phrasing beautifully clear. The performances in which I derived the most lasting impressions from him were the Thirty-two variations and last Sonata (op. 111) of Beethoven, in which latter the variations of the final movement came out more clearly in their structure and beauty than I have ever heard before or since.' Of his playing of the Thirty-two variations, Macfarren remarks that 'to each one, or each pair, where they go in pairs, he gave a character different from all the others. In playing at sight from a MS. score he characterised every incident by the peculiar tone by which he represented the instrument for which it was written.'[3] In describing his playing of the Ninth Symphony, Schleinitz testified to the same singular power of representing the different instruments. A still stronger testimony is that of Berlioz, who, speaking of the *colour* of the 'Hebrides' Overture, says that Mendelssohn 'succeeded in giving him an accurate idea of it, such is his extraordinary power of rendering the most complicated scores on the piano.'[4]

His adherence to his author's meaning, and to the indications given in the music, was absolute. Strict time was one of his hobbies. He alludes to it, with an eye to the sins of Hiller and Chopin, in a letter of May 23, 1834, and somewhere else speaks of 'nice strict tempo' as something peculiarly pleasant. After introducing some *ritardandos* in conducting the Introduction to Beethoven's Second Symphony, he excused himself by saying that 'one could not always be good,'[5] and that he had felt the inclination too strongly to resist it. In playing, however, he never himself interpolated a *ritardando*, or suffered it in any one else.[6] It especially enraged him when done at the end of a song or other piece. 'Es steht nicht da!' he would say; 'if it were intended it would be written in—they think it expression, but it is sheer affectation.'[7] But though in playing he never varied the *tempo* when once taken, he did not always take a movement at the same pace, but changed it as his mood was at the time. We have seen in the case of Bach's A minor Fugue (p. 134*a*) that he could on occasion introduce an individual reading; and his treatment of the arpeggios in the Chromatic Fantasia shows that, there at least, he allowed himself great latitude.[8] Still, in intimating this it should be remembered how thoroughly he knew these great masters, and how perfect his sympathy with them was. In conducting, as we have just seen, he was more elastic, though even there his variations would now be condemned as moderate by some conductors. Before he conducted at the Philharmonic it had been the tradition in the coda of the Overture to 'Egmont' to return to a *piano* after the *crescendo*; but this he would not suffer, and maintained the *fortissimo* to the end—a practice now always followed.

He very rarely played from book, and his prodigious memory was also often shown in his sudden recollection of out-of-the-way pieces. Hiller has given two instances of this.[9] His power of retaining things casually heard was also shown in his extempore playing, where he would recollect the themes of compositions which he heard then and there for the first time, and would combine them in the happiest manner. An instance of this is mentioned by his father,[10] in which, after Malibran had sung five songs of different nations, he was dragged to the piano, and improvised upon them all. He himself describes another occasion, a 'field day' at Baillot's, when he took three themes from the Bach sonatas and worked them up to the delight and astonishment of an audience worth delighting.[11] At the matinée of the Society of British Musicians in 1844, he took his themes from two compositions by C. E. Horsley and G. A. Macfarren which he had just heard, probably for the first time—and other instances could be given.

His extemporising was, however, marked by other traits than that of memory. 'It was,' says Macfarren, 'as fluent and as well planned as a written work,' and the themes, whether borrowed or invented, were not merely brought together but contrapuntally worked. Instances of this have been mentioned at Birmingham and elsewhere. His tact in these things was prodigious. At the concert given by Jenny Lind and himself on Dec. 5, 1845, he played two Songs without Words—No. 31, in E flat, and No. 30 in A major, and he modulated from the key of one to that of the other by means of a regularly constructed intermezzo, in which the semiquavers of the first song merged into the arpeggios of the second with the most consummate art, and with magical effect.[1] But great as were his public displays, it would seem that, as with Mozart, it was in the small circle of intimate friends that his improvisation was most splendid and happy. Those only who had the good fortune to find themselves (as rarely happened) alone with him at one of his Sunday afternoons are perhaps aware of what he could really do in this direction,[2] and he 'never improvised better' or pleased himself more than when *tête à tête* with Queen Victoria and Prince Albert. A singular fact is mentioned by Hiller,[3] which is confirmed by another friend of his: that in playing his own music he did it with a certain reticence, as if not desiring that the work would derive any advantage from his execution. The explanation is very much in consonance with his modesty, but whether correct or not, there is no reason to doubt the fact.

His immense early practice in counterpoint under Zelter—like Mozart's under his father—had given him so complete a command over all the resources of counterpoint, and such a habit of looking at themes contrapuntally, that the combinations just spoken of came more or less naturally to him. In some of his youthful compositions he brings his science into prominence, as in the Fugue in A (op. 7, No. 5); the Finale of the E flat string quartet (1823); the original Minuet and Trio of the string quintet in A (op. 18), a double canon of great ingenuity; the Chorus in 'St. Paul,' 'But our God,' constructed on the chorale 'Wir glauben all'; but with his maturity he mostly drops such displays, and 'Elijah,' as is well known, 'contains no fugues.' In extemporising, however, it was at his fingers' ends to the last.

He was also fond of throwing off ingenious canons, of which that in the following column, written on the moment for Joachim, on March 11, 1844, is a good example. A somewhat similar canon, written in the album of John Parry in 1846, is printed in the *Musical World* for August 19, 1848. Another for two violas—'Viola 1, Sir G. Smart; Viola 2,

Etude for one violin, or Canon for two violins.

F. M. B.'—is given in Sir Frederick Bridge's *Primer of Double Counterpoint and Canon.* [Yet another canon, written in the album of Miss Eliza Wesley (daughter of Samuel Wesley) will be found in the *Musical Times* of Feb. and April 1896, pp. 89 and 233.]

Of his organ-playing we have already spoken. It should be added that he settled upon his combinations of stops before starting, and steadily adhered to the plan on which he set out[4]; if he started in three parts he continued in three, and the same with four or five. He took extraordinary delight in the organ; some describe him as even more at home there than on the pianoforte, though this must be taken with caution. But it is certain that he loved the organ, and was always greatly excited when playing it.

He was fond of playing the viola, and on more than one occasion took the first viola part of his own Octet in public. The violin he learned when young, but neglected it in later life. He however played occasionally, and it was amusing to see him bending over the desk, and struggling with his part just as if he were a boy. His practical knowledge of the instrument is evident from his violin music, in which there are few difficulties which an ordinarily good player cannot surmount. But this is characteristic of the care and thoughtfulness of the man. As a rule, in his scores he gives each instrument the passages which suit it. A few instances of the reverse are quoted under CLARINET (vol. i. p. 545*a*), but they are quite the exception. He appears to have felt somewhat of the same natural dislike to brass instruments that Mozart did. At any rate in his early scores he uses them with great moderation,[5] and somewhere makes the just remark that the trombone is 'too sacred an instrument' to be used freely.

The few of Mendelssohn's very early works which he published himself, or which have been issued since his death, show in certain points the traces of his predecessors—of Bach Mozart, Beethoven, and Weber. But this is only saying what can be said of the early works of all composers, including Beethoven himself. Mendelssohn is not more but less amenable to this law of nature than most of his compeers. The traces of Bach are the most permanent, and they linger on in the vocal works even as late as 'St.

[1] Recollections of Joachim and Rockstro.
[2] Dr. Klengel and Sterndale Bennett once had this good fortune, and it was a thing never to be forgotten.
[3] *H.* p. 18.
[4] *Musical World*, Feb. 16, 1838, p. 102.
[5] Neither of his three Concert Overtures, nor the Italian and Scotch Symphonies, have trombones. As to 'St. Paul,' see his letter to Mr. J. C. Horsley, R.A., August 23, 1834, in *G. & M.* p. 115.

Paul.' Indeed, Bach may be tracked still later in the solid construction and architectonic arrangement of the choruses, even of the 'Lobgesang,' the grand Psalms, the 'Walpurgisnacht,' and 'Elijah,' works in all respects emphatically Mendelssohn's own, not less than in the religious feeling, the union of noble sentiment with tender expression, and the utter absence of commonness or vulgarity which pervade all his music alike.

In the instrumental works, however, the year 1826 broke the spell of all external influence, and the Octet, the Quintet in A, and, above all, the 'Midsummer Night's Dream' Overture, launched him upon the world at seventeen as a thoroughly original composer. The Concert-overtures, the two great Symphonies, the two PF. Concertos, and the Violin Concerto, fully maintain this originality, and in thought, style, phrase, and clearness of expression, no less than in their symmetrical structure and exquisite orchestration, are eminently independent and individual works. The advance between the Symphony in C minor (1824),—which we call 'No. I.,' though it is really 'No. XIII.'—and the Italian Symphony (Rome, 1831), is immense. The former is laid out quite on the Mozart plan, and the working throughout recalls the old world. But the latter has no model. The melodies and the treatment are Mendelssohn's alone, and while in gaiety and freshness it is quite unrivalled, it is not too much to say that the slow movement is as great a novelty as that of Beethoven's piano Concerto in G. The Scotch Symphony is as original as the Italian, and on a much larger and grander scale. The opening andante, the scherzo, and the finale are especially splendid and individual. The Concert-overtures are in all essential respects as original as if Beethoven had not preceded them by writing 'Coriolan'—as true a representative of his genius as the 'Hebrides' is of Mendelssohn's. That to the 'Midsummer Night's Dream,' which brought the fairies into the orchestra and fixed them there, and which will always remain a monument of the fresh feeling of youth; the 'Hebrides' with its intensely sombre and melancholy sentiment, and the 'Melusina' with its passionate pathos, have no predecessors in sentiment, treatment, or orchestration. 'Ruy Blas' is as brilliant and as full of fire as the others are of sentiment, and does not fall a step behind them for individuality.

In these works there is little attempt at any modification of the established forms. Innovation was not Mendelssohn's habit of mind, and he rarely attempts it. The Scotch Symphony is directed to be played through without pause, and it has an extra movement in form of a long Coda, which appears to be a novelty in pieces of this class. There are unimportant variations in the form of the concertos, chiefly in the direction of compression. But with Mendelssohn, no more than with Schubert, do these things force themselves on the attention. He has so much to say, and says it so well, the music is so good and so agreeable, that it never occurs to the hearer to inquire if he has altered the external proportions of his discourse.

His Scherzos are still more peculiarly his own offspring, and really have no prototypes. That in a movement bearing the same name as one of Beethoven's most individual creations, and occupying the same place in the piece, he should have been able to strike out so entirely different a path as he did, is a wonderful tribute to his originality. Not less remarkable is the variety of the many scherzos he has left. They are written for orchestra and chamber, concerted and solo alike, in double and triple time indifferently; they have no fixed rhythm, and notwithstanding a strong family likeness—the impress of the gay and delicate mind of their composer—are all independent of each other. In his orchestral works Mendelssohn's scoring is remarkable not more for its grace and beautiful effect than for its clearness and practical efficiency. It gives the conductor no difficulty. What the composer wishes to express comes out naturally, and, as already remarked, each instrument has with rare exceptions the passages best suited to it.

Mendelssohn's love of 'Programme' is obvious throughout the foregoing works. The exquisite imitation of Goethe's picture in the Scherzo of the Octet (p. 118*a*) is the earliest instance of it; the overture founded on his 'Calm sea and prosperous voyage' is another; and as we advance each overture and each symphony has its title. He once said, in conversation with Friedrich Schneider on the subject, that since Beethoven had taken the step he did in the Pastoral Symphony, every one was at liberty to follow.[1] But the way in which he resented Schumann's attempt[2] to discover 'red coral, sea monsters, magic castles, and ocean caves' in his 'Melusina' overture shows that his view of Programme was a broad one, that he did not intend to depict scenes or events, but held fast by Beethoven's canon, that such music should be 'more expression of emotion than painting'—*mehr Ausdruck der Empfindung als Malerei.* Thus he quotes the first few bars of the 'Hebrides' Overture (see p. 124*a*) not as his recollection of the sound of the winds and the waves, but 'to show how extraordinarily Fingal's cave had affected him'—*wie seltsam mir auf den Hebriden zu Muthe geworden ist.* True, in the 'Midsummer Night's Dream' Overture we are said to hear the bray of Bottom in the low G of the ophicleide; and in the three North Wales pieces for pianoforte (op. 16) we are told of even more minute touches

[1] Schubring, p. 347*b*, note.
[2] *L.* to Fanny, Jan. 30, 1836. The reference is to an article in the *N.M.Z.* When asked what he meant by this overture he once replied 'Him, une mésalliance.'

of imitation (see p. 123*a*); but these, if not imaginary, are at best but *jeux d'esprit*.

Connected with this tendency to Programme is a curious point, namely, his belief in the absolute and obvious 'meaning' of music. 'Notes,' says he, 'have as definite a meaning as words, perhaps even a more definite one,'[1] and he devotes a whole letter to reiterating that music is not too indefinite to be put into words, but too definite; that words are susceptible of a variety of meanings, while music has only one.[2] This is not the place to discuss so strange a doctrine, which, though true to him, is certainly not true to the majority of men, and which obviously rests on the precise force of the word 'to mean' (*heissen*); but it is necessary to call attention to it *en passant*.[3]

His great works in chamber music are on a par with those for the orchestra. The octet, the quintets, and the six quartets are thoroughly individual and interesting, nothing far-fetched, no striving after effect, no emptiness, no padding, but plenty of matter given in a manner at once fresh and varied. Every bar is his own, and every bar is well said. The accusation which is sometimes brought against them, that they are more fitted for the orchestra than the chamber, is probably to some extent well founded. Indeed Mendelssohn virtually anticipates this charge in his preface to the parts of the octet, which he desires may be played in a symphonic style; and in that noble piece, as well as in parts of the quintet in B flat and of the quartets in D and F minor, many players have felt that the composer has placed his work in too small a frame, that the proper balance cannot always be maintained between the leading violin and the other instruments, and that to produce all the effect of the composer's ideas they should be heard in an orchestra of strings rather than in a quartet of solo instruments. On the other hand, the pianoforte quartet in B minor and the two pianoforte trios in D minor and C minor have been criticised, probably with some justice, as not sufficiently concertante, that is as giving too prominent a part to the piano. Such criticism may detract from the pieces in a technical respect, but it leaves the ideas and sentiments of the music, the nobility of the style, and the clearness of the structure, untouched.

His additions to the technique of the pianoforte are not important. Hiller tells a story which shows that Mendelssohn cared little for the rich passages of the modern school; his own were quite sufficient for him.[4] But this is consistent with what we have just said. It was the music of which he thought, and as long as that expressed his feelings it satisfied him, and he was indifferent to the special form into which it was thrown. Of his pianoforte works the most remarkable is the set of seventeen Variations Sérieuses; but the Fantasia in F sharp minor (op. 28), the three great Capriccios (op. 33), the Preludes and Fugues, and several of the smaller pieces, are splendid works too well known to need further mention. The Songs without Words stand by themselves, and are especially interesting to Englishmen on account of their very great popularity in this country. Mendelssohn's orchestral and chamber works are greatly played and much enjoyed here, but it is to his oratorios, songs, Songs without Words, and part-songs, that he owes his firm hold on the mass of the English people. It was some time (see vol. ii. p. 727*b*) before the Songs without Words reached the public; but when once they became known, the taste for them quickly spread, and probably no pieces ever were so much and so permanently beloved in the country. The piece, like the name, is virtually his own invention. Not a few of Beethoven's movements—such as the adagio of the Sonate pathétique, or the minuet of op. 10, No. 3—might be classed as songs without words, and so might Field's nocturnes; but the former of these are portions of larger works, not easily separable, and the latter were little known; and neither of them possess that grace and finish, that intimate charm, and above all that *domestic* character, which have ensured the success of Mendelssohn's Songs without Words in many an English family. They soon became identified with his name as it grew more and more familiar in England; some of them were composed here, others had names or stories attached to their origin[5]: there was a piquancy about the very title—and all helped their popularity. His own feeling towards them was by no means so indulgent. It is perhaps impossible for a composer to be quite impartial towards pieces which make him so very popular, but he distinctly says, after the issue of Book 3, 'that he does not mean to write any more at that time, and that if such *animalculæ* are multiplied too much, no one will care for them,' etc.[6] It is difficult to believe that so stern a critic of his own productions should not have felt the weakness of some of them, and the strong mannerism which, with a few remarkable exceptions, pervades the whole collection. We should not forget, too, that he is not answerable for the last two books, which were published after his death, without the great alterations which he habitually made before publication. One drawback to the excessive popularity of the Songs without Words is, not

[3] Mrs. Austin (*Fraser's Mag.*, April 1848, p. 426) relates that he said to her on one occasion 'I am going to play something of Beethoven's, but you must tell them what it is about. What is the use of music, if people do not know what it means?' She might surely have replied, 'What, then, is the use of the imagination?'
[4] *H.* pp. 154, 155.
[5] Such as the well-known one in A (No. 36), which, though in Germany known as Frühlingslied, was in England for a long time called 'Camberwell Green,' from the fact of its having been composed during his visit to the Benecke's, who resided at Denmark Hill, near Camberwell Green. The Duet (No. 18) represents a conversation between the composer and his fiancée.
[6] *L.* to Simrock, March 4, 1839.

that they exist—for we might as well quarrel with Goethe for the 'Wandrers Nachtlied' or the 'Haidenröslein'—nor yet the number of imitations they produced, but that in the minds of thousands these graceful trifles, many of which were thrown off at a single sitting, are indiscriminately accepted as the most characteristic representatives of the genius of the composer of the violin concerto and the 'Hebrides' overture.

His songs may be said to have introduced the German *Lied* to England, and to have led the way for the deeper strains of Schumann, Schubert, and Brahms, in English houses and concert-rooms. No doubt the songs of those composers do touch lower depths of the heart than Mendelssohn's do; but the clearness and directness of his music, the spontaneity of his melody, and a certain pure charm pervading the whole, have given a place with the great public to some of his songs, such as 'Auf Flügeln des Gesanges,' which they will probably retain for a long time to come. Others, such as the Nachtlied, the Volkslied ('Es ist bestimmt'), and the Schilflied, are deeply pathetic; others, as the 'Lieblingsplätzchen,' are at the same time extremely original; others, as 'O Jugend,' the 'Jagdlied,' and 'An die Entfernte,' the soul of gaiety. He was very fastidious in his choice of words, and often marks his sense of the climax by varying the last stanza in accompaniment or otherwise, a practice which he was perhaps the first to adopt. One of his last commissions to his friend Professor Graves, before leaving Interlaken in 1847, was to select words from the English poets for him to set to music.

His part-songs gave the majority of English amateurs a sudden and delightful introduction to a class of music which had long existed for Germans, but which till about 1840 was little known here. Many can still recollect the utterly new and strange feeling which was then awakened in their minds by the new spirit, the delicacy, the pure style, the delicious harmonies, of these enchanting little compositions!

Ever since Handel's time, oratorios have been the favourite public music here. Mendelssohn's works of this class, 'St. Paul,' 'Elijah,' the 'Lobgesang,' soon became well known. They did not come as strangers, but as the younger brothers of the 'Messiah' and 'Judas Maccabaeus,' and we liked them at once. Nor only liked them; we were proud of them, as having been produced or very early performed in England; they appealed to our national love for the Bible, and there is no doubt that to them is largely owing the position next to Handel which Mendelssohn occupies in England. 'Elijah' at once took its place, and it is now on a level with the 'Messiah' in public favour. Apart from the intrinsic qualities of the music of his large vocal works, the melody, clearness, spirit, and symmetry which they exhibit, in common with his instrumental compositions; there is one thing which remarkably distinguishes them, and in which they are far in advance of their predecessors—a simple and direct attempt to set the subject forth as it was, to think first of the story and next of the music which depicted it. It is the same thing that we formerly attempted to bring out in Beethoven's case, 'the thoughts and emotions are the first things, and the forms of expression second and subordinate' (vol. i. p. 263*b*). We may call this 'dramatic,' inasmuch as the books of oratorios are more or less dramas; and Mendelssohn's letters to Schubring in reference to 'Elijah,' his demand for more 'questions and answers, replies and rejoinders, sudden interruptions,' etc., show how thin was the line which in his opinion divided the platform from the stage, and how keenly he wished the personages of his oratorios to be alive and acting, 'not mere musical images, but inhabitants of a definite active world.'[1] But yet it was not so much dramatic in any conscious sense as a desire to set things forth as they were. Hauptmann[2] has stated this well with regard to the three noble Psalms, 'Judge me, O God,' 'Why rage fiercely the heathen?' and 'My God, why hast thou forsaken me?' He says that it is not so much any musical or technical ability that places them so far above other similar compositions of our time, as the fact that Mendelssohn has 'just put the Psalm itself before him; not Bach, or Handel, or Palestrina, or any other style or composer, but the words of the Psalmist; and the result is not anything that can be classed as new or old, but the Psalm itself in thoroughly fine musical effect; the music not pretending to be scientific, or anything on its own account, but just throwing life and feeling into the dry words.' Any one who knows these psalms will recognise the truth of this description. It is almost more true in reference to the 114th Psalm, 'When Israel out of Egypt came.' The Jewish blood of Mendelssohn must surely for once have beat fiercely over this picture of the great triumph of his forefathers, and it is only the plain truth to say that in directness and force his music is a perfect match for the splendid words of the unknown Psalmist. It is true of his oratorios also, but they have other great qualities as well. 'St. Paul' with all its great beauties is an early work, the book of which, or rather perhaps the nature of the subject, does not wholly lend itself to forcible treatment, and it is an open question whether it can fully vie with either the 'Lobgesang,' or 'Athalie,' or still more 'Elijah.' These splendid compositions have that air of distinction which stamps a great work in every art, and which a great master alone can confer. As instances of this, take the scene of the Watchman and the concluding chorus in the 'Lobgesang'—'Ye nations'; or in 'Elijah' the two double

[1] *L.* to Schubring, Nov. 2, Dec. 6, 1838.
[2] Hauptmann's letter to Hauser, Jan. 18, 1850.

Quartets; the arioso, 'Woe unto them,' which might be the wail of a pitying archangel; the choruses, 'Thanks be to God,' 'Be not afraid,' 'He watching over Israel,' 'Behold! God the Lord passed by'; the great piece of declamation for soprano which opens the second part; the unaccompanied trio 'Lift thine eyes,' the tenor air 'Then shall the righteous.' These are not only fine as music, but are animated by that lofty and truly dramatic character which makes one forget the vehicle, and live only in the noble sentiment of the scene as it passes.

'Lauda Sion,' though owing to circumstances less known, has the same great qualities, and is a worthy setting of the truly inspired hymn in which St. Thomas Aquinas was enabled to rise so high above the metaphysical subtleties of his day. This piece of Roman Catholic music—Mendelssohn's only important one—shows what he might have done had he written a Mass, as he once threatened to do.[1] It would have been written 'with a constant recollection of its sacred purpose'; and remembering how solemn a thing religion was to him, and how much he was affected by fine words, we may well regret that he did not accomplish the suggestion.

'Antigone' and 'Œdipus,' owing to the remoteness of the dramas, both in subject and treatment, necessarily address themselves to a limited audience, though to that audience they will always be profoundly interesting, not only for the lofty character of the music, but for the able and thoroughly natural manner in which Mendelssohn carried out a task full of difficulties and of temptations to absurdity, by simply 'creating music for the choruses in the good and scientific style of the present day, to express and animate their meaning.'[2]

The 'Midsummer Night's Dream' music is a perfect illustration of Shakespeare's romantic play, and will be loved as long as beauty, sentiment, humour, and exquisite workmanship are honoured in the world.

How far Mendelssohn would have succeeded with an opera, had he met with a libretto entirely to his mind—which that of 'Loreley' was not—it is difficult to say. Fastidious he certainly was, though hardly more so than Beethoven (see vol. i. p. 254*b*), and probably for much the same reasons. Times had changed since the lively intrigues and thinly veiled immoralities of Da Ponte were sufficient to animate the pen of the divine Mozart; and the secret of the fastidiousness of Beethoven and Mendelssohn was that they wanted librettists of their own lofty level in genius and morality, a want in which they were many generations too early. Opera will not take its proper place in the world till subjects shall be found of modern times, with which every one can sympathise, treated by the poet, before they come into the hands of the composer, in a thoroughly pure, lofty, and inspiriting manner.

'Camacho' is too juvenile a composition, on too poor a libretto, to enable any inference to be drawn from it as to Mendelssohn's competence for the stage. But, judging from the dramatic power present in his other works, from the stage-instinct displayed in the 'Midsummer Night's Dream' music, and still more from the very successful treatment of the finale to the first act of 'Loreley'—the only part of the book which he is said really to have cared for—we may anticipate that his opera, when he had found the book he liked, would have been a very fine work. At any rate we may be certain that of all its critics he would have been the most severe, and that he would not have suffered it to be put on the stage till he was quite satisfied with his treatment.

We must now close this long and yet imperfect attempt to set Mendelssohn forth as he was. Few instances can be found in history of a man so amply gifted with every good quality of mind and heart; so carefully brought up amongst good influences; endowed with every circumstance that would make him happy; and so thoroughly fulfilling his mission. Never perhaps could any man be found in whose life there were so few things to conceal and to regret.

Is there any drawback to this? or, in other words, does his music suffer at all from what he calls his 'habitual cheerfulness'? It seems as if there was a drawback, and that arising more or less directly from those very points which we have named as his best characteristics—his happy healthy heart, his single mind, his unfailing good spirits, his simple trust in God, his unaffected directness of purpose. It is not that he had not genius. The great works enumerated prove that he had it in large measure. No man could have called up the new emotions of the 'Midsummer Night's Dream' overture, the wonderful pictures of the Hebrides, or the pathetic distress of the lovely Melusina, without genius of the highest order. But his genius had not been subjected to those fiery trials which seem necessary to ensure its abiding possession of the depths of the human heart. 'My music,' says Schubert, 'is the product of my genius and my misery; and that which I have written in my greatest distress is that which the world seems to like best.' Now Mendelssohn was never more than temporarily unhappy. He did not know distress as he knew happiness. Perhaps there was even something in the constitution of his mind which forbade his harbouring it, or being permanently affected by it. He was so practical, that as a matter of duty he would have thrown it off. In this as in most other things he was always under control. At any rate he was never tried by poverty, or disappointment, or ill-health, or a morbid

[1] *L.* to Pastor Bauer, Jan. 12, 1835.
[2] *L.* to Müller, March 12, 1845.

temper, or neglect, or the perfidy of friends, or any of the other great ills which crowded so thickly around Beethoven, Schubert, or Schumann. Who can wish that he had been? that that bright, pure, aspiring spirit should have been dulled by distress or torn with agony? It might have lent a deeper undertone to his songs, or have enabled his adagios to draw tears where now they only give a saddened pleasure. But let us take the man as we have him. Surely there is enough of conflict and violence in life and in art. When we want to be made unhappy we can turn to others. It is well in these agitated modern days to be able to point to one perfectly balanced nature, in whose life, whose letters, and whose music alike, all is at once manly and refined, clever and pure, brilliant and solid. For the enjoyment of such shining heights of goodness we may well forego for once the depths of misery and sorrow.

The following opening of the first movement of a symphony was found among the loose papers of Mendelssohn which belonged to his elder daughter, the late Mrs. C. Victor Benecke, and is here printed by her kind permission. The MS. is in full score, and has been compressed for this occasion by Mr. Franklin Taylor, so as accurately to represent the scoring of the original. No clue to its date has yet been discovered.

String quartet in E flat. Autograph in British Museum (Add. MS. 30,900).	March 5-30, 1823.	....	....	Erler (Berlin).

COMPOSITIONS EDITED ETC. BY MENDELSSOHN

Handel's 'Dettingen Te Deum,' with additional accompaniments. Score and parts. (Kistner.)

Handel's 'Acis and Galatea,' with additional accompaniments. (Novello.)

[Handel's 'Israel in Egypt,' edited for the London Handel Society; Mendelssohn wrote a special organ part, and the edition was published by Cramer & Co. in June 1846. For the interesting correspondence with G. A. Macfarren on the subject of this edition, see *Goethe and Mendelssohn*, 2nd edition, 1874, p. 169 *et seq.*]

J. S. Bach's Chaconne for violin, with pf. accompt. (Ewer.)

[J. S. Bach's 'Organ compositions on Corales (Psalm tunes),' Organ Preludes, etc., 2 books. (Coventry & Hollier, 1845.)

J. S. Bach's 'Eleven variations on the Corale Sey gegrusset Jesu gütig' (All hail, good Jesus), edited from the original manuscript. (Coventry & Hollier.)]

The collection of autograph MSS. of Mendelssohn contained in the green volumes, already mentioned, now preserved in the Royal Library, Berlin, comprise the following unpublished compositions :—

11 Symphonies for strings.
1 Symphony for full orchestra.
Many Fugues for strings.
Concertos for pf.; vn.; pf. and vn. with quartet accompaniment.
2 Concertos for 2 pianos and orch.
Trio for pf., vn., and viola.
2 Sonatas for pf. and vn. (one dated 1838).
1 Sonata for pf. and viola.
1 do. for pf. and clarinet.
2 Sonatas for pf. solo.
Many Studies, Fantasias (one for four hands), Fugues, etc., for pf. solo.
Many Fugues for Organ.
5 Operas and music to Calderon's 'Steadfast Prince.'
1 Secular and 3 sacred cantatas.
Many songs and vocal pieces.
Organ part to Handel's 'Solomon.'

Bibliography

The Mendelssohn literature includes the following publications :—

I. His own letters.

Two volumes have been published by authority. The first, edited by his brother Paul, is entitled *Reisebriefe . . . aus den Jahren 1830 bis 1832* (Leipzig, 1861); the second, edited by his brother and his eldest son, *Briefe aus den Jahren 1833 bis 1847* (Leipzig, 1863), with an Appendix purporting to be a List of all Mendelssohn's compositions, compiled by Julius Rietz, which is, however, both vague and incomplete.

These were translated (not adequately) by Lady Wallace and published with the titles: *Letters from Italy and Switzerland*, etc., and *Letters from 1833 to 1847* (Longmans, 1862 and 1863). At a later date some important letters were added to the German edition of vol. ii., amongst others one containing Mendelssohn's translations of Dante, Boccaccio, etc., and Indexes were appended; but no change has been made in the contents of the English translation. There is reason to believe that the letters of vol. i. were in many ways altered by the Editor; and it is very desirable that a new edition should be published in which these changes should be rectified, and the letters given as Mendelssohn wrote them.

(2) Eight letters published for the benefit of the Deutschen Invaliden-Stiftung—*Acht Briefe und ein Facsimile* (Leipzig, 1871). English translation in *Macmillan's Magazine*, June 1871.

The name of the lady to whom they were written is suppressed, but it is understood that she was Mrs. Voigt, a musical amateur of Leipzig. The last of the eight contains a facsimile of a sketch by Mendelssohn.

(3) *Musiker Briefe*, by C. F. Ludwig Nohl (Leipzig, 1867), contains thirty letters dating from 1826 to August 26, 1847. They are included by Lady Wallace in her translation of the entire work entitled *Letters of Distinguished Musicians* (London: Longmans, 1867).

(4) Other letters are contained in Devrient's *Recollections*; Hiller's *Mendelssohn*; *Goethe und Mendelssohn*; Polko's *Reminiscences*; Hensel's *Die Familie Mendelssohn*; Moscheles's *Life*; Chorley's *Life*; Eckardt's *Ferdinand David*; F. Moscheles's *Briefe*; and F. G. Edwards's *History of 'Elijah,'* etc.

II. Biographical works.

(1) Lampadius (Wilhelm Adolf). *Felix Mendelssohn-Bartholdy, Ein Denkmal für seine Freunde* (Leipzig, 1848), translated into English by William Leonhard Gage, with supplementary sketches, by Benedict, Chorley, Ludwig Rellstab, Bayard Taylor, R. S. Willis, and J. S. Dwight. (New York, 1866; London, 1876.)

(2) Benedict (Jules). *A Sketch of the Life and Works of the late Felix Mendelssohn-Bartholdy* (John Murray, London, 1850; 2nd ed., with additions, 1853). A sketch by one who knew him well; attractive and, as far as it goes, complete.

(3) Devrient (Eduard). *Meine Erinnerungen an F. M. B. . . .* (Leipzig, 1869). English translation by Lady Macfarren (London: Bentley, 1869).

Contains thirty-two letters and portions of letters. The work of an old and intimate friend, but written with all the impartiality of a stranger.

(4) Mendelssohn-Bartholdy (Carl). *Goethe und Felix Mendelssohn-Bartholdy* (Leipzig, 1871). By the composer's eldest son; an account of the three visits paid to Goethe, from journals, letters, etc., with a poor engraving from Begas's portrait. English translation by Miss M. E. von Glehn—*Goethe and Mendelssohn*, with additions and with letters of later date' (London: Macmillan, 1872); 2nd edn. 'with additional letters,' thirty-seven in all (1874).

(5) Hiller (Ferdinand). *Mendelssohn. Letters and Recollections*, etc., first published in *Macmillan's Magazine* (from Jan. to May 1874) the English translation by Miss M. E. von Glehn. Also in a volume (London: Macmillan, 1874); and in German (Cologne, 1874).

Contains twenty-six letters not before printed. A thoroughly good book, genial, discriminating, and accurate: by one well able to judge.

(6) Polko (Elise). *Erinnerungen an F. M. B.* (Leipzig, 1868). Contains twelve letters. English translation by Lady Wallace—*Reminiscences of Felix Mendelssohn-Bartholdy*, etc. (London: Longmans, 1869), with Appendix of thirty-three additional letters and fragments of letters addressed to English correspondents.

A poor, gushing book, from which, however, some traits may be picked up. Chiefly valuable for the letters.

(7) Hensel (Sebastian). *Die Familie Mendelssohn (1729-1847) . . .* with eight portraits (3 vols., Berlin, 1879). English translation, *The Mendelssohn Family* (from the second revised German edition, 2 vols. London: Sampson Low & Co., 1880), by Carl Klingemann and an American collaborator, with a notice by George Grove, D.C.L., London, 1881.

By the son of Fanny Hensel—the Sebastian of the Letters. Compiled from journals and family papers, and containing seventy-three letters or portions of letters hitherto unpublished. The title of the book would perhaps be more appropriately *Fanny Hensel and her Family*; but it is a most valuable addition to our knowledge of Felix, and a good specimen of the copious information still remaining in the hands of his family: the notices and letters of Abraham Mendelssohn are especially new and valuable. Some of Felix's letters are first rate. The portraits would be useful if one knew how far the likenesses could be trusted.

(8) Hogarth (George). *The Philharmonic Society of London* (London, 1862). Contains notices of Mendelssohn's connection with the Philharmonic, with three letters in the body of the work and seven others in the appendix.

(9) Moscheles (Charlotte). *Aus Moscheles Leben . . . von seiner Frau* (2 vols., Leipzig, 1872 and 1873). English translation by A. D. Coleridge (2 vols., London: Hurst & Blackett, 1873).

Contains many valuable notices, and some letters.

(10) Schubring (Julius). *Erinnerungen an F. M. B.* In the Magazine *Daheim* (Leipzig), for 1866, No. 26. English translation in *Musical World*, May 12 and 19, 1866.

One of the most detailed, valuable, and interesting of all the notices. Every word that Schubring writes carries conviction with it.

(11) Horsley (Charles Edward). *Reminiscences of Mendelssohn.* First published in *Dwight's Journal of Music* (Boston, U.S.A.) and reprinted in *The Choir* (London), for Jan. 11, 25; Feb. 8, 15, 1873.

By a gifted pupil and friend. Full of information, now and then a trifle exaggerated.

(12) Dorn (Heinrich L. G.). *Recollections of F. M. and his Friends.* An article in *Temple Bar*, Feb. 1872; probably translated from a German original.

Slight, but interesting, and apparently trustworthy.

(13) Chorley (Henry Fothergill). 1. *Modern German Music* (2 vols., London: Smith, Elder, & Co., 1854). Contains scattered notices of Mendelssohn.

(14) Chorley (Henry Fothergill). Brief notice prefixed to the third edition (1864) of *Mendelssohn's Letters from Italy and Switzerland*, translated by Lady Wallace.

(15) Hewlett (Henry G.). *Henry Fothergill Chorley, Autobiography, Memoir, and Letters* (2 vols., London: Bentley, 1873). Contains some information, and six letters.

(16) Marx (Adolph Bernhard). *Erinnerungen aus meinem Leben* (2 vols., Berlin, 1865).

Contains many recollections of the Mendelssohn house from 1824 to 1832, and personal anecdotes of Felix, with whom Marx was at one time extremely intimate. He was a person of strange temper and overweening opinion of himself; but he appears to be strictly honest, and in matters of fact may probably be trusted implicitly.

(17) Rellstab (Heinrich, F. L.). *Aus meinem Leben* (2 vols., Berlin, 1861).

This autobiography of the well-known Berlin critic contains (vol. ii. chap. 11) an account of Mendelssohn's playing at Goethe's house at Weimar in 1821.

(18) Lobe (Johann Christian) has reported some conversations with Mendelssohn in his *Fliegende Blätter für Musik* (Leipzig, 1853). He has also described the evening at Goethe's mentioned just above, in the *Gartenlaube* for 1867, No. 1.

[(19) Eckardt (Julius). *Ferdinand David und die Famile Mendelssohn-Bartholdy.* (Leipzig, 1888.)

Contains thirty letters of Mendelssohn's.

(20) Moscheles (Felix). *Briefe von Felix Mendelssohn an Ignaz und Charlotte Moscheles.* (Leipzig, 1888.) English translation, *Letters of Felix Mendelssohn.* (London: Trübner & Co., 1888.)

Contains many fresh letters.

(21) Edwards (F. G.). *The History of Mendelssohn's*

'*Elijah*'; with an introduction by Sir George Grove, C.B. (London: Novello, 1896.)
Contains the Mücke portrait of Mendelssohn, and portraits of William Bartholomew, Staudigl, and others; also several unpublished letters, including one in facsimile.
(22) Stratton (Stephen S.). *Mendelssohn*; in Dent's 'The Master Musicians' series, London: J. M. Dent & Co., 1901, with illustrations and portraits.
(23) Edwards (F. G.). *Musical Haunts in London.* (London: Curwen, 1895.) Contains a facsimile of a sketch of St. Paul's Cathedral and its surroundings, by Mendelssohn, and photographs of two houses at which he stayed in London, pp. 5 and 42.
(24) Wolff (Ernst). *Felix Mendelssohn-Bartholdy.* (Berlin, 'Harmonie, Verlagsgesellschaft für Literatur und Kunst,' 1905.) The best German biography, but largely compiled from Sir George Grove's article in this Dictionary. Contains many portraits, facsimiles, etc., of much interest.]

I take the opportunity of expressing my deep obligations for assistance received in the compilation of the foregoing article from the various members of the Mendelssohn family, Miss Jung and Dr. Klengel: Mme. Schumann, Dr. Ferdinand Hiller, Mrs. Moscheles, Mme. Frege, Dr. Härtel, Dr. Schleinitz, Dr. Joachim, Mrs. Klingemann, Herr Taubert, Mr. Otto Goldschmidt and Mme. Jenny Lind-Goldschmidt, Mr. Paul David, the Bishop of Limerick, the Duke of Meiningen, Lord Frederick Cavendish, the Dean of Westminster, Professor Munro, Mr. J. C. Horsley, R.A., and Miss Sophy Horsley, Sir Charles Hallé, Signor Piatti, Mr. W. S. Rockstro, Mr. Kellow Pye, Sir G. A. Macfarren, Mr. Sartoris, Mr. W. T. Freemantle, Mr. A. G. Kurtz, Mrs. Bartholomew and Miss Elizabeth Mounsey, Mr. Wiener, Mr. Rosenthal, and Mr. Franklin Taylor. Also from the Sterndale Bennett family, Mr. Bruzaud (of Erard's), Mr. J. W. Davison, Mr. James C. Dibdin, Messrs. Glen (of Edinburgh), Mr. A. J. Hipkins, Dr. E. J. Hopkins, Mr. W. H. Holmes, Mr. W. H. Husk, Mr. H. J. Lincoln, Mr. Henry Littleton (Novello's), Mr. Stanley Lucas, Mr. Julian Marshall, Mr. John Newman, Mr. Joseph Robinson, Mme. Sainton-Dolby, Mr. Edward Speyer, Mr. Tom Taylor, Mr. J. T. Willy, and Mr. James Turle. G.

[The above article is substantially the same as that which appeared in the original edition of the Dictionary; but information, which came to light since its publication, has been incorporated in square brackets, by Mr. F. G. Edwards.]

MENDELSSOHN SCHOLARSHIP. This is the most valuable musical prize in the United Kingdom. It originated in a movement among the friends of Mendelssohn at Leipzig, who, shortly after his death, resolved to found scholarships in his memory, to be competed for and held in that Conservatorium in the foundation of which, not long before, he had greatly assisted. They appealed for help in this undertaking to English admirers of the departed composer, and were met with ready sympathy and co-operation. A committee was formed in London, with Sir G. Smart as Chairman, Carl Klingemann, Mendelssohn's intimate friend, as Secretary, and E. Buxton (Ewer & Co.), Treasurer.

The first effort towards raising money was made in the shape of a performance of 'Elijah' on a large scale, to which Mlle. Jenny Lind gave her willing and inestimable services. This took place Dec. 15, 1848, under the direction of Sir Julius (then Mr.) Benedict, at Exeter Hall, the Sacred Harmonic Society and John Hullah's Upper Schools contributing to the efficiency of the choral force. A large profit was derived from the performance; and this, with a few donations, was invested in the purchase of £1050 Bank 3 per cent annuities—the nucleus of the present Scholarship Fund.

The original plan of amalgamating the London and Leipzig projects fell through, and the money was allowed to accumulate till 1856, when the first scholar was elected—Arthur S. Sullivan, who was then one of the Children of Her Majesty's Chapel Royal; he held the Scholarship for about four years, studying at the Royal Academy of Music, London, and afterwards at the Conservatorium at Leipzig.

In 1865, the funds having again accumulated, C. Swinnerton Heap, of Birmingham, was elected to the Scholarship, which he held for rather more than two years. He was succeeded in the early part of 1871 by W. Shakespeare, then a student of the Royal Academy of Music, who pursued his studies at Leipzig and subsequently in Italy. At the time of his election, a two years' Scholarship of £20 per annum was offered, out of the accumulated interest; and this was held for a year by Miss Crawford, and again (1873) by Eaton Faning. The Society's capital then consisted of £1350 in 5 per cent India Stock, lately increased to a sum which, by fresh subscriptions and donations, enables the Society to give their Scholar a stipend of £100 per annum.

In June 1875, F. Corder was elected Mendelssohn Scholar; and he held the Scholarship for four years, studying at Cologne under Hiller. Miss Maude Valerie White was elected in Feb. 1879, and was succeeded in 1881 by Eugene d'Albert. Miss Marie Wurm was elected in 1884, S. P. Waddington in 1891, Christopher Wilson in 1895, Percy H. Miles in 1899, and George Dyson in 1904.

The original Committee has consisted, since the institution of the Scholarship, of the following:—Sir G. Smart, Mr. C. Klingemann, Mr. E. Buxton, Sir Julius Benedict, Sir W. Sterndale Bennett, Mr. W. J. Bealé, Mr. C. V. Benecke (*Trustee*), Mr. A. D. Coleridge, Sir W. G. Cusins, Mr. J. W. Davison, Mr. Otto Goldschmidt, Sir John Goss, Sir G. Grove, Sir C. Hallé, Dr. John Hullah, Mr. A. G. Kurtz, Mr. H. Leslie, Sir G. A. Macfarren, Rev. Sir F. A. G. Ouseley, Bt., Mr. Kellow J. Pye, Mr. L. Sloper, Sir J. Stainer, Sir Arthur S. Sullivan, Mr. R. R. Pym (*Trustee* and *Hon. Treasurer*),

and Mr. Julian Marshall (*Hon. Secretary*). Mr. W. Godden was the Hon. Solicitor. [The present Committee consists of the following (1905); Mr. Joseph Bennett, Sir J. F. Bridge, Mr. A. D. Coleridge, Mr. Otto Goldschmidt, Sir A. C. Mackenzie, Sir C. H. H. Parry, Professor Ebenezer Prout, Sir C. V. Stanford, Mr. J. E. Street, and Mr. Thomas Threlfall. The honorary secretary is Mr. J. Edward Street.] J. M.

MENESSON, Emile, a violin maker, born and trained at Mirecourt, but working at Rheims from about 1870, whose instruments were considered worthy of a special 'Rapport' in the *Travaux de l'Académie Nationale de Reims* (Année 1875-76, No. 1, p. 44), by L. S. Fanart, which was afterwards printed separately as a pamphlet. The peculiarity which he introduced as an improvement was the covering of the outer periphery of his violins with a single coat of tender varnish, the central portions only, of the back and belly, being covered with hard varnish. By this means Menesson claimed that the elasticity of the tables was increased. E. H-A.

MÉNESTREL, LE. This weekly musical periodical, of which the first number was issued Dec. 1, 1833, originally consisted of a romance occupying two pages, with printed matter at the back; increased in 1840 to four pages of musical information and criticism; and since Dec. 1858 has contained eight folio pages on fine paper, besides music. Its great success was due to the editor, M. Jacques Heugel, who during the latter half of the 19th century inserted contributions from almost every musician of note in France, including MM. Barbedette, Blaze de Bury, Paul Bernard, Gustave Chouquet, Félix Clément, Oscar Comettant, Ernest David, Octave Fouque, Edouard Fournier, A. de Gasperini, Eugène Gautier, Gevaert, Léon Halévy, G. Héquet, B. Jouvin, Adolphe Jullien, Lacome, Th. de Lajarte, A. de Lauzières, Marmontel, Amédée Méreaux, A. Morel, H. Moreno, Ch. Nuitter, A. de Pontmartin, Prosper Pascal, Ch. Poisot, Arthur Pougin, Alphonse Royer, J. B. Weckerlin, and Victor Wilder. The *Ménestrel* has also published, among others, the following works afterwards printed separately:—articles on Schubert, Mendelssohn, Haydn, Chopin, and Weber, by Barbedette; Blaze de Bury's 'Meyerbeer'; B. Jouvin's 'Auber' and 'Hérold'; de Gasperini's 'R. Wagner et la nouvelle Allemagne'; Méreaux's 'Les Clavecinistes et leurs œuvres'; Bertrand's 'Les Nationalités musicales dans le drame lyrique'; Héquet's 'A. Boieldieu'; Marmontel's 'Les Pianistes célèbres'; and Wilder's 'Vie de Mozart' and 'Jeunesse de Beethoven.' The present editor is M. Henri Heugel. G. C.

MENGOZZI, Bernardo, distinguished both as a singer and a composer, was born in 1758 at Florence, where he first studied music. He afterwards had instruction at Venice from Pasquale Potenza, cantor of St. Mark's. In Lent of 1785, Lord Mount-Edgcumbe found him singing in oratorio at Naples, with Signora Benini, whom he soon afterwards married. After singing together at several Italian theatres, the two came to London in 1786, but our climate was very ill-suited to Mengozzi, whose voice, a good tenor, but wanting in power, suffered much and permanently from its rigour. He was too ill, indeed, to appear with Benini in the first opera in which she sang here, the 'Giannina e Bernardone' of Cimarosa, with new songs by Cherubini. He played, however, the principal part in 'Il Tutor Burlato' of Paisiello, and showed himself 'a good musician, with a good style of singing, but still too feeble to excite any other sensation in the audience than pity for the state of his health' (Burney). In March, Handel's 'Giulio Cesare' was revived, with additions from others of his works; and in this pasticcio (1787) Mengozzi took part. But he did not do himself justice, and was soon superseded by Morelli, as his wife was by la Storace.

From London Mengozzi went to Paris (about 1787), where he was heard to advantage in the concerts given by Marie Antoinette, and among the Italian company of the Théâtre de Monsieur, with Mandini and Viganoni. He remained at Paris after the Revolution, and supported himself by giving lessons and writing operettas for the Feydeau and Montansier Theatres. When the Conservatoire was established, he was named 'Professeur de Chant,' and is remembered as having formed several distinguished pupils.

Mengozzi had, during many years, compiled the materials for a *Méthode de Chant* for the Conservatoire; but he died, before he had completed it, in March 1800. The work was edited by Langlé. Fétis gives a list of his fourteen operas, now all long forgotten. J. M.

MENO MOSSO, lit. 'with less motion'; hence, rather slower. A direction, which, like Più lento, generally occurs in the middle of a movement, the latter term properly being used where the whole movement is already a slow one, and the former in a quick movement. These terms, however, are constantly used for one another. Beethoven uses 'Meno mosso e moderato' in the Fugue for strings in B♭, op. 133, and 'Assai meno presto'—'very much less quick'—in the Trio of Symphony No. 7. It occurs frequently in Chopin's Polonaises, etc., and the Scherzo, op. 39. Schumann uses 'Poco meno mosso,' with its German equivalent 'Etwas langsamer,' in the 'Kreisleriana,' Nos. 2 and 3. When the former time is resumed, the direction is Tempo primo. M.

MENSURAL MUSIC. See Musica Mensurata; Notation.

MENTER, Joseph, a celebrated violoncellist born at Deutenkofen, in Bavaria, Jan. 19, 1808. His first instrument was the violin, but before

long he transferred his attention to the violoncello, which he studied under P. Moralt at Munich. In 1829 he took an engagement in the orchestra of the Prince of Hohenzollern-Heckingen, but in 1833 became a member of the Royal Opera band at Munich. With the exception of various artistic tours in Germany, Austria, Holland, Belgium, and England, he remained at Munich till his death, April 18, 1856. T. P. P.

His daughter, SOPHIE, a very distinguished pianoforte player, was born at Munich, July 29, 1848, and after a childhood of great precocity entered the Munich Conservatorium under Professor Leonhard. At thirteen she left that establishment for private tuition under Niest; in her fifteenth year took her first artistic *tournée*; in 1867 appeared at the Gewandhaus, Leipzig, and studied with Tausig; in 1869 became a pupil of Liszt, and in 1872 married the violoncellist, David Popper, from whom she was divorced in 1886. In 1883-87 she was professor at St. Petersburg. Her first appearance in England took place in April 1881. G.

MENUETTO, MENUETT. See MINUET.

MERBECKE. See MARBECK.

MERCADANTE, GIUSEPPE SAVERIO RAFFAELLE, born in 1795 (baptized Sept. 17) at Altamura near Bari, entered at twelve the Collegio di San Sebastiano at Naples, of which Zingarelli was chief, and where he learnt the flute and violin, and became leader in the orchestra. For some unknown reason (the account given by Fétis is absurd) he was suddenly dismissed, and to gain a living attempted composing for the stage. His first work, a cantata for the Teatro del Fondo (1818) was followed by another, 'L'Apoteosi d'Ercole,' produced at San Carlo (1819) with extraordinary success. In the next year he produced his first opera buffa, 'Violenza e costanza,' and after this came several 'opere serie,' of which 'Elisa e Claudio' (Milan, 1821) was the most successful. From this period Mercadante steadily maintained his reputation, and the verdict of Italy in his favour was endorsed by Vienna in 1824. He passed the years 1827 and 1828 in Madrid, 1829 in Cadiz, and in 1831 returned to Naples. In 1833 he became Generali's successor as maestro di cappella at the cathedral of Novara. In 1836 he composed and superintended the production of 'I Briganti' in Paris. His next fine opera was 'Il Giuramento' (Milan, 1837). In the opera buffa 'I due illustri rivali,' 1838, he changed his style, marking the accents strongly with the brass instruments. In 1839 he became musical director of the cathedral at Lanciano, and in 1840 director of the Conservatorio of Naples. He was a member of the Institut de France. Though he lost an eye at Novara, he continued to compose by dictation; but he became totally blind in 1862, and died at Naples on Dec. 17, 1870. Besides his operas, which number nearly sixty, he wrote twenty masses, many psalms and motets, secular cantatas, instrumental pieces, and songs. F. G.

MERCATOR, MICHAEL, born 1491, was a Venetian maker of virginals, who made instruments for Henry VIII. and Cardinal Wolsey. He died 1544.

MERCURE DE FRANCE. This title embraces a series of periodical publications difficult to verify completely, but of so much interest to the history of the arts that we will endeavour, with the aid of the catalogue of the Bibliothèque Nationale, to give a list of them. The first newspaper published in France was called the *Mercure Français*. Originally started in 1605, it was continued in 1635 by Théophraste Renaudot, a physician and founder of the *Gazette de France* (1631); it dropped in 1644, but was revived in 1672 as the *Mercure Galant* by a prolific but mediocre writer named Donneau de Vizé. After the first six volumes (1672 to 1674) it ceased for two years, but in 1677 was resumed by de Vizé, and published in ten volumes with the title *Nouveau Mercure Galant*. It first became of real importance in 1678, when it was issued in monthly volumes, 12mo, at 3 francs, with a kind of quarterly supplement, called from 1678 to 1685 *Extraordinaires du Mercure*, and from 1688 to 1692 *Affaires du Temps*. From May 1714 to October 1716, 33 volumes of the *Nouveau Mercure Galant* came out, including three of *Relations*. The 54 volumes from 1717 to May 1721 are called *Le Nouveau Mercure*, and the 36 volumes from June 1721 to December 1723, simply *Le Mercure*. In 1724 the monthly review founded by de Vizé became *Le Mercure de France, dedié au Roi*, and 977 volumes appeared with this celebrated title. On Dec. 17, 1791, it resumed its original title of *Le Mercure Français*, and 51 volumes came out between that date and the year VII. of the Republic, but with many changes in the manner of publication. On Dec. 15, 1792, the form was changed to 8vo, and it was issued daily up to March 25, 1793, then weekly up to the 30th Pluviose of the year VII. (Feb. 19, 1799). The 84 volumes (eight 12mo and twelve 8vo) from the year VII. to 1820 are again called the *Mercure de France*. To this collection of 1772 volumes may be added *Le Mercure au XIX siècle*, 1823 to 1827 (18 volumes); *Le Mercure de France au XIX siècle*, 1827 to 1832 (18 volumes numbered 19 to 36); *Le Mercure*, 1832 (one volume numbered 37); and finally *Le Mercure de France*, Nov. 1851 to Feb. 1853, consisting of one folio and two quarto volumes.

A few words more are necessary to show the importance of the *Mercure* in the history of music. In founding his periodical, de Vizé gave particular attention to court news, anecdotes, and poetry, reserving only a small space for the announcement and criticism of new works. His chief aim was to flatter Louis XIV., and obtain

the post of 'historiographe de France'; but as we approach the Revolution the interest and importance of the information contained in the *Mercure* increases with every step. Analyses of new operas, programmes and reports of the 'Concerts Spirituels,' biographical notices of artists, articles on the 'Guerre des Bouffons'—the struggle between French and Italian music—lines addressed to singers or musicians, reviews of treatises on music, announcements of new music, or newly invented instruments—all these and more are to be found in these monthly volumes, which are, moreover, particularly easy to consult from their well-arranged indexes. A *Choix des anciens Mercures, avec un extrait du Mercure Français* (Paris, 1757 to 1764, 108 volumes, 12mo, generally bound in 54, with an additional volume of index), was drawn up by La Place, Bastide, Marmontel, and de la Porte, but there is still room for a collection of the matter most interesting to musicians. G. C.

MERCY, or MERCI, Louis, an Englishman of French extraction, born in the early part of the 18th century, was an eminent performer on the flûte-à-bec, or English flute, for which he composed several sets of solos. But he lived at a time when his favourite instrument was gradually becoming superseded by the Traverse, or German flute, and in the hope of averting the change he, about 1735, allied himself with Stanesby the instrument-maker, in an endeavour to promote the use of the modified form of the flûte-à-bec manufactured by the latter, and published 12 solos, six of which were said to be adapted to the Traverse flute, Violin, or Stanesby's New English Flute, with a preface strongly insisting on the merits of Stanesby's invention. But their efforts failed, and the flûte-à-bec became a thing of the past. Mercy's solos, two sets of which, for the flute and bassoon (or violoncello) respectively, are in the British Museum, were much esteemed in their day. W. H. H.

MEREAUX, Jean Nicolas le Froid de, born in Paris, 1745, was organist of the Church of St. Jacques du Haut Pas. His oratorios 'Samson' and 'Esther' were given at the Concert Spirituel in 1774 and 1775 respectively. These, and an Ode on the birth of the Dauphin, performed at the same concerts in Dec. 1781, are his only works of importance besides his operas, of which the following complete list is given in the supplement to Fétis:—'La Ressource comique,' 1772; 'Le Retour de Tendresse,' 1774; 'Le Duel comique' (partly arranged from Paisiello), 1776; 'Laurette,' 1777; 'Alexandre aux Indes,' 1783; 'Oedipe et Jocaste,' 1791; 'Fabius,' 1793. Two more, 'Les Thermopyles' and 'Scipion à Carthage,' are mentioned. He died in Paris in 1797. His grandson,

Jean Amédée le Froid de Mereaux, born in Paris, 1803, became a remarkable pianist and a most successful teacher. He studied under Reicha from the age of ten, and appeared with great success in Paris and London before 1835, when he settled in Rouen as a teacher, where he died April 25, 1874. Of his original compositions his studies are the most important, but his fame rests chiefly upon his excellent collection published in 1867 under the title of 'Les Clavecinistes de 1637 à 1790.' He was also in great repute as a musical journalist. M.

MÉRIC, Madame. [See Lalande.]

MERIC, Madame de, an accomplished singer, who appeared in London in 1832, and was very successful in an unsuccessful season. She was the first singer of a moderate company, and though not a great, was far from an unpleasing, performer. She was a clever actress, with a good voice and considerable versatility of talent, rendering her very useful, as she sang in serious or comic operas, first parts or second, and in any language. While in this country, she performed in Italian, German, French, and English, and could have done so equally well in Spanish, had it been required.

She appeared in 'Der Freischütz' on its first production here with the original German words, when German opera, for a time at least, drove Italian from the London boards. Madame de Meric played also Donna Elvira to the Donna Anna of Schröder-Devrient, who rather eclipsed her; but in Chelard's 'Macbeth' she distinguished herself by singing a most cramped and difficult song with astonishing truth and precision, a feat which added much to the estimation in which she was held. She did not, however, appear again in England. J. M.

MERIGHI, Antonia, a fine operatic contralto profondo, who was first engaged for the London stage by Handel, as announced in the *Daily Courant* of July 2, 1729. The first part she undertook was that of Matilda in 'Lotario' (Handel), Dec. 2, 1729, in which she created a favourable impression; but her songs, when printed in the published opera, were transposed into much higher keys. This opera was followed by a revival of 'Tolomeo,' in which she sang soprano music transposed for her, and next by 'Partenope,' in which Merighi appeared as Rosmira with equal success in 1730 and 1731. In the latter year she sang the part of Armida in the revival of 'Rinaldo.'

After the close of that season, however, her name was not found again in the bills until 1736. The *Daily Post* of Nov. 18 in that year informs us that 'Signora *Merighi*, Signora *Chimenti*, and the *Francesina*, had the honour to sing before her Majesty, the duke, and princesses, at Kensington, on Monday night last, and met with a most gracious reception.'

In Jan. 1738, Merighi appeared in the new opera, 'Faramondo,' just finished by Handel after his return from Aix-la-Chapelle, and again in 'La Conquista del Vello d' Oro' (Pescetti). In April of the same season she took the part

of Amastre in 'Serse,'—the last she sang in England. J. M.

MERK, JOSEPH, a distinguished Austrian violoncellist, born at Vienna, Jan. 18, 1795. His first musical studies were directed to singing, the guitar, and especially to the violin, which last instrument he was obliged to abandon (according to Fétis) in consequence of an accident to his arm. He then took to the violoncello, and under the tuition of an excellent master, named Schindlöcker, speedily acquired great facility on the instrument. After a few years of desultory engagements he settled at Vienna as principal violoncellist at the Opera (1818), professor at the newly founded Conservatorium (1823), and Kammervirtuos to the Emperor (1834). He died at Vienna, June 16, 1852. He was much associated with Mayseder, and was often called the Mayseder of the violoncello.

His compositions for his instrument are numerous and of merit:—Concertos, Variations, Fantasias, Polonaises, etc., and especially twenty Exercises (op. 11), and six grand Studies (op. 20), which are valuable contributions to the répertoire of the instrument. T. P. P.

MERKEL, GUSTAV, born Nov. 12, 1827, at Oberoderwitz in Saxony; studied music under Julius Otto, and the eminent organist, Johann Schneider of Dresden, and also received some instruction from Reissiger and Schumann; was appointed organist of the Waisenkirche, Dresden, in 1858, of the Kreuzkirche in 1860, and court organist in 1864. From 1867 to 1873 he was director of the Dresden Singakademie, and from 1861 was a professor at the Conservatorium there. Merkel's printed compositions reach the number of 180. Of these a large proportion is for his instrument, for which he composed Preludes, Fugues, Fantasias, Variations, Sonatas, etc., and pieces for violin (or violoncello) and organ. He also published many solos and duets for pianoforte, motets (op. 106), and songs with pianoforte accompaniment. As organist and organ composer Merkel deservedly ranks very high; his organ music is of great excellence. Many of his fugues are 'alla cappella,' and in five parts, and all are well constructed. Promise of dignity and grandeur of style in fugue writing, which has been subsequently realised, was first manifested in an early work (op. 5), the Fantasie, etc., dedicated to Schneider. His later organ sonatas (opp. 80, 115, and 118) are noble specimens of that great form of writing, and would alone entitle him to the highest position as a composer for his instrument. He died at Dresden, Oct. 30, 1885. H. S. O.

MERKLIN, SCHUTZE, & CO. See DAUBLAINE ET CALLINET, vol. i. p. 664. Joseph Merklin died, July 10, 1905, at Nancy.

MERLIN. Opera in three acts; libretto by Siegfried Lippiner, music by Carl Goldmark. Produced at the Hof Oper, Vienna, Nov. 19, 1886.

MERRIE ENGLAND. Comic opera in two acts; libretto by Basil Hood, music by Edward German. Produced at the Savoy Theatre, London, April 2, 1902.

MERRY WIVES OF WINDSOR, THE. (Die Lustigen Weiber von Windsor.) An opera in three acts; words from Shakespeare, by Mosenthal, music by Otto Nicolai. Produced at Berlin, March 9, 1849; in London, at Her Majesty's (in Italian), as 'Falstaff,' May 3, 1864; and in Paris at the Théâtre Lyrique as 'Les Joyeuses Commères de Windsor,' May 25, 1866. In English, by the Carl Rosa Company, at the Adelphi, Feb. 11, 1878. For the operas by Balfe and Verdi, founded on the same play, see FALSTAFF, vol. ii. p. 4. G.

MERSENNUS, MARIN (LE PÈRE MERSENNE), born in the village of Oizé, in Maine, Sept. 8, 1588, educated at Le Mans and La Flèche; became a Minorite, entering upon his noviciate July 17, 1611, and receiving full orders (after a course of theology and Hebrew in Paris) from Monsignor de Gondi in 1613. For a time he taught philosophy at Nevers, but soon returned to Paris, where with other kindred spirits, such as Descartes, Pascal (père), Roberval, and Peiresc, he studied deeply both mathematics and music. He corresponded with Doni, Huygens, and other learned men in Italy, England, and Holland; and visited Italy three times (1640, 1641, and 1645). He died Sept. 1, 1648, after a painful operation. His most important work is his *Traité de l'harmonie universelle* (1627), of which he published an epitome in Latin; *Harmonicorum libri XII*, etc., a shortened version of a book published in 1635 (1648, with the names of three publishers, Baudry, Cramoisy, and Robert Ballard). These are more important even than Cerone's great work as sources of information on music in the 17th century, especially French music and musicians. [His other musical treatises are *Questions harmoniques* (1634), *Les préludes de l'harmonie universelle* (1634), *Traicté de l'orgue* (1635), *Harmonicorum libri* (1635), *De la nature des sons* (1635), *Harmonie universelle* (1636). The full titles of these and of Mersennus's miscellaneous writings, are given in the *Quellen-Lexikon.*] F. G.

MERULA, TARQUINIO, a composer of the early 17th century, the facts of whose life are gathered from the title-pages of his compositions. His birthplace is never definitely given in these, but it is supposed to have been Cremona. He was maestro di cappella at Santa Maria of Bergamo in 1623, court and church organist at Warsaw in 1624, and in 1628 was organist at Sant' Agata and maestro of the cathedral at Cremona. In 1639 he resumed the office at Bergamo, and in 1640 was maestro and organist of the cathedral there. He belonged to the

Bolognese academy of the 'Filomusi,' and in 1652 was once more maestro and organist of the cathedral at Cremona. At one time, before 1680, he held a court appointment at Florence. His works are interesting as early specimens of the use of voices and instruments in combination. They are :—

Canzoni a 4 per stromenti, lib. 1. Venice, 1615.
Madrigali et altre musiche concertate a 1-5. Venice, 1623.

For other works in MS., see the *Quellen-Lexikon*. The Fitzwilliam Museum at Cambridge and the Royal College of Music contain a comic madrigal for three voices, 'Nominativo, hic, haec, hoc.' M.

MERULO, Claudio, or Claudio da Correggio, organist and distinguished teacher, born at Correggio, in 1533.[1] At the age of twenty-four, after competition with nine other candidates, he took his place at the second organ of St. Mark's, Venice. This early success points to a first-rate education, received probably at Venice itself, but possibly at Brescia, where he had been appointed organist in the previous year (Sept. 17, 1556). Venice was rich in great musicians at the time, and Claudio's duties would bring him into daily intercourse with Willaert, Ciprian de Rore, Zarlino, A. Gabrieli, Annibale Padovano, and Costanzo Porta. It is delightful to be carried back[2] to a May evening more than 300 years ago, to find Zarlino waiting on the Piazza of St. Mark till vespers are over, that he may present 'M. Claudio Merulo soavissimo organista del detto tempio' to Francesco Viola,[3] who was visiting Venice, and then to follow them all to the house of old Adrian Willaert, kept at home by the gout, yet holding a grand reception, and ready to discuss with them the subjects of Zarlino's famous book. Claudio satisfied his employers as well as his colleagues, and while they increased his salary from time to time,[4] they repeatedly expressed their appreciation of his services, and their anxiety to retain them.[5] He became first organist of St. Mark's in 1566, but his income was never a large one, and it was probably for this reason that he set up as a publisher in 1566,[6] and twelve years later (in his forty-sixth year) as a composer of motets and madrigals,[7] neither attempt succeeding very well, or lasting more than three years.

After twenty-seven years' service Claudio left Venice, went first to Mantua, and thence to Parma, in 1584, as organist of the Steccata, or ducal chapel. Here he lived sixteen years, was knighted by the Duke, and died at the age of seventy-one, May 4, 1604. The following letter was written at the time by one of his pupils to Sig. Ferrante Carli.[8]

According to your wish I send you some particulars of Sig. Claudio's death. On Sunday the 25th of April, S. Mark's Day, after playing the organ at Vespers in the Steccata, he enjoyed an evening walk before going home. In the night he was aroused by a pain in his right side, succeeded by great fever and violent sickness. The fever continued from day to day, giving him no rest even for a few minutes. The doctors, Sig. Cernidore and Cerati, his son-in-law, after using many remedies with little or no success, determined at last to give him a medicine with strong ingredients—rhubarb, etc. This was on Sunday, May 2nd. When the poor old man had taken the draught he cried out, 'Alas! how cruelly these doctors have treated me'; for they had given him to understand it was merely a syrup. The effect was so severe that he died just as the clock struck 12 on the 4th of May. The Duke arranged the funeral, and had him crowned with laurel and ivy, these marks of respect giving great consolation to all. He was dressed as a Capuchin monk, music books were placed on his coffin, at each corner of which one of his scholars, clothed in black, held a lighted candle. They were D. Chris. Bora, M. Ant. Bertanelli, M. And. Salati, the fourth scarcely venturing to add his name, for he had only been under the good old man's care for a month, thanks first to his own gentleness and kindness, and next to that of our Sig. Christophero, who introduced me and entered me at S. Claudio's great school. . . . The Monday following, May 10th, the service took place in the Cathedral, when he was buried next to Cipriano [Rore], near the altar of S. Agatha. . . . We sang the mass with double choir, one placed near the organ, the other on the opposite side. . . .

Your affectionate servant,
Alessandro Volpius.

Parma, *May* 14, 1604.

As for Claudio's organ Toccatas and Ricercari,[9] given to the world late in life, many published posthumously, we do not think the composer's greatness is to be gauged by them at all. They cannot bring back to us the wonderful power of his playing, which could fascinate the most orthodox musicians, and attract students from all parts of Italy, Germany, and the North of Europe. As a faint resemblance of the living man (perhaps the little organ at Parma on which he played could recall him to us as strongly) these organ pieces are very

[1] Entered in baptismal register of S. Quirino on April 8 as son of Antonio and Giovanni Merlotti, which was the true form of his name.

[2] *Dimonstrationi Harmoniche* (Zarlino, Venice, 1571). See Introduction.

[3] Chapelmaster to the Duke of Ferrara, and an old pupil of Willaert's.

[4] Catelani, *Memorie della Vita . . . di C. Merulo* (Milan, Ricordi).

[5] They had learnt a lesson from Jachet de Buus, who, having appealed in vain for an increase of salary, ran off from St. Mark's on pretence of a holiday, and found the Emperor glad enough to take him on his own terms.

[6] Editing madrigals by Verdelot, and, as a partner with Betanio, a set of the same by Porta. Betanio only joined him for a short time, perhaps owing to an unexpected pressure of work at St. Mark's by the resignation of the other organist and delay in appointing another. Claudio published one set of madrigals (*a* 5) of his own.

[7] Between 1578 and 1581. Gardane printed in 1578 two books of Sacrae Cantiones (*a* 5) and in 1579 and 1580 respectively two books of madrigals (*a* 4 and *a* 3). The first and second books of motets (*a* 6) were not printed till 1583 and 1593 respectively. The third book of motets was not published till 1605, after the composer's death. A first book of four masses appeared in 1573 and 'Sacrorum Concentuum 8-16, lib. 1' in 1594. To the various collections Claudio did not contribute much till late in life. Two masses (*a* 8 and *a* 12) and litanies (*a* 8), published some years after his death, complete the list of his vocal works.

[8] G. Tiraboschi, *Biblioteca Modenese*, tom. vi. pt. i. (Modena, 1786).

[9] 'Canzoni d' intavolatura,' etc. lib. 1, 1592; lib. 2, 1606; lib. 3, 1611. 'Ricercari d' intavolatura,' etc. lib. 1, 1567; lib. 2, 1607; lib. 3, 1608. 'Messe d' intavolatura d'organo,' liv. iv. 1568. 'Toccate d' intavolatura,' etc. lib. 1, 1598; lib. 2, 1604.

welcome. They compare favourably with other works of the period. As historical examples they are also valuable. In them we have classical instrumental music quite distinct from vocal, we have again chord- as distinct from part-writing, the greatest result the organists had achieved and the ultimate death-blow to the modal system. Claudio lived close on the borders of the new tonality. In his compositions he does not abandon himself to it, but he no doubt went much further in his playing than on paper, and had he lived a few years longer, Frescobaldi's bold and apparently sudden adoption of the tonal system would not perhaps have come upon him unawares. [Six vocal pieces are in Torchi's *L'Arte Musicale in Italia*, vol. i., and four toccatas in vol. iii. See full list of extant works in the *Quellen-Lexikon*.] J. R. S.-B.

MESSA DI VOCE. The art of swelling out and diminishing the tone on a long-held note in singing. See SINGING.

MESSAGER, ANDRÉ CHARLES PROSPER, was born at Montluçon (France), Dec. 30, 1853. He studied music for some time at the École Niedermeyer in Paris, and subsequently worked at harmony and composition under Camille Saint-Saëns. In 1876 he won the gold medal of the Société des Compositeurs for a symphony in four movements, which was performed the same year at the Châtelet Concerts under the direction of Edouard Colonne. He also carried off the second Premier Prix at the Concours de la Ville de Paris with a cantata for chorus and orchestra entitled 'Prométhée enchaîné.'

M. Messager's first effort as a writer for the stage was in connection with an unfinished comic opera by Firmin Bernicat, 'François les Bas-bleus,' which he completed, on the composer's death, for production at the Folies-Dramatiques on Nov. 8, 1883. Two years later, at the same theatre, was brought out his three-act operetta, 'La Fauvette du Temple,' which was favourably received. His first real success, however, was 'La Béarnaise,' a three-act operetta given at the Bouffes-Parisiens in Dec. 1885, and in the following October mounted at the Prince of Wales's Theatre, London, where, with Miss Florence St. John and Miss Marie Tempest in the principal parts, it achieved a lengthy run. To tunefulness was added a refinement and musicianship quite unusual in works of this class. It was followed in successive years by 'Les deux Pigeons,' a three-act ballet (Opéra, and Covent Garden, June 21, 1906), 'Le Bourgeois de Calais,' a three-act operetta (Folies-Dramatiques), 'Isoline,' a fairy spectacle (Renaissance), 'Le Mari de la Reine,' a three-act operetta (Bouffes-Parisiens), and 'La Basoche,' a comic opera in three acts, produced at the Opéra-Comique on May 30, 1890.

The opera last named marked a turning-point in M. Messager's career. It was recognised as aiming at a higher standard; and, despite a certain lack of originality (which the Parisian critics have invariably pointed out in their countryman's music), was warmly welcomed as a pleasant contrast to the serious and often heavy works that had too long monopolised the active repertory of the Opéra-Comique. An English version of 'La Basoche,' written by Sir Augustus Harris and Eugène Oudin, was mounted in London by Mr. D'Oyly Carte at the Royal English Opera (now the Palace Theatre of Varieties), Shaftesbury Avenue, on Nov. 3, 1891, with Miss Esther Palliser, Mr. Ben Davies, and Mr. David Bispham (then a *débutant*) in the principal parts. It met with considerable success, and established its composer's reputation in the British metropolis as a musician of ability, imagination, and resource.

His next important work was a *comédie-lyrique* on a Japanese subject 'Madame Chrysanthème,' founded upon Pierre Loti's novel of the same name, and performed at the Théâtre-Lyrique (Renaissance) for its inauguration on Jan. 30, 1893. This ambitious score was greatly admired for its 'tasteful and elegant orchestration, the limpid clearness of its *ensemble*, and the rare delicacy of its harmonies.' At the same time, it left to be desired, 'even at the cost of less perfection of form, a higher degree of solidity, a little more individuality; in a word, greater freshness, novelty, and individuality of melodic inspiration.' In the same year the same industrious pen gave forth a four-act ballet entitled 'Scaramouche,' and a three-act operetta, 'Miss Dollar,' both produced at the Nouveau Théâtre. On July 3, 1894, his three-act comic opera, 'Mirette,' specially written for the Savoy Theatre, London, was brought out there with fair success. Next came 'Le Chevalier d'Harmental' (Opéra-Comique, 1895), 'Le Chevalier aux Fleurs,' ballet (Théâtre Marigny, 1896), 'Les Petites Michus' (Bouffes-Parisiens, 1897), 'Véronique' (Bouffes-Parisiens, 1898), 'Une Aventure de la Guimart,' ballet (Opéra-Comique, 1900), and 'Les Dragons de l'Impératrice' (Variétés, 1905). Of these 'Véronique' and 'Les Petites Michus' were both transferred to the London stage with remarkable success, while the former was also given in America during the winter of 1905.

M. Messager was for several years one of the conductors of the Paris Opéra-Comique. He was appointed joint 'directeur de la Musique' with Albert Carré, and 'Directeur Général' in 1898. He has filled the post of 'Artistic Director' at the Royal Opera, Covent Garden, since 1901. H. K.

MESSIAH. Oratorio by Handel; libretto from Holy Scripture by Charles Jennens. Composition commenced August 22, 1741; first part completed August 28; second part, Sept. 6; third part, Sept. 12; instrumentation, etc., filled in, Sept. 14;—in all twenty-four days

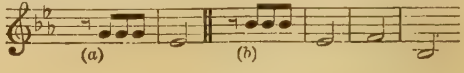
only. First performed (during Handel's sojourn in Ireland) in the Music Hall, Fishamble Street, Dublin, for the benefit of the Society for relieving Prisoners, the Charitable Infirmary, and Mercer's Hospital, April 13, 1742. The principal singers were Signora Avolio, Mrs. Cibber, and two gentlemen of the cathedral choir; principal violin, Dubourg; organist, Maclaine. First performed in England at Covent Garden Theatre, March 23, 1743. Performed annually, 1750-58, in the Chapel of the Foundling Hospital for the benefit of the charity. It was the last oratorio given by Handel, viz. on April 6, 1759, eight days only before his death. After the original performance Handel revised and re-wrote much of the work, which was published in 1767. In 1789 Mozart composed his additional accompaniments to it, so admirably executed as to have received almost universal acceptance, and to be regarded as nearly an integral part of the composition. [Robert Franz made new additional accompaniments (see *Monthly Musical Record* and *Musical Times* for 1891), and both his and Mozart's additions were used at the Birmingham Festival of 1885, where Richter got rid of many of the vulgarisms that had crept into the work by evil traditions. Sir Frederick Bridge established the excellent custom of giving the work as nearly as possible as Handel wrote it. See his Gresham Lectures of February 1899, and the *Musical Times* of the same year, p. 170, where the adaptations from Handel's own Italian duets are discussed.] No musical work has had such long, continuous, and enduring popularity as the 'Messiah,' nor has any other so materially aided the cause of charity. Much of the veneration with which it is regarded is, doubtless, owing to the subject, but much also must be attributed to the splendid music, some of which—the stirring 'Glory to God,' the stupendous 'Hallelujah,' and the magnificent 'Amen'—is 'not for an age, but for all time.' The published editions of the oratorio, in various forms, are exceedingly numerous; among the most interesting being the facsimile of the original holograph score (now in the music library at Buckingham Palace) in photo-lithography, published by the Sacred Harmonic Society in 1868; and the more accurate facsimile issued as part of the complete German Handel Society's edition. [A critical edition by Professor Prout was issued in 1902, and shortly afterwards a performance was given in the Queen's Hall in strict accordance with that edition. On the discovery of Handel's own wind parts at the Foundling Hospital, a performance was given in King's College Chapel, Cambridge, in 1894, in which they were introduced.] Many historical and descriptive pamphlets, analyses of the work, etc., have been issued at various times. [Mention has already been made of some of these; in addition we may refer to Cusins's *Handel's 'Messiah'* (1874), Dr. J. C. Culwick's *Handel's 'Messiah'* (1891), and the *Musical Times* for 1902, pp. 713 ff.] W. H. H.

MESSIDOR. Lyric drama in four acts; text by Émile Zola, music by Alfred Bruneau. Produced at the Grand Opéra, Paris, Feb. 19, 1897.

MESTO, 'sadly'; a term used twice by Beethoven, in the pianoforte sonata, op. 10, No. 3, and in the slow movement of the string Quartet, op. 59, No. 1. The slow movement of the first of these is called Largo e mesto, and of the second Adagio molto e mesto. It is also used by Chopin in the Mazurkas, op. 33, Nos. 1 and 4. M.

MESTRINO, Niccolo, violinist and composer, born in Milan, 1748; died in Paris, Sept. 1790. Having begun life as a street player, he entered the service of Prince Esterhazy, and later that of Count Erdödy in Hungary. Undergoing imprisonment for some foolish prank, he occupied the period of his confinement by perfecting his technique. Went to Paris in 1786, and performed with marked success at the Concerts Spirituels. Became an established teacher in Paris, and was appointed leader of the Italian Opera orchestra in 1789. Compositions: Twelve concertos for violin and orchestra; duos for two violins; sonatas for violin and bass; and studies for the violin alone. (A. M. Clarke's *Biog. Dict. of Fiddlers*, London, 1896.) E. H-A.

METAMORPHOSIS is the modification of a musical figure or idea, made with the view of putting it in a new light, or adapting it to changed conditions. In the later stages of the development of abstract music, composers have concentrated a great deal of energy on devising new ways of enhancing the intellectual interest of their works—as by making the continuity of the component sections more close, and giving a new aspect to the relationship of various movements, or distinct portions of single movements; and most of these are based upon some variation or modification of a well-defined melodic or rhythmic figure. Such devices can be found occasionally in the early stages of modern instrumental music, as in J. S. Bach; and an example from Mozart, in which he welds together a Minuet and Trio, is quoted in the article Form, vol. ii. p. 87*b*. Beethoven was the first to make any very conspicuous use of them, and they are frequently met with in the 'working out' portion of the movements of his sonatas and symphonies. A very striking example is quoted in the article Working out. The device is to be met with also in other situations, as in the first movement of the C minor Symphony, where the well-known figure (*a*) at the outset becomes (*b*) in the



contrasting key. Berlioz makes ingenious and characteristic use of the device in his 'Symphonie Fantastique,' in his treatment of what he calls the 'idée fixe.' Liszt also makes it a conspicuous feature in his experiments in programme music. Wagner makes more elaborate use of it than any one else in his great music dramas, and constantly transforms the character of his Leitmotiven in conformity with the varying nature of the situations. See also LEITMOTIF and WORKING OUT. [Brahms uses the device less frequently, but not less skilfully, than some of his contemporaries. In the pianoforte sonata in F♯ minor, op. 2, the theme of the slow movement is presented in a transformed shape for that of the scherzo, and in the second symphony in D, op. 73, the intermezzo in triple time is interrupted by a presto in 2–4 time, built on a metamorphosis of the same theme.] C. H. H. P.

METASTASIO, PIETRO ANTONIO DOMENICO BONAVENTURA, a celebrated Italian poet, son of Trapassi, of Assisi, a papal soldier, was born in Rome, Jan. 3, 1698. As a child he showed an astonishing power of improvisation, which so struck Gravina, that, with his parents' consent, he took him into his family, had him educated, and changed his name.[1] He was studying the classics, and engaged in translating the Iliad into Italian verse, when his benefactor died suddenly—a loss he felt deeply, although he was eventually consoled by the attachment of Maria Bulgarini the singer. In the meantime his fame had reached Vienna, and, at the instigation of Apostolo Zeno, the late court poet, the Emperor Charles VI. offered him that post. He arrived in Vienna in 1730, and remained there till his death, April 12, 1782, living with his friend Martines in the 'Michaeler Haus.' Henceforth he furnished the principal attraction at the private festivals of the Court, composing verses to be recited or sung by the young Archduchesses, set to music in the latter case by the Court composers, Reutter, Predieri, Caldara, or Bonno. Metastasio was also musical; he played the harpsichord, sang ('come un serafino,' as he used to say) and composed.[2] He may be considered as the originator of a real improvement in the musical drama, though long since superseded. His popularity as a dramatic poet was great; the charm, grace, melody, and sweetness of his verse induced the composers to overlook the absence of contrast and strong passion; and in consequence some of his libretti have been set as many as thirty or forty times. See the *Riv. Mus. Ital.* vol. xi. p. 228.

Mozart's 'Clemenza di Tito' is the solitary example of Metastasio's dramas to be seen on the boards at the present day. His poems include twenty-nine dramas, eight oratorios, thirty-nine pièces de circonstance, nearly fifty cantatas and scenas; elegies, idyls, sonnets, canzonas, sestines, terzines, etc., published in nearly fifty different editions.[3] His portrait has often been engraved; that by Mansfield and Heath after Steiner is the best. Burney describes his appearance in 1772 in enthusiastic terms.[4] There are also busts and medallions of him. He was buried in a vault in the Michaeler church, and in 1855 an amateur named Galvagni placed a marble monument to his memory (by Luccardi) in the church of the Minorites, bearing the following lines by the Abbé Guido Ferrari:—

Dat patriam Assisium, nomen Roma, Austria famam,
Plausum orbis, tumulum haec urna Metastasio.

Chronological List of Metastasio's Secular Dramas, with the chief composers and dates of production.

Didone abbandonata. Sarri, 1724; Scarlatti, about 1724; Porpora, 1742; Hasse, 1743; Jommelli, 1745; Bonno, 1752; Piccinni, 1767; Kozeluch, 1795; Paisiello, 1797; Paer, 1810; Mercadante, 1823; Reissiger, 1823.
Siface. Porpora, 1726; Leo, 1737.
Siroe. Vinci, 1726; Handel, 1728; Hasse, 1733; Piccinni, 1759.
Catone in Utica. Vinci, 1727; Leo and Hasse, 1732; Graun, 1744; Jommelli, 1749; Piccinni, 1770.
Ezio. Auletta, 1728; Porpora, 1729; Handel, 1731; Jommelli, 1749; Hasse, 1755; Graun, 1755; Gluck, 1763; Mercadante, 1826.
Semiramide. Vinci, 1729; Porpora, 1729; Hasse, 1747; Gluck, 1748; Meyerbeer, 1819.
Alessandro nell' Indie. Leo, 1727; Vinci, 1730; Handel as ('Poro'), 1731; Hasse (as 'Cleofide'), 1731; Gluck, 1745; Piccinni, 1758 and 1774.
Artaserse. Vinci, 1730; Hasse, 1740; Leo, 1740; Gluck, 1741; Galuppi, 1749; G. Scarlatti, 1763: forty settings in all.
Demetrio. Caldara, 1731; Hasse, 1732; Gluck (as 'Cleonice'), 1742.
Adriano in Siria. Caldara, 1732; Hasse, 1752; twenty-six settings in all.
Issipile. Porpora, 1723; F. Conti, 1732.
Olimpiade. Caldara, 1733; Pergolesi, 1735; Leo, 1740; Wagenseil, 1749; Hasse, 1756; Gassmann, 1764; Jommelli, 1765; Piccinni, 1761 and 1771.
Demofoonte. Caldara, 1733; Leo, 1741; Gluck, 1742; Hasse, 1748; Piccinni, 1762; Paisiello, 1773.
La Clemenza di Tito. Caldara, 1734; Leo, 1735; Hasse, 1737; Wagenseil, 1746; Gluck, 1751; G. Scarlatti, 1760; Mozart, 1791.
Achille in Sciro. Caldara, 1736; Jommelli, 1745; Hasse, 1759.
Ciro riconosciuto. Scarlatti, 1712; Leo, 1727; Caldara, 1736; Jommelli, 1744; Hasse, 1751.
Temistocle. Porpora, 1742; Pacini, 1838.
Zenobia. Predieri, 174[illegible]; Hasse, 1763.
Antigono. Hasse, 1743; Gluck, 1754.
Ipermestra. Hasse, 1744 and 1751; Gluck, 1742; Jommelli, 1752.
Attilio Regolo. Hasse, 1750; Jommelli, 1752.
Il Rè Pastore. Bonno, 1751; Sarti, 1753; Hasse, 1755; Gluck, 1756; Mozart, 1775.
L' Eroe Cinese. Bonno, 1752; Hasse, 1753; Gluck, 1754; Sacchini, 1771; Cimarosa, 1783.
L' Isola disabitata. Bonno, 1754; G. Scarlatti, 1757; Jommelli, 1762; Haydn, 1779; Spontini, 1798.
Nitteti. Jommelli, 1759; Hasse, 1759; Sarti, 1765; Sacchini, 1774.
Alcide al Bivio. Hasse, 1760; Paisiello, 1779.
Il Trionfo di Clelia. Gluck, 1760; Hasse, 1762.
Tetide. Gluck, 1760.
Egeria. Hasse, 1764.
Romolo ed Ersilia. Hasse, 1765.
Il Parnasso confuso. Gluck, 1765.
Il Trionfo d'Amore. Gassmann, 1765.
Partenope. Hasse, 1767.
Il Ruggiero, ovvero L' eroica gratitudine. Hasse, 1771.

Sacred Dramas or Oratorios, performed in the Imperial Chapel, Vienna, in Passion week.

La Passione, etc. Caldara, 1730.
Sant' Elena. Caldara, 1731.
La Morte d' Abel. Caldara, 1732.
Giuseppe riconosciuto. Porsile, 1733.
La Betulia liberata. Reutter, 1734.
Gioas, Rè di Giuda. Reutter, 1735.
Isacco. Predieri, 1740.

One drama, 'Per la Fest. di S. Natale,' composed by G. Costanza, was performed at Rome, 1727, in a theatre with scenery and action. C. F. P.

METHFESSEL, ALBERT GOTTLIEB, born Oct. 6, 1785, at Stadt Ilm, in Thuringia, became Kammermusikus at Rudolstadt, 1810, and was Hofcapellmeister in Brunswick in 1832-42.

[1] 'Metastasio,'=trapassamento, or transition, is a play on Trapassi.
[2] Cappi of Vienna published his 'XXXVI Canzoni a Sole tre voci.'
[3] Vol. i. of *Opere del Signor Abbate Pietro Metastasio*, seventeen small vols. 12mo (Nice, 1785), contains a life by Cristini. A selection of his poems was published in Paris (1804) with the title *Pensieri di Metastasio*. Burney wrote his *Memoirs* (London, 1796).
[4] 'For that time of life [he was about seventy-four] he is the handsomest man I ever beheld. There are painted on his countenance all the genius, goodness, propriety, benevolence, and rectitude which constantly characterise his writings. I could not keep my eyes off his face, it was so pleasing and worthy of contemplation.'—*Present State of Music in Germany*, i. 295.

He published a large number of songs of a popular type, and part-songs for male voices; some of his productions, as for instance, 'Krieger's Abschied,' 'Rheinweinlied' and 'Deutscher Ehrenpreis,' are still popular to a certain extent, and are included in most of the collections. He wrote an opera, 'Der Prinz von Basra' and an oratorio 'Das befreite Jerusalem.' Methfessel died March 23, 1869. M.

METRE, the rhythmic element of Song, as exemplified in Music in the structure of melodious phrases—in Poetry in that of regular verses.

As the rhythm of Poetry is measured by syllables and feet, so is that of Music by beats and bars. The two systems, notwithstanding their apparent difference, may almost be described as interchangeable, since it would be quite possible to express the swing of a melody in dactyls and spondees, or the scansion of a verse in crotchets and quavers. Upon this coincidence Music and Poetry are almost entirely dependent for the intimacy of their mutual relations; and, as we shall presently show, these relations influence pure instrumental composition no less forcibly than vocal music; the themes of a sonata being as easily reducible to metrical feet as those of an opera. Themes which are not so reducible—in other words, melodies which exhibit no rhythmic correspondence with any imaginable kind of poetical verse—may, indeed, be safely assumed to be bad ones. We shall most readily make this position intelligible by considering the syllables and feet which form the basis of poetical metre, and then showing their application to the phrases of a regularly constructed melody.

Syllables are of three kinds; long (–), short (⏑), and common (–⏑). One long syllable is reckoned as the equivalent of two short ones. A common syllable may be treated either as long or short at pleasure. In Classical Prosody the length or shortness of syllables is determined by the laws of quantity. In modern Poetry it is dependent upon accent or stress; all accented syllables being considered long, and all unaccented ones short, whatever may be the quantity of their respective vowels. This distinction is of great importance to the composer; for poetry regulated by quantity has very little affinity with the sister art. The association of what we now call tune, with Sapphics or Elegiacs, would probably be impracticable. But the regular cadence of English or Italian verses, in which the claims of quantity are utterly ignored, seems almost to demand it as a necessity.

The union of two, three, or four syllables constitutes a foot. Four forms only of the dissyllabic foot are possible—

Pyrrhic	⏑ ⏑	Iambus	⏑ –
Spondee	– –	Trochee (or Chorus)	– ⏑

Of trisyllabic feet there are eight varieties—

Tribrach	⏑ ⏑ ⏑	Antibacchius (or Palimbacchius)	– – ⏑
Molossus	– – –		
Dactyl	– ⏑ ⏑	Amphibrachys	⏑ – ⏑
Anapæst	⏑ ⏑ –	Amphimacer (or Cretic)	– ⏑ –
Bacchius	⏑ – –		

Tetrasyllabic feet—always divisible into two dissyllabic members—are sixteen in number—

Proceleusmaticus	⏑ ⏑ ⏑ ⏑	Pæon primus	– ⏑ ⏑ ⏑
Dispondæus	– – – –	Pæon secundus	⏑ – ⏑ ⏑
Diiambus	⏑ – ⏑ –	Pæon tertius	⏑ ⏑ – ⏑
Ditrochæus	– ⏑ – ⏑	Pæon quartus	⏑ ⏑ ⏑ –
Choriambus	– ⏑ ⏑ –	Epitritus primus	⏑ – – –
Antispastus	⏑ – – ⏑	Epitritus secundus	– ⏑ – –
Ionicus a majore	– – ⏑ ⏑	Epitritus tertius	– – ⏑ –
Ionicus a minore	⏑ ⏑ – –	Epitritus quartus	– – – ⏑

Two feet usually constitute a Metre (or *Dipodia*). But in Dactylic Verse each foot is regarded as a complete Metre in itself, even when the characteristic Dactyl is intermixed with feet of some other kind. Each tetrasyllabic foot is also treated, by reason of its composite character, as an entire Metre.

Verses[1] are classed according to the number of Metres they contain: thus, the Monometer, Dimeter, Trimeter, Tetrameter, Pentameter, and Hexameter contain one, two, three, four, five, and six Metres, respectively.

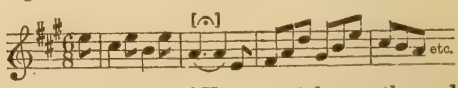
When all the Metres are perfect, the Verse is called Acatalectic. When the last syllable of the last foot is wanting, it is Catalectic. When two syllables are wanting, or an entire foot, it is Brachycatalectic. When a superfluous long syllable is added on, at the end of the Verse, it is called Hypercatalectic.

Most Verses are marked, in or near the middle, by a slight pause called a *Cæsura*, which must necessarily fall, either on a monosyllable or on the last syllable of a word, as in the well-known Alexandrine—

[𝄐]

Which, like a wounded snake, drags its slow length along;

and a similar peculiarity is observable in innumerable well-constructed melodies, as in the Giga of Corelli's Sonata in A—



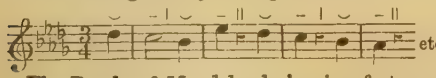
The five species of Verse most frequently used are the Iambic, the Trochaic, the Spondaic, the Anapæstic, and the Dactylic, each of which may be used in the form of a Dimeter, Trimeter, or Tetrameter, either Catalectic, or Acatalectic. But no kind of verse is strictly limited to feet of one particular order. We constantly find an Iambus substituted for a Trochee, or a Trochee for a Spondee. In Dactylic Verse especially, the Spondee is of very frequent occurrence, and the Trochee by no means uncommon. In like manner the phrasing of a melody may, at any moment, be relieved by the introduction of a subordinate figure; though, if the melody be

[1] Throughout this article the word Verse is used in its strict sense, as indicating a single line of Poetry. In common parlance the word is frequently treated as the synonym of stanza; but a stanza is really a combination of several verses.

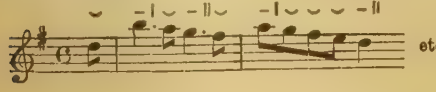
good, the new feature will be no less reducible to rule than the original one.

The variety of Metre permissible in modern poetry is unlimited; and as an equal amount of freedom is claimed in the rhythm of modern music, it would manifestly be impossible to enumerate even a tenth part of the different forms now in common use. Nevertheless, as all are constructed upon the same general principle, the student will find no difficulty in making an analysis of any that may fall under his notice. This analysis cannot be too carefully conducted. Its importance is obvious enough where words have to be set to music; but as we have already intimated it is equally important in other cases; for, without a sound practical acquaintance with the laws of poetical metre, it is not easy to invest even the subject of a fugue with the freshness and individuality which so plainly distinguish the works of the great masters from writings of inferior merit. An instrumental theme, devoid of marked rhythmic character, is never really effective. Great composers seem to have felt this as if by instinct; hence, their subjects are always reducible to metrical feet. All the Metres most common in poetry, and others innumerable, have been used by them over and over again, sometimes in their strictest form, but generally with greater variety of treatment than that allowable in verse, and with a more frequent employment of the various tetrasyllabic feet, every one of which falls into its proper place in the economy of instrumental music. We do not, indeed, always find the foot and the bar beginning together. This can only be the case when the foot begins with a long syllable, and the musical phrase with a strong accent. But in all cases the correspondence between the two modes of measurement is uniform and exact; and to its all-powerful influence many a famous melody owes half its charm. We cannot carefully examine any really fine composition, without convincing ourselves of the truth of this great law, which we will endeavour to illustrate by the aid of a few examples selected from works of universally acknowledged merit.

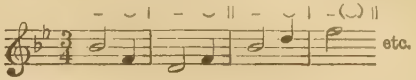
The theme of the Scherzo in Beethoven's *Sonata quasi una Fantasia* in C♯ minor (op. 27, No. 2) is in Iambic Dimeter Acatalectic—the 'Long Metre' of English Hymnologists:—



The Rondo of Mendelssohn's pianoforte concerto in G minor (op. 25) also begins in Iambic Dimeter; with the peculiarly happy use of a Pæon quartus, in the fourth, and several subsequent places:—

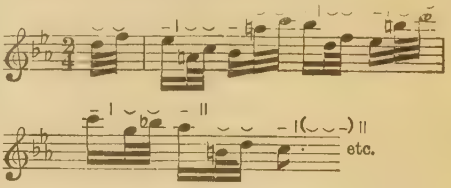


Mozart's Sonata for pianoforte and violin, in B♭, starts in Trochaic Dimeter Catalectic—



The well-known subject of the slow movement in Haydn's 'Surprise Symphony' is in Spondaic Dimeter Catalectic—

The Theme of Weber's *Rondo brillante* in E♭ (op. 62) is in Anapæstic Tetrameter Brachycatalectic, very rigidly maintained—



The slow movement of Beethoven's Symphony in A is in alternate verses of Acatalectic and Catalectic Dactylic Tetrameter, with a Spondee in each of the even places—

A no less captivating alternation of Amphimacers and Trochees is found in the theme of Mozart's pianoforte sonata in A—

It would be easy to multiply examples *ad infinitum*; but these will be sufficient to show, on no mean authority, the importance of a subject which, though too often neglected as a branch of musical education, will well repay a little diligent study. W. S. R.

METRONOME (Germ. *Metronom*, and *Taktmesser*; Fr. *Métronome*. From the Gr. *μέτρον*, 'a measure,' and *νόμος*, 'a law'). An instrument, constructed for the purpose of enabling composers to indicate the exact pace at which they wish their works to be performed.

The great masters of the earlier schools left the *Tempi* of their compositions entirely to the discretion of the executant. In doing this they incurred no risk whatever of misconception; for until the close of the 16th century and even later, the composer was almost always a singer in the choir for which he wrote; and his relations with his fellow-choristers were infinitely closer than those existing between a modern composer and the orchestra under his control. But the change of style introduced

by Claudio Monteverde, added to the impulse given to instrumental music and vocal music with instrumental accompaniments after the beginning of the 17th century, changed these relations very materially. The invention of the Opera brought new ideas into the field. The individuality of the composer began gradually to throw the characteristics of the 'School' into the background; and musicians, no longer guided by traditional laws, soon became alive to the necessity for giving some sort of direction as to the manner in which their pieces were to be sung or played. Hence arose the employment of such words as *Grave, Allegro, Adagio,* and other terms of like import, which have remained in common use to the present day. As the resources of modern art became more fully developed, even these directions were found to be insufficient for their intended purpose. A hundred different varieties of *Allegro* were possible. How was it possible to indicate to the performer which of these the composer intended him to adopt? The number of technical terms was multiplied indefinitely; but it was clear that none were sufficiently explicit to remove the difficulty; and at a very early period the use of the Pendulum was suggested as the only rational means of solving it.

To Étienne Loulié belongs the credit of having first turned this idea to practical account. In a work entitled *Élémens ou principes de Musique, mis dans un nouvel ordre* (Paris, 1696, Amsterdam, 1698) he describes an instrument, called a *Chronomètre,* formed of a bullet suspended to a cord, and provided with means for lengthening or shortening the latter at pleasure, in such a manner as to indicate seventy-two different degrees of velocity. This was a good beginning. Nevertheless, the machine does not seem to have become generally known; for in many curious treatises of later date we find vague glimmerings of similar ideas put forth in apparent ignorance of Loulié's discovery. Joseph Sauveur—the inventor of the word 'Acoustics,' and the author of a series of valuable papers on Music contributed to the *Mémoires de l'Académie* between the years 1700 and 1711—is said to have proposed a *Chronomètre* of his own. In 1732 an article on a species of Musical Time-keeper was contributed to the *Mémoires des Sciences* by Enbrayg. Gabory recommended the use of the Pendulum in his *Manuel utile et curieux sur la mesure du tems* (Paris, 1771). John Harrison's *Description concerning such a machine as will afford a nice and true mensuration of time; as also an account of the Scale of Music* (London, 1775) serves to show that the connection between music and chronometry was not unnoticed in England. Davaux wrote an article on the subject for the *Journal Encyclopédique* in 1784. Not long afterwards, Pelletier made use of the pendulum in a way sufficiently ingenious to call forth a treatise on his invention from Abel Burja of Berlin in 1790. In the same year Breitkopf & Härtel printed, at Leipzig, *Zwölf geistliche prosaische Gesänge, mit Beschreibung eines Taktmessers,* by J. G. Weiske. And enough was done, both in France and in Germany, to show that even before the close of the 18th century, the matter had attracted no small amount of serious attention.

In 1813 Gottfried Weber advocated the use of a pendulum, formed of a small bullet attached to the end of a string, upon which the necessary divisions were marked by knots; the whole being so contrived that it could be carried in the pocket—a far more simple and convenient arrangement than that of Loulié.[1] New plans were proposed by G. E. Stöckel, Zmeskall, and other musicians of reputation, and Beethoven is known to have discussed them with interest. The subject excited an equal amount of attention in England, where many attempts were made to produce a perfect instrument. Dr. Crotch, discarding Loulié's cord, used in place of it a stiff pendulum, formed of a long thin strip of box-wood, graduated in inches and hung upon a suitable frame. Another musical time-keeper invented by Henry Smart is described in the *Quarterly Musical Review* (vol. iii. London, 1821). Both are now obsolete; but the writer remembers seeing instruments of the kind recommended by Dr. Crotch exposed for sale at Messrs. Erat's Harp Manufactory, in Berners Street.

All these inventions failed, however, more or less completely, through the inconvenience caused by the length of the pendulum necessary to produce beats of even moderate slowness. In order to perform sixty oscillations in a minute a pendulum must, in our latitude, be 39·2 inches long. One long enough to execute forty would be difficult to manage. This difficulty, which had long been recognised as a bar to further improvement, was eventually removed through the ingenuity of a celebrated mechanist named Winkel, an inhabitant of Amsterdam, who first entertained the idea of constructing a metronome upon a system before untried, involving the use of a certain kind of double-pendulum, the motions of which are governed by mathematical laws of extreme complexity though, practically considered, the principle is so simple that we trust a very few words may suffice to explain it.

If a rod be suspended from its centre, and equally weighted at both ends, its centres of motion and gravity will coincide, and its position, when at rest, will be perfectly horizontal. But if the weight at one end be diminished, or moved a little nearer to the central pivot than the other, the centre of gravity will be displaced, and the unaltered end will gradually descend, until the

[1] A pocket Metronome was registered by Greaves in 1850, and another, 'scala Mälzl, system Decher,' was patented by Aibl, of Munich. A still further development of this simple kind of metronome, the principle of which is identical with an ordinary tape-measure, but with a spring to fasten the measure at any length, is that now sold by Messrs. J. Curwen & Sons.

rod hangs perpendicularly; the rapidity with which the change of position takes place depending upon the amount of diminution to which the upper weight is subjected, or its nearness to the pivot. In either case, the upper weight will exercise so strong a retarding influence on the lower one, that by carefully adjusting the proportion between weights and distances, it will be found possible to make a double pendulum, of the kind we have described, oscillate as slowly as an ordinary one five or six times its length.

The possibility of constructing a metronome upon this principle is said to have first suggested itself to Winkel about the year 1812; but it is difficult, in the face of conflicting statements, to arrive at a just conclusion as to the circumstances in which his invention was first given to the world. It is indeed, known to have been warmly commended by the Dutch Academy of Sciences, in a report dated Aug. 14, 1815; and, judging from this, we may surmise that it had by that time assumed a complete, if not a perfect form. We have, however, no definite proof of its then condition. It may have been finished, or it may not; but, finished or unfinished, it is certain that Winkel derived very little benefit from his discovery. Johann Nepomuk Maelzel, an accomplished musician and a mechanist of European reputation, had long meditated an improvement upon Stöckel's machine for beating time; and succeeded about this time in producing a species of so-called 'Chronometer,' which fairly satisfied Salieri, Weigl, and even Beethoven himself. Fortified by the approval of these high authorities he determined to bring out his invention in London. Meanwhile, he exhibited it, in company with other mechanical curiosities, in a travelling museum, which he carried about with him from city to city, through some of the principal countries of Europe. Among other places, he visited Amsterdam, where he saw Winkel's instrument. Struck with the superiority of the double-pendulum to the principle adopted in his own time-keeper, he at once offered to purchase the invention. Winkel declined to cede his rights; but Maelzel, having now learned all he wanted to know, proceeded to Paris, patented the double-pendulum in his own name, and in 1816 set up the first metronome manufactory on record. Winkel afterwards obtained possession of one of the Paris instruments; established its identity with his own; and (as Wurzbach states) took advantage of Maelzel's return to Holland to submit his case to the 'Niederländische Akademie' for decision. A Commission was appointed to investigate its merits; and as it was proved that the graduated scale was the only part of the instrument really originated by Maelzel, a formal judgment was recorded in Winkel's favour—too late, however, to do him full justice, for to this day his share in the work is, by common consent, suppressed, and Maelzel is universally regarded as the inventor of the instrument which bears his name.[1]

The first metronomes made at the new manufactory differed so little in any point of vital consequence from those now in daily use, that a description of the one will include all that need be said concerning the other. The most important part of the business is a flat steel rod, about seven and a half inches long, and an eighth of an inch in breadth, pierced, at a distance of about five and a half inches from its upper end, by a hole, through which is passed the pivot upon which it is made to oscillate. This rod—answering to the double-pendulum already described—is suspended, by means of the pivot, in front of a wooden case, and kept in a perpendicular position by a stout leaden bullet, fixed to its shorter end, which, thus weighted, sinks, of course, when at rest, to the lowest place. On its upper and longer end is placed a smaller weight, of brass, made to slide up and down at will, and so proportioned to the lower weight, that, by changing its position the pendulum may be made to execute any number of oscillations, between 40 and 208 in a minute. As a guide to the position of the upper weight, the rod is backed by a graduated scale—really the invention of Maelzel—affixed to the wooden case; and by means of this the instrument may be so adjusted as to beat, silently, for a few minutes, at any required pace. To render it still more effective—capable of beating for a longer time, and with a distinctly audible sound—it is provided with a strong spiral spring, adapted to an escapement exactly similar to that of an ordinary loud-ticking clock.[2] In this form it is complete enough to answer its intended purpose perfectly; nevertheless, an attempt is sometimes made to increase its efficiency still farther, by the addition of a little bell, which can be made to strike at every second, third, fourth, or sixth oscillation of the pendulum, and thus to indicate the various accents, as well as the simple beats of the bar. The scale does not include all the units between 40 and 208—which, indeed, would be a mere useless encumbrance—but proceeds from 40 to 60 by twos, from 60 to 72 by threes, from 72 to 120 by fours, from 120 to 144 by sixes, and from 144 to 208 by eights. In order to indicate the exact *Tempo* in which he wishes his piece to be performed, the composer uses a formula, beginning with the letters M. M.

[1] We are indebted, for most of these particulars, to Mr. A. W. Thayer, whose careful researches have placed him in possession of much valuable information on this subject. Bernsdorf tells a different story, to the effect that Maelzel, unable to overcome some difficulty connected with his improvement of Stöckel's time-keeper, took Winkel into consultation; that Winkel solved the problem for him; and that he then proceeded to Paris and there patented Winkel's invention in his own name.

[2] In the first time-keeper made by Maelzel, in his attempt to improve upon Stöckel's Chronometer, the sound was produced by a lever (*Hebel*), striking upon a little anvil (*Amboss*). This explains a curious expression contained in a letter written by Beethoven to Zmeskall—'*Erste Schwungmann der Welt, und dies ohne Hebel*' ('first swingman of the world, and that without a lever'). For a description of the instrument—known as the 'Stöckel-Maelzel Chronometer'—see the *Allgemeine Musikalische Zeitung* for Dec. 1, 1813.

followed by a musical note, connected by the sign = with a number. The letters signify Maelzel's Metronome. The note implies that the beats of the pendulum are to be understood as representing minims, crotchets, or quavers, as the case may be. The number indicates the place on the graduated scale to the level of which the top of the upper weight must be raised or lowered. Thus 'M. M. ♩ = 60,' would show that the metronome was to be so arranged as to beat minims at the rate of 60 in a minute; 'M. M. ♩ = 100,' that it was to beat crotchets at the rate of a hundred in a minute. Some metronomes are marked with the words *Andante*, *Allegretto*, *Allegro*, etc., in addition to the numbers. This is a new and utterly useless contrivance; for it is evident that if ♩ = 100 be held to indicate *Moderato*, ♩ = 100 will stand for *Allegro*, and 𝅗𝅥 = 100 for *Largo*. The word *Moderato*, therefore, without the minim, crotchet, or quaver to qualify it, means nothing at all; and it is absurd to encumber the scale with it, or with any other technical terms whatever.

By far the best metronomes now attainable are those manufactured in England for Messrs. Cocks, Chappell, Ashdown & Parry, and other well-known music publishers. French metronomes are far less durable than these, and, as a general rule, far less accurate time-keepers, though it is sometimes possible to meet with one which will beat evenly enough as long as it lasts. [For the purpose of silently indicating the time, the tape-measure already mentioned in the footnote, p. 188, and the ingenious and compact apparatus called 'Pinfold's Patent Metronome,' are of great use. The latter has the weight moving on a graduated scale, and a swinging weight below a small tripod.] A very large and loud metronome is made by Messrs. Rudall & Carte, of London, for military bands; and an instrument of this kind may often be used with great advantage when a number of vocal or instrumental performers practise together; for, apart from its primary intention, the metronome is invaluable as a means of teaching beginners to sing or play in time, and will, indeed, make 'good timists' of many who would be a long while learning to count accurately without its aid. W. S. R.

METZLER. The founder of this well-known business was Valentine Metzler, a native of Bingen on the Rhine, who opened a shop in Wardour Street for the sale of flutes and other instruments about the year 1790. He married an Englishwoman, and his only child was George Richard Metzler (1797-1867), so well and kindly remembered by many of the musical profession and trade in this country. [The name Metzler first appears in the London directories in 1812, and the style Metzler & Son was adopted in 1819; V. Metzler probably died in 1840, as the name after 1841 is G. Metzler & Co.] The firm is said to have entered upon music-publishing in 1816, and removed in 1842 to 37 Great Marlborough Street, where, on the site of the original shop, but including neighbouring houses, the present warehouse stands. The only surviving child of George Richard was George Thomas Metzler (1835-79). He gained a practical knowledge of the pianoforte in Germany, and had a distinct literary bias, which he followed as far as opportunity permitted. He became known as a writer of words for songs, Mrs. George March (Virginia Gabriel), Mme. Sainton-Dolby, Henry Smart, and J. L. Hatton having set his graceful lyrics to music. In 1867 Frank Chappell, who had acquired his knowledge of business in the Bond Street firm of that name, joined G. T. Metzler in partnership, and from his suggestion the important agency of Messrs. Mason & Hamlin, which practically introduced the American organ into this country, became a specialty of the Metzler business. [This firm was early in the field with the precursors of the harmonium; their 'improved Seraphines' are advertised in the *Musical World* in 1838.] Frank Chappell died in 1886, and from that date the business was carried on by the trustees of his estate until 1893, when it became a limited company. The new premises referred to were completed and opened in 1878. So comprehensive is their plan that there may be said to be no musical instrument in present use, or even part of a musical instrument, unrepresented in the stock, while the valuable copyrights of the publishing department include all manner of works, from full scores of modern operas to popular instruction books. [About 1810-12 a certain 'Mr. Metzler,' of 9 Newman Street, issued a small oblong book of airs for the flageolet, called 'The Magic Flageolet.' This came out in numbers, many being issued by James Power, and others by Metzler himself, whose name was affixed to many of the pieces.] A. J. H.; additions by F. K.

MEYER, Gregor, was organist of the Cathedral Church at Solothurn in Switzerland in the earlier part of the 16th century. Our whole knowledge of him is derived from Glarean, who in his *Dodecachordon*, 1547, frequently mentions him in terms of the highest respect for his musical abilities, and obtained from him for the purposes of his work various compositions as examples of the proper use of the ecclesiastical modes in polyphonic music, inattention to which Glarean is disposed to censure in the works of Josquin and others. So, for instance, he communicates of Meyer eleven somewhat elaborate settings *a* 4 and 3 of the 'Kyrie' and 'Christe Eleison' as illustrations of the proper use in conjunction of the Æolian and hypo-Æolian modes, also a motet, 'Confitebor Domino,' as an example of the Lydian and hypo-Lydian united, and two settings of the antiphon 'Qui mihi ministrat,' etc., one as an example of

what Glarean describes as the genuine form of the Lydian mode without B flat, and the other in the more commonly used form of the Lydian with the flat. J. R. M.

MEYER-HELMUND, Erik, born at St. Petersburg, April 25, 1861, after learning the rudiments of music from his father, went to Berlin to study composition with Kiel and singing with Stockhausen. He had a successful career as a concert-singer, but his fame, at all events in England, chiefly rests upon his many graceful songs, all of which are of a kind to appeal at once to a large number of hearers, and many of which are written to his own words. The operas 'Margitta' (Magdeburg, 1889), 'Der Liebeskampf' (Dresden, 1892) were very successful; his ballet, 'Rübezahl,' or 'Der Berggeist,' was given at Leipzig with great success; and a one-act burlesque opera, 'Trischka,' was given at Riga in 1894. (Riemann's *Lexikon*; Baker's *Biog. Dict. of Mus.*) M.

MEYERBEER, Giacomo (properly Jakob Liebmann Beer), famous dramatic composer, was born at Berlin, of Jewish parents, Sept. 5, 1791. His father, Herz Beer, a native of Frankfort, was a wealthy banker in Berlin; his mother (*née* Amalie Wulf) was a woman of rare mental and intellectual gifts, and high cultivation. He was their eldest son, and a legacy from a rich relation named Meyer caused his name to take the form in which it was known. He seems to have been the sole member of his family remarkable for musical gifts; but two of his brothers achieved distinction in other lines—Wilhelm as an astronomer, and Michael (who died young) as a poet.

His genius showed itself early. His first instructor was Lauska, an eminent pianoforte player, and pupil of Clementi; and old Clementi himself, although he had long given up teaching, was so much struck, during a visit to Berlin, with the promise displayed in the boy's performance as to consent to give him lessons. As early as seven years old he played in public the D minor Concerto of Mozart, and two years later was reckoned one of the best pianists in Berlin. The fact that, owing to the example and patronage of royalty, music was 'the fashion' in the Prussian capital did not prevent its being regarded by the wealthier classes in the light of a mere pastime, and it is to the credit of the Beers that they not only recognised their son's especial bent, but did their best to give him a sound professional training. It was as a pianist that he was expected to win his laurels, but as he had also, from an early age, shown much talent for composition, he was placed under Zelter for instruction in theory, and subsequently (for Zelter's rigid severity was insupportable to the young prodigy) under Bernard Anselm Weber, director of the Berlin Opera, and a pupil of the then celebrated Abbé Vogler. An amiable, accomplished man, full of enthusiasm for art, Weber was an inspiring companion, but not a competent theoretical teacher for such a pupil. The boy, whose industry was equal to his talent, brought one day to his master a fugue on which he had expended an unusual amount of time and pains, as he thought, with success. So thought Weber, who, proud and joyful, sent off the fugue as a specimen of his pupil's work to his old master, the Abbé Vogler, at Darmstadt. The answer was eagerly looked for, but months elapsed and nothing came. At last there appeared—not a letter, but a huge packet. This proved to contain a long and exhaustive treatise on Fugue, in three sections. The first of these was theoretical, setting forth in rule and maxim the whole 'duty' of the fugue-writer. The second, entitled 'Scholar's Fugue,' contained Meyerbeer's unlucky exercise, dissected and criticised bar by bar, and pronounced bad. The third, headed 'Master's Fugue,' consisted of a fugue by Vogler, on Meyerbeer's subject, analysed like the preceding one, to show that it was good.[1]

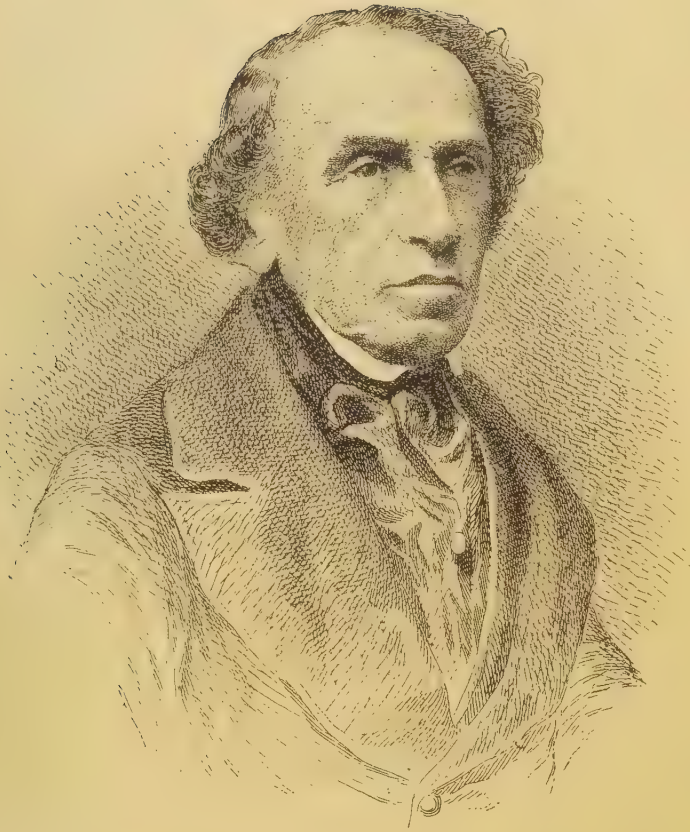
Weber was astonished and distressed; but Meyerbeer set to work and wrote another fugue, in eight parts, in accordance with his new lights. This, with a modest letter, he sent to Vogler. The answer soon came: 'Young man! Art opens to you a glorious future! Come to me at Darmstadt. You shall be to me as a son, and you shall slake your thirst at the sources of musical knowledge.' Such a prospect was not to be resisted, and in 1810 Meyerbeer became an inmate of Vogler's house.

This notorious Abbé, regarded by some people as the most profound theoretician of Germany, by others (including Mozart) as an impudent charlatan, was possessed of some originality, much eccentricity, and unbounded conceit, not so much a learned man as an enthusiast for learning in the abstract, and with a mania for instructing others. His imperturbable self-confidence ('he gives out that he will make a composer in three weeks and a singer in six months,' says Mozart in one of his letters) certainly had an attraction for young ardent minds, for among his pupils were several men of genius. After many years of a wandering, adventurous life, he had settled at Darmstadt, where he was pensioned and protected by the Grand Duke. In his house Meyerbeer had for companions Gänsbacher (afterwards an organist of repute at Vienna), and Carl Maria von Weber, who had studied with Vogler some years before, and was now attracted to Darmstadt by his presence there, and between whom and Meyerbeer, eight years his junior, there sprang up a warm and lasting friendship. Each morning after early mass, when the young men took it in turns to preside at the organ, they assembled for a lesson in counterpoint from the Abbé. Themes were distributed, and a fugue

[1] This treatise was published after Vogler's death. It is unfortunate that his criticism is often unsound, and that his own fugue will not bear close examination.

or sacred cantata had to be written every day. In the evening the work was examined, when each man had to defend his own composition against the critical attacks of Vogler and the rest. Organ fugues were improvised in the Cathedral, on subjects contributed by all in turn. In this way Meyerbeer's education was carried on for two years. His diligence was such that often, when interested in some new branch of study, he would not leave his room nor put off his dressing-gown for days together. His great powers of execution on the pianoforte enabled him to play at sight the most intricate orchestral scores, with a full command of every part. His four-part 'Sacred Songs of Klopstock' were published at this time, and an oratorio of his, entitled 'God and Nature,' was performed in presence of the Grand Duke, who appointed him Composer to the Court. His first opera, 'Jephthah's Vow,' was also written during this Vogler period and produced at Munich in 1813. Biblical in subject, dry and scholastic in treatment, it resembled an oratorio rather than an opera, and although connoisseurs thought it promising, it failed to please the public. A comic opera, 'Alimelek, or the Two Caliphs,' met with a better fate at Stuttgart in 1813. It was bespoken and put in rehearsal by the manager of the Kärnthnerthor theatre in Vienna. To Vienna, in consequence, Meyerbeer now repaired, with the intention of making his appearance there as a pianist. But on the very evening of his arrival he chanced to hear Hummel, and was so much impressed by the grace, finish, and exquisite *legato*-playing of this artist that he became dissatisfied with all he had hitherto aimed at or accomplished, and went into a kind of voluntary retirement for several months, during which time he subjected his *technique* to a complete reform, besides writing a quantity of pianoforte music, which, however, was never published. He made a great sensation on his first appearance, and Moscheles, who heard him at this time, was wont to say that, had he chosen a pianist's career, few *virtuosi* could have rivalled him. But to be a composer was the only goal worthy of his ambition, although at this moment it seemed to recede as he pursued it. The 'Two Caliphs,' performed in Vienna in 1814, had been an utter failure. Dejected, disheartened to such a degree as almost to doubt whether he had not from the first deceived himself as to his vocation, he was somewhat consoled by the veteran Salieri, who reassured him, affirming that he wanted nothing in order to succeed but freedom from scholastic trammels, and, above all, knowledge of the human voice and how to write for it, a knowledge, Salieri added, only to be acquired in Italy. Accordingly, in 1815, Meyerbeer went to Venice. It was Carnival time. Rossini's 'Tancredi' was then at the height of its popularity, and all Venice resounded with 'Di tanti palpiti.' To Meyerbeer, accustomed to associate Italian opera with the dreary works of Nicolini, Farinelli, Pavesi, and others, this was a revelation, and he surrendered spell-bound to the genial charm. Hope awoke, emulation was rekindled. He had no style of his own to abandon, but he abandoned Vogler's without regret, and set to work to write Italian operas. His success was easy and complete. 'Romilda e Costanza' (produced at Padua in 1818, Pisaroni in the leading part), 'Semiramide riconosciuta' (Turin, 1819), 'Eduardo e Cristina' and 'Emma di Resburgo' (Venice, 1820) were all received with enthusiasm by the Italian people, and this at a time when it was difficult for any one but Rossini to obtain a hearing. The last-named opera was played in Germany under the title of 'Emma von Leicester,' and not unsuccessfully. 'Margherita d' Anjou,' the best of these operas, was written for the Scala at Milan and given there in 1820. 'L' Esule di Granata' (1822) made but little impression. 'Almansor' was commenced at Rome, but not completed. In 1823, while engaged in writing the 'Crociato,' the composer went to Berlin, where he tried, but failed, to get a performance of a three-act German opera —'Das Brandenburger Thor.' This was a time of transition in his life. He was wearying of the Italian manner, and he could not be insensible to the murmurs of dissatisfaction which everywhere in Germany made themselves heard at the degradation of his talent by his change of style. Foremost among the malcontents was C. M. von Weber, who had looked on his friend as the hope of that German opera in which were centred his own ardent aspirations, and who in 1815 at Prague, and subsequently at Dresden, had mounted 'The Two Caliphs' with extraordinary care and labour, hoping perhaps to induce him to return to his old path. 'My heart bleeds,' he wrote, 'to see a German composer of creative power stoop to become an imitator in order to win favour with the crowd.' In spite of all this the friendship of the two men remained unshaken. On his way back to Italy Meyerbeer spent a day with Weber, who wrote of it, 'Last Friday I had the happiness of having Meyerbeer with me. It was a red-letter day—a reminiscence of dear old Mannheim. . . . . We did not separate till late at night. He is going to bring out his 'Crociato' at Trieste, and in less than a year is to come back to Berlin, where perhaps he will write a German opera. Please God he may! I made many appeals to his conscience.' Weber did not live to see his wish fulfilled, but the desire which he expressed before his death that an opera he left unfinished should be completed by Meyerbeer, showed that his faith in him was retained to the last.

The 'Crociato' was produced at Venice in 1824, and created a *furore*, the composer being called for and crowned on the stage. In this opera, written in Germany, old associations seem



GIACOMO MEYERBEER
(Jakob Liebmann Beer)

to have asserted themselves. More ambitious in scope than its predecessors, it shows an attempt, timid indeed, at dramatic combination which constitutes it a kind of link between his 'wild oats' (as in after years he designated these Italian works) and his later operas.[1] In 1826 he was invited to witness its first performance in Paris, and this proved to be the turning-point of his career. He eventually took up his residence in Paris, and lived most of his subsequent life there. From 1824 till 1831 no opera appeared from his pen. A sojourn in Berlin, during which his father died, his marriage, and the loss of two children, were among the causes which kept him from public life. But in these years he undertook that profound study of French character, French history, and French art which resulted in the final brilliant metamorphosis of his dramatic and musical style, and in the great works by which his name is remembered.

Paris was the headquarters of the unsettled, restless, tentative spirit which at that epoch pervaded Europe,—the partial subsidence of the ferment caused by a century of great thoughts, ending in a revolution that had shaken society to its foundations. Men had broken away from the past, without as yet finding any firm standpoint for the future. The most opposite opinions flourished side by side. Art was a conglomeration of styles of every time and nation, all equally acceptable if treated with cleverness. Originality was at an ebb; illustration supplied the place of idea. Reminiscence, association, the picturesque, the quaint, 'local colour,'—these were sought for rather than beauty; excitement for the senses, but through the medium of the intellect. Men turned to history and legend for material, seeking in the past a torch which, kindled at the fire of modern thought, might throw light on present problems. This spirit of eclecticism found its perfect musical counterpart in the works of Meyerbeer. The assimilative power that, guided by tenacity of purpose, enabled him to identify himself with any style he chose, found in this intellectual ferment, as yet unrepresented in music, a wellnigh inexhaustible field, while these influences in return proved the key to unlock all that was original and forcible in his nature. And he found a fresh stimulus in the works of French operatic composers, abounding, as they do, in quaint, suggestive ideas, only waiting the hand of a master to turn them to full account.

'He did not shrink, as a man, from the unremitting, insatiable industry he had shown as a boy, and he buried himself in the literature of French opera, from the days of Lulli onwards. . . . It was interesting to see in his library hundreds of opera-scores great and small, many of which were hardly known by name even to the most initiated. . . . In his later works we see that to the flowing melody of the Italians and the solid harmony of the Germans he united the pathetic declamation and the varied, *piquant* rhythm of the French.' (Mendel.) Last, but not least, in his librettist, Eugène Scribe, he found a worthy and invaluable collaborator.

Many vicissitudes preceded the first performance, in 1831, of 'Robert le Diable,' the opera in which the new Meyerbeer first revealed himself, and of which the unparalleled success extended in a very few years over the whole civilised world. It made the fortune of the Paris Opera. Scenic effect, striking contrast, novel and brilliant instrumentation, vigorous declamatory recitative, melody which pleased none the less for the strong admixture of Italian-opera conventionalities, yet here and there (as in the beautiful *scena* 'Robert! toi que j'aime') attaining a dramatic force unlooked for and till then unknown, a story part heroic, part legendary, part allegorical,—with this strange picturesque medley all were pleased, for in it each found something to suit his taste.

The popularity of the opera was so great that the 'Huguenots,' produced in 1836, suffered at first by contrast. The public, looking for a repetition, with a difference, of 'Robert,' was disappointed at finding the new opera quite unlike its predecessor, but was soon forced to acknowledge the incontrovertible truth, that it was immeasurably the superior of the two. As a drama it depends for none of its interest on the supernatural. It is, as treated by Meyerbeer, the most vivid chapter of French history that ever was written. The splendours and the terrors of the sixteenth century,—its chivalry and fanaticism, its ferocity and romance, the brilliance of courts and the 'chameleon colours of artificial society,' the sombre fervour of Protestantism—are all here depicted and endued with life and reality, while the whole is conceived and carried out on a scale of magnificence hitherto unknown in opera.

In 1838 the book of the 'Africaine' was given to Meyerbeer by Scribe. He became deeply interested in it, and the composition and recomposition, casting and recasting of his work, occupied him at intervals to the end of his life. His excessive anxiety about his operas extended to the libretti, with which he was never satisfied, but would have modified to suit his successive fancies over and over again, until the final form retained little likeness to the original. This was especially the case with the 'Africaine,' subsequently called 'Vasco de Gama' (who, although the hero, was an afterthought!), and many were his altercations with Scribe, who got tired of the endless changes demanded by the composer, and withdrew his book altogether; but was finally pacified by Meyerbeer's taking another libretto of his, 'Le Prophète,' which so

[1] It is significant that, with the exception of the 'Crociato,' not one of these early works, so enthusiastically received, held the stage after their composer had left Italy.

forcibly excited the composer's imagination that he at once set to work on it and finished it within a year (1843).

A good deal of his time was now passed in Berlin, where the King had appointed him Generalmusikdirector in 1842. Here he wrote several occasional pieces, cantatas, marches, and dance-music, besides the three-act German opera, 'Ein Feldlager in Schlesien.' The success of this work was magically increased, a few weeks after its first performance, Dec. 7, 1844, by the appearance in the part of the heroine of a young Swedish singer, introduced to the Berlin public by Meyerbeer, who had heard her in Paris,—Jenny Lind.

He at this time discharged some of the debt he owed his dead friend, C. M. von Weber, by producing 'Euryanthe' at Berlin. His duties at the opera were heavy, and he had neither the personal presence nor the requisite nerve and decision to make a good conductor. From 1845 he only conducted—possibly not to their advantage—his own operas, and those in which Jenny Lind sang. [On the conditions of his life at Berlin, see the *Sammelbände* of the *Int. Mus. Ges.* iv. 519.]

The year 1846 was marked by the production of the overture and incidental music to his brother Michael's drama of 'Struensee.' This very striking work is its composer's only one in that style, and shows him in some of his best aspects. The overture is his most successful achievement in sustained instrumental composition. A visit to Vienna (where Jenny Lind achieved a brilliant success in the part of Vielka in the 'Feldlager in Schlesien') and a subsequent sojourn in London occurred in 1847. In the autumn he was back in Berlin, where, on the occasion of the King's birthday, he produced, after long and careful preparation, 'Rienzi,' the earliest opera of his future rival and bitter enemy, Richard Wagner. The two composers had seen something of one another in Paris. Wagner was then in necessitous circumstances, and Meyerbeer exerted himself to get employment for him, and to make him known to influential people in the musical world. Subsequently, Wagner, while still in France, composed the 'Fliegende Holländer,' to his own libretto. The score, rejected by the theatres of Leipzig and Munich, was sent by its composer to Meyerbeer, who brought about its acceptance at Berlin. Without claiming any extraordinary merit for these good offices of one brother-artist to another, we may, however, say that Meyerbeer's conduct was ill-requited by Wagner.

'Le Prophète,' produced at Paris in 1849, after long and careful preparation, materially added to its composer's fame. Thirteen years had elapsed since the production of its predecessor. Once again the public, looking for something like the 'Huguenots,' was disappointed. Once again it was forced, after a time, to do justice to Meyerbeer's power of *transferring himself*, as it were, according to the dramatic requirements of his theme. But there are fewer elements of popularity in the 'Prophète' than in the 'Huguenots.' The conventional operatic forms are subordinated to declamation and the coherent action of the plot. It contains some of Meyerbeer's grandest thoughts, but the gloomy political and religious fanaticism which constitutes the interest of the drama, and the unimportance of the love-story (the mother being the female character in whom the interest is centred), are features which appeal to the few rather than the many. The work depends for its popularity on colouring and chiaroscuro; the airy *verve* of the ballet-music, and the splendid combinations of scenic and dramatic effects in the fourth act, being thrown into strong relief by the prevailing sombre hue.

Meyerbeer's health was beginning to fail, and after this time he spent a part of every autumn at Spa, where he found a temporary refuge from his toils and cares. Probably no great composer ever suffered such a degree of nervous anxiety about his own works as he did. During their composition, and for long after their first completion, he altered and retouched continually, never satisfied and never sure of himself. During the correcting of the parts, the casting of the characters, the 'coaching' of the actors, he never knew, nor allowed any one concerned to know, a moment's peace of mind. Then came endless rehearsals, when he would give the orchestra passages scored in two ways, written in different coloured inks, and try their alternate effect; then the final performance, the ordeal of public opinion and of possible adverse criticism, to which, probably owing to his having been fed with applause and encouragement from his earliest years, he was so painfully susceptible that, as Heine says of him, he fulfilled the true Christian ideal, for he could not rest while there remained one unconverted soul, 'and when that lost sheep was brought back to the fold he rejoiced more over him than over all the rest of the flock that had never gone astray.' This peculiar temperament was probably the cause also of what Chorley calls his 'fidgetiness' in notation, leading him to express the exact amount of a *rallentando* or other inflection of *tempo* by elaborate alterations of time signature, insertions or divisions of bars, giving to many of his pages a patchwork appearance most bewildering to the eye.

Faithful to change, he now challenged his adopted countrymen on their own especial ground by the production at the Opéra-Comique in 1854 of 'L'Etoile du Nord.' To this book he had intended to adapt the music of the 'Feldlager in Schlesien,' but his own ideas transforming

themselves gradually while he worked on them, there remained at last only six numbers of the earlier work. 'L'Etoile' achieved considerable popularity, although it aroused much animosity among French musicians, jealous of this invasion of their own domain, which they also thought unsuited to the melodramatic style of Meyerbeer. The same may be said of 'Le Pardon de Ploermel' (Dinorah), founded on a Breton idyl, and produced at the Opéra-Comique in 1859. Meyerbeer's special powers found no scope in this comparatively circumscribed field. The development of his genius since 1824 was too great not to be apparent in any style of composition, but these French operas, although containing much that is charming, were, like his Italian 'wild oats,' the result of an effort of *will*—the will to be whomsoever he chose.

After 1859 he wrote, at Berlin, two cantatas, and a grand march for the Schiller Centenary Festival, and began a musical drama—never finished—called 'Göthe's Jugendzeit,' introducing several of Goethe's lyrical poems, set to music. His life was overshadowed by the death of many friends and contemporaries, among them his old coadjutor, Scribe, to whom he owed so much.

In 1862 he represented German music at the opening of the London International Exhibition by his 'Overture in the form of a March.' (He had before visited England in 1832.) The next winter he was again in Berlin, still working at the 'Africaine,' to which the public looked forward with impatience and curiosity. For years the difficulty of getting a satisfactory cast had stood in the way of the production of this opera. His excessive anxiety and fastidiousness resulted in its being never performed at all during his lifetime. In October 1863 he returned, for the last time, to Paris. The opera was now finished, and in rehearsal. Still he corrected, polished, touched, and retouched: it occupied his thoughts night and day. But he had delayed too long. On April 23 he was attacked by illness, and on May 2, 1864, he died.

The 'Africaine' was performed after his death at the Académie in Paris, April 28, 1865. When it appeared in London (in Italian) on the 22nd July following, the creation by Pauline Lucca of the part of Selika will not soon be forgotten by those who had the good fortune to see it.

The work itself has suffered somewhat from the incessant change of intention of its composer. The original conception of the music belongs to the same period as the 'Huguenots'—Meyerbeer's golden age—having occupied him from 1838 till 1843. Laid aside at that time for many years, and the book then undergoing a complete alteration, a second story being engrafted on to the first, the composition, when resumed, was carried on intermittently to the end of his life. The chorus of Bishops, and Nelusko's two airs, for instance, were written in 1858; the first duet between Vasco and Selika in 1857; while the second great duet took its final form as late as the end of 1862. The excessive length of the opera on its first production (when the performance occupied more than six hours) necessitated considerable curtailments detrimental to coherence of plot. But in spite of all this, the music has a special charm, a kind of exotic fragrance of its own, which will always make it to some minds the most sympathetic of Meyerbeer's works. It is, in fact, the most purely *musical* of them all. None is so melodious or so pathetic, or so free from blemishes of conventionality; in none is the orchestration so tender: it may contain less that is surprising, but it is more imaginative; it approaches the domain of poetry more nearly than any of his other operas.

It is common to speak of Meyerbeer as the founder of a new school. Fétis affirms that, whatever faults or failings have been laid to his charge by his opponents, one thing—his originality—has never been called in question. 'All that his works contain,—character, ideas, scenes, rhythm, modulation, instrumentation,—all are his and his only.'

Between this view and that of Wagner, who calls him a 'miserable music-maker,' 'a Jew banker to whom it occurred to compose operas,' there seems an immeasurable gulf. The truth probably may be expressed by saying that he was unique rather than original. No artist exists that is not partly made what he is by the 'accident' of preceding and surrounding circumstances. But on strong creative genius these modifying influences, especially those of contemporary Art, have but a superficial effect, wholly secondary to the individuality which asserts itself throughout, and finally moulds its environment to its own likeness. Meyerbeer's faculty was so determined in its manifestations by surrounding conditions, that, apart from them, it may almost be said to have had no active existence at all. He changed music as often as he changed climate, though a little of each of his successive styles clung to him till the last. A born musician, of extraordinary ability, devoted to Art and keenly appreciative of the beautiful in all types, with an unlimited capacity for work, helped by the circumstance of wealth which in many another man would have been an excuse for idleness, he seized on the tendencies of his time and became its representative. He left no disciples, for he had no doctrine to bequeath; but he filled a gap which no one else could fill. As a great actor endows the characters he represents with life—since to the union of his personality with the outlines suggested by the dramatist, they do in fact owe to him their objective existence, and are said to be *created* by him—so Meyerbeer, by blending his intellect with the outlines and suggestions of a certain epoch, gave to it a

distinct art-existence which it has in his works and in his only. His characters stand out from the canvas with—his contemporary eulogists say—the vividness of Shakespeare's characters; we should say rather of Scott's. The literary analogue to his operas is to be found, not in tragedy, they are too realistic for that, but in the historical novel. Here the men and women of past times live again before our eyes, not as they appear to the poet, who 'sees into the life of things,' but as they appeared to each other when they walked this earth. This is most compatible with the conditions of the modern stage, and Meyerbeer responds to its every need.

It is consistent with all this that he should have been singularly dependent for the quality of his ideas on the character of his subject. His own original vein of melody was limited, and his constructive skill not such as to supplement the deficiency in sustained idea. This defect may have been partly owing to the shallow pedantry of his instructor, at the time when his youthful talent was developing itself. Wagner (whose antipathy to Meyerbeer's music was rather intensified than otherwise by the fact that some of the operatic reforms on which his own heart was set were first introduced, or at least attempted, by that composer) compares him to a man who, catching the first syllable of another man's speech, thereupon screams out the whole sentence in a breath, without waiting to hear what it really should have been! However this may be, Meyerbeer's own ideas rarely go beyond the first syllable; the rest is built up by a wholly different process, and too often—as though his self-reliance failed him at the crucial point—a melody with a superbly suggestive opening will close with some conventional phrase or vulgar *cadenza*, all the more irritating for this juxtaposition. As a striking case in point it is enough to adduce the baritone song in 'Dinorah.' The first phrase is beautiful. The second, already inferior, seems dragged in by the hair of its head. The third is a masterly augmentation—a *crescendo* on the first. The fourth is a tawdry platitude. Something of the same sort is the case with his harmonies. He often arrests the attention by some chord or modulation quite startling in its force and effect, immediately after which he is apt to collapse, as if frightened by the sudden stroke of his own genius. The modulation will be carried on through a sequence of wearisome sameness, stopping short in some remote key, whence, as if embarrassed how to escape, he will return to where he began by some trite device or awkward makeshift. His orchestral colouring, however, is so full of character, so varied and *saisissant* as to hide many shortcomings in form. His grand combinations of effects can hardly be surpassed, and are so dazzling in their result that the onlooker may well be blinded to the fact that what he gazes on is a consummate piece of mosaic rather than an organic structure.

But in some moments of intense dramatic excitement he rises to the height of the situation as perhaps no one else has done. His very defects stand him here in good stead, for these situations do not lend themselves to evenness of beauty. Such a moment is the last scene in the fourth act of the 'Huguenots,' culminating in the famous duet. Here the situation is supreme, and the music is inseparable from it. Beyond description, beyond criticism, nothing is wanting. The might, the futility, the eternity of Love and Fate—he has caught up the whole of emotion and uttered it. Whatever was the source of such an inspiration (and the entire scene is said to have been an afterthought) it bears that stamp of truth, which makes it a possession for all time. If Meyerbeer lives, it will be in virtue of such moments as these. And if the 'Prophète' may be said to embody his intellectual side, and the 'Africaine' his emotional side, the 'Huguenots' is perhaps the work which best blends the two, and which, most completely typifying its composer, must be considered his masterpiece.

Presenting, as they do, splendid opportunities to singers of dramatic ability, his operas hold the stage, in spite of the exacting character which renders their perfect performance difficult and very rare. They will live long, although many of the ideas and associations which first made them popular belong already to the past.

Subjoined is a list of his principal works:—

OPERAS AND DRAMATIC PIECES.

1. Jephtha's Gelübde (performed 1811); 2. Les Amours de Tevelinde (in German, Monodrama for Soprano, Chorus, and Clarinet obbligato, in which the instrumentalist figured as a dramatic personage); 3. Alimelek, or The Two Caliphs (German, Wirth und Gast), 1813; 4. Romilda e Costanza, 1818; 5. Semiramide riconosciuta, 1819; 6. Emma di Resburgo, 1819; 7. Margherita d'Anjou, 1820; 8. L'Esule di Granata, 1822; 9. Das Brandenburger Thor, 1823; 10. Il Crociato in Egitto, 1824; 11. Robert le Diable, 1831; 12. Les Huguenots, 1836; 13. Ein Feldlager in Schlesien, 1840; 14. Struensee (overture and entr'actes), 1846; 15. Le Prophète, 1849; 16. L'Etoile du Nord, 1854; 17. Le Pardon de Ploermel (Ital. Dinorah), 1859; 18. L'Africaine, 1864.

An Oratorio—Gott und die Natur (performed 1811).

Choruses to the Eumenides of Aeschylus.

CANTATAS AND VOCAL MUSIC.

Seven sacred cantatas of Klopstock, for four voices, unaccompanied.

An Gott. Hymn, by Gubitz. For four voices.

Le Génie de la Musique à la Tombe de Beethoven. For Solos and Chorus.

Cantata, for four voices. Written for the inauguration of Gutenberg's statue at Mainz.

Cantata, 'Maria und ihr Genius.' Composed for the silver wedding of Prince and Princess Charles of Prussia. For Solos and Chorus.

Serenade, 'Braut geleite aus der Heimath.' Composed for the wedding of Princess Louise of Prussia. For eight voices, unaccompanied.

La Festa nella Corte di Ferrara. Grand Cantata, with tableaux.

March of the Bavarian Archers. Cantata for four voices and Male Chorus, with accompaniment of brass instruments.

Ode to Rauch the sculptor. Solos, Chorus, and Orchestra.

Festal Hymn. Composed for the silver wedding of the King of Prussia. Four voices and Chorus.

Freundschaft. Quartet for men's voices.

The 91st Psalm, for eight voices. Composed for the Choir of Berlin Cathedral. Published, in score, by Brandus, at Paris.

Pater Noster, for four voices, with organ accompaniment.

Twelve Psalms, for Double Chorus, unaccompanied. (MS.)

Stabat Mater. (MS.)

Miserere. (MS.)

Te Deum. (MS.)

SONGS.

A large number of Songs with PF. accompaniment, among which the best known are perhaps 'Le Moine' (for Bass) and 'Das Fischermädchen.' The whole of them were published together with 'Le Génie de la Musique à la tombe de Beethoven,' in one volume, entitled 'Quaranto Mélodies à une et plusieurs voix,' by Brandus, at Paris.

'Neben Dir,' Song, for Tenor voice, with Violoncello obbligato.
'Des Jäger's Lied,' for Bass voice, with Horns obbligati.
'Dichter's Wahlspruch,' Canon for three voices.
'A Venezia,' Barcarole.
'Des Schäfer's Lied,' for Tenor voice with Clarinet obbligato.
And many others of less importance.

INSTRUMENTAL MUSIC.

First Dance, with Torches (Fackeltanz), for brass orchestra. Composed for the King of Bavaria's wedding, 1846.
Second ditto, for the wedding of Princess Charlotte of Prussia, 1850.
Third ditto, for the wedding of Princess Anne of Prussia, 1853.
Grand March, for the Schiller Centenary Festival, 1859.
Overture, in the form of a March, for the opening of the International Exhibition in London, 1862.
Coronation March, 1863.
A quantity of FF. music, written in youth, all unpublished.

[The best memoirs of Meyerbeer are those of A. de Lassalle (1864), A. Pougin (1864), H. Blaze de Bury (1865), H. Mendel (1868), J. Weber (1898). In Berlioz's posthumous volume, *Les Musiciens*, interesting articles are to be found at pp. 83 and 106.] F. A. M.

MEZZO, MEZZA (Ital.), 'half' or 'medium'; whence MEZZA VOCE, 'with restrained force,' and MEZZO SOPRANO, the female voice intermediate to the Soprano and Contralto. J. H.

MI CONTRA FA. See TRITONE.

MICHAEL, ROGIER, born at Bergen just within the borders of Dutch Brabant, was the son of a certain Simon Michael, who is described as Mechanicus and Musicus to the Emperor Ferdinand I. The date of Rogier's birth is not given. He is first mentioned as being before 1574 in the service of the Markgraf of Ansbach as tenor singer. In 1575 he became tenor singer at the Electoral Chapel at Dresden, and in 1587 became capellmeister to the Elector. For some years before his death about 1619, owing to Michael's age and growing infirmities, the Elector was obliged to send for Michael Praetorius, and afterwards Heinrich Schütz, to take his place on all important occasions. Heinrich Schütz definitely succeeded Michael in 1619. The second part of the Dresden Gesangbuch of 1593 contains fifty-two choralbearbeitungen by Michael, which Otto Kade describes as simple four-part settings, *nota contra notam*, with the chorale melody in the discant; but, judging from the specimen Kade himself gives in his *Beilagen zu Ambros*, a setting of 'Ein' feste Burg,' we cannot call them simple harmonic settings in the modern sense, as they have also something of the freedom of the motet style. Another work not preserved complete, is a book of Introits for Sundays and Festivals, set as motets for five voices, 1603. A few other occasional works, printed and MS., are enumerated in the *Quellen-Lexikon*. J. R. M.

MICHAEL, TOBIAS, son of Rogier Michael, was born at Dresden in 1592. He was first a soprano singer at the court chapel in Dresden, and receiving his further education at Schulpforta and Wittenberg, became in 1619 capellmeister at Sondershausen. In 1631 he succeeded Johann Hermann Schein as cantor and musikdirector of the Thomaskirche at Leipzig. He died 1657. His chief work is 'Musikalischer Seelenlust,' of which the 'Erster Theil,' 1634-35, contains thirty sacred pieces, *a* 5, in the madrigal style, and the 'Ander Theil,' 1637, fifty pieces, *a* 1-6, in the concerto style for voices and instruments. Other occasional and MS. works are enumerated in the *Quellen-Lexikon*. J. R. M.

MICHELI, ROMANO, born in Rome about 1575, studied music there under Francesco Soriano, and acquired fame among his contemporaries as a learned contrapuntist. Doni (*Annotazioni*, Roma, 1640, p. 395) describes him as a 'peritissimo contrapuntista, ed allievo in questa professione del Soriani.' Printz (*Sing- und Kling- Kunst*, 1690, ch. xii.) also praises Micheli's work 'in dem Stylo canonico.' Micheli made a tour of all the more important towns in Italy—Milan, Ferrara, Bologna, Venice, Florence, and Naples; he met many celebrated musicians, with whom there was much friendly rivalry in the pastime of composing music on given themes. In the preface to *Musica vaga*, 1615, he gives an account of his travels; he was warmly received in Venice, and adds 'non solo darmi occasione di comporre diverse opere ecclesiastiche a mio beneplacito, ma anche alcuni motetti con oblighi, e canoni diversi, datomi da ciascheduno il soggetto, come in essi motetti e canoni è annotato.' In 1616 he was maestro di cappella at the church of Concordia, Modena. He became a priest; in 1610 he was already a 'clerico,' and in 1621 was placed for a time at Aquileia. He returned to Rome in 1625 as maestro di cappella at S. Luigi de' Francesi. One of Banchieri's *Lettere armoniche*, Bologna, 1628, p. 50, is addressed to 'Sig. D. Romano Micheli, Roma' (Parisini, i. 4). In 1659 he was still alive at the age of eighty-four.

Micheli took part in an amusing squabble as to the relative merits of German and Italian composers, between the Italian organist Marco Scacchi and Paul Syfert, organist at Danzig. The latter asserted that Italian compositions were of a trivial character, and that their authors should go to Danzig and study genuine music. Micheli promptly sent copies of his musical works to both Syfert and Forster of Danzig, with a request that they would test Italian work before they condemned it. The effect was immediate, a polite reply was received in Feb. 1647, and the matter then dropped. Scacchi himself was not so ready to acknowledge Micheli's pre-eminence. The work, 'Canoni musicali composti sopra le vocali di più parole da Romano Micheli romano, del qual modo di comporre egli è inventore,' Roma, 1645, roused him to publish a protest (Warsaw, March 16, 1647) against the assumption that Micheli was the originator of this type of canon, which could be traced to a much earlier date. Micheli replied by the publication of a collection of canons, full of the most ingenious devices, entitled 'La potestà pontificia diretta dalla santissima Trinità.' The manuscript inscribed 'Canoni musicali di Romano Micheli romano,' was preserved in the library

of S. Agostino (Baini, *Mem. stor. crit.* ii. 34, note 473).

List of works :—

Psalmi ad officium vesperarum musicis notis expressi, et ternis vocibus decantandi. Una cum parte organica. Romano Michaele clerico romano auctore. Liber primus. Romae. J. B. Roblectum, 1610. 4to.

Musica vaga et artificiosa continente motetti con obligbi, e canoni diversi, etc. Di D.R.M. rom. Venetia. Giacomo Vincenti, 1615. Folio. Is in the British Museum; the music, writes Burney (*Hist. of Music*, iii. 319), shows nothing but 'toil and pedantry.'

Salmi per i vesperi a tre voci in concerto da cantarsi in diversi modi . . . con il basso continuo per l' organo. Libro secondo. Opera terza. Venetia. Magni, 1615. 4to.

Completa a sei voci con tre tenori concertata all' uso moderno con il basso continuo per l' organo di D.R.M. rom. maestro di cappella nella cattedrale di Concordia. Venetia. 1616. Fétis gives an edition of 1618.

Lettera di R.M. rom. alli . . . sig. eccellentiss. musici della cappella di N.S. ed altri musici romani miei Patroni osservandissimi. Venetia. G. Vincenti, 1618. Contains a canon in twelve parts.

Madrigali a sei voci in canone, con la resolutione delle parti, nel quale per mezzo de gli accidenti l' armonia discende un' tuono e di poi ascende il tuono già disceso, potendosi anco cantare per i suoi riversi, come li musici periti sanno; studio curioso non più veduto. Con un avviso a tutti li Sig. musici di Roma. Dato in luce da R.M. rom. Beneficiato nella metropoli d' Aquileia. Roma. Soldi, 1621. Contains the madrigal 'O voi che sospirate,' which was afterwards printed by Angelo Berardi both in his *Miscellanea musicale*, Bologna, 1689, p. 60, and in his *Arcani musicali*, 1690, p. 14; he describes it as written 'con nobilissimo artificio.'

Certezza d' artificii musicali, non più fatti, contenuti nelli dieci obligbi della messa a dieci voci; con la risposta all' opposizione, fatta dal Sig. A. Antonelli, musico in Roma, sopra la quantità di essi obbligbi. Dato in luce da R.M. rom. Beneficiato nella metropoli di Aquileia. Venetia. Bonfadino, 1621. 4to.

Copia di lettera con manoscritta mandata dal Sig. A. Antonelli musico in Roma a me R.M., etc., con la risposta fatt'agli nelle presente stampe, etc. Venetia. Bonfadino, 1621. 4to.

Vivit Deus. Canones super plurium verborum vocalibus: quod artificium componendi, neque in Italia, nec alibi Lactenus visum est nounullaque curioso artificio ad musices peritissimos pertinentia. Auctore R.M. rom. Opus sextum. Romae. L. Grignani, 1649. Folio.

Avviso inviato da me R.M. insieme col foglio reale del canone musicale Fons Signatus, alli famosi e peritissimi sig. musici d' Italia e di tutti gl' altri Regni, etc. Roma. Grignani, 1650. 4to. This work gives approximately the date of Micheli's birth as it was written 'nella sua rignardevole età di anni 75' (Parisini, i. 89).

Canone musicale a quattro voci, ad honore della concettione della B.V.M., composto sopra le vocali di nuovo, e curioso artificio, etc. Opera et inventione pellegrina di R.M. rom. Roma, L. Grignani. 1650.

Baini also mentions the following three works:—

Li salmi a quattro voci. Venetia, 1638.

Le messe a quattro voci. Roma, 1650.

Li respon-ori a cinque voci. Roma, 1658.

Kircher, *Musurgia universalis*. Roma, 1650, i. pp. 583-4 prints a canon in thirty-six parts, distributed among nine choirs, composed by Micheli, 'one of those who had revived the forgotten art of writing canons.'

MSS. In the Dresden Library, MS. 375b, an aria scored for voice and instruments. (Eitner.)

In the British Museum, Add. MS. 11,588, ff. 143, 149, 'Canon di Romano Micheli,' 1615; and 'Canone del Metallo, dal Romano Micheli'; both from Micheli's *Musica vaga et artificiosa*, 1615. C. S.

MICROLOGUS (from the Gr. adj. μικρολόγος, 'having regard to small things'—from μικρός, 'little,' and λόγος, 'a word'; Lat. *Sermo brevis*, an 'Epitome,' or 'Compendium'). A name given by two celebrated authors to works containing on epitome of all that was known of music at the time they were written.

I. The Micrologus of Guido d' Arezzo is believed to have been compiled about the year 1024. Valuable MS. copies of this curious work are preserved in the Vatican Library, as well as in the Bibliothèque Nationale at Paris, and in other European collections. The treatise was printed in 1784 by Gerbert, Prince Abbot of S. Blasien, in his great work entitled *Scriptores ecclesiastici de musica*; and in 1876 Hermesdorff published a copy of the original text at Treves, side by side with a German translation. Considerable variations occur in the ancient MSS.; but full dependence may be placed upon the readings given in the two printed editions we have mentioned. The work is divided into twenty chapters, some of which throw great light, both upon the state of musical science at the time of its production, and upon its subsequent progress. The first chapter is merely introductory; the second treats of the different kinds of Notes; and the third, of 'the Disposition of the Monochord,' which the author strongly recommends as a means of teaching Choristers to sing in tune [see MONOCHORD]; and it is worthy of notice, as a chronological 'landmark,' that Guido here uses the long-since universally rejected division of Pythagoras, which resolves the Perfect Fourth (*Diatessaron*) into two Greater Tones and a Limma, instead of the truer section of Ptolemy, who divides it into a Greater and Lesser Tone and a Semitone. Chapter V. treats of the Octave (*Diapason*), and of the seven letters by which its sounds are represented. Chapters XVIII. and XIX., entitled, *De Diaphonia, id est Organi precepta*, and *Dictae Diaphoniae per exempla probatio*, are filled with still more interesting matter, and contain a detailed description of the method pursued in accompanying a Plain-song Melody with Discant—here called *Diaphonia* or *Organum*. Earlier authorities had decreed that, with the exception of the Octave, no intervals were admissible in Discant, but the Perfect Fourth, and its inversions, the Perfect Fifth, used as in the following example—quoted in the Micrologus—in which the Plain-song occupies the middle part :—

But Guido, though he speaks of the Fourth as the most important interval, permits also the use of the Major Second and the Major and Minor Third; and gives the following example of the manner in which they may be introduced :—

Neither in the chapters we have selected for our illustration, nor in any other part of the work do we find any mention whatever of the Harmonic Hand, the Solmisation of the Hexachord, or the use of the lines and spaces of the stave; nor do Guido's other writings contain any allusion to these aids to science sufficiently explicit to identify him as their inventor. His claim to this honour rests entirely on the authority of Franchinus Gafurius, Vicentino, Glareanus, Vincenzo Galilei, Zarlino, and other early writers, whose verdict in his favour is, however, so unanimous, that it would be dangerous to reject the traditions handed down to us through so many consentient records. [An admirable edition of Guido's *Micrologus* was prepared by Dom Ambrogio Amelli, O.S.B., Prior of Monte Cassino, and published in 1904.]

II. A less celebrated but scarcely less valu-

able treatise entitled *Musice active Micrologus* was printed at Leipzig in 1517, by Andreas Ornithoparcus (or Ornitoparchus)—a German musician, of acknowledged eminence, whose true patronymic in its mother tongue was Vogelsang or Vogelgesang.

[The following are the various editions through which it passed :—

1. Leipzig, Jan. 1517. The colophon runs as follows :—

Excussum est hoc opus Lipsiae in aedibus Valentini | Schuman. Mēse Januario, Anni virginei partus De | cimiseptimi supra sesquimillesimū Leone de | cimo pont. max. ac Maximiliano | gloriosissimo Impatore orbi terras | praesidentibus. |

This is the first edition, and only one copy is known to exist, viz. in the Bibliothèque Nationale at Paris, the whole of sheet A of which is wanting. It was described by Fétis, who, however, confuses it with the second edition.

2. Leipzig, Nov. 1517. Described in Panzer (ix. 496). The colophon is :—

Excussum est hoc opus, ab ipso authore denuo castigatum, | recognitumq; Lipsie in edibus Ualentini Schumanni, calco- | graphi solertissimi : Mense Nouēbr: Anni virginei partus de- | cimi septimi supra sesquimillesimū. Leone decimo Pont. Max. | ac Maximiliano inuictissimo impatore orbi terras p̄sidētibus. |

This edition, though the colophon clearly proves the contrary, is generally described as the first. Copies of it are in the British Museum ; Kgl. Bibliothek, Berlin ; Hofbibliothek, Darmstadt ; Library of St. Mark's, Venice ; University of Bonn, and one was in the 'Rosenthal Antiquariat,' Munich, May 1888.

3. Leipzig, 1519. The colophon runs :—

Excussum est hoc opus: denuo castigatum recognitumq; | Lipsie in edibus Ualentini Schumanni : calcographi solertissi | mi : Mense Aprili ; Anni virginei partus vndeuigesimi supra | sesquimillesimum. |

There are copies of this at Berlin (Royal Library), Munich (Royal Library), Königsberg (see *Monatshefte für Musikgeschichte*, 1870, p. 47), Göttingen (University Library), and Brussels (see *Catalogue de la Bibliothèque de F. J. Fétis*, p. 621). A copy is said (*Monatshefte*, viii. p. 22) to be in the Rathsschulbibliothek of Zwickau. Fétis says there is an edition of 1521 at the Bibliothèque Nationale in Paris, though on inquiry the only copy found there was that of Jan. 1517. The colophon he quotes is that of the 1519 edition, but he seems to have imagined that 'undevigesimi' meant twenty-one, instead of nineteen. His statement has been copied by Mendel.

4. Cologne, 1533. The title-page runs :—

Andræ Ornitoparchi Meyningensis, De arte cantandi micrologus, libris quatuor digestus, omnibus musicæ studiosis non tam utilis quam necessarius, diligenter recognitus. Coloniæ, apud Joannem Gymnicum, anno 1533.

A copy of this edition is in the Bibliothèque du Conservatoire Nationale de Musique, Paris (see M. Weckerlin's *Catalogue*, p. 209).

5. Cologne, 1535. An edition without colophon, similar to the preceding. A copy is in the Royal Library at Munich.

6. Gerber (*Lexicon*, ed. 1813, iii. p. 618) quotes Schacht's *Bibl. Music.* (1687) to the effect that there exists an edition in oblong 8vo, printed by Johannes Gymnicus at Cologne in 1540, but no copy of this is known to exist.]

This work, written in the quaint Latin peculiar to the 16th century, contains the substance of a series of Lectures delivered by the author at the Universities of Heidelberg, Mainz, and Tübingen ; and is divided into four separate books. The First Book, comprising twelve Chapters, treats of the different kinds of Music, of the clefs, the Ecclesiastical Modes, the Hexachords, the rules of Solmisation and Mutation, the various Intervals, the Division and Use of the Monochord, the laws of *Musica ficta*, Transposition, and the Church Tones. [See MODES, THE ECCLESIASTICAL ; HEXACHORD ; SOLMISATION ; MUTATION ; MUSICA FICTA ; ORNITHOPARCUS ; TONES, THE GREGORIAN.]

The second Book, divided into thirteen Chapters, treats of Measured Music, [see MUSICA MENSURATA], and contains an amount of information even more valuable than that conveyed in Morley's *Plaine and Easie Introduction*, inasmuch as it is expressed in more intelligible language, and freed from the involutions of a cumbrous and frequently vague and meaningless dialogue. In the second chapter of this Book the author describes eight kinds of notes—the Large, Long, Breve, Semibreve, Minim, Crotchet, Quaver, and Semiquaver. The third chapter is devoted to Ligatures ; and, as the Ligatures in common use at the beginning of the 16th century differed in some particulars from those employed in the time of Palestrina, the rules here given are of inestimable value in deciphering early compositions. [See NOTATION.]

In the fourth and fifth chapters of the second Book the author defines the various species of Mood, Time, and Prolation ; and, complaining as bitterly as Morley does, of the diversity of the signs by which they are represented, [see MOOD, PROLATION, TIME] ; proceeds to give his readers directions, which will be found exceedingly useful to those who wish to score the works of Josquin des Prés and other writers who flourished before the middle of the 16th century. The remaining chapters treat of Augmentation, Diminution, Rests, Points, Proportion, and other matters of deep interest to the student of ancient music.

The third Book, disposed in seven chapters, is devoted to the consideration of Ecclesiastical Music, and chiefly to the Accents used in reciting the Divine Office. [See INFLEXION, vol. ii. pp. 466, etc.]

The fourth Book, in eight chapters, contains an epitome of the Laws of Counterpoint ; and treats in detail of the difference between Consonances and Dissonances, the 'General Precepts of Counterpoint,' the nature of different voices, the formation of Cadences, the 'Special Precepts

of Counterpoint,' the use of rests in Counterpoint and the different styles of singing. On this last point the author's remarks are cruelly caustic. He tells us that the English carol, the French sing, the Spanish weep, the Italians of Genoa caper, other Italians bark; but 'the Germans, I am ashamed to say, howl like wolves.'

In 1609 our own John Dowland printed a correct though deliciously quaint English translation in London; and it is through the medium of this that the work is best known in this country. Hawkins, indeed, though he mentions the Latin original, gives all his quotations from Dowland's version. W. S. R.; with additions in square brackets by W. B. S.

MIDAS. A famous work of the second period of English ballad opera. It is a classical extravaganza, and a parody of Italian opera. Its first appearance on the English boards was at Covent Garden in 1764, though it is possible that, as O'Keeffe in his *Recollections* (1826), vol. i. p. 54, gives as a first cast one different from the first published copy, it may have been placed upon the stage in Dublin, where the author of the libretto, Kane O'Hara lived.

The music was selected from popular melodies, and the piece held the stage for many years. It was revised and acted at Drury Lane, Oct. 25, 1802, when Michael Kelly took the part of 'Apollo,' previously filled by Vernon, and by Mattocks. Another revival took place at Covent Garden in 1814, Sinclair taking 'Apollo.' The pretty song 'Pray Goody please to moderate the rancour of your Tongue,' appears in the opera, the air of which has been variously ascribed to Rousseau, Oswald, and Burney. The music of the opera was first published by Walsh; the revised edition of 1802 by Birchall. F. K.

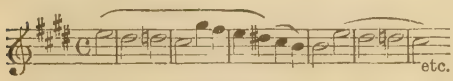
MIDDLE C. (i.) The note, *c'*, indicated by the C clef, or by the first ledger line below the treble stave, and the first above the bass stave. (ii.) The key upon the organ manuals sounding the same note at 'eight-foot pitch,' a key two octaves above the lower or CC key. The word is also used of the middle C upon the pedalboard (*i.e.* sounding the note *c* at eight-foot pitch), but only when special reference is made to that clavier. T. E.

MIDLAND INSTITUTE SCHOOL OF MUSIC. The Birmingham and Midland Institute was incorporated by Act of Parliament in the year 1854, 'for the diffusion and advancement of Science, Literature, and Art.' The foundation-stone was laid by the Prince Consort in the year 1855. The Institute consists of two principal departments: 'General' and 'Industrial.' The latter is of a strictly educational nature, and supplies the benefits of an Evening College; while nearly all the day classes are devoted to individual tuition in musical subjects. The School of Music is one of the most important and interesting developments in the activity of the Institute during recent years. There is a very capable staff of teachers, who give instruction in the various branches of the Art, including Mr. Max Mossel (Violin); Herr Willy Lehmann, and Herr Johann C. Hock (Violoncello); Dr. Rowland Winn, Madame Marie Fromm, Mr. G. H. Manton, Mr. G. Halford, Mr. Rutland Boughton (Piano); Mr. C. W. Perkins, and Mr. W. F. Newey (Organ); Mr. G. A. Breeden, Mr. F. W. Beard, and Mr. J. L. Robinson (Singing); Mr. Alfred Gaul, Dr. Winn, Mr. Halford, and Mr. Boughton (Theory), etc. Collective classes are held in the evenings in the following subjects: Singing, Harmony, Counterpoint, Rudiments, Elocution, Orchestral Instruments, etc. In 1900 Mr. Granville Bantock was appointed the first Principal of the School of Music, and a reorganisation of a Students' Choir, Orchestra, Operatic Class, Fortnightly Rehearsals, and Terminal Concerts, with an Annual Concert at the Town Hall, was effected. In 1903 Sir Edward Elgar accepted the honorary position of Visitor to the School, and has evinced his personal interest in the work of the School, not only as a member of the Committee, but by personally conducting the Students' Orchestra at a Town Hall Concert. A Chamber Music Class for the practice of Sonatas, Trios, Quartets, etc., is under the direction of Mr. Max Mossel, and interesting concerts of the work of this class are given at the close of each session. The Operatic Class, in the charge of the Principal and Mr. H. A. Breeden, has given performances of Mozart's 'Magic Flute'; Gluck's 'Orpheus'; and 'Iphigenia in Aulis.'

Examinations are held at the end of every session, and certificates are awarded to successful students in the Honours, First, and Second Grades. The examinations are conducted in accordance with a prescribed Syllabus, modelled on that of the Associated Board, by the Principal and a Visiting Examiner, assisted by members of the teaching staff. Mr. Ivor Atkins (Worcester); Dr. G. R. Sinclair (Hereford); Dr. Herbert Brewer (Gloucester); and Mr. Frederick Corder (London) have officiated in the capacity of Visiting Examiner during recent years. The work presented at the Students' Concerts is carefully selected from the Classics, and recognised Masters of Music, and performances have been given of such works as Bach's 'Magnificat,' 'Sleepers, wake,' 'Bide with us'; Brahms's 'Song of Destiny,' 'Rhapsody'; Beethoven's 'Choral Fantasia,' Pianoforte Concertos; Haydn's and Mozart's Symphonies, etc. The number of individual students at the present time is about 700, and increases annually, while the work of the students, and the results obtained, afford encouragement to those interested in the progress of music in the Midlands. G. B.

MIDSUMMER NIGHT'S DREAM MUSIC, by Mendelssohn, consists of two parts. (i.) The

Overture was written between July 7 and August 6, 1826, with the latter of which dates the score (in the Berlin Bibliothek) is signed. It appears from Marx's statement (*Erinn.* ii. 231-33) that the work, as we possess it, is a second attempt. The former one, of which the first half was completed, began with the four chords and the fairy figure. On these followed a regular overture, in which the theme



represented the proceedings of the lovers. Nothing else has survived. The Bergomask dance and other most characteristic features are all new, and appear to have been the result of the representations of Marx, who urged that the overture should not only be formed on the subject of the play but should adopt it as a Programme. It was first performed in public at Stettin in Feb. 1827. Mendelssohn brought it with him to London in 1829, and it was played under his direction at a concert given by Drouet at the Argyll Rooms, on June 24, Midsummer night. On returning from the concert the score was left in a hackney coach and irrecoverably lost [but see p. 582].

The coincidence between the melody at the close of the overture and that in the 'Mermaid's song' in the Finale to the second act of Weber's 'Oberon' is no doubt a mere coincidence. Weber's sketch of the Finale was finished in Dresden on Jan. 7, 1826,[1] immediately after which he started for London; and it is very improbable that any of the *motifs* of the opera should have become known before its performance, April 12, 1826. But apart from this, it is so extremely unlike Mendelssohn to adopt a theme from another composer, that we may be perfectly sure that the idea was his own. He introduces it in the beginning of the work, at the first *fortissimo*; it then twice recurs in the course of the working, and appears in an extended form as a cantilène in the coda. Mendelssohn appears to have felt some difficulty as to the notation of the overture. He first wrote it with the fairy subject in quavers; he then published an arrangement for the PF. with Cramer & Co., which has the fairy subject in semiquavers; and lastly returned to the original notation, in which the score is printed. These alterations of course do not affect the actual sound of the theme. The score was published with those of the 'Hebrides' and 'Meeresstille,' as '3 concert overtures,' by Breitkopfs, in March or April 1835.

(ii.) The music for the Play was composed in 1843 in obedience to the desire of the King of Prussia, and was produced on the stage at the New Palace at Potsdam, on Oct. 14 of that year, after eleven rehearsals. It contains 12 numbers—Scherzo; Fairy march; 'You spotted snakes' for two sopranos and chorus; Melodrama; Intermezzo; Melodrama; Notturno; Andante; Wedding march; Allegro commodo; Bergomask dance; Finale. Its first performance at the Philharmonic was under the composer's direction, May 27, 1844. [The march was played on the organ, on the Sunday following, by Dr. E. J. Hopkins. See *Mus. Times*, 1899, p. 122.] G.

[1] Weber's *Life*, by his son, ii. 639, 643.

MIGNON. Opéra-comique in three acts, words by MM. Carré and Barbier, founded on 'Wilhelm Meister'; music by Ambroise Thomas. Produced at the Opéra-Comique, Paris, Nov. 17, 1866, and in London, at Drury Lane, July 5, 1870. M.

MIKADO, THE. Comic opera in two acts; words by W. S. Gilbert, music by Sir Arthur Sullivan. Produced at the Savoy Theatre, March 14, 1885. M.

MILAN. A school of music was founded at Milan in 1483 by Lodovico Sforza, Duke of Milan. Some writers affirm that this was the first public school of music in Italy, but that of Bologna, founded in 1482 by Pope Nicholas V., preceded it by one year. Franchino Gafurio of Lodi was the first public professor of music in Milan. Costanza Porta, the pupil of Willaert, Zarlino, Caimo, Gastoldi, Biffi, and others, were also eminent composers in the old Lombard school of music, but Claudio Monteverde (born at Cremona, 1570) was the first to found a new epoch in this school, and to make it one of the richest and most powerful in Italy. He first attracted the notice of the Duke of Mantua by his performance on the viola; and by his direction, and applying himself to the study of composition under Ingegneri, the Maestro di Cappella of that Court, he became a considerable composer for the Church. The result of his studies appears in some valuable innovations in the old rules of counterpoint, which, although they excited much cavil and discussion at the time, were soon adopted not only by dilettanti but by professors.

Besides making these important discoveries, he is considered to be one of the first inventors of recitative in the Musical Drama. Orazio Vecchi, born about 1550, was another writer of operatic music of the Lombard school. His opera of 'L' Amfiparnaso,' was one of the earliest operatic representations. These and many other writers of dramatic music were formed in the Lombard school, which was also illustrated by composers for the Church, such as Viadana, Noscimbeni, Simpliciano Olivo, Giuseppe Vignati, Antonio Rosetti, Gio. Andrea Fioroni, etc. etc.

In the first part of the 18th century the famous school of singing of Giuseppe Ferdinando Brivio flourished at Milan, but there does not seem to have been any special 'Accademia' or Conservatorio for public musical instruction till

the year 1807, when, by a decree of Napoleon Buonaparte, the present Royal Conservatorio of Milan was established.

By order of the viceroy, Eugène Beauharnais, the building annexed to the church of Santa Maria della Passione, formerly a convent, was set apart for the new musical institute. It was opened on Sept. 8, 1808, and formally inaugurated by the Marquis de Brème, minister of the interior; and it was to be modelled on the pattern of the old Conservatorios of Naples.

The first president of the Conservatorio was Bonifazio Asioli, chosen by the celebrated Gian Simone Mayr, who traced out the rules for the new institution; and the first professors of the various branches of musical instruction were Federigi, Secchi, Ray, Piantanida, Negri, Rolla, Sturioni, Andredi, Adami, Belloli, Buccinelli. In 1814, on account of the large increase of pupils, two extra professors were nominated. During the years 1848 and 1849, when the Austrians were in Milan, the Conservatorio was also occupied by their troops, but the musical instruction of the pupils was carried on in the private houses of the professors. In 1850 the Conservatorio was reopened under the presidency of Lauro Rossi on a larger scale, with a considerable change in its form of government, and fresh provision was made for instruction in the organ, the harp, the history and philosophy of music. In 1858 a school of instruction in singing for the performers at the royal theatres was likewise added.

An Academical Council was instituted in 1864, to determine what prizes should be distributed to the pupils, and every year those who distinguish themselves most at the yearly examinations receive a monthly pension arising out of the endowment of the Institution. In this same year the 'Società del Quartetto' was formed, of which many of the most notable musicians of the present day are honorary members. Every year this society causes six or eight concerts of classical music to be performed, and offers a prize for the best musical composition on a given subject. The 'Scuole popolari' for the lower classes of the people, at the cost of the State, are also offshoots of the great Milanese Conservatorio.

The programme of musical instruction in the Royal Conservatorio, as translated from the report of January 1873, of the president, Signor Lodovico Melzi, comprehends two kinds of instruction in music, artistic and literary, and these may again be subdivided into a preliminary and a superior course of instruction in either of these two branches.

The Conservatorio professes to give a complete musical and a fair literary education. The musical instruction is directed by twenty-nine professors, and by about thirty teachers selected from the best pupils of both sexes. For the literary branch there are seven professors. There are two other professors, one for deportment, pantomime, and ballet, the other for drill.

Each pupil previous to admission must pass through a preliminary examination to see if he has any capacity for the branch of musical instruction he intends to pursue. This examination when passed only gives the pupil a right to enter the Conservatorio probationally for a year, and not till he has passed the second examination at the end of the probationary year is he admitted as a pupil. On admission he pays an entrance fee of twenty lire, and every year, until his studies are completed, he pays to the Institute five lire monthly, with the exception of the months of September and October.

Nine years are allowed to each pupil for study in composition, and for attaining proficiency in *stringed instruments*, ten years for wind instruments, eleven years for instruction in singing. [For the opera-house at Milan, see SCALA, LA.] C. M. P.

MILANOLLO, TERESA and MARIA, two exceptionally gifted youthful violinists. Domenica Maria Teresa—the elder and better known of the two sisters—was born in Savigliano near Turin on August 28, 1827, and died (Mme. Parmentier) in Paris, Oct. 25, 1904. Her sister Maria, whose career was suddenly cut short at the age of sixteen, was born in Savigliano, July 19, 1832, and died in Paris, Oct. 21, 1848. Their father, according to Fétis, was a poor carpenter, and his little daughters were two out of thirteen children. Teresa's talent asserted itself at the age of four, the child being so powerfully influenced by a violin solo played at High Mass one Sunday that she never rested until her father gave her a violin. Then followed lessons from a native violinist, Giovanni Ferrero, under whose tuition she remained for about a year, making astounding progress. Her talent was so precocious that her father began to think seriously about her musical education, and in order to give her the advantages of better tuition, the Milanollos migrated to Turin, when the little girl—scarcely six—received instruction from Gebbaro and Mora, two violinists attached to the Capella Carlo Alberto. While in Turin she made a few public appearances which confirmed the high opinion which had already been formed of her talent, but the recompense she received was quite inadequate to alleviate the poverty of the Milanollo family. After a year of struggle and trial in Turin, Milanollo père resolved to tempt fortune by taking Teresa to Paris. Full of hope but with very small means, he and his wife and their two children—Teresa seven and Maria three—left Turin. They crossed the Alps on foot, and in spite of cold, hunger, and fatigue, pursued their journey without a stop until they reached Marseilles. Here their future aspirations for Teresa were strengthened by her successful appearance at four concerts. Armed with an

introduction to Lafont, they finally arrived in Paris in 1837. Lafont at once recognised Teresa's gifts, made her one of his pupils, allowed her to play five times at the Opéra-Comique concerts, and took her on tour with him through Holland and Belgium. At these appearances, besides playing solos, she often joined her master in duets. After a severe illness in Amsterdam, which prevented her from finishing the tour, she reappeared at the Hague, and played to the Prince of Orange, who presented her with a handsome diamond ornament. From Holland she went to England; played in Covent Garden Theatre at five concerts; received some tuition from the Anglo-Italian violinist, Mori, and then toured in the provinces and Wales, playing at forty concerts in less than a month. For this fatiguing undertaking the child received no recompense, owing to the harpist, Boscha, absconding with all the profits. Previously to this, Teresa had started giving her sister Maria violin lessons. Maria's gifts were also of a high order, though her style was quite different. Teresa's playing was full of warmth and feeling, while Maria's was brilliant and sparkling, characteristics which caused them to be nicknamed Mademoiselle Adagio and Mademoiselle Staccato. After Maria's début in Boulogne at the age of six, the two sisters were inseparable, and travelled together everywhere, playing in France, Holland, and Belgium. In 1839 they returned to Paris. Teresa assumed an incognito so as to take lessons from Habeneck. Habeneck respected her wish to keep her name hidden from the public for a space of study, and never divulged his discovery that his pupil was Teresa Milanollo. A year later, the sisters appeared again in public at Rennes, Nantes, and Bordeaux, where they gave twelve concerts with great success. In Paris they played before King Louis Philippe at Neuilly, and at Habeneck's special request made a most successful appearance at the Paris Conservatoire. At this concert, which took place on April 18, 1841, Teresa played a Polonaise by Habeneck, gaining an enthusiastic reception, and receiving particular compliments from Cherubini and Auber, who were of the audience. Making the acquaintance of De Bériot at Boulogne, she received some lessons from him, and then travelled with her sister in Belgium and Germany, played before the King of Prussia, gave twelve concerts at Frankfort, and in 1843 arrived in Vienna, where they created a furore at twenty-five concerts. In the same year they returned to their native country, and on June 9, 1845, appeared in London at the Philharmonic Concert, but in spite of their great continental reputation, the London critics rather condemned what they considered to be an exaggerated style. In 1848, after continued touring, they returned to Paris; in the same year Maria, who was just sixteen and had been ailing for some months, suddenly died of rapid consumption, and was buried in the Cemetery of Père Lachaise. Teresa was so overcome with grief at the loss of her companion that she retired from public life for some time, remaining mostly on an estate which her father had bought near Malezeville, in Lorraine. Gradually she resumed her concert appearances, which she continued with remarkable success in Germany and Italy, until 1857, when she married, on April 16, an eminent French military engineer, Monsieur Charles Joseph Théodore Parmentier (born at Barr, [Lower Rhine] March 14, 1821). After her marriage she abandoned the concert platform and followed the fortunes of her husband, who had been a distinguished soldier, and had seen service in the Crimea, and was also an excellent amateur musician (see Fétis, *Biog.*). During the lifetime of Maria the sisters were greatly interested in the poor of Lyons, and as soon as Teresa had roused herself from the grief which her sister's death caused her, she exerted herself in establishing her 'Concerts des Pauvres,' which she carried out in a systematic manner in almost every town in France. Her plan was to give a concert, for which the wealthy purchased tickets, and immediately to follow the first with a second concert at which the audience was composed of poor people entirely. She would first charm them by her playing, and at the conclusion, money, food, and clothing—which had been purchased out of the receipts of the former concert—were distributed. From 1878 until her death Mme. Parmentier lived quietly in Paris.

Compositions: Ave Maria, chorus for male voices; Fantaisie-élégiaque for violin; two romances; Transcriptions and variations for violin and pianoforte.

MILDER-HAUPTMANN, Pauline Anna, a celebrated German singer and tragic actress, the daughter of Milder, a courier in the Austrian service, was born at Constantinople, Dec. 13, 1785. She lived afterwards at Vienna, where, having lost her father, she was compelled to enter the service of a lady of rank as lady's maid. Her fine voice and handsome person attracted the notice of Schikaneder, the well-known Viennese manager, who urged her to enter the profession, offering to be responsible for her musical education and to superintend her début on the stage. The offer was accepted, and she became the pupil of an Italian singing-master named Tomascelli, and subsequently of Salieri. She made her first public appearance on April 9, 1803, as Juno, in Süssmayer's opera, 'Der Spiegel von Arkadien.' As an artist, she

seems to have profited but little by instruction. With the kind of Oriental indolence that always distinguished her, she was content to rely for success on her splendid natural gifts, which were such as to procure for her, almost at once, an engagement at the Imperial Court theatre. That the part of 'Fidelio' should have been written for her is sufficient testimony to the capabilities of the organ which caused old Haydn to say to her, 'Dear child, you have a voice like a house!'

Her fame spread rapidly, and in 1808 she made a brilliantly successful professional tour, obtaining, on her return to Vienna, a fresh engagement at Court as *prima donna assoluta*. In 1810 Anna Milder married a rich jeweller named Hauptmann. Her greatest series of triumphs was achieved at Berlin, where she appeared in Gluck's 'Iphigenia in Tauris' in 1812. After singing with equal éclat in other great German towns, she contracted, in 1816, a permanent engagement with the royal theatre of Berlin, where for twelve years she reigned supreme. She played in all the principal rôles in the répertoire, but her great parts were those of the classical heroines of Gluck—Iphigenia, Alcestis, Armida — for which she was pre-eminently fitted, both by her imposing presence, and by her magnificent soprano voice, full, rich, and flawless, which both in amount and quality seems to have left nothing to desire. It was, however, unwieldy, and this natural inflexibility so little overcome by art as to be incapable of the simplest trill or other florid embellishment. At times, especially in her later years, she attempted some lighter parts, such as Mozart's Donna Elvira, and Susanna, but her lack of execution prevented her from succeeding in these as she did in Weigl's opera, 'Die Schweizerfamilie' (made celebrated by her impersonation of Emmeline), or in the broad declamatory style of Gluck. Although 'Fidelio' became one of her principal rôles, her performance in this opera was never, either vocally or dramatically, irreproachable. Thayer (*Life of Beethoven*, ii. 290) relates a conversation with her, in 1836, when she told him what 'hard fights' she used to have with the master about some passages in the Adagio of the great scena in E major, described by her as 'ugly,' 'unvocal,' and 'inimical (*widerstrebend*) to her organ.' All was in vain, however, until in 1814 she declared herself resolved never again to appear in the part, if she had to sing this ungrateful air as it stood—a threat which proved effective.

Her manner in society is described as cold and apathetic, and her degree of musical culture so small that she could only learn her parts by having them played to her over and over again. In spite of this (in which indeed she is not singular), she was as much admired by composers and critics as by the court and the public. Zelter describes her golden voice as 'positively belonging to the class of rarities,' and herself as 'the only singer who gives you complete satisfaction.' There is no doubt that her success and steady hold on the public favour had a most important influence in upholding German opera and the classical style, and in counteracting the frivolous fashion for foreign talent of every kind which reigned at Berlin.

Chorley tells an amusing story, on the authority of an eye-witness, of an occasion when Mme. Milder's stately calm was for a moment overcome during one of her magnificent impersonations of Gluck's heroines. 'At the moment where Blum, the bass singer, who used to strengthen himself for the part of Hercules upon champagne, was carrying off the colossal Alcestis from the shades below, Queen Milder, aware of the risk she ran in arms so unsteady, and overpowered with sudden terror, exclaimed, "Herr Jesu! Ich falle!" This exclamation elicited a simultaneous roar from all parts of the theatre. And from that day forward, Milder was *led*, not carried, from the stage by the God of Strength.' (*Modern German Music*, vol. i. p. 186.)

In 1829 she abdicated her sceptre in Berlin, owing to misunderstandings and differences with the opera-director, Spontini. She then visited Russia, Sweden, and Denmark, but her voice was failing fast. Her last public appearance was at Vienna in 1836, two years before her death, which happened at Berlin on May 29, 1838. MILITARY BAND. See WIND BAND.

MILITARY DRUM is another term for the side drum. [See DRUM, 3, vol. i. p. 732.] V. DE P.

MILITARY SOUNDS AND SIGNALS. The use of musical instruments in war by the ancients—a use which is found in all countries and at all times—appears to have been more as an incentive to the courage of the troops than as a means of conveying orders and commands. It is in the 13th century of our era that we first find undoubted evidence of the sounding[1] of trumpets in a field of battle as a signal for attack. At the battle of Bouvines (1215) the French charge was signalled in this manner, and numerous other instances are to be found in the chronicles of the period. For the next 200 years at least, the instrument used for signalling seems to have been the trumpet alone. The question of the introduction of the drum into Europe is one involving too much discussion to be entered upon here, but it may be mentioned as a fact that the first clear evidence of its use is the passage in Froissart (Bk. I. Pt. i. chap. 322) describing how, in the year 1347, Edward III. and his company entered

[1] In connection with this word we have an instance of Tennyson's extreme accuracy in the choice of terms. Where the bugle is used as a mere means of awakening the echoes he says—

'*Blow* bugle, *blow*, set the wild echoes flying';

but where it is to be used as a signal he employs the strictly correct term—

'Leave me here, and when you want me, *sound* upon the bugle-horn.'

into Calais 'à grand foison de menestrandies, de trompes, de tambours, de nacaires, de chalemies et de muses'—no mean military band to attend the king of 'unmusical' England! It is in Italy that the drum seems first to have been used for signalling purposes. Macchiavelli, in several passages in his *Art of War* (written for Lorenzo de' Medici in 1521), clearly states that the drum commands all things in a battle, proclaiming the commands of the officer to his troops. He also recommends the use of trumpets and flutes, the latter being apparently an idea of his own borrowed from the Greeks; he would give the signals to the trumpets, followed by the drums, and advises that the cavalry should have instruments of a different sound from those used by the infantry. This use by the Italians of both trumpets and drums is confirmed by a passage in Zarlino (*Istitutioni Armoniche*, Venice, 1558, pt. i. cap. 2), 'Osservasi ancora tal costume alli tempi nostri; perciocche di due esserciti l' uno non assalirebbe l' inimico, se non invitato dal suono delle Trombe e de' Tamburi, overo da alcun' altra sorte de' musicali istrumenti.' It was in all probability from Italy that the earliest musical signals came: spread over Europe by mercenaries, they were modified and altered by the different troops which adopted them, but the two signalling instruments were everywhere the same (with perhaps the exception of Germany, where the fife seems to have been introduced), and the names given to the different sounds long retained evidence of their Italian origin. The first military signals which have been handed down to us in notation are to be found in Jannequin's remarkable composition, 'La Bataille,' which describes the battle of Marignan (1515), and was published at Antwerp in 1545, with a fifth part added by Verdelot. [See vol. ii. p. 526.] A comparison of this composition with the same composer's similar part-songs 'La Guerre,' 'La prinse et reduction de Boulogne' (fifth book of Nicolas du Chemin's Chansons, 1551; Eitner, *Bibl. d. Sammelwerke*, 1551 i.), or Francesco di Milano's 'La Battaglia,' would be most interesting, and would probably disclose points of identity between the French and Italian military signals. The second part of Jannequin's 'Bataille' (of which the first ten bars are given here in modern notation) evidently contains two trumpet calls, 'Le Bouteselle' and 'A l'Etendart.'

In the same year in which Jannequin's 'Bataille' was published, we find in England one of the earliest of those 'Rules and Articles of War' of which the succession has been continued down to the present day. These 'Rules and Ordynaunces for the Warre' were published for the French campaign of 1544. Amongst them are the following references to trumpet signals. 'After the watche shal be set, unto the tyme it be discharged in the mornynge, no maner of man make any shouting or blowing of hornes or whisteling or great noyse, but if it be trumpettes by a special commaundement.' 'Euery horseman at the fyrst blaste of the trumpette shall sadle or cause to be sadled his horse, at the seconde to brydell, at the thirde to leape on his horse backe, to wait on the kyng, or his lorde or capitayne.' There is here no mention of drums, but it must be remembered that by this time the distinction of trumpet sounds being cavalry signals and drum-beats confined to the infantry was probably as generally adopted in England as it was abroad. In a Virginal piece of William Byrd's preserved at Christ Church, Oxford, and called 'Mr. Birds Battel,' which was probably written about the end of the 16th century, we find different sections, entitled 'The Souldiers Summons,' 'The March of the footemen,' 'The March of the horsemen,' 'The Trumpetts,' 'The Irish March,' and 'The Bagpipe and the Drum.' The first and fifth of these contain evident imitations of trumpet sounds which are probably English military signals of the period, the combination of bagpipes and drums being a military march. Jehan Tabourot, in his valuable *Orchésographie* (1588),[1] says that the musical instruments used in war were 'les buccines et trompettes, litues et clerons, cors et cornets, tibies, fifres, arigots, tambours, et aultres semblables' (fol. 6*b*), and adds that 'Ce bruict de tous les dicts instruments, sert de signes et aduertissements aux soldats, pour desloger, marcher, se retirer: et à la rencontre de l'ennemy leur donne cœur, hardiesse, et courage d'assaillir, et se defendre virilement et vigourousement.' Tabourot's work also mentions that it was the custom among certain German troops for the cavalry to use kettledrums. The illustrations to the 1566 edition of L. Fronsperger's *Kriegsbuch* give more than one example of this. Similarly in Rabelais we find a description of the Andouille folk attacking Pantagruel and his company, to the sound of 'joyous fifes and tabours, trumpets and clarions.' But though from these passages it would seem as if signals were given by other instruments than the drum and trumpet, there can be no doubt that if this was the case, they were soon discontinued. 'It is to the voice of the Drum the Souldier should wholly attend, and not to the aire of the whistle,' says Francis Markham in 1622; and Sir James Turner, in his *Pallas Armata* (1683), has the following:—'In some places a Piper is allowed to each Company; the *Germans* have him, and I look upon their Pipe as a Warlike Instrument. The Bag-pipe is good enough Musick for them who love it; but sure it is not so good as the *Almain* Whistle. With us any Captain may keep a Piper in his Company, and maintain him too, for no pay is allowed him, perhaps just as much as he deserveth.'

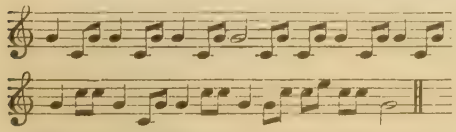
In the numerous military manuals and works published during the 17th century, we find many allusions to and descriptions of the different signals in use. It would be unnecessary to quote these *in extenso*, but Francis Markham's *Five Decades of Epistles of Warre* (London, 1622) demands some notice as being the first work which gives the names and descriptions of the different signals. In Decade I., Epistle 5, 'Of Drummes and Phiphes,' he describes the drum signals as follows: 'First, in the morning the discharge or breaking up of the *Watch*, then a preparation or Summons to make them repaire to their colours; then a beating away before they begin to march; after that a *March* according to the nature and custom of the country (for diuers countries have diuers Marches), then a *Charge*, then a *Retrait*, then a *Troupe*, and lastly a *Battalion*, or a *Battery*, besides other sounds which depending on the phantasttikenes of forain nations are not so useful.' He also states that a work upon the art of drumming had been written by one Hindar; unfortunately of this no copy apparently exists. Markham is no less explicit with regard to Trumpet Sounds than he is with Drum Signals: 'In Horse-Troupes . . . the *Trumpet* is the same which the *Drum* and *Phiph* is, onely differing in the tearmes and sounds of the Instrument: for the first point of warre is *Butte sella*, clap on your saddles; *Mounte Cauallo*, mount on horseback; *Tucquet*, march; *Carga, carga*, an Alarme to charge; *A la Standardo*, a retrait, or retire to your colours; *Auquet*,[2] to the Watch, or a discharge for the watch, besides diuers other points, as Proclamations, Cals, Summons, all which are most necessary for euery Souldier both to know and obey' (Dec. III., Ep. 1). It is noticeable in this list that the names of the trumpet sounds evidently point to an Italian origin, while those of the drum signals are as clearly English. To the list of signals given by Markham we may add here the following, mentioned only in different English works, but in which, unfortunately, no musical notes are given: Reliefe, Parado, Tapto, (*Count Mansfields Directions of Warre*, translated by W. G. 1624); March, Alarm, Troop, Chamadoes and answers thereunto, Reveills, Proclamations (Du Praissac's *Art of Warre*, Englished by J. Cruso, 1639); Call, Preparative, Battle, Retreat (W. Barriffe's *Military Discipline: or the Young Artillery Man*, second edition,

[1] See Orchésographie.

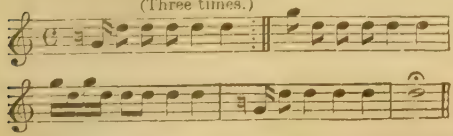
[2] Auquet, *i.e. Au guet*—to the watch.

1639, and Elton's *Compleat Body of the Art Military*, 1650); Take Arms, Come to Colours, Draw out into the Field, Challenge, General, Parley (*English Military Discipline*, 1680); Gathering (Turner's *Pallas Armata*, 1683).

To return to those signals, the notes of which have come down to us, the earliest collection extant is to be found in the second book of Mersenne's *De Instrumentis Harmonicis*, Prop. xix. (1635), where the following cavalry signals are given—L'entrée; Two Boute-selles; A cheval; A l'estendart; Le simple cavalquet; Le double cavalquet; La charge; La chamade; La retraite; Le Guet. Of these signals (copies of which will be found in a MS. of the 17th century in the British Museum, Harl. 6461) we give here the first Boute-selle:—



The next collection known is that of Girolamo Fantini, Trumpeter to Ferdinand II., Duke of Tuscany, whose work is entitled *Modo per imparare a sonare di tromba tanto di guerra quanto musicalmente in organo, con tromba sordina, col cimbalo e ogn' altro istrumento; aggiuntovi molte sonate, come balletti, brandi, capricci, serabande, correnti, passaggi e sonate con la tromba e organo insieme* (Frankfurt, 1636). This rare work, to which M. Georges Kastner first drew attention in his *Manuel de Musique Militaire*, contains specimens of the following trumpet calls—Prima Chiamata di Guerra; Sparata di Butta Sella; L'accavallo; La marciata; Seconda Chiamata che si và sonata avant la Battaglia; Battaglia; Allo Stendardo; Ughetto; Ritirata di Capriccio; Butte la Tenda; Tutti a Tavola. Some of these are very elaborate. The Boute-selle, for instance, consists of an introduction of four bars in common time, followed by a movement in 6–4 time, twenty-nine bars long, which is partly repeated. We give here one of the shorter signals, 'Allo Stendardo':—



With regard to the German signals of this period, and indeed with regard to the whole history of military music in Germany, we are reluctantly compelled to treat the subject very cursorily, owing to the almost total want of material. It has been seen that the use of the kettledrum for the cavalry came from Germany, and frequent allusions are made in French works of the 18th century to the superiority of German military music. But owing perhaps to the more general musical intelligence of the soldiers, the different signals seem to have been handed down orally to a greater extent than they were with other nations. It is said that their signals were better in point of form than those of other nations, and that they were often derived from popular Volkslieder, etc. Their musical superiority they retain to the present day. An interesting point with regard to the German signals is the habit the soldiers had of inventing doggerel verses to them. Some of these rhymes are said to be very ancient, going back so far as the 16th century. The verses were not confined to the signals of their own armies, but were sometimes adapted to those of their traditional enemies, the French. Freiherr von Soltau gives several of these in his work on German Volkslieder (Leipzig, 1845). The following are some of the most striking:—

Wahre di bure
Di garde di kumbt. (1500.)

Hüt dich Bawr ich kom
Mach dich bald davon. (16th cent.)

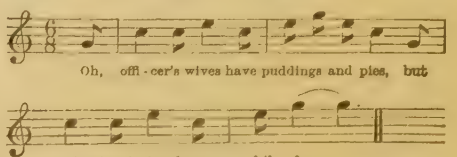
Zu Bett zu Bett
Die Trommel geht
Und das ihn morgen früh aufsteht,
Und nicht so lang im Bette lêht.
(Prussian Zapfenstreich, or Tattoo.)

Die Franzosen haben das Geld gestohlen,
Die Preussen wollen es wieder holen!
Geduld, geduld, geduld!
(Prussian Zapfenstreich.)

Kartoffelsupp, Kartoffelsupp,
Und dann und wann ein Schöpfenkop',
Mehl, mehl, mehl. (Horn Signal.)[1]

Another probable reason of the scarcity of old collections of signals in Germany is that the trumpeters and drummers formed a very close and strict guild. The origin of their privileges was of great antiquity, but their real strength dates from the Imperial decrees confirming their ancient privileges, issued in 1528, 1623, and 1630, and confirmed by Ferdinand III., Charles VI., Francis I., and Joseph II. Sir Jas. Turner (*Pallas Armata*, Lond. 1623)[2] has some account of this guild, from which were recruited the court, town, and army trumpeters. Their privileges were most strictly observed, and no one could become a master-trumpeter except by being apprenticed to a member of the guild.[3]

[1] In England similar nonsense rhymes are invented for some of the calls. Their chief authors and perpetuators are the boy buglers. The following Officer's Mess Call is an example:—



Of recent years several collections of Trumpet and Bugle Sounds with adapted words have been published; that by A. C. Atherley (1902) is especially complete.

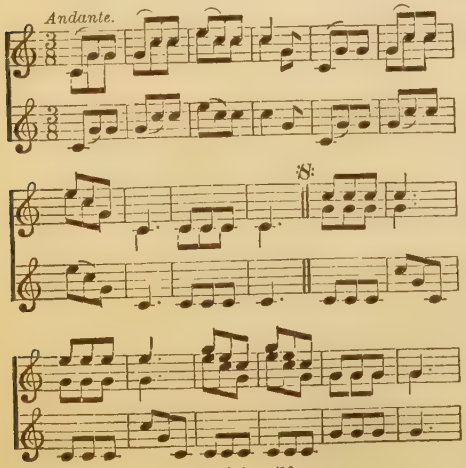
[2] See also *Ceremoniel u. Privilegia d. Trompeter u. Paucker* (Dresden, no date. Quoted in Weckerlin's *Musiciana*, p. 110).

[3] Further information on this subject will be found in Mendel, *sub voce* 'Trompeter,' and in the work quoted in that article, *Versuch einer Anleitung zur heroisch-musikalischen Trompeter- und Pauken-Kunst* (Halle, 1795).

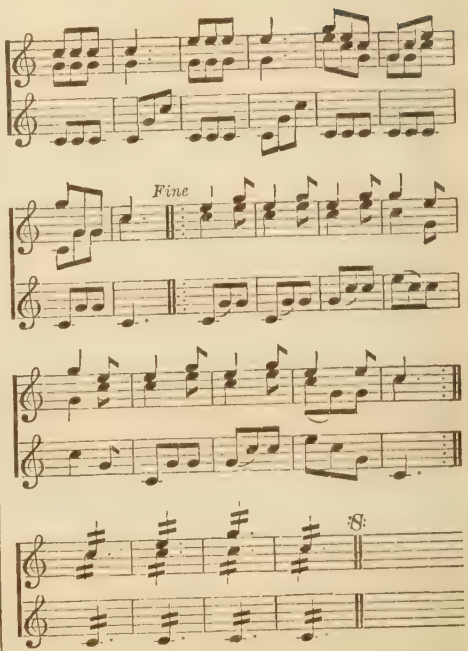
Returning to France, we find from the time of Louis XIV. downwards a considerable number of orders of the government regulating the different trumpet and drum signals. Many of these have been printed by M. Kastner in the Appendix to his *Manuel*, to which work we must refer the reader for a more detailed account of the various changes which they underwent. In 1705 the elder Philidor (André) inserted in his immense autograph collection [see PHILIDOR], part of which is now preserved in the Library of the Paris Conservatoire, many of the 'batteries et sonneries' composed by himself and Lully for the French army. The part which Lully and Philidor took in these compositions seems to have been in adapting short airs for fifes and hautbois to the fundamental drum-beats. See the numerous examples printed in Kastner's *Manuel*.

From this time the number and diversity of the French signals increased enormously. Besides Philidor's collection, a great number will be found in Lecocq Madeleine's *Service ordinaire et journalier de la Cavalerie en abrégé* (1720), and Marguery's *Instructions pour les Tambours*, for the most part full of corruptions, and too often incorrectly noted. Under the Consulate and Empire the military signals received a number of additions from David Buhl,[1] who prepared different sets of ordonnances for trumpets, drums, and fifes, which were adopted by the successive French governments during the first half of the 19th century, and still form the principal body of signals of the French Army.

The French signals are much too numerous for quotation in these pages. They are superior to the English in the three essentials of rhythm, melody, and simplicity, but in all three respects are inferior to the German. Perhaps the best French signal is 'La Retraite,' played as arranged for three trumpets.



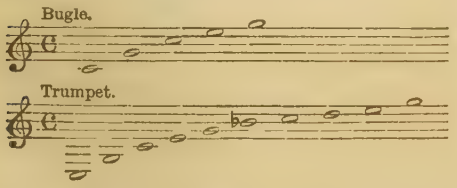
[1] See vol. i. p. 416.



Returning to the English signals, after the Rebellion and during the great continental wars of the 18th century, the English army underwent many changes, and was much influenced by the association of foreign allies. The fife had fallen into disuse, but was reintroduced by the Duke of Cumberland in 1747. Fifes were first used by the Royal Artillery, who were instructed in playing them by a Hanoverian named Ulrich. They were afterwards adopted by the Guards and the 19th, and soon came into general use. Grose (*Military Antiquities*) alleges that the trumpet was first adopted in 1759 by the Dragoons instead of the hautbois; but this is evidently an error, as by an order of George II., dated July 25, 1743, 'all Horse and Dragoon Grand Guards are to sound trumpets, and beat drums, at marching from the Parade and Relieving.' On the formation of light infantry regiments, drums were at first used by them, in common with the rest of the army, but about 1792 they adopted the bugle for signalling purposes. 'Bugle Horns' are first mentioned in the *Rules and Regulations for the Formations, Field-Exercise, and Movements, of His Majesty's Forces*, issued June 1, 1792. In December 1798 the first authorised collection[2] of trumpet-bugle Sounds was issued, and by regulations dated Nov. 1804 these Sounds were adopted by every regiment and corps of cavalry in the service. The bugle was afterwards (and still

[2] In James Gilbert's *Bugle Horn Calls of Riflemen*, etc. (London, 1804) the author states that he was 'in the year 1795 the First that Arranged and Published the compleat Duty of the Trumpet and Bugle Horn for the Light Horse Regiments and Associations throughout Great Britain.'

is) used by the Royal Artillery, and about the time of the Crimean campaign was used by the cavalry in the field, although the trumpet is still used in camp and quarters. The use of the drum[1] for signalling is almost extinct in our army, except for parade purposes to convey orders, but combined with the fife (now called the flute), it is used for marching purposes. Like many other musical matters connected with the British army, the state of the different bugle- and trumpet-sounds calls for considerable reform. The instruments used are trumpets in E♭ and bugles in B♭, and though the former are said to be specially used by the Horse Artillery and Cavalry, and the latter by the Royal Artillery and Infantry, there seems to be no settled custom in the service, but—as in the similar case of the different regimental marches—one branch of the service adopts the instrument of another branch whenever it is found convenient. The two collections of Sounds formerly published for the respective use of the Mounted Services and Garrison Artillery and the Infantry, have been superseded, since Dec. 1902, by *The Trumpet and Bugle Sounds for the Army*, which was compiled under the direction of the Commandant, Royal Military School of Music, and is issued by authority. In this all calls have been assimilated, so that they can be sounded either by trumpet or by bugle. The work contains Regimental Calls, War and Peace Calls, for all arms, and Instructions for Trumpeters and Buglers. The sounds are formed by different combinations of the open notes of the bugle[2] and trumpet. Their scales are as follows:—



The B♭ of the trumpet is, however, never used. Many of the English signals are intrinsically good, while many are quite the reverse; and they are noted down without much regard to the manner in which they should be played. A comparison with the sounds used by the German army (especially the infantry signals) shows how superior in this respect the latter are, the rests, pauses, marks of expression, and tempi being all carefully printed, and the drum-and-fife marches being often full of excellent effect and spirit, while in the English manuals attention to these details is more the exception than the rule.

In conclusion we must refer the reader who would further investigate this subject to Kastner's *Manuel général de Musique Militaire* (Paris, 1848), where are to be found a large number of the signals and sounds in use in the different European armies in the author's time, as well as much information on the subject of military music in general—a subject which has been hitherto strangely neglected in both Germany and England. Some little information will also be found in Mendel's *Lexikon* (arts. 'Militair-Musik,' and 'Trompeter'). The present writer is much indebted to the kindness of Col. Thompson and Col. Barrington Foote, past and present Commandants of the Military School of Music, Kneller Hall; Lionel Cust, Esq.; Lieut. A. J. Stretton; Mr. J. A. Browne, bandmaster of the South Metropolitan Schools, and Messrs. H. Potter & Co., who have furnished information for this article. The last-named firm publish a *Drum, Flute, and Bugle Duty Tutor*. W. B. S.

MILLER, Edward, Mus.D., born at Norwich in 1731, studied music under Dr. Burney, and was elected organist of Doncaster, July 25, 1756, upon the recommendation of Nares. He graduated as Mus.D. at Cambridge in 1786. He died at Doncaster, Sept. 12, 1807. His compositions comprise elegies, songs, harpsichord sonatas, flute solos, psalm tunes, etc., and he was the author of 'The Elements of Thorough-bass and Composition,' 1787, and a *History of Doncaster*, 1804. In his 'Psalms of David for the use of Parish Churches' occurs the famous hymn-tune 'Rockingham.' See *Musical Times*, 1901, p. 736. W. H. H.

MILLICO, Giuseppe, a good composer and better singer, was born in 1739 at Terlizzi (Poviglio), Modena. Gluck, who heard him in Italy, thought him one of the greatest soprani of his day, and, when Millico visited Vienna in 1772, and was attached to the court theatre, Gluck showed his estimation of him by choosing him as singing-master for his own niece. In the spring of that year Millico had already come to London, where, however, he found the public but little disposed in his favour. Though a judicious artist and a most worthy man, he was not an Adonis, and his voice had received its greatest beauties from art (Burney); 'Of a singularly dark complexion, ill-made, and uncommonly plain in features' (Lord Mount-Edgcumbe). By the end of the season, Millico had reversed the first unfavourable impression, and his benefit was a bumper. He had then appeared in 'Artaserse' and 'Sofonisba,' and he took part in 'Il Cid' and 'Tamerlano' in the following year. In 1774 he appeared here in 'Perseo,' after which he went to Berlin. In 1780 he was in Italy again, attached to the Neapolitan Court, where he is said to have profited by his own influence to oppress other artists. Fétis gives a list of his compositions, including three operas, three cantatas, a collection of canzonets, published in London (1777),

[1] Some of the Drum-beats will be found in vol. i. p. 733 of this Dictionary.
[2] See vol. i. p. 416.

and other pieces. [The canzonets are apparently a small oblong quarto publication of Italian songs, 'Six Songs with an accompanyment (*sic*) for the Great or Small harp, fortepiano, or harpsichord . . . dedicated to the Hon. Mrs. Hobard by Giuseppe Millico,' issued originally by Welcker and republished by Birchall at a much later date. F. K.] J. M.

MILLÖCKER, Karl, a most prolific composer of operettas, was born in Vienna on May 29, 1842, and was educated in the Conservatorium der Musikfreunde there. After being capellmeister at Graz in 1864, and at the short-lived Harmonietheater in Vienna two years later, Millöcker was, in 1869, appointed conductor of and composer to the Theater-an-der Wien, for which he accomplished all of his most brilliant work. The list of his compositions is very long. It includes, besides a number of musical farces and the collection of pianoforte pieces, which were issued as the *Musikalische Presse* in monthly parts, the operettas 'Der todte Gast,' and 'Die Beiden Binder,' written for Graz; 'Diana,' produced at the Harmonietheater; 'Fraueninsel,' brought out at Buda-Pesth; 'Ein Abenteuer in Wien,' 'Das Verwunschene Schloss,' with dialect songs, 'Gräfin Dubarry,' 'Der Bettelstudent' (1882), which enjoyed an enormous vogue in Germany and Austria especially, and was produced at the Alhambra Theatre, April 12, 1884; 'Der Feldprediger,' 'Der Vice-admiral,' 'Die Sieben Schwaben,' 'Der arme Jonathan,' 'Das Sonntagskind,' 'Gasparone,' and a host of other operettas. Millöcker's music was piquant and cheerful, and aimed at popularity, which it very easily attained. He died at Baden, near Vienna, Dec. 31, 1899. R. H. L.

MILLS, Robert Watkin, born March 4, 1856, at Painswick, Gloucestershire, was taught singing by Edwin Holland in London, by S. Blasco in Milan, and on his return to London by Blume. On May 17, 1884, he made his début at a Crystal Palace concert, and on the 21st he made a single appearance on the stage at Birmingham with the Carl Rosa Company as Balthazar in an English version of 'La Favorite,' and was offered a permanent engagement, which he declined in favour of a concert career. On Jan. 1, 1885, he created a favourable impression at the Albert Hall in the 'Messiah.' On Feb. 14 he first appeared at the Popular Concerts. In the autumn of the same year he sang at the Birmingham Festival in the production of Stanford's 'Three Holy Children,' etc. From that time until the present he has been a favourite baritone singer at all the principal concerts and festivals, and since 1894 has made several tours in Canada, the United States, and Australasia, etc., with the greatest success (*Brit. Mus. Biog.*, etc.). A. C.

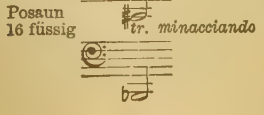
MILLS, Sebastian Bach, a pianist, English by birth, but a resident of the United States for the last thirty years of his life, where he made a highly honourable record as an artist. He was born in Cirencester, on March 1, 1838. He showed evidence of decided musical talent at an early age, and when he was seven years old played the pianoforte before Queen Victoria. His first teachers were his father and Cipriani Potter; later he studied at the Conservatorium in Leipzig, under Moscheles, Plaidy, Rietz, and Hauptmann, and then came within the circle of young men who were so strongly influenced by Liszt. Mills's first professional engagement was as organist of the Roman Catholic cathedral at Sheffield, which he took in 1855. He did not drop out of sight, however, as a public pianist, and in 1858 he appeared as solo performer at the Gewandhaus in Leipzig. In 1859 he went to New York, making his first appearance there at a concert of the Philharmonic Society on March 26, in Schumann's A minor concerto. His success was immediate and well-founded, and, indeed, so great was the favour with which he was received in the United States that he decided to settle in New York, and soon gained a national reputation as pianist and teacher. In 1859, 1867, and 1878 he made brilliant and successful concert tours in Germany. His appearances in the United States were frequent, and he was an especial favourite in New York, where he played every season in the Philharmonic Society's concerts from 1859 down to 1877, his last performance being on Nov. 24 of the latter year. It is a record that has only one parallel in the Society's history, viz., that of Mr. Richard Hoffman (see vol. ii. p. 414). During his long period of activity Mr. Mills did yeoman's service in the cause of good music in the United States that has been gladly recognised there by all lovers of the art. The Philharmonic Society elected him an honorary member in 1866. He went to Wiesbaden in the summer of 1898 in quest of health, and there suffered a stroke of paralysis which caused his death on Dec. 21. R. A.

MILTON, John, son of Richard Milton, a well-to-do yeoman of Stanton St. John, near Oxford, was born about 1563. Aubrey says that he was brought up at Christ Church, Oxford; the fact that his name is not found in the University registers does not make this impossible, for they were carelessly kept at that time. Perhaps it was at Oxford that he received a gold medal and chain from a Polish prince, in reward for an 'In Nomine' of forty parts, as related by his grandson Phillips on the authority of the poet; this prince, it has been conjectured, may have been Albertus Alasco, vaiode or palatine of Siradia in Poland, who visited Oxford in 1583, and was entertained by the University with 'learned recreations.' Milton was 'cast out by his father, a bigoted Roman Catholick, for abjuring the Popish tenets,' and accordingly went to London to seek his fortune. In 1595 he

was apprenticed to James Colbron, a member of the Scriveners' Company, and on Feb. 27, 1599 (1600), was himself admitted to the freedom of the Company. He married Sarah Jeffrey about the same date, and settled in Bread Street. Of his children (five of whom were baptized at Allhallows, Bread Street) three survived; John, the poet; Christopher, the judge; and a daughter, Ann, who married Edward Phillips and was the mother of Edward and John Phillips, the authors. About the year 1632, Milton, who had acquired a considerable fortune, retired to Horton in Buckinghamshire. In 1634 he was elected to the Mastership of the Scriveners' Company, but avoided serving the office. (For particulars as to his business career, and a lawsuit brought against him and his partner which was decided in their favour, see Masson's *Life of Milton* vol. i.) On April 3, 1637, Milton's wife died at Horton, and soon afterwards his son Christopher came with his family to live with him, until at some date between Jan. 1639-40 and August 1641 he moved with them to Reading. Here he remained till the taking of Reading by Lord Essex's forces in 1643, when he went to live in London with his son the poet, at first in Aldersgate Street, and later in a house in the Barbican, where he died. He was buried in the chancel of St. Giles', Cripplegate, on March 15, 1646-47.

Milton's musical abilities are alluded to in his son's poem 'Ad Patrem.' His compositions display sound musicianship, but are of no remarkable interest. The following were printed in his lifetime. In 'The Triumphs of Oriana,' 1601, 'Fair Oriana in the morn,' *a* 6. In Leighton's 'Teares or Lamentacions,' 1614, 'Thou God of might,' *a* 4 (printed by Burney); 'O Lord behold,' *a* 5; 'O had I wings,' *a* 5 (printed by Hawkins); and 'If that a sinner's sighs,' *a* 5. For Ravenscroft's Psalter, 1621, he set two Psalm-tunes, one of them twice over. Of his other compositions, 'When David heard' and 'I am the Resurrection' (both *a* 5) have been printed in No. xxii. *Old English Edition*, from B.M. Add. MSS. 29,372-7, which also contain 'O woe is me,' *a* 5, 'Precamur sancte Domine,' 'How doth the Holy City,' and 'She weepeth continually' (all *a* 6). At Christ Church, Oxford, are 'If ye love me,' *a* 4, and five Fancies in five and six parts. G. E. P. A.

MINACCIANDO, 'threateningly'; a term used once by Beethoven, in a letter to Schott, dated Jan. 28, 1826 (Nohl, *Neue Briefe Beethoven's*, p. 282), in which, after some playful abuse, the following postscript occurs:—



M.

MINGOTTI, REGINA, a very celebrated singer, whose family name was VALENTINI, was born at Naples, of German parents, in 1728. Her father, an officer in the Austrian service, being ordered to Graz in Silesia in the same year, took his daughter with him. Here he died, leaving her to the care of an uncle, who placed her in the Ursuline Convent, where she received her first instruction in music. At the age of fourteen, however, she lost her uncle by death, and the pension which ensured her an asylum with the nuns ceased with his life. Compelled to return to her family, she spent some time very unhappily.

In order to escape from this miserable life, though still a mere child, she married Mingotti, an old Venetian musician, impresario of the Dresden opera. Perceiving all the advantage that might be derived from the great gifts of his young wife, Mingotti placed her at once under the tuition of Porpora, where she made rapid progress in her art. From a slender salary, she soon rose to receiving more considerable pay, while her growing popularity aroused the jealousy of a powerful and established rival, the celebrated Faustina, who actually vacated the field and left Dresden for Italy. Soon afterwards the younger singer went also to Italy, and obtained a lucrative engagement at Naples. There she appeared with great éclat (1748) in Galuppi's 'L'Olimpiade,' astonishing the Italians no less by the purity of her pronunciation than by the beauty of her voice and style. Engagements were immediately offered her for many of the great Italian operas, but she refused all in order to return to Dresden, where she was already engaged. Here she played again in 'L'Olimpiade' with enormous success. Faustina and her husband, Hasse the composer, were also now again in Dresden; and Burney tells an anecdote which, if true, shows that their jealous feelings towards Mingotti had not ceased. [See HASSE, vol. ii. p. 339, and Burney, *Present State* (*Germany*), i. 157.] From Dresden she went to Spain (1751), where she sang with Gizziello in the operas directed by Farinelli, who was so strict a disciplinarian that he would not allow her to sing anywhere but at the Opera, nor even to practise in a room that looked on the street! Burney illustrates this with another anecdote, too long to quote here.

After spending two years in Spain, Mingotti went to Paris, and thence to London for the first time. Her arrival here retrieved the fortunes of the opera in England, which were in a languishing condition. In Nov. 1755, Jommelli's 'Andromaca' was performed, but 'a damp was thrown on its success by the indisposition of Mingotti' (Burney). She told that writer, indeed, in 1772, 'that she was frequently hissed by the English for having a toothache, a cold, or a fever, to which the good people of England will readily allow every human being is liable except an actor or a singer.' She seems to have been a very accomplished singer and actress; her only fault,

if she had one, being a little want of feminine grace and softness.

Her contentions with Vaneschi, the manager, occasioned as many private quarrels and feuds as the disputes about Handel and Buononcini, Gluck and Piccinni, or Mara and Todi. Mingotti addressed a letter 'to the town,' but in such cases 'not a word which either party says is believed' (Burney). Mingotti (with Giardini) carried the same company through the next winter with great éclat,—but little profit, in spite of appearances; and, after this season, the new managers gave up the undertaking.

At the close of the season of 1763, Signora Mattei left England, and Giardini and Mingotti again resumed the reins of opera-government, and Mingotti sang in 'Cleonice' ('in the decline of her favour'—Burney), 'Siroe,' 'Enea e Lavinia,' and 'Leucippe e Zenocrita.' And here the reign of Giardini and Mingotti seems to have ended, after an inauspicious season (Burney). She afterwards sang with considerable success in the principal cities of Italy, but she always regarded Dresden as her home, during the life of the Elector Augustus. In 1772 she was settled at Munich, living comfortably, well received at court, and esteemed by all such as were able to appreciate her understanding and conversation. It gave Dr. Burney 'great pleasure to hear her speak concerning practical music, which she did with as much intelligence as any *maestro di Cappella* with whom he ever conversed. Her knowledge in singing, and powers of expression, in different styles, were still amazing. She spoke three languages, German, French, and Italian, so well that it was difficult to say which of them was her own. English she likewise spoke, and Spanish, well enough to converse in them, and understood Latin; but in the three languages first mentioned she was truly eloquent.' She afterwards played and sang to him 'for near four hours,' when he thought her voice better than when she was in England.

In 1787 Mingotti retired to Neuburg on the Danube, where she died in 1807, at the age of seventy-nine. Her portrait in crayons, by Mengs, is in the Dresden Gallery. It represents her, when young, with a piece of music in her hand; and, if faithful, it makes her more nearly beautiful than it was easy for those who knew her later in life to believe her ever to have been. 'She is painted in youth, plumpness, and with a very expressive countenance.' The dog in Hogarth's 'Lady's Last Stake' is said to be a portrait of Mingotti's dog. J. M.

MINIM (Lat. and Ital. *Minima*; Fr. *Blanche*; Germ. *Halbe Note*, whence the American term, Half-note). A note equal in duration to the half of a Semibreve and divisible into two Crotchets (Semiminimae majores) or four Quavers (Semiminimae minores).

The Minim derives its name from the fact that, until the invention of the Crotchet, it was the shortest note in use. We first find it mentioned early in the 14th century by Joannes de Muris; though Morley says it was employed by Philippus de Vitriaco, who flourished during the latter half of the 13th. Its form has undergone but little change in modern times. It was always an open note with a tail. Formerly its head was lozenge-shaped, and its tail turned always upwards; now the head is round, inclining to oval, and the tail may turn either upwards or downwards.

In ancient music the Minim was always imperfect; that is to say, it was divisible into two Crotchets only, and not into three. As time progressed, a quasi-exception to this rule was afforded by the *Hemiolia minor*; but it was never used in ligature. [See HEMIOLIA; LIGATURE; NOTATION.]

The Minim Rest resembles that of the Semibreve, except that it is placed above the line instead of below it—a peculiarity which is observed in the oldest MSS. in which Minims occur. W. S. R.

MINNESINGER, or MINNESÄNGER, were the German counterpart of the Troubadours, but of somewhat later date. They flourished in the 12th and 13th centuries, and were succeeded by the MEISTERSINGER (see p. 103). The Minnesinger were almost exclusively of noble or gentle birth, and to modern musicians, the names of Walther von der Vogelweide, Wolfram von Eschenbach, and Tannhäuser are the most familiar, from the dramas of Wagner. The work of F. H. von der Hagen, *Minnesänger* (1838-56), is the best authority on the subject. The name implies that love was the principal subject dealt with in the songs of these knightly minstrels. [See MEISTERSINGER, SONG (Germany).] M.

MINOR. When intervals have two forms which are alike consonant or alike dissonant, these are distinguished as major and minor. The minor form is always a semitone less than the major.

The consonances which have minor forms are thirds and sixths; the dissonances are seconds, sevenths and ninths; of these the minor thirds and sixths are the roughest of consonances, and the minor second is the roughest and the minor seventh the smoothest of dissonances.

Minor scales are so called because their chief characteristic is their third being minor. Minor tones are less than major by a comma. [See MAJOR, p. 31, DAY, vol. i. p. 674, and HELMHOLTZ, vol. ii. p. 378.] C. H. H. P.

MINOR CANONS, priests in cathedrals and collegiate churches whose duty it is to superintend the performance of daily service. They are not of the chapter, but rank after the canons and prebendaries. They were formerly called vicars choral, and were originally appointed as deputies of the canons for church purposes, their number being regulated by the number of the capitular members. Laymen

were frequently appointed as vicars choral, but it is necessary that minor canons should be in holy orders. According to the statutes, they should also be skilled in church music. (Hook's *Church Dictionary*.) W. B. S.

MINORE (Ital. *Minor*) is used as a warning sign in music which changes suddenly into the tonic (or sometimes the relative) minor of the original key, and in which the change of signature might escape the observation of the performer. It is most commonly found, like its counterpart, MAGGIORE (see p. 23) in variations. M.

MINSTREL (Fr. *Ménétrier*). The name so vaguely used in modern romantic language as the equivalent of musician, had originally a far more definite signification. Its most probable derivation is from *minister*, and at first the minstrels seem to have been employed by the troubadours as their attendants, possibly in order to accompany them on some stringed instrument. Through all the development of music, the idea of an instrumental performer has clung to the name minstrel, who appears to have corresponded in the north of France to the jongleur of the south, and to have performed the same functions. The name minstrel has undergone no such debasing change of meaning as has been the fate of jongleur in its modern form of juggler. [See SONG; TROUBADOUR.] M.

MINUET (Fr. *Menuet*; Ger. *Menuett*; Ital. *Menuetto*). A piece of music in dance rhythm, and of French origin. The name is derived from the French *menu* (small), and refers to the short steps of the dance. The exact date of its first invention is uncertain. According to some authorities it came originally from the province of Poitou, while others say that the first was composed by Lully. In its earliest form the minuet consisted of two eight-bar phrases, in 3–4 time, each of which was repeated; sometimes commencing on the third, but more frequently upon the first, beat of the bar, and of a very moderate degree of movement. The well-known minuet in the first finale of 'Don Giovanni' is a very faithful reproduction of this original form of the dance. [In the matter of pace, it may be instructively compared with the 'allegretto' minuet in his symphony in E flat; at this time there is abundant evidence to show that there were two very different rates of speed adopted for the minuet, the slow tempo being obligatory where actual dancing was intended, and a much quicker measure being used for the minuet as a purely musical composition.] As a complement to the short movement, a second minuet was soon added, similar in form to the first, but contrasted in feeling. This was mostly written in three-part harmony, whence it received its name Trio, a name retained down to the present time, long after the restriction as to the number of parts has been abandoned. A further enlargement in the form of the minuet consisted in the extension of the number of bars, especially in the second half of the dance, which frequently contained sixteen, or even more, bars, instead of the original eight. It is in this form that it is mostly found in the Suite.

In the works of the composers of the 18th century, especially Handel and Bach, the minuet is by no means an indispensable part of the Suite. As compared with some other movements, such as the Allemande, Courante, or Sarabande, it may be said to be of somewhat infrequent occurrence. Its usual position in the Suite is among the miscellaneous dances, which are to be found between the Sarabande and the Gigue, though we exceptionally meet with it in the third Suite of Handel's second set as a final movement, and with three variations. In Handel, moreover, it is very rare to find the second minuet (or Trio) following the first. On the other hand, this composer frequently gives considerable development to each section of the movement, as in the eighth Suite of the second set, where the minuet (written, by the way, as is frequently the case with Handel, in 3–8 instead of 3–4 time), contains thirty-four bars in the first part, and seventy-one in the second. This piece has little of the character of the ordinary minuet excepting the rhythm. Handel also frequently finishes the overtures of his operas and oratorios with a minuet; one of the best-known instances will be found in the overture to 'Samson.'

The minuets of Bach are remarkable for their variety of form and character. In the Partita in B♭ (No. 1) the first minuet contains sixteen bars in the first section and twenty-two in the second; while the second minuet is quite in the old form, consisting of two parts of eight bars each. The minuet of the fourth Partita (in D) has no Trio, and its sections contain, the first eight, and the second twenty bars. In a Suite for Clavier in E♭ (B.-G., xxxvi. p. 12) we find an early example of a frequent modern practice. The first minuet is in E♭ major, and the second in the tonic minor. It may be remarked in passing that Bach never uses the term 'Trio' for the second minuet, unless it is actually written in three parts. In the fourth of the six Sonatas for flute and clavier we meet with another departure from the custom of the day which ordained that all movements of a suite must be in the same key. We here see the first minuet in C major, and the second in A minor—a precedent often followed in more modern works. Another example of the same relation of keys will be found in the fourth of the so-called 'English Suites'—the only one which contains a minuet. Here the first minuet is in F and the second in D minor. Of the six French Suites four have minuets, two of which are worth noticing. In the second minuet

of the first Suite the latter half is not repeated —a very rare thing; and in the third Suite we meet with a genuine Trio in three parts throughout, and at the end the indication 'Menuet da Capo.' Though it was always understood that the first minuet was to be repeated after the second, it is very rare at this date to find the direction expressly given. One more interesting innovation of Bach's remains to be mentioned. In his great Concerto in F for solo violin, two horns, three oboes, bassoon, and strings, will be found a minuet with three trios, after each of which the minuet is repeated. (B.-G. xix. p. 27.) We shall presently see that Mozart, half a century later, did the same thing.

The historic importance of the minuet arises from the fact that, unlike the other ancient dances, it has not become obsolete, but continues to hold a place in the symphony (the descendant of the old Suite), and in other large instrumental works written in the same form. The first composer to introduce the minuet into the symphony appears to have been Haydn; for in the works of this class which preceded his (those of C. P. E. Bach, Sammartini, and others) we find only three movements. And even with Haydn (as also in many of the earlier works of Mozart) we find the minuet at first by no means of invariable occurrence. On the other hand, we sometimes see in the same work two minuets, each with a trio, one before and one after the slow movement. Examples will be met with in Haydn's first twelve quartets (opp. 1 and 2) and also in some of Mozart's serenatas, divertimenti, etc. (Köchel's Catalogue, Nos. 63, 99, 204, 247, and others). The detailed examination of the numerous minuets which Haydn has left us in his quartets and symphonies would be deeply interesting, but would lead us too far. Only a few of the prominent characteristics can be mentioned. While in general retaining the old form of the minuet, Haydn greatly changes its spirit. The original dance was stately in character, and somewhat slow. With Haydn its prevailing tone was light-hearted humour, sometimes even developing into downright fun. The time becomes quicker. While in the earlier works the most frequent indications are *Allegretto*, or *Allegro ma non troppo*, we find in the later quartets more than once a *Presto* (opp. 76 and 77). These minuets thus become an anticipation of the Beethoven scherzo. Curiously enough, in one set of quartets, and in only one (op. 33), Haydn designates this movement 'Scherzando,' in Nos. 1 and 2, and 'Scherzo' in Nos. 3 to 6. As the tempo here is not more rapid than in the other minuets, it is evident that the term only refers to the character of the music, and is not used in the modern sense. As we learn from Pohl's *Haydn* (p. 332) that the composer carefully preserved the chronological order of the quartets in numbering them, we are in a position to trace the gradual development of the minuet through the entire series. We find one of Haydn's innovations in some of the later works, in putting the trio into a key more remote from that of the minuet, instead of into one of those more nearly related (Quartet in F, op. 72, No. 2—minuet in F, trio in D♭; Quartet in C, op. 74, No. 1—minuet in C, trio in A major). This relation of the tonics was a favourite one with Beethoven. In only one of Haydn's quartets (op. 9, No. 4), do we find a trio in three parts, though the name is always given to the second minuet. A curious departure from the ordinary form is to be seen in the quartet in E♭, op. 2, No. 3. Here the trio of the second minuet has three variations, one of which is played, instead of the original trio, after each repetition of the minuet.

It is no uncommon thing in the works of Haydn to meet with another variety of the minuet. The finales of his smaller works are often written in a 'Tempo di Minuetto.' Here the regular subdivisions of minuet and trio, sometimes also the double bars and repeats, are abandoned. In the piano sonatas and trios many examples will be met with. A well-known instance of a similar movement by Mozart is furnished in the finale of his sonata in F for piano and violin. Haydn's predilection for the minuet is further shown by the fact that in several of his sonatas in three movements the minuet and trio replace the slow movement, which is altogether wanting.

With Mozart the form of the minuet is identical with that of Haydn's; it is the spirit that is different. Suavity, tenderness, and grace, rather than overflowing animal spirits, are now the prevailing characteristics. It is in Mozart's concerted instrumental works (serenatas, etc.) that his minuets must be chiefly studied; curiously enough, they are singularly rare in his pianoforte compositions. Of seventeen solo sonatas, only two (those in E♭ and A major) contain minuets; while out of forty-two sonatas for piano and violin, minuets are only found in four as intermediate movements, though in the earlier works a 'Tempo di Minuetto' often forms the finale. In many of the earlier symphonies also we find only three movements, and even in several of the later and finer symphonies (*e.g.* Köchel, Nos. 297, 338, 444, 504) the minuet is wanting. On the other hand, in the serenades and divertimenti, especial prominence is given to this movement. Frequently two minuets are to be found, and in some cases (Köchel, Nos. 100, 203, 250) three are to be met with. The variety of character and colouring in these minuets is the more striking as the form is approximately the same in all. One example will suffice in illustration. In the Divertimento in D (Köchel, 131), for strings, flute, oboe, bassoon, and four horns, there are two minuets, the first

of which has three trios and the second two. The first minuet in D major is given to strings alone; the first trio (also in D major) is a quartet for the four horns; the second (in G) is a trio for flute, oboe, and bassoon; while the third (in D minor) is for the seven wind instruments in combination. After the last repetition of the minuet, a coda for all the instruments concludes the movement. The three trios are as strongly contrasted in musical character as in orchestral colour. Many similar instances might easily be given from the works of Mozart.

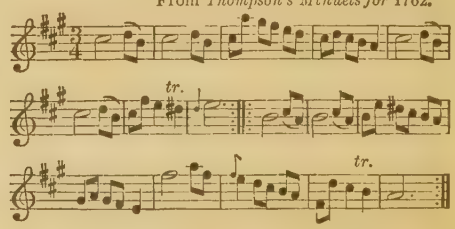
To Beethoven we owe the transformation of the minuet into the Scherzo. Even in his first works this alteration is made. Of the three piano trios, op. 1, the first and second have a scherzo, and only the third a minuet. The examination of the different varieties of the scherzo will be treated elsewhere (SCHERZO); it will be sufficient here to explain that the difference between the minuet and the scherzo is one of character rather than of form. The time is frequently quicker; the rhythm is more varied (see, for instance, the scherzi in Beethoven's Fourth Symphony, in the Sonata, op. 28, and in the Bagatelle, op. 33, No. 2); and sometimes, as in the Seventh and Ninth Symphonies, the form itself is enlarged. Still Beethoven does not entirely abandon the older minuet. Out of sixty-three examples of the minuet or scherzo (not counting those in common time) to be found in his works, seventeen are entitled 'Minuet,' or 'Tempo di Minuetto.' Besides this, in two works (the Piano and Violin Sonata in G, op. 30, No. 3, and the Piano solo Sonata in E♭, op. 31, No. 3), the Tempo di Minuetto takes the place of the slow movement; in the Sonata, op. 49, No. 2, it serves as finale (as with Haydn and Mozart); and in the Sonata, op. 54, the first movement is a Tempo di Minuetto. In these minuets we sometimes find a grace akin to that of Mozart (Sonata, op. 10, No. 3; Septet), sometimes, as it were, a reflexion of the humour of Haydn (Sonata, op. 22); but more often the purest individuality of Beethoven himself. In some cases a movement is entitled 'Minuet,' though its character is decidedly that of the scherzo (*e.g.* in the First Symphony). The only one of the nine symphonies in which a minuet of the old style is to be seen is No. 8. Occasionally we meet in Beethoven with minuets simply entitled 'Allegretto' (*e.g.* Sonata quasi Fantasia, op. 27, No. 2; Trio in E♭, op. 70, No. 2): in other cases the same term is used for what is in reality a veritable scherzo (Sonatas, op. 14, No. 1, op. 27, No. 1). It may be said that with Beethoven the minuet reached its highest development.

The transformation of the minuet into the scherzo, just adverted to, has had an important influence on modern composers. In the large majority of works produced since the time of Beethoven, the scherzo has replaced its predecessor. Occasionally the older form still appears, as in Mendelssohn's 'Italian Symphony,' the third movement of which is a genuine minuet, and in the second movement of Schumann's E♭ Symphony; but with Beethoven the history of the minuet practically closes. One of the best specimens of a modern minuet will be seen in Sterndale Bennett's Symphony in G minor, [and as an instance of completely successful adaptation of the form in quite modern music may be cited the beautiful minuet in the last scene of Verdi's 'Falstaff.'] E. P.

Minuets began to appear in English musical publications in the latter part of the 17th century; one is in Salter's *Genteel Companion for the Recorder*, 1683, and in the first half of the 18th century they were a feature in English dancing. The period of their greatest popularity here, was from about 1730 to 1770, owing, no doubt, to their Court patronage. Annually, on the King's birthday, a special Minuet was composed for the occasion, and this with the other French dances, was published in a small oblong volume issued yearly by such publishers as Walsh and Wright. Later, other music-sellers brought out similar yearly collections. The earliest of these issues of minuets with which the present writer is acquainted, is for 1716, and the latest, Thompson's for 1791. After that date the decline of the minuet as a dance caused such yearly sets to be abandoned. Though so greatly in favour, much of this minuet music was decidedly uninteresting, and as an example of the type common at the middle of the 18th century the following is appended; it is notable as having been used at the Coronation ball of George the Third in 1761—

The Coronation Minuet.

From *Thompson's Minuets for* 1762.



Other minuets of greater musical quality were Martini's; that from 'Ariadne,' Foot's, etc.; these were in great favour for flute and fiddle pieces. F. K.

MIOLAN. See CARVALHO, vol. i. pp. 475-6.

MIRECOURT (Dep. Vosges), a small town in Lorraine, France, which rivals Markneukirchen in Saxony, and Mittenwald in Bavaria, as a centre for the manufacture of cheap musical instruments, principally of the violin class. Four centuries ago this Manchester of Musical-instrument-making—as Geo. Hart terms it—was the home of Tywerens the viol maker, of his pupil Nicolas Renauld (who was employed by

Andreas Amati), of Claude Trevillot, and of Jean and Nicolas Médard, who held appointments at the Court of Louis XIV. These were all clever craftsmen, who built their fiddles with reverential love for their art, and now worthily head the list of notable names connected with the Mirecourt violin manufacture. The nine members of the Vuillaume family, including the great Jean Baptiste, were all born in Mirecourt. Claude Vuillaume, the first known violin maker of the family was born there in 1625. (He married a daughter of François Médard of Nancy.) Six members of the family lived and died as violin makers in Mirecourt, two settled in Paris, and one in Brussels. The brothers François and George Chanot, Simoutre, Lupot, and his pupil Auguste Phillipe Bernardel, Caillot, Maucotel, Miremont, Rambeaux (who settled first in Paris and later returned to Mirecourt) and his successor Menegard; Voirin the bow maker and many other familiar names all belonged to Mirecourt. Owing to the ever-increasing demands for cheap instruments, especially of the violin type, the market value of individual work has greatly diminished all over the world, consequently Mirecourt makers, like others, have been forced to content themselves with making imitations, at moderate prices and working for the wholesale manufacturing houses. The largest manufacturing firm in Mirecourt is that of Mons. Thibouville-Lamy, who employs over 5000 persons, sends out yearly about 40,000 instruments, has a manufactory for strings at Grenelle, another manufactory for brass instruments at La Couture, and trade branches in Paris and London. A little before 1867 Mons. Lamy became sole proprietor of many of the various manufactories in Mirecourt, and by substituting mechanical for manual labour greatly reduced the cost of making a violin. In 1873 he was awarded a medal at the Vienna exhibition for his remarkable 4s. 8d. and 16s. violins. Since then he has received medals in Santiago, Philadelphia, and a gold medal in London in 1885. He was made Chevalier of the Légion d'Honneur, April 10, 1877, and Officer, Jan. 15, 1892. Other manufacturing firms are: Paul Bailly, who has branches in London and Paris; Coutureux & Heroux (established in 1850 by N. Coutureux) who manufacture cheap bows also; L. Gaspard & Co.; Laherte Humbert Frères; Lété, a good guitar maker; and Paul Mougenot, an individual maker of talent, whose son G. Mougenot of Brussels is responsible for a recent pamphlet entitled *The Mercury Stradivarius* (Brussels, 1892).

Mirecourt to-day is undoubtedly the greatest emporium of cheap musical instruments in existence, but besides this it is an excellent school in which many talented amateur and professional makers have been instructed. (Le Comte A. de Pontecoulant's *Organographie*; Heron-Allen's *Violin making as it was and is*; Hart's *The Violin*; Von Lutgendorff's *Die Geigen- und Lautenmacher*; Haweis's *Old Violins*.) E. H-A.

MIREILLE. Opera in five acts; words by M. Carré (from Mirèio, a Provençal poem by Mistral), music by Gounod. Produced at the Théâtre Lyrique, March 19, 1864. Reduced to three acts, with the addition of the waltz, and reproduced Dec. 15, 1864, at the same theatre. In London, in Italian and five acts, as Mirella, at Her Majesty's Theatre, July 5, 1864. G.

MISERERE. The Psalm, *Miserere mei Deus*, as sung in the Sistine Chapel, has excited more admiration and attained a more lasting celebrity than any other musical performance on record. Its effect has been described, over and over again, in sober Histories, Guide-books, and Journals without end; but never very satisfactorily. In truth it is difficult to convey in intelligible language any idea of the profound impression it never fails to produce upon the minds of all who hear it, since it owes its irresistible charm less to the presence of any easily definable characteristic than to a combination of circumstances, each of which influences the feelings of the listener in its own peculiar way. Chief among these are the extraordinary solemnity of the service into which it is introduced, the richness of its simple harmonies, and the consummate art with which it is sung; on each of which points a few words of explanation will be necessary.

The *Miserere* forms part of the service called *Tenebrae*, which is sung, late in the afternoon, on three days only in the year—the Wednesday in Holy Week, Maundy Thursday, and Good Friday. [See TENEBRAE.] The Office is an exceedingly long one, consisting, besides the Miserere itself, of sixteen Psalms and a Canticle from the Old Testament (sung, with their proper Antiphons, in fourteen divisions); nine Lessons; as many Responsories; and the Canticle, Benedictus Dominus Deus Israel. The whole of this, with the exception of the First Lesson, [see LAMENTATIONS] and the Responsories, is sung in unisonous Plain-song; and the sternness of this ancient music forms the most striking possible preparation for the plaintive tones which are to follow, while the ceremonial with which it is accompanied adds immeasurably to the intended effect.

At the beginning of the service the chapel is lighted by six tall candles on the Altar, and fifteen others, placed on a large triangular candlestick in front. Of these last, one is extinguished at the end of each division of the Psalms. The six altar-candles are put out, one by one, during the singing of Benedictus. The only light then remaining is the uppermost one on the triangular candlestick. This is removed, and carried behind the altar, where it is completely hidden from view, though not extinguished. The chapel is by this time so dark

that it is only just possible to discern the red vestments of the Pope as he kneels at his Genuflexorium in front of the altar. Meanwhile, a single soprano voice sings with exquisite expression the Antiphon, 'Christus factus est pro nobis obediens usque ad mortem.' An awful silence follows, during which the Paternoster is said in secret, and the first sad wail of the Miserere then swells, from the softest possible *pianissimo*, into a bitter cry for mercy, so thrilling in its effect that Mendelssohn—the last man in the world to give way to unnatural excitement—describes this part of the Service as 'the most sublime moment of the whole.'

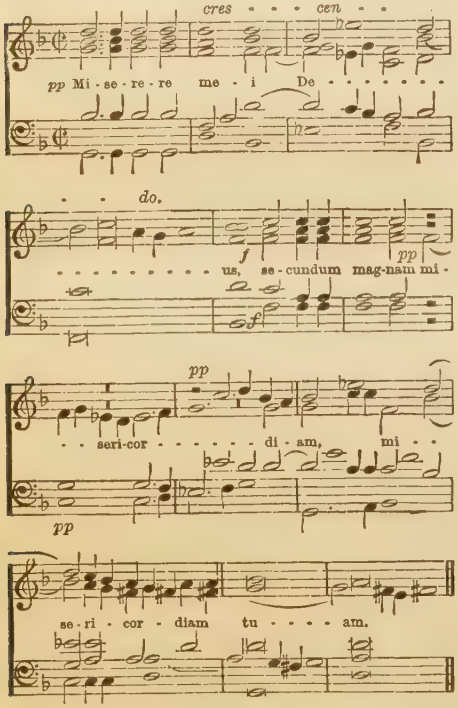
There is reason to believe that the idea of adapting the Miserere to music of a more solemn character than that generally used for the Psalms, and thus making it the culminating point of interest in the service of Tenebrae, originated with Pope Leo X., whose Master of Ceremonies, Paride Grassi, tells us that it was first sung to a Fauxbourdon in 1514. Unhappily no trace of the music used on that particular occasion can now be discovered. The oldest example we possess was composed in 1517 by Costanzo Festa, who distributed the words of the Psalm between two Falsi-bordoni, one for four voices and the other for five, relieved by alternate verses of Plain-song—a mode of treatment which has survived to the present day, and upon which no later composer has attempted to improve. Festa's Miserere is the first of a collection of twelve, contained in two celebrated MS. volumes preserved among the archives of the Pontifical Chapel. The other contributors to the series were, Luigi Dentice, Francesco Guerrero, Palestrina, Teofilo Gargano, Francesco Anerio, Felice Anerio, an anonymous composer of very inferior ability, Giovanni Maria Nanini,[1] Sante Naldini, Ruggiero Giovanelli, and lastly Gregorio Allegri—whose work is the only one of the twelve now remaining in use. So great was the jealousy with which these famous compositions were formerly guarded, that it was all but impossible to obtain a transcript of any one of them. It is said that up to the year 1770 only three copies of the Miserere of Allegri were ever lawfully made—one for the Emperor Leopold I., one for the King of Portugal, and a third for Padre Martini. Upon the authority of the last-named MS. rests that of nearly all the printed editions we now possess. P. Martini lent it to Dr. Burney, who, after comparing it with another transcription given to him by the Cavaliere Santarelli, published it, in 1790, in a work (now exceedingly scarce) called *La Musica della Settimana Santa*, from which it has been since reproduced in Novello's *Music of Holy Week*. The authenticity of this version is undoubted; but it gives only a very faint idea of the real Miserere, the beauty of which depends almost entirely on the manner in which it is sung. A curious proof of this well-known fact is afforded by an anecdote related by Santarelli. When the choristers of the Imperial Chapel at Vienna attempted to sing from the MS. supplied to the Emperor Leopold, the effect produced was so disappointing that the Pope's Maestro di Cappella was suspected of having purposely sent a spurious copy, in order that the power of rendering the original music might still rest with the Pontifical Choir alone. The Emperor was furious, and despatched a courier to the Vatican, charged with a formal complaint of the insult to which he believed himself to have been subjected. The Maestro di Cappella was dismissed from his office; and it was only after long and patient investigation that his explanation was accepted and he himself again received into favour. There is no reason to doubt the correctness of this story. The circumstance was well known in Rome, and the remembrance of it added greatly to the wonderment produced, nearly a century later, by a feat performed by the little Mozart. On the fourth day of Holy Week 1770 that gifted boy—then just fourteen years old—wrote down the entire Miserere after having heard it sung once only in the Sistine Chapel. On Good Friday he put the MS. into his cocked hat and corrected it with a pencil as the service proceeded. And not long afterwards he sang and played it, with such exact attention to the traditional abbellimenti that Cristoforo, the principal soprano, who had himself sung it in the Chapel, declared his performance perfect.

Since the time of Mozart the manner of singing the Miserere has undergone so little radical change that his copy, were it still in existence, would probably serve as a very useful guide to the present practice. Three settings are now used alternately—the very beautiful one by Allegri already mentioned; a vastly inferior composition, by Tommaso Bai, produced in 1714, and printed both by Burney and Novello; and another, contributed by Giuseppe Baini in 1821, and still remaining in MS. These are all written in the Second Mode, transposed; and so closely resemble each other in outward form that not only is the same method of treatment applied to all, but a verse of one is frequently interpolated in performance between two verses of another. We shall, therefore, confine our examples to the Miserere of Allegri, which will serve as an exact type of the rest, both with respect to its general style and to the manner in which the far-famed Abbellimenti are interwoven with the phrases of the original melody. These Abbellimenti are, in reality, nothing more than exceedingly elaborate four-part cadenzas introduced in place of the simple closes of the text, for the purpose of adding to the interest of the performance. Mendelssohn paid close attention to one which he heard in 1831, and minutely described it in

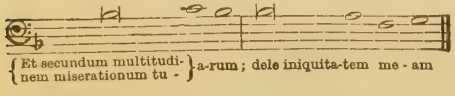
[1] Nanini's work is little more than an adaptation of Palestrina's with an additional verse for nine voices.

his well-known letter to Zelter; and in 1840 Alessandro Geminiani (*i.e.* Alfieri) published at Lugano a new edition (now long since exhausted) of the music, with examples of all the Abbellimenti at that time in use. Most other writers seem to have done their best rather to increase than to dispel the mystery with which the subject is, even to this day, surrounded. Yet the traditional usage is not so very difficult to understand; and we can scarcely wonder at the effect it produces when we remember the infinite care with which even the choral portions of the Psalm are annually rehearsed by a picked choir, every member of which is capable of singing a solo.

The first verse is sung, quite plainly, to a Fauxbourdon for five voices, exactly as it is printed by Burney and Novello; beginning *pianissimo*, swelling out to a thrilling *forte*, and again taking up the point of imitation *sotto voce*.



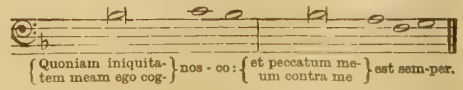
The second verse is sung, in unisonous Plainsong, to the Second Tone transposed.



We first meet with the Abbellimenti in the third verse, which is sung in the form of a Concertino—that is to say, by a choir of four choice solo voices. In the following example the text of the Fauxbourdon is printed in large notes, and the two Abbellimenti—one at the end of each clause—in small ones.[1]

In describing this beautiful passage, Mendelssohn says, 'The *Abbellimenti* are certainly not of ancient date; but they are composed with infinite talent and taste, and their effect is admirable. This one in particular[2] is often repeated, and makes so deep an impression that when it begins an evident excitement pervades all present. . . . The soprano intones the high C in a pure soft voice, allowing it to vibrate for a time, and slowly gliding down, while the alto holds its C steadily; so that at first I was under the delusion that the high C was still held by the soprano. The skill, too, with which the harmony is gradually developed is truly marvellous.'

The unisonous melody of the fourth verse

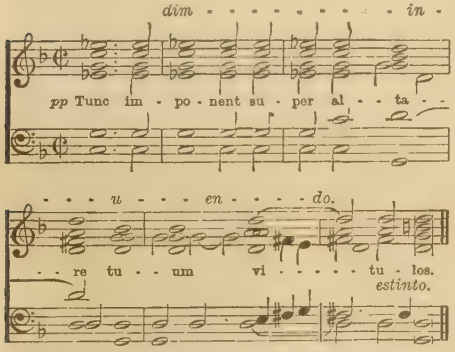


[1] The accidentals in brackets are undoubtedly due to the caprice of individual singers.

[2] That is, the last shown in our example.

serves only to bring this striking effect into still bolder relief.

The fifth verse is sung like the first; the sixth like the second; the seventh like the third; and the eighth like the fourth, and this order is continued—though with endless variations of Tempo and expression—as far as the concluding strophe, the latter half of which is adapted to a double chorus, written in nine parts, and sung very slowly, with a constant *ritardando*, 'the singers diminishing or rather extinguishing the harmony to a perfect point.'[1]



When the last sounds have died away a short Prayer is sung by the Pope; at a signal given by the Master of Ceremonies the last candle is brought forth from its hiding-place behind the Altar, and the congregation disperses. It would be impossible in an article like the present to enter into the symbolical meaning attached, either to the hiding of the candle or to any other part of the ceremony. Suffice it to say that everything has a symbolical meaning, which is explained to some extent in a little pamphlet[2] annually sold in Rome during the Holy Week. That this elaborate system of symbolism tends to predispose the mind of the hearer towards a fuller appreciation of the beauty of the music is undeniable. On the other hand, it will be readily understood that much of the effect produced depends upon the quality of the voices employed—especially that of the sopranos. Fifty years ago a very celebrated sopranist named Mariano sang the higher passages with wonderful delicacy and pathos; but, even with voices of ordinary capacity, the habit of constantly practising together without instrumental accompaniment of any kind leads to a perfection of style quite unattainable by those who are accustomed to lean on the organ for support. [See an article in the *Musical Times* for August 1885.] W. S. R.

MISSA, and MISSA DE ANGELIS. See MASS.

MITCHELL, JOHN, deserves a place in these columns on account of his close connection with musical enterprise in London for many years. He was born there April 21, 1806, and died Dec. 11, 1874. For a large part of his life he was one of the most prominent musical managers and agents in the metropolis. In 1837 he introduced opera buffa at the Lyceum Theatre; including 'Betly,' 'L' Italiana in Algieri,' 'Elisa e Claudio,' and others, for the first time in England. In 1849 and 1850 he opened the St. James's Theatre with an excellent French company for comic opera with 'Le Domino Noir,' 'L'Ambassadrice,' 'La Dame blanche,' 'Zanetta,' 'Richard Cœur de Lion,' 'Le Châlet,' and many other first-rate works. Of the French plays which he produced at the same theatre with Rachel, Regnier, and many other great actors, through a long series of years, this is not the place to speak. In 1842 Rossini's 'Stabat Mater' was brought out under his direction for the first time in England. In 1853 he first brought over the Cologne Choir to England. Few men were better known than John Mitchell in all musical circles. G.

MITTENWALD. A small town in the southern part of the Bavarian Alps, standing almost midway between Munich and Innsbruck, and environed by Partenkirchen, Ammergau, and Bozen.

About the middle of the sixteenth century, Mittenwald, owing to its proximity to Italy, awoke to the developing art of violin-making, and later the Mittenwalders came under the spell of the strange Jacobus Stainer, who came wandering through the woods from Absam near Innsbruck in search of suitable timber for his violins. One boy, by name Matthias Klotz, was so greatly interested in all he heard of the art, that he persuaded his father—Urbino Klotz—to allow him to learn. Authorities differ as to who was Matthias Klotz's master. It is generally accepted that he studied with his countryman Jacobus Stainer, who was at the zenith of his career when Matthias Klotz was a boy. He is also stated to have been a pupil of Nicolas Amati in Cremona, but his relations with either of these masters are not very clearly defined. It is not improbable that he may have received some instruction from both of them; more probably from Jacobus Stainer. In 1684, the year Nicolas Amati died in Cremona, Matthias Klotz commenced work in his native town. He energetically taught his fellow-citizens, who were glad of work—now that the annual fair, which in 1487 had been transferred to Mittenwald, had returned to Bozen—and established an educational school for violin-making in imitation of the Italians. His three sons, George, Sebastian, and Joseph, all followed their father's footsteps, as did also fourteen other members of the Klotz family, extending over a period of more than 200 years. Sebastian—son of Matthias—was the best maker of the family. The

[1] These words are Burney's. Adami's direction is, *L' ultimo verso del Salmo termina a due Cori, e però sarà la Battuta Adagio, per finirlo Piano, smorzando poco a poco l'Armonia.*

[2] *Manuel des Cérémonies qui ont lieu pendant la Semaine Sainte.* (Rome, Imprimerie de Saint-Michel.)

industry which Matthias Klotz initiated has gradually grown from century to century, though its characteristics have utterly changed. The old days of individual makers who sallied forth with their packs on their backs, selling their productions at the nearest markets, have passed away, instead, these violin makers have become merged into the united body of men who work for the large wholesale manufacturing firms which constitute the Mittenwald industry of the present day. The two most important existing factories are those of J. A. Baader & Co., and Neuner & Hornsteiner, which has recently become Altenoder & Neuner.

The amalgamation of the houses of Hornsteiner & Neuner was most happy, for both families have been intimately connected with the violin-making of the past. The Hornsteiners—who outnumbered the Klotz family—held an excellent position as individual makers for over a century. The best maker of the family was Matthias II., who worked between 1765 and 1793. The Neuners' connection dates as far back as the 18th century. Johann Neuner (*fl.* 1760-64)—the first fiddle maker of the name—was amongst those pioneers who took their work as far as Russia for sale. After him came Matthias Neuner, who founded the manufacturing firm of Neuner & Co. in 1812. His son, who was Burgmeister of Mittenwald, became partner in the firm when it joined hands with the Hornsteiners. The factory now employs over 200 workmen, and yearly sends from 15,000 to 20,000 violins, guitars, and zithers to all parts of the world. The name of Baader has been not less intimately associated with violin-making than those of Hornsteiner & Neuner. The firm was founded by Johann Baader in 1770, he was himself an excellent maker, and gave Johann Baptiste Reiter—one of Mittenwald's most distinguished makers—his first instruction in violin-making. Herr Reiter afterwards went to Würtemberg, where he became one of Jean Vauchel's best pupils. On his return to Mittenwald he was made director of the Mittenwald school, which instructs young students in the art of violin-making, and is under Government control. Medals and diplomas were awarded for the violins of Johann Reiter both in Paris and Vienna; he died January 22, 1899. His son is at present almost the only successful individual maker in Mittenwald. His work is of the most finished type, and he preserves the model and style of his father's master, Jean Vauchel. (A complete list of Mittenwald makers, past and present, is to be found in *Die Geigen- und Lautenmacher*, by W. L. von Lutgendorff. Frankfurt, 1904.) Out of eighteen hundred Mittenwalders quite five hundred are violin makers, chiefly working for the factories. Some of the workers make the different portions of the violins, etc., at their homes, and take them to the factories to be put together, but the greater number work in the factories entirely. The manner of procedure is to allot certain sections of the instrument to each workshop. After the wood has been sawn into planks and stored for drying purposes for about six years it is taken to the first workshop, where the outline of some famous Italian maker's model is marked with a pencil, and cut out with a mechanical fret-saw. From here it passes to the scooping room, where the necessary thicknesses of back and belly are scooped out; next the *f* holes are pierced. The ribs are planed to the exact thickness by one set of men, while others cut the strips into the proper lengths. Then comes the bending of the ribs by means of heated irons to the shape of the mould, and so on from one workshop to another until the completed instrument is sent out, ready for use, at the price of about 10s. or less. There has recently been introduced a new system for quickly drying the wood; this is done by means of dipping it in certain acids, but it is hardly a successful practice, as the violins so made rarely last any length of time, and as a rule acquire a most unpleasant smell. (*Vom Fels zum Meer, Mittenwald und seine Geigenmacher*; Emma Brewer's *Mittenwald* in the *Girl's Own Paper*, Nov., Dec. 1888, Feb. and March 1889; H. R. Haweis's *Old Violins*; Von Lutgendorff's *Die Geigen- und Lautenmacher.*) E. H-A.

MIXED BOWINGS. An amalgamation of the various bow strokes, which are technically known to all players of bow instruments. By a judicious mixing of the different bow strokes an artist gives individuality to his manner of phrasing and rendering of a piece of music. The sign which indicates a down stroke is ⊓, and an up stroke, ∨, and the various known bowings which form part of the technique of violin-playing are: The long stroke executed with the whole length. The half-stroke. The rapid detached stroke with the whole bow. The Martelé, or hammered, executed at the tip of the bow. The Sautillé, or skipping stroke executed in the middle of the bow. The Ricochet, a bounding stroke of a staccato nature executed at the tip of the bow. The Legato stroke, two or more notes in one stroke of the bow. The Staccato Stroke, executed at the tip of the bow;—this is really a series of martelé notes taken in one stroke. The Tremolo, a succession of very quick short strokes in the middle of the bow, played entirely with the wrist. And the several manners of playing arpeggios, which are generally executed with varied bowings and rhythms. O. R.

MIXED CADENCE. See CADENCE, IV. vol. i. p. 441.

MIXED MODES. Writers on Plain-song apply this term to tonalities which embrace the entire compass of an Authentic Mode in combination with that of its Plagal derivative; thus the Mixed Dorian Mode extends from **A**

to the next D but one above it; the Mixed Phrygian from B to the next E but one; the Mixed Lydian from C to the next F but one; and the Mixed Mixolydian from D to the next G but one. [See MANERIA.]

A very fine example of Mixed Mixolydian (Modes VII. and VIII. combined) is to be found in the melody of 'Lauda Sion.' [See LAUDA SION, vol. ii. p. 651 ff.]

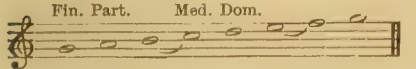
Polyphonic music for unequal voices is always of necessity written in Mixed Modes; since if the treble and tenor sing in the Authentic Mode the alto and bass will naturally fall within the compass of its Plagal congener; and *vice versa*. The composition is, however, always said to be in the Mode indicated by its tenor part. W. S. R.

MIXED VOICES. The English term for a combination of female and male voices, as opposed to 'Equal voices,' which denotes male or female voices alone. Thus Mendelssohn's part-songs for S.A.T.B. are for mixed voices, and those for A.T.T.B. for equal voices. [See EQUAL VOICES, vol. i. p. 787.] G.

MIXOLYDIAN MODE (Lat. *Modus Mixolydius*; *Modus Angelicus*). The Seventh of the Ecclesiastical Modes. [See MODES, THE ECCLESIASTICAL.]

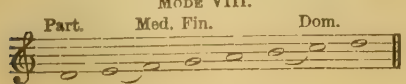
The Final of the Mixolydian Mode is G. Its compass, in the Authentic form, extends upwards from that note to its octave; and its semitones occur between the third and fourth and the sixth and seventh degrees. Its Dominant is D, its Mediant C (B being rejected on account of its forbidden relations with F), and its Participant A. Its Conceded Modulations are B and E, and its Absolute Initials G, B, C, D, and sometimes, though not very frequently, A. The subjoined example will give a clear idea of its most prominent characteristics:—

MODE VII.



In its Plagal or Hypomixolydian form (Mode VIII., *Modus Hypomixolydius*; *Modus perfectus*) its compass lies a Fourth lower—from D to D; and the semitones fall between the second and third and the sixth and seventh degrees. The Dominant of this Mode is C, B being inadmissible by reason of its *Quinta falsa* with F. Its Mediant is F—for which note A is sometimes, though not very frequently, substituted in order to avoid the false relation of *Mi contra Fa* with B. [See MI CONTRA FA.] Its Participant is the lower D. Its Conceded Modulations are the upper D and B, and its Absolute Initials the lower C (below the normal compass of the mode), D, F, G, A, and C.

MODE VIII.



In performance Mode VII. is almost always transposed, in order to escape the high range of its upper notes. Mode VIII., on the contrary, lies well within the compass of ordinary voices.

The Antiphon 'Asperges me,' as given in the Roman Gradual and the Sarum Melody of 'Sanctorum meritis,' printed in the 1904 edition of *Hymns Ancient and Modern*, may be cited as highly characteristic examples of the use of Mode VII.; and an equally perfect illustration of that of Mode VIII. will be found in the melody of 'Iste confessor,' as given in the Roman Vesperal.[1]

In Polyphonic music the Mixolydian Mode is used with great effect both in its Authentic and Plagal form. We can scarcely call attention to a finer instance of the use of the VIIth mode than Palestrina's Missa 'Dies sanctificatus'; or of that of the VIIIth, than his Missa 'Iste confessor.' W. S. R.

MIXTURE. An organ stop ordinarily furnished with from two to five comparatively small pipes to each key. It is compounded of the higher-sounding and therefore shorter members of the 'foundation' and 'mutation' classes of stops, combined or 'mixed,' and arranged to draw together, as in practice they are seldom required to be used separately. The Mixture represents or corroborates the higher consonant harmonic sounds suggested by nature, and in the bass produces tones to the third or fourth octave above the unison or chief foundation tone. As the musical scale ascends the higher harmonics become weak and inaudible to the ear; hence in a Mixture stop it is customary to discontinue the higher ranks as they ascend, one or more at a time, and insert in lieu a rank of lower tone than was previously in the stop, but appearing as a separate stop. This alteration is called a 'break.' These return-ranks serve the best of purposes. In a pianoforte it is well known that the strings increase in number from one in the bass to two higher up, and afterwards to three, to preserve an evenness in the tone. In a similar manner the return-ranks, when well managed, considerably reinforce the strength of the treble part of the organ. [A Full Mixture is generally of three ranks, consisting of the following intervals in relation to the unison:—15, 19, 22, or c'', g'', c''', when c is struck. T. E.] [See MUTATION and J. J. Wedgwood's *Dictionary of Organ Stops*.] E. J. H.

MIZLER (Mitsler), VON KOLOF, LORENZ CHRISTOPH, born at Heidenheim, Würtemberg, July 25, 1711, died at Warsaw, March 1778; was educated at the Gymnasium of Anspach and the University of Leipzig. He was one of Bach's scholars. In 1734 he became a magistrate, and was generally a cultivated and prominent person. His claim to perpetuity is his connection

[1] Care must be taken to distinguish these melodies from the Roman 'Sanctorum meritis,' and the Sarum 'Iste confessor,' which are not in the Modes here indicated.

with the 'Association for Musical Science,' which he founded at Leipzig in 1738 and kept together. Amongst its members were Handel, Bach, and Graun. Bach composed a 6-part Canon and the Canonical Variations on 'Vom Himmel hoch,' as his diploma pieces. Mizler edited a periodical, the *Neu-eröffnete Musik-Bibliothek* (1739-54), wrote a treatise on Thorough Bass (Generalbasslehre), in which he seems to have pushed the connection of music and mathematics to absurdity. (See Spitta, *Bach*, Engl. transl. iii. 22-25.) He translated Fux's *Gradus* into German (1742). [See the *Quellen-Lexikon* for other works.] G.

MOCK DOCTOR, THE. See MÉDECIN MALGRÉ LUI.

MODERATO. 'In moderate time,' or 'moderately.' This direction is used either singly as a mark of time, or as qualifying some other mark of time, as Allegro moderato, or Andante moderato, when it has the result of lessening the force of the simple direction. Thus Allegro moderato will be slightly slower than Allegro alone, and Andante moderato slightly faster than Andante. Moderato alone is never used by Beethoven, except in the doubtful Pianoforte Sonata in G called No. 37. He uses Molto moderato, however, in the Sonata for Pianoforte and Violin, op. 30, No. 3, and Moderato e grazioso in the Menuetto of the Pianoforte Sonata in E♭, op. 31, No. 3. Assai moderato is used in the march from the 'Ruins of Athens,' and Moderato cantabile molto espressivo in the beginning of op. 110. Molto moderato is used by Schubert in the Pianoforte Sonata in B♭, No. 10. Instances of Allegro moderato in Beethoven's works will occur to every one. Allegretto moderato is also very common. Vivace moderato occurs in Bagatelle No. 9 (op. 119). Mendelssohn is very fond of the direction Allegro moderato, using it no less than eight times in the 'Elijah' alone. Schumann very constantly used Moderato alone, translating it into German sometimes by Mässig, and sometimes by Nicht schnell. See the Album, Nos. 3, 5, 13, 16, 19, etc. M.

MODES, THE ECCLESIASTICAL. All mediæval art-music is based upon a system of Eight Modes. This system is the result of a long, intricate and controverted history; and it will be best explained by an historical method of treatment.

The first question that arises is with regard to the antiquity of the Modes. It has been taken for granted that when ancient Greek writers such as Plato and Aristotle speak of certain *Harmoniai* (ἁρμονίαι) distinguished by Greek tribal names as Dorian, Lydian, Phrygian, etc., they are referring to modes such as were in use in the later Middle Ages under those names. In the article GREEK MUSIC reasons have been given to prove that this is a false assumption, and to show that the groups of notes described as Dorian, Phrygian, etc., by the Greek writers of classical times were distinguished from one another by pitch and grouping, and not, properly speaking, by tonality.

Now the mediæval modal system is one which depends on differences of tonality, and is comparatively indifferent to pitch. The history of the mediæval modes is therefore, to a considerable extent, the history of the evolution of tonality. Tonality may be defined as the musical character belonging to a mode or a melody by reason of the mutual relation of the notes employed. It is determined chiefly by three things, (1) the range and sequence of the notes, and their relation to the two fixed points of (2) the Dominant, and (3) the Final.

The early Greek *Harmoniai* or groupings of notes and tetrachords were experimental in character; one of them proved to be more valuable than all the rest, viz. the Octave-system (see MONOCHORD), and it came, in theory at any rate, to supersede all the others, though, they being no doubt associated with particular instruments, continued to be in practical use long after theory had advanced beyond them. This Octave-system represented only one form of tonality. Variety was provided not by differences of tonality but by differences of *genus* (γένος), the enharmonic, the chromatic and the diatonic *genera*. [See GREEK MUSIC.] In the diatonic genus (which alone need be taken into account for the present purpose) the tonality may be roughly described as that of the modern minor scale or mode, for the series of notes presented tones and semitones in the following order ascending

T S T T S T T | T S T T, etc.

equivalent to the white notes of the pianoforte from A upwards.

A reader unaccustomed to the modes and the idea of tonality will realise what this implies by contrasting the T S T T S T T series of intervals of the modern minor scale or mode, with the familiar T T S T T T S series of the modern major scale or mode. This Greek diatonic system, standing, as it did, alone, afforded no sufficient opportunity for any idea of differences in tonality. Yet even so the Greeks began to see that the character of a melody depended upon its reference to a given note of the series. The fixed note in their series of notes was the Mese (μέση), the central note, which served as the hinge or meeting-point for the two conjunct tetrachords of the Octave-system (E–*e*), or in later days for the two octaves of the Perfect System (A–*a*). (See MONOCHORD.) Thus Aristotle called attention (*Probl.* xix. 20) to the way in which the character of a melody depended upon the relation of its notes to the constantly recurring Mese. Here are the first signs of the sense of Tonality, and of a Mese or Dominant; but they are only rudimentary as yet.

The *Harmoniai* and their designations fell into the background as the advance was made first towards the Octave-system and then the Perfect System; thereupon that sense of pitch, to which the early Greeks attached so much significance, was satisfied in a new way, viz., by transposing the Octave-system to different pitches. When thus set at a special pitch it was called τόνος; and it was natural to give to these various τόνοι the same designations which had previously been employed to denote pitch, viz., Dorian, Lydian, etc.

Thus when the old (Dorian, Phrygian, Lydian, etc.) *Harmoniai* or groups went out of vogue, there came up in their place the (Dorian, Phrygian, Lydian, etc.) *Tonoi*, each formed by transposing the Octave-system to the Dorian, the Phrygian, the Lydian, etc. pitch. At this point there appeared upon the scene Aristoxenus of Tarentum, a pupil of Aristotle (*fl. c.* 310), the author of many developments in musical theory. He noted the indefiniteness of the old use of the designations Dorian, Phrygian, etc., and gave them a definite pitch. He made out a scheme of thirteen *Tonoi*, placing one on each semitone of the octave, and he attached to each some one of the old designations. The enumeration is found in two forms in the writings of Cleoneides, a disciple of Aristoxenus; his own account is not extant. In the one form thirteen designations are used, in the other only eight, five of them being utilised for a pair of *Tonoi*.

		Mese.
1 (highest)	Hypermixolydian	*e* Hypermixolydian or Hyperphrygian.
2	Mixolydian	*d*♯ Mixolydian or Hyperionian.
3		*d* Hyperdorian.
4	Lydian	*c*♯ Lydian.
5		*c* Æolian.
6	Phrygian	*b* Phrygian.
7		*a*♯ Ionian.
8	Dorian	*a* Dorian.
9	Hypolydian	G♯ Hypolydian.
10		G Hypoæolian.
11	Hypophrygian	F♯ Hypophrygian.
12		F Hypoionian.
13 (lowest)	Hypodorian	E Hypodorian.

At a later date the Aristoxeneans raised the number to fifteen by adding a Hyperlydian and a Hyperæolian: the *Tonoi* thus fell into three groups of five each, the upper group distinguished by the prefix Hyper and the lower by the prefix Hypo.

This system of *Tonoi* or Keys remained the chief feature of Greek musical theory for the next 500 years. It provided only for one tonality or mode, viz. that represented by the Octave-system, or later by the Perfect System of two octaves; but it provided for it at every possible pitch. (See vol. ii. pp. 226-229.) Meanwhile advances were being made towards a fuller sense of tonality and towards the modal system.

Aristoxenus himself was active in this direction. He showed that as there are in the diatonic genus three different species of tetrachord possible, viz., those represented by the formulas T T S, T S T, and S T T, so there are seven possible species of octave. In the writings of his followers (his own treatise unfortunately breaks off at this point) these are thus described—

1. S T T S T T ^{m} T { Hypate Hypaton to Paramese } (B—*b*) Mixolydian.
2. T T S T T ^{m} T S { Parhypate Hypaton to Trite Diezeugmenon } (C—*c*) Lydian.
3. T S T T ^{m} T S T { Lichanos Hypaton to Paranete Diezeugmenon } (D—*d*) Phrygian.
4. S T T ^{m} T S T T { Hypate Meson to Nete Diezeugmenon } (E—*e*) Dorian.
5. T T ^{m} T S T T S { Parhypate Meson to Trite Hyperbolæon } (F—*f*′) Hypolydian.
6. T ^{m} T S T T S T { Lichanos Meson to Paranete Hyperbolæon } (G—*g*) Hypophrygian.
7. ^{m} T S T T S T T { Mese to Nete Hyperbolæon } (*a*—*a*′) Hypodorian.

These seven octaves were distinguished from one another in range and sequence of intervals; so far they exhibited the first element of tonality. But they were not distinguished from one another by difference of Mese or Dominant, and there is as yet no idea of a Final. The note Mese (= *a*) acted as Dominant throughout, and this accounts for the designations. Mixolydian, signifying high pitch, is given to No. 1 because it has its Mese at the highest point, Lydian at the next highest, and so on. The position is marked above by ^{m}. Thus the designations Mixolydian, Lydian, etc., here appear in inverse order as compared with their use for the *Tonoi* or Keys. The contradiction is more apparent than real. In each case it is the Mese that determines the sense of pitch. In the *Tonoi*, being transpositions of the scale, the Mese varies actually in pitch just as all the other notes of the *Tonos* vary in pitch; and the highest *Tonos* in range is the highest also in pitch. In the Seven Species of Octave, however, being mere sections of a fixed scale, the Mese is at a fixed pitch, and only varies relatively to the other notes of the octave. Consequently the octave which is the lowest in range gives the effect of the highest pitch, since its melodies group round the Mese, which is at the top of the Octave; conversely, the octave which has the highest range, gives the effect of low pitch because of the prevalence of its lowest note. In other words, the designations are given to the *Tonoi* in regard to the actual pitch of the Mese, but to the Seven Species of Octave in regard to the relative pitch of the Mese (see vol. ii. p. 225).

This doctrine of the Seven Species of Octave remained without further development among the disciples of Aristoxenus, until the advent of Ptolemy in the middle of the 2nd century A.D. Differences of pitch were now felt to be of less importance, and distinctions of species were more highly appreciated; the consequence was, that interest was transferred from the *Tonoi* or Keys, which merely gave the same scale at different pitches, to the Seven Octaves which

represented different species. Ptolemy reduced the Tonoi to seven in number, equating them to the Seven Species of Octave, and using transposition as a way of setting all the species at a uniform pitch, but with varying signatures. When this was done it was natural to ascribe to each species a Mese of its own, which should be a real Mese or middle note of the Octave, exercising the same function with regard to it, that the original Mese exercised with regard to the original (Dorian) Octave of the Perfect System. This necessitated the double nomenclature described in vol. ii. p. 229 E. According to the new method (*κατὰ θέσιν*) each species of Octave could have a Mese as its central note, a Nete as its highest note, and so on. As each octave thus acquired its own Mese, which was not as formerly in a varying position but always the central note, the inverted series of denominations formerly given to the Octaves became inappropriate, and the series of names was attached to the Seven Species of Octave in the same order in which it was attached to the *Tonoi* and not in the inverse order.

Thus Ptolemy's Seven Octaves, which we may now begin to call Modes because they are distinguished by their Tonality and valued accordingly, may be set down in tabular form thus: First as seven Modes varying in pitch, but each formed of a section of the Perfect System or white notes of the pianoforte.

			Mese.		
1 (highest).	Mixolydian	(*a*—*a*¹)	*d*	= Paranete Diezeugmenon	Κατὰ δύναμιν.
2.	Lydian	(G—*g*)	*c*	= Trite Diezeugmenon	
3.	Phrygian	(F—*f*)	*b*	= Paramese	
4.	Dorian	(E—*e*)	*a*	= Mese	
5.	Hypolydian	(D—*d*)	G	= Lichanos Meson.	
6.	Hypophrygian	(C—*c*)	F	= Parhypate Meson	
7.	Hypodorian	(B—*b*)	E	= Hypate Meson	Κατὰ θέσιν.

Secondly, reduced by the system of *Tonoi* to uniform pitch but varying in signature.

The successors of Ptolemy, as it appears from the late Byzantine writer Bryennius, came to regard each of these modes as a pair of conjunct tetrachords meeting in Mese; they then added below a Proslambanomenos or disjunct note to make up the octave, thus repeating again the process which had taken place years before in the extension downwards of the two lower conjunct tetrachords of the Perfect System (see MONOCHORD); and the old names of the notes in the Octave were reapplied to each mode in slightly altered form, thus:—Proslambanomenos, Hypate, Parhypate, Lichanos, Mese, Parhypate, Lichanos, Nete.

The main results of these changes were as follows: (1) The Seven Species of Octave of the theorists became seven practical working Modes,[1] distinguished from one another essentially by their different sequence of intervals, and only incidentally by difference of pitch. (2) The Mese became the regular Dominant of the mode: and (3) the modes ranged a note lower than they had previously done owing to the addition of the Proslambanomenos. Thus the Dorian mode is found to have its seat as ever in the octave from E upwards, with *a* as its Mese or Dominant: but it now descends to D. Similarly the Phrygian has *b* for its dominant and E for its lowest note: while the Lydian has *c* and F, the Mixolydian *d* and G.

So far it has been possible to trace the evolution of the modal system in the writings of the theorists. Two out of three chief features of tonality have emerged, viz. (1) the range and succession of the intervals in each mode, and (2) the idea of the Dominant. Hitherto, however, there is no sign of any idea of the importance of the Final, which is the third chief ingredient of Tonality. The conception of the Dominant is traceable back as far as Aristotle, but the significance of the closing note of a melody had not as yet been scientifically recognised, at any rate by the theorists. At this point in the evolution the series of writers on the theory of music, who have hitherto been our guides, to all intents and purposes comes to an end. No Greek writers are forthcoming after the 4th century A.D. until Bryennius in the 14th; the Latin writers do little to fill the gap, at any rate until the 9th. Boethius, Cassiodorus, and Martianus Capella in the 5th and 6th centuries are of little value, as they merely repeat, after the manner of an encyclopædist, such information as they derived from the Greek writers. Happily at this date when the theorists fail, there becomes available for the western history a large collection of actual musical compositions, in which the further evolution of the modal system may be traced.

The developments in the West between the 6th and the 9th centuries are bound up with the great music school (*Schola Cantorum*) of Rome. They go forward in silence; for it is only when the Roman chant reaches the Frankish Empire that the silence is broken by fresh writings of theorists, called forth here, as in the case of the Liturgy, by the new ways recently imported from Rome. The early Roman church was pre-eminently Greek in character and personnel, therefore its church music was not different in this respect from the Roman secular music which clung closely to the Greek traditions. From the 5th or 6th century onward the music school of the Roman Church grew in importance and organisation; and, even when Greek ceased to be the liturgical language

[1] Later followers of Ptolemy added a Hypermixolydian Mode, thus making eight.

of the Roman Church, there is no reason to think that any break came in the continuity of the Greek tradition so far as the music was concerned. The bulk of the so-called Gregorian music (see that heading) was composed in these surroundings, and whatever importations there were at this period from outside, were from Greek sources. It is therefore to be expected that the theory that lies behind the Gregorian music should prove to be in line with the Greek traditions. For a full discussion of the character of this music the reader is referred to the article PLAIN-SONG; but one or two points must be taken into account here.

The bulk of the music falls into two classes, and is either responsorial or antiphonal in its style. Now the responsorial music, which is the older class of the two, is characterised by a Dominant note, which serves as the note on which the greater part of the text is recited; but it sets no great store on the Final. It therefore corresponds with the state of development already reached and expounded. The antiphonal style was of later introduction, coming from the East in the 4th century. Here the Final is of greater moment, for the antiphon consists of a melody, which has no reciting note, and in which, therefore, tonality is largely determined by the close. It is safe, therefore, to suppose that with the progress of the antiphonal style, there went along a growth in the conception and importance of the Final. Meanwhile a transformation from simple to elaborate music was taking place, as musical proficiency grew within the Roman School. The responsorial class of music was more affected by it than the antiphonal. The elaborate embroideries which decorated the chant of the Graduals and other Responds tended to obscure the primitive reciting note; the Final, however, was only brought into greater prominence by the process of elaboration. Consequently, as the music grew more ornate, tonality came to depend more upon the newly conceived Final and less upon the older conception of the Dominant. This change is one which may safely be said to have come about during this intervening period from the 5th to the 8th centuries in which the theorists are silent.

A more difficult change to account for is that by which the so-called 'plagal' modes came into existence in their mediæval form. The germ of them is clearly discernible in the prefix 'Hypo,' which characterised the lowest three of the Seven Modes. But in Ptolemy's time these were not accounted of a different class from the rest; they had the same general character (*mutatis mutandis*); and the prefix merely denoted that they were each in pitch a fourth below the mode with the corresponding designation. The mediæval plagal modes took from these their names and ranges, but they had not their independent position and other characteristics. Each plagal mode depended upon the corresponding authentic mode; it had the same Final, and was so closely related to it, that, when the modes came to be denoted by numbers, it was at first thought more natural to put the two under one number, only distinguishing them from one another by the term 'Authentic' and 'Plagal.' Thus the Greeks reckoned them as four pairs; but the Latins, as they emancipated themselves from Greek influence, came to denote them by the numbers from one to eight.

			Range.	Dominant.	Final.
1st.	First Mode	Authentic (Dorian)	D—*d*	*a*	D
2nd.		Plagal (Hypodorian)	A—*a*	F	D
3rd.	Second Mode	Authentic (Phrygian)	E—*e*	*b*	E
4th.		Plagal (Hypophrygian)	B—*b*	*a*	E
5th.	Third Mode	Authentic (Lydian)	F—*f*	*c*	F
6th.		Plagal (Hypolydian)	C—*c*	*a*	F
7th.	Fourth Mode	Authentic (Mixolydian)	G—*g*	*d*	G
8th.		Plagal (Hypomixolydian)	D—*d*	*c*	G

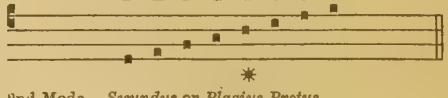
This arrangement of eight modes in four pairs must be subsequent to the evolution of the idea of the Final; for it is the Final that is made the main link between each pair of modes. It also seems to be subsequent to the decay of the Dominant in importance; for while the Dominants of the authentic modes keep to the old line as being the Mese of the mode, those of the plagal modes are determined only with reference to the corresponding authentic Dominant, being normally a third lower.

It is further to be observed that a new mode has been added to the seven, viz. the Hypomixolydian (quite unlike the previous one of that name), which occupies the same octave as the Dorian, but in the new condition of things is entirely unlike it in any other respect.

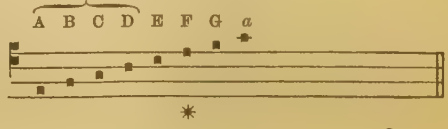
There is also conceived to be a structural difference between authentic and plagal. The extra note that was added to the two conjunct tetrachords in the form of a Proslambanomenos (see above) came to be regarded, when the old Greek tetrachordal system faded, as forming with the lower tetrachord of the two a pentachord or fifth; consequently, each authentic mode was looked upon as a pentachord with a tetrachord above it. This pentachord it shared with its plagal brother; and thus a plagal mode was conversely viewed as a tetrachord with a pentachord above it. In the former case the Dominant (or 'Media' as the Latins called it, $=\mu\acute{\epsilon}\sigma\eta$) was the hinge or meeting-point of the two, and in the latter case the Final. [See also MANERIA, *ante*, p. 41.]

TABLE OF EIGHT MODES.

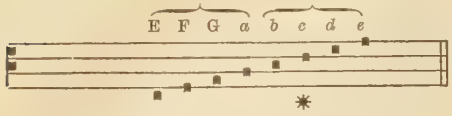
1st Mode. *Primus* or *Authentus Protus.*



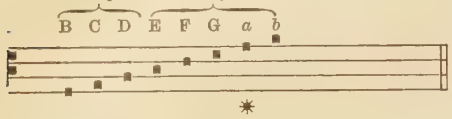
2nd Mode. *Secundus* or *Plagius Protus.*



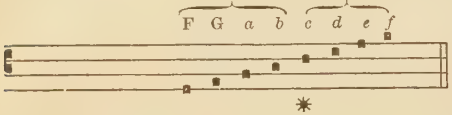
3rd Modo. *Tertius* or *Authentus Deuterus.*



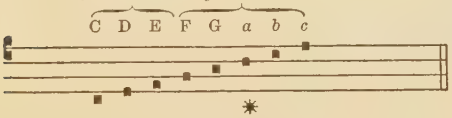
4th Mode. *Quartus* or *Plagius Deuterus.*



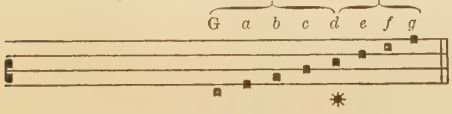
5th Mode. *Quintus* or *Authentus Tritus.*



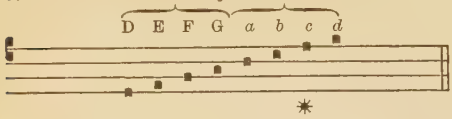
6th Mode. *Sextus* or *Plagius Tritus.*



7th Mode. *Septimus* or *Authentus Tetrardus.*



8th Mode. *Octavus* or *Plagius Tetrardus.*



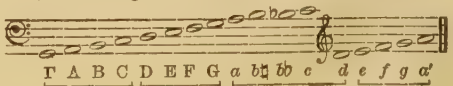
This brief analysis tends to show that, though the exact genesis of the dual system of Authentic and Plagal Modes cannot be traced, it proceeded along very natural lines, and arrived at a very convenient and symmetrical result. The development still went on under the Greek ægis, as the terminology would alone be sufficient to prove. Its date is a matter of more difficulty. The earliest literary mention of the system of Eight Modes, or Octoechus as the latest Greeks called it, is found in a table given in some editions of Boethius; but as there is no mention of it in the text it must be taken to be a later addition. The next mention is to be found in a passage of Alcuin of the end of the 8th century, where the system is spoken of as a matter of common knowledge. Among Greek writers (so far as they have been explored) an even greater conspiracy of silence prevails. So literary evidence is entirely wanting. The history of the Schola Cantorum suggests the 5th or 4th century as a suitable date for such a settlement; and this view of the case is amply borne out by an examination of the Gregorian Music itself.

The older class, the responsorial music, demands in its highly elaborated form an eight-mode system, *e.g.* the Responds of the Hours employ normally for the 'Verse' one of eight set formulas corresponding to the modes. Similarly in the antiphonal music there are the eight Gregorian Tones corresponding also to the modes. (See PSALMODY.) These two facts alone are enough to prove that the music, as we now have it, presupposes the eight-mode system. Now there are many lines of evidence that converge to show that the main bulk and nucleus of this music is to be dated as belonging to the 5th and 6th centuries. A persistent tradition ascribes the final regulation of it to S. Gregory (590 to 604). The festivals and other occasions for which the music was written are as a rule earlier than his date; and the festivals of later origin differ markedly from the pre-Gregorian festivals in having borrowed music instead of original music provided for them; this is especially the case in regard to the Mass. Further, the text of the Latin Bible employed is an ancient one that was for most purposes superseded in the 5th and 6th centuries. These and other considerations all point in the same direction. From them it may be concluded, though with some considerable hesitation owing to the difference of views among students of the question, that the eight-mode system lay behind the great plain-song compositions that form the musical Corpus of the Western Church; and must, therefore, have arisen at least as early as the 5th century.

When literary evidence as to the Modes again becomes available in the Carlovingian era, the system is regarded as an old-established tradition. Greek theory still holds the field, and Aurelian, the first of a new group of writers that gives any full discussion or statement of the Modes, quotes Greek teachers as his authorities. In fact the theory was already so ancient that some of it was no longer intelligible to the Greek teachers, and the actual practice of liturgical singers had in some respects moved away from it. One of the difficulties, therefore, that confronted the Franks, as new disciples of the *Cantilena Romana*, was that of reconciling the practice and the theory; indeed, we owe the treatises written in the 9th century, by such writers as Aurelian, Regino, and Odo, to the fact that such discrepancies existed, and that the Franks desired to reconcile them.

It will be well to sum up what was clear and fixed at this important epoch before going on to discuss what was doubtful or what was changing in practice.

1. The Greek Perfect System was the basis of all. This gave the following possibilities.



The range was ample for vocal purposes; it was even extended on occasions one further note downwards (φ), and several notes upwards;

while the use of the ♭ gave an opportunity not only for transposition but also for obtaining some variety by the use of an accidental. Moreover, by combining transposition and the use of the ♭ some further chromatic effects could be obtained, and were in fact employed.

2. This range was subdivided into tetrachords, and this arrangement accorded with the position of the eight modes, for the lowest tetrachord comprised the four lowest limits of the plagal modes : the next comprised the four finals, and was always so described ; the third in fact comprised the four Dominants (Mese) of the authentic modes, but it was not so described.

3. The doctrine of the Final was very clearly held, though the doctrine of the Dominant had almost entirely dropped out of sight.

4. The distinction between Authentic and Plagal was clearly drawn in theory, though it was being found a difficult task to draw the line in practice. No tradition survived as to the origin of the distinction. (The fable that S. Ambrose made the authentic modes and S. Gregory the plagal is of much later date.) It is only supposed that the plagal were devised to include the melodies of lower range, and no significance is attached to the difference of dominant between the authentic and plagal.

Yet even with all these four points clear, there remained much for the new musicians to do in the way of exposition and development of the modal system. They had before them (1) a great collection of masterpieces which had been in use two hundred years and more, (2) an eight-mode system of Greek origin and unknown antiquity, which even their Greek teachers could not fully explain, and (3) works of theorists (such as we have already had in review) extending only down to the 5th or 6th century and exhibiting the theory at an inchoate stage of development.

The works of Boethius and the rest of the theorists, were, so far as the modes went, far more a source of mystification than of enlightenment. Valiant and clumsy attempts were made by the writers of the 9th and 10th centuries to reconcile the earlier with the later, the past theory and the actual practice (*e.g.* in the nomenclature of the modes); but they only resulted in much confusion both at the time and since. When, however, this element is eliminated from their writings, there remains a real development and a true exposition of the modal system to be found even in the earliest of the Frankish writers ; and when once Guido of Arezzo had had the courage to say that 'the book of Boethius is of no use to singers, but only to philosophers,' emancipation had come, and the road of progress lay open to future generations.

The chief features of the modal system which we have already brought to light, *e.g.* the combination of pentachord and tetrachord in the authentic, and its inversion in the plagal, were duly expounded by these writers. They have also the credit of having resisted an attempt to make twelve modes instead of eight ; they rightly pointed out that twelve were quite unnecessary, granted the power to transpose and the use of the *b*♭. They laboured to expound and maintain the real tonal independence of the modes ; and this in itself was no easy task in the days before Guido when the singers had in the neums no absolute guide as to the intervals and notes which they were to sing.

The chief innovation for which this period was responsible was the change of the Dominant of the third mode from the dubious note *b* to *c* ; it took place in the 10th or 11th century, and, though the improvement was universally accepted in theory and the innovation was adopted in the most prominent position possible, *i.e.* in the case of the reciting note of the third tone, which thenceforward was *c* not *b*, the change was never carried out thoroughly, and plenty of traces of the old use of *b* as Dominant have survived.

The main difficulties that the writers of this period had to face lay in two very practical directions, and were caused by a change in practice. Both the antiphons and the responds had ceased to be used in the old way, and much trouble was caused to the singers in consequence. In many of the responds the custom had arisen of repeating, after the verse or verses, only the latter part of the respond itself instead of the whole. It thus became necessary to lay down rules for the establishing of a proper musical relation between the end of the verse and the opening notes of the repeat. A similar process of shortening had caused the antiphon to be repeated no longer after each verse of the psalm, but only once or twice in the course of the psalmody. Now the endings of the Tones had always been carefully adapted so as to suit the opening phrases of the antiphons ; but when the repetition of the antiphon decayed, this close intimacy was no longer so necessary. This change of custom affected also the view taken of the tonality of the antiphon. As originally used, its opening phrase was all-important ; and it was assigned to this or that mode (and associated therefore with this or that tone) according to the character of its opening. When, however, it came to be used rarely, or only once at the end of the psalm, the end of the antiphon and its Final became far more important than its opening ; consequently, according to the newer plan, its tonality was determined no longer by its *incipit* but by its last note.

The difficulty with the Responds was soon settled once for all, by making, where necessary, some slight but permanent accommodation in the music ; but the other difficulty was a more or less permanent one ; the mediæval Tonals continued to offer varying solutions of it, and out of it there grew such further developments

of modal theory as the settlement of the Absolute Initials, *i.e.* the notes in each mode on which a melody may begin.

The development that produced the sequences (see SEQUENCE) entailed a further modification in the modal theory that went far to break down again the distinction between authentic and plagal. In many cases the sequence-melodies were written, as it were, in two registers; their compass, therefore, exceeded the normal limits assigned to any one mode by the theorists of the 10th to 12th centuries (who in this respect were much more strict than the original writers of the music had been); it then became usual to regard them as being both in the authentic and in the corresponding plagal mode.

This was the last modification of any great moment that plain-song brought to the theory of the modes. Such other modifications as came to it between the 12th and the 16th centuries were due principally to two other causes, (1) the invasion of popular music or the spirit of folk-song, and (2) the growth of harmonised and measured music.

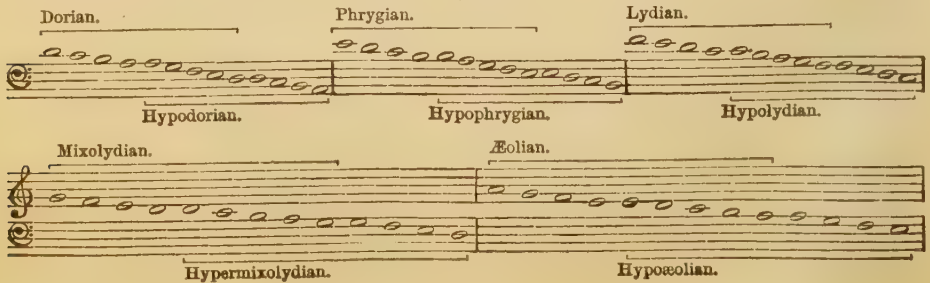
The tonality that was congenial to folk-song especially in France was one that had always been uncongenial to the classical plain-song, viz. the scale which resulted from the uniform use of the ♭ with the fifth and sixth modes, and is identical with the modern major scale or mode. This pair of modes had always been the least used of all the four; without the flat, there was too much tritone in it, even for mediæval ears that were not so sensitive in that respect as modern ones; with the flat, the mode did not much differ from the fourth pair except in having a semitone below the final, *i.e.* in possessing a leading note, which from the point of view of unharmonised music was rather a disadvantage than an advantage. This major scale, however, is the joy of folk-song; and, as such, it tended to invade the art-music and even to claim a place cheek by jowl with the severe ecclesiastical plain-song.

This tendency was still further emphasised by the growing art of harmony. As the perfect close was invented and became the centre of the harmonic art, the leading note became a necessity; the F mode with ♭ (or the C mode without it) became favourites; other modes had to submit to chromatic alteration in the interests of harmony; and though for a surprisingly long time the feeling for the old tonality was so strong that this alteration had to be disguised (see MUSICA FICTA), yet it was clear that eventually it would have to yield before the steady pressure of the advancing art of harmony. The period of the rise of harmony is thus the period of the decay of the old tonality, and of the modal system. The ancient modes gradually disappeared until only the major and minor modes remain. A good deal of richness in melodic beauty was sacrificed in the process, and modern melody, even with all its chromatic freedom, has not such a wide range of variety as the old modal system afforded. No one will doubt that the gains in harmony more than compensated for the losses in melody; but it must be emphasised that all was not clear gain.

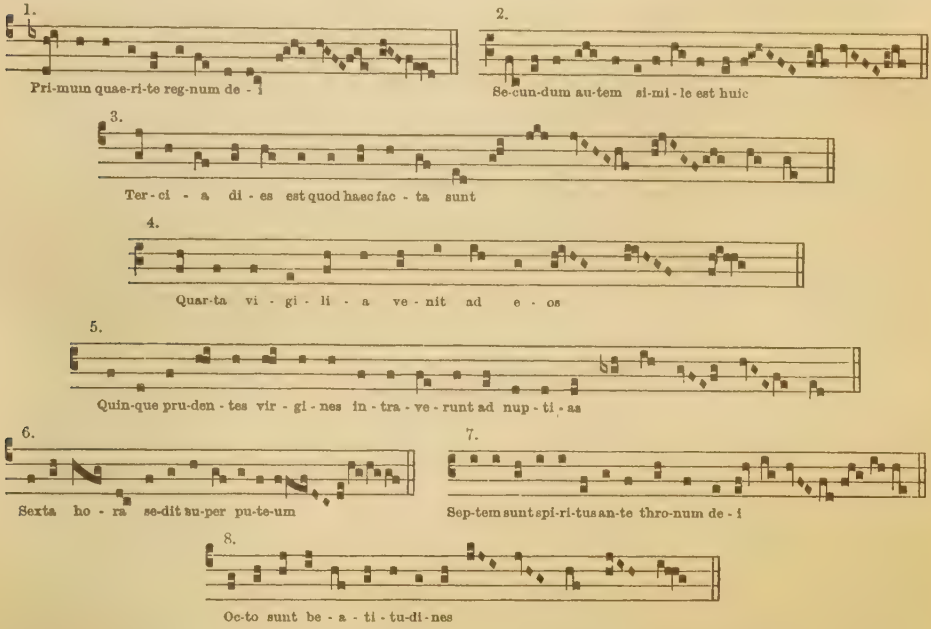
The modal system as handled and transformed by the pioneers of modern harmony is a matter of far less interest, for all was in a continual state of transition; and though at certain points a halt seems to be called and a permanent interest stirred by the genius of Dunstable, or of the great Flemings, or Palestrina and his contemporaries, yet from the point of view of harmony the old modal system cannot be regarded as anything else but a slavery, from which it was desirable that the polyphonic school should work its escape as soon as possible.

In the closing stages of the decay an attempt was made to revive the proposal to reckon twelve (or even fourteen) modes. (See DODECACHORDON.) There was much more to be said for this from the point of view of polyphony in the 16th century than there had been in the 9th from the point of view of plain-song; but the modes were then a vanishing quantity, and the enumeration is only misleading if it is applied to the classical plain-song of earlier days. The Renaissance sent the musicians back afresh to the old writers on musical theory, but the attempts of Gafori and his followers to combine the old and new were as little successful in the 16th century as they had been in the 9th; they added nothing but some fresh elements of confusion to the theory of the modes.

The following tables of the fourteen modes as given by Glareanus may be compared with the table given above to represent the eight modes of the mediæval plain-song:—



The following are the eight representative melodies (or Neums) devised in the later Middle Ages in order to show off the special characteristics of each mode :—



1.
Pri-mum quae-ri-te reg-num de - i
2.

[The ancient authorities are enumerated in the article headed SCRIPTORES. Among modern writers the following may be named. Greek Music—Westphal, *Harmonik und Melopoie der Griechen*, 1863, and Gevaert, *Histoire de la musique d'antiquité*, Ghent, 1875 and 1881. These writers and their followers are opposed by Monro, *The Modes of Ancient Greek Music*, Oxford, 1894, and Macran, *Harmonics of Aristoxenus*, Oxford, 1902. As regards mediæval music, Gevaert has also put forward a view of the evolution of the mediæval modes out of the ancient in his *Mélopée Antique*, Ghent, 1895—a book of great value even to those who cannot accept his theories. Another view, also based on Westphal, is given by Gaisser in his *Système musical de L'église Grecque* (Rome, 1901). The account given above differs entirely from these as regards the mediæval period, and follows Monro and Macran as regards the earlier history. See GREEK MUSIC, vol. ii. pp. 223 ff.] W. H. F.

Some further points remain to be noticed, more especially in connection with the use of the modes in polyphonic music.

[Besides its Final and Dominant, every mode is distinguished by two other highly characteristic notes—its Mediant and Participant.

The Mediant—so called from its position between the Final and Dominant—is always the third of the scale in the Authentic Modes, unless that note should happen to be B, in which case C is substituted for it. In the Plagal Modes its position is less uniform. The Participant is an auxiliary note, generally in the immediate neighbourhood of the Mediant in Authentic Modes, and, in the Plagal forms, coincident with the Dominant of the corresponding Authentic scale. Some modes have a second Participant; and one has a second Mediant, which, however, is not very frequently used.

Each mode is also influenced by certain notes, called its Modulations or Cadences, which are of two kinds. To these are added two or more subsidiary notes, called Conceded Modulations (*modulationes concessae*), among which we often find the inverted seventh, *i.e.* the seventh taken an octave lower than its true pitch, and, consequently, one degree below the natural compass of the scale.

Upon one or other of these modulations, either regular or conceded, every phrase of every

melody must begin and end, subject only to two further restrictions: (i.) The first phrase must begin on one of a somewhat less ample series of notes, called the Absolute Initials; (ii.) The last phrase can only end on the Final of the mode.

The following table shows the Compass, Final, Dominant, Mediant, Participant, Regular and Conceded Modulations, and Absolute Initials of the tonality with regard to the situation of its Final—to the difference of effect produced by a point of ultimate repose placed in the middle of the scale, as contrasted with that peculiar to one resting on the lowest degree. And a similar difference of expression may be found, even in secular music, if we only examine it carefully. Take, for instance, the three follow-

Numbers.	Names of the Modes.	Range.	Fin.	Dom.	Med.	Part.	Modulations: Regular. Mod. Con.	Modulations: Conceded. Absolute Initials.

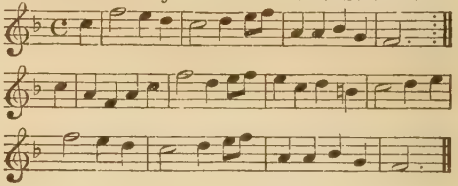
every mode in the series, including the Locrian and Hypolocrian, which, in spite of their manifest imperfection, have sometimes been used in secular music.

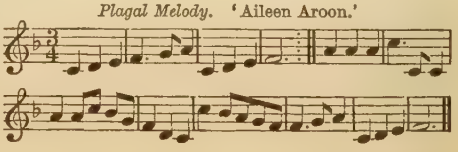
Just as the Greeks assigned a special character to their scales, so in mediæval days theorists assigned to each mode a special epithet descriptive of its æsthetic peculiarities. Thus, the First Mode was called 'Modus Gravis'; the Second, 'Modus Tristis'; the Third, 'Modus Mysticus'; the Fourth, 'Modus Harmonicus'; the Fifth, 'Modus Laetus'; the Sixth, 'Modus Devotus'; the Seventh, 'Modus Angelicus'; and the Eighth, 'Modus Perfectus.'[7] On carefully examining this classification we shall find that the Plagal Modes are everywhere characterised by a calmer and less decided force of expression than their authentic originals; thus, while the latter are described as grave, mystical, joyful, and angelic, the former are merely sad, harmonious, devout, and perfect. The solemn grandeur of the First Mode gives place to the sadness of the Second; while the joy of the Fifth merges, in the Sixth, into devotion. That this distinction can be in no wise dependent upon the position of the semitones is evident; for we have already shown that these are similarly placed, in different modes; it must, therefore, be entirely due to the peculiar aspect of

ing beautiful old melodies, in the Ionian Mode transposed; the first of which lies between the Tonic and its Octave; the second between the Dominant and its Octave; and the third between

Authentic Melody. 'The Blue-Bell of Scotland.'



Plagal Melody. 'Aileen Aroon.'



Mixed Melody. 'Jock o' Hazeldean.'

[3] The 5th above the Final.
[4] Rarely used in an Absolute Initial.
[5] Used as an Absolute Initial chiefly in polyphonic music.
[6] The lowest note of the Mode.
[7] Figulus interprets the sentiment of the Modes somewhat differently—in the case of the First Mode, with a very wide difference indeed. His epithets are: i. Hilaris; ii. Moestus; iii. Austerus; iv. Blandus; v. Jucundus; vi. Mollis; vii. Gravis; viii. Modestus. The difference of sentiment between the Authentic and Plagal Modes is even more strongly set forth here than in the more generally received synopsis given above in the text.

the Dominant and the Tonic in the Octave above. Is it possible to deny that, apart from its natural individuality, each of them owes a peculiar character to the position it occupies in the scale?

Now the first of these melodies, lying entirely between the Tonic and its Octave, is strictly Authentic; the second, lying between the Dominant and its Octave, is strictly Plagal; and the third, occupying the entire range of the Mode, from the Dominant below to the Tonic in the next Octave above, is Mixed. Here, then, are three varieties of expression producible by the Ionian Mode alone; and when we remember the number of modes which, in addition to this distinction, obtainable by mere change of position, possess a distinct tonality also, we cannot but be struck with the immense fund of variety with which the Gregorian system is endowed. Moreover, it is not absolutely necessary that the melody should be restricted to the exact compass of an Octave. Originally, as we learn from Hermannus Contractus, no licence was permitted in this matter; but Theogerus, Bishop of Metz, writing about the year 1100, allows the elongation of the scale, whether Authentic or Plagal, to the extent of a tone above and a tone below its normal limits. The same licence is permitted by Hucbaldus of St. Amand and the Abbot Oddo; and it has become a recognised rule that the First Mode may be extended a tone downwards, and a tone, or even a minor third upwards; the Second a tone downwards, and a semitone, tone, or minor third upwards; the Third Mode a major third downwards and a semitone upwards; the Fourth a tone downwards and a semitone upwards; the Fifth a semitone or minor third downwards and a tone upwards; the Sixth a semitone downwards and a tone upwards; the Seventh a tone downwards or upwards; the Eighth a tone downwards or upwards; and so with the later forms; one degree, either upwards or downwards, being always conceded, and a major or minor third, in one direction, very frequently claimed. Guido d'Arezzo's rule is, that 'Though the Authentic Modes may scarcely descend more than a single degree, they may ascend to the octave, the ninth, or even tenth. The Plagal Modes, however, may be extended by carrying them down to the fifth (*i.e.* below the Final); but authority is granted to extend them (upwards) to the sixth or the seventh (*i.e.* above the Final) as the Authentic form rises to the ninth and tenth.'[1] Here, then, we see a new and prolific source of variety, in the elaboration of which the Plagal Modes play a very important part; an advantage which is turned to equally good account in Plain-song and Polyphonic music. Both in Plain-song and Polyphonic music the Modes are used, sometimes at their true pitch, sometimes transposed a fourth higher (or fifth lower) by means of a B flat at the signature. No accidentals are permitted in Plain-song, except an occasional B flat, introduced for the purpose of correcting a Tritonus or a false fifth—the use of both these intervals being strictly forbidden, whether in disjunct or conjunct movement. The *canto fermo*, in polyphonic music, is as strictly subject to the laws of the Mode as a Plain-song melody,—which, in fact, it generally is; but in the counterpoint the use of certain sharps, flats, and naturals is sometimes directly enjoined, in conformity with precepts which will be found fully described elsewhere. (See Musica Ficta.)

In order to ascertain the Mode in which a Plain-song melody is written, observe the last note, which will, of course, show the required Final. Should the compass of the melody lie between that Final and its octave, the Mode will be Authentic. Should it lie between the fifth above and the fourth below, it will be Plagal. Should it extend throughout the entire range, from the fourth below the Final to the octave above it, it will be Mixed. Should there be a B flat at the signature, it will indicate that the Mode has been transposed; and the true Final will then lie a fourth below the written one. For example, the Plain-song

melody 'Angelus autem Domini' has no B flat at the signature. Its last note is G, the Mixolydian Final. Its compass lies between the fifth above that note, and the second below it. It is, therefore, in the Eighth, or Hypomixolydian Mode; and, as its range falls two degrees short of the full downward range of the scale, it belongs to the class of Imperfect Melodies.

To ascertain the Mode of a polyphonic composition, examine the last note in the bass. This will be the Final. Then, should the range of the *Canto fermo*—which will almost always be found in the tenor—lie between the Final and its octave, the Mode will be Authentic. Should it lie between the fifth above and the fourth below, it will be Plagal. Should there be a B flat at the signature, it will show that the Mode has been transposed; and the true Final will then lie a fourth below the last bass note. Thus, Palestrina's Motet, 'Dies sancti-

1 'Autenti vix a suo fine plus una voce descendunt—Ascendunt autem autenti usque ad octavam et nonam, vel etiam decimam. Plagae vero ad quintam remittuntur et intenduntur; sed intensioni sexta vel septima auctoritate tribuitur, sicut in autentis nona et decima.' (*Discipl. Artis Mus.* xiii.)

ficatus,' has no B flat at the signature. The last note in the bass is G. The compass of the *Canto fermo*, as exhibited in the tenor, lies, almost entirely, between that note and its octave. The Motet, therefore, is in the Seventh, or Mixolydian Mode. The same composer's Missa, 'Æterna Christi munera,' has a B flat at the signature, and is, therefore, transposed. The last note in the bass is F, the fourth below which is C—the Ionian Final. The compass of the *Canto fermo*, in the tenor, lies between the transposed Final and its octave. Consequently, the Mass is in the Thirteenth or Ionian Mode, transposed.

According to strict law, it is as necessary for the *Canto fermo* to end on the Final of the Mode as the bass; but, when the last cadence is a very elaborate one, it frequently contents itself with just touching that note, and then glancing off to others, after the manner of what we should now call a *coda*. The neophyte will always, therefore, find the last bass note his safest guide in this particular. (See POLYPHONIA.)

In order to accommodate the range of 'unequal' voices, it constantly happens that the treble and tenor are made to sing in an Authentic Mode, while the alto and bass sing in a Plagal one, and *vice versa*. In these cases the true character of the Mode is always decided by the compass of the *Canto fermo*. W. S. R.]

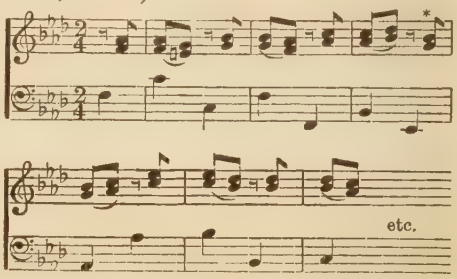
MODULATION is the process of passing out of one key into another.

In modern harmonic music, especially in its instrumental branches, it is essential that the harmonies should be grouped according to their keys; that is, that they should be connected together for periods of appreciable length by a common relation to a definite tonic or keynote. If harmonies belonging essentially to one key are irregularly mixed up with harmonies which are equally characteristic of another, an impression of obscurity arises; but when a chord which evidently belongs to a foreign key follows naturally upon a series which was consistently characteristic of another, and is itself followed consistently by harmonies belonging to a key to which it can be referred, modulation has taken place, and a new tonic has supplanted the former one as the centre of a new circle of harmonies.

The various forms of process by which a new key is gained are generally distributed into three classes—Diatonic, Chromatic, and Enharmonic. The first two are occasionally applied to the ends of modulation as well as to the means. That is to say, Diatonic would be defined as modulation to relative keys, and Chromatic to others than relative. This appears to strain unnecessarily the meaning of the terms, since Diatonic and Chromatic apply properly to the contents of established keys, and not to the relations of different shifting ones, except by implication.

Moreover, if a classification is to be consistent, the principles upon which it is founded must be uniformly applied. Hence if a class is distinguished as Enharmonic in relation to the means (as it must be), other classes cannot safely be classed as Diatonic and Chromatic in relation to ends, without liability to confusion. And lastly, the term Modulation itself clearly implies the process and not the result. Therefore in this place the classification will be taken to apply to the means and not to the end,—to the process by which the modulation is accomplished and not the keys which are thereby arrived at.

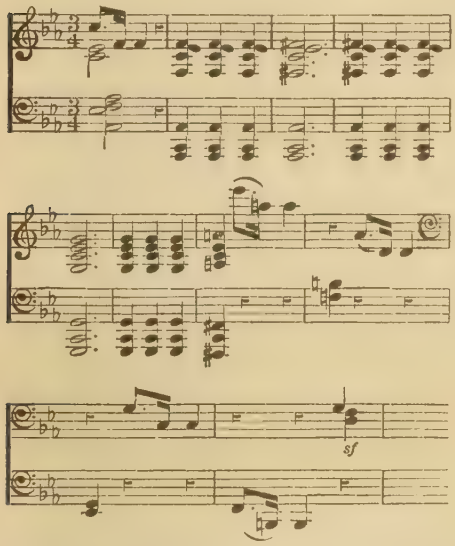
The Diatonic forms, then, are such as are effected by means of notes or chords which are exclusively diatonic in the keys concerned. Thus in the following example (Bach, *Wohlt. Clav.* Bk. 2, No. 12):—



the chord at * indicates that F has ceased to be the tonic, as it is not referable to the group of harmonies characteristic of that key. However, it is not possible to tell from that chord alone to what key it is to be referred, as it is equally a diatonic harmony in either B♭, E♭, or A♭; but as the chords which follow all belong consistently to A♭, that note is obviously the tonic of the new key, and as the series is Diatonic throughout it belongs to the Diatonic class of modulations.

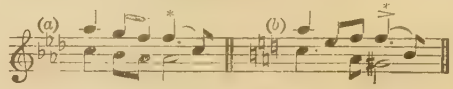
The Chromatic is a most ill-defined class of modulations; and it is hardly to be hoped that people will ever be sufficiently careful in small matters to use the term with anything approaching to clear and strict uniformity of meaning. Some use it to denote any modulation in the course of which there appear to be a number of accidentals—which is perhaps natural but obviously superficial. Others again apply the term to modulations from one main point to another through several subordinate transitions which touch remote keys. The objection to this definition is that each step in the subordinate transitions is a modulation in itself, and as the classification is to refer to the means, it is not consistent to apply the term to the end in this case, even though subordinate. There are further objections based upon the strict meaning of the word Chromatic itself, which must be omitted for lack of space. This reduces the limits of chromatic modulation to such as is effected through notes or chords which are chromatic in relation to the keys in question. Genuine examples of

this kind are not so common as might be supposed; the following example (Beethoven, op. 31, No. 3), where passage is made from E♭ to C, is consistent enough for illustration:—



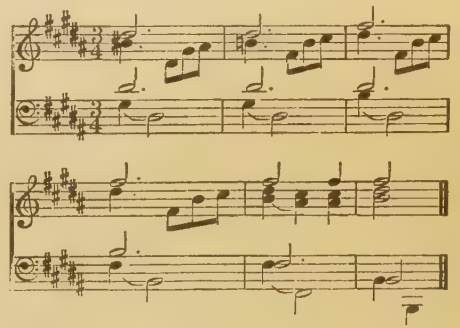
The third class, called Enharmonic, which tends to be more and more conspicuous in modern music, is such as turns mainly upon the translation of intervals which, according to the fixed distribution of notes in the modern system, are identical, into terms which represent different harmonic relations. Thus the minor seventh, G–F, appears to be the same interval as the augmented sixth G–E♯; but the former belongs to the key of C, and the latter either to B or F♯, according to the context. Again, the chord which is known as the diminished seventh is frequently quoted as affording such great opportunities for modulation, and this it does chiefly enharmonically; for the notes of which it is composed being at equal distances from each other can severally be taken as third, fifth, seventh, or ninth of the root of the chord, and the chord can be approached as if belonging to any one of these roots, and quitted as if derived from any other. The passage quoted from the Leonora Overture in the article CHANGE, I. (vol. i. p. 497) may be taken as an example of an enharmonic modulation which turns on this particular chord.

Enharmonic treatment really implies a difference between the intervals represented, and this is actually perceived by the mind in many cases. In some especially marked instances it is probable that most people with a tolerable musical gift will feel the difference with no more help than a mere indication of the relations of the intervals. Thus in the succeeding example the true major sixth represented by the A♭–F in (*a*) would have the ratio 5 : 3 (=125 : 75), whereas the diminished seventh represented by G♯–F♮ in (*b*) would have the ratio 128 : 75; the former is a consonance and the latter, theoretically, a rough dissonance, and though they are both represented by the same notes in our system, the impression produced by them is to a certain extent proportionate to their theoretical rather than to their actual constitution.



Hence it appears to follow that in enharmonic modulation we attempt to get at least some of the effects of intervals smaller than semitones; but the indiscriminate and ill-considered use of the device will certainly tend to deaden the musical sense, which helps us to distinguish the true relations of harmonies through their external apparent uniformity.

A considerable portion of the actual processes of modulation is effected by means of notes which are used as pivots. A note or notes which are common to a chord in the original key and to a chord in the key to which the modulation is made, are taken advantage of to strengthen the connection of the harmonies while the modulation proceeds; as in the following modulation from G♯ major to B major in Schubert's Fantasie-Sonata, op. 78.



This device is found particularly in transitory modulation, and affords peculiar opportunities for subtle transitions. Examples also occu where the pivot notes are treated enharmonically, as in the following example from the chorus 'Sein Odem ist schwach' in Graun's 'Tod Jesu':

These pivot-notes are, however, by no means indispensable. Modulations are really governed by the same laws which apply to any succession of harmonies whatsoever, and the possibilities of

modulatory device are in the end chiefly dependent upon intelligible order in the progression of the parts. It is obvious that a large proportion of chords which can succeed each other naturally—that is, without any of the parts having melodic intervals which it is next to impossible to follow—will have a note or notes in common; and such notes are as useful to connect two chords in the same key as they are to keep together a series which constitute a modulation. But it has never been held indispensable that successive chords should be so connected, though in earlier stages of harmonic music it may have been found helpful; and in the same way, while there were any doubts as to the means and order of modulation, pivot-notes may have been useful as leading strings, but when a broader and freer conception of the nature of the modern system has been arrived at, it will be found that though pivot-notes may be valuable for particular purposes, the range of modulatory device is not limited to such successions as can contain them, but only to such as do not contain inconceivable progression of parts. As an instance, we may take the progression from the dominant seventh of any key to the tonic chord of the key which is represented by the flat submediant of the original key: as from the chord of the seventh on G to the common chord of A♭; of which we have an excellent example near the beginning of the Leonora Overture, No. 3. Another remarkable instance to the point occurs in the trio of the third movement of a quartet of Mozart's in B♭, as follows:—

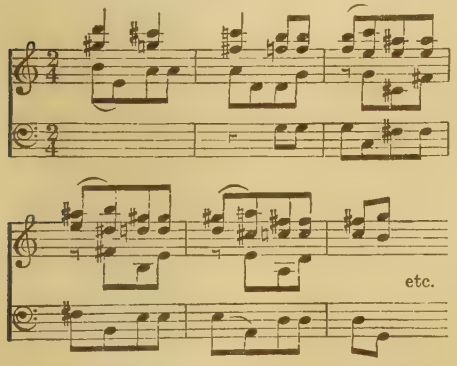
Other examples of modulation without pivot-notes may be noticed at the beginning of Beethoven's Egmont Overture, and of his Sonata in E minor, op. 90 (bars 2 and 3), and of Wagner's 'Götterdämmerung' (bars 9 and 10). An impression appears to have been prevalent with some theorists that modulation ought to proceed through a chord which was common to both the keys between which the modulation takes place. The principle is logical and easy of application, and it is true that a great number of modulations are explicable on that basis; but inasmuch as there are a great number of examples which are not, even with much latitude of explanation, it will be best not to enter into a discussion of so complicated a point in this place. It will be enough to point out that the two principles of pivot-notes and of ambiguous pivot-chords between them cover so much ground that it is not easy to find progressions in which either one or the other does not occur—and even though in a very great majority of instances one or the other may really form the bond of connection in modulatory passages, the frequency of their occurrence is not a proof of their being indispensable. The following passage from the first act of 'Die Meistersinger' is an example of a modulation in which they are both absent:—

The real point of difficulty in modulation is not the manner in which the harmonies belonging to different keys can be made to succeed one another, but the establishment of the new key, especially in cases where it is to be permanent. This is effected in various ways. Frequently some undoubted form of the dominant harmony of the new key is made use of to confirm the impression of the tonality, and modulation is often made through some phase of that chord to make its direction clear, since no progression has such definite tonal force as that from dominant to tonic. Mozart again, when he felt it necessary to define the new key very clearly, as representing a definite essential feature in the form of a movement, often goes at first beyond his point, and appears to take it from the rear. For instance, if his first section is in C, and he wishes to cast the second section and produce what is called his second subject in the dominant key G, instead of going straight to G and staying there, he passes rapidly by it to its dominant key D, and having settled well down on the tonic harmony of that key, uses it at last as a dominant point of vantage from which to take G in form. The first movement of the Quartet in C, from bar 22 to 34 of the Allegro, will serve as an illustration. Another mode is that of using a series of transitory modulations between one permanent key and another. This serves chiefly to obliterate the sense of the old key, and to make the mind open to the impression of the new one directly its permanency becomes apparent. The plan of resting on the dominant harmony for a long while before passing definitely to the subjects or figures which are meant to characterise the new key is an obvious means of enforcing it; of which the return to the first subject in the first movement of Beethoven's Waldstein Sonata is a strong example. In fact insistence on any characteristic harmony or on any definite group of harmonies which clearly represent a key is a sure means of indicating the object of a modulation, even between keys which are remote from one another.

In transitory modulations it is less imperative

to mark the new key strongly, since subordinate keys are rightly kept in the background, and though they may be used so as to produce a powerful effect, yet if they are too much insisted upon, the balance between the more essential and the unessential keys may be upset. But even in transitory modulations, in instrumental music especially, it is decidedly important that each group which represents a key, however short, should be distinct in itself. In recitative, obscurity of tonality is not so objectionable, as appears both in Bach and Handel; and the modern form of melodious recitative, which often takes the form of sustained melody of an emotional cast, is similarly often associated with subtle and closely-woven modulations, especially when allied with words. Of recitative forms which show analogous freedom of modulation in purely instrumental works, there are examples both by Bach and Beethoven, as in an Adagio in a Toccata in D minor and the Fantasia Cromatica by the former, and in the Introduction to the last movement of the A♭ pianoforte Sonata (op. 110) of the latter.

When transitory modulations succeed one another somewhat rapidly they may well be difficult to follow if they are not systematised into some sort of appreciable order. This is frequently effected by making them progress by regular steps. In Mozart and Haydn especially we meet with the simplest forms of succession, which generally amount to some such order as the roots of the chord falling fifths or rising fourths, or rising fourths and falling thirds successively. The following example from Mozart's C major Quartet is clearly to the point :—



Bach affords some remarkably forcible examples, as in the chorus 'Mit Blitzen und Donner' in the Matthew Passion, and in the last movement of the Fantasia for Organ in G (B.-G. xxxviii. p. 81), in which the bass progresses slowly by semitones downwards from C♯ to D. A passage quoted by Marx at the end of the second volume of his Kompositionslehre from the 'Christe Eleison' in Bach's A major[1] Mass is very fine and characteristic; the succession of transitions is founded on a bass which progresses as follows :—

In modern music a common form is that in which the succession of key-notes is by rising or falling semitones, as in the following passage from the first movement of the Eroica Symphony :—

Of this form there are numerous examples in Chopin, as in the latter part of the Ballade in A♭, and in the Prelude in the same key (No. 17). Beethoven makes use of successions of thirds in the same way; of which the most remarkable example is the Largo which precedes the fugue in the pianoforte Sonata in B♭, op. 106. In this there are fully eighteen successive steps of thirds downwards, most of them minor. This instance also points to a feature which is important to note. The successions are not perfectly symmetrical, but are purposely distributed with a certain amount of irregularity so as to relieve them from the obviousness which is often ruinous to the effect of earlier examples. The divisions represented by each step are severally variable in length, but the sum total is a complete impression based upon an appreciable system; and this result is far more artistic than the examples where the form is so obvious that it might almost have been measured out with a pair of compasses. This point leads to the consideration of another striking device of Beethoven's, namely, the use of a cæsura in modulation, which serves a similar purpose to the irregular distribution of successive modulations. A most striking example is that in the Prestissimo of the pianoforte Sonata in E major, op. 109, in bars 104 and 105, where he leaps from the major chord of the supertonic to the minor of the tonic,

[1] See B.-G. viii. 51.

evidently cutting short the ordinary process of supertonic, dominant and tonic; and the effect of this sudden irruption of the original key and subject before the ordinary and expected progressions are concluded is most remarkable. In the slow movement of Schumann's sonata in G minor there is a passage which has a similar happy effect, where the leap is made from the dominant seventh of the key of D♭ to the tonic chord of C to resume the first subject, as follows:—

In the study of the art of music it is important to have a clear idea of the manner in which the function and resources of modulation have been gradually realised. It will be best, therefore, at the risk of going occasionally over the same ground twice, to give a short consecutive review of the aspect it presents along the stream of constant production.

To a modern ear of any musical capacity modulation appears a very simple and easy matter, but when harmonic music was only beginning to be felt, the force even of a single key was but doubtfully realised, and the relation of different keys to one another was almost out of the range of human conception. Musicians of those days no doubt had some glimmering sense of a field being open before them, but they did not know what the problems were which they had to solve. It is true that even some time before the beginning of the 17th century they must have had a tolerably good idea of the distribution of notes which we call a key, but they probably did not regard it as an important matter, and looked rather to the laws and devices of counterpoint, after the old polyphonic manner, as the chief means by which music was to go on as it had done before. Hence in those great polyphonic times of Palestrina and Lasso, and even later in some quarters, there was no such thing as modulation in our sense of the word. They were gradually absorbing into their material certain accidentals which the greater masters found out how to use with effect; and these being incorporated with the intervals which the old church modes afforded them, gave rise to successions and passages in which they appear to us to wander with uncertain steps from one nearly related key to another; whereas in reality they were only using the actual notes which appeared to them to be available for artistic purposes, without considering whether their combinations were related to a common tonic in the sense which we recognise, or not. Nevertheless, this process of introducing accidentals irregularly was the ultimate means through which the art of modulation was developed. For the musical sense of these composers, being very acute, would lead them to consider the relations of the new chords which contained notes thus modified, and to surround them with larger and larger groups of chords which in our sense would be considered to be tonally related; and the very smoothness and softness of the combinations to which they were accustomed would ensure a gradual approach to consistent tonality, though the direction into which their accidentals turned them was rather uncertain and irregular, and not so much governed by any feeling of the effects of modulation as by the constitution of the ecclesiastical scales. Examples of this are given in the article HARMONY; and reference may also be made to a Pavin and a Fantasia by our great master, Orlando Gibbons, in 'Parthenia,' republished in the 'Trésor des Pianistes,' in Pauer's 'Old English Music,' and (Fantasia alone) in Dannreuther's *Ornamentation*. In these there are remarkably fine and strong effects produced by means of accidentals; but the transitions are to modern ideas singularly irregular. Gibbons appears to slip from one tonality to another more than six times in as many bars, and to slide back into his original key as if he had never been away. In some of his vocal works he presents broader expanses of distinct tonality, but of the power of the effect of modulation on an extended scale he can have had but the very slightest possible idea. About his time and a little later in Italy, among such musicians as Carissimi and Cesti, the outlines of the modern art were growing stronger. They appreciated the sense of pure harmonic combinations, though they lost much of the force and dignity of the polyphonic school; and they began to use simple modulations, and to define them much as a modern would do, but with the simplest devices possible. Throughout the 17th century the system of keys was being gradually matured, but their range was extraordinarily limited, and the interchange of keys was still occasionally irregular. Corelli, in the latter part of it, clearly felt the relative importance of different notes in a key and the harmonies which they represent, and balanced many instrumental movements on principles analogous to our own, though simpler; and the same may be said of Couperin, who was his junior by a few years; but it is apparent that

they moved among accidentals with caution, and regarded what we call extreme keys as dangerous and almost inexplorable territory.

In the works of the many sterling and solid composers of the early part of the 18th century, the most noticeable feature is the extraordinary expanse of the main keys. Music had arrived at the opposite extreme from its state of a hundred years before ; and composers, having realised the effect of pure tonality, were content to remain in one key for periods which to us, with our different ways of expressing ourselves, would be almost impossible. This is in fact the average period of least modulation. Handel is a fairer representative of the time than Bach, for reasons which will be touched upon presently, and his style is much more in conformity with most of his contemporaries who are best known in the musical art. We may take him, therefore, as a type ; and in his works it will be noticed that the extent and number of modulations is extremely limited. In a large proportion of his finest choruses he passes into his dominant key near the beginning—partly to express the balance of keys and partly driven thereto by fugal habits ; and then returns to his original key, from which in many cases he hardly stirs again. Thus the whole modulatory range of the Hallelujah Chorus is not more than frequent transitions from the Tonic key to the key of its Dominant and back, and one excursion as far as the relative minor in the middle of the chorus, — and that is all. There are choruses with a larger range, and choruses with even less, but the Hallelujah is a fair example to take, and if it is carefully compared with any average modern example, such as Mendelssohn's 'The night is departing,' in the 'Hymn of Praise,' or 'O great is the depth,' in 'St. Paul,' or the first chorus in Brahms's Requiem, a very strong impression of the progressive tendency of modern music in the matter of modulation will be obtained. In choruses and movements in the minor mode, modulations are on an average more frequent and various, but still infinitely less free than in modern examples. Even in such a fine example as 'The people shall hear,' in 'Israel,' the apparent latitude of modulation is deceptive, for many of the changes of key in the early part are mere repetitions ; since the tonalities range up and down between E minor, B and F♯ only, each key returning irregularly. In the latter part it is true the modulations are finely conceived, and represent a degree of appreciation in the matter of relations of various keys, such as Handel does not often manifest.

Allusion has been made above to the practice of going out to a foreign key and returning to the original again in a short space of time. This happens to be a very valuable gauge to test the degrees of appreciation of a composer in the matter of modulation. In modern music keys are felt so strongly as an element of form, that when any one has been brought prominently forward, succeeding modulations for some time after must, except in a few special cases, take another direction. The tonic key, for instance, must inevitably come forward clearly in the early part of a movement, and when its importance has been made sufficiently clear by insistence, and modulations have begun in other directions, if it were to be quickly resumed and insisted on afresh, the impression would be that there was unnecessary tautology ; and this must appear obvious on the merest external grounds of logic. The old masters, however, must, on this point, be judged to have had but little sense of the actual force of different keys as a matter of form ; for in a large proportion of examples they were content to waver up and down between nearly related keys, and constantly to resume one and another without order or design. In the 'Te gloriosus' in Graun's Te Deum, for instance, he goes out to a nearly related key, and returns to his tonic key no less than five several times, and in the matter of modulation does practically nothing else. Even Bach occasionally presents similar examples, and Mozart's distribution of the modulations in 'Splendente te Deus' (in which he probably followed the standing classical models of vocal music) are on a similar plan, for he digresses and returns again to his principal key at least twelve times in the course of the work.

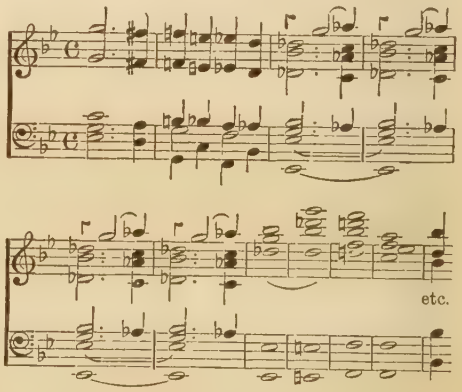
Bach was in some respects like his contemporaries, and in some so far in advance of them that he cannot fairly be taken as a representative of the average standard of the day. In fact, his more wonderful modulatory devices must have fallen upon utterly deaf ears, not only in his time but for generations after ; and, unlike most great men, he appears to have made less impression upon the productive musicians who immediately succeeded him than upon those of a hundred years and more later. In many cases he cast movements in the forms prevalent in his time, and occasionally used vain repetitions of keys like his contemporaries ; but when he chose his own lines he produced movements which are perfectly in consonance with modern views. As examples of this the 'Et resurrexit' in the B minor Mass and the last chorus of the Matthew Passion may be taken. In these there is no tautology in the distribution of the modulation, though the extraordinary expanse over which a single key is made to spread, still marks their relationship with other contemporary works. In some of his instrumental works he gives himself more rein, as in fantasias, and preludes, and toccatas, for organ or clavier. In these he not only makes use of the most complicated and elaborate devices in the actual passage from one key to another, but also of closely interwoven transitions in a thoroughly modern fashion. Some of the most wonderful examples

are in the Fantasia in G minor for organ B.-G. xv. p. 177), and others have been already alluded to.

It is probable that his views on the subject of the relation of keys had considerable influence on the evolution of the specially modern type of instrumental music ; as it was chiefly his sons and pupils who worked out and traced in clear and definite outlines the system of key-distribution upon which Haydn and Mozart developed their representative examples of such works.

In the works of these two great composers we find at once the simplest and surest distribution of keys. They are in fact the expositors of the elementary principles which had been arrived at through the speculations and experiments of more than a century and a half of musicians. The vital principle of their art-work is clear and simple tonality ; each successive key which is important in the structure of the work is marked by forms both of melody and harmony, which, by the use of the most obvious indicators, state as clearly as possible the tonic to which the particular group of harmonies is to be referred. This is their summary, so to speak, of existing knowledge. But what is most important to this question is that the art did not stop at this point, but composers having arrived at that degree of realisation of the simpler relations of keys, went on at once to build something new upon the foundation. Both Haydn and Mozart —as if perceiving that directly the means of clearly indicating a key were realised, the ease with which it could be grasped would be proportionately increased—began to distribute their modulations more freely and liberally. For certain purposes they both made use of transitions so rapid that the modulations appear to overlap, so that before one key is definitely indicated an ingenious modification of the chord which should have confirmed it leads on to another. The occasions for the use of this device are principally either to obtain a strong contrast to long periods during which single keys have been or are to be maintained ; or, where according to the system of form it so happens that a key which has already been employed has soon to be resumed—as, for instance, in the recapitulation of the subjects—to lead the mind so thoroughly away that the sense of the more permanent key is almost obliterated. Occasionally, when the working-out section is very short, the rapid transitions alluded to are also met with in that position, as in the slow movement of Mozart's E♭ Quartet. The example quoted above from the last movement of his Quartet in C will serve as an example on this point as well as on that for which it was quoted.

A yet more important point in relation to the present question is the use of short breaths of subordinate modulation in the midst of the broader expanses of the principal keys. This is very characteristic of Mozart, and serves happily to indicate the direction in which art was moving at the time. Thus, in the very beginning of his Quartet in G (Köchel, 387), he glides out of his principal key into the key of the supertonic, A, and back again in the first four bars. A similar digression, from F to D and back again, may be observed near the beginning of the slow movement of the Jupiter Symphony. But it requires to be carefully noted that the sense of the principal keys is not impaired by these digressions. They are not to be confounded either with the irregular wandering of the composers who immediately succeeded the polyphonic school, nor with the frequent going out and back again of the composers of the early part of the 18th century. This device is really an artificial enlargement of the capacity of a key, and the transitions are generally used to enforce certain notes which are representative and important roots in the original key. A striking example occurs in the first movement of Mozart's symphony in G minor (1st section), where after the key of B♭ has been strongly and clearly pointed out in the first statement of the second subject, he makes a modulatory digression as follows :—



This is in fact a very bold way of enforcing the subdominant note ; for though the modulation appears to be to the key of the minor seventh from the tonic, the impression of that key is ingeniously reduced to a minimum, at the same time that the slight flavour that remains of it forms an important element in the effect of the transition.

The great use which Beethoven made of such transitory subordinate modulations has been already treated of at some length in the article HARMONY ; it will, therefore, be best here to refer only to a few typical examples. The force with which he employed the device above illustrated from Mozart is shown in the wonderful transition from E♭ to G minor at the beginning of the Eroica (bars 7-10), and the transition from F to D♭ at the beginning of the Sonata Appassionata. These are, as in most of Mozart's examples, only single steps ; in many cases Beethoven makes use of several in succession. Thus in the begin-

ning of the E minor pianoforte Sonata, op. 90, the first section should be theoretically in E minor, but in this case a quick modulation to G begins in the third bar, in the seventh a modulation to B minor follows, and in the ninth, G is taken up again, and through it passage is made back to E minor, the original key, again. Thus the main centre of the principal key is supplemented by subordinate centres; the different notes of the key being used as points of vantage from which a glance can be taken into foreign tonalities, to which they happen also to belong, without losing the sense of the principal key which lies in the background.

These transitions often occur in the early part of movements before the principal key has been much insisted on, as if to enhance its effect by postponement. Thus we find remarkable examples in Beethoven's Introductions, as for instance in the Leonora Overture, No. 3, and in the Introduction to the Quartet in C, op. 59, No. 3. In composers of note since Beethoven, we find a determination to take full advantage of the effect of such transitions. Brahms, for instance, makes constant use of them in his instrumental works from the earliest to the latest. The first two pages of the G minor Quartet for pianoforte and strings, show at once how various are the subordinate centres of which he makes use. In a much later work—the Pianoforte Quartet in C minor, op. 60—he presents a short version of his principal subject in the principal key, and then passes to B♭ minor, D♭ major, E♭ minor, A♭, G♭ minor, and B♭ major in rapid succession before he resumes his original key, in order to propound his first subject more fully. Schumann was equally free in his use of subordinate modulations. In the fine intermezzo of the 'Faschingsschwank,' which has the signature of E♭ minor, the first chord is in that key, but the second leads to D♭ major, and a few chords farther on we are in B♭ minor, from which an abrupt return is made to E♭ minor only to digress afresh. Such are the elaborate transitions which are developed by an extension of the device of single transitions used so frequently by Mozart; and it may be noted that a closely connected series of transitory modulations after this manner, occupies in modern music an analogous position to that occupied by a connected series of harmonies, based on quickly shifting root-notes, in the music of a century or a century and a half earlier. Similarly, in the closely connected steps of modulation, like those used by Haydn and Mozart between one strongly marked expanse of key and another, more modern composers have packed their successions of keys so closely that it is often a matter of some difficulty to disentangle them with certainty. For instance, the passage in the slow movement of Beethoven's B♭ Sonata, op. 106, just before the resumption of the principal key and the first subject (in variation), is as follows—

In this, besides the number of the transitions (exceeding the number of bars in the example), the steps by which they proceed are noticeable with reference to what was touched upon above in that respect. Many similar examples occur in Schumann's works. For instance, in the last movement of his sonata in G minor, where he wishes to pass from B♭ to G major, to resume his subject, he goes all the way round by B♭ minor, G♭ major, E♭ major, D♭ minor, F♯, B, A, D, C minor, B♭, A♭, and thence at last to G; there is a similar example in the middle of the first movement of his Pianoforte Quartet in E♭; examples are also common in Chopin's works, as for instance bars 29 to 32 of the Prelude in E♭, No. 19, in which the transitions overlap in such a way as to recall the devices of Haydn and Mozart, though the material and mode of expression are so markedly distinct.

From this short survey it will appear that the direction of modern music in respect of modulation has been constant and uniform. The modern scales had first to be developed out of the chaos of ecclesiastical modes, and then they had to be systematised into keys, a process

equivalent to discovering the principle of modulation. This clearly took a long time to achieve, since composers moved cautiously over new ground, as if afraid to go far from their starting-point, lest they should not be able to find a way back. Still, the invention of the principle of passing from one key to another led to the discovery of the relations which exist between one key and another; in other words of the different degrees of musical effect produced by their juxtaposition. The bearings of the more simple of these relations were first established, and then those of the more remote and subtle ones, till the way through every note of the scale to its allied keys was found. In the meanwhile groups of chords belonging to foreign keys were subtly interwoven in the broader expanses of permanent keys, and the principle was recognised that different individual notes of a key can be taken to represent subordinate circles of chords in other keys of which they form important integers, without destroying the sense of the principal tonality. Then as the chords belonging to the various groups called keys are better and better known, it becomes easier to recognise them with less and less indication of their relations, so that groups of chords representing any given tonality can be constantly rendered shorter, until at length successions of transitory modulations make their appearance, in which the group of chords representing a tonality is reduced to two, and these sometimes not representing it by any means obviously.

It may appear from this that we are gravitating back to the chaotic condition which harmony represented in the days before the invention of tonality. But this is not the case. We have gone through all the experiences of the key-system, and by means of it innumerable combinations of notes have been made intelligible which could not otherwise have been so. The key-system is therefore the ultimate test of harmonic combinations, and the ultimate basis of their classification, however closely chords representing different tonalities may be brought together. There will probably always be groups of some extent which are referable to one given centre or tonic, and effects of modulation between permanent keys; but concerning the rapidity with which transitions may succeed one another, and the possibilities of overlapping tonalities, it is not safe to speculate; for theory and analysis are always more safe and helpful to guide us to the understanding of what a great artist shows us when it is done, than to tell him beforehand what he may or may not do. C. H. H. P.

MODULATIONS, REGULAR AND CONCEDED (Lat. *Modulationes* [*vel Clausulae*] *regulares et concessae*). The composer of a Plain-song melody is not permitted to begin or end, even his intermediate phrases, upon any note he pleases. The last phrase of every melody must, of necessity, end with the Final of the Mode in which it is written. The first phrase must begin with one or other of a certain set of notes called the Absolute Initials of the Mode. The intermediate phrases can only begin or end on one of another set of notes called its Modulations. Of these Modulations, four—the Final, Dominant, Mediant, and Participant—are of more importance than the rest, and are therefore called Regular. But as the constant reiteration of these four notes would prove intolerably monotonous in a melody consisting of very numerous phrases, other notes called Conceded Modulations are added to them; and upon any one of these any phrase, except the first or last, may either begin or end.

A complete table of the Regular and Conceded Modulations of all the Modes will be found in the article MODES, THE ECCLESIASTICAL. W. S. R.

MOLINARA, LA (Ger. *Die schöne Müllerin*). Opera by Paisiello, produced at Naples in 1788. In London at the King's Theatre, March 22, 1803. Its name is preserved by a duet, 'Nel cor più non mi sento,' which has served as the theme of many Variations, amongst others of six by Beethoven. The autograph of the six was headed, 'Variazioni . . . perdute par la . . . retrovate par L. v. B.' Beethoven also wrote nine variations on 'Quant' e più bello,' an air from the same opera. A third air from 'La Molinara,' viz. 'La Rachelina,' is given in the 'Musical Library,' i. 98. [The song, 'Hope told a flattering tale,' adapted to Paisiello's 'Nel cor più non mi sento,' became, near the close of the 18th century, one of the most favourite English sentimental songs; it was introduced by Mara in a revival of Arne's 'Artaxerxes,' and was republished in all imaginable forms. F. K.] G.

MOLINARO, SIMONE, born at Genoa, was nephew and pupil of Giovanni Battista dalla Gostena, whom he succeeded in 1599 in his office of maestro di cappella at the cathedral of Genoa. In 1613 he edited in score in one folio volume, the six books of chromatic madrigals of Gesualdo, Prince of Venosa, which, as Ambros says, shows that these strange works had begun to be a subject of study for musicians. Of Molinaro's own publications, consisting of motets, sacred concertos with organ score, including some masses and magnificats, a book of madrigals and canzonets, hardly any are preserved complete, part-books being missing in nearly every case. A certain number of his motets for five voices have been preserved complete in the collections of Hasler ('Sacrae Symphoniae,' 1598) and Schadaeus ('Promptuarium,' 1611), from which Commer in modern times has reprinted ten. These are mostly quite simple and melodious on a harmonic basis, without anything of imitative counterpoint to speak of. But Molinaro is also known as a lutenist, and from his 'Intavolatura di liuto,' 1599, containing Saltarelli, Passamezze, and Gagliarde, and including twenty-five fantasias by his master

Gostena, Oscar Chilesotti has reprinted fourteen little pieces in modern notation in his 'Lautenspieler des XVI. Jahrhunderts' (Breitkopf & Härtel, 1891). In these pieces, as Eitner says, Molinaro despises all counterpoint, and shows himself as a pure melodist and harmonist, but both in so simple and pretty a way, that they all have something uncommonly attractive (see *Monatshefte*, xxiv. p. 29). J. R. M.

MOLIQUE, Wilhelm Bernhard, celebrated violinist and composer, was born Oct. 7, 1802, at Nuremberg. His father, a member of the town band, at first taught him several instruments, but Molique soon made the violin his special study. Spohr, in his *Selbstbiographie* (i. 228), relates that while staying at Nuremberg, in 1815, he gave some lessons to the boy, who already possessed remarkable proficiency on the instrument. Molique afterwards went to Munich, and studied for two years under Rovelli. After having lived for some time at Vienna, as member of the orchestra of the Theater-an-der-Wien, he returned in 1820 to Munich, and succeeded his master Rovelli as leader of the band. From Munich he made several tours through Germany, and soon established his reputation as an eminent virtuoso and a solid musician. In 1826 he accepted the post of leader of the Royal Band at Stuttgart, and remained there till 1849. In that year he came to England, where he spent the remaining part of his professional life. The sterling qualities of Molique as a player, and his sound musicianship, soon procured him an honourable position in the musical world of London. His first appearance at the Philharmonic was on May 14, 1840, when he played his own A minor Concerto. With the general public he was equally successful as a soloist, quartet-player and teacher, while the serious character and the fine workmanship of his compositions raised him high in the estimation of connoisseurs and musicians.

As an executant he showed a rare perfection of left-hand technique, but his bowing appears to have been somewhat wanting in breadth and freedom. His style of playing was usually very quiet, perhaps deficient in animation. As a composer he holds a prominent place among modern writers for the violin. The influence of Spohr is evident, not only in the character of most of his subjects, but also in his manner of treating and working them out, yet some of his works—especially the first two movements of his third Concerto in D minor, and of the fifth in A minor—are fine compositions. The main subjects are noble and pathetic, the form is masterly, the working-out and the scoring full of interest. On the other hand, they suffer in effect by being too much spun out, and by being overladen with somewhat old-fashioned and extremely difficult passages. His other compositions, though evincing the same technical mastery, are very inferior in interest to these concertos — they bear hardly any traces of inspiration and had no great or lasting success.

Molique [gave a farewell concert at St. James's Hall, May 3, 1866, and five days afterwards] retired to Cannstadt near Stuttgart, where he died May 10, 1869. His principal published works are:—six Violin Concertos; eight Quartets for stringed instruments; two Pianoforte Trios; a Symphony; two Masses, and an Oratorio, 'Abraham,' performed at the Norwich Festival in 1860. To these must be added Duos for two violins, and for flute and violin, with a number of smaller vocal and instrumental pieces. P. D.

MOLL and DUR are the German terms for Minor and Major.

MOLLENHAUER, Edward R., a violin-maker, established in New York in the latter half of the 19th century, who introduced an 'improvement' in violin construction which was patented in this country (1881, No. 621). 'The invention consists in placing a board between the sounding-board and the back of the instrument, and parallel to these two boards, so as to divide the interior into two compartments. This intermediate board is provided with sound-holes and a bass bar.' This contrivance was considered of sufficient importance by Count Luigi Francesco Valdrighi to form the subject of No. 9 of his *Musurgiana* under the title 'Strumenti ad Arco Rinforzati' (Modena, 1881). E. H-A.

MOLLER, Joachim, who afterwards dropped his patronymic, and subscribed himself *Joachim von Burck* or *Burgk*, was born in 1541 at Burg, in what was then the territory of the Archbishopric of Magdeburg. His teacher in music as he himself tells us, was a certain *Hermann Noricus*, of whom nothing else is known. His real teaching, however, was derived from his diligent study of the works of Orlando di Lasso, whom, as he says he endeavoured to imitate, not only in his free admixture of the chromatic with the diatonic style, but in his careful adaptation of the music to the sense and accent of the words. From 1566 to his death, May 24, 1610, Joachim von Burck was organist of the Church of St. Blasius, Mühlhausen, a post in which he had several distinguished successors, and greatest of all, Sebastian Bach. Spitta says that 'Burck may be regarded as having given the chief impulse to the earnest musical feeling for which Mühlhausen was long distinguished.' Johann Eccard, who was born at Mühlhausen, was probably his pupil, and was afterwards associated with him in several of his publications. Besides being organist at St. Blasius, Burck subscribes himself as 'Symphonista' of the city of Mühlhausen, which would seem to imply that he held some position as instrumentalist in the town-band. He was also chosen to be Senator or Alderman in the city Council, which, as Mühlhausen was a free city of the Empire, was then an office of some distinction. A large number

of Burck's compositions consist of settings of German and Latin Odes and Hymns for Church and School use, written by Ludwig Helmbold, Lutheran preacher and superintendent at Mühlhausen. His chief publications are as follows:—

1566. Harmoniae Sacrae tam viva voce quam instrumentis . . . editae, 25 n. *a* 5.
1568. Die deutsche Passion (Passion after St. John), *a* 4. This work was dedicated to the Lutheran Cathedral chapter of Magdeburg. It has been republished in modern score among other works of Burck by Eitner, 1898.
1569. Symb. Apost. Nicen. Te Deum . . . ac verba institutionis . . . *a* 4.
1572, 1578, 1580, 1599. Several books of Odae Sacrae of Helmbold. These Odes are described as set after the manner of Italian Villanescas.
1573. Sacrae Cantiones, 20 n. *a* 4-6.
1574. Passio Jesu Christi. Psalm 22, *a* 4. This work in Motet style is included in Eitner's publication of 1898.
1575. Twenty Deutsche Liedlein (Helmbold), *a* 4, also included in Eitner, 1898.
1578. Crepundia Sacra (Helmbold), a collection of School songs, *a* 4.
1583. Vom hlg. Ehstande, 40 Liedlein (Helmbold), *a* 4.
1594. Thirty Geistliche Lieder, *a* 4.

In 1626 the Council of Mühlhausen did honour to its Senator-composer by issuing at the expense of the city a collected edition in six volumes of all the Odes and Hymns of Helmbold as set to music by Burck. Besides the works mentioned above as republished by Eitner, a considerable number of Burck's hymn-settings, partly in the simple Choral-style, partly in Motet-form, are contained in Schöberlein's *Schatz*. J. R. M.

MONASTERIO, Jesus de, eminent Spanish violinist, born at Potes in the province of Santander, April 18, 1836, showed strong inclination for music at a very early age, and enjoyed royal patronage from the age of seven years. He was taught by the best masters at Madrid, and for a time followed the career of a prodigy, but the death of his father compelled him to return to his home, and through the influence of a wealthy amateur he was sent to Brussels to study with De Bériot. Here he remained at the Conservatoire from 1849 to 1852, when he returned home and played in Madrid with great success; in 1861 he appeared in Belgium, Holland, and Germany as a finished performer. His success in these countries and in France was remarkable; at Weimar he was offered the post of court-capellmeister, but he preferred to return to his native country, and in a short time he was appointed violin professor at the Conservatoire of Madrid. His quartet-playing was of remarkable excellence, and he introduced the works of the classical masters to the musical amateurs of Spain. He wrote many successful works for his instrument, as well as two ecclesiastical compositions without accompaniment. He died at Santander, Sept. 28, 1903 (obituary in the *Zeitschrift* of the *Int. Mus. Ges.* 1903, p. 224). M.

MONDAY, Joseph. See Vowles.

MONDAY POPULAR CONCERTS. See Popular Concerts.

MONDONVILLE, Jean Joseph Cassanea de, born at Narbonne, Dec. 24, 1711, died at Belleville near Paris, Oct. 8, 1772, son of well-born but poor parents. His taste for music showed itself early, and he acquired considerable powers of execution as a violinist. After travelling for some time he settled in Lille, where he was well received, and still more so at the Concerts Spirituels in 1737. Having achieved success in Paris as a violinist and composer of popular chamber-music and organ pieces (for Balbâtre), Mondonville attempted the stage, but his first opera, 'Isbe' (Académie, April 10, 1742), failed. In 1744 he succeeded Gervais as Surintendant de la Chapelle du Roi, and under court patronage he produced at the Académie 'Le Carnaval du Parnasse' (Sept. 23, 1749), an opéra-ballet in three acts, containing some graceful music. When the contest between the partisans of Italian and French music, known as the Guerre des Bouffons, arose in 1752 in consequence of the success of 'La Serva Padrona,' Mondonville, a protégé of Mme. de Pompadour, was chosen champion of the national school; and his opera 'Titon et l'Aurore' (Jan. 9, 1753) owed its success largely to this circumstance. 'Daphnis et Alcimadura' (Dec. 29, 1754), a pastoral in the Langue d'Oc, in which he introduced many Provençal airs, completed his popularity; and of this he made use to procure his appointment as director of the Concerts Spirituels. That post he occupied for seven years (1755-62), showing great ability both as an administrator and conductor, and producing at the Concerts with much success three short oratorios, 'Les Israëlites au Mont Oreb,' 'Les Fureurs de Saül,' and 'Les Titans.' 'Les Fêtes de Paphos' (May 9, 1758), originally written for Mme. de Pompadour's private theatre, was the only opera performed at the Académie during the same period. His last operas, 'Thésée' (1767) and 'Psyché' (1769, a mere adaptation of the third act of 'Les Fêtes de Paphos'), were unsuccessful. [Twelve Motets, a book of trios, sonatas for violin and harpsichord, etc., are mentioned in the *Quellen-Lexikon*, and a very amusing *jeu d'esprit* was published in 1760. It is a musical setting in cantata-form of the 'Privilège du Roi' which appears in all publications of the period; it has parts for strings, oboes, and horns.]

There is a good portrait of Mondonville in pastel by Latour, formerly in the possession of M. Ambroise Thomas. The physiognomy is that of a man, cunning, patient, and fond of money; the arch of the eyebrows indicating a musician gifted with melody and a good memory. He holds a violin in his hand; possibly a hint from the artist that posterity would rank the virtuoso and conductor higher than the composer. However this may be, his music has long been forgotten.

His son (born in Paris, 1748, died there 1808) had some reputation as a violinist and oboist. G. C.

MONFERRINA. A kind of country dance, originating in Piedmont. The tunes used in Italy and Malta became fashionable in England in the early years of the 19th century, and

were employed for country dances. In this country the name stood as 'Monfrina,' 'Monfreda' or 'Manfredina.' The favourite tune with the title 'Italian Monfrina' was—

Copies will be found in Wheatstone's *Country Dances for 1810, Companion to the Ball-Room*, circa 1816, and other collections of country dances. F. K.

MONGINI, a tenor well remembered by opera-goers of a generation back, first sang in London at the old Her Majesty's Theatre in 1859, and again about 1862. The best part of his London career, however, dated from 1866, when the premature death of Giuglini had left Mapleson without a leading tenor possessed of any great attraction for the public. Mongini could not fill Giuglini's place, but he had a voice of extraordinary power and range, and in certain parts—Arnold in 'William Tell,' Manrico in 'Trovatore,' and John of Leyden in 'The Prophet' among the rest—he met with marked success. When Gye and Mapleson joined forces at Covent Garden in 1869, Mongini was one of the leading tenors in the company, and he afterwards sang under Mapleson's management down to 1873. Towards the end of his career, however, he lived a very irregular life, and in 1874 he died. As regards sheer vocal power—he was a typical *tenore di forza*—Mongini was the Tamagno of his day, but he had none of Tamagno's gifts as an actor. S. H. P.

MONIUSZKO, Stanislaus, born May 5, 1820, in the department of Minsk in Lithuania, received his first musical education from the organist Aug. Freyer and went to Berlin in 1837, where he was a pupil of Rungenhagen for two years. He settled down at Wilna as a teacher and organist of the church of St. John, and in 1846 his first opera, 'Halka,' was given at Warsaw. In 1858 he became capellmeister at the opera in Warsaw, and afterwards professor at the Conservatorium. Among his operas and dramatic pieces (of which Riemann enumerates fourteen, with three ballets) the most noteworthy are 'Die Gräfin,' and 'Der Paria,' the latter produced in 1869. He wrote five masses, church music, cantatas, and choral music, an overture 'Bajka,' music to 'Hamlet' and 'The Merry Wives of Windsor,' and many songs and pianoforte pieces, besides an instruction book in Harmony in Polish. One of his best songs, 'Le Cosaque,' enjoyed great popularity for many years. He died at Warsaw, June 4, 1872; twenty years afterwards a branch of the Warsaw Musical Society was founded with the special object of publishing his MS. works and founding a museum in his honour. (Riemann's *Lexikon.*) M.

MONK, Edwin George, Mus.D., born at Frome, Somerset, Dec. 13, 1819, was initiated in music by his father, an amateur. He studied pianoforte playing at Bath under Henry Field, and organ playing under George Field. He then went to London and learned choral singing in Hullah's classes, and solo singing from Henry Phillips. After holding several appointments as organist in his native county he went to Ireland in 1844, and became organist and music-master of the newly-formed College of St. Columba [at Stackallan, near Navan, County Meath, afterwards transferred to Rathfarnham, County Dublin; he remained there till 1846, when he was succeeded by J. B. Collins. W. H. G. F.] About the same time he commenced the study of harmony and composition under G. A. Macfarren, whose valuable teaching he enjoyed for several years. In 1847 he settled in Oxford, and was concerned in the formation of 'The University Motett and Madrigal Society.' In 1848 he obtained the appointments of lay precentor, organist, and music-master at the new College of St. Peter, Radley, and graduated as Mus.B. at Oxford. In 1856 he proceeded Mus.D., his exercise being a selection from Gray's ode, 'The Bard,' which he published in the same year in vocal score. In 1859 he was appointed successor to Dr. Camidge as organist and choirmaster of York Cathedral. [He resigned in 1883, and was succeeded by Dr. J. Naylor. He died at Radley, near Oxford, Jan. 3, 1900.] He published a service, several anthems, a 'Veni Creator Spiritus,' and other pieces, and various secular compositions, and edited *The Anglican Chant Book* and *The Anglican Choral Service Book*, also, with the Rev. R. Corbet Singleton, *The Anglican Hymn Book* and, with Sir F. A. G. Ouseley, *The Psalter and Canticles pointed for chanting* (two series), and *Anglican Psalter Chants*. He was the compiler of the libretti of Macfarren's oratorios, 'St. John the Baptist,' 'The Resurrection,' and 'Joseph.' [He was a student of astronomy, and became a F.R.A.S. in 1871.] W. H. H.

MONK, William Henry (no relation to the preceding), was born in London, March 16, 1823. He studied under Thomas Adams, J. A. Hamilton, and G. A. Griesbach. After filling the office of organist at Eaton Chapel, Pimlico; St. George's Chapel, Albemarle Street; and Portman Chapel, St. Marylebone, he was appointed in 1847 director of the choir in King's College, London, and in 1849 organist. In 1874, upon the resignation of Hullah, he became Professor of Vocal Music in the College. He was early associated with Hullah in his great work of

popular musical education. In 1851 he became Professor of Music at the School for the Indigent Blind. In 1852 he was appointed organist of St. Matthias, Stoke Newington, where a voluntary choir, under his direction, for many years sustained a daily choral service. He delivered lectures on music at the London Institution (1850 to 1879); the Philosophical Institution, Edinburgh; and the Royal Institution, Manchester. He was appointed a professor in the National Training School for Music, 1876, and in Bedford College, London, 1878. He was musical editor of *The Parish Choir* after the fortieth number, and one of the musical editors of *Hymns Ancient and Modern*. He edited many other works of a similar character, including some for the Church of Scotland, and made various contributions to many of the modern Hymnals. [He died in London, March 1, 1889.] W. H. H.

MONOCHORD (from the Greek Μονόχορδον and the Latin 'Monochordon'), a single vibrating string, which, being subdivided in simple mathematical ratios, gives the main notes of the scale which underlie all musical theory. This scientific basis of music has been known from very early times. It is especially connected with the name of Pythagoras, the great Greek of the 6th century B.C. He very possibly obtained his knowledge of it from the Egyptian priests, and he certainly handed on to a Greek school of his own a developed musical or rather acoustical theory, on which all subsequent theory has been based. The earliest full statement of it is in the treatise of Euclid (*c.* 300 B.C.), called 'Sectio Canonis,' the precursor of a large number of such treatises extending into the Latin Middle Ages.

The first interval to be established is the octave, which is sounded by $\frac{1}{2}$ the vibrating string; the fifth will similarly be given by $\frac{2}{3}$ of the string and the fourth by $\frac{3}{4}$ of it. A tone is the difference between the fourth and the fifth, that is to say, it is represented by the fraction $\frac{8}{9}$. Thus the whole skeleton of the scales is arrived at. The Greeks subdivided the fourth in three different ways: (1) into a tone, a tone, and a semitone: or else (2) into a semitone, a semitone, and a sesquitone: or else (3) into a quarter-tone, a quarter-tone and a ditone, these three methods give the three *genera* of scale called respectively diatonic, chromatic, and enharmonic.[1] (See GREEK MUSIC.)

The first of the three is the one that has been perpetuated in modern Western music, and therefore is the only one that need be taken into account here. The immediate result of it was an Octave-System made up thus:—

T	Nete (νήτη or νεάτη,	lit. 'lowest'), our highest note.
T	Paranete (παρανήτη,	*i.e.* 'next to Nete').
S	Trite (τρίτη,	*i.e.* 'third string').
	Paramese (παραμέση,	*i.e.* 'next to Mese').
T	Mese (μέση,	*i.e.* 'middle string').
T	Lichanos (λιχανός,	*i.e.* 'forefinger string').
S	Parhypate (παρυπάτη,	*i.e.* 'next to Hypate').
	Hypate (ὑπάτη	*i.e.* 'highest'), our lowest note.

[1] There are further subtleties of subdivision which may here be left unnoticed.

The terminology is taken from the Cithara or Lyre. The interval from Nete to Hypate is that of an octave; from Paramese to Hypate is a fifth or pentachord; from Nete to Paramese or from Mese to Hypate is a fourth or tetrachord. These four notes are 'stable,' *i.e.* of fixed position, whether the scale be diatonic, enharmonic, or chromatic; but the inner notes of the tetrachord vary according to the character of the scale. On the left-hand side the intervals of the diatonic scale are indicated by the initials T and S; and it will be noticed that the two tetrachords are exactly alike in the arrangement of their intervals, each being represented by the formula STT ascending. This octave, therefore, consists of two similar tetrachords separated from one another by a tone, and therefore called in technical language 'disjunct.'

As the range of musical instruments and of musical ideals became more extended this conception of the scale was widened. In the extant writings of Aristoxenus (4th cent. B.C.) there is little trace of any more extended scale than this of one octave; but at least by the time of Euclid (*c.* 300 B.C.) the standard scale was regarded as consisting of two octaves. A tetrachord was added both above and below the twin tetrachords of the original octave, and then, in order to complete the range of two octaves an additional note was added below. The result was the Double Octave-System, consisting of the following series of notes, and known thenceforward as the 'Perfect System' (σύστημα τέλειον):—

T	Nete Hyperbolaion (νήτη ὑπερβολαίων)	Tetrachord Hyperbolaion.
T	Paranete Hyperbolaion (παρανήτη ὑπερβολαίων)	
S	Trite Hyperbolaion (τρίτη ὑπερβολαίων)	
T	Nete Diezeugmenon (νήτη διεζευγμένων)	Tetrachord Diezeugmenon.
T	Paranete Diezeugmenon (παρανήτη διεζευγμένων)	
S	Trite Diezeugmenon (τρίτη διεζευγμένων)	
T	Paramese (παραμέση)	
T	Mese (μέση)	Tetrachord Meson.
T	Lichanos Meson (λιχανὸς μέσων)	
S	Parhypate Meson (παρυπάτη μέσων)	
T	Hypate Meson (ὑπάτη μέσων)	Tetrachord Hypaton.
T	Lichanos Hypaton (λιχανὸς ὑπατῶν)	
S	Parhypate Hypaton (παρυπάτη ὑπατων)	
	Hypate Hypaton (ὑπάτη ὑπατῶν)	
	Proslambanomenos (προσλαμβανόμενος)	

It is evident at once that this nomenclature is only the extension of the preceding. There

are only three new terms: the tetrachord added above is called Hyperbolaion (*ὑπερβολαίων*) additional; the upper tetrachord of the two original ones is called Diezeugmenon (*διεζευγμένων*) disjunct; the note added to complete the two octaves is called proslambanomenos (*προσλαμβανόμενος*) additional. This enlargement of the scale grew up during the course of the 4th century B.C. Its earliest extant exposition is in the treatise of Euclid already mentioned, but probably its growth was gradual. It will be observed that each of the two new tetrachords is more closely attached to its neighbour than were the two original tetrachords; each pair is in technical language not disjunct but 'conjunct' (*συνημμένων*), because the two meet and share one note in common.

This conjunction of tetrachords was not a new thing, for there had long been in existence, side by side with the octave, a Heptachord consisting of two conjunct tetrachords which met in the note Mese. The full Greek system therefore was not complete without a tetrachord conjunct having Mese as its base. This formed an alternative to the intervals and notes of the Tetrachord Diezeugmenon; and thus a tetrachord called Synemmenon (*συνημμένων*) found a place alongside and parallel to it. The middle of the scale thus offered two alternatives, thus:

Paranete Diezeugmenon.	Nete Synemmenon.
T	T
Trite Diezeugmenon.	Paranete Synemmenon.
S	T
Paramese.	Trite Synemmenon.
T	S
Mese.	Mese.

Thus, by a combination of these two,—known as the Greater Perfect System and the Lesser Perfect System,—there was reached the full development in the Perfect Unmodulating System *σύστημα τέλειον ἀμετάβολον*, which consisted of a pair of octaves corresponding, so far as notes went, with the modern minor scale without accidentals, but with the possibility that the note above the middle note of the series could be flattened by a semitone.

This series had no particular pitch of its own; in other words these Greek names correspond with the modern terms Tonic, Supertonic, Mediant, etc., not with the names that denote a definite pitch. They were, therefore, applicable to any pitch. The early notions of pitch among the Greeks were denoted by tribal names,—Dorian, Locrian, Lydian, etc., which in themselves were necessarily somewhat indeterminate. (See MODES.) Such methods, though for the moment they might satisfy the theorists, were necessarily insufficient as a working notation for practical musicians. An alphabetical system of notation was, therefore, devised by them for their use in early days. This policy was begun by the instrumentalists who assigned fifteen letters of a Greek archaic alphabet to the fifteen degrees of the Perfect System. These applied in the first instance to the diatonic form, but by modifications in form and in position the same set of Symbols was made to serve also for the chromatic and enharmonic forms. The highest note of the series was called *alpha*; *beta* stood for the fourth below and *gamma* for its octave, *delta* for the sixth below and *epsilon* for its octave, and thus the series went on, each pair of letters signifying two notes an octave apart. (See GREEK MUSIC.) The antiquity of the system is shown not merely by the employment of the digamma, but also by the archaic form of other letters and by the use of a second form of *lambda*, the second of which is said to be peculiar to the alphabet of Argos. The strange method of arrangement is probably to be explained as due to the technique of the instruments (see the table, pp. 246-247).

This system was sufficient not only to provide a short notation for each note of the Perfect System, but also (with the help of some modifications to express the chromatic semitones) to provide for the old Octave Scale to be pitched at each of the thirteen pitches which the teaching of Aristoxenus showed to be required, corresponding with the thirteen semitones of the diatonic octave. (See MODES.) When the neo-Aristoxenean teaching demanded fifteen pitches instead of thirteen, the series was insufficient, and had to borrow from elsewhere, as will be seen shortly.

Meanwhile the singers had devised their own method of notation, a simpler one and more modern. They reckoned up all the notes that they would use whether in the diatonic, the chromatic, or the enharmonic form, gave *alpha* to the highest note, and the succeeding letters to the succeeding notes. No digamma or other archaic form was used; all the notes of the alphabet down to *phi* were required for the higher octave, owing to the number of the true chromatic, enharmonic, and diatonic subdivisions of the octave. The lower octave then followed suit, beginning with the *chi*, *psi*, and *omega* that were left over and then starting a fresh alphabet with slightly modified letter-symbols, which in turn had reached to *phi* by the time that the lowest note was reached. This notation, like the other, was sufficient to represent the octave at the thirteen Aristoxenean pitches. To provide for the set of fifteen the vocalists extended their notation upwards, and adopted notes above their original *alpha*, denoting them by the letters of the fag end of an alphabet from *tau* to *omega*.

It seems to have been at this point in the evolution that the two systems of notation—that of the vocalists and that of the instrumentalists—were for the first time confronted with one another. At once a discrepancy was seen to exist between them in point of pitch; for the *alpha* of the instrumentalist was a minor third above

the *alpha* of the vocalist. As, however, the vocalist had adopted the notes just mentioned above his original *alpha*, he had something to equate with the instrumentalist's *alpha*, and thus the two were easily brought into line, so far as the upper end of the scale was concerned. At the lower end the discrepancy was more marked, because the instrumentalist had not yet extended his notation so as to meet the requirements of the neo-Aristoxenean fifteen pitches. He was able, however, to do this very simply by adding to the lower end of his scale the lower notes of the vocalist's scale that overlapped his. Thus the two methods of notation were made to conform to one another. No further devices were required, except that when it was desired to note the Double-octave of the Perfect System, and not merely the old Single-octave, at the different pitches, the additional notes that this change entailed were added above, and the notation of the lower octave was repeated (with a distinguishing dash) alike in both the systems of notation.

Thenceforward the two systems prevailed side by side ; each note was represented by two signs, and it is in this form that the Greek notation is known to us. The full description of it is only found in writers of the Christian era such as Gaudentius and Alypius ; but it is clear that it is of great antiquity, and some such history as that which has been reconstructed here must lie behind it.

The Perfect System and its notation are of importance because they pass from Greek music through Greco-Latin music into the music of the Middle Ages, and their effect still remains in modern music. The further history as regards the theory of music is traced in the article Modes, but the question of pitch must be dealt with here. Though the Perfect System could be set at any pitch, it was natural to look upon some one particular pitch as the normal one, and upon others as transpositions. The Lydian pitch was adopted for that purpose, and consequently the symbol ⊢, which represented Proslambanomenos at the Lydian pitch, is constantly found as the normal equivalent of Proslambanomenos, the Γ (*gamma*) a note higher as the equivalent of Hypate Hypaton, and so on, the notation being the instrumental one. The reason for this convention is not clear ; certainly it was settled without reference to the origin of either of the systems of notation, for each of these presupposes a different pitch as the normal one, as its use of the letter *alpha* shows. If the ancient and modern notations are to be compared it is evident that the normal pitch at which the Perfect System can most naturally be set is from *a′* to A, for its intervals are those of our minor scale, or else from *dd* to D when the *b♭* is used instead of *b♮*. To bring the old Greek instrumental notation into line with modern notation it is therefore natural to take the modern *aa* as the equivalent of the highest note of the old instrumental system, (which was its starting-point, and was in fact called *alpha*). The starting-point of the old vocal system will then have F♯ as its modern equivalent ; while the Lydian pitch, which was adopted as the normal pitch of the Perfect System, will be represented by the range from *dd* to D. And the whole range covered by the Perfect System in all its possible pitches will be from *gg* (the top note of the Hyperlydian pitch) to FF, the bottom note of the Hypodorian pitch. Within these extreme limits lies the whole of ancient and mediæval music.

The Perfect System, with its double Greek notation, appears in the early Latin writers such as the celebrated Roman philosopher Boethius (470-524), and through him it reappears in the Latin writers on music in the 9th century. The Lydian pitch still continued to be for Boethius and his followers the normal pitch ; and thus the description of the Perfect System in Hucbald's treatise *De harmonica institutione* (*c.* 900) is accompanied by the ancient signs derived from the primitive Greek alphabet, but in a yet more degraded form, and with letters drawn from the vocalist's system of alphabetical notation substituted where the instrumentalist's symbol was too uncouth to be easily reproduced (see below).

This fusion of the two Greek alphabetical methods of noting the Perfect System, called Dasian Notation, did not last long. Later writers are content to describe the Greek scale without the Greek notation, and with a new Western alphabetical system in its stead. The two tables following will make all clear.

Table of Greek Notation for every Semitone.

(Compare the Tables, Vol. ii. pp. 226-229.)

Modern.	Vocal notation.		Instrumental notation.	
FF	Ⅎ	(altered Phi)	Ⅎ	borrowed from the vocal.
GG♭	Ⅽ	(turned Upsilon)	Ⅽ	
FF♯	⊥	(turned Tau)	⊥	
GG	Ϛ	(double Sigma)	Ϛ	
A♭	ϸ	(inverted Rho)	ϸ	
GG♯	⊔	(inverted Pi)	Ϛ	
A	Ϙ	(altered Omicron)	H	
B♭	[I]I[I]	(double Xi)	Ⲏ	forms of H.
A♯	И	(inverted Nu)	Ⲏ	
B	Ⲙ	(inverted Mu)	Ⲏ	ancient forms of I.
C=B♯	V	(inverted Lambda)	Ⲓ	
[B=C♭]	...	(? Kappa)	...	
C	⊢	(turned Iota)	E	forms of E.
D♭	ϑ	(turned half Theta)	Ⲉ	
C♯	Ⲏ	(altered Eta)	Ⲓ	
D	⅂	(altered Zeta)	Ⲓ	forms of Argive Δ.
E♭	F	(altered Epsilon[1])	Ⲗ	
D♯	∀	(altered Delta)	Ⲗ	
E	⅂	(turned Gamma)	Γ	forms of Γ.
F=E♯	Ꞵ	(altered Beta)	L	
[F♭=E]	...	(? altered Alpha)	...	

[1] Not really Digamma though called so.

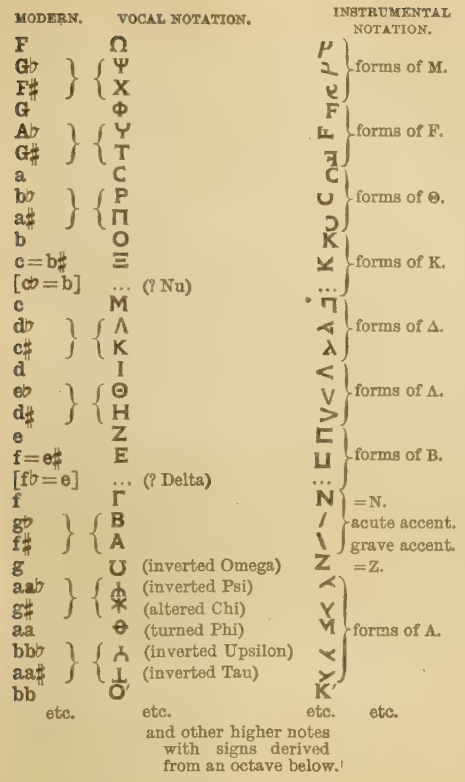


TABLE OF GRECO-LATIN NOTATION.

The Dasian Notation of Hucbald derived from the Greek runs thus:—

(Iota.)	[Ν]	Nete hyperbolaion.	
	Π	Paranete hyperbolaion.	
(Form of Alpha.)	[Υ]	Trite hyperbolaion.	
	Ν	Nete diezeugmenon.	
	[Ω]	Paranete diezeugmenon.	Ω Nete synnemmenon.
	[Ε]	Trite diezeugmenon.	[Ε] Paranete synemmenon.
	⊏	Paramese.	[Θ] Trite synnemmenon.
	[Ι]	Mese.	[Ι] Mese.
	[Μ]	Lichanos meson.	
	[Ρ]	Parhypate meson.	
	C	Hypate meson.	
(Digamma.)	F	Lichanos hypaton.	
	[Β]	Parhypate hypaton.	
(Gamma.)	Γ	Hypate hypaton.	
(Dasian.)	Ⱶ	Proslambanomenos.	

The lower notes are, as was then usual, placed below and the upper ones above; and this table reads in the inverse order to the preceding one. Proslambanomenos here is the equivalent of D there.

The signs which are bracketed are those taken from the Vocal Notation. Compare the Lydian Table (given in vol. ii. p. 227) from which Hucbald took his signs.

[See also A. J. Hipkins's *Dorian and Phrygian, from a Non-Harmonic Point of View.* 1902.]

W. H. F.

MONOCORDO (Ital.), MONOCORDE (Fr.). An indication which instructs a player of a stringed instrument to execute a given passage or whole piece on one string. This excellent effect originated with Paganini (*q.v.*). Having played his 'Love Scene' which he had written for the G and E strings, before the Court at Lucca with great success, he was asked if he could not execute something on one string only. The idea immediately caught his fancy, and he set to work and composed his Sonata 'Napoleon' for the G string. This he performed before the Court on the Emperor Napoleon's birthday, in the presence of the Princess of Piombo, Napoleon's favourite sister, and other royalties, and the success of this composition led to many others of a similar character. O. R.

MONODIA. (From the Gr. *μόνος*, 'single,' and *ᾠδή*, 'a song.') A term applied by modern critics to music written in what is sometimes called the Homophonic Style; that is to say, music in which the melody is confined to a single part, instead of being equally distributed between all the voices employed, as in the Polyphonic Schools.

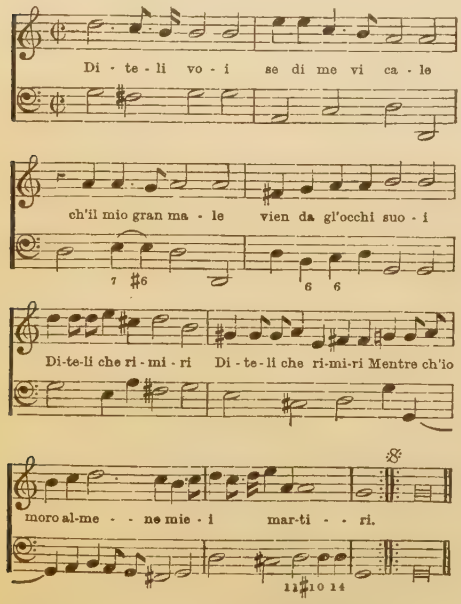
The rise of the Homophonic School was extraordinarily rapid. Soon after the death of Palestrina, in the year 1594, it sprang suddenly into notice; and, without having previously passed through any of the usual stages of gradual development, at once began to exercise an irresistible influence upon the progress of art.

Giov. Battista Doni tells us that at the celebrated *réunions* which took place in Florence about the close of the 16th century, at the house of Sig. Giov. Bardi de' Conti di Vernio, 'Vincenzo Galilei was the first who composed songs for a single voice'; and that Giulio Caccini (detto Romano), 'in imitation of Galilei, but in a more beautiful and pleasing style, set many canzonets and sonnets written by excellent poets,' and sang them 'to a single instrument, which was generally the theorbo, or large lute, played by Bardilla.'[1] [See CACCINI, GIULIO.] The success of these early efforts was so encouraging that the inventors of the Opera and the Oratorio were content to write the whole of their recitatives, and even the rudimentary arias with which they were interspersed, with no richer accompaniment than that of an exceedingly simple figured bass, in which we soon find indications of the unprepared discords first introduced by Monteverde. The use of these discords inevitably led to the repudiation of the ancient ecclesiastical modes in favour of the modern major and minor scales, and these scales once established, the new system was complete. No doubt unisonous vocal music with little or no accompaniment had been heard in the Canzonetta, Villanella, and other forms of national melody, ages and ages before the birth of Galilei; and that the recognition

[1] Giov. Batt. Doni. Op. Omn. Firenze, 1763, tom. ii.

of what we now call the 'Leading Note' as an essential element of melody was no new thing, may be gathered from the words of Zarlino, who, writing in 1558, says 'even Nature herself has provided for these things; for not only those skilled in music, but also the *Contadini*, who sing without any art at all, proceed by the interval of the semitone'—*i.e.* in forming their closes. Nevertheless, whatever may have been the popular practice, it is certain that the Polyphonic Style alone had hitherto been taught in the Schools. We must understand therefore that those who met at the house of Bardi, though undoubtedly the first to introduce this simple music to real lovers of art, were not its actual inventors. The latent germs of the Monodic Style must have been present wherever national melody existed.

The following example from Caccini's 'Nuove Musiche' (Venezia, 1602) will show the kind of effect contemplated by the Count of Vernio's enthusiastic disciples. We need scarcely say that the figure 14, under the last D, in the last bar but one, indicates a Dominant Seventh; but before this Canzonetta was published, Monteverde had already printed his Fifth Book of Madrigals; he would not, therefore, be robbed of any portion of the credit universally accorded to him, even if it could be proved—which it cannot—that the discord in this instance was not intended to appear as a passing-note. The seventh on the E, in the third bar, is, of course, a suspension, written in strict accordance with the laws of ancient counterpoint. [See MONTEVERDE, CLAUDIO.]



Di - te - li vo - i se di me vi ca - le
ch'il mio gran ma - le vien da gl'occhi suo - i
Di-te-li che ri - mi - ri Di - te - li che ri-mi-ri Mentre ch'io
moro al-me - - ne mie - i mar-ti - - ri.

Poor as this seems, when compared with the delightful madrigals it was intended to supplant, it nevertheless already shows traces of a new element, destined to work one of the most sweeping revolutions known in the history of art. In exchange for the contrapuntal glories of the 16th century, the composers of the 17th offered the graces of symmetrical form, till then unknown. The idea was not thrown away upon their successors. Before very long, symmetrical form was cultivated in association with a new system, not of counterpoint, as it is sometimes erroneously called, but of part-writing, based upon the principles of modern harmony, and eminently adapted to the requirements of instrumental music; and thus to such slight indications of regular phrasing, reiterated figure, and prearranged plan, as are shown in Caccini's unpretending little aria, we are indebted for the germ of much that delights us in the grandest creations of modern genius. [See FORM, HARMONY, OPERA, ORATORIO.] W. S. R.

MONOTONE (from *μόνος*, 'single,' and *τόνος*, a 'note,' or 'tone'). Prayers, Psalms, Lessons, and other portions of the Divine Office, when declaimed on a single note, are said to be monotoned, or recited in Monotone. It is only when ornamented with the traditional inflections proper to certain parts of the service, that they can be consistently described as sung. [See INFLEXION.]

The use of Monotonic Recitation is of extreme antiquity, and was probably suggested, in the first instance, as an expedient for throwing the voice to greater distances than it could be made to reach by ordinary means. W. S. R.

MONPOU, FRANÇOIS LOUIS HIPPOLYTE, born in Paris, Jan. 12, 1804; at five became a chorister at St. Germain l'Auxerrois, and at nine was transferred to Notre Dame. In 1817 he entered as a pupil in the school founded by Choron, which he left in 1819 to be the organist at the Cathedral at Tours. For this post he proved unfit, and soon returned to Choron, who was extremely fond of him, and made him, although a bad reader and a poor pianist, his accompagnateur (or assistant) at his Institution de Musique religieuse. Here he had the opportunity of studying the works of ancient and modern composers of all schools, while taking lessons in harmony at the same time from Porta, Chelard, and Fétis; but notwithstanding all these advantages he showed little real aptitude for music, and seemed destined to remain in obscurity. He was organist successively at St. Nicolas des Champs, St. Thomas d'Aquin, and the Sorbonne, and sacred music appeared to be his special vocation until 1828, when he published a pretty nocturne for three voices to Béranger's song, 'Si j'étais petit oiseau.' He was now taken up by the poets of the romantic school, and became their musical interpreter, publishing in rapid succession romances and ballads to words chiefly by Alfred de Musset and Victor Hugo. The harmony of these songs is incorrect, the

rhythm rude and halting, and the arrangement wretched, but the general effect is bold and striking, and they contain much original melody. Backed as the composer was by influential friends, these qualities were sufficient to attract public attention and ensure success. But though he was the oracle of the romanticists, Monpou found himself after the close of Choron's school without regular employment, and being a married man found it necessary to have some certain means of support. The stage seemed to offer the best chance of fortune, and though entirely unpractised in instrumentation, he unhesitatingly came forward as a composer of operas. Within a few years he produced 'Les deux Reines' (Aug. 6, 1835); 'Le Luthier de Vienne' (June 30, 1836); 'Piquillo,' three acts (Oct. 31, 1837); 'Un Conte d'Autrefois' (Feb. 20, 1838); 'Perugina' (Dec. 20, 1838); 'Le Planteur,' two acts (March 1, 1839); 'La chaste Suzanne,' four acts (Dec. 27, 1839); and 'La Reine Jeanne,' three acts (Oct. 12, 1840). These operas bear evident traces of the self-sufficient and ignorant composer of romances, the slovenly and incorrect musician, and the poor instrumentalist which we know Monpou to have been; but quite as apparent are melody, dramatic fire, and instinct, and a certain happy knack. His progress was undeniable, but he never became a really good musician. Unfortunately he overworked himself, and the effort to produce with greater rapidity than his powers would justify, resulted in his premature death. Being seriously ill he was ordered to leave Paris, but he became worse, and died at Orleans, Aug. 10, 1841. He left unfinished 'Lambert Simnel' (Sept. 16, 1843), completed by Adolphe Adam, and a short opéra-comique, 'L'Orfèvre,' which has never been performed. G. C.

MONRO, or MONROE, GEORGE, an organist, who held appointment at St. Peter's in Cornhill, and who played the harpsichord in the orchestra of Goodman-fields theatre from 1729 to his death a few years later (1731 ?) His principal fame was gained, however, by a great number of vocal compositions which were in great favour during the early part of the 18th century. After appearing on single music sheets many were transferred to *The Merry Musician*, vols. ii. and iii. *c.* 1728-29; to Watt's *Musical Miscellany*, 1731; to Walsh's *British Musical Miscellany*, 1733-34, and similar collections. He composed the music for Fielding's 'Temple Beau,' acted in 1729. F.K.

MONRO, HENRY, born at Lincoln in 1774, was a chorister in the cathedral there, and afterwards a pupil of John James Ashley, Dussek, Dittenhofer, and Domenico Corri. In 1796 he was appointed organist of St. Andrew's, Newcastle-upon-Tyne. He composed a sonata for pianoforte and violin, and a few pianoforte pieces and songs. W. H. H.

MONSIGNY, PIERRE ALEXANDRE, whom Choron used to call the French Sacchini, born at Fauquembergue, near St. Omer, Oct. 17, 1729, showed a taste for music in childhood, and studied the violin with success, though not intended for the profession of music. His father died just as he had completed his classical education, and wishing to help his family, Monsigny went to Paris in 1749, and obtained a clerkship in the Bureaux des Comptes du Clergé. Having good patrons, for his family was a noble one, and being well-educated, refined in manners, and a skilful violinist, he was soon attached to the household of the Duke of Orleans as maître d'hôtel, with a salary which placed him above want, and enabled him to provide for his younger brothers. He then resumed his musical studies, and Pergolesi's 'Serva Padrona' having inspired him with a vehement desire to compose a comic opera, he took lessons from Gianotti, who played the double-bass at the Opéra and taught harmony on Rameau's system. He was a good teacher, and his pupil made so much progress that it is said Gianotti would not have been averse to putting his own name on the score of 'Les Aveux indiscrets,' which Monsigny submitted to him after only five months' tuition, and which at once established his fame when produced at the Théâtre de la Foire (Feb. 7, 1759). Encouraged by this first success he composed for the same theatre, 'Le Maître en droit' (Feb. 13, 1760), and 'Le Cadi dupé' (Feb. 4, 1761), which contains an animated and truly comic duet. His next opera, 'On ne s'avise jamais de tout' (Sept. 14, 1761), was the first in which he had the advantage of a libretto by Sedaine, and the last performed at the Théâtre de la Foire, before it was closed at the request of the artists of the Comédie Italienne, in fear of the new composer's increasing reputation. After the fusion of the two companies Monsigny composed successively 'Le Roi et le Fermier,' three acts (Nov. 22, 1762); 'Rose et Colas,' one act (March 8, 1764); 'Aline, Reine de Golconde,' three acts (April 15, 1766); 'L'Île sonnante,' three acts (Jan. 4, 1768); 'Le Déserteur,' three acts (March 6, 1769); 'Le Faucon,' one act (March 19, 1772); 'La belle Arsène,' three acts (August 14, 1773); 'Le rendezvous bien employé,' one act (Feb. 10, 1774); and 'Félix ou l'enfant trouvé,' three acts (Nov. 24, 1777). After the immense success of this last work he never composed again. [Two other operas, 'Pazanius de Monègne,' and 'Philémon et Baucis,' written about 1770, remained unperformed.] He had acquired a considerable fortune as steward to the Duke of Orleans, and Inspector-general of canals, but the Revolution deprived him of his employment, and of nearly all his resources. However, in 1798 the sociétaires of the Opéra-Comique came to his assistance, and in recognition of his services to the theatre, allowed him an annuity of 2400 francs (nearly £100). On the death of Piccinni, two years later, he was

appointed Inspector of Instruction at the Conservatoire de Musique, but he resigned in 1802, being aware that he could not adequately perform the duties of the office from his own insufficient training. In 1813 he succeeded Grétry at the Institut; but it was not till 1816 that he received the Legion of Honour. He died Jan. 14, 1817, aged eighty-eight, his last years being soothed by constant testimonies of sympathy and respect.

As an artist Monsigny's greatest gift was melody. His desultory training accounts for the poverty of his instrumentation, and for the absence of that ease, plasticity, and rapidity of treatment which are the most charming attributes of genius. He was not prolific; and either from fatigue, or from a dread of an encounter with Grétry, he ceased to compose immediately after his greatest triumph; his exquisite sensibility and his instinct for dramatic truth have, however, secured him a place among original and creative musicians. G. C.

MONTAGNANA, Antonio, a celebrated basso, who appeared in England in the autumn of 1731. He made his début on the London boards in 'Poro' (revived); and in January 1732 he created the bass rôle in 'Ezio,' Handel having written specially for him the famous song 'Nasce al bosco,' which was clearly intended to exhibit the peculiar powers of the singer. This opera was followed by 'Sosarme,' in which Montagnana had again an air 'Fra l'ombre e l'orrori,' in which the depth, power, and mellow quality of his voice, and his rare accuracy of intonation in hitting distant and difficult intervals, were displayed to full advantage. In the same year he sang in Handel's 'Acis,' a revival of 'Alessandro,' 'Flavio,' 'Coriolano,' and in 'Esther.' In 1733 Montagnana took part in 'Deborah,' 'Tolomeo,' 'Ottone,' 'Orlando,' and 'Athaliah' (at Oxford). In 'Orlando' he had another very difficult song composed expressly for him, 'Sorge infausta,' which has remained a trial of compass and execution since his day for the most accomplished bassi.

In the following year, however, Montagnana seceded, with Senesino and Cuzzoni, to the Theatre in Lincoln's-Inn-Fields, under the direction of Porpora; and here he appeared in 'Onorio' by that master, and other pieces. In 1735 and 1736 he was still with Porpora, singing in his 'Polifemo,' and the 'Adriano' of Veracini. In January 1738 he returned to his allegiance to Handel, singing in 'Faramondo,' then first produced, 'La Conquista del Vello d'Oro,' and 'Serse.' After this we hear no more of Montagnana. J. M.

MONTAGNANA, Domenico, 1700-40, a great violin-maker whose name is not as renowned as others of his class, owing to the misleading labels bearing the names of 'Guarnerius,' 'Bergonzi,' etc., which have been dishonestly inserted in his instruments from time to time to enhance their market value. He was an apprentice of Antonius Stradivarius, and ranks with Carlo Bergonzi as one of the master's best pupils. He first established a workshop of his own in Cremona, but later he settled in Venice, where his superior knowledge of qualities, materials, thicknesses, and varnish—gained in the workshops of Cremona—brought him into prominence. His instruments show the influence of Stradivarius's teaching, but bear little resemblance to the Stradivarius form. The outline is less graceful, the upper and lower curves flatter. The sound-holes somewhat resemble the 'Guarnerius' type, and the scroll is much larger and bolder than that of Stradivari. The extreme richness and velvety softness of his varnish rivals that of his master, and has excited the admiration of connoisseurs throughout Europe. Montagnana made violas and magnificent violoncellos besides violins, but not being a prolific maker, his instruments are scarce and valuable. It is as a violoncello maker that the best tribute has been paid to him by Charles Reade, who called him 'the mighty Venetian' in his letters to the *Pall Mall Gazette* in 1872. Hart's *The Violin* (London, 1875). A. Vidal's *Les Instruments à Archet* (Paris, 1876). Charles Reade's *A Lost Art Revived*, reproduced from the *Pall Mall Gazette* by George Muntz (Gloucester, 1873). *Les Luthiers Italien au XVII. et XVIII. siècles* (Jules Gallay, Paris, 1869). E. H-A.

MONTANARI, Francesco, a distinguished violinist born in Padua during the latter part of the 17th century. He was a pupil of Corelli, and established himself in Rome, where he became a member of the orchestra of St. Peter's in 1700, and, according to Dr. Burney, died in 1730 of a broken heart when Bini came to Rome and proved himself to be the finest performer of the period. He composed twelve sonatas for violin which are published by a Boulogne firm. (A. M. Clarke's *Fiddlers Ancient and Modern*; Fetis, *Biog. des Mus.*) E. H-A.

MONTE, Philippe or Filippo de, and sometimes Philippe de Mons, born probably in 1521 or 1522,[1] traditionally at Mons, but according to Dlabacz at Mechlin.[2] As to his history we gain little by consulting old authorities, as Boissart,[3] Bullart,[4] Freher,[5] Sweertius,[6] etc., and are told as much by the title-pages of Philippe's own publications. Bullart, however, gives a portrait of the composer, after Sadeler, which is well worth seeing, and much superior to the smaller copies of it in Boissart and Hawkins.

[1] Sadeler's portrait, the single authority for this date, give Philippe's age as seventy-two in 1594.
[2] *Allgem. histor. Künstler Lex. fur Böhmen.* 4to. (Prag. 1815). Dlabacz founds his statement on a list of the imperial chapel dated 1582. For a full discussion of the subject see Fétis's *Biographie*, under 'Philippe de Mons.'

[6] Sweertius, *Athenæ Belgicæ*, p. 645 (Antwerp, 1628)

Elisabeth Weston's poem,[1] often referred to in biographies of Philippe, gives no information at all.

De Monte published his first book of Masses at Antwerp in 1557,[2] just at the end of Lassus's residence in that city, and we may safely credit the common tradition of a friendship existing between the two composers. It was probably on Orlando's recommendation that Philippe was called to Vienna, May 1, 1568, to become Maximilian's Chapelmaster. Rudolph II., the next emperor, moved his court to Prague, and thither Philippe followed him. Thus we find him dating from Vienna, April 15, 1569,[3] and from Prague, Sept. 20, 1580,[4] and Oct. 10, 1587.[5]

Fétis gives interesting details of de Monte's appointment as treasurer and canon of the cathedral at Cambrai, a benefice which he apparently held without residence. He resigned these appointments early in 1603, and died on July 4 of the same year.[6]

De Monte published over thirty books of madrigals—nineteen books *a* 5, eight *a* 6, and four *a* 4.[7] Eight books of these in the British Museum contain 163 Nos., so we may assume that 630 madrigals were printed, not to speak of many others contributed to collections. His sacred publications (two books of masses, and seven of motets) seem comparatively few, but he would scarcely find at the imperial court the same encouragement to write, or assistance to publish such works, as fell to the lot of his contemporaries at Rome and Munich. [See the *Quellen-Lexikon* for list.] Of modern reprints, Hawkins contributes a madrigal *a* 4, Dehn and Commer a motet each, and Van Maldeghem some Nos. in his 'Trésor Musical.' J. R. S.-B.

MONTÉCLAIR, Michel Pignolet de, born about 1666 at Chaumont in Bassigny, was a chorister in the cathedral of Langres, and subsequently sang in various other churches. He entered the service of the Prince de Vaudémont, as music-master, and went with him to Italy. In 1700 he went to live in Paris, and became a double-bass player in the opera orchestra in 1707, remaining there until 1737, when he retired with a pension. He died at St. Denis in September 1737. He was a distinguished teacher of the violin, and a composer of some importance, both for the stage and the chamber. His 'Festes de l'Été,' an 'opéra-ballet,' was produced on June 12, 1716, and his 'tragédie lyrique' 'Jephté,' in five acts and a prologue, on Feb. 28, 1732. In the prologue of this latter is a curious scene in which various mythological divinities are driven from the opera-house by Truth and the Virtues, and their places taken by the scriptural personages. Montéclair's *Méthode pour apprendre la Musique* had appeared in 1700, but in a revised edition (1736) a number of examples from 'Jephté' were given. It contains a valuable explanation of the more usual ornaments, and on the hints on the proper accentuation of words in music. (See *The Oxford History of Music*, vol. iv.; *The Age of Bach and Handel*, p. 301.) M.

MONTEVERDE, or MONTEVERDI, Claudio, the originator of the Modern style of composition, was born at Cremona in May 1567 and, at a very early period, entered the service of the Duke of Mantua as a violist; showing from the first unmistakable signs of a talent which gave good promise of future excellence, and which before long met with cordial recognition, not only at the Ducal Court, but from end to end of Europe.

The youthful violist was instructed in counterpoint by the Duke's Maestro di cappella, Marc Antonio Ingegneri, a learned musician and a composer of some eminence, who, if we may judge by the result of his teaching, does not seem to have been blessed in this instance with a very attentive pupil. It is, indeed, difficult to believe that Monteverde can ever have taken any real interest in the study of scholastic music. Contrapuntal excellence was not one of his strong points, and he never shines to advantage in music in which it is demanded. His first published work—a Book of 'Canzonette a tre voci,' printed at Venice in 1584—though clever enough for a youth of sixteen, abounds in irregularities which no teacher of that period could have conscientiously endorsed. And the earlier books of Madrigals by which the Canzonette were followed (in 1587, 1590, 1592, and 1603) show no progressive improvement in this respect, but rather the reverse. The beauty of some of these compositions is of a very high order; yet it is constantly marred by unpleasant progressions which can only have been the result of pure carelessness; for it would be absurd to suppose that such evil-sounding combinations could have been introduced deliberately, and equally absurd to assume that Ingegneri neglected to enforce the rules by the observance of which they might have been avoided. We must, however, draw a careful distinction between these faulty passages and others of a very different character, which, though they must have been thought startling enough at the time they were written, can only be regarded now as unlearned attempts to reach, *per saltum*, that new and as yet unheard-of style of beauty for which the young composer was incessantly longing, and to which alone he owes his undoubted

[1] From the *Parthenicon*, by E. J. Weston, 'ex familia Westoniorum Angla' (Praga, Aug. 16, 1810). The poem in Philippe's honour consists of forty-six Latin lines.

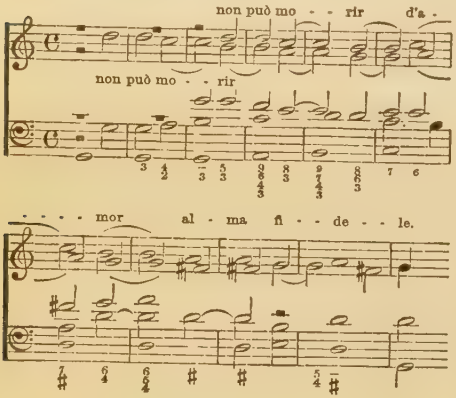
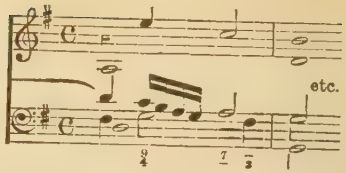
[7] Fétis speaks of the nineteenth book. The British Museum has the fourteenth. Fétis mentions no four-part Madrigals; but the Catalogue of the Bibliothèque Fétis contains 'Di Fi. di M. il 4°. lib. di Mad. à 4.'

claim to be revered, not only as the greatest musician of his own age, but as the inventor of a system of harmony which has remained in uninterrupted use to the present day. Among progressions of this latter class we may instance the numerous suspensions of the Dominant Seventh and its inversions, introduced into the cadences of *Stracciami pur il core*—an extremely beautiful Madrigal, published in the Third Book (1592). Also an extraordinary chain of suspended sevenths and ninths in the same interesting work, which, notwithstanding the harshness of its effect, is really free from anything approaching to an infraction of the theoretical laws of counterpoint, except, indeed, that one which forbids the resolution of a discord to be heard in one part while the discord itself is heard in another—and exceptions to that law may be found in works of much earlier date.



In his Fifth Book of Madrigals, printed in 1605, Monteverde grew bolder; and, thrusting the time-honoured laws of counterpoint aside, struck out for himself that new path which he ever afterwards unhesitatingly followed. With the publication of this volume began that deadly war with the Polyphonic Schools which ended in their utter defeat, and the firm establishment of what we now call modern music. In 'Cruda Amarilli'—the best-known madrigal in this most interesting series, we find exemplifications of nearly all the most important points of divergence between the two opposite systems, not excepting the crucial distinctions involved in the use of the diminished triad, and the unprepared dissonances of the seventh and ninth:—



Some modern writers, including Oulibicheff and Pierre Joseph Zimmerman, have denied that these passages exhibit any novelty of style—but they are in error. Up to this time sevenths had been heard only in the form of suspensions or passing-notes, as in 'Stracciami pur il core.' The unprepared seventh—the never-failing test by which the modern school may be distinguished from the ancient, the free style from the strict—was absolutely new; and was regarded by contemporary musicians as so great an outrage upon artistic propriety that one of the most learned of them—Giovanni Maria Artusi of Bologna—published in the year 1600 a work entitled *Delle imperfettioni della moderna musica* in which he condemned the unwonted progressions found in 'Cruda Amarilli,' on the ground that they were altogether opposed to the nature of legitimate Harmony.[1] To this severe critique Monteverde replied, by a letter addressed 'Agli studiosi lettori,' which he prefixed to a later volume of Madrigals. A bitter war now raged between the adherents of the two contending schools. Monteverde endeavoured to maintain his credit by a visit to Rome, where he presented some of his ecclesiastical compositions to Pope Clement VIII. But, much as his church music has been praised by the learned Padre Martini and other well-known writers, it is altogether wanting in the freshness which distinguishes the works of the great masters who brought the Roman and Venetian schools to perfection. Laboured and hard where it should have been ingenious, and weak where it should have been devotional, it adds nothing to its author's fame, and only serves to show how surely his genius was leading him in another and a very different direction.

Monteverde became Maestro di Cappella at the Ducal Court in the year 1602. In 1607 the Duke's son, Francesco di Gonzaga, contracted an alliance with Margherita, Infanta of Savoy; and in that year Monteverde produced his 'Orfeo' (see below) followed, in 1608, by a grand serious opera, called 'Arianna,' the text of which was supplied by the poet Rinuccini. The success of this great work was unprecedented. It could scarcely have been otherwise; for all the composer's past experience was brought to bear upon it. The passionate dissonances, which had corrupted the Madrigal, and were destined ere long to prove the destruction of the Polyphonic Mass, were here turned to such good account that in the scene in which

[1] *Che siano cose diformi dalla natura et proprietà dell' harmonia propria et lontane dal fine del musica, ch' è la dilettatione.*

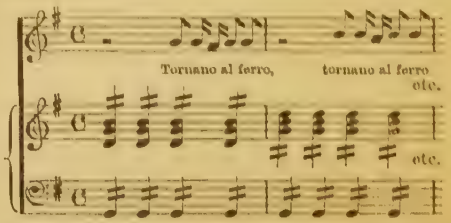
CLAUDIO MONTEVERDE

the forsaken Ariadne laments the desertion of her faithless lover they drew tears from every eye. No possible objection could be raised against them now. The censures of Artusi and his colleagues, just though they were, would have lost all their force had they been directed —which happily they were not—against vocal music with instrumental accompaniment. The contrapuntal skill necessary for the successful development of true church music would have been quite out of place on the stage. Monteverde's bitterest enemies could scarcely fail to see that he had found his true vocation at last. Well would it have been for polyphonic art and for his own reputation also had he recognised it sooner. Had he given his attention to dramatic music from the first, the Mass and the Madrigal might perhaps have still been preserved in the purity bequeathed to them by Palestrina and Luca Marenzio. As it was, the utter demolition of the older school was effected before the newer one was built upon its ruins ; and Monteverde was as surely the destroyer of the first as he was the founder of the second.

As no perfect copy of 'Arianna' has been preserved to us, we know little or nothing of the instrumental effects by which its beauties were enhanced. But happily, 'Orfeo' was published in a complete form in 1609, and again re-issued in 1615 ; and from directions given in the printed copy we learn that the several instruments employed in the orchestra were so combined as to produce the greatest possible variety of effect. [A very interesting analysis of the instrumental portions of this work, by Alfred Heuss, appeared in the *Sammelbände* of the *Internationale Musik-Gesellschaft*, iv. 175.] 'Orfeo,' indeed, exhibits many very remarkable affinities with dramatic music in its latest form of development—affinities which may not unreasonably lead us to inquire whether some of our newest conceptions are really so original as we suppose them to be. The employment of certain characteristic instruments to support the voices of certain members of the *Dramatis personæ* is one of them. The constant use of a species of mezzo recitativo—so to speak—in preference either to true recitative or true melody is another. But what shall we say of the instrumental prelude formed from beginning to end upon one single chord, with one single bass note sustained throughout? No two compositions could be less alike in feeling than this, and the Introduction to 'Das Rheingold' —yet in construction the two pieces are absolutely identical.[1]

Monteverde produced only one more work of any importance during his residence at Mantua —a mythological spectacle called 'Il ballo delle Ingrate,' which was performed at the same time as 'Orfeo.' Five years later he was invited to Venice by the Procuratori of S. Mark, who on the death of Giulio Cesare Martinengo in 1613 elected him their Maestro di Cappella, promising him a salary of three hundred ducats per annum —half as much again as any previous maestro had ever received—together with a sum of fifty ducats for the expenses of his journey, and a house in the Canons' Close. In 1616 his salary was raised to five hundred ducats ; and from that time forward he gave himself up entirely to the service of the Republic, and signed his name 'Claudio Monteverde, Veneziano.' [An opera, 'Andromeda,' is mentioned in the *Riv. Mus. Ital.* xi. p. 24, as produced in 1618-20.]

The new maestro's time was now fully occupied in the composition of church music for the Cathedral, in training the singers who were to perform it, and in directing the splendid choir placed under his command. His efforts to please his generous patrons were crowned with complete success ; and his fame spread far and wide. On May 25, 1621, some Florentines, resident in Venice, celebrated a grand Requiem in the Church of SS. Giovanni e Paolo, in memory of Duke Cosmo II. Monteverde composed the music, which produced a profound impression ; but, judging from Strozzi's extravagant description, it would seem to have been more fitted for performance in the theatre than in the church. A happier opportunity for the exercise of his own peculiar talent presented itself in 1624 in connection with some festivities which took place at the Palace of Girolamo Mocenigo. On this occasion he composed the Music to a grand Dramatic Interlude, called 'Il Combattimento di Tancredi e Clorinda,' in the course of which he introduced, among other novel effects, an instrumental *tremolo*, used exactly as we use it at the present day—a passage which so astonished the performers that at first they refused to play it.



But Monteverde's will was now too powerful to be resisted. He was the most popular composer in Europe. In 1627 he composed for the Court of Parma the intermezzo, 'Licori, la finta pazza.' In 1629 he wrote a Cantata—'Il Rosajo fiorito'—for the Birthday Festival of the son of Vito Morosini, governor of Rovigo. In 1630 he won new laurels by the production of 'Proserpina rapita,' a grand opera, written for him by Giulio Strozzi, and represented at the Marriage Festival of Lorenzo Giustiniani and Giustiniana Mocenigo. Soon after this event

[1] See *The Oxford History of Music*, vol. iii., *The Seventeenth Century*, p. 51.

Italy was devastated by a pestilence, which, within the space of sixteen months, destroyed fifty thousand lives. On the cessation of the plague, in November 1631, a grand Thanksgiving Service was held in the Cathedral of S. Mark, and for this Monteverde wrote a Mass, in the *Gloria* and *Credo* of which he introduced an accompaniment of trombones. Two years later, in 1633, he was admitted to the priesthood; and after this we hear nothing more of him for some considerable time.

In the year 1637 the first Venetian Opera House, Il Teatro di San Cassiano, was opened to the public by Benedetto Ferrari and Francesco Manelli. In 1639 the success of the house was assured; and Monteverde wrote for it a new Opera called 'L'Adone.' In 1641 'Arianna' was revived, with triumphant success, at another new theatre—that of S. Mark. In the same year the veteran composer produced two new operas—'Le Nozze di Enea con Lavinia,' and 'Il Ritorno d'Ulisse in patria'; [and he wrote a ballet, 'Vittoria d'Amore' for the carnival at Piacenza. (See *Riv. Mus. Ital.* xi. p. 24.)] Finally, in 1642, appeared 'L'Incoronazione di Poppea'—the last great effort of a genius which in less than half a century proved itself strong enough to overthrow a system which had been at work for ages, and to establish in its place another which has served as the basis of all the great works produced between the year in which the dominant seventh was invented and that in which we are now living.

Monteverde died Nov. 29, 1643, and was buried in the Chiesa dei Frari, where his remains still rest in a chapel on the Gospel side of the choir. Of his printed works we possess eight Books of Madrigals, published between the years 1587 and 1638; the volume of Canzonette published in 1584; a volume of Scherzi musicali (1632); the complete edition of 'Orfeo'; and three volumes of church music. A MS. copy of 'Il Ritorno d'Ulisse' is preserved in the Imperial Library at Vienna; [but the identity of this score with Monteverde's work is disputed by Eitner. See the *Quellen-Lexikon*]. It is much to be regretted that the greater number of the composer's MSS. appear to be hopelessly lost. We shall never be able to say the same of his influence upon art—that can never perish. To him we owe the discovery of a new path, in which no later genius has ever disdained to walk; and as long as that path leads to new beauties he will maintain a continual claim upon our gratitude, notwithstanding the innumerable beauties of another kind which he trod under foot in laying it open to us. [An interesting discovery of a supposed portrait of Monteverde is recorded at length in Messrs. Hill's *Antonio Stradivari*, p. 283. See the *Musical Times* for March and April 1880 and Sept. 1904.] W. S. R.

MONTGOMERY, Hugh, afterwards 12th Earl of Eglintoun, born Nov. 29, 1739; joined the army and became a colonel. On succeeding to the title and estates in Ayrshire he devoted himself to musical studies and became a fair amateur composer. He became a prominent figure in Edinburgh Musical Society, and patronised the Gow family. Some of his compositions appear in the Gow publications, and in 1796 Nathaniel Gow issued a thin folio volume (24 pp.) entirely of his Strathspeys. It was issued anonymously, its title being *New Strathspey Reels . . . composed by a gentleman, and given with permission to be published by Nathaniel Gow.* 'Ayrshire Lasses,' his best-known Strathspey, is included in this work. Niel Gow dedicated his *Fourth Collection of Strathspey Reels*, 1800, to him. His death occurred on Dec. 14 (or 15), 1819, and a volume of his vocal airs and marches, apparently from his hitherto unpublished MSS., was issued in Glasgow about 1835-40 with pianoforte arrangements by John Turnbull. Mrs. John Hunter had in most instances supplied the words. F. K.

MONTICELLI, Angelo Maria, was born at Milan about 1710. He first appeared in opera at Rome in 1730, and, having a beautiful face and figure, began in that city, where no women were then allowed upon the stage, by representing female characters. His voice was clear and sweet, and singularly free from defects. 'He was,' says Burney, 'a chaste performer, and . . . a good actor.' In 1731 and 1732 he appeared at Venice with Carestini, Bernacchi, and Faustina. He came to London in the autumn of 1741, and made his début here in the pasticcio 'Alessandro in Persia.' In the beginning of 1742, after other attempts, another opera was brought out by Pergolesi, called 'Meraspe, o L'Olimpiade,' the first air of which, 'Tremende, oscuri, atroci,' in Monticelli's part, was sung for ten years after the end of the run of this opera; and 'the whole scene, in which "Se cerca se dice" occurs, was rendered so interesting by the manner in which it was acted as well as sung by Monticelli that the union of poetry and music, expression and gesture, have seldom had a more powerful effect on an English audience' (Burney). [The air is given at length in *The Oxford History of Music*, vol. iv., *The Age of Bach and Handel*, p. 221.]

He continued to perform in London through 1743; and in 1744 he sang, in 'Alfonso,' songs of more bravura execution than he had previously attempted. During 1745 and 1746 Monticelli still belonged to our Opera; and in the latter year he sang in Gluck's 'Caduta de' Giganti,' and described one of his songs as an 'aria Tedesca' from the richness of the accompaniment. The 'Antigono' of Galuppi (produced May 13) was the last opera in which Monticelli appeared on our stage. He sang at Naples with la Mingotti in the same year, and afterwards at Vienna. In 1756 Hasse engaged him

for the Dresden theatre; and in that city he died in 1764.

A capital mezzotint portrait of Monticelli was scraped by Faber after Casali. J. M.

MONTIGNY-RÉMAURY, Fanny Marcelline Caroline, born at Pamiers (Ariége), Jan. 21, 1843. Her elder sister and godmother, Elvire Rémaury (Mme. Ambroise Thomas), an excellent pianist, first taught her music, but anxious to secure her every advantage, entered her in 1854 at the Conservatoire, in the pianoforte class of Professeur Le Couppey. In 1858 she gained the first prize for piano; in 1859 a prize for solfège; and in 1862 the first prize for harmony. Shortly after this Mme. C. Rémaury played Mendelssohn's Concerto in G minor at one of the concerts of the Conservatoire, and her animated and vigorous interpretation of this favourite work at once placed her in the first rank of French pianists. In 1866 she married Léon Montigny, a political writer on the staff of the *Temps*, but was left a widow in 1872. She has constantly mixed in society of the best kind, and is as much appreciated for her ready wit and attractive originality as for her musical talent. She has not published any composition, declining to print the 'transcriptions' which she occasionally plays to her intimate friends. She was for long the head of the pianoforte virtuosi of France, and her visits to England and tours on the Continent extended her reputation over Europe. Her repertory is large; her playing is free from affectation; her tone powerful, her style at once vigorous, tasteful and refined; and she interprets with fidelity the spirit of each master whose works she produces. The impression she leaves is that of a true musician, gifted with an extraordinary memory and with intellectual powers above the average. G. C.

MONZANI, Theobald, a celebrated Italian flute-maker and player. As early as 1790 he was established as a flute-maker and seller at 1 Duke Street, Grosvenor Square; and before 1800, after sundry changes of address, had settled down at 2 Pall Mall, in partnership with one Cungdor, Cundon, or Cinador, for the name is variously spelled in contemporary references. In 1804 they removed to 3 Old Bond Street, and in 1808 Monzani was in partnership with Hill. Monzani & Hill were, in 1814, at 100 Cheapside; in 1814, at 24 Dover Street; and finally, 1820, at 28 Regent Street, close to Regent Circus. They issued a great deal of sheet music, much of it being Italian vocal pieces, while their reputation as flute-makers was at the highest. The elder Monzani acquired some fame as an orchestral flautist, and wrote several instruction-books, etc., but his son excelled the father in taste and execution, and in 1826 is referred to, in W. N. James's *A Word or Two on the Flute*, as 'the most promising performer in England.' F. K.

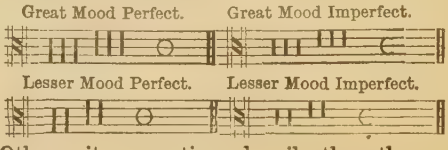
MOOD (Lat. *Modus*; Ital. *Modo*; Old Eng. *Mode* or *Moode*). A term employed in mediæval music to indicate the relative duration of the Large, the Long, and the Breve.

Mood is of two kinds—the Greater and the Lesser. The former regulates the proportions of the Large (maxima) to the Long; the latter that of the Long to the Breve. Both kinds may be either Perfect or Imperfect.

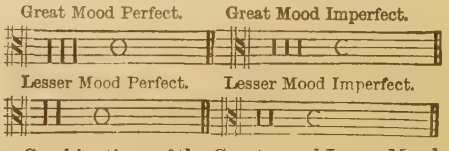
In the Great Mood Perfect the Large is equal to three Longs. In the Great Mood Imperfect it is equal to two only.

In the Lesser Mood Perfect the Long is equal to three Breves. In the Lesser Mood Imperfect it is equal to two.

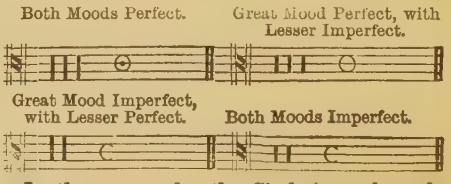
The Modal Sign is usually placed after the Clef, like the Time Signature in modern music. Innumerable varieties are found in music of different periods. Even as early as 1597 we find Morley bitterly lamenting the absence of a rule of universal application; and a little attention to the subjoined examples will show that his complaint was not an unreasonable one. The following forms are given by Zacconi:—



Other writers sometimes describe them thus:



Combinations of the Greater and Lesser Moods are frequently indicated, thus:



Both Moods Perfect.
Great Mood Perfect, with Lesser Imperfect.
Great Mood Imperfect, with Lesser Perfect.
Both Moods Imperfect.

In these examples the Circle is used as the sign of Perfection, and the Semicircle as that of Imperfection. The rests denote the proportion between the two notes—not always accurately, but in a vague way which accorded well enough with the conventional signification of the figures, when they were in general use, though it fails to explain their real meaning. In Zacconi's formulæ the groups of rests are doubled—probably for the sake of symmetry. Allowing for this, we shall find that the sign for the Great Mood Perfect exhibits, in every case, the exact number of rests required; viz. three Perfect Long Rests, as the equivalent of a Perfect Large. The same accuracy is observable in the signs for the combined

Moods exhibited in the last four examples. But in the other cases, so great a discrepancy exists between the number of rests indicated. and the true proportion of the notes to which they refer, that the figures can only be regarded as arbitrary signs, sufficiently intelligible to the initiated, but formed upon no fixed or self-explanatory principle.

It will be observed that in all the above examples the rests are placed before the Circle or Semicircle; in which case it is always understood that they are not to be counted. Sometimes indeed they are altogether omitted, and a figure only given in conjunction with the Circle or Semicircle. Thus Morley, following the example of Ornithoparcus, gives ◯ 3 as the sign of the Great Mood Perfect; ☾ 3, as that of the Great Mood Imperfect; ◯ 2 as that of the Lesser Mood Perfect; and ☾ 2 as that of the Lesser Mood Imperfect. [See NOTATION.]

During the latter half of the 15th century, and the first of the 16th, composers delighted in combining Mood, Time, and Prolation, in proportions of frightful complexity; but after the time of Palestrina the practice fell into disuse. [See TIME; PROLATION; PROPORTION.] W. S. R.

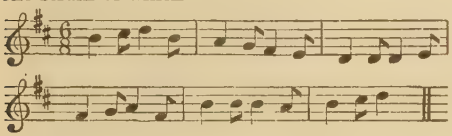
MOONLIGHT SONATA. An absurd title which for years has been attached both in Germany and England to the Sonata quasi una fantasia in C♯ minor, the second of the two which form together Beethoven's op. 27. It is dedicated to the 'Damigella Contessa Giulietta Guicciardi.' The title is said to have been derived from an expression of Rellstab the critic comparing the first movement to a boat wandering by moonlight on the Lake of Lucerne.[1] In Vienna it is sometimes known as the Laubensonate,[2] from a tradition that the first movement was composed in the leafy alley (Laubengang) of a garden.

Op. 27 was published—'for the harpsichord or pianoforte'—in March 1802. Its dedication, on which so much gratuitous romance has been built, appears from the statement of the countess herself to have been a mere accident. [See vol. i. p. 237.] Beethoven, perhaps in joke, laughed at its popularity, and professed to prefer the Sonata in F♯ minor (op. 78). [See vol. i. p. 245.]

MOORE, THOMAS. There have been many biographies of this 'poet of all circles'; but it is as a composer and singer, and thus as 'the idol of his own,' that our pages must exhibit him. Moore, who was born of Catholic parents, in Dublin, May 28, 1779, seems to have been from early youth susceptible of musical impressions, and has recorded his childish delight at being permitted to astonish the company at the house of a certain Miss Dodd, by grinding out music from a little barrel-organ, whilst concealed under a table. We next find him brought forward as a show-reciter of his own rhymes at the school of Samuel Whyte of Dublin, who also educated Richard Brinsley Sheridan. The Dublin University in 1793 having opened its portals to the once proscribed Catholics, Moore entered as a student in 1795; being on a visit to the family of a fellow-student, he tells us of his pleasure at hearing a sonata of Haydn's, and a lesson of Nicolai's performed on the harpsichord by the sisters of his friend. Among his musical acquaintances were one Wesley Doyle, a musician's son, who published some songs at Chappell's in 1822, and Joe, the brother of Michael Kelly, the author of the *Reminiscences*. Moore sang effectively upon these occasions some of the songs of Dibdin, then immensely popular. He now received lessons from Warren, subsequently organist of the Dublin cathedrals, and a pupil of Dr. Philip Cogan, a noted extemporiser upon Irish melodies; but neither Doyle nor Warren's example or precept produced any effect until the future bard began to feel personal interest in music. Subsequently he says, 'Billy Warren soon became an inmate of the family: I never received from him any regular lessons; yet by standing often to listen while he was instructing my sister, and endeavouring constantly to pick out tunes, or *make them* when I was alone, I became a pianoforte player (at least sufficiently so to accompany my own singing) before almost any one was aware of it.' He produced a sort of masque at this time, and sang in it an adaptation of Haydn's 'Spirit-song,' to some lines of his own. On occasion of a mock coronation held [Aug. 14, 1796] at the rocky islet of Dalkey, near Dublin, Moore met Incledon, who was then and there knighted as Sir Charles Melody, the poet contributing an ode for the sportive occasion. [His friendship with Robert Emmett at Trinity College stimulated his taste for old Irish airs; and his first musical works, songs, glees, etc., were published by James Carpenter of London in 1802-5. After 1807 James Power, and subsequently his widow, were the sole publishers of his music.] It was the metrical translation or paraphrase of Anacreon, subsequently dedicated to the Prince Regent, that first brought Moore into public notice; about this time he alludes to the 'bursting out of his latent talent for music': further quickened by the publication of Bunting's first collection of Irish melodies in the year 1796. From this collection Moore (greatly to Bunting's chagrin) selected eleven of the sixteen airs in the first number of his Irish melodies; Bunting averred that not only was this done without acknowledgment, but that Moore and his coadjutor Stevenson had mutilated the airs. [The first number of the 'Irish Melodies' was published in 1807, containing twelve songs; the eighth number (1821) was provided with symphonies and accompaniments by Sir H. Bishop, and a 'pirated' edition appeared in Dublin in the

[1] Lenz, *Beethoven et ses trois styles*, i. 225.
[2] Id., *Beethoven, eine Kunststudie*, Pt. 2, 79.

same year, edited by Sir John Stevenson. The tenth number and supplement appeared in 1834. They were often republished, a recent edition being that in which Sir C. V. Stanford restored the airs to their original form (1895)]. That Bunting's censures were not without foundation will appear from O'Carolan's air 'Planxty Kelly,' one strain of which—



was altered by Moore to the following:—

Even this ending (on a minim) is incorrect, the portion of the original air here used being

In 'Go where glory waits thee,' the ending as given by Moore destroys what in the article Irish Music we have called the *narrative form*; it should end as follows:—

The air was, however, altered thus to suit Moore's lines:—

The song 'Rich and rare' ends thus in the original:—

The version of Moore is perhaps an improvement, but it is an alteration:—

[but see Alfred Moffat's *Minstrelsy of Ireland*.]

Moore took to himself whatever blame these changes involved, and even defended the often rambling and inappropriate preludes of Stevenson, which he fancifully compared to the elaborate initial letters of mediæval MSS. Moore wrote 125 of these beautiful and now famous poems, [for which he received an average of £121 each, or £6 per line]. His singing of them to his own accompaniment has been frequently described as indeed deficient in physical power, but incomparable as musical recitation; not unfrequently were the hearers moved to tears, which the bard himself could with difficulty restrain; indeed it is on record that one of his lady listeners was known to faint away with emotion. Mr. N. P. Willis says, 'I have no time to describe his (Moore's) singing; its effect is only equalled by his own words. I for one could have taken him to my heart with delight!' Leigh Hunt describes him as playing with great taste on the piano, and compares his voice as he sang, to a flute softened down to mere breathing. Jeffrey, Sydney Smith, and Christopher North are equally eloquent; nay, even the utterly unmusical Sir W. Scott calls him the 'prettiest warbler he had ever known'; while Byron, almost equally deficient in musical appreciation, was moved to tears by his singing. Moore felt what he expressed, for as an illustration of the saying, 'Si vis me flere, dolendum est primum ipsi tibi,' it is recorded that on attempting 'There's a song of the olden time,' a favourite ditty of his father, for the first time after the old man's death, he broke down, and had to quit the room, sobbing convulsively. [His piano, made by Murland of Dublin and dated 1808, is now in the National Museum, Dublin.]

Although as an educated musician Moore had no repute, yet, like Goldsmith, he now and then undertook to discuss such topics as harmony and counterpoint, of which he knew little or nothing. Thus we find him gravely defending consecutive fifths, and asking naïvely whether there might not be some pedantry in adhering to the rule which forbids them? That he was largely gifted with the power of creating melody, is apparent from his airs to various lines of his own; amongst them 'Love thee, dearest,' 'When midst the gay,' 'One dear smile,' and 'The Canadian boat-song' (first published in 1820), long deemed a native air, but latterly claimed by Moore. Many of his little concerted pieces attained great popularity. The terzetto 'O, lady fair' was at one time sung everywhere; a little three-part glee, 'The Watchman'—describing two lovers, unwilling to part, yet constantly interrupted by the warning voice of the passing guardian of the night calling out the hours as they flew too quickly—was almost equally popular. Among his musical works may be briefly cited the matchless 'Irish Melodies,' and their sequel the 'National Airs' (1818-28); 'Sacred Songs' (1816); 'Evenings in Greece' (1831), and numerous songs and ballads. [For his only opera, 'M. P., or the Blue Stocking,' see Horn, vol. ii. p. 433*b*]. With his satirical and political writings we do not concern ourselves. Probably no poet or man of letters has ever attained such popularity, or such loving celebrity amongst his very rivals. Some of his works have been translated into the French, Russian, Polish, and other languages of Europe, and his oriental verse has been rendered into Persian, and actually sung in the streets of Ispahan. It will be sufficient for our purpose to allude to the one misfortune of his public life, which arose from the defalcation of his deputy in a small official post at Bermuda, given him in 1804 through the influence of Earl Moira. The

claims which thus arose he, however, honourably discharged by his literary labours. The evening of Moore's life was saddened by the successive deaths of his children. His wife,[1] an admirable woman, was his mainstay under these trials; and in 1835 the government of the day, through Lord John Russell, almost forced upon him a pension of £300 per annum. He died, enfeebled, but in the possession of his faculties, Feb. 25, 1852, at Sloperton Cottage, near Devizes. R. P. S.; with additions in square brackets by F. K. and W. H. G. F.

MOOREHEAD, JOHN, was born about the middle of the 18th century, in Ireland, where he received his first musical instruction. He came to England when young, and was for several years engaged in the orchestras of various country theatres. [He was one of the violins at the Worcester Festival of 1794, and in 1796 was principal viola at Sadler's Wells Theatre.] In 1798 he was engaged in the orchestra at Covent Garden, and soon after was employed to compose for that theatre. During his engagement he composed music for 'The Philosopher's Stone,' 1795; 'Birds of a Feather,' 1796; 'The Volcano' and 'Speed the Plough,' 'Harlequin's Tour' and 'The Dominion of Fancy' (both with Attwood), 1880; 'Il Bondocani' (with Attwood) and 'Perouse' (with Davy), 1801; 'Harlequin's Habeas,' 'The Cabinet' (with Braham, Davy, etc.), and 'Family Quarrels' (with Braham and Reeve), 1802. [In that year he became insane, and having transgressed the laws, was confined successively in Tothillfields' Prison and Northampton House, Clerkenwell. On his liberation he entered the navy as a common sailor, and was quickly promoted to be bandmaster. A short time afterwards he hanged himself in a fit of insanity near Deal, in March 1804. The 'F. Moorehead' who is described as the composer of 'The Naval Pillar,' 1799 (see the *Quellen-Lexikon*) is probably a printer's error for John Moorehead. His brother, Alexander, was also a violinist of merit, and led the band at Sadler's Wells; he also became insane and died in an asylum in Liverpool. See T. Dibdin's *Reminiscences*, 1827, vol. i. pp. 314-333.] W. H. H.; additions by F. K.

MOOSER, ALOYS, a famous Swiss organ-builder, whose greatest instruments are those at Fribourg and in the New Temple at Berne. He was born at Fribourg in 1770, and died there Dec. 19, 1829. Mooser also made pianos. G.

MORALES, CRISTOFERO, born at Seville, Jan. 2, 1512, was a member of the papal chapel in 1535-40. [He is supposed to have been maestro de capilla at Toledo in 1544-45, and was a singer in the cathedral of Malaga in 1551. In 1552 he seems to have returned to Seville; he died either there or at Malaga, June 14, 1553.] His published works, dating between the years 1539 and 1569, consist of sixteen Masses (in two books), Magnificats, and several Motets published in various collections. Morales[2] 'despised all worldly, to say nothing of light, music, and had nothing to do with it, regarding with anger those who applied that noble gift of God, the power of making music, to frivolous, and even to objectionable uses.' Ambitious that his works should be worthy of God and the papal chapel, he surely gained his end, and for nearly 350 years they have been annually sung[3] in the place for which he designed them. In modern score Eslava gives six pieces; Rochlitz[4] some extracts from a mass; Schlesinger[5] the celebrated motet 'Lamentabatur Jacob,' which Adami describes as a 'marvel of art'; Martini[6] three movements from the Magnificats. Two motets (*a* 3), 'Domine Deus' and 'Puer est natus,' and a Magnificat are in score in the British Museum in Burney's Musical Extracts, vol. iv. (Add. MS. 11,584.) [See the *Quellen-Lexikon.*]

An interesting portrait is given by Adami, and copied in Hawkins's *History*. J. R. S.-B.

MORALT. Five brothers of great celebrity in Munich, celebrated for their rendering of Haydn's quartets.

The first, JOSEPH, born 1775, entered the court band in 1797, and became concertmeister in 1800, which post he held till his death in 1828.

The next brother, JOHANN BAPTIST, born Jan. 10, 1777, was violinist in the Mannheim Court band, and entered the Munich band in 1792, was the second violin in the quartet, and also composed two symphonies for orchestra, and 'Leçons méthodiques' for the violin, two string quartets, besides a MS. Mass, etc. He died Oct. 7, 1825.

PHILIPP, the violoncello of the quartet, born 1780, was in the band from 1795 to his death March 18, 1847. He had a twin-brother, Jacques, who played in the orchestra, but not in the celebrated quartet.

GEORG, the tenor-player, was born in 1781 and died 1818.

A Moralt, probably one of the same family, was well known in England in the early part of the 19th century. He was first viola player at the Philharmonic till 1842, when his name disappears, possibly on account of his death, and is succeeded by that of Hill. He took a prominent part in the provincial festivals and music generally. M.

MORDENT (Ital. *Mordente*; Ger. *Mordent*, also *Beisser*; Fr. *Pincé*). One of the most important of the *agrémens* or graces of instrumental music. It consists of the rapid alternation of

[1] Miss Bessie Dykes, a young and beautiful Irish actress, whom he married in 1811.

[2] From preface to second book of Masses.

[3] 'Mottetti etc. che si cantano nella Capella Sistina e nella Basilica Vaticana'—a MS. in the British Museum (Egerton Collection 2460-2461) containing a Magnificat sung on the vigil of Epiphany, and the motet 'Lamentabatur Jacob,' sung on the 4th Sunday in Lent.

[4] *Sammlung Gesangstücke*, vol. i. Nos. 27, 29.

[5] In 'Musica Sacra,' Berlin, 1853. Each motet can be had separately.

[6] *Esemplare . . . di contrappunto* (Bologna 1774.) The three movements are used as theoretical examples, and numerous notes added on questions which they illustrate.

a written note with the note immediately below it.

Mordents are of two kinds, the Simple or Short Mordent, indicated by the sign 𝆔, and consisting of three notes, the lower or auxiliary note occurring but once, and the Double or Long Mordent, the sign for which is 𝆕, in which the auxiliary note appears twice or oftener. Both kinds begin and end with the principal note, and are played with great rapidity, and, like all graces, occupy a part of the value of the written note, and are never introduced before it.

1. *Single Mordent.* *Double Mordent.*

The appropriateness of the term Mordent (from *mordere*, 'to bite') is found in the suddenness with which the principal note is, as it were, attacked by the dissonant note and immediately released. Walther says its effect is 'like cracking a nut with the teeth,' and the same idea is expressed by the old German term *Beisser*.

The Mordent may be applied to any note of a chord, as well as to a single note. When this is the case its rendering is as follows :—

2. Bach, Sarabande from 'Suite Française No. 4.'

3. Bach, Overture from 'Partita No. 4.'

Sometimes an accidental is added to the sign of the Mordent, thus 𝆔♯, or 𝆕♯; the effect of this is to raise the lower or auxiliary note a semitone. This raising takes place in accordance with the rule that a lower auxiliary note should be only a semitone distant from its principal note, and the alteration must[1] be made by the player even when there is no indication of it in the sign (Ex. 4), except in certain understood cases.

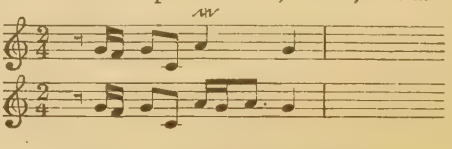
[1] [It should be mentioned that the passage referred to in Ex. 4 is, in the opinion of many excellent authorities, to be played without the accidental, *i.e.* with A♮ not A♯ as the auxiliary note. See Spitta, *J. S. Bach*, Engl. trans., i. 403, note 89.]

The exceptions are as follows,—when the note bearing the Mordent is either preceded or followed by a note a whole tone lower (Exs. 5 and 6) and, generally, when the Mordent is applied to either the third or seventh degree of the scale (Ex. 7). In these cases the auxiliary note is played a whole tone distant from its principal.

4. Bach, Organ Fugue in E minor.

5. Air from 'Suite Française No. 2.'

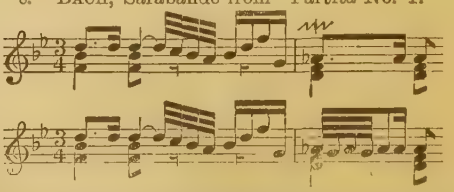
6. 'Well-tempered Clavier,' No. 1, vol. 2.



7. Sarabande from 'Suite Française,' No. 5.

The Long Mordent (*pincé double*) usually consists of five notes, though if applied to a note of great length it may, according to Emanuel Bach, contain more; it must, however, never fill up the entire value of the note, as the trill does, but must leave time for a sustained principal note at the end (Ex. 8). Its sign is 𝆕, not to be confounded with 𝆔, or 𝆖, the signs for a trill with or without a turn.

8. Bach, Sarabande from 'Partita No. 1.'



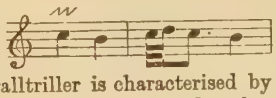
Besides the above, Emanuel Bach gave the name of Mordent to two other graces, now nearly or quite obsolete. One, called the Abbreviated Mordent (*pincé etouffé*) was rendered by striking the auxiliary note together with its principal,

and instantly releasing it (Ex. 9). This grace, which is identical with the ACCIACCATURA (see the word), was said by Marpurg to be of great service in playing full chords on the organ, but its employment is condemned by the best modern organists. The other kind, called the Slow Mordent, had no distinctive sign, but was introduced in vocal music at the discretion of the singer, usually at the close of the phrase or before a pause (Ex. 10).

9. *Abbreviated Mordent.* 10. *Slow Mordent.*

Closely allied to the Mordent is another kind of ornament, called in German the *Pralltriller* (*prallen*, 'to rebound,' or 'bounce'), for which term there is no exact equivalent in English, the ornament in question being variously named Passing Shake, Beat, and Inverted Mordent (*pincé renversé*), none of which designations are very appropriate. The sign for this grace is ∿, the short vertical line being omitted; and it consists, like the Mordent, of three notes, rapidly executed, the auxiliary note being one degree above the principal note instead of below it.

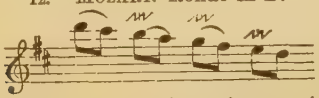
11. *Written.* *Played.*



The Pralltriller is characterised by Emanuel Bach as the most agreeable and at the same time the most indispensable of all graces, but also the most difficult. He says that it ought to be made with such extreme rapidity that even when introduced on a very short note, the listener must not be aware of any loss of value.

The proper, and according to some writers the only place for the introduction of the Pralltriller is on the first of two notes which descend diatonically, a position which the Mordent cannot properly occupy. This being the case, there can be no doubt that in such instances as the following, where the Mordent is indicated in a false position, the Pralltriller is in reality intended, and the sign is an error either of the pen or of the press.

12. MOZART. Rondo in D.

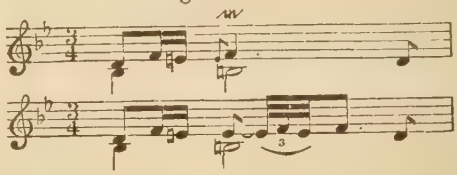


Nevertheless, the Mordent is occasionally, though very rarely, met with on a note followed by a note one degree lower, as in the fugue already quoted (Ex. 6). This is, however, the only instance in Bach's works with which the writer is acquainted.

When the Pralltriller is preceded by an appoggiatura, or a slurred note one degree above the principal note, its entrance is slightly delayed (Ex. 13), and the same is the case if the Mordent is preceded by a note one degree below (Ex. 14).

13. W. F. BACH, Sonata in D.

14. J. S. BACH, Sarabande from 'Suite Anglaise No. 3.'



Emanuel Bach says that if this occurs before a pause the appoggiatura is to be held very long, and the remaining three notes to be 'snapped up' very quickly, thus—

15. *Written.* *Played.*

The earlier writers drew a distinction between the Pralltriller and the so-called *Schneller* (*schnellen*, 'to fillip'). This grace was in all respects identical with the Pralltriller, but it was held that the latter could only occur on a descending diatonic progression (as in Ex. 11), while the Schneller might appear on detached notes. It was also laid down that the Schneller was always to be written in small notes, thus— , while the sign ∿ only indicated the Pralltriller. Türk observes, nevertheless, that the best composers have often made use of the sign in cases where the indispensable diatonic progression is absent, and have thus indicated the Pralltriller where the Schneller was really intended. This is, however, of no consequence, since the two ornaments are essentially the same, and Türk himself ends by saying 'the enormity of this crime may be left for the critics to determine.'

Both Mordent and Pralltriller occur very frequently in the works of Bach and his immediate successors; perhaps the most striking instance of the lavish use of both occurs in the first movement of Bach's 'Capriccio on the departure of a brother,' which though only seventeen bars in

length contains no fewer than seventeen Mordents and thirty Pralltrillers. In modern music the Mordent does not occur, but the Pralltriller and Schneller are frequently employed, as for instance by Beethoven in the first movement of the Sonate Pathétique.

Although the Mordent and Pralltriller are in a sense the opposites of each other, some little confusion has of late arisen in the use of both terms and signs. Certain modern writers have even applied the name of Mordent to the ordinary Turn, as for example Czerny, in his 'Study' op. 740, No. 29; and Hummel, in his 'Pianoforte School,' has given both the name and the sign of the Mordent to the Schneller. This may perhaps be accounted for by the supposition that he referred to the Italian *mordente*, which, according to Dr. Callcott (*Grammar of Music*), was the opposite of the German Mordent, and was in fact identical with the Schneller. It is nevertheless strange that Hummel should have neglected to give any description of the Mordent proper. F. T.

MORELLI, Giovanni, a basso with a voice of much power, compass, sweetness, and flexibility. He first appeared in London in Paisiello's 'Schiavi per Amore,' with Storace and Sestini, and Morigi, who had long been the first *buffo caricato*, but now became second to Morelli. The latter was a very good actor, but, having been *running-footman* to Lord Cowper at Florence, he was probably not much of a musician. He continued for many years in great favour, and sang at the Opera from time to time till he had scarcely a note left; but he was always received kindly as an old and deserving favourite.

He sang the bass part in the 'Serva Padrona,' with Banti, so successfully that the performance was repeated by Royal command; and he was actually singing with Catalani and Miss Stephens (her first appearance) at the Pantheon, when that house was rebuilt. He sang in the Commemoration of Handel in 1787, with Mara and Rubinelli. J. M.

MORENDO, 'dying,' is used to indicate the gradual 'decrescendo' at the end of a cadence. Its meaning is well given by Shakespeare in the words, 'That strain again! it had a *dying fall*.' It is used by Beethoven in the Trio, op. 1, No. 3, at the end of the fourth variation in the slow movement, and in the Quartet, op. 74, also at the end of the slow movement. As a rule, it is only used for the end of the movement or in a cadence, but in the Quartet, op. 18, No. 7, slow movement, and in the Ninth Symphony, slow movement, it is not confined to the end, but occurs in imperfect cadences, to give the effect of a full close. It thus differs from *smorzando*, as the latter can be used at any time in the movement. Chopin generally used *smorzando*. Both these words are almost exclusively used in slow movements. M.

MORI, Nicolas, an Italian by family, born in London [Jan. 24, 1796 (or 1797),[1] was the son of an Italian wigmaker in the New Road. He was brought out as a prodigy, and at eight years of age played in public a concerto of Barthélemon's, from whom he had lessons.] Subsequently he studied for six years with Viotti, and not only became an excellent solo violinist, but from his enthusiasm, industry, and judgment, occupied a very prominent position in the music of London and England generally, from about 1812 till his death. He played in the second concert of the Philharmonic Society in 1814, and from 1816 was for many years one of the leaders of the Philharmonic band and first violin at the Lenten oratorios, the provincial festivals, and the majority of concerts of any importance. 'His bow-arm was bold, free, and commanding, his tone full and firm, and his execution remarkable.' [He married in 1819 the widow of the music-publisher Lavenu, and entered into partnership with her son.] Amongst other music they published the second book of Mendelssohn's Songs without Words, and his PF. Concerto in G minor. He died June 14, 1839, leaving a son, Frank (born March 21, 1820, died August 2, 1873), who was well known in London for many years as a promising musician. His cantata 'Fridolin' (brought out at the Worcester Festival of 1851) was performed several times with success; and an operetta, the 'River-sprite,' to words by G. Linley, was produced at Covent Garden, Feb. 9, 1865. [A second son, Nicholas Mori, junr., was born Jan. 14, 1822, and having studied with his father and Charles Lucas, as well as in Paris, composed various works, among them a setting of Psalm cxxxvii., and music to Gilbert's 'Wicked World.'] G.

MORIANI, Napoleone, was born at Florence, March 10, 1808. He came of a good family, received a liberal education, and studied the law for some time, intending to embrace it as his profession. Seduced, however, by the applause which his beautiful tenor voice obtained for him in society, he changed his intentions, and attempted the operatic career at Pavia in 1833, with success. After singing in the principal Italian cities, he returned to Florence in 1839, and in the following year was recognised both there and at Milan, and Trieste, as the first living tenor of Italy. In 1841 he visited Vienna, where he was appointed 'Virtuoso di Camera' by the Emperor. In 1844 and 1845 he sang in London. He came with a real Italian reputation, but he came too late in his own career, and too early for a public that had not yet forgotten what Italian tenors had been. Besides, Mario was already there, firmly established, and not easily to be displaced from his position. 'Moriani's must have been a superb and richly-strong voice, with tones full of expression as well as force' (Chorley). But either he was led away by bad taste or fashion into

[1] 1797 is found on a portrait issued in 1805. (*Dict. of Nat. Biog.*)

drawling and bawling, or he had never been thoroughly trained. Any way, he pleased little here. Still he sang with success at Lisbon, Madrid, and Barcelona, in 1846, and was decorated by the Queen of Spain with the Order of Isabella. He sang at Milan, in the autumn of 1847, but his voice was gone, and he soon afterwards retired from the stage, and died March 4, 1878. Mendelssohn more than once speaks of him as 'my favourite tenor, Moriani.' J. M.

MORIGI, Angelo, violinist and composer, born in Rimini in 1752 ; died in Parma in 1788. Tartini was his violin teacher and Valotti instructed him in theory and harmony. In 1758 he was appointed first violin of the Prince of Parma's band, and later, director of the court music, a position which he held for many years. He was a composer of some merit, and excellently spoken of as a teacher of composition. Among his pupils was Bonifazio Asioli the dramatic composer, who, out of deference to his master's memory, published his (Morigi's) *Trattato di contrappunto fugato* after his death. Compositions: Six Sonatas for violin alone, op. 1. Six trios for two violins and violoncello with a figured bass for the Clavecin, op. 2. Six concerti grossi for violin, op. 3. Six others dedicated to the Infanta Donna Philippe. (Fétis, *Biographie des Musiciens*; A. Mason Clarke, *Fiddlers Ancient and Modern.*) E. H-A.

MORISSEAU, whose Christian name and place of origin are unknown, was a sabot-maker practising at No. 9 Rue des Fontaines du Temple, in Paris, who applied the principles of his art to the manufacture of violins, carving the back and sides and neck all in one piece out of a solid block of practically green wood, the only glue used in their manufacture being that employed to fasten on the bellies. This innovation was considered sufficiently serious by the 'Société d'Encouragement pour l'Industrie Nationale' for a *Rapport* to be inserted in their Bulletin (vol. xi. second series, No. 137, May 1864) drawn up by J. Lissajous, with the assistance of MM. Guérin, Professor at the Conservatoire, Deloffre and Ferrand, leaders of the orchestras of the Théâtre Lyrique and the Opéra-Comique respectively. The report damns the instruments with the faintest possible praise. E. H-A.

MORITZ (Maurice), Landgraf of Hesse-Cassel from 1592 to 1627, was born May 25, 1572, and under the musical tuition of George Otto, capellmeister at Cassel from about 1588 to 1619, developed considerable talent for composition. In 1601 he published a Lutheran Gesangbuch with tunes only, twenty-four of which were his own invention. In 1612 he republished the book, providing all the tunes with his own 4-part harmony. Meantime, in 1605, he had abandoned Lutheran doctrine and embraced Calvinism, even adopting the extreme Calvinistic view that nothing but words of Scripture in the vernacular should be sung in churches. Under the influence of his new convictions he published a musical edition of Lobwasser's German version of the French Calvinistic Psalms, providing the original French tunes with a 4-part harmony, and adding some new tunes of his own. His endeavours to force the Calvinistic form of worship on his Lutheran subjects met with some resistance, and he was obliged to concede the use of the Lutheran hymns. It is all the more strange that so enlightened a prince should have adopted this narrow view of the province of church music, considering that he had himself composed a large number of Latin psalms, motets, and magnificats in the *a cappella* style, *a* 4 to 12, which are still preserved in MS. in the library at Cassel (see the *Quellen-Lexikon*). It redounds to his credit, however, that he showed himself so munificent a patron to the young Heinrich Schütz who, brought up as a chorister in his chapel at Cassel, was afterwards sent at his expense to Venice to complete his musical education under the tuition of Giovanni Gabrieli. Schütz testified his gratitude to his patron by dedicating to him in 1611 his Opus 1, the first-fruits of his Venetian studies, consisting of a book of Italian madrigals *a* 5, concluding with a flattering poem written by the musician himself in praise of his patron, and set for eight voices. Among the MS. works of the Landgraf in the Cassel library, there are some Italian madrigals and Villanelle *a* 4, also some instrumental pieces, fugues, and dances, which all serve to show the interest taken by him in the various branches of music of his time. He laid down the reins of government of his principality in 1627, having lost the confidence of his Lutheran subjects by his Calvinising policy, and died in retirement, March 14, 1632. A considerable number of his 4-part settings of psalm and hymn tunes have been republished in modern collections, such as those of Erk, Tucher, and Winterfeld. A fugal movement for four strings has also been published in score by Hugo Riemann in his first Book of Old Chamber Music (Augener & Co.). J. R. M.

MORLACCHI, Francesco, composer ; born at Perugia, June 14, 1784. He learnt the violin at seven years old from his father. At twelve he was placed under Caruso, maestro of the cathedral of Perugia, who taught him singing, the clavier, and thorough-bass, while he learned the organ from Mazetti, his maternal great-uncle. At thirteen he had already composed much, and during his years of boyhood wrote several pieces for the church, among which a short oratorio, 'Gli angeli al sepolcro,' attracted the attention of many amateurs, and among them, of his godfather, Count Pietro Baglioni, who sent him to study counterpoint with Zingarelli, at Loreto. But the severe conventional teaching of Zingarelli clashed with the aspirations of his young, impatient mind,

and after a year and a half he returned to Perugia. Conscious, however, that he had still a great deal to learn, he went to Bologna, to complete his studies under Padre Mattei. [See MATTEI.] Here he devoted much attention to ecclesiastical music, besides making a special study of the orchestra, and acquiring a practical knowledge of all the chief instruments. During this time of studentship he was commissioned to write a cantata for the coronation of Napoleon as King of Italy, at Milan, in 1805. In February 1807, a musical farce called 'Il Poeta in Campagna' was performed at the Pergola theatre in Florence, and, later in this year, a Miserere for sixteen voices having won golden opinions, the composer was invited to visit Verona, where he produced his first *buffo* opera, 'Il Ritratto.' He achieved his first popular success with the melodrama, 'Il Corradino,' at Parma, in 1808. This was followed by 'Enone e Paride,' 'Oreste,' 'Rinaldo d'Asti,' 'La Principessa per ripiego,' 'Il Simoncino,' and 'Le Avventure d'una Giornata,' besides a grand Mass. But all these were surpassed by 'Le Danaide,' written for the Argentino theatre at Rome, in 1810. This work was immensely successful, and once for all established its composer's fame. Through the influence of Count Marcolini, Minister to the Court of Saxony, Morlacchi was now appointed chapel-master of the Italian opera at Dresden, at first for a year, subsequently for life, with a large salary, besides a considerable honorarium for every new opera he might compose, and leave of absence for some months of each year, with liberty to write what he pleased, where he pleased. This appointment he held till his death. The Italian style had long reigned supreme in the Dresden fashionable world, and Morlacchi at once became 'the rage.' His music partook of the styles of Paer and Mayr; it was melodious and pleasing, but very slight in character. He now acquainted himself to some extent with the works of the great German masters, a study which had a happy effect on him, as it led him insensibly to add a little more stolidity to his somewhat threadbare harmonies. His earliest compositions at Dresden were, a Grand Mass for the royal chapel, the operas 'Raoul de Créqui' (1811) and 'La Cappriciosa pentita' (1813), and an Oratorio of the 'Passion' (1812) (book by Metastasio), extravagantly admired by contemporary enthusiasts.

In 1813 Dresden became the military centre of operations of the allied armies, and the King, Friedrich August, Napoleon's faithful ally, was a prisoner. During this time Morlacchi kept at a wise distance from public affairs, and bewailed the fate of his patron in retirement. He was, however, roughly aroused by a sudden order from Baron Rozen, Russian Minister of Police, to write a cantata for the Emperor of Russia's birthday. The task was, of course, uncongenial to the composer, and as only two days were available for it, he declined to comply, alleging in excuse that the time allowed was insufficient. By way of answer it was notified to him that his choice lay between obeying and being sent to Siberia. Thus pressed he set to work, and in forty-eight hours the cantata was ready. Not long after this the Russian government having decreed the abolition of the Dresden chapel, Morlacchi obtained an audience of the Czar, at Frankfort, when, in consequence of his representations and entreaties, the decree was reversed.

To celebrate the return of the Saxon king to his capital in 1814, Morlacchi wrote another Grand Mass and a sparkling *opera buffa*, 'Il Barbiere di Siviglia.' His political principles must have been conveniently elastic, for the year 1814 also saw the production of a Triumphal Cantata for the taking of Paris by the allied armies, and a mass for voices alone, according to the Greek ritual, in Slavonic, for the private chapel of Prince Repuin, who had been the Russian Governor of Dresden.

In June 1816 he was elected member of the Academy of Fine Arts at Florence, and shortly after paid a visit of some months to his native country, where he was received with every kind of honour, gala performances of 'Le Danaide,' and the oratorio of the 'Passion,' being given at Perugia. For the dedication of this last work, Pope Pius VII. rewarded him with the decoration of the Golden Spur, and the title of Count Palatine. An oratorio, 'Il sacrifizio d'Abramo, o l'Isaaco' (1817), although a feeble work, was remarkable for the employment in it of a novel kind of rhythmical declamation, in place of the ordinary recitative.

In 1817 C. M. von Weber was appointed capellmeister of the German opera at Dresden. Morlacchi behaved to him with a studied show of obsequious politeness, while doing his utmost in an underhand way to cripple his activity and bar his progress. Yet he did not disdain to beg for Weber's good word as a critic in the matter of his own compositions, and indeed was too much of an artist not to recognise the genius of his young colleague, to whom, although already overworked, he would frequently delegate the whole of his own duties, while on the plea of ill-health he absented himself in Italy for months together. Between 1817 and 1841 he produced a number of operas and dramatic pieces, among which the principal were 'Laodicea' (Naples, 1817), 'Gianni di Parigi' (1818), 'La Morte d'Abel' (Dresden, 1821), 'Donna Aurora' (Milan, 1821), 'Tebaldo ed Isolina' (1822), 'La Gioventù di Enrico V.' (1823), 'Ilda d'Avenello' (1824), 'I Saraceni in Sicilia' (1827), 'Il Colombo' (1828), 'Il Disperato per eccesso di buon cuore' (1829), and 'Il Rinegato' (1832), this last opera being a second setting of the book of 'I Saraceni,' 'in a style calculated to suit

German taste.' He wrote ten Grand Masses for the Dresden chapel, besides a great number of other pieces for the church. The best of these was the Requiem, composed on the occasion of the King of Saxony's death, in 1827. He said of himself that, during the composition of the 'Tuba Mirum' in this mass, he had thought unceasingly of the 'Last Judgment' in the Sistine chapel, and his biographer, Count Rossi-Scotti, does not hesitate to affirm that by his harmony he emulates Michel Angelo in the realisation of the tremendous moment. We must refer those of our readers who may wish for a detailed account of Morlacchi to this memoir, *Della vita e delle opere del Cav. Francesco Morlacchi di Perugia,* or to the notice in Fétis's *Biographie des Musiciens* (ed. of 1870), which also contains a list of his compositions. A 'scena' or 'episode' for baritone voice with pianoforte accompaniment (the narration of Ugolino, from Canto xxxiii. of the *Inferno*), written in his last years, deserves special mention here, as it became very famous.

In 1841 he once more set off for Italy, but was forced by illness to stop at Innsbruck, where he died, October 28. He left an unfinished opera, 'Francesca da Rimini,' for the possession of which Florence, Dresden, and Vienna had disputed with each other. Profuse honours were paid to his memory in Dresden and in Perugia.

Morlacchi's music is an absolutely dead letter to the world. Yet during his lifetime he was reckoned by numbers of contemporaries one of the foremost composers of the golden age of music. Weber's good-natured criticism (in one of his letters) on his 'Barbiere di Siviglia,' aptly describes much of his dramatic work. 'There is much that is pretty and praiseworthy in this music; the fellow has little musical knowledge, but he has talent, a flow of ideas, and especially a fund of good comic stuff in him.' For an exact verification of this description we refer the English student to the MS. score of 'La Gioventù di Enrico V.,' in the library of the Royal College of Music. He was a clever executant in composition of this ephemeral kind, which supplied a passing need, but could not survive it. The best monument he left to his memory was a benevolent institution at Dresden for the widows and orphans of the musicians of the Royal Chapel, which he was instrumental in founding.

The names of such published compositions of Morlacchi as are still to be had, may be found in Hofmeister's *Handbuch der musikalischen Literatur.* F. A. M.

MORLEY, Thomas, was born in 1557, according to the Sadler MS. (Bodl. MS. Mus. e. 1-5), in which is entered his *Domine non est exaltatum,* with the inscription 'Thomas Morley ætatis suæ 19, anº domini 1576.' He was pupil of William Byrd, by whose endeavours, says Anthony Wood, 'the said Morley became not only excellent in musick, as well in the theoretical as practical part, but also well seen in the Mathematicks, in which Byrde was excellent.' In July 1588, he took his degree of Mus. Bac. at Oxford, and at the close of the same year there is reason to think that he was organist of St. Giles's, Cripplegate, for in the registers of that church is entered the burial of 'Thomas ye sonne of Thomas Morley, Organist,' Feb. 14, 1588-89. (*Mus. Times,* Sept. 1903.) His wife had probably been a member of the household of Lady Periam, wife of the Lord Chief Baron of the Exchequer (see the Dedication of the *First Book of Canzonets to Two Voices,* 1595).

It is most likely that, after leaving St. Giles's, Morley became organist at St. Paul's Cathedral, though from a passage in the Description of Q. Elizabeth's Entertainment at Elvetham in Sept. 1591, it might perhaps be inferred that his appointment took place earlier; it is said there that the performance of some musicians so pleased the Queen that 'she gave a newe name unto one of their Pavans, made long since by master Thomas Morley, then organist of Paules church' (Nichols's *Progresses*). However this may be, he was still at St. Paul's in the same year, 1591, for there is an allusion to him as organist there in a letter dated Oct. 3, 1591. (*State Papers,* Dom. Eliz. vol. ccxl. No. 19.) From this letter, written from Flanders by one Paget, a Catholic intriguer, it would appear that Morley had been employed there as some kind of political agent. 'Ther is one Morley that playeth on the organies in poules that was with me in my house. He semed here to be a good Catholicke and was reconsiled, but notwith-standing suspecting his behaviour I entercepted letters that Mr. Nowell' (presumably the Dean of St. Paul's) 'wrote to him, wherby I discovered enoughe to have hanged him. Nevertheles he shewing with teares great repentaunce, and asking on his knees forgivenes, I was content to let him goe. I here since his comming thether he hath played the promotor and apprehendeth Catholickes.' This is corroborated in the reply. (*Ibid.* No. 53.) 'It is true that Morley the singing man employeth himselfe in that kind of service . . . . and hath browght diverse into danger.'

In 1592 Morley was made Gentleman of the Chapel Royal, being 'sworne 24th of July in Mr. Greene's roome' (Rimbault, *Cheque-book,* p. 5); and in November of the same year he was appointed to the 'Gospeller's place and waiges,' after having served as Epistler. (*Ibid.* p. 34.) Between 1596 and 1601 he was living in the parish of St. Helen's, Bishopsgate, his house at the end of this period being in Little St. Helen's. The parish registers (Harleian Soc. 1904) record the baptism of 'Frauncys daughter of Thomas Morley, Musition,' August

19, 1596; and the burial of 'Frauncis d. of Thomas Morley, Gent,' Feb. 9, 1598-9. On June 26, 1599, 'Cristofer, s. of Thomas Morley, gentleman, and Suzan his wyfe': and on July 28, 1600, 'Anne, d. of Thomas Morley, gentleman, and Suzan his wyfe,' were baptized. There seems no reason to doubt that these entries all refer to the musician. His residence in St. Helen's is further marked by the appearance of his name in two Rolls of Assessments for Subsidies dated 1598 and 1600, in both of which his goods to be taxed were valued at £5, and the assessment was 13s. 4d. An interesting point in connection with the earlier of these documents is that the name of William Shakespeare occurs in it, his goods being valued at the same amount as were Morley's. It appears that he and Morley both appealed against the assessment, and one may suppose that some amount of personal intercourse existed between the two, especially when it is remembered that of the very little original music for Shakespeare's plays which has survived, Morley composed one if not two songs. (The 1598 Roll is printed in Hunter's *New Illustrations of Shakespeare*, 1845; and is discussed fully in Elton's *William Shakespeare, his Family and Friends*, 1904.)

In 1598 Morley was granted a license for twenty-one years to print song-books of all kinds and music paper, 'with forfeiture of £10 to every person offending against this grant.' The Patent, dated Sept. 28, 1598, is printed in Steele's *Earliest English Music Printing*, 1903. It would seem that it was obtained through the interest of one of the Caesar family, (probably Sir Julius), which was connected with the parish of St. Helen's. One book, Carlton's 'Madrigals,' 1601, is said on the title-page to have been 'printed by Thomas Morley dwelling in Little Saint Helen's,' but as a rule East, Barley, and others, published as Morley's 'assignes' under the Patent. Barley indeed, in 1599 and 1600, seems to have done his printing in Little St. Helen's, and only to have sold his books at his shop in 'Gratious' Street (cf. Farmer's 'Madrigals,' and Morley's 'Consort Lessons,' 1599: and Morley's 'First Booke of Ayres,' 1600. [An imperfect copy of this last, in the possession of Mr. Perry, of Providence, R.I., U.S.A., is believed to be unique.]) In 1601 the whole question of granting monopolies of this kind was raised in the House of Commons, and Morley's Patent was among those mentioned (Ames, *Typographical Antiquities*, 1749, p. 569). The last book which appears to have been printed 'by the assignement of a Patent granted to T. Morley,' was Dowland's 'Third Book of Songs,' 1603. Barley obtained this Patent on Morley's death, and his name appears as owner of it from 1606 onwards.

Morley alludes more than once to his ill health in his *Plaine and Easie Introduction*, 1597: 'My health since you saw me, hath beene so bad, as if it had beene the pleasure of him who may all things, to have taken me out of the world, I should have beene very well contented; and have wished it more than once': and he speaks of the 'solitarie life which I lead (being compelled to keepe at home),' as a reason for his undertaking the work. It was perhaps the bad state of his health which caused the severance of his connection with the Chapel Royal, where he was succeeded by George Woodson, Oct. 7, 1602. His death probably took place in 1603, for the 'commission to administer the goods, etc. of Thomas Morley, late parishioner of St. Botolph's, near Billingsgate,' was granted to his widow 'Margaret Morley' on Oct. 25, 1603. (Information from Mr. Barclay Squire.) If we may assume that this refers to the musician, we must suppose that he had married a second time. The title-page of the 1606 edition of the 'Canzonets' of 1593, which states that they are 'Now Newly Imprinted with some Songs added by the Author,' may be interpreted in two ways. Weelkes printed in his 'Ayres or Fantastic Spirites,' 1608, a 'Remembrance of my friend M. Thomas Morley,' beginning 'Death hath deprived me of my dearest friend.'

The following is a list of Morley's publications, of some of which he was only the editor:—

1. Canzonets. Or Little Short Songs to Three Voyces. 1593. (2nd ed. with four additional Canzonets, 1606. 3rd ed. 1631. German Translations, Cassel, 1612: Rostock, 1624.)
2. Madrigalls to Foure Voyces. 1594. (2nd ed. with two additional Madrigals, 1600.)
3. The First Booke of Balletts to fiue voyces. 1595. (2nd ed. 1600. An Italian Edition, London, 1595. German Edition, Nuremberg, 1609. Edited for the Mus. Ant. Soc. by Rimbault, 1842.)
4. The First Booke of Canzonets to two voyces. 1595. (2nd ed. 1619.)
5. Canzonets, Or Little Short Songs to foure voyces. Celected out of the best and approued Italian Authors. 1597. (Contains two by Morley himself.)
6. Canzonets or Little Short Aers to fiue and sixe voices. 1597.
7. A Plaine and Easie Introduction to Practicall Musicke, 1597. (2nd ed. 1608. 3rd ed. 1771. Contains eight compositions, chiefly motets, by Morley.)
8. Madrigalls to fiue voyces. Celected out of the best approued Italian Authors. 1598.
9. The First Booke of Consort Lessons, made by diuers exquisite Authors for six Instruments. 1599. (2nd ed. 1611.)
10. The First Booke of Ayres or Little Short Songs; to sing and play to the Lute with the Base Viole. 1600. (Contains 'It was a lover and his lass.')
11. The Triumphes of Oriana to 5 and 6 voices, composed by diuers seuerall authors. 1601. (Contains two madrigals by Morley. Reprinted in score by Hawes, 1814. A new edition by Mr. Lionel Benson is in course of publication, 1906.)

With these should be mentioned, 'The whole Booke of Psalmes. With their woonted Tunes . . . Compiled by sundrie Authors,' etc. 'Printed at London in Little S. Hellens by W. Barley, the assigne of T. Morley, and are to be sold at his shop in Gratious street.' This book, which has no date, contains four settings of tunes by Morley, two of which (with another hitherto unprinted setting) appeared later in Ravenscroft's Psalter, 1621. (See PSALTER.) Of his sacred music, Barnard (1641) printed a Morning and Evening Service of four and five parts; an Evening Service of five parts; and a Verse Anthem 'Out of the Deep.' His *Burial Service* was printed by Boyce. A Motet, 'Nolo mortem,' *a* 4, has been edited by Mr. Barclay Squire. Among his unpublished works are:—

Domine non est exaltatum, *a* 5. Domine Dominus noster, *a* 5. Bodl. MS. Mus. c. 1-5.

De profundis, *a* 6. Laboravi, *a* 6. B. M. Addl. MSS. 29,372-7.
How long wilt thou forget me. O Jesu meek. Out of the deep second version). R. College of Music.
Teach me thy ways. Peterhouse, Cambridge.

The *Fitzwilliam Virginal Book* (ed. Fuller Maitland and Squire) contains music by him; as also does Forster's MS. Virginal Book in the Buckingham Palace Library. A Fancy *a* 5 is at Christ Church, Oxford, where are many MS. compositions, chiefly canzonets, by him, some of which may be from the printed collections with altered words.

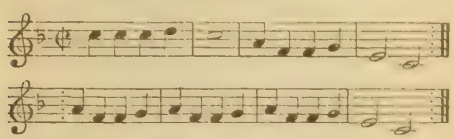
Morley's contemporaries, such as Meres and Peacham, placed him among the best English musicians of the time, and Ravenscroft speaks of him after his death as 'he who did shine as the Sun in the Firmament of our Art, and did first give light to our understanding with his Præcepts' (*Briefe Discourse*, 1614). At the present day Morley perhaps holds the first place in popular esteem of all the Elizabethan composers, partly because of the cheerfulness and tunefulness of his Ballets, a form of composition which he introduced into this country, and in which he is unrivalled in England, unless by his follower Weelkes. Here he owed much to Gastoldi, after whose 'Balletti' he modelled his own, sometimes making use of phrases which are plainly suggested by the Italian writer, just as in his Canzonets he sometimes adapts phrases from Felice Anerio. But if his material is sometimes borrowed, his treatment of it is original, and the charge of plagiarism, which Oliphant and others bring against him, need not be pressed. If Morley wrote more in the lighter forms of music, his graver compositions are not less masterly, as may be seen by reference to the 'Nolo mortem' or the *Burial Service*, which is worthy of the praises bestowed on it by Burney. His *Plaine and Easie Introduction* stands by itself. Written in dialogue form, it gives a pleasant impression of Morley's personality, and is of the greatest value for the side-lights which it throws on contemporary musical life; while for the English student of modal music it is indispensable, being still the only important English work on the subject. Here again Morley has been charged with plagiarism, on the ground that some of his examples are the same as some which Tigrini gives in his *Compendio della Musica*, 1588. But in these examples, both Tigrini and Morley are simply showing the best ways of making formal Closes; and as the best are not unlimited in number, it is not surprising if, in a crowd of others, the same examples sometimes occur in different text-books. Morley's notation is not identical with Tigrini's, his arrangement is quite different, and there is no reason to suppose that he ever saw his book. G. E. P. A.

MORLEY, WILLIAM, Mus.B., graduated at Oxford, July 17, 1713. On Aug. 8, 1715, he was admitted a Gentleman of the Chapel Royal. He composed some songs published in a collection together with others by John Isham, and a chant in D minor, printed by Boyce, ii. 306, by some believed to be the oldest double chant in existence. [See FLINTOFT.] He died Oct. 29, 1731. W. H. H.

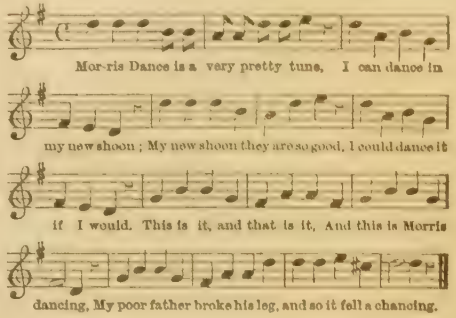
MORNINGTON, GARRETT COLLEY WELLESLEY (or WESLEY), Earl of, Mus.D., born July 19, 1735, at Dangan, Ireland, displayed capacity for music at a very early age. Several interesting anecdotes of his early career are related by Daines Barrington (*Miscellanies*, 1781). With little or no assistance from masters he learned to play on the violin and organ and to compose, and when, with the view of improving himself in composition, he consulted Th. Roseingrave and Geminiani, they informed him that he already knew all they could teach him. [He graduated B.A. of Dublin in 1754 and proceeded M.A. in 1757. In that year he founded the Academy of Music, an amateur society in which ladies sang in the chorus for the first time. Two years later he married the Hon. Anne Hill Trevor. W. H. G. F.] In 1764 the University of Dublin conferred on him the degree of Mus.D., and elected him professor of that faculty, a post he held till 1774. In 1758 he succeeded his father, who in 1746 had been created Baron Mornington, and in 1760 he was created Viscount Wellesley and Earl of Mornington. His compositions are chiefly vocal; some are for the church, copies of which exist in the choir-books of St. Patrick's Cathedral, Dublin. His chant in E flat is universally known. [It is given in its original form in *Musical Times*, 1900, p. 173.] But it was as a glee composer that he excelled. He gained prizes from the Catch Club in 1776 and 1777 for two catches, and in 1779 for his popular glee 'Here in cool grot.' He published a collection of 'Six Glees,' and John Sale included three others in a collection with three of his own. Nine glees, three madrigals, an ode, and ten catches by him are contained in Warren's collections, and several glees in Horsley's 'Vocal Harmony.' A complete collection of his glees and madrigals, edited by Sir H. R. Bishop, was published in 1846. He died May 22, 1781. Three of his sons attained remarkable distinction, viz. Richard, Marquis Wellesley; Arthur, Duke of Wellington; and Henry, Lord Cowley. W. H. H.

MORRIS, or MORRICE, DANCE. A sort of pageant, accompanied with dancing, probably derived from the Morisco, a Moorish dance formerly popular in Spain and France. Although the name points to this derivation, there is some doubt whether the Morris Dance does not owe its origin to the MATACINS. In accounts of the Morisco, no mention is made of any sword-dance, which was a distinguishing feature of the Matacins, and survived in the English Morris Dance (in a somewhat different form) so late as the 19th century. Jehan

Tabourot, in the *Orchésographie* (Langres, 1588), says that when he was young the Morisco used to be frequently danced by boys who had their faces blacked, and wore bells on their legs. The dance contained much stamping and knocking of heels, and on this account Tabourot says that it was discontinued, as it was found to give the dancers gout. The following is the tune to which it was danced :—

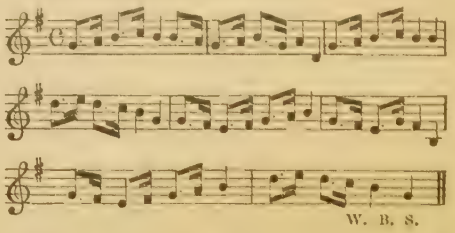


The English Morris Dance is said to have been introduced from Spain by John of Gaunt in the reign of Edward III., but this is extremely doubtful, as there are scarcely any traces of it before the time of Henry VII., when it first began to be popular. Its performance was not confined to any particular time of the year, although it generally formed part of the May games. When this was the case, the characters who took part in it consisted of a Lady of the May, a Fool, a Piper, and two or more dancers. From its association with the May games, the Morris Dance became incorporated with some pageant commemorating Robin Hood, and characters representing that renowned outlaw, Friar Tuck, Little John, and Maid Marian (performed by a boy), are often found taking part in it. A hobby-horse, four whifflers, or marshals, a dragon, and other characters were also frequently added to the above. The dresses of the dancers were ornamented round the ankles, knees, and wrists with different-sized bells, which were distinguished as the fore bells, second bells, treble, mean, tenor, bass, and double bells. In a note to Sir Walter Scott's *Fair Maid of Perth* there is an interesting account of one of these dresses, which was preserved by the Glover Incorporation of Perth. This dress was ornamented with 250 bells, fastened on pieces of leather in twenty-one sets of twelve, and tuned in regular musical intervals. The Morris Dance attained its greatest popularity in the reign of Henry VIII. ; thenceforward it degenerated into a disorderly revel, until, together with the May games and other 'enticements unto naughtiness,' it was suppressed by the Puritans. It was revived at the Restoration, but the pageant seems never to have attained its former popularity, although the dance continued to be an ordinary feature of village entertainments until within the memory of persons now living. In Yorkshire the dancers wore peculiar headdresses made of laths covered with ribbons, and were remarkable for their skill in dancing the sword dance,[1] over two swords placed crosswise on the ground. A country dance which goes by the name of the Morris Dance is still frequently danced in the north of England. It is danced by an indefinite number of couples, standing opposite to one another, as in 'Sir Roger de Coverley.' Each couple holds a ribbon between them, under which the dancers pass in the course of the dance. In Cheshire the following tune is played to the Morris dance:—



Mor-ris Dance is a very pretty tune, I can dance in
my new shoon ; My new shoon they are so good, I could dance it
if I would. This is it, and that is it, And this is Morris
dancing, My poor father broke his leg, and so it fell a chancing.

In Yorkshire the following tune, founded on that of 'The Literary Dustman,' is generally used :—

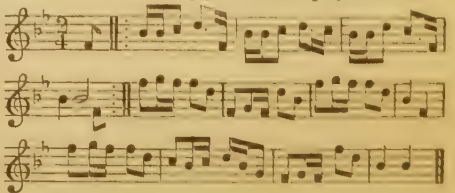


W. B. S.

More or less modernised forms of the Morris dance still linger in certain country places, both in the north, and in the south of England. In Oxfordshire there are Morris dancers who perform to the music of a pipe and tabor. The following tune was noted down by the present writer from a pipe and tabor player, as one used for the Morris dance in an Oxfordshire village.

Oxfordshire Morris Dance.

Noted from a pipe and tabor player in 1901.

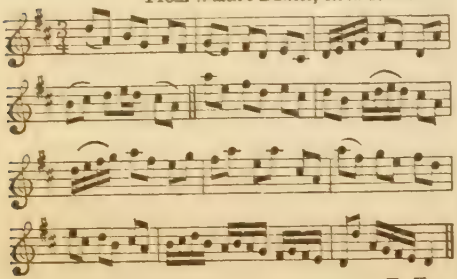


In Yorkshire, and in Northumberland, the sword-dance is a feature of the Morris (see SWORD-DANCE) and in the Whitby and other districts of north Yorkshire the pastime is called 'plew stotting.' 'Plew' is the local pronunciation of plough, and 'stot' is a young bull, formerly yoked to the plough. The 'plew stots' are bands of youths (one dressed as the 'maiden'—no doubt a survival of 'Maid

[1] 'Do the sword-dance with any Morris-dancer in Christendom.' (Marston, *Malcontent*, Act i. Scene 3.)

Marian'—and another as the 'old man') who parade from village to village dancing the sword and other dances, to the accompaniment of a fiddle. In 'Traditional Tunes,' 1891, edited by the present writer, is a Lancashire Morris dance, danced at 'rush bearings' in that country. It is noticeable that most Morris dances are in either common, or 2–4 time, and the 'Helston Furry Dance,' which is a true Morris dance, is a very characteristic example. Of a different type is the following, which we may assume to be a traditional Welsh Morris, printed in a book of country dances issued by John Walsh about 1730-35; it is there entitled 'Welsh Morris dance.'

Welsh Morris Dance.
From *Walsh's Dances, circa* 1730-35.



F. K.

MORTIER DE FONTAINE. A pianist of celebrity, born at Warsaw, May 13, 1816. He was possessed of unusual technical ability, and is said to have been the first person to play the great sonata of Beethoven, op. 106, in public. From 1853 to 1860 he resided in St. Petersburg, and subsequently in Munich, Paris, and London, at the last of which he died, May 10, 1883. M.

MOSCHELES, Ignaz, the foremost pianist after Hummel and before Chopin, was born at Prague on May 30, 1794. His precocious aptitude for music aroused the interest of Dionys Weber, the director of the Prague Conservatorium. Weber brought him up on Mozart and Clementi. At fourteen years of age, he played a concerto of his own in public; and soon after, on the death of his father, was sent to Vienna to shift for himself as a pianoforte teacher and player, and to pursue his studies in counterpoint under Albrechtsberger, and in composition under Salieri.

The first volume of *Aus Moscheles Leben*, extracts from his diary, edited by Mme. Moscheles (Leipzig, 1872), offers bright glimpses of musical life in Vienna during the first decade of the century, and shows how quickly young Moscheles became a favourite in the best musical circles. In 1814 Artaria & Co., the publishers, honoured him with a commission to make the pianoforte arrangement of Beethoven's 'Fidelio' under the master's supervision. [See vol. i. 248*b*, and 224*b*.]

Moscheles's career as a virtuoso can be dated from the production of his 'Variationen über den Alexandermarsch,' op. 32, 1815. These 'brilliant' variations met with an unprecedented success, and soon became a popular display piece for professional pianists; later in life he frequently found himself compelled to play them, though he had outgrown them both as a musician and as a player. During the ten years following Moscheles led the life of a travelling virtuoso. In the winter of 1821 he was heard and admired in Holland, and wrote his Concerto in G minor; in the same year he played in Paris, and subsequently in London, where he first appeared at the Philharmonic on June 11, 1821. Here John Cramer, and the veteran Clementi, hailed him as an equal and friend; his capital Duo for two pianofortes, 'Hommage à Händel,' was written for Cramer's concert, and played by the composer and 'glorious John,' at the opera concert-room on May 9, 1822. In the season of 1823 he reappeared in London, and in 1824 he gave pianoforte lessons to Felix Mendelssohn, then a youth of fifteen, at Berlin. In 1826, soon after his marriage, at Hamburg, with Charlotte Embden, he chose London for a permanent residence; and for a further ten years he led the busy life of a prominent metropolitan musician. He appeared at the concerts of friends and rivals, gave his own concert annually, paid flying visits to Bath, Brighton, Edinburgh, etc., played much in society, did all manner of work to the order of publishers, gave innumerable lessons, and withal composed assiduously. [In 1827 he noted and arranged the traditional airs sung by a troupe of Tyrolese singers who came to London. Two folio volumes of these songs were published by Willis with translation by W. Ball. In this collection first appeared the once favourite song, 'The Merry Swiss Boy.' F. K.] In 1832 he was elected one of the directors of the Philharmonic Society; and in 1837 and 1838 he conducted Beethoven's Ninth Symphony with signal success at the society's concerts. In 1845, after Sir Henry Bishop's resignation, he acted as regular conductor.

When Mendelssohn, who during his repeated visits to England had become Moscheles's intimate friend, started the Conservatorium of Music at Leipzig, Moscheles was invited to take the post of first professor of the pianoforte. He began his duties in 1846; and it is but fair to add that the continued success of the institution, both during the few remaining months of Mendelssohn's life, and for full twenty years after, was in a great manner owing to Moscheles's wide and solid reputation, and to his indefatigable zeal and exemplary conscientiousness as a teacher. Moscheles took quite a paternal interest in his pupils. If the school hours proved insufficient, which was frequently the case, he would invite them to

his private residence, and there continue his instructions; and when they left school he endeavoured to find suitable professional openings for them, and remained their friend, ever ready with kindly advice and assistance.

As a pianoforte player Moscheles was distinguished by a crisp and incisive touch, clear and precise phrasing, and a pronounced preference for minute accentuation. He played octaves with stiff wrists, and was chary in the use of the pedals.

Mendelssohn and, with some reservations, Schumann, were the only younger masters whose pianoforte works were congenial to him. Those of Chopin and Liszt he regarded with mingled feelings of aversion and admiration. Indeed, his method of touch and fingering did not permit him to play either Chopin's or Liszt's pieces with ease. 'My thoughts, and consequently my fingers,' he wrote in 1833, àpropos of Chopin's Études, etc., 'ever stumble and sprawl at certain crude modulations, and I find Chopin's productions on the whole too sugared, too little worthy of a man and an educated musician, though there is much charm and originality in the national colour of his motives.' It is true he somewhat modified this opinion when he heard Chopin play. Still it remains a fact that to the end of his days, both the matter and the manner of Chopin and other modern pianists appeared to him questionable.

Moscheles was renowned for the variety and brilliancy of his extempore performances, the character of which can be guessed at by his Preludes, op. 73. His last improvisation in public on themes furnished by the audience formed part of the programme of a concert at St. James's Hall in 1865, given by Madame Jenny Lind-Goldschmidt 'in aid of the sufferers by the war between Austria and Prussia,' where he improvised for some twenty minutes on 'See the conquering hero comes,' and on a theme from the Andante of Beethoven's C minor Symphony, in a highly interesting and astonishing manner.

The list of his numbered compositions given in a Thematic Catalogue (Leipzig, Kistner) and in *Aus Moscheles Leben*, vol. ii., extends to op. 142, and there is besides a long list of ephemera, written for the market, to please publishers and fashionable pupils. The latter, and many of the former, have had their day; but his best works, such as the Concerto in G minor, op. 60 (1820-21); the Concerto pathétique, op. 93; the Sonate mélancolique, op. 49; the Duo for pianoforte, 'Hommage à Händel,' op. 92; the three Allegri di Bravura, op. 51; and above all, the twenty-four Études, op. 70 (1825 and 1826), and the 'Characteristische Studien,' op. 95, occupy a place in the classical literature of the instrument from which no subsequent development can oust them. Moscheles died at Leipzig, March 10, 1870. The memoir above referred to was translated by Mr. A. D. Coleridge, and published in 1873, as *The Life of Moscheles*. His *Briefe von F. Mendelssohn-Bartholdy an Ignaz und Charlotte Moscheles* appeared in 1888. E. D.

MOSE IN EGITTO. An 'oratorio'; libretto by Tottola, music by Rossini. Produced at the San Carlo Theatre, Naples, March 5, 1818, and at the Théâtre Italien, Paris, Oct. 22, 1822. The libretto was adapted by Balocchi and De Jouy, and the music much modified by the composer; and it was reproduced, under the title of 'Moïse,' at the Académie Royal, Paris, March 26, 1827. On the bills it was entitled 'Oratorio,' and on the book 'Moïse et Pharaon, ou le Passage de la Mer Rouge.' The opera was produced at the King's Theatre, Haymarket, London, as 'Pietro l' Eremita,' April 23, 1822. On Feb. 22, 1833, it was brought out at the Covent Garden oratorios as 'The Israelites in Egypt; or, The Passage of the Red Sea,' with scenery and dresses, and additions from 'Israel in Egypt.' On April 20, 1850, it was again brought out at the Royal Italian Opera, Covent Garden, as 'Zora.' In 1845 it was performed by the Handel and Haydn Society of Boston, U.S.A., in an English version of the original libretto,[1] and on May 24, 1878, was also performed with great success by the Sacred Harmonic Society, at Exeter Hall, in an English version by Arthur Matthison. G.

MOSEL, Giovanni Felice, a violinist of merit, born in Florence in 1754. The date of his death is unknown. His father, who had been a pupil of Tartini, gave him his first instruction in violin playing, and he also received lessons from Pietro Nardini. In 1793 he succeeded the latter as director of the music at the Court of the Grand Duke Leopold in Florence, and in 1812 became first violin in the Theatre at Pergola. His name is chiefly known in connection with the history of the 'Tuscan Strad,' a violin which was one of a quartet made by Stradivarius for the Grand Duke of Tuscany in 1690. Before 1792 this *chef d'œuvre* had disappeared from the ducal collection, and was lost until 1795, when Mosel (whose possession of the instrument is unaccounted for) sold it to Mr. David Ker of Portavoe, Ireland, for £24. Published compositions: Six duets for two violins and piano, published by Pleyel in Paris in 1783. Six quartets for two violins, alto and bass; *Ibid.* 1785. Six duets for two violins, op. 3; Venice, 1791. Serenade for flute, two violins, and violoncello; Venice, 1791. MS. Sonatas for violin alone; trios for two violins and violoncello, and some symphonies.—A. M. Clarke's *Fiddlers Ancient and Modern*; Fétis, *Biog. des Mus.*; Olga Racster's *Chats on Violins* (London, 1905); Hill & Sons, *The Tuscan Strad* (London, 1889, 1891). E. H-A.

[1] They performed it forty-five times down to 1878.

MOSEL, Ignaz Franz, Edler von, composer and writer on musical subjects, born at Vienna, April 1, 1772, conducted the first musical festivals of the Gesellschaft der Musikfreunde in the Imperial Riding-school (1812 to 1816). He was ennobled, and made a Hofrath. From 1820 to 1829 he was vice-director of the two Court theatres, and from 1829 till his death principal custos of the Imperial library. He was one of the three chief mourners at Beethoven's funeral. In his earlier years he arranged Haydn's 'Creation' (Mollo), Cherubini's 'Médée,' and 'Deux journées' (Cappi), and 'Così fan tutte' (Steiner), for string-quartet; and the 'Creation' and 'Così fan tutte' for two pianofortes, for the blind pianist Paradies. For the Gesellschaft der Musikfreunde he put additional instruments to several of Handel's oratorios,[1] and translated the text. He also composed three operas (court-theatre), one Singspiel, several overtures and entr'actes for plays, a Missa solennis, etc. He published three collections of songs, dedicating one to Vogl, the celebrated singer of Schubert's songs, and another to Rochlitz (Steiner). Among his writings the following are of value:—*Versuch einer Aesthetik des dramatischen Tonsatzes* (Vienna, Strauss, 1813); *Ueber das Leben und die Werke des Antonio Salieri* (*ibid.*, Wallishauser, 1827); *Ueber die Originalpartitur des Requiems von W. A. Mozart* (1829); *Geschichte der Hofbibliothek* (*ibid.*, Beck, 1835); and articles in various periodicals on the history of music, including *Die Tonkunst in Wien während der letzten 5 Dezennien* (1818, revised and republished 1840). Von Mosel died in Vienna, April 8, 1844. C. F. P.

MOSES. An oratorio, the words and music of which were composed by A. B. Marx, and which was first performed at Breslau in Dec. 1841, and a few times subsequently in Germany. The book was originally compiled, at Marx's request, by Mendelssohn, though afterwards rejected; and the autograph is preserved by the Mendelssohn family in Berlin, with the date August 21, 1832. G.

MOSEWIUS, Johann Theodor, born Sept. 25, 1788, at Königsberg in Prussia; like so many others, forsook the law for music and the theatre. After a regular musical education he became in 1814 director of the opera in his native town. He married, and in 1816 went to Breslau, and for eight years he and his wife were the pillars of the opera. His wife dying in 1825 he forsook the stage, and founded the Breslau Singakademie. He had before this started the Liedertafel of the town. In 1827 he followed Berner as Professor at the University, and in 1832 became Director of the music there. In 1831 he succeeded Schnabel as head of the Royal Institution for Church Music, which he appears to have conducted most efficiently, bringing forward a large number of pieces by the greatest of the old Italian masters, as well as the vocal works of Mendelssohn, Löwe, Spohr, Marx, etc. His activity was further shown in the foundation of an elementary class as a preparative for the Singakademie, and a society called the Musikalische Cirkel (1834) for the practice of secular music. He also initiated the musical section of the Vaterländische Gesellschaft of Silesia, and became its secretary. He died Sept. 15, 1858, at Schaffhausen. In England this active and useful man is probably only known through two pamphlets—reprints from the *Allg. Musikalische Zeitung*—*J. S. Bach in seinen Kirchencantaten und Choralgesängen* (Berlin, 1845), and *J. S. Bach's Matthäus Passion* (Berlin, 1852). These valuable treatises are now superseded by the publication of the works of which they treat, but in the copious examples which they contain, some Englishmen made their first acquaintance with Bach's finest compositions. G.

[1] Haslinger published the scores of 'Belshazzar' and 'Jephtha.'

MOSKOWA, Joseph Napoléon Ney, Prince de la, eldest son of Marshal Ney, born in Paris, May 8, 1803. As a lad he showed great aptitude for music, and composed a mass, which was performed at Lucca, where he lived after his father's death. In 1831 he was made 'Pair de France,' but sought distinction in a totally different line from that of his brother the Duc d'Elchingen. He contributed to various periodicals, especially some articles in the *Revue des deux Mondes* and the *Constitutionnel*, which excited considerable interest. His love of sport was great, and he was one of the founders of the Jockey Club of Paris. In 1828 he married the only daughter of Laffitte, the banker. The services rendered by the Prince to music are considerable. In connection with Adolphe Adam he founded the 'Société des Concerts de musique religieuse et classique,' an association for the practice of vocal music, and to this he devoted a great amount of learning, taste, and judgment. We append a catalogue of the works contained in the fine collection (11 vols. 8vo), published for the Society by the Prince, which has now become very scarce.[2] The Prince lived on intimate terms with Delsarte the singer, and with Niedermeyer the composer, whom he materially assisted in the foundation of his 'École de musique religieuse.' In 1831 a mass of his for voices and orchestra was executed by the pupils of Choron, and called forth the strong encomiums of M. Fétis. Although naturally inclined to the madrigal style and sacred music, he also attempted the theatre, producing at the Opéra-Comique, 'Le Cent-Suisse' (June 7, 1840), a one-act piece, which had a considerable run, and 'Yvonne' (March 16, 1855), a one-act opéra-comique, a clever imitation of the antique style. The Prince died July 25, 1857, at St. Germain-en-Laye.

MOSZKOWSKI, Moritz, pianist and composer, born at Breslau, August 23, 1854, studied first at Dresden and afterwards at Berlin at the academies of Stern and Kullak successively. He was a teacher at the latter for a good many years. After a successful career as a pianist and composer he went in 1897 to live in Paris, and was made a member of the Berlin Academy in 1899. His compositions include two books of Spanish Dances for Pf., four hands, a symphony in four movements, 'Jeanne d'Arc,' op. 19, two concertstücke and a scherzo for violin with Pf.: 'Aus allen Herren Landen,' for Pf. four hands, op. 23; three concert studies for Pf. op. 24; Barcarolle for Pf. op. 27; three pieces for violoncello and piano, op. 29; violin concerto, op. 30; two orchestral suites, opp. 39 and 47; Pf. concerto in E major; 'Phantastischer Zug' for orchestra, and many Pf. solos and duets, and songs. His opera 'Boabdil' was produced at Berlin, April 21, 1892, and a three-act ballet 'Laurin' in 1896. He appeared at the Philharmonic Concerts in 1886, and frequently in London since as a pianist and conductor. M.

MOTET (Barb. Lat. *Motetum, Motectum, Mutetus, Motellus, Motulus*; Ital. *Mottetto*). A term which for the last three hundred years has been almost exclusively applied to certain pieces of Church Music, of moderate length, adapted to Latin words (selected, for the most part, either from Holy Scripture, or the Roman Office-books), and intended to be sung at High Mass, either in place of or immediately after the Plain-song Offertorium for the day. [See Mass; Offertorium.] This definition, however, extends no farther than the conventional meaning of the word. Its origin involves some very grave etymological difficulties, immeasurably increased by the varied mode of spelling adopted by early writers. For instance, the form *Motulus* can scarcely fail to suggest a corruption of *Modulus*—a Cantilena or Melody; and in support of this derivation we may remind our readers that in the 13th and 14th centuries, and even earlier, the terms *Motetus* and *Motellus* were constantly applied to the voice-part afterwards called *Medius* or *Altus*. On the other hand, the idea that the true etymon is supplied by the Italian word *Mottetto*,

diminutive of *Motto*, and equivalent to the French *mot* or *bon mot*, a jest, derives some colour from the fact that it was unquestionably applied, in the first instance, to a certain kind of profane music, which in the 13th century was severely censured by the Church, in common with the *Rondellus*, another kind of popular melody, and the *Conductus*, a species of secular song, in which the subject in the tenor was original, and suggested the other parts, after the manner of the *Guida* of a canon. Again, it is just possible that the varying orthography to which we have alluded may originally have involved some real distinction no longer recognisable. But in opposition to this view it may be urged that the charge of licentiousness was brought against the Motet under all its synonyms, though ecclesiastical composers continued to use its themes as *Canti fermi*, as long as the polyphonic schools remained in existence—to which circumstance the word most probably owes its present conventional signification.

The earliest purely ecclesiastical motets of which any certain record remains to us are those of Philippus de Vitriaco, whose *Ars compositionis de Motetis*, preserved in the Paris Library, is believed to have been written between the years 1290 and 1310. Morley tells us that the motets of this author 'were for some time of all others best esteemed and most used in the Church.' Some others, scarcely less ancient, are printed in Gerbert's great work *De Cantu et musica sacra*—rude attempts at two-part harmony, intensely interesting as historical records, but intolerable to cultivated ears.

Very different from these early efforts are the productions of the period, which in our article Mass we have designated as the First Epoch of practical importance in the history of polyphonic music—a period embracing the closing years of the 13th century, and the first half of the 14th, and represented by the works of Du Fay, Bianchoys, Eloy, Dunstable, Vincenzo Faugues, and some other masters whose compositions are chiefly known through the richly illuminated volumes which adorn the Library of the Sistine Chapel, in which they are written, in accordance with the custom of the pontifical choir, in characters large enough to be read by the entire body of singers, at one view. These works are full of interest; and, like the earliest Masses, invaluable as studies of the polyphonic treatment of the Modes.

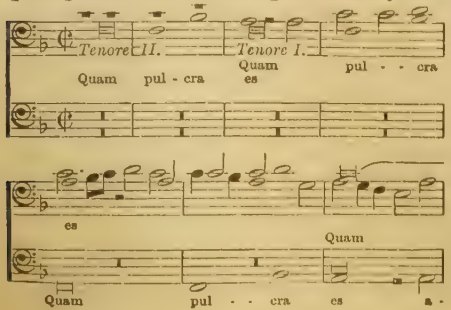
Equally interesting are the productions of the Second Epoch, extending from the year 1430 to about 1480. The typical composers of this period were Okeghem, Caron, Gaspar, Antonius de Fevin, Hobrecht, and Giovanni Basiron, in whose works we first begin to notice a remarkable divergence between the music adapted to the Motet and that set apart for the Mass. From the time of Okeghem, the leader of the school, till the middle of the 16th century, composers seem to have regarded the invention of contrapuntal miracles as a duty which no one could avoid without dishonour. For some unexplained reason, they learned to look upon the music of the mass as the natural and orthodox vehicle for the exhibition of this peculiar kind of ingenuity; while in the Motet they were less careful to display their learning, and more ready to encourage a certain gravity of manner, far more valuable, from an æsthetic point of view, than the extravagant complications which too often disfigure the more ambitious compositions they were intended to adorn. Hence it frequently happens that in the Motets of this period we find a consistency of design combined with a massive breadth of style, for which we search in vain in contemporary Masses.

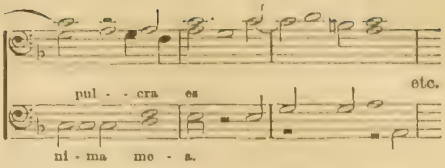
The compositions of the Third Epoch exhibit all the merits noticeable in those of the First and Second, enriched by more extended harmonic resources, and a far greater amount of technical skill. It was during this period comprising the last two decades of the 15th century, and the first two of the 16th, that the great masters of the Flemish school, excited to enthusiasm by the matchless genius of Josquin des Prés, made those rapid advances towards perfection which for a time placed them far above the musicians of any other country in Europe, and gained for them an influence which was everywhere acknowledged with respect, and everywhere used for pure and noble ends. The Motets bequeathed to us by these earnest-minded men are, with scarcely any exception, constructed upon a *Canto fermo* supplied by some fragment of grave Plain-song or suggested by the strains of some well-known secular melody. Sometimes this simple theme is sung by the tenor or some other principal voice entirely in Longs and Breves, while other voices accompany it in florid counterpoint with every imaginable variety of imitation and device. Sometimes it is taken up by the several voices in turn, after the manner of a Fugue or Canon, without the support of the continuous part, which is only introduced in broken phrases, with long rests between them. When, as is frequently the case, the Motet consists of two movements—a *Pars prima* and *Pars secunda*—the *Canto fermo* is sometimes sung by the tenor first in the ordinary way, and then backwards, in retrograde imitation, *cancrizans*. In this, and other cases, it is frequently prefixed to the composition, on a small detached stave, and thus forms a true *Motto* to the work, to the imitations of which it supplies a veritable key, and in the course of which it is always treated in the same general way. [See Inscription, vol. ii. p. 470.] But side by side with this homogeneity of mechanical construction we find an infinite variety of individual expression. Freed from the pedantic trammels which at one period

exercised so unhealthy an influence upon the Mass, the composer of the Motet felt bound to give his whole attention to a careful rendering of the words, instead of wasting it, as he would certainly have done under other circumstances, upon the concoction of some astounding inversion or inscrutable canon. Hence the character of the text frequently offers a tolerably safe criterion as to the style of work; and we are thus enabled to divide the Motets, not of this epoch only, but of the preceding and following periods also, into several distinct classes, each marked by some peculiarity of more or less importance.

Nowhere, perhaps, do we find more real feeling than in the numerous Motets founded on passages selected from the Gospels, such as Jacobus Vaet's 'Egressus Jesus,' Jhan Gero's renderings of the parable of the Pharisee and the Publican, and others of similar intention. The treatment of these subjects, though exhibiting no trace of the dramatic element, is highly characteristic, and shows a deep appreciation of the sense of the sacred text, embracing every variety of expression, from the triumphant praises of the Magnificat to the deep sadness of the Passion of our Lord. The oldest known example of the former subject, treated in the Motet style, is a Magnificat for three voices by Du Fay. One of the earliest renderings of the latter is Hobrecht's 'Passio D.N.J.C. secundum Matthaeum,' a work full of the deepest pathos, combined with some very ingenious part-writing. Scarcely less beautiful is the later 'Passio secundum Marcum,' by Johannes Galliculus; and Loyset Compère has left us a collection of Passion Motets of extraordinary beauty.

The Book of Canticles was also a fruitful source of inspiration. Among the finest specimens extant are three by Johannes de Lynburgia (John of Limburg)—'Surge propera,' 'Pulcra es anima mea,' and 'Descende in hortum meum'; Du Fay's 'Anima mea liquefacta est'; a fine setting of the same words, by Enrico Isaac; Antonius de Fevin's 'Descende in hortum meum'; and, among others, by Craen, Gaspar, Josquin des Prés, and the best of their compatriots, a remarkably beautiful rendering of 'Quam pulcra es anima mea,' for Grave Equal Voices, by Mouton, from which we extract the opening bars, as a fair example of the style:—





A host of beautiful Motets were written in honour of Our Lady, and all in a style of peculiarly delicate beauty; such as Du Fay's 'Salve Virgo,' 'Alma Redemptoris,' 'Ave Regina,' and 'Flos florum, fons amorum'; Brasart's 'Ave Maria'; Bianchoys' 'Beata Dei genitrix'; Arcadelt's 'Ave Maria'; several by Brumel, and Loyset Compère; and a large number by Josquin des Prés, including the following beautiful little 'Ave vera virginitas,' in Perfect Time, with its remarkable progression of consecutive fifths arising from the necessity of maintaining the strictness of a Canon, in the fifth below, led by the Superius and resolved by the Tenor.

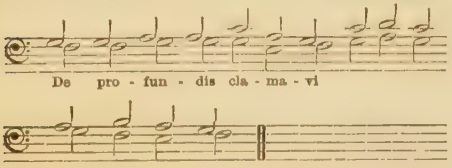
The Lamentations of Jeremiah have furnished the text of innumerable beautiful movements, in the Motet style, by Joannes Tinctor, Hykaert, Gaspar, Pierre de la Rue, Agricola, and, above all, Carpentrasso, whose Lamentations were annually sung in the Sistine Chapel, until in the year 1587 they were displaced to make room for the superb compositions of Palestrina. [See LAMENTATIONS, vol. ii. p. 626.]

The greater Festivals of the church, as well as those of individual saints, gave occasion for the composition of countless motets, among which must be reckoned certain Sequences set in the Motet style by some of the great composers of the 15th and 16th centuries; notably a 'Victimae paschali,' by Josquin des Prés, founded on fragments of the old Plain-song Melody, interwoven with the popular Rondelli, 'D'ung aultre amer,' and 'De tous biens pleine,' and a 'Stabat Mater,' by the same writer, the

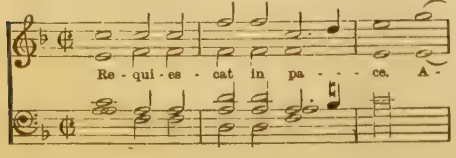
Canto fermo of which is furnished by the then well-known secular air, 'Comme femme.' This last composition, too long and complicated to admit of quotation, was reprinted by Choron in 1820, and will well repay serious study.

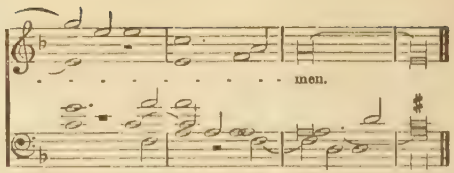
Less generally interesting than the classes we have described, yet not without a special historical value of their own, are the laudatory Motets dedicated to princes and nobles of high degree, by the maestri attached to their respective courts. Among these may be cited Clemens non Papa's 'Caesar habet naves,' and 'Quis te victorem dicat,' inscribed to Charles V.; Adrian Willaert's 'Argentum et aurum'; and many others of like character.

Finally we are indebted to the great masters of the 15th and 16th centuries for a large collection of *Naeniae*, or Funeral Motets, which are scarcely exceeded in beauty by those of any other class. The service for the dead has been treated, by composers of all ages, with more than ordinary reverence. In the infancy of Discant, the so-called organisers who were its recognised exponents did all they could to make the 'Officium Defunctorum' as impressive as possible; and, acting up to their light, endeavoured to add to its solemnity by the introduction of discords which were utterly forbidden in *Organum* of the ordinary kind. Hence arose the doleful strain, anciently called 'Litaniae mortuorum discordantes':—



It is interesting to compare these excruciating harmonies with the Dirge of Josquin des Prés in memory of his departed friend and tutor, Okeghem. This fine Motet is founded on the Plain-song melody of 'Requiem aeternam,' which is sung in Breves and Semibreves by the tenor, to the original Latin words, while the four other voices sing a florid counterpoint to some French verses beginning, 'Nymphes des bois, Déesses des fontaines.' It was printed at Antwerp in 1544; and presents so many difficulties to the would-be interpreter that Burney declares himself 'ashamed to confess how much time and meditation' it cost him. The simple harmonies of the peroration, 'Requiescat in pace,' are so touchingly beautiful that we transcribe them in preference to the more complicated passages by which they are preceded.





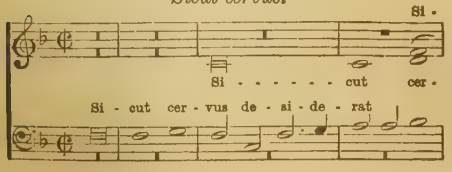
The earliest printed copies of the Motets we have described were given to the world by Ottaviano dei Petrucci, who published a volume at Venice in 1502 called 'Motette, A. numero trentatre'; another in 1503 called 'Motetti de passioni, B.'; a third in 1504 called 'Motetti, C.'; a fourth in 1505—'Motetti libro quarto'; and in the same year a book for five voices—'Motetti a cinque libro primo'—which, notwithstanding the promise implied in its title, was not followed by the appearance of a companion volume. In 1511 the inventor of printed music removed to Fossombrone; where between the years 1514 and 1519 he published four more volumes of Motets, known, from a figure engraved on the title-page, as the 'Motetti della Corona.' In 1538 Antonio Gardano published at Venice a collection, called—also from a figure on its title-page—'Motetti del Frutto.' These were pirated at Ferrara under the name of 'Motetti della Scimia,' with the figure of an ape devouring a fruit; whereupon Gardano issued a new volume with the figure of a lion and bear devouring an ape. Between the years 1527 and 1536 nineteen similar volumes were issued in Paris by Pierre Attaingnant; and many more were printed in the same city by Adrian le Roy and Robert Ballard. These collections, containing innumerable works by all the great composers of the earlier periods, are of priceless worth. Of some of Petrucci's only one copy is known to exist, and that unhappily incomplete. The Library of the British Museum possesses his Second, Third, and Fourth Books of 'Motetti della Corona,' besides a single part-book of 'Motetti C,' his First and Third Books of Josquin's Masses, and the First of Gardano's 'Motetti del Frutto'; and this, taking into consideration the splendid condition of the copies, must be regarded as a very rich collection indeed.

During the Fourth Epoch—embracing the interval between the death of Josquin des Prés, in 1521, and the production of the 'Missa Papae Marcelli,' in 1565—the development of the Motet coincided so closely with that of the Mass that it seems necessary to add but very little to the article already written upon that subject. The contemporaneous progress of the Madrigal did indeed exercise a healthier influence upon the former than it could possibly have done in presence of the more recondite intricacies, common to the latter; but certain abuses crept into both. The evil habit of mixing together

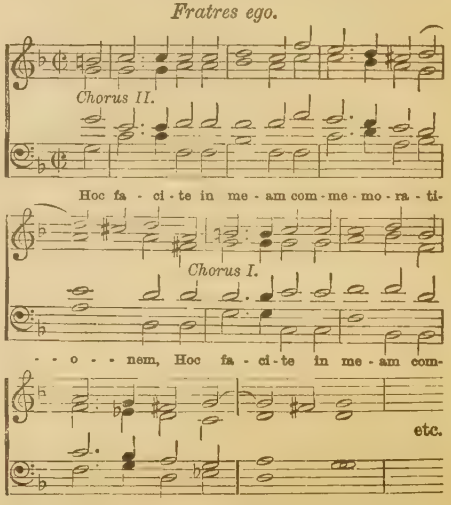
irrelevant words increased to such an extent that among the curiosities preserved in the Library of the Sistine Chapel, we find Motets in which every one of the five voices is made to illustrate a different text throughout. In this respect, if not in others, an equal amount of deterioration was observable in both styles.

The Fifth Epoch—extending from the year 1565 to the beginning of the following century—witnessed the sudden advance of both branches of art to absolute perfection; for Palestrina, the brightest genius of the age, was equally great in both, and has left us Motets as unapproachable in their beauty as the 'Missa Papae Marcelli.' The prolific power of this delightful composer was no less remarkable than the purity of his style. The seven books of Motets printed during his lifetime contain two hundred and two compositions, for four, five, six, seven, and eight voices, among which may be found numerous examples of all the different classes we have described. About a hundred others, including thirteen for twelve voices, are preserved in MS. in the Vatican Library, and among the archives of the Pontifical Chapel, the Lateran Basilica, S. Maria in Vallicella, and the Collegium Romanum; and there is good reason to believe that many were lost through the carelessness of the maestro's son, Igino. The entire contents of the seven printed volumes, together with seventy-two of the Motets hitherto existing only in MS., have been issued in the complete edition of Palestrina's works by Messrs. Breitkopf & Härtel of Leipzig; and this, probably, is as many as we can now hope for, as it is well known that some of the MS. copies we have mentioned are incomplete. Among so many gems, it is difficult to select any number for special notice. Perhaps the finest of all are those printed in the Fourth Book of Motets for five voices, the words of which are taken from the book of Canticles; but the two books of simpler compositions for four voices are full of treasures. Some are marvels of contrapuntal cleverness; others—where the character of the words is more than usually solemn—as unpretending as the plainest *Faux bourdon*. As an example of the more elaborate style we transcribe a few bars of 'Sicut cervus desiderat,' contrasting them with a lovely passage from 'Fratres ego enim accepi,' a Motet for eight voices, in which the Institution of the Last Supper is illustrated by simple harmonies of indescribable beauty:—

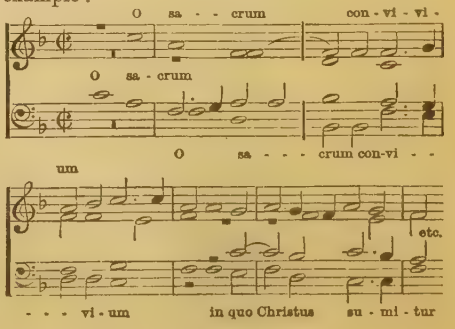
Sicut cervus.



Fratres ego.



Palestrina's greatest contemporaries in the Roman school were Vittoria, whose Motets are second only in importance to his own, Morales, Felice and Francesco Anerio, Bernardino and Giovanni Maria Nanini, Luca Marenzio, and Francesco Suriano. The honour of the Flemish school was supported to the last by Orlando di Lasso, a host in himself. The Venetian school boasted, after Willaert, Ciprian de Rore, Andrea and Giovanni Gabrieli, and especially Giovanni Croce, the originality of whose style was only exceeded by its wonderful delicacy and sweetness, which are well shown in the following example:—



In England the Motet was cultivated with great success by some of the best composers of the best period. The 'Cantiones Sacrae' of Tallis and Byrd will bear comparison with the finest productions of the Roman or any other school, those of Palestrina alone excepted. And besides these we possess a number of beautiful Motets by Tye, John Taverner, John Shepherd, Fayrfax, Robert Johnson, John Dygon, John Thorne, and several other writers not unknown to fame. Though the Latin Motet was, as a matter of course, banished from the services of the church after the Reformation, its style still lived on in the Full Anthem, of which so many glorious examples have been handed down to us in our Cathedral choir-books; for the Full Anthem is a true Motet, notwithstanding the language in which it is sung; and it is certain that some of the purest specimens of the style were originally written in Latin, and adapted to English words afterwards—as in the case of Byrd's 'Civitas sancti tui,' now always sung as 'Bow thine ear, O Lord.' Orlando Gibbons's First (and only) Set of 'Madrigals and Mottets,' printed in 1612, furnishes a singular return to the old use of the word. They are all secular songs; as are also Martin Pierson's 'Mottects,' published eighteen years later.

The Sixth Epoch, beginning with the early years of the 17th century, was one of sad decadence. The Unprepared Dissonances introduced by Monteverde sapped the very foundations of the polyphonic schools, and involved the Motet, the Mass, and the Madrigal in a common ruin. Men like Claudio Casciolini and Gregorio Allegri did their best to save the grand old manner; but after the middle of the century no composer did it full justice.

The Seventh Epoch inaugurated a new style. During the latter half of the 17th century instrumental music made a rapid advance; and Motets with instrumental accompaniments were substituted for those sung by voices alone. In these the old ecclesiastical modes were naturally abandoned, in favour of the modern tonality; and as time progressed Alessandro Scarlatti, Leo, Durante, Pergolesi, and other men of nearly equal reputation, produced really great works in the new manner, and thus prepared the way for still greater ones.

The chief glories of the Eighth Epoch were confined to Germany, where Reinhard Keiser, the Bach family—with Johann Christoph and Johann Sebastian at its head—Graun, and Hasse, clothed the Motet in new and beautiful forms which were turned to excellent account by Homilius and Rolle, Wolf, Hiller, Fasch, and Schicht. The Motets of Sebastian Bach are too well known to need a word of description—known well enough to be universally recognised as artistic creations of the highest order, quite unapproachable in their own peculiar style. With Handel's Motets few musicians are equally familiar; for it is only in modern times that the German Handel Society has rescued them from oblivion. Nevertheless, they are extraordinarily beautiful; filled with the youthful freshness of the composer's early manner. Besides a 'Salve Regina,' the MS. of which is preserved in the Royal Library at Buckingham Palace, we possess a 'Laudate pueri,' in D, used as an introduction to the Utrecht Jubilate; another in F, a 'Dixit Dominus,' a 'Nisi Dominus,' and, best of all, a lovely 'Silete venti,' for soprano solo, with accompaniments for a stringed band, two oboes, and two bassoons, the last movement of which, 'Dulcis amor, Jesu care,' was introduced in 'Israel in Egypt,' on its second revival, in 1756, adapted to the words, 'Hope, a pure and lasting treasure.'

Of the Ninth or Modern Epoch we have but little to say. The so-called Motets of the 19th century have no real claim to any other title than that of sacred cantatas. They were, it is true, originally intended to be sung at High Mass; but the 'Insanae et vanae curae' of Haydn, the 'Splendente te Deus' of Mozart, and the 'O salutaris' of Cherubini, exquisitely beautiful as they are, when regarded simply as music, have so little in common with the Motet in its typical form that one can scarcely understand how the name ever came to be bestowed upon them. The Motets of Mendelssohn, again, have but little affinity with these—indeed, they can scarcely be said to have any; for in spite of the dates at which they were produced they may more fairly be classed with the great works of the Eighth Epoch, to which their style very closely assimilates them. We need scarcely refer to his three Motets for treble voices, written for the Convent of the Trinità de' Monti at Rome, as gems of modern art.

All that we have said in a former article on the traditional manner of singing the polyphonic Mass, applies with equal force to the Motet. It will need an equal amount of expression and an equal variety of colouring; and as its position in the service is anterior to the Elevation of the Host a vigorous *forte* will not be out of place, when the sense of the words demands it. It would scarcely be possible to find more profitable studies for the practice of polyphonic singing than the best Motets of the best period. W. S. R.

MOTETT SOCIETY, THE, was established in 1841, its chief promoter being William Dyce, R.A. The object was to print 'A Collection of Ancient Church Music,' adapted to English words, with a compressed score, for the purpose of accompaniment. The subscription was a guinea a year. The musical portion was under the charge of Dr. Rimbault, who acknowledges in his preface that 'the greater part of the Motetts of Palestrina were adapted by Mr. William Dyce.'

The works were published in large folio, and in parts, forming three divisions:—No. 1, Anthems for Festivals; No. 2, Services; No. 3, Miscellaneous Anthems, in all 192 pages of music, and a few more of introductory matter.

DIVISION 1.

Redford. Rejoice in the Lord, 4 voices.
Lupi. Now it is high time, 6 v.
Vittoria. Behold I bring you, 5 v.
Palestrina. If thou shalt confess, 4 v.
Do. Almighty and everliving, 4 v.
Do. O Jerusalem, 4 v.
Do. These things have I, 4 v.
Do. These are they, 4 v.
Do. This shall be, 5 v.
Do. Break forth, 5 v.
F. della Porta. I have appeared, 4 v.
Lasso. Behold I will send, 4 v.
Vittoria. Come unto me, 4 v.
Lasso. And the Angel, 4 v.
Do. If ye keep my, 4 v.
Masera. Blessed is the man, 4 v.
Lasso. For he was a good, 4 v.
Do. The voice of him, 4 v.
Do. He saith unto them, 4 v.
Do. Are ye able to drink, 4 v.
Croce. And they went forth, 4 v.
Do. Charge them that are, 4 v.
Byrd. Bless the Lord ye, 5 v.
Lasso. But watch thou, 4 v.
Croce. Now unto Him, 4 v.
G. M. Nanini. All thy works, 5 v.
Lasso. Miserere, 5 v.
Palestrina. Behold the Lamb of God, 5 v.
Do. How beautiful, 4 v.
Tallis. If ye love me, 4 v.
Palestrina. Holy, Holy, 5 v.

DIVISION 2.

Vittoria. Communion Service, 4 v.
Colonna. Magnif. and N. Dim. 8 v.
Gabrieli. Magnificat, 8 v.
Bareroft. Te Deum and Ben., 4 v.
Stonard. Magnif. and N. Dim., 5 v.
Palestrina. Magnif. and N. Dim., 4 v.
Blow. Sanctus and Gloria, 4 v.

DIVISION 3.

Barcroft. O Almighty God, 4 v.
O. Gibbons. Why art thou so heavy, 4 v.
Lasso. O praise the Lord, 5 v.
Do. Not unto us, 5 v.
P. Certon. I will alway give, 3 v.
Byrd. Prevent us, O Lord, 4 v.
Tallis. Hear the voice, 4 v.
Palestrina. O God, Thou art, 4 v.
Tallis. All people that on earth, 4 v.
Farrant. Unto Thee, O Lord, 4 v.
Palestrina. I will magnify Thee, 5 v.
F. della Porta. Be merciful, 4 v.
Do. Righteous art Thou, 4 v.
Palestrina. O Lord my God, 4 v.
O. Gibbons. O Lord, increase, 4 v.
Vittoria. I will give thanks, 4 v.
Do. It is a good thing, 4 v.
Do. Teach me, O Lord, 4 v.
Do. How long wilt Thou, 4 v.
Do. My God, my God, 4 v.
Do. Unto Thee, O God, 4 v.
Do. Behold, now praise, 4 v.
Palestrina. O Lord God of our salvation, 5 v.
Tallis. Great and marvellous, 5 v.
Lasso. Hear my prayer, 4 v.
Byrd. Save me, O God, 4 v.
Tye. From the depth, 4 v.
Lasso. I will love thee, 4 v.
Vittoria. Save me, O God, 4 v.
Mel. O praise the Lord, 4 v.
Tallis. Blessed are those, 5 v.
Shepherd. Haste thee, O God, 4 v.
Croce. Behold now, praise, 4 v.
Do. O praise the Lord, 4 v.
Do. O give thanks, 4 v.
Do. Teach me Thy way, 4 v.
Do. Give ear, Lord, 4 v.
Do. Behold, I bring you, 4 v.
Lasso. Save me, O God, 4 v.
Vittoria. O God, wherefore, 4 v.
Hooper. Teach me Thy way, 4 v.

W. C.

MOTETUS. A name given, in the infancy of polyphonic music, to a middle part written for the voice, which was afterwards called *Medius* or *Altus*. The term was constantly used in this sense in the 13th and 14th centuries, and probably still earlier. W. S. R.

MOTIF (Germ. *Motiv*), a word which is in process of naturalisation into English, and which has no less than three distinct meanings, according to which it will be found under separate heads: first, the German word originally means what we call FIGURE, that is, a short group of notes, 'which produces a single, complete, and distinct impression'; second, it is used as a synonym for SUBJECT; third, as equivalent to, and an abbreviation of, LEIT-MOTIV, which has been fully treated. M.

MOTION is change of pitch in successive sounds, when they are allotted to a single part or voice, or to groups of parts or voices which sound simultaneously. The motions of a single part are classified according as the successive steps do or do not exceed the limits of a degree of the scale at a time, the former being called 'disjunct,' and the latter 'conjunct' motion. The following examples illustrate the two forms:—

The independent motions of different parts sounding together constitute counterpoint, and are classified according to their relations, as 'contrary,' 'similar,' and 'oblique,' motions. In the first the parts either distinctly converge or diverge, one rising when the other falls. In the second the parts either rise or fall together, though not necessarily at equal distances. The third refers to one part only, which moves up or down while another stands still.

Further explanations and examples will be found under the respective headings. C. H. H. P.

MOTTL, FELIX, a celebrated and highly gifted conductor, was born at Unter-St. Veit near Vienna, August 29, 1856. As a boy he possessed a fine soprano voice, and obtained admission to the Löwenburgische Convict, the preparatory school of the Imperial Court Chapel. Later on he entered the Vienna Conservatorium, where Josef Hellmesberger soon recognised the eminent gifts of young Mottl, who in due course obtained all the prizes the college could award. The Academical Richard Wagner Verein of Vienna elected him to the post of conductor of the society's concerts, and it was there that his eminent ability as a *chef d'orchestre* attracted general notice. In 1876 Mottl took part in the Bayreuth Festival performances of Wagner's 'Ring of the Nibelung' as stage conductor, and he became one of the most active members of the so-called 'Nibelungen-kanzlei.' Upon the recommendation of Dessoff he obtained in 1881 the post of conductor at the Grand Ducal Opera House at Carlsruhe, which post he held until 1903. Mottl's energetic activity raised the performances at this opera-house to a place amongst the finest to be heard in Germany. A sworn enemy of all routine work, he produced at Carlsruhe many important stage works of modern times, including the complete cycle of operas by Berlioz, and all the musical dramas of Richard Wagner. Mottl has also obtained brilliant successes as a conductor of concerts; he was director of the Philharmonic Society of Carlsruhe until 1892, and was in 1886 appointed by the Bayreuth authorities to conduct the festival performances of 'Tristan und Isolde,' a task which he accomplished to perfection. [He went to New York to conduct the performance of 'Parsifal' given there in 1903-4]. He has composed three operas, 'Agnes Bernauer' (successfully produced at Weimar in 1880), 'Ramin' and 'Fürst und Sänger,' a 'Festspiel' 'Eberstein' (produced at Carlsruhe in 1881), a string quartet, a song-cycle 'Pan im Busch,'

besides a considerable number of songs for one voice and pianoforte accompaniment. He has edited various works of Berlioz, and the 'Barbier von Bagdad' of Cornelius; he has orchestrated Liszt's pianoforte solo, 'St. Francis of Assisi preaching to the birds.' It was played at the Richter Concert of June 4, 1888. [He conducted a Wagner Concert in the Queen's Hall on April 17, 1894, and appeared often in London subsequently, at many series of similar concerts. In June 1898 he conducted the Nibelungen trilogy at Covent Garden. In 1904 he was made a director of the Berlin Royal Academy of Music.] C. A.

MOUNSEY. The name of two English lady organists and musicians. The elder of the two, Ann Sheppard, was born in London, April 17, 1811, and studied under Logier. She is alluded to by Spohr in his account of his visit to Logier's academy in 1820.[1] In 1828 she was elected organist to a church at Clapton; in 1829 to St. Michael's, Wood Street, E.C., and on Nov. 22, 1837 to St. Vedast's, Foster Lane. In 1834 Miss Mounsey became an associate of the Philharmonic Society. In 1843 she gave the first of six series of Classical Concerts, at Crosby Hall, London, for one of which Mendelssohn[2] composed 'Hear my Prayer,' for voices and organ first performed Jan. 8, 1845. On April 28, 1853 she married Mr. W. Bartholomew, and in the same year composed the oratorio of 'The Nativity,' which was performed, Jan. 17, 1855, under the direction of John Hullah at St. Martin's Hall. Mrs. Bartholomew was well known in London as a teacher; she published upwards of 100 songs, 40 part-songs, and a large number of works for piano and for organ. She died in London, June 24, 1891.

The second sister, Elizabeth, was born in London, Oct. 8, 1819, and developed considerable musical ability at a very early age. She was appointed organist of St. Peter's, Cornhill, in 1834, when only fourteen years old, a post she resigned in 1882. The organ of St. Peter's, a fine instrument by Hill, was one of those on which Mendelssohn frequently played during his visits to London. (See *ante*, p. 138.) In 1842 Miss Elizabeth Mounsey was elected an associate of the Philharmonic Society. Besides the organ and piano, she at one time devoted much study to the guitar, and in 1833 and 1834 appeared in public as a performer thereon. She published several works for all three instruments. [She died in London, Oct. 3, 1905, having lived in the same house, 58 Brunswick Place, City Road, for eighty-three years. See *Mus. Times*, 1905, p. 718.] G.

MOUNT OF OLIVES. The English name of Beethoven's oratorio, 'Christus am Oelberg.' It was first produced in this country on Feb. 25, 1814, by Sir George Smart, in the Lenten oratorios at Drury Lane; and the English version was probably made by Arnold, at that time manager of the King's Theatre and a prominent person in all theatrical matters. Another version was made by Thos. Oliphant, and a third by Mr. Bartholomew. The strong feeling prevailing in England against the appearance of our Saviour as a personage in the oratorio, which led to the modifications in the versions already mentioned, led to one by Dr. Hudson of Dublin in 1842, in which the story was changed to that of David, and the title to 'Engedi.' [In the present day this compromise is generally given up, but it was adopted as lately as in 1905, at the Bristol Festival.] G.

MOUNTAIN, Henry, a Dublin musician, and violinist of ability, who was also established as a music-seller and publisher in the Irish capital towards the latter end of the 18th century. From before 1785, he was at 20 Whitefriar Street, but about 1790 removed from thence to 44 Grafton Street. He published a large number of engraved single songs from the popular operas of the day, and besides about 1785, issued a small book—'The Gentleman's Catch Book,' which he edited and dedicated to the Hibernian Catch Club.

Joseph Mountain, his son, was equally clever on the violin, and came to Liverpool where he was leader at the Concert Hall, and the theatre. In this town he married Sarah Wilkinson, and came with her to Covent Garden, where he was leader of the orchestra. His wife's Christian name varies in different biographical notices—Sarah, Sophia, and Rosoman, being variously given. She was born about 1768 of parents named Wilkinson, who were circus performers engaged at Sadler's Wells. As a young girl she was handed over to Charles Dibdin who trained her as a singer, and employed her in a little burletta named 'Mount Parnassus' acted at his Royal Circus, where she made some success. Shortly afterwards, in 1782, she appeared at the Haymarket Theatre, and in 1784 went to Hull where she sought an engagement from Tate Wilkinson who at first refused her. She obtained a public hearing at the benefit of one of his actors, and he then gave her a part in 'The Maid of the Mill.' At this time her parents were entirely dependent on her. She rapidly rose as a vocalist, and in 1786 was engaged at Covent Garden Theatre. In 1787 she married Joseph Mountain (see above). Though her reception by the public while at Covent Garden was enthusiastic, yet for some reason the managers kept her considerably in the background, and she left the theatre to go to Dublin. In 1790 she again returned to the Haymarket Theatre, and Vauxhall. At this latter place she was a great acquisition, and her name figures as singer there from 1793 to 1799. She again returned to Covent Garden, but left it in 1798, ultimately singing at the Haymarket and Drury

[1] *Autobiography*, ii. 99 100.
[2] See his letter, in Polko's *Reminiscences*, p. 220. The autograph is now in the South Kensington Museum.

Lane. In 1802, having had a monologue entertainment written for her, she went on tour, and finally retired from the stage on May 4, 1815. She died at Hammersmith, July 3, 1841. In person she was small, but in her best period very attractive. F. K.

MOUNTAIN SYLPH, THE. A romantic ballet opera in two acts; words by J. T. Thackeray, music by John Barnett. Produced at the English Opera House (Lyceum), August 25, 1834. G.

MOUNT-EDGCUMBE, RICHARD EDGCUMBE, second Earl of, born Sept. 13, 1764, an amateur musician and composer, whose Italian opera 'Zenobia' was performed at the King's Theatre in 1800 for the benefit of Banti. He is best known as author of *Musical Reminiscences, containing an Account of the Italian Opera in England from 1773*, London, 1825; an amusing, gossiping book, containing much useful information. Two other editions, with a continuation, appeared, and in 1834 a fourth, including the Musical Festival in Westminster Abbey in that year. He died Sept. 26, 1839. W. H. H.

MOUNTIER, who is called by Burney 'the Chichester boy,' was probably of French origin, and educated musically in the choir of Chichester Cathedral. He made his first appearance 'in Character on any stage' as Acis, to the Galatea of Miss Arne (afterwards Mrs. Cibber), May 17, 1732, at the Haymarket Theatre,—the performance got up by the elder Arne. Mountier sang, in the same year, the part of Neptune (though advertised for that of Phœbus, which was given afterwards to Barret) in Lediard's 'Britannia, an English Opera,' with music by Lampe, 'after the Italian manner,' a work not mentioned by the biographers of that composer. It may be, therefore, interesting to record that the caste included Cecilia Young (Britannia), afterwards Mrs. Arne, Susanna Mason (Publick Virtue), Comano, or Commano (Discord), a basso who had sung the year before on the Italian stage, Waltz (Honour), the well-known singer who, from being 'Handel's cook,' became afterwards the performer of many of that master's principal bass parts in opera and oratorio,—and other performers. In the following year we find Mountier promoted to the Italian stage, and singing the part of Adelberto in Handel's 'Ottone' (revived), after which his name does not appear again in the bills. J. M.

MOURET, JEAN JOSEPH, born at Avignon, April 16, 1682, was in the service of the Duchess of Maine at Paris from about 1707, and composed his first ballets in 1714; his first opera, 'Ariane,' in five acts and a prologue, was produced April 6, 1717, 'Les Amours des Dieux,' an 'opéra-ballet' in four scenes and a prologue, came out in 1727, and 'Les Triomphes des Sens' in 1732. The names and dates of other operas and ballets will be found in the *Quellen-Lexikon*. Mouret was appointed musical director of the Concerts Spirituels in 1728, and held the post till the concerts were taken over by the Académie Royale in 1734. For this institution he wrote a book of motets, published in 1742; and for the Comédie Italienne, of which he was for some time the conductor, a piece called 'Arlequin Pluton.' He died at Charenton, Dec. 22, 1738. M.

MOUSQUETAIRES DE LA REINE, LES. An opéra-comique in three acts; words by St. Georges, music by Halévy. Produced at the Opéra-Comique, Feb. 3, 1846. G.

MOUSSORGSKY, MODESTE PETROVICH, born March 16/28, 1835, at his father's country-house at Karevo, in the Government of Pskov. His childhood was spent among rural surroundings. Both his parents were musical, and his mother taught him the piano from a very early age. Before he was nine he played several of Liszt's compositions and a pianoforte concerto of Field's. While at the 'Ensigns' School' in St. Petersburg he continued to take lessons from the pianist Herke (Gerke). On leaving this institution he was gazetted to the famous 'Preobrajensky' regiment, accounted one of the smartest in the service. Gifted with a pleasant baritone voice, and a facility for improvising, his attitude towards music remained purely that of an amateur until 1857, when he became acquainted with Dargomijsky, and was thus brought in contact with all the members of the New Russian School. He now began to study the works of Beethoven, Glinka, and Schumann, and generally to enlarge his musical outlook. Balakirev soon recognised the dramatic tendency in Moussorgsky, and set him to compose music to 'Œdipus,' of which an excellent translation had just appeared in Russian. He was also occupied with a project to compose an opera on the subject of Victor Hugo's 'Han d'Islande,' but got no further than the libretto.

As he became increasingly absorbed in music, Moussorgsky found his military duties more and more irksome. Cui, Rimsky-Korsakov, and Borodin had accepted the necessity of a dual profession, and Stassov—who entertained the highest opinion of Moussorgsky's talents—counselled prudence, and tried to persuade him that military duties need not prove fatal to their development. But Moussorgsky had immense faith in his powers, and even the persuasions of his mother could not prevent him from sending in his papers. At twenty-two he began the long struggle with poverty which lasted—with scarcely a bright interval—to the end of his life. Far from being able to devote himself exclusively to his art, he was compelled to accept a subordinate post in a government office, in order to live. This uncongenial work proved a constant hindrance to his artistic projects. Highly strung, morbidly sensitive, and impatient of all checks to his ambition, Moussorgsky was frequently tempted to forget his troubles in an excitable and irregular mode of life which proved

injurious to his health. After the death of his mother, matters grew worse, and in 1866, after a serious breakdown, he consented to live for a time in the house of his married brother at Minkino, and then recovered sufficiently to do some of his best work. In 1868, having exhausted the patience of his Department, he returned to Petersburg with the score of his national music drama 'Boris Godounov.' The operatic direction requested Moussorgsky to shorten the work and give more opportunity to the soloists. In this revised form the work was first performed at the Maryinsky Theatre, St. Petersburg, Jan. 24 (Feb. 6), 1874. In spite of much acrimonious criticism it must have interested the public, since it was given twenty times in the course of the season. It was performed in Moscow in 1889. In 1896 a new edition was issued, the instrumentation revised by Rimsky-Korsakov. Although it has been allowed to drop out of the repertory of the State theatres, 'Boris Godounov' has been revived with success by private companies and on benefit nights. After 'Boris Godounov' Moussorgsky turned his attention to the dramatic story of the Princes Khovanstchin, suggested to him by Stassov in 1872.

From 1870 to 1881 Moussorgsky continued to live and work in St. Petersburg. At first he shared rooms with Rimsky-Korsakov, but when the latter married, he found himself once more upon his own resources. The pinch of poverty grew intolerable, and his health was more and more undermined. A tour in South Russia with the gifted singer Mlle. Leonov gave promise of comparative prosperity. But it came too late. During the last years of his life Moussorgsky frequently had recourse to drugs and stimulants, in which he sought relief from constant nervous depression. It is sufficient to look at Repin's portrait of the composer painted shortly before his death, and compare it with Borodin's account of the smart young guardsman, and we shall need no further biographical commentary. In this slovenly, broken-down, but not unlovable personality we may find traces of the Moussorgsky of earlier days, at once the most imaginative and realistic of musicians; something, too, still lingers of Moussorgsky the humorist, the composer of such satires upon his contemporaries as 'The Gallery' and 'The Lay of the Classicist'; still more of Moussorgsky the child-lover who had such tender insight into the children's world; but the most haunting impression of the portrait is that of the pitiful, tragic Moussorgsky, dying in the prime of life, his fine genius already dimmed and deteriorated, destined never to know the invigorating joy of recognition and success. He died in the Military Hospital of St. Nicholas, in St. Petersburg, on his forty-second birthday, March 16/28, 1881.

Moussorgsky is the closest follower of Dargomijsky. He is not less national in sympathy than the direct disciples of Glinka; but whereas their tendencies are lyrical and ideal, those of Moussorgsky are emphatically disposed to realism. In this respect, and also because he was pre-eminently a vocal rather than a symphonic composer, his musical temperament accords with that of Dargomijsky. His dominant idea was to bring music into closer relationship with actual life. In a letter to Vladimir Stassov he reveals his artistic intentions: 'To seek assiduously the most delicate and subtle features of human nature—of the human crowd—to follow them into unknown regions, to make them our own: this seems to me the true vocation of the artist . . . to feed upon humanity as a healthy diet which has been neglected—there lies the whole problem of art.' This view, legitimate in its first expression, led the composer insensibly to an attitude of complete negation. Of all the Russians he is the only one to whom the epithet 'musical Nihilist' can be applied with any show of justice. Seeing nature in everything and making the exact copying of nature the first duty of the artist, Moussorgsky came to reject the formula of 'art for art's sake' as meaningless. To attempt in a work of art the union of beauty with the material object, seemed to him a puerility belonging to the childhood of art.

In order to understand Moussorgsky's work and his attitude towards art, it is necessary to realise the social conditions under which he lived. He was a true child of the sixties, of that period of moral and intellectual ferment which followed the accession of Alexander II. and the emancipation of the serfs. Of the little group of composers then striving to give musical expression to their newly awakened nationality, none was so entirely carried away by the literary and political movements of the time as Moussorgsky. Every man was asking himself and his comrades the question posed by the most popular novel of the day: 'What shall we do?' The answer was: 'Throw aside social and artistic conventions. Make art the handmaiden of humanity. Seek not for beauty but for truth. Go to the people. Hold out the hand of fellowship to the liberated masses and learn from them the true purpose of life.' To this democratic and utilitarian spirit, to this deep compassion for the people, to this contempt for the dandyism and dilettantism of an earlier generation, Moussorgsky strove to give expression in his music, as Perov expressed it in painting, as Tchernichevsky, Dostoievsky, and Tolstoi expressed it in fiction. We may disagree with his æsthetic principles, but we must confess that he carried out with logical sequence and conviction a considerable portion of his programme. In his sincere efforts to attain great ends he undoubtedly overlooked the means. He could never submit to the discipline of a thorough musical training as did Tchaikovsky

and Rimsky-Korsakov. He preserved his originality intact, but at a heavy cost. The weakness of his technique has been exaggerated by those who put down all his peculiarities to ignorance; but in some respects—particularly as regards orchestration—his craftsmanship was certainly unequal to the demands of his inspiration, for his aims were very lofty. Had this been otherwise Moussorgsky's name would have been more closely linked with those of Berlioz and Richard Strauss.

His songs are the finest expression of his artistic intentions. The ordinary themes of lyric verse had no attraction for Moussorgsky. Conventional subjects were failures in his hands. His songs are a series of 'human documents' in which the psychology of the Russian people is faithfully reflected. The whole army of the 'humiliated and offended' supplied him with subjects. He has re-created these types of rural life with extraordinary fidelity to nature. He had also a vein of sardonic humour, and his musical satires upon the critics, priests, and minor officials of his day are unique in their clever mimicry and mordant sarcasm. He is the Juvenal of musicians. In the series of songs entitled 'The Nursery' he has done for the children what he had already done for the peasantry: caught and fixed a whole series of child-types with all their moods, engaging, petulant, capricious, and whimsical. The song-cycles 'No Sunlight' and 'Songs and Dances of Death' were composed during his last years of suffering, and are indeed the cries of one 'who departeth in darkness.' Had the realistic schools of painting and fiction never come into being, we might still reconstruct from Moussorgsky's songs the whole psychology of Russian life.

The national music-drama, 'Boris Godounov,' was written when Moussorgsky was at the zenith of his power, and is the chief foundation on which rests his reputation as an operatic composer. The libretto is based upon Poushkin's famous historical drama which bears the same title, some scenes being kept intact as regards the original text. It is full of stirring dramatic interest, for it deals with one of the most sensational episodes of Russian history. The heir of Ivan the Terrible was of weak intellect, consequently the real power passed into the hands of the regent, the capable and crafty Boris Godounov. The only obstacle between the usurper and the crown was the Tsar's younger brother Dmitri. Boris Godounov did away with him, and ruled wisely and well for many years. Then Nemesis came in the person of the False Dmitri, a young monk who declared himself to be the heir, rescued at the eleventh hour, and concealed in a monastery. The remorse, agitation, and madness of Boris are finely depicted by Poushkin, who obviously had Macbeth in his mind when creating this character. In 'Boris Godounov' Moussorgsky discards the conventional divisions and ensemble pieces of Italian opera; while the chief interest is centred in the chorus and dialogue. The period is about 1600, and the scene is laid partly in the Kremlin, partly on the borders of Poland. The action of Moussorgsky's second music drama 'Khovanstchina' takes place in the time of Peter the Great, when all Russia was divided between the Old order and the New. It would be impossible to point to anything in Russian music more intensely and touchingly national than the prelude to this work. The orchestral introduction is built upon national airs. The scene represents dawn on the river Moskva. The bells are ringing for matins, and as the sun rises, the gathering light reveals the Holy of Holies to all Russian hearts—the Red Square in Moscow. The noisy jingoism of Tchaikovsky's Overture '1812' loses its thrill in comparison with this poetical evocation from the national life. As in 'Boris Godounov,' so also in 'Khovanstchina,' religious music is introduced. In the latter work the 'Rasskolniki' or 'Old Believers' play a prominent part, and Moussorgsky has made their music distinctly archaic in character, as it should be. Martha, the loyal, passionate, fanatical Rasskolnik, is one of Moussorgsky's finest achievements in musical portraiture. Before his death the composer entrusted the instrumentation of 'Khovanstchina' to Rimsky-Korsakov.

Besides these completed operatic works Moussorgsky in 1868 made an experiment in what he described as 'opéra dialogué.' He attempted to set to music, just as it stood, the prose text of Gogol's comedy 'The Matchmaker.' He abandoned the idea after completing the first act. Another unfinished opera was based upon Flaubert's 'Salammbô.' Fragments of this music were afterwards incorporated in other works. A third operatic subject which he took up for a time was Gogol's tale 'The Fair at Sorochinsk.'

The following is probably a complete list of Moussorgky's compositions:—

VOCAL MUSIC

OPERATIC

'The Matchmaker,' opéra dialogué (one act only); 'Boris Godounov,' national music drama in four acts with a prologue (completed 1870, first performed at the Maryinsky Theatre, St. Petersburg in 1874); 'Khovanstchina' national music drama in five acts (1872-1880); fragments of an opera based upon Gogol's tale 'The Fair at Sorochinsk.'

CHORUS AND ORCHESTRA

'The Destruction of Sennacherib' (1867); 'Joshua Navin' (1877. Both these works based on original Hebrew themes); female chorus from 'Salammbô': mixed chorus from 'Œdipus.'

SONGS

'Saul' (1863); 'Night,' 'Peasant Cradle Song,' 'Savishna' (The idiot's song, 1865); 'Gopak,' 'The Wish,' 'The Seminarist' (1866); 'Mushrooming,' 'Hebrew Song,' 'The little Feast,' 'The Goat,' 'The Magpie' (?), 'The Swaggerer,' 'The Classicist' (1867); 'The Orphan,' 'The Nurse and Child,' 'The Gallery' (musical pamphlet, 1870); 'The Nursery' (seven pictures of child-life 1868-70); 'Left Behind'; 'No Sunlight' (a cycle of six songs, 1874-75); 'Dances of Death' (four songs, 1875). Published posthumously: 'The quiet Heights'; 'O, the Honour!' 'Dawn'; 'The Vision,' 'Down the Don,' 'The Dneiper,' 'The Flea,' 'Callistratus,' 'The Traveller.'

ORCHESTRAL

Intermezzo in modo classico (B minor), Scherzo in B; Turkish March; fantasia 'Night in the bare Mountain.'

t

PIANOFORTE

Pictures from an Exhibition (ten musical sketches, subjects taken from pictures by the celebrated Russian architect Hartmann); Méditation; Une Larme; 'The Sempstress'; 'On the Southern Shores of Crimea'; 'In the country'; 'A Child's Joke': Intermezzo. R. N.

MOUTHPIECE (Fr. *Bec, Bocal, Embouchure*; Ger. *Mundstück*). That portion of a wind instrument which, as the name implies, is inserted into the player's mouth or applied to his lips. [Of the French words, Bec (beak) is applied to the first variety, and Embouchure to the second or the mouthpieces of brass instruments. As an Anglicised word the name embouchure is also applied to the mouth-hole in the head-joint of the transverse flute, which is never spoken of as the mouthpiece, although for purposes of comparison it is convenient to refer to it under this heading. (For Bocal see CROOK.) Including, therefore, the orifice for sound production in the transverse flute, mouthpieces may be classed into four groups, viz.

1. The open end of a tube, across which a stream of air is blown, as when a note is produced from a Pandean pipe, or from the pipe of a common key. This is the simplest of all forms, and possibly the most ancient; it is the form adopted in the Nay or Egyptian flute. (See FLUTE.) In the ordinary modern or transverse flute, the open end across which the stream of air is directed is obtained by means of a lateral orifice.

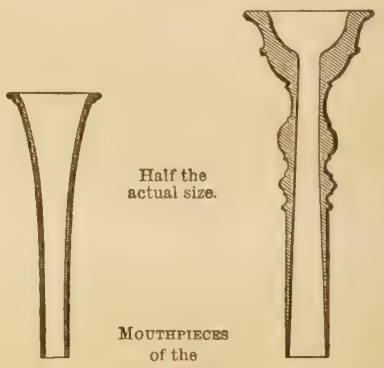
2. A tubular conduit inserted between the lips by which air is conveyed under pressure to a whistle as in the flageolet; or to enclosed reeds, either directly as in the cromorne, or indirectly through a wind-bag as in the bag-pipe. The beaked mouthpiece of the recorder is merely a modified form of this tubular conduit, but by its name marks the distinction between the Flute-à-bec and the transverse flute.

3. A beak-shaped chamber forming the upper end of single-reed instruments of the clarinet and saxophone types. One side is flattened to form a bed or table for the reed, and communication is opened with the general tube of the instrument by a slot cut in this table.

This variety of mouthpiece can be applied, although rather ineffectively, to the Bassoon and its diminutives. The Dolcino or small bassoon in the B♭ of the four-foot octave, was actually played in military bands by means of a single reed as late as the early years of the last century, and even since then attempts have been made to revive this means of producing tone on the bassoon.]

4. Cupped mouthpieces, which are applied to the outer surface of the lips, not inserted between them. The lips thus stretched across the calibre of the cup form a kind of double reed, closely resembling the Vocal Cords of the Larynx. Each instrument of this class has a somewhat different form of cup, which is described under their respective headings. In the older examples, however, and in those used by uncivilised tribes, the cup consists of a simple hole, at the end of a cow's horn for instance, or in the side of an ivory tusk, communicating with the medullary cavity. The transition from this to the shaped cup can be well seen in the Swiss Alpenhorn, in which a small globular cavity, like the mouthpiece of the Trumpet, is rudely carved out of the wooden strips of which the long tube is built up. In more finished instruments of this class, the mouthpiece is turned out of Brass, Ivory, Aluminium, or Silver, with a rounded cushion-shaped edge for the accurate and painless pressure of the lips. Glass has also been used, and of late the cushion has been made of vulcanised india-rubber.

[In all the mouthpieces comprised in the third and fourth groups, the exact dimensions and proportions exercise a great effect upon the tone-quality. In those of the clarinet type the ruling factor is the exact degree of opening between the reed and the bed of the mouthpiece, this is technically called the 'spring' or 'lay.' In the cupped mouthpieces of brass instruments the variations are even greater and of more importance, for in addition to the general size suitable to the range of compass of each class, the exact form of the cup and rim and the diameter of the bore of each mouthpiece have a marked effect.



HORN and TRUMPET. MOUTHPIECES of the

The cups of the mouthpieces of cornets, bugles, and saxhorns are intermediate in character between those of the horn and trumpet.

Double-reeds, as used on the Oboe and Bassoon are mouthpieces only in the literal sense that they are placed in the mouth; they will be treated under REED.] W. H. S.; with additions in square brackets by D. J. B.

MOUTON, JEAN, French composer, born about the year 1475[1] in the department of the Somme,[2] pupil of Josquin, teacher of Willaert,

[1] Date proposed by Fétis. Mouton's first publication appeared in 1505.

[2] See *Joannis Mouton Sameracensis . . . aliquot moduli*; Paris, Le Roy & Ballard, 1555 (Brit. Mus. A. 132)—an edition apparently unknown abroad, or the word 'Sameracensis' would not have escaped attention. Glarean merely calls Mouton 'Gallus.' Fétis thinks, from the inscription on the tomb, that Hollingue, a little town near Metz, may have been his birthplace. In that case 'Sameracensis' may refer simply to Mouton's residence at S. Quentin.

musician to Louis XII. and Francis I. of France, canon of Therounne,[1] and afterwards, like Josquin, canon of the collegiate church of S. Quentin, in which place he died, and was buried in 1522, the following words being inscribed on his tomb:[2]—

Ce gist maistre Jean de Hollingue dit Mouton, en son vivant chantre du Roy, chanoine de Therouanne et de cet eglise, qui trepassa le penultieme jour d'Octobre MDXXII. Priez Dieu pour son âme.

When Petrucci began to print music, Mouton was in his prime, and the edition of five masses (*a* 4) which Fétis assigned to the year 1508 is an early example of a whole book devoted to one composer. This book, which Glarean[3] found 'in manibus omnium,' is now scarce, and Fétis thinks the copy of the second edition[4] in the British Museum the only complete one. Burney carefully examined the fourth mass,[5] and scored several movements, discovering no variety of measure or subject, no melody, no ingenuity of contrivance, no learning of modulation. Yet the masses were highly valued in their day, reprinted by other publishers[6] and much admired, according to Glarean and Le Roy,[7] by Pope Leo X., Giov. di Medici.[8] As for motets, Mouton saw twenty-one printed in the best collection of his time, Petrucci's Motetti de la Corona.[9] Posthumous publications continued for nearly forty years, and the list of known printed works includes nine masses,[10] about seventy-five motets and psalms, and a few French chansons. [See *Quellen-Lexikon.*]

The British Museum has a single voice-part (superius) of Mouton's twenty-two motets[11] printed by Le Roy in 1555, and happily a complete MS. score of the same collection. This gives many interesting pieces, the 'Nesciens Mater' (*a* 8) with four of the parts derived canonically from the others, the 'Quis dabit oculis' composed in 1514 on the death of Anne of Bretagne, Queen of France, some Easter pieces, 'Alleluia,' and 'In illo tempore,' and one for Christmas, 'Noe, noe, psallite,' on which Arcadelt afterwards wrote a mass.

Burney has scored, besides the mass movements, three motets,[12] and in this style of composition finds Mouton more smooth and polished than his contemporaries. 'Life in a court' can scarcely account for it. Most great musicians of the time had the same surroundings. Glarean, more reasonably, attributes to zeal and industry the rare facility which separated Mouton from his fellows. The numerous examples drawn from his works for the 'Dodecachordon,' and the evident pride with which Glarean[13] recalls the meeting in Paris, are evidence of the high value set upon the French composer. Had Mouton left no compositions of his own, he would still be remembered as belonging to a remarkable line of great teachers, Okeghem. Josquin, Mouton, Willaert, Zarlino. J. R. S.-B.

MOVEMENT. A definite and complete item in a musical composition, sometimes forming part of a large work, and sometimes single and independent. So called because each portion as a rule maintains the same rate of 'movement.' A 'number' in an opera or oratorio will often contain several movements. M.

MOZART, LEOPOLD, father of the great composer, and son of Johann Georg, a bookbinder, of Augsburg, was born Nov. 14, 1719. Intelligent, sagacious, and persevering, he determined to push his way beyond the narrow circle of his parental home. From the first he was addicted to music; on leaving school he went for two years (1737-39) to the University of Salzburg, after which he devoted himself to the study of music as a profession, and having become an excellent violinist, was appointed Hofmusikus by Archbishop Leopold (Firmian) in 1743, afterwards Hofcompositor, and in 1762 vice-Capellmeister by Archbishop Sigismund (Schrattenbach). On Nov. 21, 1747, he married Anna Maria Pertlin (or Bertlin) daughter of an official of St. Gilgen. They were described as the handsomest couple in Salzburg. Of seven children, only two survived—a daughter, Maria Anna, born July 30, 1751, and a son, the immortal Wolfgang. His travels with his children are detailed on pages 285-289. He discerned at once their immense gifts, and, with pious trust in Providence, devoted his whole energies to their education in music. He died at Salzburg, May 28, 1787, bearing to the grave the honourable distinction of having trained one of the greatest musicians the world ever saw. He composed much—oratorios, dramatic music, including the operas 'Semiramis' and 'Die verstellte Gärtnerin'; but especially church and instrumental works, several of which were circulated either in print or MS. [See the *Quellen-Lexikon.*] He engraved six of his own

[1] Whence he removed, probably, when the English took the town in 1513.

[2] See *Etudes St. Quentinoises* (St. Quentin 1851-62 etc.) tom. i. p. 302.) Ch. Gomart, the author, took the inscription from a *MS. of Quentin Delafons*, but does not state where it is to be found. It is the only authority for the date of Mouton's death, and for his two church preferments.

[3] 'Δωδεκαχορδον' (Basileae, 1548), p. 464.

[4] 'Missae J. Mouton' (Fossombrone, Petrutius, Aug. 11, 1515), containing 'Missa sine nomine,' 'Alleluia,' 'Alma Redemptoris,' another 'Sine nomine,' 'Regina mearum' (Brit. Mus. K. 1, d 7).

[5] For Burney's examples from Mouton, and critical notes, see 'Musical Extracts' (vol. ii. pp. 104, 134, 137, 169) in Brit. Mus. (Add. MS. 11,582). Most of the notes are incorporated in his *History* (vol. ii. p. 533).

[6] The 'Alma redemptoris' was reprinted, and a new one, 'dittes moy toutes vos pensées,' added in Antiquis' famous 'Liber quindecim Missarum' (Rom. 1516).

[7] See preface to work quoted in note 2 of previous page.

[8] 'A passionate lover of music . . . the sounds of which were daily heard floating through the palace, Leo himself humming the airs that were performed.' (Ranke's *History of the Popes.*)

[9] Eight in book i. (1514): ten in book ii. (1519); three in book iii. (1519).

[10] Besides the six mentioned in note 4 of this col. and note 6 above, the 'Missa d'Allemagne,' 'Tua est potentia,' and 'Quem dicunt' were printed. Fétis mentions a MS. 'Missa sans cadence' at Cambrai. Zarlino speaks of a Mass 'Benedicam Dominum,' *a* 6 (*Istitutioni Harm.* pt. iv. p. 414).

[11] See Note 2 on previous page.

[12] 'Quis dabit oculis,' 'Non nobis Domine,' composed in 1509 at the birth of Renée, daughter of Louis XII. Also 'Quam pulcra es,' which Burney likes so much that he gives the first movement in his *History*. This motet had in its own time been ascribed to Josquin.

[13] Speaking of it continually in the 'Dodecachordon.' See pp. 296, 320, 464. They conversed by means of an interpreter.

sonatas in 1740. His great work, however, was his *Versuch einer gründlichen Violinschule* (Augsburg, 1756), which passed through many editions in various languages, and was for long the only Method for the violin. From this work alone we should judge him to have been a man of culture far above the average, and of solid worth, as indeed he was. Marpurg, Schubart, Zelter, and others, have all mentioned the book in the highest terms. A steel engraving of him from the family portrait in the Mozarteum at Salzburg, is given in vol. i. of Otto Jahn's *Mozart* (2nd ed.). His daughter

MARIA ANNA, whom he early taught the piano,[1] and who shared her brother's successes as a pianist on their joint tours, married, in 1784, Baron von Berchthold zu Sonnenberg, Hofrath of Salzburg, and Warden of St. Gilgen. On his death she returned to Salzburg, and occupied herself with teaching. She became blind in 1820, and died Oct. 29, 1829. C. F. P.

MOZART, CONSTANZE, Wolfgang's wife (*née* Weber), born at Zell in Lower Austria, had a pretty, well-trained voice, and played the piano in a pleasing manner. Mozart dedicated to her, always in affectionate terms, many of his compositions, but, characteristically, finished none of them. She was a good and loving wife, accommodated herself in everything to her husband's disposition, and restrained him from many heedless actions. He was sincerely attached to her, and she, in return, lavished upon him every care and attention. After Mozart's death she and her two children had a hard struggle for existence, but her necessities were in some measure relieved by the success of concerts which she gave in Vienna, Prague, Berlin, and other cities. In Berlin, the King granted her the use of the Opera-house, and the services of his own band, for a concert, at which she sang. In 1799 she sold all her husband's remaining MSS. to André for 1000 ducats (£500). In 1809 she married George N. Nissen, an official in the Danish diplomatic service, whose acquaintance she had made in Vienna in 1797. Henceforth her life was peaceful and uneventful. On Nissen's retirement from office in 1820 they went to live in Salzburg, where he collected the materials for his *Mozart-Biographie*. He died in 1826, and Constanze on March 6, 1842, a few hours after the arrival of the model of Mozart's statue.

Of the two sons of Wolfgang and Constanze Mozart, the elder, KARL, first took to commerce, practising music as a pastime, and afterwards became an employé of the Austrian government at Milan, where he died in 1858. Mendelssohn met him there in 1831, and delighted him by playing the Overtures to 'Don Juan' and the 'Zauberflöte.' The younger,

WOLFGANG AMADEUS, born July 26, 1791, in Vienna, studied the piano and composition with Neukomm, A. Streicher, Albrechtsberger, and Salieri. He made his first appearance in public, being led forward by his mother, at a concert given on April 8, 1805, at the theatre 'an der Wien,' when he played a concerto of his father's, and variations on the minuet in 'Don Juan.' The latter, and a cantata in honour of Haydn's seventy-third birthday, were his own compositions. In 1808 he became music-master to the family of Count Joseph von Bawarowsky, in Galicia. He made repeated professional tours, and in 1814 became Musikdirector at Lemberg, where he founded the Cäcilienverein, in 1826. As a pianist and composer he was held in esteem—his name alone was sufficient to preclude his rising to eminence. He died July 30, 1844, at Carlsbad in Bohemia. C. F. P.

MOZART, WOLFGANG AMADEUS,[2] born at Salzburg, Jan. 27, 1756, even as a child of three showed his love for music in a remarkable manner. He listened eagerly to his sister Marianne's music-lessons, amused himself for hours with picking out thirds, and showed a good memory for the pieces he heard. Encouraged by these indications his father began, almost in play, to teach him little minuets on the harpsichord; but the boy showed such aptitude that the play soon became real work. Marianne's MS. music-book[3] was called into requisition, the father writing down in it pieces of progressive difficulty. The impulse to compose similar pieces for himself was soon roused in the boy; these, which already betray his feeling for beauty both of sound and form, he played to his father, who wrote them down in the book. Before long he was able to enter his own compositions. He even ventured on a concerto, but it was so difficult that no one could play it; he stood his ground, however, maintaining to his father that 'that is just why it is called a concerto; people must practise till they can play it perfectly.' Schachtner the court trumpeter, and a friend of the family, relates many touching instances of his lively and essentially child-like disposition[4]; of his eagerness in learning anything, especially arithmetic; of his warm love for his father ('next after God comes papa' he used to say); of his docility, which was such that even in those days of severity he never was whipped; of his ear, which was so delicate that he could detect and remember to the next day a difference of half a quarter of a tone, and so susceptible that he fainted away at the sound of a trumpet; of his disinclination to ordinary childish amusements, and his earnestness over his music-lessons. His father wrote to him in 1778, 'as a child and

[1] Her lessons first brought out Wolfgang's extraordinary musical gifts.

[2] He was christened in full Joannes Chrysostomus Wolfgangus Theophilus: instead of Theophilus his father wrote Gottlieb—in Latin Amadeus. In his earlier letters Mozart added his confirmation-name Sigismundus. On his first works, and those engraved in Paris in 1764, he signs himself J. G. Wolfgang, afterwards Wolfgang Amade; in private life he was always Wolfgang.

[3] Now in the Mozarteum at Salzburg.

[4] Letter to Mozart's sister, dated Salzburg, 1792; given entire by Jahn, i. 19. The references throughout are to Jahn's 2nd edition.

a boy you were too serious even to be childish: and when sitting at the harpsichord, or doing anything in the shape of music, you would not stand a joke from any one. Indeed, from the precocity of your talent, and the extremely thoughtful expression of your countenance, many people feared you would not live to grow up.' It was not long ago discovered[1] that when a little over 5½, Mozart took part in a comedy, 'Sigismundus Hungariae Rex,' set to music by Eberlin the court organist, and performed in the hall of the University of Salzburg, Sept. 1 and 3, 1761. There were about 150 performers, including young counts, students, and choristers of the chapel.

The father, struck by the rapid progress of his children, determined to travel with them. Their first excursion was in Jan. 1762, to Munich, where the Elector received them kindly, and expressed great admiration; and encouraged by this success the family next went to Vienna, giving a concert at Linz by the way.

The reputation of the little prodigies had preceded them to Vienna, but the reality far exceeded the expectations formed by the court and nobility. The Emperor was especially taken with the 'kleiner Hexenmeister' (little magician), and in joke made him play first with one finger only, and then with the keyboard covered. Wolfgang asked expressly for Wagenseil, the court composer, that he might be sure of having a real connoisseur among his hearers. 'I am playing a concerto of yours,' he said, 'you must turn over for me.' He treated the Empress with all the frankness of an unspoilt child, jumping up into her lap, throwing his arms round her neck and kissing her. Of course the upper classes went wild about the children, and 'all the ladies lost their hearts to the little fellow.' But a change soon came, for Wolfgang took the scarlet fever, and even after his recovery people held aloof from fear of infection. After a short excursion to Pressburg they returned to Salzburg in the beginning of 1763.

The father now considered himself justified in attempting a longer journey, his main aim being Paris. They left Salzburg on June 9, and travelled by Munich, Augsburg, Schwetzingen, Mayence, Frankfort,[2] Coblenz, Aix-la-Chapelle, and Brussels, giving public concerts, or playing at the various courts. Wolfgang played the violin, and also the organ at the various churches.

They arrived in Paris on Nov. 18, and stayed five months. The children played before the court at Versailles, gave two concerts, and excited the greatest enthusiasm. Grimm, the cultivated man of letters, took them up warmly, and was of great use in procuring them introductions, and rendering services of various kinds. To show Wolfgang's talent in composition, the father had four sonatas for pianoforte and violin engraved, two (6, 7)[3] being dedicated to the Princess Victoire, the King's second daughter, and two (8, 9) to the witty Comtesse de Tessé. The whole family was painted by Carmontelle, and the picture is now in the possession of Lord Revelstoke (see p. 311*a*).

They left Paris, April 10, 1764, and went by Calais to London, where they took lodgings in Cecil Court, St. Martin's Lane.[4] Here also they met with a gracious reception at court, and the children, especially Wolfgang, made an extraordinary impression. The King put before the 'invincible' Wolfgang pieces by Bach, Abel, Wagenseil, and Handel, which he played at sight, and also made him play on his organ, to the still greater admiration of everybody. He then accompanied the Queen in a song, and a flute-player in his solo, and improvised a charming melody to the bass-part of one of Handel's airs. He became very intimate with the Queen's music-master, J. Christian Bach, and with the singers Tenducci and Manzuoli, the latter of whom gave him singing-lessons of his own accord. He also made the acquaintance of the Hon. Daines Barrington, a man of very versatile attainments, who after putting him to the severest tests, wrote a paper for the Royal Society, in which he detailed the facts and his own admiration and astonishment.[5] After a second performance at court, the children gave their first concert on Tuesday, June 5, at the Great Room in Spring Gardens. In the advertisement the father called his children 'prodigies of nature,' and directed special attention to Wolfgang; 'his father had brought him to England, not doubting but that he will meet with success in a kingdom where his countryman Handel, the late famous virtuoso, received during his lifetime such particular protection.' Town was very full for the King's birthday (June 4), and the receipts were as much as 100 guineas; moreover, many of the professors engaged declined receiving any remuneration for their services. The sensation was immense; even the father was astonished, and wrote home describing their progress. 'To play the British patriot' he next allowed Wolfgang to play the harpsichord and organ at a concert at Ranelagh on June 29, 'for the benefit of a useful public charity.'[6] After this the family went to Tunbridge Wells, then at the height of its fashion, returning at the end of July; shortly after the father took cold in returning from a concert at Lord Thanet's, and had a severe illness. During his convalescence

[6] Probably the Lying-in Hospital (Surrey), the foundation-stone of which was laid in 1765.

they went to Chelsea, then a detached village, and lived at the house of a Dr. Randal in Fivefields (now Lower Ebury Street). Not being able to play any instrument, on his father's account, Wolfgang composed his first Symphony (15), followed by three others in 1765 (17-19). On their return to town they lodged at Williamson's, No. 15 Thrift Street (now Frith Street, Soho); and on October 29 were again invited to court. In acknowledgment of so much gracious kindness, the father had six of Wolfgang's sonatas for harpsichord and violin (10-15) engraved at his own cost, and dedicated to the Queen, who sent him 50 guineas. The last two concerts, in which 'all the overtures were of the little boy's own composition,' took place respectively on Feb. 12, 1765, at the Little Theatre, Haymarket, and May 13, in Hickford's Great Room, Brewer Street, the latter at reduced prices, as the charm of novelty had worn off. Here the children played a piece of Wolfgang's for four hands on the same harpsichord, a thing then quite new. The instrument was one with two manuals and pedals, as well as a Venetian swell, made by Burkhard Shudi for the King of Prussia.[1]

From this time the father put forth repeated invitations to the public to hear and test the youthful prodigies in private, 'every day from 12 to 3, admittance 2/6 each person,' first at their lodgings, and afterwards at the Swan and Hoop Tavern, Cornhill. Playing with the keyboard covered is mentioned as a special attraction. Visitors, however, became constantly fewer, in spite of the increasing urgency with which they were invited (the *Advertiser* of July 11 contains the last advertisement), and some popular disturbances, together with the appearance of the first symptoms of George the Third's malady, made the elder Mozart determine to leave the country. The family, however, first visited the British Museum (opened Jan. 15, 1759), to which the father presented all Wolfgang's printed compositions, and a copy of the engraving from Carmontelle's picture. In memory of his visit Wolfgang composed, by request, a four-part motet,[2] his only vocal piece to English words, and presented the autograph to the Museum, receiving a note of thanks from the secretary, Mr. Maty (July 19, 1765). They started July 24, stopped at Canterbury, and at Bourne with Horace Mann, and on August 1 left England for the Hague in consequence of an invitation to the court of Holland.[3]

They were detained a month at Lille by Wolfgang's falling ill, but on their arrival at the Hague in September were most graciously received by the Prince of Orange and his sister Princess Caroline of Nassau-Weilburg. First, however, the little girl fell ill, and then Wolfgang took a violent fever which lasted many weeks. It was not till Jan. 1766 that he was able to give two concerts at Amsterdam, at which all the instrumental music was his own composition, including a symphony (22). In March they were again at the Hague for the fêtes on the installation of the Prince of Orange as Stadtholder, for which Wolfgang composed harpsichord variations on an allegretto, and on the old Volkslied 'Willem van Nassau' (24, 25), which were immediately printed. He also composed for the Festival a kind of concerto grosso which he called 'Galimathias musicum' (32); it concludes with a fugue on the Volkslied. Six sonatas for PF. and violin (26-31), dedicated to the Princess, were also engraved. At Ghent and Haarlem he played the organ in public.

They next travelled by Mechlin to Paris, where they arrived on May 10. The children played repeatedly at court, and their improvement was appreciated, but here, too, there was a falling off in interest. On July 9 they left Paris, and passing through Lyons to Switzerland, spent many pleasant days at Lausanne, Berne, Zurich, and Schaffhausen. They were fêted everywhere, but most of all at Zurich by the poet Gessner, from whom they parted with great regret. It was found not long ago[4] that the father took his children over from Geneva to Ferney, having a letter of introduction from Damilaville of Paris. But Voltaire had been in bed for six weeks, and Mme. Denis, Rameau's pupil, was ill too; 'Comment pourrais-je recevoir votre jeune joueur de clavecin? Ah! nous sommes bien loin de donner des fêtes!' he wrote to his friend in Paris; and so this strange encounter between Leopold Mozart the sincere believer, and Voltaire, did not take place. That the former should have desired it is a proof of his readiness to sacrifice even his scruples to the interests of his children.[5] At Donaueschingen they spent twelve pleasant days with the Prince of Fürstenberg, who had music nearly every evening, and after remunerating them very handsomely, took leave of them with tears in his eyes. At Biberach Count Fugger of Babenhausen made Wolfgang compete on the organ with Sixtus Bachmann, a gifted boy two years older than himself; neither was able to obtain a decided advantage over the other. Passing through Munich, where the Elector was much pleased with Wolfgang's progress, they arrived in Salzburg in November 1766.

The father's first care was to carry on Wolfgang's interrupted studies; and as a solid foundation took him through Fux's *Gradus ad Parnassum*. The Archbishop, not believing in

[1] See A. J. Hipkins's *History of the Pianoforte* (1897). An account of the concert is given in the *Salzburger Zeitung*, August 6, 1765.

[2] 'God is our Refuge and Strength.' For facsimile of the autograph see Pohl's *Mozart in London*, [and the piece, edited by Dr. W. H. Cummings, was reprinted in *Musical News*, Jan. 27, 1906.]

[5] The above interesting fact throws light on the passage on Voltaire's death in Mozart's Letters (Paris, July 3, 1778).

THE MOZART FAMILY

From the painting by Johann Nepomuk de la Croce, preserved in the Mozart Museum, at Salzburg

the boy's powers, gave him the first part of a sacred cantata, 'Die Schuldigkeit des ersten Gebotes'[1] (35), to compose under strict surveillance. Quite within our own time it has been ascertained that this work was performed on March 12, and April 2, 1767, by the students in the University hall.[2] To this period also belong a Passions-cantate or Grabmusik (42), his first PF. concertos (37, 39-41), and a Latin comedy 'Apollo et Hyacinthus,' performed May 13, at the Aula, at which (according to Hammerle) he also played the harpsichord. In the beginning of September the family, attracted by the approaching betrothal of the Archduchess Josepha, went to Vienna; but they came in for a series of misfortunes. The Princess died of small-pox, the upper classes took flight for fear of infection, and the Mozarts also fled to Olmütz, where, however, both children took the disease, and Wolfgang was blind for nine days. Count Podstatzky generously gave them free quarters in the Deanery, and every care was lavished upon them. After their recovery they made a short stay at Brünn, where they were kindly welcomed by Count Schrattenbach, and other nobles.

They arrived in Vienna in January 1768, and were very kindly received at court; but the Empress was living in retirement after the death of her husband, the Emperor set an example of parsimony which was scrupulously followed by the aristocracy, and the general public had no feeling for art. But worse than all was the envy and jealousy shown by their professional brethren. In the midst of these various difficulties and trials the Emperor invited Wolfgang to compose an opera, and conduct it at the harpsichord. Coltellini's 'La finta Semplice' (51) was chosen, but a series of intrigues prevented its being produced. Wolfgang had, however, the satisfaction of producing his little German operetta 'Bastien und Bastienne' (50)[3] in the private theatre of their friends the Messmers.[4] He had also an opportunity of appearing in public as a composer, being commissioned to furnish a mass (49), an offertorium (47), and a trumpet-concerto, for the consecration of the new church at the Waisenhaus. The ceremony took place Dec. 7, and Wolfgang conducted in presence of the Emperor and the court. [The most remarkable composition of this year is a string quintet in B♭ major (46), the last page of which is dated Jan. 25, 1768. It is far more mature in style than any of the preceding symphonies or chamber-works, and it has the special historical interest that in 1780 Mozart rescored it, with three additional movements, as a wind-Serenade (361).]

A great pleasure awaited Wolfgang on his return to Salzburg; the Archbishop had his rejected opera performed in the palace. He also made him his Concertmeister, though without salary. Wolfgang again devoted himself to study, composing two masses (65, 66), and the charming Johannes Offertorium (72) for a priest in the monastery of Seeon. His father now resolved to take him to Italy for further cultivation, and also as a means of making his name known. The father and son left Salzburg in the beginning of December 1769, and travelling by Innsbruck, where Wolfgang was greatly admired at a private concert given by Count Künigl, they visited Roveredo, Verona, Mantua, Milan, Lodi, where Wolfgang composed his first quartet (80), Bologna, Rome, Florence, Naples, and on their return, Bologna, Milan, and Venice. At Roveredo Wolfgang played at Baron Todeschi's, and the day after played the organ in the parish church to an immense crowd. At Verona one of his symphonies was performed, and his playing at sight, and composing and singing an air to given words, caused great astonishment. Pietro Lugiati had a picture taken of him, and poets celebrated his praises. In Mantua, at a concert of the Società Filarmonica, nine out of twelve pieces were by Wolfgang. In Milan, they were lodged in S. Marco, and Count Firmian, the Governor-General, who was a great connoisseur, introduced them to all the principal families. 'It is the same here as everywhere,' writes the father, 'so there is no need to describe it.' The foremost musician in the city, the aged Giambattista Sammartini, subjected Wolfgang to severe tests. After a brilliant soirée at Count Firmian's, for which he composed three airs to words by Metastasio (77-79), he was commissioned to write an opera for the next 'stagione.' At Parma they admired the celebrated singer Agujari. At Bologna they were most hospitably received by Count Pallavicini, who gave a brilliant academy, at which even Padre Martini was present, although he had then given up attending concerts. The father writes that Wolfgang was more admired there than anywhere, and anticipates that from Bologna, the residence of so many artists and scientific musicians, his fame will soon spread over Italy. And he was right; for the recommendation of Padre Martini, the great church composer, and referee in all musical disputes, at once gave him a position in the eyes of the world. After each visit to the Padre, Wolfgang carried away a fugue to work out at home, and in every case acquitted himself to the satisfaction of the great contrapuntist. His acquaintance, too, with the great singer Farinelli was of service to him from an artistic point of view.

In Florence, where they arrived March 30, the Mozarts were graciously received by the Archduke Leopold, who had known them in Vienna. Wolfgang played at court, accom-

[1] [The MS. is at Windsor Castle.]

[2] Hammerle quotes the notice in the University minutes:—'1767, 12 Martii, Jovis: Vacatio (Post prandium). Hora media 7 in Aula Oratorium fuit decantatum a D. Wolfgango Mozart adulescentulo 10 annorum in modulos musicos egregie redactum.'

[3] Translation of a parody on Rousseau's 'Devin du Village.'

[4] A medical man, not the celebrated magnetiser.

panied Nardini the great violinist, and solved, 'as easily as if he were eating a bit of bread,' the hardest problems set him by the Marquis de Ligniville, director of the court-music and a thorough contrapuntist. Wolfgang copied for his own use nine pieces from the Marquis's Stabat Mater with thirty canons, and composed in imitation of it a Kyrie a cinque con diversi canoni (89). Here to his great delight he again met Manzuoli, who had taught him to sing in London. He also struck up a great friendship with Thomas Linley, the young composer of fourteen, who was a pupil of Nardini, and already gave remarkable promise. The two young artists were inseparable for the few days of Mozart's stay, and competed 'not like boys, but like men.' They parted with many tears, and never met again, Linley being drowned in 1778. Long afterwards in Vienna Mozart spoke of him, and lamented his early death.[1] Burney says that the talk throughout Italy was of the two genuises, little Mozart and 'Tommasino,' from both of whom much was expected.

The travellers reached Rome on Wednesday in Holy Week, and went straight to the Sistine Chapel to hear Allegri's celebrated Miserere, when Wolfgang gave the well-known proof of his ear and memory, by writing down the entire work, after one hearing, merely correcting one or two passages during the repetition on Good Friday. [See MISERERE.] This feat made a great sensation. The principal people received him with open arms, and Wolfgang played everywhere. For these concerts he composed a symphony (81) and two soprano airs (82, 83), and sent a contredanse to his sister in return for Haydn's minuets.

On May 8 they went direct to Naples. Wolfgang was not invited to play before the court, but the nobility treated both father and son with great respect; they also met many previous acquaintances, who were of use to them in various ways. On the 28th Wolfgang gave a concert, which was brilliantly attended, and brought in a good sum. When he played at the 'Conservatorio alla Pietà,' his hearers were superstitious enough to attribute his marvellous execution to the charm of a ring on his finger, and when he laid it aside their astonishment knew no bounds. They had made acquaintance with Piccinni in Milan, and did the same here with Jommelli. On June 25 they went back to Rome, and the Pope, in a private audience, bestowed on Wolfgang the order of the 'Golden Spur'—'the same that Gluck has,' as the father wrote home with pardonable pride. He also told as a good joke, how the guards let them pass, taking Wolfgang for a young prince, and himself for his tutor. Now he was Signor Cavaliere Amadeo, and his father insisted on his thus signing his compositions. Wolfgang, however, was less pretentious, and soon let the title drop. He was painted again in Rome by Battoni.

Leaving Rome on July 10, they arrived on the 20th in Bologna, where a great distinction awaited Wolfgang. The Accademia Filarmonica, after testing his powers,[2] admitted him to their ranks as 'compositore,' although the statutes, besides other qualifications, required that members should be at least twenty. His election as 'maestro di cappella'[3] followed on June 5, 1771. Again they saw much of Padre Martini, and under his influence Wolfgang wrote for practice a series of sketches in the forms of strict counterpoint.[4] A Miserere (85) shows the influence of the one heard in Rome.[5] Finally Martini gave him a formal testimonial.

By Oct. 10 they were in Milan, and Wolfgang set seriously to work on his opera, before the completion of which the usual battles with the singers, and in this case with jealous rivals, had to be gone through. On Dec. 26, however, 'Mitridate Rè di Ponto' was produced for the first time, Wolfgang conducting; and it was repeated to full houses twenty times, amid cries of 'Evviva il Maestro! Evviva il Maestrino!' After an excursion to Turin, they again passed through Milan on their way to Venice, entered into all the amusements of the Carnival, were fêted by the nobility, and gave a brilliant concert. On March 12 they went to Padua, where Wolfgang played the organ in S. Giustina, and was commissioned to compose an oratorio, which Jahn conjectures to have been 'Betulia liberata' (118), performed in all probability during Lent, 1772. After some days' detention in Vicenza and Verona, they arrived at Salzburg, March 28, 1771.[6] His success in Italy procured him two commissions,—one from Milan for an opera for the Carnival of 1773, and the other from the Empress Maria Theresa for a dramatic serenata for the marriage of the Archduke Ferdinand, to take place in Milan in October. During their short stay at Salzburg, Wolfgang composed a Litany (109), a Regina cœli (108), and a symphony (110). They started again August 13, 1771, and arrived in Milan on the 21st; but the libretto was not ready till the end of the month. The score was completed in a fortnight, a remarkable instance of rapidity, considering that he had a violinist overhead, an oboe-player beneath, and a pianoforte-teacher next door, all hard at work the whole day long—a Babel of sounds which he, however, pronounced to be 'delightful (*lustig*) for composing, as it gave ideas'! He was now so firmly established in the favour both of the court and the public, that he had no intrigues to encounter. He was on the best terms, too, with Hasse, who was composing 'Ruggiero,' and who with commend-

able generosity, prophetically remarked, 'This boy will cause us all to be forgotten' (Questo ragazzo ci farà dimenticar tutti). The marriage of the Archduke and the Princess Beatrice of Modena took place on Oct. 15; Hasse's opera was performed on the 16th, and Wolfgang's Serenata 'Ascanio in Alba' (111) on the 17th, with a success which enabled the father to write home 'I am sorry to say Wolfgang's Serenata has cut out Hasse's Opera to an extent I cannot describe.' Besides his fee, the Empress sent him a gold watch set with diamonds, with her portrait at the back. After the opera he composed another symphony (112), and a divertimento (113).

They returned home in the middle of December 1771. In the last days of the year Wolfgang composed another symphony (114), and was then laid up by serious illness. Meantime the Archbishop died, and Wolfgang was commissioned to compose an opera for the allegiance festival of his successor Hieronymus, Count von Colloredo, whose election caused universal astonishment and dismay. The piece chosen was Metastasio's 'Il Sogno di Scipione,' very inappropriate, and apparently wanting in inspiration, as the music is superficial and entirely 'de circonstance.' It was performed probably in May 1772. About the same period he composed four symphonies (124, 128-130); a grand divertimento (131); three quartets (136-138); a very important Litany 'de venerabili' (125); and a Regina cœli (127).

The travellers again set out for Milan on Oct. 24, 1772, and arrived on Nov. 4. Here Wolfgang completed his new opera, 'Lucio Silla' (135), produced on Dec. 26, and repeated more than twenty times to crowded and enthusiastic audiences. Rauzzini was one of the singers, and Wolfgang composed for him a motet, 'Exultate' (165), which he sang in the church of the Theatines.

They returned in the beginning of March 1773 to Salzburg, where Wolfgang composed four symphonies (181-184), three divertimenti for wind-band (186-188), a grand concerto for two violins (190), and a mass (167). In the summer the father and son took the opportunity of the Archbishop's absence in Vienna, to go there themselves. Their immediate object is not known, but probably the father was trying to obtain some court appointment. He had made a similar attempt in Florence, but without success. He wrote to his wife and daughter, 'Things will and must alter; take comfort, God will help us.' [This visit to Vienna, though it failed of its immediate object, had an important bearing on Mozart's artistic career. We are told that he here made acquaintance with some of Haydn's quartets—probably those numbered as op. 17—and that to these we owe the six quartets (168-173) which he wrote in August, and to which he specially referred when he spoke of Haydn as his master in this form of composition. During his stay at the capital he also wrote a serenata for Salzburg (185), and 'was bold enough,' as his father wrote, to play a violin concerto at a festival in the Theatine monastery. His Mass in C major (the Pater Domenicus Missa, 66) was performed in August at the Jesuit Church, and made a great impression.]

In 1773 Wolfgang also composed at Salzburg a string quintet (174), and a PF. concerto (175), the first since those of 1767. The family were together at Salzburg nearly the whole of 1774, Wolfgang being very busy with his studies, and with composition. To this period belong—two masses (192, 194); a grand litany (195); two vesper-psalms (193); an offertorium for soprano and tenor soli (198); a bassoon-concerto (191); four symphonies (199-202); two serenatas (203, 204); an interesting divertimento (205), and PF. variations on Fischer's favourite minuet (179), which he frequently played on his tour.

On Dec. 6 the father and son started for Munich, where Wolfgang was engaged, through the influence of his patron, Count Ferdinand von Zeil, Prince Archbishop of Chiemsee, to compose an opera for the Carnival of 1775. Stimulated, doubtless, by the rich resources at his disposal, Wolfgang exerted himself to the utmost, and 'La finta Giardiniera' (196), produced Jan. 13, 1775, was a great success. Schubart, who had heard it, speaks of the 'wonderful genius' of the composer, and adds, 'unless Mozart should prove to be a mere overgrown product of the forcing-house, he will be the greatest composer that ever lived.' Court and public vied with each other in paying him attentions, and the court-chapel performed one of his grand litanies (125), his two latest masses, and an offertorium, 'Misericordias Domini' (222), written in haste at the request of the Elector, and an admirable specimen of strict counterpoint.

Soon after their return to Salzburg in March 1775, a series of fêtes was given at court in honour of the Archduke Maximilian, afterwards Archbishop of Cologne, and Wolfgang's dramatic cantata to Metastasio's much-used 'Il Rè pastore' (208) was performed on April 23. To the remainder of this year belong another mass (220); two airs for tenor (209, 210); an air for soprano (217); a divertimento (213); nine canons for two, three, and four voices (226-234); and five violin concertos (207, 211, 216, 218, 219), to which a sixth (268) was added in 1776. The concertos show that he was working at the violin, which he did to please his father, as he disliked playing at court, though it was one of his duties. His father writes to him, Oct. 18, 1777, 'You have no idea how well you play the violin; if you would only do yourself justice,

and play with boldness, spirit, and fire, you would be the first violinist in Europe.' Again, 'I suspect you have scarcely touched the violin since you were in Munich; I should be very sorry if that were the case'; and later, 'The violin is hanging up on its nail, I suppose'—and the conjecture was right. The remark about Munich refers to his Cassation (287), 'Everybody was staring away; and I played as if I had been the greatest violinist in Europe.' Later, in Vienna, he preferred taking the viola in quartets.

The whole of 1776, and as far as Sept. 1777, passed quietly in the old routine, numerous compositions testifying to Wolfgang's industry. To this period belong five masses (257-259, 262, 275); a litany 'de venerabili' (243); an offertorium for two choirs 'Venite populi' (260); a graduale 'Sancta Maria' (273); a serenade for the wedding of Burgermeister Haffner's daughter (249, 250); a serenade for two violins principali with accompaniments (239); a divertimento for various instruments (251); a notturno for ditto (286); two divertimenti or Cassations for string quartet and two horns (247, 287) for the name-day of Countess Antonie Lodron; five divertimenti for two oboi, two bassoons, and two horns (240, 252, 253, 270, 289); a sonata for bassoon and violoncello (292); an oboe-concerto (293) for Ferlendi, frequently played by Ramm of Mannheim, who used to call it his 'cheval de bataille.' The PF. also reappears—variations (264, 265); six sonatas (279-284), ordered by Baron Dürnitz, who forgot to pay for them; a trio (254); two concertos (238, 246); and a concerto for three PFs. (242) for the three Countesses Lodrow, a favourite piece, often played on his next tour by Mozart himself. Of seventeen sonatas for organ, generally with violin and bass, intended as graduales, six (241, 244, 245, 263, 274, 278) belong to this period.

Besides all this mass of music, Wolfgang studied the works of other masters, and even —an example well worth following—put into score from the parts a number of church-pieces in the strict style by Michael Haydn and Eberlin. He sent from Vienna for a note-book of this kind for van Swieten's benefit.

We have now before us a youth of twenty-one, a skilled performer on three instruments, and at home in the most varied branches of composition. His father had given him a conscientious and systematic education, protected him from all injurious influences, and made him concentrate his whole powers on his artistic cultivation. All that teaching could do for him had been done in Salzburg; the time had now come for him to go out into the world, and let the discipline of life complete the work. His existence at Salzburg had long been intolerable to him; beyond a few intimate friends he had no society; he was disgusted at the want of appreciation for art, and his position with regard to Archbishop Hieronymus became daily more critical. On this point both he and his father became anxious. Something must be done. Not daring as yet to send his son alone into the world, the father asked leave to take a professional tour with him. It was refused, the Archbishop's reason being, as he said afterwards, 'that he could not bear people going about begging in that fashion.' The cup was now full, and Wolfgang applied for his discharge.[1] Irritated that any one should dare to leave him so abruptly, and quite aware of what he was losing, the Archbishop granted the request on August 28, adding that, 'after the Gospel both father and son were free to seek their fortune wherever they pleased.' He relented, however, with regard to the father, who came to the painful resolve of sending his son away with his mother. It was true that she had little energy, and less intellectual power; but she was an experienced traveller, and could be useful to her son in many practical ways. The necessary preparations were accordingly made, even to the purchase of a carriage, that they might present a suitable appearance. On Sept. 23, 1777, mother and son left home. The father bore up bravely till they were really off, and then going to his room sank exhausted on a chair. Suddenly he remembered that in his distress he had forgotten to give his son his blessing. He rushed to the window with outstretched hand, but the carriage was already out of sight. His son, however, breathed freely when once fairly off; the deliverance from a position which he had long groaned under was delightful enough to mitigate even the pain of separation from his father and sister. Fortunately for him he could not foresee the life which lay before him,—a life full to its close of crosses and disappointments, and with so few joys!

Their first halting-place was Munich, but here they met with nothing but discouragement, and had to leave without accomplishing anything. At Augsburg Mozart visited G. Andreas Stein, the celebrated maker of organs and pianofortes, and both at his house and in the monastery of St. Ulrich charmed all hearers by his playing. A concert, however, produced but a small sum. On Oct. 30 they reached Mannheim, where they stayed much longer than they anticipated. The good prospects which at first seemed to open before them were not indeed realised; but the visit formed a decisive epoch in Mozart's life. Under the Elector Karl Theodor, Mannheim possessed a good opera, with an orchestra containing virtuosi of the first rank, and at that time considered the first

[1] This interesting document was found in the archiepiscopal archives by Pirckmeyer the custodian, and published with other matter under the title of *Zur Lebensgeschichte Mozarts*, Salzburg, 1876; also copied in the Preface to Nohl's *Mozartbriefe*, 2nd ed. 1877.

in Europe for instrumental music.[1] Mozart made great friends with Cannabich, an excellent conductor and good teacher, and gave pianoforte lessons to his daughter Rose, who attracted him in spite of her youth. He also became intimate with the poets Wieland and Freiherr von Gemmingen, the composers Holzbauer and Schweitzer, Raaff the great tenor, Wendling, Ramm, and Ritter, excellent performers on the flute, oboe, and bassoon. Here also his playing, both on the pianoforte and the organ, was much admired, and he had opportunities of measuring himself with Sterkel and Vogler, neither of whom impressed him much. The latter, indeed, he positively disliked. While vainly endeavouring to gain admittance to the Elector's Chapel, Wendling, Ramm, and Ritter tried to persuade him to accompany them to Paris and give concerts there. He was inclined to the plan, and his father agreed, though with reluctance; but when it came to the point he allowed his friends to start without him. The truth was he had fallen in love. Aloysia, the second daughter of Fridolin Weber, prompter and copyist, was a gifted singer, with a fine voice and considerable beauty, and these qualities made a due impression upon Wolfgang, during an excursion to Kirchheim, in Poland, where the Princess of Orange kept a private orchestra, and had daily concerts. Aloysia returned his attachment, and allowed him to teach her singing; and he, touched by the poverty of the family, resolved to take her to Italy, and there write a new opera for her first appearance. So romantic a proposition drove his father nearly out of his senses. In such a case quick action was everything. Urging upon him the doubtful character of the plan, he used all his endeavours to tear him away from these dangerous surroundings. 'Off with you to Paris, and that immediately! Take up your position among those who are really great,—*aut Cæsar aut nihil!* From Paris the name and fame of a man of talent spreads throughout the world.' As for his Aloysia, he advised him to commend her to Raaff, who would not only be able to teach her, but whose good word would have great weight with impresarios. It was a hard struggle for Wolfgang, but his love for his father enabled him to defer to his authority, and the time for departure was fixed. Before leaving, however, he gave some concerts, at which he played, and produced both his compositions and his pupils; and now for the first time Mannheim became aware of what it was losing. Parting with the Webers was hard work; they all wept, and thanked him as their 'greatest benefactor.' In Mannheim he composed—a soprano air for Aloysia (294); a tenor air for Raaff (295); two Lieder (307, 308); two flute concertos (313-314); Romanze for flute (315); quartet for flute and strings (285); seven sonatas for PF. and violin, partly composed in Paris (296,301-306); three PF. sonatas (309-311), including the beautiful one in A minor.

Leaving Mannheim on March 14, 1778, they reached Paris on the 23rd. The father's anticipations did not in this instance prove correct; their old friend Grimm was still there, but by no means so devoted to their interests as he had been; the youth was not the same attraction as the marvellous boy had been; and the musical world was absorbed in the Gluck and Piccinni controversy. Nor had they succeeded in obtaining from Vienna a recommendation to Marie Antoinette. They were thus thrown upon their Mannheim friends, and upon Count von Sickingen, to whom von Gemmingen had given them an introduction. Wolfgang renewed his acquaintance with Piccinni, whom he had met in Italy, but they never got beyond the terms of ordinary courtesy; 'I know my business, and he his,—that is enough,' writes Wolfgang. Gossec he calls 'my very good friend, and an uncommonly dry man.' There is no trace of any acquaintance with Grétry. Grimm procured him admittance to the Duc de Guisnes, who played the flute superbly, as Mozart says, and his daughter the harp. Accordingly he had to compose a concerto (299) for these two instruments, for which he cared less than any other. To the daughter he gave daily lessons in composition, and he had a few other lady-pupils. But he was not allowed to write an opera. Noverre, ballet-master at the Opéra, promised to use his influence, which was great, in his favour; but all he did was to employ him to compose twelve pieces for his ballet, 'Les petits riens.'[2] He composed a symphony for flute, oboe, bassoon, and French horn, at the request of Le Gros, director of the Concerts Spirituels, but it was never performed. Some airs in a Miserere by Holzbauer, produced at the Concerts Spirituels without Mozart's name, passed unnoticed, except by Gossec, who expressed great admiration. Le Gros afterwards ordered another symphony, which pleased greatly—the Paris or French symphony in three movements (297); and at his request Mozart wrote a second Andante in place of the original one.

In the meantime, his mother, who had never been well in Paris, became seriously ill, and died in Wolfgang's arms on July 3. With great thoughtfulness he wrote to their friend Bullinger to prepare his father for the sad news, and then sent a letter direct, which gives a high idea of the love which bound the family together, and of the manliness of his own conduct in so distressing a position.[3] He felt he could not remain longer in Paris, and his father even urged his departure, especially as there was now some prospect for him in Salzburg, owing to the deaths

[1] It was here that Mozart first learnt the value of the clarinet as an orchestral instrument.

[2] Discovered and printed some years ago. [See Noverre.]

[3] Jahn gives both letters (ii. 691-692), with a facsimile of that to Bullinger in an appendix to vol. i.

of Adlgasser the court organist, and Lolli the old capellmeister. Moreover, the Archbishop had promised to allow him to go anywhere to superintend the production of an opera, should he be commissioned to write one. His last few days in Paris were cheered by his old London friend Christian Bach, who had come over for the performance of his 'Amadis.' 'His joy, and mine too, at meeting again, you can well imagine,' he wrote to his father. With Bach came Tenducci, and the three spent a few pleasant days at the Maréchal de Noailles's château at Saint Germain. Mozart wrote a scena for Tenducci,[1] with accompaniment for pianoforte, oboe, horn, and bassoon, and this was played by the Maréchal's servants, who were all Germans. To the compositions already mentioned in Paris must be added a gavotte (300), and a quartet for flute and strings (298).

On Sept. 26, 1778, Mozart left Paris with a still heavier heart than he had carried into it six months before. He went by Nancy and Strasburg, which he reached in the middle of October. Here he gave three concerts, which produced much applause but little money, and played on Silbermann's two best organs in the Neukirche and St. Thomas. On Nov. 3 he started for Mannheim, although it was, as his father said, a foolish notion to go there when the Court, the Webers, and his best friends were all absent at Munich, and there was nothing for him to do. But it did him good to recall the old memories, and, as he said, 'I love Mannheim, and Mannheim loves me.' Besides, he had some prospect of an engagement for an opera. Seyler's troupe was still at the theatre; they were indeed only an operetta-company, but there was some talk of founding a German national opera. Here, too, Mozart saw two of Benda's melodramas, 'Medea' and 'Ariadne auf Naxos,' and was so delighted with them that he willingly undertook von Gemmingen's 'Semiramis.'[2] Von Dalberg, director of the theatre, also had his eye upon Mozart for his opera 'Cora,' although he was already in negotiation with Gluck and Schweitzer. However, all came to nothing; and his father, who had run into debt on his account, and had, moreover, great hopes of seeing him well placed in Salzburg, put forth his authority to make him return—'You will start immediately on receipt of this.' The son obeyed, and by Dec. 25 was at Munich; but his father, anxious lest he should be detained for good, and fearing the proximity of his beloved, did not let him rest there. Cannabich and Raaff were indeed 'working for him hand and foot,' but there was no need for anxiety on Aloysia's account. Her family welcomed him warmly, but she who 'had wept for him' seemed now scarcely to remember him, and was even displeased that he had altered the fashion of his clothes. Yet he again offered her his musical homage, composing a grand aria (316) suited to her present capabilities, to words taken, with a trace of self-complacency, from Gluck's 'Alceste,' and with an obbligato accompaniment intended for Ramm and Ritter. This air was his farewell to Aloysia Weber, about whom he wrote to his father in May 1781, 'I did love her truly, and feel still that I am not indifferent to her; but luckily for me her husband is a jealous fool, and never lets her go anywhere, so that I rarely see her.'[3]

In mourning for his mother, disappointed in his first love, and with all his hopes falsified, Mozart returned in the middle of June 1779 to the home of his childhood. In such circumstances the warmth with which he was received was doubly grateful. A good many of his old friends were still there to rally round him, but nothing could overcome his dislike of Salzburg. Even the duties entailed by his position as Concert-meister and organist to the Court and Cathedral,[4] were fulfilled as an irksome task. His desire to write for the stage was re-kindled by the presence of a dramatic company under Böhm and Schikaneder (1779-80). This was the beginning of his intimacy with the latter, to whom he furnished entr'actes and choruses for Freiherr von Gebler's Dramma eroica 'Thamos, König von Egypten' (345). To this period also belongs a German opera, libretto by Schachtner, to which André afterwards gave the title of 'Zaïde' (344)—performed in 1866 at Frankfort.

During his stay at Salzburg in 1779-80 he produced the following works: two masses (317, 'Coronation mass,' and 337); a Kyrie (323); two vespers (321, 339), among his best compositions; a trio for three voices with three corni di bassetto (346); two Lieder (349, 351); two canons (347, 348); two symphonies (319, 338); movement of a symphony[5] (318); duo concertante for violin and viola (364); two serenades (320, 361); divertimento for string-quartet and two horns (334); four sonatas for PF. (330-333); variations for PF. and violin (359, 360); sonatas for four hands (357, 358); variations for PF. (352-354); a concerto for two PFs. (365); and the last organ sonatas (328, 329, 336). At Munich he composed: Kyrie of an unfinished mass (341); concert-aria for Countess Baumgarten (369); and quartet for oboe, violin, viola, and violoncello, for Ramm (370).

[1] Tenducci appears to have taken this composition with him to London. Burney (see Barrington's *Miscellanies*, 289) speaks of it as a masterpiece of invention and technique (Pohl's *Mozart in London*, 121).

[2] He took the libretto home with him to compose 'gratuitously.' 'You see,' he writes to his father, 'how strong my liking for this kind of composition is.' Jahn (i. 514) has not been able to discover whether he ever composed it, or whether the poem was lost.

[3] She was engaged as prima donna in Vienna in 1780, and married Joseph Lange, the court actor. She acknowledged afterwards that as a young girl she had not appreciated Mozart as highly as she ought to have done, but she became a great admirer of his music, and a true friend. She did not live happily with her husband, but their intercourse with Mozart was quite unconstrained. He composed for her in Vienna five more airs, and they gave mutual assistance at each others' concerts. Kelly (*Reminiscences*, i. 253) admired her as a singer of the first rank. Her voice was exceptionally high.

[4] His father succeeded in getting him appointed successor to Adlgasser, with a salary of 400 florins (about £40).

[5] Generally quoted as overture composed for Bianchi's 'Villanella rapita.'

His next employment was most congenial. Through the exertions of his friends at Munich the grand opera for the Carnival of 1781 was put into his hands. The libretto was by Abbate Varesco, court chaplain at Salzburg, who consulted Mozart at every step, as he began the work at home. He went to Munich in the beginning of November, and at the very first rehearsals the music was highly approved by the Elector and the performers. His father even wrote to him from Salzburg, 'The universal subject of conversation here is your opera.' The Archbishop being in Vienna at the time, his father and sister were able to go to Munich for the first performance on Jan. 29, 1781. 'Idomeneo, Rè di Creta,' opera seria (366, ballet-music, 367), was enthusiastically received, and decided once for all Mozart's position as a dramatic composer.

While in the full enjoyment of the pleasures of the Carnival, into which he plunged as soon as his labours were over, he received a summons from the Archbishop to join him in Vienna, and started immediately.

On March 16, 1781, after a journey of four days, Mozart arrived 'all by himself in a post-chaise' in Vienna, where his destiny was to be accomplished. He was made to live with the Archbishop's household, and dine at the servants' table—treatment in striking contrast to that he received from the aristocracy in general. The Countess Thun, 'the most charming and attractive woman I have ever seen in my life,' invited him to dinner, and so did vice-chancellor Count Cobenzl, and others. The Archbishop liked the prestige of appearing in society with Mozart, Ceccarelli, and Brunetti, as his domestic virtuosi, but did not allow Mozart either to play alone in any house but his own, or to give a concert. He was obliged, however, to yield to the entreaties of the nobility, and allow him to appear at the concert of the Tonkünstler-Societät. 'I am so happy,' Mozart exclaimed beforehand, and wrote to his father afterwards of his great success. At the Archbishop's private concert, too, he excited the greatest enthusiasm, though he was often addressed in that very house as 'Gassenbube' (low fellow of the streets). In vain did his father urge him to forbearance, he was determined not to remain in a position where he had such indignities to endure. The opportunity came only too soon. The Archbishop, detested by the nobility, and above all by the Emperor Joseph, did not receive an invitation to Laxenburg, the summer residence of the court, and in his disgust determined to leave Vienna. The household was to start first, but Mozart, 'the villain, the low fellow,' was turned out of the house before the others. He took lodgings with the Webers, who were living in the Petersplatz at a house called 'zum Auge Gottes,' reduced in number by the death of the father and the marriage of Aloysia. At his next audience he was greeted with 'Lump,' 'Lausbube,' and 'Fex' (untranslatable terms of abuse). 'None of his servants treated him so badly,' continued the Archbishop. 'Your Grace is dissatisfied with me then?' said Mozart. 'What! you dare to use threats?' (using all the time the contemptuous 'Er'). 'Fex! there is the door; I will have nothing more to do with such a vile wretch' ('elenden Buben'). 'Nor I with you,' retorted Mozart, and turned on his heel. Not having received an answer to his application for his discharge, Mozart drew up a fresh memorial, with which he presented himself in the ante-chamber of this Prince of the Church; but as if to culminate all the brutal treatment he had already received, Count Arco the high-steward, addressed him as 'Flegel' (clown), 'Bursch' (fellow), etc., *and kicked him out of the room.* This took place on the 8th of June. Mozart was now free, though he had not received his formal dismissal; 'I will never have anything more to do with Salzburg,' he wrote to his father, 'I hate the Archbishop almost to fury.' It was summer, the nobility were all going into the country, and there was no demand for either concerts or lessons. The Countess Rumbeck was his only pupil. Composition was of course his resource, and while thus employing his leisure, he fulfilled his long-cherished desire of writing an opera for the National Singspiel (German opera), founded by the Emperor in 1778. The Emperor interested himself in his favour, and he soon received a libretto to his taste. He was hurt, however, at finding himself passed over at the fêtes in honour of the Grand Duke Paul and his wife; even his 'Idomeneo' had to give way to two operas of Gluck's. His contest with Clementi, in the presence of the Emperor and the Grand Duchess on Dec. 24,[1] afforded him some slight compensation. He had previously (Nov. 16) played at the house of Archduke Maximilian, who was very fond of him, though under the circumstances unable to do anything for him. [It was almost certainly during this winter that he first met Haydn, who visited the Viennese Court to superintend the performance of the six quartets (op. 33), dedicated to the Grand Duke Paul. From this meeting dates a ten years' friendship which ceased only at Mozart's death, and which influenced for good the compositions of both masters. It is no coincidence that the greatest works of both were written after 1781. Haydn learned from Mozart a rounder phrase, a richer harmonisation, and a fuller command of the orchestra; Mozart learned from Haydn a wider range of structure, and a gravity and dignity of expression which are particularly noticeable in his later symphonies.]

[1] The date in Mozart's letter—the 14th, in Jahn i. 637, is a misprint. In Nohl's *Mozartbriefen*, both editions, Dec. 26 should be substituted for 22, as may be seen from the letter itself. It is well known that the theme of the sonata played by Clementi (*Œuvres*, vi. 1) on this occasion was adopted by Mozart in the overture to the 'Zauberflöte.'

In spite of unremitting intrigues his 'Entführung aus dem Serail' (384), libretto by Bretzner, was produced by the Emperor's express command, with great success on July 16, 1782.[1] Mozart was arranging it for a wind-band when he received through his father a request for a serenade to be composed in all haste, for the Haffners of Salzburg. This is the well-known Symphony in D (385), at which, when looking over it long afterwards, he was 'quite surprised,' and thought 'it must have had a very good effect.' To this was added the fine Nachtmusik in C minor, for a wind-band, better known as a string-quintet (388).

On the Grand Duke's second visit to Vienna in October, he attended Mozart's opera, which was still attracting 'swarms of people'; the composer conducted in person, 'to show himself the father of his own child.' Prague soon produced it with great success; a foretaste of the many honours Mozart was to receive in that city.

He found his new abode with the Webers very comfortable; but the world soon began to inquire whether he were not intending to marry one of the daughters. The report reached his father, who admonished him seriously; but Wolfgang solemnly declared that he was thinking of nothing of the kind, and to prove his statement took another lodging, in the 'Graben.' Here, however, the want of the attentions to which he had been accustomed drove him to a new step, for which we soon find him preparing his father. 'To my mind a bachelor lives only half a life,' he writes, and hesitatingly names the object of his love. 'But surely not a Weber?' 'Yes, a Weber, Constanze, the third daughter.' All attempts at dissuasion were vain; his resolution was fixed, and on August 4, scarcely a month after the production of his opera, he led Constanze to the altar, at St. Stephen's. Bringing home his bride was his 'Entführung aus dem Auge Gottes' as he told his friends. 'As soon as we were married, my wife and I both began to weep; all present, even the priest, were touched at seeing us so moved, and wept too.'

His marriage involved Mozart in innumerable troubles. With many good qualities his wife was a thoroughly bad manager, and this was the worst defect possible, since Mozart was naturally careless in money matters, and of course his life as a busy artist was an unfavourable one for economy. They began housekeeping with next to nothing, and their resources were uncertain at the best. No wonder, then, that in six months they were in serious difficulties; and so it went on to the end. His friends, the worthy Puchberg especially, were always ready to come to his assistance, but they could not prevent his often being put to embarrassing and humiliating straits. Without even a prospect of a fixed appointment he was thrown back upon lessons and concerts. Pupils were scarce, but he was more fortunate as a virtuoso; and for the next few years he was constantly employed with concerts, his own and those of other artists, and still more in playing at the houses of the nobility. Lent and Advent were the regular concert seasons in Vienna. The Emperor was frequently present, and always had a loud 'bravo' for Mozart, speaking of him too at his own table 'in the highest terms' as 'un talent décidé.' This makes it all the more difficult to exonerate His Majesty from the charge of yielding to the efforts of those immediately about him, to prevent his bestowing some suitable post on Mozart. The latter writes on this subject to his father, 'Countess Thun, Count Zichy, Baron van Swieten, even Prince Kaunitz, are all much vexed at the little value that the Emperor puts on men of talent. Kaunitz said lately, when talking to the Archduke Maximilian about me, *that men of that stamp only came into the world once in a hundred years, and that they ought not to be driven out of Germany, especially when, as good luck would have it, they were already in the capital.*' After the success of his first concert in Lent 1782, Mozart entered into an engagement with Martin, who had instituted a series of concerts held in the winter at the 'Mehlgrube,'[2] and removed in May to the Augarten,[3] where Mozart played for the first time on May 26. He afterwards joined the pianist Richter, who gave subscription concerts. Among the artists at whose concerts he appeared, were the singers Laschi, Teyber, and Storace, and his sister-in-law, Mme. Lange.

His own subscription concerts, generally three or four, were held in the theatre, at the Mehlgrube, or in the Trattnerhof, and being attended by the cream of the nobility,[4] produced both honour and profit. The programme consisted chiefly, sometimes entirely, of his own compositions—a symphony, two PF. concertos, an orchestral piece with an instrument concertante, three or four airs, and an improvised fantasia. The latter, in which he showed incomparable skill, always roused a perfect storm of applause. For each concert he composed a new PF. concerto, the greatest number

[1] July 12, in Jahn, i. 648, is wrong. The Emperor is reported to have said, 'Too fine for our ears, lieber Mozart, and much too many notes,' meaning that the accompaniments overpowered the voices. Mozart answered frankly, 'Exactly as many notes as are necessary, your Majesty.'

[2] A very old building, with rooms in which balls and concerts were held. A flour-warehouse in the basement gave its name to the house. It is now the Hotel Munsch.

[3] See AUGARTEN, vol. i. p. 131*a*.

[4] In the list of his subscribers for 1784 we find, besides his regular patrons, Countess Thun, Baroness Waldstädten, Count Zichy, van Swieten, etc., the Duke of Würtemberg, Princes Lichtenstein, Auersperg, Kaunitz, Lichnowsky, Lobkowitz, Paar, Palm, and Schwarzenberg; the distinguished families of Bathyany, Dietrichstein, Erdödy, Esterhazy, Harrach, Herberstein, Keglewicz, Nostiz, Palfy, Schaffgotsch, Stahrenberg, and Waldstein; the Russian, Spanish, Sardinian, Dutch, and Danish ambassadors; the eminent financiers Fries, Henickstein, Arenfeld, Bienenfeld, Ployer, and Wetzlar; government officials of position, and scientific men, such as Isdenczy, Bedekovich, Nevery, Braun, Greiner, Keess, Puffendorf, Born, Martini, Sonnenfels, etc.

and the best belonging to this time. With so much on his hands he might well say, when excusing himself to his sister for writing so seldom, 'Has not a man without a kreutzer of fixed income enough to do and to think of day and night in a place like this?' A list he sent to his father of the concerts for 1784 will best show the request he was in. During six weeks (Feb. 26 to April 3) he played five times at Prince Gallitzin's, nine times at Count John Esterhazy's, at three of Richter's concerts, and five of his own.

Tired of waiting for an appointment, which must have been most trying to one of his excitable nature, Mozart seriously thought of going to London and Paris, and began to practise himself in English and French. He had even written to Le Gros in Paris about engagements for the Concerts Spirituels, and the Concerts des Amateurs, but his father, horrified at the idea of a newly married man without resources thus wandering about the world, succeeded in putting a stop to the scheme. As a compensation for the postponement of one desire, he was able to fulfil another, that of presenting his young wife to his father. Starting after her recovery from her first confinement (June 17) they reached Salzburg at the end of July 1783.

Before his marriage Mozart had made a vow that if ever Constanze became his wife, he would have a new mass of his own composition performed in Salzburg. The work was nearly ready, and the missing numbers having been supplied from one of his older masses, this fine and broadly designed composition (427) was given at the end of August in the Peterskirche, Constanze herself singing the soprano. Opera buffa having been reintroduced in Vienna he began a new opera, 'L' Oca del Cairo' (422), but after some progress found the libretto (by Varesco) so wretched that he let it drop.[1] A second opera, 'Lo Sposo deluso' (430), only reached the fifth number, partly perhaps because he despaired of being able to produce it, as Sarti and Paisiello were then in Vienna, absorbing public attention with the triumph of the latter's 'Il Rè Teodoro' (1784). In the meantime Mozart rendered a service of love to his friend Michael Haydn, who was incapacitated by illness from completing two duets for violin and viola for the Archbishop. The Archbishop characteristically threatened to stop his Concertmeister's salary, but Mozart came to the rescue, and undertook to write the two pieces 'with unmistakable pleasure.' His friend retained his salary, and the Archbishop received the duets (423, 424) as Haydn's. Mozart also took an active interest in his father's pupils—Marchand the violinist of twelve (then playing in Vienna), his sister Margarethe, then fourteen, afterwards Mme. Danzi, the well-known singer, and a child of nine, the daughter of Brochard the celebrated actor. He also became intimate with Marie Thérèse Paradies, the blind pianist, who was then in Salzburg, and for whom he afterwards composed a concerto (456). The main object of his visit, however, was not fulfilled. It was only after long opposition that his father had unwillingly given his consent to his marriage, but Wolfgang hoped that his prejudice against Constanze would disappear on acquaintance; neither his father nor his sister, however, took to her.

Leaving Salzburg on the 30th of October, and stopping at Lambach for Mozart to play the organ in the monastery, they found Count Thun on the look-out for them at Linz, and made some stay with him, being treated with every consideration. For a concert which Mozart gave in the theatre, he composed in haste a new symphony (425).[2]

In 1785 the father returned his son's visit, staying with him in the Grosse Schulerstrasse (now No. 8) from Feb. 11 to April 25. He was rejoiced to find their domestic arrangements and money matters for the time being in good order. He found a grandson too—'little Karl is very like your brother.' Though not yet on thoroughly good terms with his son or his daughter-in-law, he derived all the old pleasure from his successes as an artist, and listened with delight to his productions. He had come just at the right time, when concerts were succeeding each other as fast as possible, and his son taking part in all; and at the first he attended his eyes filled with tears of happiness at Wolfgang's playing and compositions. The day after his arrival Wolfgang invited his friend Haydn and the two Barons Todi; and his father wrote home a full account of this memorable evening; memorable indeed! for setting aside other considerations, it was not often that two men of such remarkable solidity of character as Leopold Mozart and Haydn could be found together. 'Three new quartets were played,' writes the happy father, 'the three (458, 464, 465) he has added to those we already have (387, 421, 428); they are perhaps a trifle easier, but excellently composed. Herr Haydn said to me, *I declare to you before God as a man of honour, that your son is the greatest composer that I know, either personally or by reputation; he has taste, and beyond that the most consummate knowledge of the art of composition.*' In return for this avowal Mozart dedicated to Haydn, with a laudatory preface, these six quartets, 'the fruits of long and arduous toil.' 'It is but his due,' he said, 'for from Haydn I first learnt how to compose

[1] It was completed by André, with a Rondeau, quartetto from 'Lo Sposo deluso,' finale from 'La Villanella rapita,' by Mozart; was adapted to new words by Victor Wilder, and performed in Paris, Théâtre des Fantaisies-Parisiennes, June 6, 1867; at Vienna in the Carltheater, 1868; at Drury Lane, May 12, 1870.

[2] Dedicated to Count Thun. André imagines No. 444 to have been the one composed for this occasion, from Mozart having copied some of the parts.

a quartet.' The success of his pupil Marchand, and the great progress of Aloysia Lange, both as a singer and actress, also afforded pleasure to Leopold Mozart. It is a significant fact that a man of his way of thinking should have joined the Freemasons, avowedly through his son's influence. This, however, was their last meeting, for soon after his return from Vienna his health began to fail, and on May 28, 1787, he ended a life which had been wholly consecrated to his children.

Mozart the son belonged to the eighth and oldest Freemasons' Lodge ('zur gekrönten Hoffnung') in Vienna. His interest in the order was great, indeed he at one time thought of founding a society of his own to be called 'Die Grotte,' and had drawn up the rules. A letter to his father, during his illness, in which he enlarges upon the true significance of death to a Mason, is a proof of the serious light in which he considered his obligations. His connection with the order also inspired many of his compositions. For it he wrote—'Gesellenlied' (468); 'Maurerfreude' (471), a short cantata, at the performance of which his father was present shortly before his death; 'Maurerische Trauermusik' (477), for strings and wind; 'Lied,' with chorus, and a chorus in three parts, both with organ (483, 484), for the ceremony at the opening of the 'Neugekrönte Hoffnung' (by a decree of the Emperor Joseph) in 1785; and a short cantata for tenor, with closing chorus (623), composed Nov. 15, 1791, the last of his recorded works which he conducted himself. A short adagio for two corni di bassetto and bassoon (410); an adagio for two clarinets and three corni di bassetto (411); and an unfinished cantata (429) were probably intended for the same.

In March 1785 Mozart produced at the concert of the Tonkünstler Societät, a cantata, 'Davidde penitente' (469), the materials for which he drew from his last unfinished mass (427), writing the Italian words below the Latin, and adding two new airs. There was an object for this work; his name was down at the time for admittance into the Society, but in accordance with the statutes he was rejected, on the ground that he could not produce the certificate of his baptism!

After a long delay he was again gratified by an opportunity of writing for the stage. An opera-buffa had been organised as far back as April 1783, and the Emperor had secured an excellent company[1]; and after a failure the National-Singspiel had been revived in October 1785. A libretto, 'Rudolf von Habsburg,' sent to Mozart from Mannheim remained unused, but at length he and Salieri were requested to supply German and Italian 'pièces de circonstance' for some fêtes in honour of distinguished visitors at Schönbrunn. To Mozart's lot fell 'Der Schauspieldirector' (486), a disjointed comedy by Stephanie, junior, produced at Schönbrunn, Feb. 7, 1786, and afterwards at the Kärnthnerthor Theatre.[2]

In the next month a gratifying performance of 'Idomeneo' took place at the palace of Prince Auersperg, by a troupe of titled and efficient performers, under Mozart's own supervision.[3] This mark of the favourable disposition of the aristocracy towards him bore fruit, attracting the attention of Lorenzo da Ponte, the well-known dramatist. His proposal to adapt Beaumarchais's 'Mariage de Figaro' for Mozart received the Emperor's consent,—reluctantly given on account of the offensive nature of the plot in the original,—and the first performance of 'Le Nozze di Figaro' (492) took place after violent intrigues, on May 1, 1786. The theatre was crowded, and the audience enthusiastic; several numbers were repeated twice, and the little duet three times, and this went on at succeeding representations till the Emperor prohibited encores.[4] Kelly, who took the parts of Basilio and Don Curzio, writes with great spirit: 'Never was anything more complete than the triumph of Mozart, and his "Nozze di Figaro," to which numerous overflowing audiences bore witness. Even at the first full band rehearsal, all present were roused to enthusiasm, and when Benucci came to the fine passage "Cherubino, alla vittoria, alla gloria militar," which he gave with stentorian lungs, the effect was electric, for the whole of the performers on the stage, and those in the orchestra, as if actuated by one feeling of delight, vociferated "Bravo! Bravo, Maestro! Viva, viva, grande Mozart!" Those in the orchestra I thought would never have ceased applauding, by beating the bows of their violins against the music desks.' And Mozart? 'I never shall forget his little animated countenance, when lighted up with the glowing rays of genius;—it is as impossible to describe it, as it would be to paint sunbeams.'[5]

And yet, after all this success, nothing was done for him. Earning a living by giving lessons and playing in public was in every respect unsatisfactory. 'You lucky man,' he said to young Gyrowetz as he was starting to Italy, 'and I am still obliged to give lessons to earn a trifle.' Moreover, he soon found himself eclipsed on the stage by two new pieces, which for a time absorbed the public entirely; these were Dittersdorf's Singspiel 'Doctor und

[1] Including Nancy Storace, her brother Stephen, and the tenor Kelly, all English.

[2] This Singspiel was given several times with a new libretto, and several interpolations. A later attempt by Schneider (1861) introduced both Mozart and Schikaneder, and was particularly unfortunate.

[3] He composed for it a new duet for two soprani (489), and a rondo for soprano with violin solo (490).

[4] Kelly relates (*Reminiscences*, i. 262), 'When the singers were one day rehearsing, the Emperor said, "I daresay you are all pleased that I have desired there shall be no more encores." To which they all bowed assent, but Kelly said boldly, "Do not believe them, Sire, they all like to be encored, at least I am sure I always do."'

[5] *Reminiscences*, i. 259, 258.

Apotheker' (July 11), and Martin's 'Cosa rara' (Nov. 17). Again he resolved to go to England, and was again dissuaded by his father. A gleam of light came, however, from Prague, whither he was invited to see for himself the immense success of his 'Figaro,' produced there first after Vienna, as had been the case with the 'Entführung.' Count Johann Jos. Thun, one of the greatest amateurs in Prague, placed his house at Mozart's disposal, and he joyfully accepted the invitation. His first letter states[1] the condition in which he found Prague, 'the one subject of conversation here is—Figaro; nothing is played, sung, or whistled but—Figaro; nobody goes to any opera but—Figaro; everlastingly Figaro!' He was literally overwhelmed with attentions, and felt himself at the summit of bliss; at the opera, given quite to his satisfaction, he received a perfect ovation. Furthermore two concerts were brilliantly successful; at the first, his new symphony (504) having been loudly applauded, he sat down to the piano, and improvised for full half an hour, rousing the audience to the highest pitch of enthusiasm. Again, and yet once again he had to resume, till, obeying the general acclamation, he finished by extemporising variations on 'Non più andrai,' which completed his triumph. The receipts also were thoroughly satisfactory. Having made the remark that he should like to compose an opera for so intelligent and appreciative a public, the impresario Bondini took him at his word, and concluded a contract with him for an opera for the ensuing season, for which he was to receive the usual fee of 100 ducats, and the librettist 50. The distractions of society in Prague took up all his time, and his only compositions while there were nine contredanses for orchestra (510) written for Count Pachta, who locked him in for an hour before dinner for the purpose, and six Teutsche for full orchestra (509).

On his return to Vienna after this magnificent reception, he felt his position more galling than ever; and his desire to visit England was rekindled by the departure of his friends Nancy Storace, and her brother, Kelly, with his own pupil Attwood. They promised to endeavour to secure him some position there, so that he would be able to go without undue risk.

The libretto of 'Figaro' having proved so satisfactory, he applied again to Da Ponte, and this time their choice fell upon 'Don Giovanni.' In September 1787 he and his wife went to Prague, and took lodgings 'Bei den drei Löwen' No. 420 in the Kohlmarkt. But his favourite resort was the vineyard of his friend Duschek at Koschirz near the city, where are still shown his room, and the stone table at which he used to sit working at his score, often in the midst of conversation or skittle-playing.[2] Before the production of his new opera, Mozart conducted a festival performance of 'Figaro' on Oct. 14, in honour of the Archduchess Maria Theresia, bride of Prince Anton of Saxony. He was very anxious about the success of his opera, although, as he assured Kucharz the conductor of the orchestra, he had spared neither pains nor labour in order to produce something really good for Prague. On the evening before the representation the overture was still wanting, and he worked at it far into the night, while his wife kept him supplied with punch, and told him fairy stories to keep him awake. Sleep, however, overcame him, and he was obliged to rest for a few hours, but at seven in the morning the copyist received the score, and it was played at sight in the evening. This first performance of 'Don Giovanni' (527) took place on Oct. 29, 1787.[3] On Mozart's appearance in the orchestra he was greeted with enthusiastic applause, and a triple flourish of trumpets, and the opera was accompanied from beginning to end with rapturous marks of approval. He had of course no time for other compositions, but his friend Mme. Duschek locked him into her summer-house to ensure his writing an aria he had promised her. He revenged himself by making it difficult, and would only give it her on condition that she should sing it at sight. It is one of his finest airs (528).

About the time of his return to Vienna Gluck died (Nov. 15, 1787), and Mozart had reason to hope that some suitable position would now be open to him. But the Emperor was in no hurry. By way, however, of recognising his recent triumph at Prague, and in order to retain him in Vienna (his hankering after England being well known) he appointed him Kammercompositor with a salary of 800 gulden[4] (about £80). Mozart looked upon this appointment as a mere beggar's dole, and when, according to custom, he had to send in a sealed letter stating his income, he wrote bitterly 'Too much for what I produce[5]; too little for what I could produce.' 'Don Giovanni' was not given in Vienna till May 7, 1788, and then did not please.[6] Mozart added a new air for Donna Elvira, No. 25 (K. 527), an air for Masetto, No. 26, a short air for Don Ottavio, No. 27, and a duet for Zerlina and Leporello, No. 28.

In spite of the success of his last opera, Mozart's pecuniary condition continued desperate. This is shown convincingly by a letter (June 27) to his friend Puchberg, in which the poor fellow

[1] To his friend Gottfried von Jacquin, Jan. 15, 1787.

[2] The Villa is now called 'Bertramka.' A bust of Mozart, by Seidan, was placed on a slight eminence in the grounds, and solemnly unveiled on June 3, 1876, by the then possessor, Herr Lambert Popelka, who died June 9, 1879. A hitherto unpublished letter of Mozart's, dated Prague, Oct. 15, 1787, was printed at the same time.

[3] [The text of the playbill for an early performance is given in *Le Ménestrel* for May 21, 1905.]

[4] His father did not live to see this partial realisation of his hopes; he had died, as already stated, on May 28.

[5] Viz. the dances for the Imperial Redouten-balls, which it was his duty to supply.

[6] According to Da Ponte the Emperor said, 'The opera is divine, finer perhaps than "Figaro," but it is not the meat for my Viennese.' When the saying was reported to Mozart he replied, 'We must give them time to chew it.'

begs piteously for a loan, and speaks of 'gloomy thoughts which he must repel with all his might.' And yet at the very height of his distress he manifests extraordinary power. Besides other compositions, he wrote within six weeks (June 26 to Aug. 10) his three last and finest symphonies, in E♭, G minor, and C (Jupiter) (543, 550, 551). But other very congenial work awaited him. From the beginning of his life in Vienna he had been acquainted with van Swieten, director of the Hofbibliothek, who was a great amateur of classical music, and who with a small band of friends devoted every Sunday morning to studying the works of the old masters. He himself sang the treble,[1] Mozart (who sat at the piano) the alto, and Starzer and Teyber tenor and bass. It was for these practices that Mozart sent for his MS. book of pieces by Michael Haydn and Eberlin, and afterwards for the fugues of Bach and Handel. They also served as an incentive to him to compose pianoforte pieces of a solid description; several remained fragments, but among those completed are—Prelude and Fugue, *a* 3, in C (394); Fugue in G minor (401); Claviersuite in the style of Bach and Handel (399); an arrangement of the fugue in C minor (originally for two PFs.) for string-quartet, with a short adagio (546). He also arranged five fugues from Bach's 'Wohltemperirtes Clavier' for string-quartet (405).

By 1788, however, van Swieten's practices had assumed larger proportions. At his instigation a number of gentlemen united to provide the necessary funds for performances of oratorios with chorus and orchestra. The fine large hall of the Hofbibliothek served as their concert-room, Mozart conducted, and young Weigl took the pianoforte. It was for these performances that he added wind-parts to Handel's 'Acis and Galatea'[2] (Nov. 1788), 'Messiah' (March 1789), 'Ode to St. Cecilia's Day,' and 'Alexander's Feast' (July 1790).[3]

Such work as this, however, did nothing to improve his pecuniary condition; and in the hope that the journey might bring to light some means of extricating himself, he gratefully accepted an invitation from his pupil and patron Prince Karl Lichnowsky, to accompany him to Berlin.

Leaving Vienna on April 8, 1789, their first halting-place worth noting was Dresden, where Mozart played at court, exciting great admiration and receiving 100 ducats. He was well received also in private circles, and the general interest was increased by a competition with J. W. Hässler of Erfurt, then distinguished as pianist and organist.[4] Without considering him a formidable opponent, Mozart acknowledged his talent. Here also he made the acquaintance of the poet Körner, and his sister-in-law Dora Stock, who drew a charming portrait of Mozart with a silver pencil (see p. 312). He produced a still greater effect in Leipzig, where he made the acquaintance of Rochlitz, who has preserved innumerable interesting traits both of the man and the artist. On April 22 he played the organ in the St. Thomas Church, Doles the Cantor and Görner the organist pulling out the stops for him. All present were enchanted, especially Doles, who could almost have believed in the restoration to life of his teacher, the great Bach himself. In return he made the choir of the Thomas-school sing Bach's 8-part motet 'Singet dem Herrn,' at which Mozart exclaimed with delight, 'Here is something from which one may still learn,' and having secured the parts of the other motets (no score being at hand), he spread them out before him, and became absorbed in study.

On their arrival in Berlin the travellers went straight to Potsdam, and Prince Lichnowsky presented Mozart to the King, who had been anxiously expecting him. Frederick William II. was musical, played the violoncello well (he was a pupil of the elder Duport), and had a well-selected orchestra. The opera was conducted by Reichardt, and the concerts by Duport. The King's favourable anticipations were fully realised in Mozart, but Reichardt and Duport were set against him by his candidly replying to the King's question, what he thought of the band, 'it contains great virtuosi, but if the gentlemen would play together, they would make a better effect.' The King apparently laid this remark to heart, for he offered Mozart the post of Capellmeister, with a salary of 3000 thalers (about £600). After a moment's hesitation, he replied with emotion, 'How could I abandon my good Emperor?'

In the meantime, preparations having been made for a concert, Mozart went again to Leipzig. The programme consisted entirely of his own unpublished compositions, and at the close he improvised by general request; but the audience was a scanty one. For Engel, the Court-organist, he composed a charming little Gigue for pianoforte (574). Returning to Berlin on May 19, he rushed to the theatre, where his 'Entführung' was being performed, and taking a seat near the orchestra, made observations in a half-audible tone; the second violins, however, playing D sharp instead of D, he called out, 'Confound it, do take D!' and was recognised immediately. He was much pleased to meet his pupil Hummel, who only became aware while playing of his master's presence at his concert. This time Mozart played before the Queen, but gave no public performance. The King sent him 100 Friedrichs d'or, and asked him to compose some quartets for him. As to the pecuniary results of the tour, Mozart wrote laconically to his

[1] 'Diskant.' Mozart's letter, March 12, 1783.
[2] Also performed at Mozart's benefit-concert in the Jahn'sche Concertsaal in the same month.
[3] As to the public adoption of these additional accompaniments in England, see *Musical Times*, 1899, p. 18.
[4] Hässler played a concerto of Mozart's at his concert in London, May 30, 1792. See Pohl's *Haydn in London*, p. 200.

wife, 'On my return you must be glad to have *me*, and not think about money.' He started on his homeward journey on May 28, and passing through Dresden and Prague, reached Vienna on June 4, 1789. He set to work immediately on the first quartet (575) for the King of Prussia, and received a kind letter of thanks, with a gold snuff-box and a second 100 Friedrichs d'or. The two others (589, 590) followed in May and June, 1790.

His position still continued a most melancholy one, his wife's constant illnesses adding to his expenses. Again he applies to his friend and brother freemason 'for immediate assistance. I am still most unfortunate! Always hovering between hope and anxiety!' In this state of things he yielded to the pressure put upon him by his friends, and informing the Emperor of the offer of the King of Prussia, tendered his resignation. Surprised and disconcerted, the Emperor exclaimed, 'What, Mozart, are you going to leave me?' and he answered with emotion, 'Your Majesty, I throw myself upon your kindness—I remain!' This circumstance, and the success of 'Figaro,'[1] revived after a long pause, probably induced the Emperor to order a new opera, for which Da Ponte again furnished the libretto (said to have been founded on recent occurrences in Vienna). This was the opera buffa 'Così fan tutte' (588), produced Jan. 26, 1790, but soon interrupted by the Emperor's serious illness, terminating in death on Feb. 20. Musicians had little to expect from his successor, Leopold II., and there was no break in the clouds which overshadowed poor Mozart. The rough draft is still preserved of an application for the post of second Capellmeister, but he did not obtain it. The magistrate did indeed grant (May 9, 1791) his request to be appointed assistant, 'without pay for the present,' to the cathedral Capellmeister, which gave him the right to succeed to this lucrative post on the death of Hoffmann the Capellmeister, but Hoffmann outlived him.

The coronation of the Emperor Leopold at Frankfurt on Oct. 9, was the occasion of his last artistic tour. Having pawned his plate to procure funds, he started on Sept. 26, and after a journey of six days arrived in the ancient Reichstadt. He gave a concert on Oct. 14, in the Stadttheatre, the programme consisting entirely of his own compositions. During a short stay made in Mayence, Tischbein took a life-size half-length portrait [but see below, p. 312]. On the return journey he visited Mannheim and Munich, where, at the Elector's request, he played at a court concert given in honour of the King of Naples. He had not been invited to play before the latter in Vienna, and he wrote to his wife with some bitterness, 'It sounds well for the court of Vienna, that members of their own family should hear me for the first time at a foreign court!' Soon after his arrival in Vienna, Mozart had to take leave of his best friend, for Salomon, the impresario, had come in person to carry Haydn off to London.[2] With a heavy heart he said good-bye to the only artist who understood him thoroughly, and honestly wished to see him prosper. They were never to meet again.

His affairs were now worse than ever; the Berlin journey had produced nothing, and a speculation on which he had set his hopes failed. And yet he went on working his hardest. A series of his best and most varied compositions, including the beautiful motet 'Ave Verum' (618)—written at Baden, near Vienna, afterwards Beethoven's favourite resort—were but the forerunners of the 'Requiem' and the 'Zauberflöte.' His last appearance as a virtuoso (he had not played the piano in public since 1788) was in all probability at a concert given by Bähr, the clarinet-player, on March 4, 1791. Perhaps he played his last Concerto in B♭ (595) composed in January. In this very month of March, Schikaneder, the Salzburg acquaintance of 1780, and now manager of the little theatre, scarcely more than a booth, in the grounds of Prince Starhemberg's house in the suburb of Wieden, began to urge Mozart to compose a magic opera to a libretto he had in hand, which he hoped would extricate him from his embarrassments. Ever ready to help anybody, Mozart agreed, and set to work on the score, the greater part of which was written in a little pavilion[3] near the theatre, and in a summer-house in the little village of Josefsdorf, on the Kahlenberg, close to Vienna. To keep him in good humour, Schikaneder provided him with wine, and amusing society,—his enjoyment of which good things, grossly exaggerated, has tended more than anything to throw discredit upon his character.

In July, while hard at work, he received a visit from a stranger, who, enjoining secrecy, commissioned him to write a Requiem for an unknown individual.[4] The price (50, or according to some, 100 ducats) was fixed, and Mozart set to work with the more ardour for having composed no church music since the mass of 1783. Again he was interrupted by an urgent invitation from the Estates of Bohemia, to compose an opera for the approaching coronation of Leopold II. at Prague. Mozart was on the point of stepping into the travelling carriage when the mysterious messenger suddenly stood before him, and asked what had become of the requiem. Touched and distressed by the question, Mozart assured the man that he would do his best on his return; and so saying departed with his pupil Süssmayer. He worked hard at

[1] Mozart composed a new air (577) for Mlle. Ferrarese del Bene.

[2] He made preliminary offers of a similar kind to Mozart.

[3] Now on the Capucinerberg in Salzburg, a gift from the present Prince Starhemberg.

[4] Proved after his death to have been Count Walsegg, an amateur anxious to be thought a great composer, who really had the Requiem performed under his own name. The messenger was his steward Leutgeb.

the opera during the journey, Süssmayer filling in the recitativo secco. The coronation took place on Sept. 6, and 'La Clemenza di Tito' (621) was performed the same evening in the National theatre, in presence of their Majesties and a select audience, who were too much absorbed by the occurrences of the day to pay great attention to the opera. Indeed, the Empress is said to have made very disparaging remarks on the 'porcheria' of German music. Mozart, who was not well when he came to Prague, suffered severely from the strain, but he spent a few pleasant hours with his friends, and parted from them with tears.

Disappointed and suffering he reached home in the middle of September, and at once set to work with energy at Schikaneder's opera. The overture and introductory march to the second act were finished Sept. 28, and two days later, on the 30th, the 'Zauberflöte' (620) was given for the first time. Mozart conducted at the piano, Süssmayer turned over for him, and Henneberg, who had conducted the rehearsals, played the bells. It was coldly received at the outset, and at the end of the first act Mozart, looking pale and agitated, went on the stage to Schikaneder, who endeavoured to comfort him.[1] The audience recovered from their coldness so far as to call for Mozart at the close, but he was with difficulty persuaded to appear before the curtain. The interest in the opera increased with each representation, and soon the 'Zauberflöte' was as great a 'draw' as Schikaneder could desire.

Mozart now hoped to be able to devote his whole time to the Requiem, but his late exertions and excitement had proved too much for him, sorely tried as he was in other respects. Fainting fits came on, and he fell into a state of deep depression.[2] His wife tried in vain to raise his spirits. During a drive in the Prater, he suddenly began to talk of death, and said with tears in his eyes that he was writing the Requiem for himself. 'I feel certain,' he continued, 'that I shall not be here long; some one has poisoned me, I am convinced. I cannot shake off the idea.'[3] By the advice of his physicians, his terrified wife took the score away from him, and he rallied sufficiently to compose on Nov. 15 a cantata (623) for his Lodge to words by Schikaneder. He even conducted the performance himself; but the improvement was of short duration, and he took to his bed. Now, when it was too late, favourable prospects opened before him. He was informed that some of the nobility of Hungary had clubbed together to guarantee him a yearly sum, and at the same time a subscription was got up in Amsterdam, for which he was to furnish compositions to become the property of the subscribers. When the hour for the theatre arrived, he would follow in imagination the performance of the 'Zauberflöte,' and the Requiem continued to occupy his mind. On Dec. 4 he had the score brought to him in bed, and tried a passage, singing the alto himself, while his brother-in-law Hofer took the tenor, and Schack and Gerl from the theatre the soprano and bass. When they got to the first few bars of the Lacrimosa, it suddenly came home to him that he should never finish it, and he burst out crying, and put away the score. In the evening Süssmayer came in, and he gave him some directions about the Requiem, with which his thoughts seemed constantly occupied, for even while dozing he puffed out his cheeks as if trying to imitate the drums. Towards midnight he suddenly sat up with his eyes fixed; then he turned his head on one side, and appeared to fall asleep. By one o'clock in the morning of Dec. 5, 1791, his spirit had fled. He died of malignant typhus fever. At three o'clock in the afternoon of the 6th his body was removed from the house of mourning to St. Stephen's[4]; the service was held in the open air, as was the custom with the poorest class of funeral, and van Swieten, Süssmayer, Salieri, Roser, and Orsler, stood round the bier.[5] They followed as far as the city gates, and then turned back, as a violent storm was raging, and the hearse went its way, unaccompanied, to the churchyard of St. Marx. Thus, without a note of music, forsaken by all he held dear, the remains of this prince of harmony were committed to the earth,—not even in a grave of his own, but in the common paupers' grave (Allgemeine Grube[6]). The Lodge to which he belonged held in his honour a ceremonial worthy of the deceased; the *Wiener Zeitung* announced 'the irreparable loss' in a few eloquent lines, and afterwards inserted the following epitaph:—

MOZARDI

TVMOLO INSCRIBENDVM

Qui iacet hic, Chordis Infans Miracula Mundi
Auxit et Orpheum Vir superavit, Abi!
Et Animae eius bene precare.

[1] Schenk, in his autobiography, tells how he had a place in the orchestra at the first performance, and was so enchanted with the overture that he crept up to the conductor's chair, seized Mozart's hand and kissed it. Mozart, putting out his right hand, looked kindly at him, and stroked his cheek.

[2] A note (Jahn, ii. 539) to some unknown person (? Da Ponte) strikingly confirms this.

[3] It is notorious that Salieri was very much suspected, but he indignantly repudiated the accusation. His own words (reported by Niemetschek, p. 81) prove that he was not displeased at Mozart's death:—'It is indeed a pity to lose so great a genius, but his death is a good thing for us. If he had lived longer not a soul would have given us a bit of bread for *our* compositions.' The answer given to the accusation by Salieri's friend, Capellmeister Schwanenberg, was, to say the least of it, remarkable:—'Pazzi! non ha fatto niente per meritar un tal onore?' (Geese! what has he done to deserve so great an honour?)

[4] Rauhensteingasse, on the site of the present Galvani'sche Gebäude, in the vestibule of which the builder has placed a bust of Mozart.

[5] Schikaneder was too much overcome to be present. Walking up and down he exclaimed, 'His spirit pursues me everywhere; I have him continually before my eyes.'

[6] By van Swieten's orders (himself well off) the strictest economy was observed in the funeral arrangements. The site of the actual grave was soon forgotten; but the city of Vienna erected on the probable spot a handsome monument by Hans Gasser, solemnly unveiled on the anniversary of Mozart's death, Dec. 5, 1859.

To the compositions already mentioned in Vienna must be added the following :—

Airs for soprano (368, 374) ; concertarias for his sister-in-law, Mme. Lange (383, 416, 538) ; air with PF. obbl. for Nancy Storace (505) ;[1] ditto for Adamberger, the tenor (431) ; bass airs for Fischer (432, 512), Gottfried von Jacquin (513), Gerl (who sang Sarastro), with contrabasso obbligato for Pischlberger (612), and Benucci (584). Airs inserted in operas by other composers : two for Mme. Lange in Anfossi's 'Il curioso indiscreto' (418, 419) ; bass air for Albertarelli in 'Le Gelosie fortunate' (Anfossi) (541) ; for Mlle. Villeneuve in Cimarosa's 'I due Baroni' (578), and in Martin's 'Il burbero di buon cuore' (582, 583) ; for his sister-in-law Mme. Hofer in Paisiello's 'Barbiere' (580). Trios for the Jacquin family (436-39) ; comic, nicknamed the Bandel-Terzet (441) ; for Bianchi's 'Villanella rapita,' trio (480) and quartet (479). Twenty Lieder for a single voice, including 'Das Veilchen' (476) ;[2] 'Abendempfindung' (523), 'An Chloe' (524) ; twelve canons.

Instrumental : serenade for wind instruments (375) ; Kleine Nachtmusik (525) ; three marches (408) ; dances, 25 Nos. ; 'Ein musikalischer Spass' (522) ; four string-quintets (515, 516, 593, 614) ; one quintet for clarinet, two violins, viola, and v'cello (581) ; quintet for harmonica, flute, oboe, viola, and v'cello (617) ; trio (divertimento) for violin, viola, and v'cello (563) ; rondo for violin (373) ; four horn concertos (412, 417, 447, 495) ; clarinet concerto (622). For PF. : sonata in C minor (457) with introductory fantasia (475) ; three sonatas (545, 570, 576) ; Allegro and Andante (533) ; two fantasias (396, 397) ; Adagio in B minor (540) ; two rondos (485, 511) ; variations (398, 455, 460, 500, 573, 613) ; six sonatas with violin, completed in Vienna, and published by subscription, Mozart editing (296, 376-380) ; seven ditto (402-4, 454, 481, 526, 547) ; sonatas for four hands (497, 521) ; Andante with five variations (501) ; for a musical clock (also arranged for four hands) Adagio and Allegro (594) ; fantasia (680) ; Andante (616) ; six trios with violin and v'cello (442, 496, 502, 542, 548, 564) ; trio with clarinet and viola (498) ; two quartets, G minor and E flat (478, 493) ; quintet in E flat, with oboe, clarinet, horn, and bassoon (452) ; seventeen concertos (413-15, 449-51, 453, 456, 459, 466, 467, 482, 488, 491, 503, 537, 595) ; concert-rondo (382), printed as the last movement of an earlier concerto (175).

In contemplating Mozart as an artist we are first struck by the gradual growth of his powers. God bestowed on him extraordinary genius, but nearly as extraordinary is the manner in which his father fostered and developed it. We have seen him laying a solid foundation by the study of Fux's *Gradus*, and anxiously enforcing early practice in technique. We have also seen Mozart studying in Salzburg the works of contemporaneous composers. In Italy his genius rapidly mastered the forms of dramatic and ancient church music ; van Swieten's influence led him to Bach, whose works at Leipzig were a new-found treasure, and to Handel, of whom he said, 'He knows how to make great effects better than any of us ; when he chooses he can strike like a thunderbolt.' How familiar he was with the works of Emanuel Bach is shown by his remark to Doles, 'He is the father, we are his children ; those of us who can do anything worth having have learnt it from him, and those who do not see this are ——.' The eagerness with which he laid hold of Benda's melodramas as something new has already been described.

His handwriting was small, neat, and always the same, and when a thing was once written down he seldom made alterations. 'He wrote music as other people write letters,' said his wife, and this explains his apparently inexhaustible power of composing, although he always declared that he was not spared that labour and pains from which the highest genius is not exempt. His great works he prepared long beforehand ; sitting up late at night, he would improvise for hours at the piano, and 'these were the true hours of creation of his divine melodies.' His thoughts were in fact always occupied with music ; 'You know,' he wrote to his father, 'that I am, so to speak, swallowed up in music, that I am busy with it all day long—speculating, studying, considering.' But this very weighing and considering often prevented his working a thing out ; a failing with which his methodical father reproached him :—'If you will examine your conscience properly, you will find that you have postponed many a work for good and all.' When necessary, however, he could compose with great rapidity, and without any preparation, improvising on paper as it were. Even during the pauses between games of billiards or skittles he would be accumulating ideas, for his inner world was beyond the reach of any outer disturbance. During his wife's confinement he would spend his time between her bed-side and his writing-table. When writing at night he could not get on without punch, of which he was very fond, and 'of which,' says Kelly,[3] 'I have seen him take copious draughts.' At the same time he would get his wife to tell him stories, and would laugh heartily.

We have already remarked on his powers as a virtuoso on the piano, organ, and violin, and also on his preference for the viola. He considered the first requisites for a pianist to be a quiet, steady hand, the power of *singing* the melody, clearness and neatness in the ornaments, and of course the necessary technique. It was the combination of virtuoso and composer which made his playing so attractive. His small, well-shaped hands glided easily and gracefully over the keyboard, delighting the eye nearly as much as the ear. Clementi declared that he had never heard anybody play with so much mind and charm as Mozart. Dittersdorf expressed his admiration of the union of taste and science, in which he was corroborated by the Emperor Joseph. Haydn said with tears in his eyes, that as long as he lived he should never forget Mozart's playing, 'it went to the heart.' No one who was fortunate enough to hear him improvise ever forgot the impression. 'To this hour, old as I am,' said Rieder,[4] 'those harmonies, infinite and heavenly, ring in my ears, and I go to the grave fully convinced that there was but *one* Mozart.' His biographer Niemetschek, expresses himself in similar terms, 'If I might have the fulfilment of one wish on earth, it would be to hear Mozart improvise once more on the piano ; those who never heard him cannot have the faintest idea of what it was.' Vienna was the very place for him in this respect ; when he was thinking of settling there, his father, with characteristic prudence, warned him of the fickleness of the public, but he replied that his department was too favourite a one, 'this certainly is pianoforte-land.' And he was right ; from his first

[4] Ambros Rieder, organist and choirmaster at Perchtolsdorf, near Vienna, died 1851.

appearance to the last, the favour of the public never wavered. As a teacher he was not in much request, Steffan, Kozeluch, Righini, and others, having more pupils though charging the same terms as he. The fact is, he was neither methodical nor obsequious enough ; it was only when personally attracted by talent, earnestness, and a desire to get on, that he taught willingly. Many people preferred to profit by his remarks in social intercourse, or took a few lessons merely to be able to call themselves his pupils. Fräulein Auernhammer is an instance of the first, and the celebrated physician Joseph Frank of the second. With such pupils as these he used to say, 'You will profit more by hearing me play, than by playing yourself,' and acted accordingly. Among his best lady pupils were the Countesses Rumbeck and Zichy, Frau von Trattnern, wife of the wealthy bookseller, Franziska von Jacquin, afterwards Frau von Lagusius, and Barbara Ployer. Hummel came to him in 1787, he lived in the house, and his instruction was most irregular, being given only as time and inclination served ; but personal intercourse amply supplied any deficiencies of method. Mozart could always hear him play, and played constantly before him, took him about with him, and declared that the boy would soon outstrip him as a pianist. Hummel left in Nov. 1788 to make his first tour with his father. Of Thomas Attwood, who came to him from Italy in 1785 for a course of composition, and became his favourite pupil, he said to Kelly, 'Attwood is a young man for whom I have a sincere affection and esteem ; he conducts himself with great propriety, and I feel much pleasure in telling you that he partakes more of my style than any other scholar I ever had, and I predict that he will prove a sound musician.'[1] Kelly, who wrote pretty songs, wished to have some instruction from Mozart in composition, but he dissuaded him from it, as his profession of the stage ought to occupy all his attention. 'Reflect,' he said, 'a *little knowledge* is a dangerous thing . . . ; do not disturb your natural gifts. *Melody* is the essence of music ; I compare a good melodist to a fine racer, and contrapuntist to hack post-horses : therefore be advised, *let well alone*, and remember the old Italian proverb—Chi sa più, meno sa.'[2] Mozart also taught composition to a few ladies, a cousin of Abbé Stadler's among the number. The MS. book he used with her is in the Hofbibliothek, and is interesting as showing the cleverness with which, in the midst of jokes and playful remarks, he managed to keep his lady pupils to their grammar.[3] With more advanced pupils he of course acted differently. Attwood began by laying before him a book of his own compositions, and Mozart looked it through, criticising as he went, and with the words, 'I should have done this so,' re-wrote whole passages, and in fact re-composed the book.[4]

He held regular concerts at his own house on Sundays, his friends being invited, and amateurs admitted on payment.

Of his intercourse with other artists on his tours we have spoken, but something remains to be said of his relations with his brethren in Vienna. Of Bonno, at whose house his newest symphony was twice performed in 1781 with an unusually large orchestra (sixty strings, wind instruments doubled, and eight bassoons), Mozart said, 'he is an honourable old man.' Gluck appreciated him, and was inclined to be friendly, but they were never intimate. At his request the 'Entführung' was performed out of its turn, and 'Gluck paid me many compliments upon it. I dine with him to-morrow.' On another occasion Gluck was at Mme. Lange's concert, where Mozart played. 'He could not say enough in praise of the symphony and aria (both by Mozart), and invited us all four (the Mozarts and Langes) to dinner on Sunday.' Salieri was unfriendly. He had great influence with the Emperor, and could easily have secured an appointment for Mozart, but though astute enough not to show his dislike openly, he put obstacles in his way. Other still more bitter opponents were Kozeluch, Kreibich, and Strack, who with Salieri had it all their own way in the Emperor's music-room. Kozeluch also hated Haydn, and this inspired Mozart with a contempt which he took no pains to conceal, and which Kozeluch never forgave. We have already spoken of the relations between Mozart and Haydn. 'It was quite touching,' says Niemetschek, 'to hear Mozart speak of the two Haydns, or of any other great master ; it was like listening to an admiring pupil, rather than to the great Mozart.' He recognised in the same generous way the merit of those who merely crossed his path, such as Paisiello and Sarti, with both of whom he was on very friendly terms. Kelly[5] dined at Mozart's house with Paisiello, and was a witness of their mutual esteem. Mozart's pupil, Barbara Ployer, played some of his compositions to Paisiello, who in his turn asked for the score of 'Idomeneo.' Of Sarti, Mozart writes to his father, 'He is an honest upright man[6]; I have played a great deal to him already, including variations on one of his own airs (460) with which he was much pleased.' He immortalised this very theme by introducing it into the second Finale of 'Don Giovanni' ; and did a similar service for a theme from Martin's 'Cosa rara,' an opera which at that time threw even Mozart into the shade. Of that composer, then a universal favourite, he said : 'Much that he writes is really very pretty, but in ten years' time his

[6] The 'honest' man afterwards wrote a very malicious critique on Mozart's quartets.

music will be entirely forgotten.' Mozart took a great interest in all striving young artists, augmented in the case of Stephen Storace by his esteem for his sister Nancy, the first Susanna in 'Figaro.' His sympathy with Gyrowetz has been mentioned: of Pleyel's first quartets he wrote to his father, 'They are very well written, and really pleasing; it is easy to see who his master was (Haydn). It will be a good thing for music if Pleyel should in time replace Haydn.' When Beethoven came to Vienna for the first time in the spring of 1787, and found an opportunity of playing before Mozart, he is said to have observed to the bystanders, 'Mark him; he will make a noise in the world.' Of Thomas Linley, with whom, as we have seen, he made friends in Florence, he said, 'That he was a true genius, and had he lived would have been one of the greatest ornaments of the musical world.'[1]

Mozart was short, but slim and well-proportioned, with small feet and good hands; as a young man he was thin, which made his nose look large, but later in life he became stouter. His head was somewhat large in proportion to his body, and he had a profusion of fine hair, of which he was rather vain. He was always pale, and his face was a pleasant one, though not striking in any way. His eyes were well-formed, and of a good size, with fine eyebrows and lashes, but as a rule they looked languid, and his gaze was restless and absent. He was very particular about his clothes, and wore a good deal of embroidery and jewellery; from his elegant appearance Clementi took him for one of the court chamberlains. On the whole he was perhaps insignificant-looking, but he did not like to be made aware of the fact, or to have his small stature commented upon. When playing the whole man became at once a different and a higher order of being. His countenance changed, his eye settled at once into a steady calm gaze, and every movement of his muscles conveyed the sentiment expressed in his playing. He was fond of active exercise, which was the more necessary as he suffered materially in health from his habit of working far into the night. At one time he took a regular morning ride, but had to give it up, not being able to conquer his nervousness. It was replaced by billiards and skittles, his fondness for which we have mentioned. He even had a billiard-table in his own house: 'Many and many a game have I played with him,' says Kelly, 'but always came off second best.' When no one else was there he would play with his wife, or even by himself. His favourite amusement of all, however, was dancing, for which Vienna afforded ample opportunities. This, too, Kelly mentions (i. 226): 'Mme. Mozart told me that great as his genius was, he was an enthusiast in dancing, and often said that his taste lay in that art, rather than in music.' He was particularly fond of masked balls, and had quite a talent for masquerading in character, as he showed at the Rathhaus balls in Salzburg. In 1783 he sent home for a harlequin's suit, to play the character in a pantomime got up by some friends for the Carnival Monday; Mme. Lange and her husband were Columbine and Pierrot; Merk, an old dancing-master who trained the company, was Pantaloon, and the painter Grossi the Dottore, Mozart devised the whole thing, and composed the music, which was of course very simple; thirteen numbers have been preserved (446).

In society Mozart found amusement of the highest kind, and inspiration, as well as affection and true sympathy. No house offered him so much of these as that of Countess Thun, 'die charmanteste, liebste Dame, die ich in meinem Leben gesehen,' of whom Burney, Reichardt, and George Forster, wrote in the highest terms. Other associates were the Countess's son-in-law and Mozart's pupil Prince Karl Lichnowsky, Hofrath von Born, Baron Otto von Gemmingen, Hofrath von Spielmann, Prince Kaunitz, Count Cobenzl, Field-marshal Haddik, Geheimrath von Kees, who had weekly orchestral concerts at his house, the botanist Jacquin, and his son and daughter, Count Hatzfeld, an intimate friend who played in his quartets, Kaufmann Bridi, a good tenor who sung in 'Idomeneo,' the families Greiner, Martinez, and Ployer, all of whom had constant music, and van Swieten, who has been mentioned already. Another great admirer of his was Barisani the physician, 'that noble man, my best and dearest friend, who saved my life' (when seriously ill in 1784), and whose unexpected death in 1787 affected him much. One can quite understand that the refreshment of social intercourse was a real necessity after his hard brain-work. On such occasions he was full of fun, ready at a moment's notice to pour out a stream of doggerel rhymes or irresistibly droll remarks; in short he was a frank, open-hearted child, whom it was almost impossible to identify with Mozart the great artist. His brother-in-law Lange[2] says that he was full of fun during the time he was occupied with his great works. It has been reiterated *ad nauseam* that Mozart was a drunkard, whose indulgence in this and cognate vices brought him to an early grave, but that such a charge was totally unfounded no one who has studied his life can doubt for a moment.[3] That, like other people, he enjoyed a good glass of wine nobody can deny, but his laborious life and the prodigious number of his compositions convincingly prove that he was never given to excess. Those who accused him of intemperance also magnified his debts tenfold when he died, and thus inflicted grievous injury on his

widow.[1] These 'friends' propagated the worst reports as to his domestic affairs and constant embarrassments. Undoubtedly his wife was a bad manager, and this was a serious defect in a household which only acquired a regular income (800 fl. !) in 1788, and whose resources before and after that time were most irregular. His wife's constant illnesses, too, were a great additional burden. Though naturally unfitted for anything of the kind, he made many serious attempts to regulate his expenses, and would every now and then keep strict accounts of income and expenditure, but these good resolutions did not last.[2] As Jahn remarks with point, how could he, when writing to Puchberg for assistance (July 17, 1789), have appealed to his friend's knowledge of his character and honesty, if these exaggerations had been true ? In most cases he was led astray by sheer good-nature, as he never could refuse any one in need. His kindness was grievously abused by false friends, whose acquaintance was damaging to his character, but he never learned prudence. The worst offender in this respect was Stadler, the eminent clarinet-player, who often dined at his table, and repeatedly wheedled money out of him under pretext of poverty. After all that had passed, Mozart composed a concerto (622) for Stadler's tour, finishing it two days only before the production of the 'Zauberflöte,' when he was, of course, particularly hard pressed.

His religious sentiments, more especially his views on death, are distinctly stated in a letter to his father at first hearing of his illness. 'As death, strictly speaking, is the true end and aim of our lives, I have for the last two years made myself so well acquainted with this true, best friend of mankind, that his image no longer terrifies, but calms and consoles me. And I thank God for giving me the opportunity (you understand [3]) of learning to look upon death as the key which unlocks the gate of true bliss. I never lie down to rest without thinking that, young as I am, before the dawn of another day I may be no more ; and yet nobody who knows me would call me morose or discontented. For this blessing I thank my Creator every day, and wish from my heart that I could share it with all my fellow-men.'

Mozart has often been compared with other great men, Shakespeare, Goethe, Beethoven, Haydn, etc., but the truest parallel of all is that between him and Raphael. In the works of both we admire the same marvellous beauty and refinement, the same pure harmony and ideal truthfulness : we also recognise in the two men the same intense delight in creation, which made them regard each fresh work as a sacred task, and the same gratitude to their Maker for His divine gift of genius. The influence of each upon his art was immeasurable ; as painting has but *one* Raphael, so music has but *one* Mozart.

In reviewing Mozart's instrumental compositions, we will first consider those for pianoforte. They comprise all the different branches, and are thoroughly suited to the instrument—grateful, and for the present state of technique, easy ; they contain no mere bravura-writing, the passages being for the most part founded on the scale, or on broken chords. In playing them, clearness, taste, and the power of singing on the instrument are required. In variations, written almost entirely for pupils and amateurs, he employs for the most part the melismatic style. His themes were taken from well-known pieces, such as, Fischer's minuet, and airs by Paisiello, Gluck, Sarti, Duport, etc. A good many that were not his were circulated under his name, a proof of the demand for them. Of these only two need be specified, one by Förster on a theme from Sarti's opera 'I finti Eredi' ; the other by Eberl, on 'Zu Steffen sprach im Traume,' from Umlauf's 'Irrlicht.' Of three Rondos the last, in A minor (511), is well known ; it is characterised throughout by a tenderness which makes it most attractive. Two Fantasias (396, 397), and a short sustained Adagio (540) are almost improvisations ; a third Fantasia forms the prelude to an excellent fugue in the style of Bach (394) ; a fourth (475) full of depth and earnestness, was united by Mozart himself with the sonata in C minor (457). The charming Gigue (574) is well known ; but a PF. Suite in the style of Bach and Handel (499) was unfortunately not finished ; the Abbé Stadler completed a more formal and abstract Fugue (401). In his Sonatas of the Viennese period Mozart retained the conventional three movements ; they overflow with melody, but the last movements, generally in the form of an easy rondo or variations, are as a rule not much worked out. The C minor (457), already mentioned, is full of fire and passion, not excepting the last movement, and already indicates what Beethoven was destined to do for the sonata. Two others in B♭ and D (570, 576), both pleasing, lively and easy, also deserve mention. Sonatas by others were published under his name, for instance, one in C minor (Köchel's Anhang, 204) recommended by Czerny in his 'Pianoforteschule' (iv. 162), even though of doubtful authenticity, and afterwards published by Artaria with the composer's name—'Anton Eberl, œuvre I.' Another favourite one is in B♭ (Köchel's Anhang 136), partly put together from Mozart's concertos by A. E. Müller as op. 26. The most striking sonata for four hands is the last but one in F (497). Two pieces for a musical clock (594, 608) ordered by Count Deym for Müller's Kunstcabinet, are only known in the PF. arrangement for four hands ; they belong to the close

[1] His association with Schikaneder gave some colour to the reports. Hummel protested vehemently against such accusations.
[2] In one of these orderly fits he began (1784) a thematic register of all his compositions as they were completed, and continued the practice up to a short time before his death. This invaluable document was first published by André in 1828.
[3] A reference to the doctrine of the Freemasons.

of his life, and the earnestness of purpose and thoroughness of technique which we find in them show how conscientiously Mozart executed such works to order. For two pianos we have a lively sonata in D (448), and an energetic fugue in C minor (426) arranged by Mozart for string-quartet with introductory adagio (546). The Sonatas for PF. and violin were generally written for his lady-pupils (the violin at that time was, generally speaking, a man's instrument). They are neither deep nor learned, but interesting from their abundant melody and modulations. One of the finest is that in B♭ (454) composed in 1784 for Mlle. Strinasacchi; the last, in F (547), is 'for beginners'; the last but one in E♭ (481), is also easy, and contains in the first movement the favourite subject which he treats in the finale of the Jupiter Symphony. The PF. Trios were intended for amateur meetings; the most important is the one in E (542) composed in 1788 for his friend Puchberg. The one in E♭ (498) with clarinet and viola has been already mentioned; they were all written between 1786 and 1788. Broader in design and more powerful in expression are the two Quartets in G minor and E♭ (478, 493), especially the first, which is effective even at the present day. The Quintet in E♭ with oboe, clarinet, horn, and bassoon (452), composed in 1784, is particularly charming. Mozart played it to Paisiello, and wrote to his father 'I consider it the best I have yet written.'

We now pass to the compositions for strings and wind. The Duets are few; and include those composed for Michael Haydn. The only Trio for violin, viola, and violoncello, in E♭ (563) composed in 1788, is in six movements, like a divertimento; it is broadly designed, and worked out with the greatest zeal and care, 'a true cabinet-picture.'[1] Of the first sixteen Quartets for two violins, viola, and violoncello, that in D minor (173), composed in 1773, rises obviously to a higher level. It was only after a pause of nine years (Nov. 1782) that Mozart resumed this branch of composition with the six dedicated to Haydn, each one a gem. Such, however, was not the popular verdict at the time; a critic of the day[2] found them 'much too highly spiced'—and asks 'whose palate can stand that for any length of time?' Prince Grassalkowics tore up the parts in a rage at finding that they really contained the hideous stuff which was being played before him; and they were returned to Artaria from Italy as so full of mistakes that it was impossible to play from them. The chief stumbling-block was the much-abused introduction to the last quartet. In his next one, in D (499), Mozart tried to accommodate himself to the wishes of the public. The last three, in D, B♭, and F (575, 589, 590), were composed for the King of Prussia at a time when he was nearly crushed beneath a load of care and poverty, of which, however, the works bear no trace. The king's favourite instrument, the violoncello, has more than its full share of work, and in spite of the fine treatment and wealth of invention this is injurious to the character of the quartet. The Adagio with fugue (546) has been already noticed. The Quartets for flute and strings (285, 298), and for oboe obbligato (370) are easy of execution, and of no special importance.

The Quintets must all be ascribed to external influences: Mozart invariably doubled the viola, instead of the violoncello as Boccherini did. The first, in B♭ (46), was written in Vienna[3] in 1768, and the autograph shows his still unformed boyish hand; the next, dated five years later, is in B♭ (174); and the third, in C minor (406), an arrangement of the eight-part serenade for wind instruments (388), follows ten years later. Of those belonging to 1787 in C and G minor (515, 516), the latter, full of passion and movement, is the *ne plus ultra* of its kind. The two last, in D and E♭ (593, 614), were written in December 1790 and April 1791, 'at the urgent request of an amateur,' whose object evidently was to give assistance in a delicate manner to the hard-pressed composer; both show the clearness and firmness of the master-hand, although the end was so near. Three other Quintets must be included in this series; one in E♭ (407) composed in 1787 for Leitgeb the horn player, with only one violin, and a French horn or violoncello; another in A (581), the charming 'Stadler quintet,' for clarinet, two violins, viola, and violoncello, completed Sept. 29, 1789; and a third in C minor (617) for glass harmonica, flute, oboe, viola, and violoncello, composed in May 1791 for Kirchgässner. The accompanying instruments are obviously selected with a view to the special timbre of the solo, an effect which is lost by substituting the piano.

The Serenades, Nocturnes, and Divertimenti or Cassationen, mostly with solo instruments concertante, consist generally of from six to eight movements. One of the nocturnes (286) has four orchestras, of two violins, viola, bass, and two horns each, by means of which a triple echo is produced; a short serenade (239) has only strings and drums. Another serenade for wind instruments with violoncello and bass (361), remodelled in 1780 from a youthful quintet (46), is an important work. Of solid merit are three divertimenti for string-quintet and horns in F, B♭, and C (247, 287, 334); the second is well known. They have six movements each, and are essentially in quartet-style,

[1] Jahn. [2] Cramer's *Magazin der Musik*, ii. 1275.

[3] Köchel gives Salzburg, but the family were then in Vienna after their return from Olmütz and Brünn. The quintet was metamorphosed by Mozart into a serenade (361) in 1780. The fine adagio No. 3 was arranged in Vienna by an unknown hand as an offertorium, to the words 'Quis te comprehendat,' for four voices, organ and violin solo, two violins, viola, two horns, and bass. Parts published with others by Diabelli, in E♭.

in spite of the horns. Though written when he was not much above twenty, his mastery of this kind of composition is complete. Another divertimento for the same instruments, 'Ein musikalischer Spass, oder auch Bauern-Symphonie' ('a musical joke'), composed in 1787, is irresistibly comic.

The Tafelmusik, Nachtmusik, etc., for wind instruments, with from six to eight movements each, often present the most extraordinary combinations, such as two flutes, five trumpets, and five drums (187, 188), intended it is true for festal occasions, and two oboi, two bassoons, and two horns, in six divertimenti (213, 240, 252, 253, 270, 289) composed in 1775 and 1776, and graceful in spite of their concise form. Superior to these, and indeed to all mere fête music, are two serenades for wind in E♭ and C minor (375, 388), composed in Vienna in 1781 and 1782; the latter also arranged by Mozart as a quintet (406). Of dance-music for full orchestra the first published was four contredanses (267, Salzburg, 1776); in 1784 followed two quadrilles (463), each consisting of a minuet and an allegro; and in 1787 six German dances (509) and nine contredanses (510). The dances, written for six of the Redouten-saal balls in Vienna, begin in Dec. 1788 with the German dances (567) and twelve minuets (568).

In the Symphonies we are able to follow the steps of his progress most closely. He first makes sure of his materials and technique, then the separate parts acquire more freedom and independence, melody and invention grow the subjects gain in character, there is more substance in the whole, the details are better worked out; the wind instruments, no longer used merely to strengthen the strings, take their own line and materially assist in the light and shade; in a word, the various component parts of the orchestra become one animated whole. Mozart had a great advantage over Haydn in having heard and studied the fine orchestras at Mannheim, Munich, and Paris, while Haydn was entirely restricted to his own. Mozart at first learned from Haydn, but after 1785 the reverse took place; Haydn's London symphonies also show how much his orchestration gained in fulness and brilliance from contact with the world. Mozart's first attempts in London and the Hague are in three movements; in those composed at Vienna in 1767 and 1768 the minuet is introduced. His later treatment of this movement is distinguished for refinement and dignified cheerfulness, in contrast to the jovial good-humour and banter which characterise Haydn's minuets. Of twenty symphonies composed in Salzburg, two are distinctly superior, that in G minor (183) being serious, almost melancholy, and in some sense the precursor of the later one in the same key, to which the other in A (201), bright, fresh, and sunny, forms a striking contrast. Next comes the lively Parisian or French Symphony in D (297) with three movements; then three more in Salzburg, including one in G (318) in one movement, probably intended as an overture to a play.[1] With the exception of two in C and G (425, 444) composed in Linz, and plainly showing Haydn's influence, all the rest were written in Vienna. [The earliest of these was the bright and energetic symphony in D major (385), composed 1782 for his friend Haffner of Salzburg; four years later followed the Prague Symphony (504) also in D major, the orchestration of which reminds us that it had recently been preceded by 'Figaro.'] The last three, in E♭, G minor, and C with the fugue (Jupiter) (543, 550, 551), were composed in 1788 between the 26th of June and the 10th of August, just over six weeks! Ambros says of them, 'Considered as pure music, it is hardly worth while to ask whether the world possesses anything more perfect.'[2] Jahn calls the first a triumph of beauty in sound, the second a work of art exhausting its topic, and the third in more than one respect the greatest and noblest of Mozart's symphonies.

[Equal in historical interest is Mozart's treatment of the Concerto, which may justly be regarded as his chief contribution to the growth of the instrumental forms. Up to the middle of the century the concerto was not distinguished in essential structure from the current types of orchestral or chamber music, and indeed only differed from the overture and the concerted sonata in the opportunity which it afforded for contrasted masses or timbres. Even in the concertos of Handel and J. S. Bach the solo instruments are only 'primi inter pares'; the distinction of protagonist and chorus is not as yet fully felt. The first to perceive the real æsthetic value of this contrast was C. P. E. Bach, whose clavier-concertos definitely modify the symphonic texture, and his tentative suggestions were developed by Mozart with a richer invention, a wider melodic range, and a far greater command of orchestral effect. (For a description of the form as he established it see vol. i. p. 578.) He composed in all twenty-five concertos for clavier solo, the first four (37-41) at Salzburg in 1767, the next six (175-386) at Salzburg between 1773 and 1777, the last fifteen (413-595) at Vienna between 1781 and 1791. To these should be added a concerto for three claviers (242), written in 1776, and one for two claviers (365) in 1780. During the years 1775-1776 he wrote six for violin (207-268) mainly, it would appear, as studies for his own practice, and followed them in 1780 with a Concertante Symphonie (364) for violin and viola. His other works in this form are a concertone for two violins and a concerto for bassoon (190-191),

[1] Not, as often stated, Bianchi's 'Villanella rapita,' first produced in 1785.

[2] *Grenzen der Musik und Poesie*, p. 123.

both written at Salzburg in 1774, a concerto for oboe (293) in 1777, one for flute and harp (298) written at Paris in 1778, two for flute solo (313, 314) on his return to Mannheim, four for horn (412, 417, 447, 495), at Leitgeb's house in Vienna, and the clarinet-concerto (622) composed for Stadler in 1791.

These works fall naturally into two groups which respectively precede and follow the beginning of his residence in Vienna. Those of the earlier group are, comparatively speaking, of less importance, and though they exhibit all his delicacy of touch and daintiness of invention are mainly interesting as stages in his treatment of the form. The most noticeable among them are those in D major (175), F major (242), and E♭ major (365) for one clavier or more, together with the six for violin which make charming use of a medium that has been somewhat neglected by the great masters. The concerto for flute and harp (298), written apparently with some reluctance on the commission of the Duc de Guisnes, is a brilliant virtuoso-piece with a graceful and tender andante. The Viennese clavier concertos are all masterly, especially those in D minor (466), C major (467), C minor (491), and C major (503); perfect in style, melody, and balance, and often showing a freedom of structural organisation which is not to be found in his other instrumental works. It is well known that they were carefully studied by Beethoven, in whose early compositions their influence can clearly be traced. The horn-concertos were evidently intended as a jest, they are written at breakneck speed, and the rondo of the first (412) is scrawled over with extravagant mock-directions. The concerto for clarinet (622) is, on the other hand, a careful study of one of Mozart's favourite instruments, and 'may be regarded,' in Jahn's words, 'as the basis of modern clarinet-playing.']

Next come the Vocal Compositions. Lieder he only wrote casually; and unfortunately to very insignificant words. The greater number are in stanzas, but some few are continuously composed (*durchcomponirt*), such as 'An Chloe' (524), more in the style of an Italian canzonet; 'Abendempfindung' (523), fine both in form and expression; 'Unglückliche Liebe' and 'Trennung und Wiedervereinigung' (520, 519), almost passionate; and 'Zu meiner Zeit' (517), in a sportive tone. Of three Kinderlieder (529, 596, 598) the second, 'Komm' lieber Mai,' still survives; nor will the 'Wiegenlied' (350) be forgotten. Goethe's 'Veilchen' (476) is perfection, and shows what Mozart could have produced in this direction. Many spurious Lieder have been published under his name; there are thirty-eight in Köchel's Catalogue (Anhang V. Nos. 246-283). The canons require sifting; even our English 'Non nobis Domine' has been set to German words, and ascribed to him. Several are composed to words in the Viennese dialect, and the effect is quite neutralised by the modern drawing-room text which is often substituted. 'Difficile lectu mihi Mars' (559) is a comic canon, followed on the reverse side of the sheet by 'O du eselhafter Peyerl'[1] (560). The double canon on 'Lebet wohl, wir sehn uns wieder' and 'Heult noch gar wie alte Weiber,' written on taking leave of Doles at Leipzig, is well known.

As we have seen already, he was frequently called upon to write airs for concerts, and for insertion in operas: many of these still bear repetition; for instance, the soprano airs 'Misera dove son' (369), 'Non temer amato bene' with PF. obbligato (505), 'Un moto di gioja' (579), 'Bella mia fiamma' (528), one of his finest airs; the tenor air 'Per pietà' (420), and the bass airs 'Non so d'onde viene' (512), 'Mentre ti lascio' (513), and 'Per questa bella mano' with double-bass obbligato (612).

To prepare the way for his Masses we must first consider his Church music of various kinds. First and foremost come the Litanies and Vespers, each a complete whole formed of several independent parts. The chief characteristic of the Litania de venerabili is solemnity, and of the Lauretanae or Marienlitanei, tenderness; and these Mozart has succeeded in preserving. [See LITANY.] Of the latter, the first, in B♭, composed in 1771, already shows fluency in part-writing, and mastery of form and modulation; but the second, in D (195), composed in 1774, is far more important, the voices being treated contrapuntally with independent orchestra. We have also two Litanie de venerabili in B♭ and E♭ (125, 143), composed in 1772 and 1776, the lapse of time between the two being clearly marked in the compositions themselves. The fine choruses in Nos. 3 and 5 of the latter, point to the Requiem, and like the fugue 'Pignus futurae' almost startle by their power, as does also the opening of the 'Panis vivus,' identical with the 'Tuba mirum' in the Requiem. A still stronger sense of the dignity of church music is shown in two vespers in C (321, 339) composed in 1779 and 1780, the greater part of both thoroughly deserving a place among his most important works. The 'Confitebor' in the first, and 'Laudate pueri' and 'Laudate Dominum' in the latter are real gems. The motet 'Misericordias Domine' (222), an exercise for Padre Martini, who gave him a brilliant testimonial for it in 1775, is in strict counterpoint throughout. In 1776 he composed a 'Venite populi' for double chorus; the parts are in imitation, strict or free, and the whole work teems with force and freshness. A list of innumerable small pieces of church music closes with the angelic motet 'Ave verum' (618), composed on the 18th of June 1791, at Baden, near Vienna.

His first Masses (49, 65, 66), written while he

[1] Referring to the defective utterance of Peyerl, the tenor.

was still a mere boy, show how thoroughly he had mastered the forms then in use for that style of music. We pass at once to the 6th Mass, in F[1] (192), the whole of which is in counterpoint, with only two violins, bass, and organ as accompaniment. This mass, in which the master-hand is clearly discernible, recalls the finest models of the old Neapolitan school, and justly ranks next to the Requiem; the Credo is based throughout on the subject so well known in the finale to the Jupiter Symphony. The next, in D[2] (194), is also next in order of merit; it has perhaps more grace, but less earnestness and ideality. These two masses show what he was capable of in church music when unfettered; but in the five which followed[3] (220, 257-259, 262) he was forced to suit his patron's taste by aiming at display, and the result is less fortunate. Unhappily these being his best-known masses, are generally taken as his standard church works. Hardly more important are the next three[4] (275, 317, 337), although Mozart himself seems to have had a preference for the first, in B♭, since he chose it to conduct himself in 1791. The second, in C, composed in 1779, [see the following article on the spurious masses] is called the 'Coronation-mass,' why, nobody knows; the third, also in C, was composed in 1780, and all three fulfil the conventional requirements, but seldom show a glimpse of the true Mozart, and then only in court uniform. We have already mentioned the last mass, in C minor (427), and the circumstances under which it was written. It is broadly designed, each section being treated as a separate movement, and the whole bears clear traces of his studies at the time (1783) with van Swieten. It is to be regretted that it was never finished; the Kyrie, Gloria, Sanctus, and Benedictus alone are complete; the Credo is only half done. Very remarkable are the inequality of the different movements, the large dimensions of the choruses and fugues, and the bravura style of the solos. The Kyrie, Gloria, and Sanctus are excellent, the five-part Gratias, and the eight-part Qui tollis, of incomparable beauty. [The Credo was completed by the adaptation of other church compositions of the master; for the Agnus Dei, the opening Kyrie was repeated, and the mass, as thus made fit for public performance, was given by the Mozartverein at Dresden, April 3, 1901, and at the Bristol Festival of 1905, for the first time in England.]

We now come to the Requiem, that work of pain, which he was not permitted to finish. The following pieces are in his own handwriting:—(1) Requiem and Kyrie, complete; (2) voice-parts, organ, and notes of the accompaniment of Nos. 2 to 9, as follows:—Dies irae, 68 bars; Tuba mirum, 62; Rex tremendae, 22; Recordare, 130; Confutatis, 40; Lacrymosa, 8; Domine, 78; Hostias, 54: the last eight bars, containing voice-parts, organ, and first violin, go to the words 'Fac eas Domine de morte transire ad vitam,' followed by the direction 'Quam olim Da Capo,' that is to say, repeat the last 35 bars of the Domine. His widow, in her anxiety to have the score completed, and thus satisfy the person who had ordered it, first applied to Eybler, but after a few attempts he threw up the task, and she then entrusted it to Süssmayer, who not only had more courage, but was able to imitate Mozart's hand. He copied what Mozart had sketched in, filled up the gaps, wrote a Sanctus, Benedictus, and Agnus Dei, of his own, and, to give unity to the work, wound it up by repeating the fugue of the Kyrie to the words 'Cum sanctis tuis.' The score thus completed was handed to the messenger, who afterwards proved to have been Leutgeb, steward to Count Franz von Walsegg, of Ruppach. The Count, who had lost his wife Anna Edlen von Flammberg, on Feb. 14, 1791, and wished to perform a Requiem to her memory, copied out the score, inscribed it 'Requiem composto dal Conte Walsegg,' and absolutely had it performed as his own on Dec. 14, 1793. After wanderings almost as complicated as those of Ulysses, the various portions, in the original handwriting, were at length safely landed in the Hofbibliothek of Vienna. They consist of—(1) the autograph Requiem[5] and Kyrie, with the remainder complete in Süssmayer's hand, bought by the Hofbibliothek in 1839 for fifty ducats; (2) Nos. 2 to 9 just as they were left by Mozart; (3) twelve sheets presented by the Abbé Stadler, and (4) thirteen bequeathed by Eybler in 1846. The discovery of the autograph was the most conclusive reply to Gottfried Weber, who, as is well known, disputed for years the authenticity of the Requiem. It has been analysed with becoming love and reverence by Holmes[6] and by Jahn in his second volume. The latter concludes his observations thus: 'It is the true and legitimate expression of his artistic nature at its highest point of finish—his imperishable monument.'[7] An admirable summary of the whole story will be found in *Mozart's Requiem*,

[1] Mozart's Masses, arranged by V. Novello, No. 3.
[2] Novello, No. 6.
[3] The second, in B♭ (257; Novello 2), is called the 'Credo Mass,' from the peculiar treatment of the Credo. It is printed in a very mutilated form; even the characteristic subject in the Credo itself being left out whenever possible. The much-used subject from the Jupiter Symphony is introduced again in the Sanctus.
[4] Novello, 10, 1, 14.

[5] The heading 'Requiem di me, W. A, Mozart mp 792' is touching, as showing how he looked forward to its completion.
[6] *A Critical Essay*, etc.
[7] This, Mozart's last work, was the first of his vocal works (including his operas) to be performed in England. John Ashley introduced it at Covent Garden Theatre on the first oratorio evening during Lent, Feb. 20, 1801. The piece which preceded it was a Dead March with corni di bassetto, double bassoons, and two pair of double drums; after it came a PF. concerto played by John Field, and Handel's 'L'Allegro ed il Pensieroso.' Books of the words, with a translation of the Requiem and a biographical sketch of Mozart, were sold at 6d. each. Of the Requiem Parke says, 'It is a composition of infinite science and dulness, from the effects of which the audience was happily relieved by Incledon's song in "L'Allegro," "Haste thee, Nymph."' The *Morning Post* said, 'The talents which have celebrated the name of Mozart can scarcely be justly appreciated by such a composition as the Requiem'; and wound up with, 'It is upon the whole a composition which could only have come from the hand of a master. From the performers it received ample justice.' According to the *Porcupine* 'the performance was far from being well managed.' It was repeated on March 4. (Pohl, *Mozart in London*, p. 144.)

by W. Pole, F.R.S., Mus.Doc. ; London, Novello, 1879.

We have seen Mozart, when a mere boy, turning from childish play to serious occupations: a striking instance of this is his 'Grabmusik' or German cantata (42), written in 1767, which is anything but a boyish composition. About five years later he wrote, apparently in consequence of his visit to Padua, an oratorio by Metastasio called 'Betulia liberata' (118), corresponding to an opera seria of the period. The refrain in the last number but one, alternately sung by solo and chorus, is an ancient canto fermo harmonised in four parts, in fact the same which is introduced in the Requiem to the words 'Te decet hymnus.' This is the only independent work of the kind, his other cantata 'Davidde penitente' (469) being made up from the Kyrie and Gloria of his last unfinished mass (427) set to Italian words, with two interpolated airs in concert style, which serve to render more prominent the inherent want of unity and congruity in the piece.

Of smaller cantatas, the two (471, 623) for the Freemasons' Lodge are the only specimens. Both show much earnestness and depth of feeling; the first, for tenor solo and chorus, was composed in 1785 ; the latter, consisting of six numbers, written on Nov. 15, 1791, he conducted in person only two days before his last illness.

The long list of Mozart's dramatic compositions is headed by a sacred Singspiel, 'Die Schuldigkeit des ersten Gebotes,' in three parts, the first being composed by him in Salzburg during the winter of 1766-67, and the others added by Michael Haydn and Adlgasser, the court organist. Mozart's work occupies 208 pages, and is in the style of the Italian oratorios of the period, the forms being handled with perfect certainty. Mingled with the boy's unsteady writing there are occasional passages, mostly florid, in his father's hand, and the words to the recitatives are by a third person. The third tenor air is interesting, and Mozart himself evidently thought it good, as he introduced it with slight variations into his first opera. Immediately afterwards followed a Latin comedy 'Apollo et Hyacinthus,' which, in spite of the restraint of a foreign language, was so far a success that it was performed once. In Vienna in 1768 he composed a German operetta or pastorale in one act, 'Bastien und Bastienne,' and an opera buffa in three acts, 'La finta Semplice.' According to Jahn these rise above the ordinary level of contemporary comic operas in spite of their wretched librettos; and he remarks that in these early dramatic works Mozart fixes the two opposite poles which he touched in his artistic career. The chief number in the 'Finta Semplice' is the tenor air No. 7, previously mentioned. The three operas composed and performed in Milan, 'Mitridate,' 'Ascanio in Alba,' and 'Lucio Silla,' each mark a step in advance. They succeeded beyond the expectations of himself and his father; as did also 'La finta Giardiniera,' produced in Munich, Jan. 1775, when he wrote home, 'Everything has gone off so well, the noise was greater than I can describe to Mama.' The German opera, 'Zaide,' in which he made use of the melodrama by Benda which he admired so much, has neither overture nor finale, and once set aside, its subject is too much like that of the 'Entführung' to allow of its being again performed.[1] To this period also belongs the heroic drama 'Thamos, König von Egypten,' consisting of three choruses and four instrumental pieces. The choruses, like those of Racine's 'Athalie,' were intended to add dignity to the action, and as choruses were at that time his 'most favourite composition,' he worked at them with great satisfaction. They are on a far grander scale, especially as regards the orchestral accompaniments, than those of his masses of the same period. Unfortunately the play had been given up in Vienna, and he much regretted not being able to use his music. The choruses were published with Latin words—'Splendente te,' 'Ne pulvis,' 'Deus tibi'—in which form they are well known in England.[2] With 'Idomeneo' he started on a fresh career, for which all his previous works had been merely preparatory. Oulibicheff declares that in it three styles may be easily distinguished, the first in which he is still fettered by the formalism of opera seria, the second in which he strives to imitate Gluck and French opera, and the third in which his own artist nature develops itself freely. Jahn says, 'In "Idomeneo" we have the genuine Italian opera seria brought to its utmost perfection by Mozart's highly cultivated individuality.' He put his best work into the parts of Ilia and Electra, which most struck his fancy. The choruses form a prominent feature, especially those which so much enhance the beauty of the second Finale. The handling of the orchestra is still admirable and worthy of study. In fact, this opera is the work of one who, though in the prime of manhood, has not lost the vigour and freshness of youth. Mozart was very anxious to have it performed in Vienna, when he intended to rearrange it more after the French model; but we have seen that he had to be content with a private performance by distinguished amateurs, for which he made several alterations, and composed a duet for two soprani (489), and a scena with rondo for soprano and violin solo (490).

In the 'Entführung' it is interesting to observe the alterations in Bretzner's libretto which Mozart's practical acquaintance with the

[1] André added an overture and finale, and a new libretto was written by Gollmick. A performance in Frankfort, Jan. 27, 1866, is only of historical interest.

[2] Von Vincke wrote a connecting poem for concert use. They were afterwards translated into German.

stage has dictated, to the author's great disgust.[1] Indeed Osmin, one of the most original characters, is entirely his own creation at Fischer's suggestion. Jahn quotes Weber's excellent remark on this opera[2]: 'Here I seem to see what the bright years of youth are to every man, a time of blossom and exuberance which he can never hope to reach again. As time goes on defects are eradicated, but with them many a charm is rooted up also. I venture to affirm that in the "Entführung" Mozart had reached the full maturity of his powers as an *artist*, and that his further progress after that was only in knowledge of the *world*. Of such operas as "Figaro" and "Don Juan" we might have had many more; but with all the good will in the world he could never have written another "Entführung."'

In 'Figaro' we admire 'the spontaneous growth of the whole organism, the psychological truth and depth of sentiment, which make the characters so life-like, and resulting from these the striking harmony in the use of means and forms, and the mixture of dignity and grace, all founded on something higher than mere sensuous beauty.' In it 'we feel the throbbing of our own life-blood, recognise the language of our own hearts, and are captivated by the irresistible charm of unfading beauty—it is Art, genuine, immortal, making us free and happy.'

'Don Giovanni,' inferior perhaps to 'Figaro' as regards artistic treatment, has one manifest superiority; all the moods and situations are essentially musical. There is scarcely a feeling known to humanity which is not expressed in some one of the situations or characters, male or female. 'Così fan tutte,' taken either as a whole or in detail, is unquestionably a falling off from the two previous operas, and yet even here in detached pieces, especially in the chief rôles, many brilliant touches show the master-hand. Even this opera, therefore, we can in some respects consider an enlargement of his boundaries. 'La Clemenza di Tito' carries us back to the old opera seria. 'Così fan tutte' had recalled the old opera buffa, and Metastasio's libretto, written in 1734, required considerable modifications to suit the taste of the day; the most important being the introduction of ensembles wherever the situations allowed, and the curtailment of the original three acts to two. Nothing, however, availed to make the plot or characters interesting; throughout it was evident that the characteristics which had most attracted in Metastasio's day, were now only so many obstacles and hindrances to the composer. Moreover, two of the singers, imported purposely from Italy, demanded special opportunities for display; Mozart was ill, had the 'Zauberflöte' in his head, and was deep in the 'Requiem'—a combination of unfavourable circumstances, sufficient of itself to preclude success. 'Making due allowance for these facts,' writes Rochlitz,[3] 'Mozart found himself compelled to take one of two courses, either to furnish a work of entire mediocrity, or one in which the principal movements should be very good, and the less interesting ones treated lightly and in accordance with popular taste; he wisely chose the latter alternative.'

We now come to the 'Zauberflöte,' which made an impression on the public such as no work of art had ever produced before. The libretto is so extraordinary that it is necessary to explain its origin. Schikaneder, at his little theatre in the Wieden suburb, had produced with great success a romantic comic opera after Wieland, 'Oberon, König der Elfen,' set by Paul Wranitzky. Encouraged by this success he had a second libretto constructed upon a fairy-tale, 'Lulu, oder die Zauberflöte,' from Wieland's 'Dschinnistan.' Just as it was ready he found that the same subject had been adapted by an actor named Perinet for the theatre in the Leopoldstadt of Vienna, under the title 'Kaspar der Fagottist, oder die Zauberzither,' with music by Wenzel Müller. He therefore remodelled his materials, introduced sympathetic allusions to the Freemasons, who were just then being hardly treated by the government, added the parts of Papageno and Papagena, and laid claim to the entire authorship. Such was the origin of this patchwork libretto, which, with all its contradictions, improbabilities, and even vulgarity, is undeniably adapted for the stage. Schikaneder knew how to gain the attention of an audience by accumulating and varying his stage effects. In proof of this we have not only the long run of the opera itself, but the testimony of Goethe,[4] who, while acknowledging that it was full of indefensible improbabilities, added, 'in spite of all, however, it must be acknowledged that the author had the most perfect knowledge of the art of contrast, and a wonderful knack of introducing stage effects.' It is well known that Goethe contemplated a continuation of the libretto, and entered into an agreement with Wranitzky on the subject in 1796.[5] Beethoven[6] declared it to be Mozart's greatest work—that in which he showed himself for the first time a truly German composer, and Schindler[7] adds that his reason for estimating it so highly was, that in it were to be found specimens of nearly every species of music from the lied to the chorale and fugue. Jahn (ii. 533) thus concludes his critique: 'The "Zauberflöte" has a special and most important position among Mozart's operas; the whole musical conception is pure German; and here for the first time German opera makes free and skilful use of all

the elements of finished art. If in his Italian operas he assimilated the traditions of a long period of development, and in some sense put the finishing stroke to it, with the "Zauberflöte" Mozart treads on the threshold of the future, and unlocks for his countrymen the sacred treasure of natural art.'

We append a list of Mozart's operas, in the order in which they were first performed in London.[1]

'La Clemenza di Tito,' 1806, March 27, King's Theatre; for Mrs. Billington's benefit, 'ably supported by Mr. Braham.' (1812, March 3, Catalani appeared as Vitellia, and Sig. Tramezzani as Sesto.)

'Così fan tutte,' 1811, May 9, King's Theatre; for the benefit of Mme. Bertinotti Radicati.

'Il Flauto magico,' 1811, June 6; King's Theatre; Signor Naldi's benefit.

'Le Nozze di Figaro,' 1812, June 18, King's Theatre; in aid of the funds of the Scottish Hospital. Among the performers were Catalani, Mrs. Dickons, Sig. Naldi, and Fischer. It was a decided success, further increased on its revival in 1817 (Feb. 1) under Ayrton, with a powerful cast.

'Don Giovanni,' 1817, April 12, King's Theatre. Extraordinary success.

'The Seraglio' ('Entführung aus dem Serail'), 1827, Nov. 24, Covent Garden. Music and libretto mutilated. Performed in Italian at Her Majesty's, June 30, 1866.

'Der Schauspieldirector,' 1861; music given at Crystal Palace summer concert, in Italian. Also in English (Sept. 13, 1877) in the Crystal Palace Theatre as 'The Manager.'

[Mozart's likeness has been preserved in every form and variety of portrait; the following list is taken from an article by Emil Vogel in the *Jahrbuch der Musikbibl. Peters für 1899* (1900), p. 13. (1) The earliest, an oil-painting to the knee, taken in Vienna in 1762, represents him in the Archduke Maximilian's gold-laced court suit, given him by the Empress. (2) A pencil drawing made in the spring of 1763 at Salzburg, probably by F. N. Streiche; the original is lost, but a photograph is in the Mozart Museum. (3) In the small family picture, painted by Carmontelle in Paris in 1763, Mozart is sitting at the harpsichord, with his sister by his side, and his father standing behind him playing the violin. This is now in the possession of Lord Revelstoke. It was engraved by Delafosse, and was reproduced in coloured facsimile by Goupil's Photogravure process for Colnaghi & Co., London, in 1879. (4) In the Museum of Versailles is a small oil-painting of the date Dec. 1763, by M. B. Ollivier, crowded with figures, representing Mozart sitting at the harpsichord in the Prince de Conti's saloon. This is reproduced in *Riv. Mus. Ital.* v. 699. (5) A portrait of doubtful authenticity, said to have been painted during Mozart's visit to the Netherlands in 1765-66, is in oil, and signed D. van Smissen. The original is in the possession of Herr Landgerichtsrat Rich. Hörner in Neu-Ulm, and a photograph is in the Mozart Museum. (6) Another doubtful oil-portrait, of the date 1766-67, painted by Thadäus Helbling, was on loan in the Mozart Museum (1900), and is reproduced in *Famous Composers*, ii. 272. (7) About 1769 a miniature by an anonymous artist, formerly in the possession of the composer's sister, was given by her to the painter F. von Amerling (1803-87), and is now in the possession of the painter's widow, Countess Maria Hoyos in Vienna. As has been mentioned, his picture was taken in 1770, both in Verona and Rome. (8) In the first he is seated at the harpsichord in a crimson and gold court suit, with a diamond ring on the little finger of his right hand. Above the keyboard is 'Joanni Celestini Veneti, MDLXXXIII,' and on the open music-book may be clearly deciphered what was apparently a favourite piece of the period. This picture, a half-length, is now in the possession of Frau Therese Kammerlacher, geb. von Sonnleithner. The head is given in the frontispiece of Jahn's 4th volume and is also reproduced in *Riv. Mus. Ital.* v. 709. (9) In Pompeo Battoni's portrait, taken in Rome—now in the Nottingham Museum—the right hand holds a roll of music; the countenance is full of life, but highly idealised; an engraving by Adlard is given in the Record of the Musical Union for 1865; in Ella's *Musical Sketches*, vol. i. and in the second edition of Nohl's *Mozartbriefe*. (9a) A portrait in the possession of W. Barclay Squire, Esq., is probably by Battoni, was lent to the Vienna Exhibition of 1892, and has been reproduced by the Berlin Photographic Company. It represents a musician of about Mozart's age in 1770, but has a harp in the background, and it is not absolutely certain that it is a genuine portrait of the composer. (10) A miniature, dating from about the end of 1771, is in the Mozart Museum. (11) In October 1772, Karl Christian Klass made a drawing in profile, sitting at a table on which are a violin and a book; this is in the possession of Count von Waldstein in Prague. (12) In the Liceo Musicale at Bologna there is a portrait said to be a copy made for Padre Martini from a lost original referred to in a letter by Leopold Mozart of Sept. 25, 1777. The composer is represented sitting at an organ. (13) In 1777 Mozart sent to his cousin, Maria Anna Thekla Mozart, a miniature, which at her death in 1841 was bequeathed to Postmeister Streitel of Bayreuth, whose great-grand-daughter, Frau Justizrath Vogl, of Regensburg, is the present owner. It is reproduced in Vogel's article. (14) Frau Emil König of Mainz is the possessor of a portrait probably painted by J. J. Langenhöffel in Mannheim in 1777; this also is reproduced in Vogel's article. (15) A crayon drawing by Augustin de Saint-Aubin was executed in Paris in July 1778; it now belongs to Herr R. P. Goldschmidt of Berlin. (16) A wax medallion, possibly of about the same date as No. 15, is in the possession of Dr. Max Friedländer of Berlin. (17) Della Croce painted a large picture of the family in 1780: Mozart and his sister are at the piano playing a duet; the father with his violin stands at the side, and the mother's portrait hangs on the wall. A large steel-engraving from it by Blasius Höfel

[1] Pohl, *Mozart in London*, pp. 145-151.

is published at Salzburg. The half-lengths of Mozart and his father in Jahn's 1st vol. (pp. 1 and 564) are from this picture. The original is in the Mozart Museum. (18) A half-length profile carved in box-wood by Posch (1781), and now in the Mozarteum at Salzburg, was engraved by J. G. Mansfeld, and published by Artaria, with the inscription 'Dignum laude virum Musa vetat mori.' This, the universally accepted portrait, is out of print, and Kohl's engraved copy (1793) by no means comes up to the original. (19) Miniatures of Mozart and his wife were sent by the composer to his sister soon after his marriage in 1783; they have disappeared, but are reproduced in Nissen's biography. (20) A miniature by Grassi, Vienna, 1785, is much idealised. It was engraved by Gottschick in 1829. (21) During his short stay at Dresden in 1789, Dora Stock, the talented sister-in-law of Körner and friend of Schiller, drew him in her own refined and spirited style. The likeness is caught with the tenderness peculiar to a woman's hand; the outlines are correct, and the thoughtful expression of the eye rivets the beholder; the luxuriant silky hair, of which he was proud, is more truthfully rendered than in any of his portraits; and even the small stature is sufficiently indicated. Hofcapellmeister Eckert of Berlin (died Oct. 14, 1879), possessed the original (now in the possession of the Bibliothek Peters), of which we have here attempted an engraving.

(22) A life-size half-length, said to have been painted at Mayence in 1790 by Tischbein, is given in Jahn (ii. 456); there is more intellect and refinement in it than in that by Posch, which, however, is more like. Grave doubts have been cast upon the authenticity of the 'Tischbein' portrait (the composer's son, when shown it in 1849, said there was not the smallest resemblance to his father), which, supposing them to be established, forbid us to suppose that (22a) a portrait now in the possession of Mr. H. E. Krehbiel of New York, discovered by him in Paris in 1900, in the house of M. Catusse, the French Minister to Sweden, is a genuine representation of Mozart. This portrait is reproduced in the American periodical the *New Music Review*. (23) Lange, Mozart's brother-in-law, drew him, probably at the beginning of 1791, sitting at the piano absorbed in improvisation. The picture, complete only to the waist, was pronounced by his son Karl to be very like. It is now in the Mozarteum at Salzburg; and a lithograph from it by Ed. Lehmann was published at Copenhagen. Some other less authoritative portraits are mentioned at the end of Vogel's article.]

The Mozart literature is copious; but it has been ably summarised by Jahn in his *W. A. Mozart* (1st ed. 4 vols. 1856-59, 2nd ed. 2 vols. 1862, Breitkopf & Härtel, translated by Miss Pauline Townsend and published by Novello). In the preface he expressly describes his method of procedure, and the use he has made of all the printed matter in existence, assigning to each work its relative value and importance. Here we find Schlichtegroll, Niemetschek, Rochlitz, Arnold, Schlosser, G. N. von Nissen, Holmes, Oulibicheff, Gottfried Weber, André, Lorenz, Fuchs, Nohl, Marx, and others. Breitkopf & Härtel also published in 1878 a second edition of *Mozart's Briefe*. Conjointly with Jahn's second edition should be used Dr. von Köchel's *Chronologisch-thematisches Verzeichniss sämmtlicher Tonwerke W. A. Mozarts* (Breitkopf & Härtel, 1862), second edition, enlarged and revised by Paul, Graf von Waldersee, 1905. As will be evident to the reader, the present article is founded on the above two excellent works, the substance of which, in a compressed form, is now presented for the first time[1] to the English public.

Comparatively few of Mozart's compositions were published in his lifetime; the greater part being circulated, with or without his acquiescence, in MS. His publishers in Vienna were Artaria, Toricella, and Hoffmeister. Breitkopf & Härtel published the first comprehensive edition in 1800, and the twelve vols. of 'Œuvres complets' were long and widely known. The same enterprising firm issued the first scores of his Symphonies, Requiem, and other works. Steiner of Vienna followed in 1820 with an engraved edition of his collected works in thirty parts. Numerous 'complete' collections of his PF. works, quartets, quintets, etc., came out afterwards. Breitkopf & Härtel next issued his last great operas in score, revised from the autographs, preparatory to their 'Erste kritisch durchgesehene Gesammtausgabe' of his works, begun in 1876 and now completed. Von Köchel with great liberality provided a special

[1] [This of course refers to the first edition of the Dictionary.]

fund to start this work—the finest possible monument to Mozart, and at the same time an honourable memorial of his most worthy admirer.

Classified List of Mozart's works; from the Catalogue of Breitkopf & Härtel's *Erste kritisch durchgesehene Gesammtausgabe.*

I. VOCAL

Series 1. 15 Masses.
Series 2. 4 Litanies, 2 Vespers, 1 Dixit and Magnificat.
Series 3. 4 Kyries, 1 Madrigal, 1 Veni Sancte, 1 Miserere. 1 Antiphon, 3 Regina cœli, 1 Te Deum, 2 Tantum ergo, 2 German Kirchenlieder, 9 Offertoires, 1 De profundis, 1 Air for soprano, 1 Motet for ditto, 1 Motet for 4 voices, 1 Graduale, 2 Hymns.
Series 4. 1 Passions-cantate (Grabmusik); 'La Betulia liberata,' oratorio: 'Davidde penitente,' cantata; 'Die Maurerfreude,' short cantata for tenor with final chorus; 'Eine kleine Freimaurer cantate,' for 2 tenors and bass.
Series 5. 'Die Schuldigkeit des ersten Gebotes,' sacred Singspiel in three parts (first only by Mozart). 'Apollo et Hyacinthus,' Latin comedy. 'Bastien und Bastienne,' German operetta, 1 act. 'La finta Semplice,' opera buffa, 3 acts. 'Mitridate, Rè di Ponto,' opera, 3 acts. 'Ascanio in Alba,' theatralische Serenade, 2 acts. 'Il Sogno di Scipione,' dramatische Serenade, 1 act. 'Lucio Silla,' dramma per musica, 3 acts. 'La finta Giardiniera, opera buffa, 3 acts. 'Il Rè Pastore,' dramatic Cantata, 2 acts. 'Zaide,' German opera, 2 acts. 'Thamos, König in Aegypten,' heroisches Drama; Choruses and Entr'actes. 'Idomeneo Rè di Creta, ossia, Ilia ed Adamante,' opera seria in 3 acts. Ballet-music to 'Idomeneo.' 'Die Entführung aus dem Serail,' komisches Singspiel, 3 acts. 'Der Schauspieldirector,' comedy with music, 1 act. 'Le Nozze di Figaro,' opera buffa, 4 acts. 'Il Dissoluto punito, ossia, Il Don Giovanni,' opera buffa, 2 acts. 'Così fan tutte' ('Weibertreue'), opera buffa, 2 acts. 'La Clemenza di Tito,' opera seria, 2 acts. 'Die Zauberflöte' ('Il Flauto magico') German opera, 2 acts.
Series 6. 27 airs, 1 rondo for soprano with orchestra obbligato; 1 ditto for alto; 8 ditto for tenor; 5 ditto for bass: 1 ariette for bass; 1 deutsches Kriegslied; 1 duet for 2 soprani; 1 comic duet for soprano and bass; 6 terzettos; 1 quartet.
Series 7. 34 Lieder for single voice with PF. accompaniment; 1 Lied with chorus and organ; 1 three-part chorus with organ; comic terzetto with PF.: 20 canons for 2 or more voices.

II. INSTRUMENTAL

Orchestral Works

Series 8. 41 Symphonies.
Series 9. 28 Divertimenti, Serenades, and Cassationen for orchestra (12 Divertimenti for wind instr.); 3 Divertimenti for 2 violins, viola, 2 horns, and bass.
Series 10. 9 Nos. Marches for orchestra; 2 symphonic movements; 'Maurerische Trauermusik' for orch.; 'Ein musikalische Spass' for 2 violins, viola, bass, and 2 horns; 1 Sonata for bassoon and v'cello; short Adagio for 2 corni di bassetto and bassoon; Adagio for 2 clarinets and 3 corni di bassetto; Adagio for harmonica; Adagio and Allegretto for harmonica, flute, oboe, viola, and v'cello; Adagio and Allegretto for a musical clock; Fantasia for ditto; Andante for a small barrel-organ.
Series 11. 25 Nos. various kinds of dance-music for orchestra.
Series 12. Concertos, and smaller pieces with orch. 6 Concertos for violin; 3 short pieces for ditto; 1 Concertone for 2 solo violins; 1 Symphonie concertante for violin and viola; 1 Concerto for bassoon; 1 ditto for flute and harp; 2 ditto for flute; 1 Andante for ditto; 4 Concertos for horn; 1 ditto for clarinet.

Chamber-Music

Series 13. 7 Quintets for 2 violins, 2 violas, and v'cello; 1 ditto, for 1 violin, 2 violas, horn, and v'cello (or 2nd v'cello instead of horn); 1 ditto for clarinet, 2 violins, viola, and v'cello.
Series 14. 26 Quartets for 2 violins, viola, and v'cello; 1 short Nachtmusik for 2 violins, viola, v'cello, and double-bass; Adagio and Fugue for 2 violins, viola, and v'cello; 1 Quartet for oboe, violin, viola, and v'cello.
Series 15. 2 Duets for violin and viola; 1 Duet for 2 violins; 1 Divertimento for violin, viola, and v'cello.

PF. Music

Series 16. 25 Concertos for PF. and orchestra; 1 ditto for 2 PFs.; 1 ditto for 3 PFs.; 1 Concert-rondo for 1 PF.
Series 17. 1 Quintet for PF., oboe, clarinet, horn, and bassoon; 2 Quartets for PF, violin, viola, and v'cello; 7 Trios for PF., violin, and v'cello; 1 ditto for PF., clarinet, and viola.
Series 18. 42 Sonatas for PF. and violin; Allegro for ditto; 12 variations for ditto; 6 variations for ditto.
Series 19. 5 PF. Sonatas for 4 hands; Andante with 5 variations for ditto; Fugue for 2 PFs.; Sonata for ditto.
Series 20. 17 Sonatas for PF.; Fantasia and Fugue; 3 Fantasias for ditto.
Series 21. 15 Collections of variations for PF.
Series 22. 18 short pieces for PF. (Minuets, 3 Rondos, Suite, Fugue, 2 Allegros; Allegro and Andante; Andantino; Adagio; short Gigue; 35 Cadenzas for PF. concertos).
Series 23. 17 Sonatas for organ with accompaniment (chiefly 2 violins and bass).
Series 24. Supplement. Contains all the unfinished and doubtful works, etc. Among others: The 'Requiem'; 'L'Oca del Cairo,' opera buffa; 'Lo Sposo deluso,' opera buffa; Handel's 'Acis,' 'Messiah,' 'Alexander's Feast,' and 'Ode on St. Cecilia's Day' (additional accompaniments); 5 Fugues from the 'Wohltemperirtes Clavier' (arranged for 2 violins, viola, and bass); 3 Sonatas of Johann Bach's (arranged as a concerto for PF., 2 violins, and bass); etc.

C. F. P.; with additions in square brackets by W. H. H[W].

Mozart's Spurious Masses

The notice of Mozart can scarcely be considered complete without some mention of works, undoubtedly spurious, which have been attributed to him, and of those which the best authorities consider at least doubtful, especially as some important works are included in these categories. Of the former class Köchel's Catalogue enumerates sixty-three, of the latter forty-seven. The most important are various masses, published, together with Mozart's genuine ones, by Novello in his arrangement for organ and voices. Those in E♭ (Novello's Nos. 13 and 16), and in C (his No. 17), Köchel regards as of doubtful authorship (Appendix Nos. 185, 186). Novello's No. 7 in B♭, of which the score and parts were published by C. F. Peters at Leipzig as by Mozart, is believed by a writer in the *Allgemeine musikalische Zeitung* (xiv. p. 829) to be spurious, which opinion is shared by O. Jahn (ed. 1, i. 673), who states that there were no clarinets in the Salzburg orchestra when Mozart was there; to which Köchel adds that we know enough of Mozart's subsequent life at Mannheim, Munich, and Vienna before 1784, from his own letters, to be sure that he then wrote no Mass except that in C minor. To which must be added that Mozart's widow stated that this Mass was composed by F. X. Süssmayer. Two short Masses (Novello's Nos. 8 and 9) in C and G were published by M. Falter at Munich as Mozart's, but are said to be by Gleissner of Munich. A short Requiem in D minor was published by Simrock at Bonn (Novello's No. 18) as Mozart's; but Köchel says it is certain that Mozart never wrote any Requiem except his celebrated last composition.

The most important of these spurious Masses is that which was published in score by N. Simrock at Bonn in 1821, and by Novello for organ and voices as No. 12. This Mass commences in G, but is chiefly in C and its related keys, and ends in C. The reviewer in the *Allgemeine musikalische Zeitung*, xxiii. p. 648, for Oct. 1821 declares that he had possessed it for thirty years, and argues for its genuineness (notwithstanding that the style is rather showy, more calculated to please the Archbishop of Salzburg than to satisfy Mozart himself). But in July 1826 Ritter Ign. von Seyfried opened a controversy on the subject in the *Cæcilia* (vol. v. Heft 17, p. 77) with 'Scruples concerning the Mass in G published by Simrock in the name of Mozart,' in which he enumerated especially weaknesses in part-writing and tonality, and other faults, and pronounced it spurious. In Heft 22 of the same journal the publisher of the Mass declared that he had received it from Carl Zulehner, who would doubtless explain how he had come into possession of the MS., the handwriting of which was similar to Mozart's, but probably not his. But Zulehner made no answer to the challenge. Jahn (i. 672) agrees with

Seyfried, and adds that 'the treatment of the instruments, especially the bassoons, is quite different from Mozart's manner in his Salzburg masses.' And Köchel adds, 'This Mass is declared by all connoisseurs to be decidedly spurious.' To this another testimony can now be added. The violinist Leopold Jansa recognised it as a Mass in which he used to sing as a boy in a musical school in his native country of Bohemia, where it was known as 'Müller's Mass.' This would take us back to about 1812, long before its first publication by Simrock in 1821. If Müller was really the composer's name, it ought to be possible to discover him. As regards his age, he might be August Eberhardt Müller. And he is named in Köchel's *Catalogue* (App. No. 286) on the authority of a Catalogue of Breitkopf's, as the real composer of some variations published as Mozart's own; besides which, two songs, also published as Mozart's, are attributed to 'Müller' by Köchel (Nos. 248, 249), on the authority of a writer in the *Allgemeine musikalische Zeitung* (i. 745). But as a musician of North Germany he was perhaps hardly likely to be known in manuscript copies in Bohemia. Wenzel Müller, music composer at the various theatres in Vienna from 1786 is more likely in the latter respect, but his serious music is extremely unimportant. If the name Müller be discarded, it might be asked whether Zulehner may not have palmed off a work of his own on Simrock as Mozart's. Zulehner was well acquainted with Mozart, and worked for Simrock, who published two choruses from 'Thamos,' arranged for four voices with pianoforte accompaniment by Zulehner, which are quite different from those in Mozart's 'Thamos' to the same words, and are therefore placed by Köchel in the list of spurious works (No. 243). This seems a parallel case to that of the Mass, of which Simrock published both the score and an arrangement for four voices and pianoforte by Zulehner. The same publisher published also an arrangement for Mozart's (genuine) symphonies as trios for PF., violin and violoncello, by Zulehner. Moreover, Zulehner was the possessor of a Mass in C bearing Mozart's name, and called the 'Coronation Mass.' This was a mere pasticcio of pieces taken from 'Così fan tutte,' transposed, altered, and joined together by intervening chords. Zulehner is said to have maintained that the mass was the original work, and that Mozart 'plundered' his own work (as Jahn says) to produce the opera. This is perhaps the most damaging fact, yet ascertained, to Zulehner's reputation. Jahn says, 'That the mass is pieced together from the opera by some church-musician is proved by the existence of passages not belonging to the opera, and by the mode in which the borrowed treasure is employed; and no musician to whom I have shown the mass doubted this' (Jahn, iv. Beilage 5). Two other remarks may be made. It rather seems as if the mass were put together from two distinct sources. The Kyrie is in G, the Gloria is in C; the Mass ends in C, and the middle movements are in keys related to C, but not for the most part to G: F, A minor, G, and C minor. It seems, therefore, as if we had a mass in C *minus* the Kyrie, and as if a Kyrie from some other source had been prefixed to complete it. It is finally interesting to note that the only really strong movement in the Mass, the great fugue 'Cum sancto spiritu,' which is well worthy of Mozart, is expressly stated by Simrock in his answer to Seyfried to have been performed, long before the publication of this Mass, in the chapel of the Elector of Cologne in *a Mass* of Mozart's; and he gives no such testimony of any other part of this Mass. It may, therefore, be possible to cling to the belief that this single movement is genuine.

The other spurious works are less important. Most have never been published, or published only once or twice by obscure publishers in Germany. There are, however, thirty-nine spurious songs in vogue, published chiefly by Rellstab at Berlin and André at Offenbach, of some of which the true composers are known. One is the beautiful bass air 'Io ti lascio, cara, addio' (published in Suppl. to *Allg. musik Zeitung*, i.), which is by G. von Jacquin (Köchel, App. Nos. 245-283). Among the doubtful pieces are reckoned three Divertimenti for wind instruments, a sonata in C minor, and a romance for pianoforte in A♭ (*Ib.* 226-228, 204, 205). R. M.

MOZARTEUM OF SALZBURG, THE. An educational institute for musicians, which also gives annual concerts. With it is connected the Dom Musikverein, which undertakes the music for the cathedral services. Dr. Otto Bach was the director from 1868. In 1869 an 'International Mozart Stiftung' or Fund was created, with the double object, as yet unrealised, of assisting poor musicians, and founding an 'International Conservatorium.' C. F. P.

MOZARTSTIFTUNG, THE, at Frankfort, was founded in 1838, to assist poor but talented musicians in their studies. Scholarships are retained as a rule for four years. [Among eminent musicians who have held them are the following:—Max Bruch, K. J. Brambach, A. Krug, F. Steinbach, E. Humperdinck, Paul Umlauft, and Ludwig Thuille.] C. F. P.

MUCH ADO ABOUT NOTHING. Opera in four acts after Shakespeare, text by Julian Sturgis, music by C. V. Stanford. Produced at Covent Garden, May 30, 1900. In a German translation by John Bernhoff, at the Stadttheater, Leipzig, April 25, 1902.

MUCK, Karl, was born at Darmstadt, October 22, 1859, his father being a Bavarian Magistrate (Ministerialrat), and studied at Heidelberg and Leipzig. At the latter place he visited both University and Conservatorium, and graduated as Doctor of Philosophy. The same

year (1880) he made his début as a pianist in the Gewandhaus. Shortly afterwards he became capellmeister at Salzburg, then at Brünn, Graz, and in 1886 first capellmeister at Prague. As director of Neumann's Travelling Opera Company he appeared in Berlin, and was appointed in 1892 capellmeister at the Royal Opera in that capital, a post he resigned in June 1906, going to America to conduct the Boston Symphony Concerts. He conducted at the Bayreuth Festival of 1902. He visited England in 1899 to conduct German Opera at Covent Garden. H. V. H.

MUDIE, Thomas Molleson, was born at Chelsea on Nov. 30, 1809. He died, unmarried, in London, July 24, 1876, and is interred in Highgate cemetery. He was one of the ten successful candidates for entry into the Royal Academy of Music, in the severe first examination of 1823. At the foundation of this institution the Utopian idea was entertained of giving free education to its pupils and defraying the cost from funds raised by subscription; hence the large number of candidates. Mudie was a pupil of Dr. Crotch for composition, of Cipriani Potter for the pianoforte—who also gave him useful advice as to his writings—and of Willman for the clarinet. He studied this last in compliance with the rule that male students must take part in the orchestral practices, and thus obtain the benefit of this experience; he obtained much proficiency on the instrument, and had a remarkably beautiful tone, but he ceased its use when he discontinued his studentship. His song 'Lungi dal caro bene,' was so esteemed that the Committee of Management paid the cost of its publication, an act repeated in the case of Sterndale Bennett's First Concerto, but in no other. Several vocal pieces with orchestral accompaniment, a Symphony in C, and one in B♭ were also works of his student time. The last named is especially notable, and may be remembered by its Minuet with two Trios, all three finally played together as a Coda. Mudie's pupilage terminated in 1832, by his appointment as a professor of the pianoforte in the Academy, which post he held till 1844. In 1834 he entered into some relationship, partly of friendship and partly stipendiary, with Lord Monson, with whom he spent much of his time at Gatton in Surrey. This relation was closed by Lord Monson's death in 1840, who bequeathed to Mudie an annuity of £100, which, however, the estate being somewhat involved, the musician relinquished in favour of his patron's widow. He continued to act as organist of Gatton till 1844. The Society of British Musicians, founded in 1834, furnished an arena for the performance of several of the works of Mudie. The Symphony in B♭ already mentioned, was played at the concert of Feb. 9, 1835; a Symphony in F, remarkable for a movement in F minor, Nov. 10, 1835; a Symphony in D, March 10, 1837; a Quintet in E♭ for pianoforte and strings, Jan. 5, 1843 and March 7, 1844; a Trio in D for pianoforte and strings, Oct. 6, 1843; and several songs and concerted vocal pieces on many occasions. On the death of Alfred Devaux, in 1844, Mudie went to succeed him in his occupation as teacher in Edinburgh. While there he published several pianoforte pieces and songs, and wrote accompaniments to many of Wood's collection of the Songs of Scotland; he also occasionally gave pianoforte recitals. In 1863 he returned permanently to London, but from that time, except with an overture at one of the Crystal Palace concerts, came little before the public. A complete reverse of the brilliant prospects of his early days clouds the latter period of Mudie's career, when his playing lost its charm, and his music had rarely the power — amounting even to mastership—that distinguished his first productions. His published music comprises forty-eight original pianoforte solos, including the twelve melodies dedicated to Sir W. Sterndale Bennett; six duets for the same instrument; nineteen fantasias, some of which are on Scottish airs; a collection of twenty-four sacred songs, a work of remarkable interest; three sacred duets; three chamber anthems for three voices; forty-two separate songs, and two duets. The existing scores of his symphonies and the whole of his printed works are deposited in the library of the Royal Academy of Music. G. A. M.

MÜHLFELD, Richard, born Feb. 28, 1856, at Salzungen, learnt theory from Emil Büchner, and was a member of the famous Grand Ducal Orchestra of Meiningen from 1873, at first as a violinist, but from 1876 as first clarinet, having taught himself the latter instrument with such success that he rapidly gained an unique position among modern players. He took part in the Bayreuth festival plays from 1884 to 1896, and came to England for the first time in 1892, appearing on March 28 at the Popular Concerts, in Brahms's quintet for clarinet and strings, a work, like the master's trio and the two sonatas in which the same instrument is employed, written with special view to Mühlfeld's great qualities as a player. Nothing can exceed the depth of meaning and beauty that he can put into a phrase, and in all kinds of music his performance is a perfect model of what musical interpretation can be. Many a detail of excellence in the Meiningen orchestra is due to him, for he was accustomed for many years to act as sub-conductor, and to rehearse the players singly and in groups. (Riemann's *Lexikon*, etc.) M.

MÜLLER, the brothers, celebrated quartet-players, four sons of the Duke of Brunswick's Hofmusikus, Aegidius Christoph Müller, born July 2, 1766, at Nordhausen, died Aug. 14, 1841, at Brunswick, where all his sons

were born. The brothers were KARL FRIEDRICH, first violin and concertmeister to the Duke, born Nov. 11, 1797, died April 4, 1873; THEODOR HEINRICH GUSTAV, viola, born Dec. 3, 1799, died Sept. 7, 1855; AUGUST THEODOR, violoncello, born Sept. 27, 1802, died Oct. 20, 1875; FRANZ FERDINAND GEORG, second violin and capellmeister to the Duke, born July 29, 1808, died May 22, 1855.[1] Educated by their father expressly with a view to quartet-playing, they brought the art to a perfection then unknown. The Duke of Brunswick's somewhat tyrannical regulation, by which none of his musicians were allowed to take any part in the music of the town, obliged them to prepare in secret for appearing in public, and in 1830 they sent in their resignations. They gave concerts at Hamburg in 1831, and in 1832 at Berlin, where the public gradually learned to appreciate their wonderful ensemble. In 1833 they left Berlin, and visited in turn all the principal cities of Germany and Paris, extending their tours farther and farther, till 1845, when they went to Russia. Their repertoire consisted almost entirely of the works of Haydn, Mozart, and Beethoven, and they thus contributed immensely to the spread of a taste for really good music. Their performance of Haydn's 'Kaiser quartett' especially had a world-wide reputation.

The eldest brother, Karl Friedrich, also had four sons, known as the younger Müller brothers; BERNHARD, viola, born Feb. 24, 1825, died Sept. 4, 1895; KARL, first violin, born April 14, 1829 (he married a singer Elvira Berghaus, and was known as Müller-Berghaus); HUGO, second violin, born Sept. 21, 1832, died June 26, 1886; and WILHELM, violoncello, the most important, born June 1, 1834, died in New York, in Sept. 1897. They were court quartet-players to the Duke of Meiningen, and also made extended tours, visiting Russia, Denmark, and France. In 1866 they settled for a short time in Wiesbaden, and then at Rostock, where Karl became capellmeister, his place in the quartet being supplied when travelling by Leopold Auer. It was, however, broken up entirely in 1873, by the appointment of Wilhelm as Kammermusikus, and teacher at the Hochschule für Musik in Berlin. The younger Müllers, though distinguished for their ensemble, did not reach the standard of perfection maintained by the elder brothers; the chief reason being that instead of restricting themselves to genuine quartets, they played music which, though good of its kind, was in reality better suited to a small orchestra. F. G.

MÜLLER, AUGUST EBERHARDT, born Dec. 13, 1767, at Nordheim, in Hanover. His father, organist at Rinteln, was his first instructor and he subsequently learnt of J. C. F. Bach of Bückeburg. In 1785 he went to Leipzig to study law, but soon gave it up, and became in 1789 organist of St. Ulrich's church, Magdeburg. In 1792 he was chosen to direct the concerts, etc., at Berlin, and there became intimate with Marpurg, Fasch, Reichardt, and other distinguished men. He was made organist of St. Nicholas' church, Leipzig, in 1794. He played the organ and harpsichord equally well, and was also a proficient on the flute. In 1800 he was appointed deputy to Hiller at the Thomasschule, and cantor on Hiller's death in 1804. In 1810 he moved to Weimar, and died Dec. 3, 1817. The following is a list of his compositions:—(1) Piano: Two concertos; a trio for piano and strings, op. 17; two sonatas for violin and piano; many sonatas for piano solo, besides variations, etc. (2) Organ: Suites, a sonata and chorale, variations. (3) Flute: Eleven concertos; a fantasia with orchestra, and twenty-three duets for two flutes. (4) Vocal: Three cantatas for four voices and orchestra; two posthumous operettas (Singspiele); songs with piano accompaniment. (5) Instruction: Method for the piano, and instruction-book for the flute (see the *Quellen-Lexikon*). M.

MÜLLER, CHRISTIAN, of Amsterdam, between 1720 and 1770 built the finest organs in Holland, and especially the celebrated instrument at Haarlem in 1738. V. DE P.

MÜLLER, HEINRICH, born at Lübeck, Oct. 18, 1631, was from 1653 till his death, Sept. 17, 1675, Pastor and Archdeacon of the St. Marien-Kirche, Rostock, also a distinguished professor of theology at the University there. Among his numerous theological and homiletical works he published in 1659 a book entitled 'Geistliche Seelen-Musik,' containing about 400 Hymns, mostly of a very subjective devotional cast, for which 126 tunes are provided with Figured Bass. As the Hymns are characterised by almost an excess of subjective devotional sentiment, some of them by Müller himself, and a large number from Angelus Silesius, so the tunes bear witness to a corresponding change in musical taste, and the gradual suppression of the older rhythmical chorale in favour of the secular Aria-form in modern keys. The work is even more of a pioneer in this direction than Crüger's 'Praxis pietatis melica.' Of the tunes fifty new ones are the invention of Nicolaus Hasse, then organist of the Marienkirche. None of these tunes have continued in general use, though one has reappeared in a recent English collection 'Songs of Syon,' edited by the Rev. G. R. Woodward (No. 3). Müller prefaces his work with a series of ten chapters on the origin and use of Spiritual Songs, in the course of which he deplores the decay of congregational interest in Church Music and Hymn-singing, and of the devotional sentiment in connection therewith. His object was thus to stir up greater interest in congregational singing from the devotional point of view, and by the infusion of greater warmth of

[1] The dates of death are very much confused by Riemann; the above are believed to be correct.

devotional sentiment. Another work of Müller may be mentioned, *Geistliche Erquick-stunden* (1664-66), the devotions in which were afterwards versified, and provided with tunes in the form of spiritual Arias by several Nuremberg poets and musicians, members of the Pegnitz-Blumen-Genossenschaft, and published under the title *Poetischer Andacht-Klang* (1673-91). It was works of this kind that led the way to the introduction of the devotional solo Aria into the Lutheran Church Cantata. J. R. M.

MÜLLER, Iwan, a renowned clarinettist, born at Reval, Dec. 3, 1786, appeared first in Paris in 1809, where he brought out many of his structural improvements in the instrument, and where, after a residence of some years, and a successful concert tour through all the principal European cities, undertaken in 1820-1826, he was appointed professor in the Conservatoire. In later life he returned to Germany, and died at Bückeburg, Feb. 4, 1854. His compositions (concertante for two clarinets, three quartets for clarinet, violin, viola, and violoncello, etc.) have an educational value for players of his instrument, but beyond that they are of no importance. His best production is a 'Gamme pour la nouvelle Clarinette,' published at Berlin in 1825. M.

MÜLLER, Wenzel, born Sept. 26, 1767, at Tyrnau in Moravia, was for some time a pupil of Dittersdorf, and became conductor in the Brünn Theatre in 1783 and three years afterwards, when only nineteen, obtained a similar post at Marinelli's theatre in Vienna. The rest of his life was spent in the capital, with the exception of the years 1808-1813, during which he was director of the opera at Prague, where his daughter Therese, afterwards known as Madame Grünbaum, was engaged as a singer. On his return to Vienna, he became conductor at the Leopoldstadt Theatre, and retained the post until within a short time of his death, which took place at Baden near Vienna, on August 3, 1835. As a composer of light operas, he enjoyed enormous popularity for many years, and his productions in this kind are said to number over 200. His more ambitious works, as symphonies, masses, etc., were less successful. Among his dramatic works may be mentioned:—'Das Sonnenfest der Braminen' (1790); 'Das neue Sontagskind' (1793); 'Die Schwestern von Prag' (1794); 'Die Teufelsmühle auf dem Wienerberge' (1799). A peculiar interest attaches to his 'Zauberzither' or 'Kasper der Fagottist,' produced June 8, 1791, since Schikaneder took several suggestions from it for the plot of 'Die Zauberflöte.' In 1818 Müller produced his 'travestierte Zauberflöte' (Mendel's *Conversations-Lexikon*; Riemann's *Opernhandbuch*). M.

MÜLLER, Wilhelm, author of the poems of Schubert's beautiful song-cycles 'Die schöne Müllerin' and 'Die Winterreise,' and father of Max Müller the eminent philologist, was born at Dessau, Oct. 7, 1794, son of a well-to-do tradesman, who educated him carefully in accordance with the liberal tendencies of the times. In 1812 he studied philology at Berlin under F. A. Wolf, and history. In 1813 he joined the Prussian army as a volunteer, and took part in Lützen, Bautzen, and other battles, and in the occupation of the Netherlands. Returning to Berlin in 1814, he devoted himself to ancient German language and literature. On his return from Italy in 1819 he became librarian to the Duke of Dessau. He died at Dessau on Oct. 1, 1827. The best-known of his poems are *Gedichte aus den hinterlassenen Papieren eines Waldhornisten*, two vols. (1821-1824); *Lieder der Griechen*, five parts (1821-1824); a translation of Fauriel's modern Greek national airs, two vols. (Leipzig, 1825); *Lyrische Spaziergänge* (*ibid.* 1827). His miscellaneous works were edited by Schwab in five vols. (1830). His collected poems, published after his death (Leipzig, 1837), are among the choicest lyrical treasures of Germany.[1] Warmth and truth of expression, keen observation of nature, and melodiousness of language, have made him a universal favourite with composers. Randhartinger states that the first time Schubert met with the Müllerlieder, he was so enchanted that he set several before the next day. F. G.

MÜTHEL, Johann Gottfried, born about 1720 at Mölln in Lauenburg, became a pupil of J. P. Kuntzen at Lübeck, and in 1738 received the appointment of chamber-musician and court-organist at Schwerin, in which capacity he also gave musical instruction to the members of the Ducal family of Mecklenburg-Schwerin. Provided with a letter of introduction from the Duke he went to Leipzig in May 1750 to perfect himself in playing and composition under the tuition of Sebastian Bach. It was the last year of Bach's life, but he received Müthel into his house, and Müthel was with him in his last illness and at his death. He then went to Naumburg to Bach's son-in-law Altnikol, and afterwards visited Dresden and Potsdam, at which latter place he made the acquaintance of Emanuel Bach, with whom he continued on terms of close friendship. In 1753 he accepted a call to Riga, where he remained for the rest of his life as organist to the Lutheran Church, and where he died some time after 1790. Müthel is described as one of the best organ and clavier players and composers of his time. Dr. Burney speaks of his clavier works in the highest terms, describing them indeed as more difficult than those of Handel, Scarlatti, Schobert, and Emanuel Bach; but as characterised by so much novelty, taste, grace, and contrivance as entitle them to be ranked among the best productions of the kind (see his *Present State of Music in Germany*, 1773, vol. ii.

[1] See an essay on Wilhelm Müller, in Max Müller's *Chips from a German Workshop*, vol. iii. pp. 103-121.

pp. 328-329). His style would seem to be akin to that of Emanuel Bach, but of greater severity and with fewer concessions to the taste of the day. Only a few of his works were published, among them two Concertos, C minor and D minor, for clavier with accompaniment of strings, published at Riga in 1767; three sonatas and two Ariosi with variations published by Haffner at Nuremberg; a 'Duetto für 2 Claviere, 2 Flügel, oder 2 Fortepiano,' Riga, 1771, which appears to be the earliest work with Fortepiano on the title. In Madame D'Arblay's *Diary* mention is made of this Duet as played by two members of Dr. Burney's family at one of his house-concerts. If Müthel's clavier works have that originality which Burney and Schubart (*Ideen zur Aesthetik der Tonkunst*, 1784), ascribe to them, it is surprising that in these days of revivals none of them have ever been republished. J. R. M.

MUETTE DE PORTICI, LA. See MASANIELLO.

MUFFAT, GEORG, highly esteemed composer, of Scottish extraction (Eitner), studied Lulli's style for six years in Paris; was organist of Strasburg Cathedral till 1675; became organist to the Bishop of Salzburg about 1678; visited Vienna and Rome; became in 1690 organist, and in 1695 capellmeister and Master of the Pages to the Bishop of Passau, and died there Feb. 23, 1704. He published 'Armonico tributo' (sonate di camera, Salzburg, 1682); 'Apparatus musico-organisticus'—twelve toccatas, chaconne, passacaglia, Augsburg, 1690, dedicated to Leopold I.)—of importance as regards the development of organ-playing. 'Svaviores harmoniae. . . . Florilegium I.' (Augsburg, 1695); 'Florilegium secundum' (Passau, 1698), both with autobiographical preface in four languages; 'Ausserlesene mit Ernst und Lust Gemengte Instrumental-Music' (1701). See *Zeitschrift* of the *Int. Mus. Ges.* vol. v. p. 365. [The 'Apparatus' was republished in the *Trésor des Pianistes*, and the two works called 'Florilegium' in the *Denkmäler d. Tonkunst in Oesterreich*, Jhrg. i. and ii., 1894 and 1895;] the 'Ausserlesene mit Ernst und Lust Gemengte,' etc. in the same series, Jhrg. xi. His son

AUGUST GOTTLIEB (Theophilus), born in 1690 (baptized April 25) at Passau, a pupil of J. J. Fux, became in 1717 court and chamber-organist to the Emperor Charles VI., and to the widowed Empress Amalie Wilhelmine (died 1742), and music-master to the royal children. He retired on a pension in 1763, and died in Vienna, Dec. 10, 1770, aged eighty. He was a distinguished organist and a composer of taste, and published for organ,[1] '72 Versetten oder Fugen, sammt 12 Toccaten, besonders zum Kirchendienst bei Choral-Aemtern und Vespern dienlich' (Vienna, 1726); for harpsichord, 'Componimenti musicali,' containing overtures, caprices, sarabandes, etc., with a preface; and ending with 'Particolari segni delle maniere,'[2] etc. (Vienna, 1727, dedicated to Charles VI., at whose expense it was engraved). Zellner arranged a toccata and fugue in C minor, composed by Muffat in 1720 as a concert-piece for harmonium (Vienna, Spina). A Courante and two Minuets of his are given by Pauer in 'Alte Klaviermusik' (Senff). He was one of the many composers whom Handel laid under contribution for subjects and phrases in his oratorios. The 'Componimenti,' republished in the *Trésor des Pianistes*, were again brought out by Chrysander, as No. 5 of his 'Supplemente.' See DENKMÄLER, vol. i. p. 689. See *Riv. Mus. Ital.* iii. 1, where an interesting article by Guido Adler is to be found.

There were two violinists of the same name in the Imperial chapel, GOTTFRIED, from 1701 to 1709, and JOHANN ERNST, appointed in 1730, died in 1746, aged forty-eight. C. F. P.

DE MUNCK, FRANÇOIS, Belgian violoncellist, was born at Brussels in 1815. He was trained at the Brussels Conservatoire under Platel, in which institution he eventually became that famous teacher's successor as first professor of the violoncello. As a soloist he was well known in Germany. In 1848 he accepted a position in the orchestra of Her Majesty's Theatre, London, but returned to Brussels in 1853, where he died the year following. His chroniclers unite in ascribing to him exceptional talents, the development of which was hindered by a somewhat disorderly course of life. His one published composition was a 'Fantaisie et Variations sur un thème Russe.' W. W. C.

DE MUNCK, ERNEST, son of the above, was born at Brussels in 1840. A pupil of his father, and of Servais, he was at the age of ten already a capable violoncellist. In 1855 he went on tour in Great Britain with Jullien's band, and ultimately settled down in London, where he is now engaged as professor at the Guildhall School of Music. His residence in London has, however, not been continuous. In 1868 he was in Paris, and in 1870 at Weimar, where he formed part of the Court orchestra. He married Carlotta Patti in 1879. In 1893 he was appointed professor at the Royal Academy of Music. W. W. C.

MUNDY, JOHN, Mus.D., son of William Mundy, Gentleman of the Chapel Royal, was educated by his father, became organist of Eton College, and about 1585 succeeded John Marbeck as one of the organists of St. George's Chapel, Windsor. On July 9, 1586, he graduated as Mus.B. at Oxford. Both he and his father are mentioned in some verses at the end of a MS. collection of Motets and Madrigals transcribed in 1591 by John Baldwin, singing man of Windsor, recounting the celebrated musicians of the time. In 1594 he published 'Songs and Psalmes, composed into 3, 4, and 5

[1] About seventy years ago Löschenkohl of Vienna republished from this work 'XII kleine Fugen sammt II Toccaten.'

[2] Manieren = Agrémens—turns, beats, etc.

parts, for the use and delight of such as either love or learne Musicke.' He contributed a madrigal, 'Lightly she tripped o'er the dales.' to 'The Triumphes of Oriana,' 1601. He took his Mus.D. degree in 1624. An anthem by him is contained in Barnard's MS. collections, and three of the pieces in his 'Songs and Psalmes' were scored by Burney (Brit. Mus. Add. MS. 11,588). Burney gives a part-song by him, 'In deep distress,' in his *History*, vol. iii. p. 55. Several of his compositions for the keyboard are contained in the Fitzwilliam Virginal Book, among them a curious Fantasia describing 'Faire Wether,' 'Lightning,' 'Thunder,' 'Calme Wether,' and 'A faire Day.' He died in 1630 and was buried in the Cloisters of St. George's Chapel, Windsor.

William Mundy, his father, was a vicar choral of St. Paul's, and on Feb. 21, 1563-4, was sworn a Gentleman of the Chapel Royal. A service and three anthems by him, and also the anthem 'O Lord, the Maker of all thing' (sometimes assigned to Henry VIII.), are printed in Barnard's 'Selected Church Music.' Another service and two other anthems are contained in Barnard's MS. collections, and eleven Latin motets in a set of MS. parts by him, both in the library of the Royal College of Music. A number of compositions are in the Christ Church and Music School collections, Oxford. The words of several of his anthems are contained in Clifford's *Divine Services and Anthems*, 1664. He was probably one of those who, although outwardly conforming to the Reformed worship, retained a secret preference for the old faith, since he is mentioned by Morley in his *Introduction*, in company with Byrd and others, as never having 'thought it greater sacriledge to spurne against the Image of a Saint then to take two perfect cordes of one kinde together.' The date of his death is not recorded, but it was probably in 1591, as on Oct. 12 in that year Anthony Anderson was sworn Gentleman of the Chapel Royal in his room. W. H. H.

MUNRO, Alexander, a Scottish musician settled in Paris. He published there 'A Collection of the best Scots tunes fitted to the German flute,' folio, license dated 1732. This work is particularly rare, a copy was sold at the Taphouse sale in July 1905. Hawkins criticises the arrangements of the melodies thus: 'The simplicity of the airs is lost in the attempts of the author to accommodate them to the style of the Italian music.' F. K.

MURIS, Johannes de, a celebrated musical theorist of the early part of the 14th century. He has been claimed as an Englishman, but on what grounds it is difficult to say. Gesner, in his *Bibliotheca Universalis* of 1545, p. 441, cites a mathematical treatise of De Muris printed at Mainz in 1538, but gives no indication of his nationality. Bale, who appears to have relied on information received from the learned Oxford mathematician, physician, and antiquary Robert Record, included 'Joannes de Muris, *quem Anglum fuisse scriptores ferunt*,' in the second part of the enlarged edition of his *Scriptores Illustres Majoris Brittaniae* (Basle, 1559, p. 69). Neither Gesner nor Bale makes any reference to his reputation as a musician. At a later date Tanner describes him as '*natione Anglus*, philosophus, mathematicus et musicus insignis' (*Bibliotheca Brittanico-Hibernica*, 1748, p. 537), and Sir John Hawkins found confirmation of his English origin in the following verses which occur in a treatise 'De Origine et Effectu Musice' in MS. Lansdowne 763 of the British Museum, at fol. 17 :—

> Pausas. iuncturas. fracturas. atque figuras
> Mensuratarum formauit Franco notarum.
> Et Jhon de Muris variis floruitque figuris.
> Anglia cantorum nomen gignit plurimorum.

But, in whatever way these lines are punctuated, it is difficult to see how they can be made to attribute an English origin to De Muris. No locality in England is known with an English or Latinised name at all resembling Muri or Muris.

When we look abroad, the great Benedictine Abbey of Muri in Switzerland at once suggests itself; but the chronicles of this Abbey, which have been published by P. M. Keim (Zurich, 1877), contain no reference to our author. In France there are several communes of the name of Murs or Meurs, and M. l'abbé Normand, who under the pseudonym of Théodore Nisard published a short paper on Jean de Muris in 1886, gives reasons for selecting Murs or Meurs in the cantonne of Sézanne, which lies about half-way between Meaux and Vitry, as the home of the De Muris family. Henri de Muris, bishop of Thérouane, who died in 1286, was a benefactor of the abbey of Saint Faron at Meaux. Another Henri de Muris, chevalier, owned land at Saint Fiacre in Brie in 1313. This is in the near neighbourhood.

On the other hand Fétis favours a Norman origin on the ground that De Muris in a letter written late in life to Pope Clement the Sixth alludes to the friendship of their youth, and that Clement had in fact been a monk at the Chaise Dieu in Normandy and afterwards Archbishop of Rouen. He cites a Padua manuscript dated 1404, and entitled 'Mag. Joh. de Muris de Normandia alias Parisiensis practica mensurabilis cantus cum expositione Prosdocimi de Beldemandis': but one may suspect that the title is a later addition. In a mathematical treatise at Oxford dated 1321 (MS. Digby 190, fol. 66) Johannes de Muris is again described as a Norman: but this is in a colophon which is clearly not part of the original treatise. No place of the name of Murs is known in Normandy.

Whatever doubt there may be about his birthplace, there is abundant evidence that De Muris resided for some part of his life in Paris. He himself speaks of having heard at Paris a

triplum composed by Franco (Coussemaker, *Scriptores*, ii. 402*a*), and at least two of his treatises are dated from the Sorbonne in Paris. One is the 'Musica Speculativa' printed by Gerbert (*Scriptores*, vol. iii.), the Paris manuscript of which ends with the words:—'Explicit musica speculativa secundum Boetium per magistrum Johannem de Muris abbreviata Parisiis in Sorbona anno Domini 1323.' The other is the 'Canones de eclipsi lunae,' the Bodleian manuscript of which (MS. Digby 97, fol. 124*b*) ends thus:—'Hos autem canones disposuit Johannes de Muris Parisiis in anno Domini 1339 in domo scolarium de Sorbona.' M. Leopold Delisle (*Le Cabinet des Manuscrits de la Bibliothèque Nationale*, 1874, vol. ii. p. 186) has noticed that many of the Sorbonne manuscripts bear the names and possibly the signatures of teachers through whose hands they passed. One of them (Latin MS. 16,646) is an Euclid bearing the name of J. de Muris, but this may be the Julianus de Muris who was elected Rector of the Sorbonne in December 1350 (Du Boulay, *Historia Universitatis Parisiensis*, iv. 973). Mersenne (*Harmonicorum Libri XII.*, Paris, 1648, i. xxv. 8) speaks of De Muris as 'Canonicus et Decanus Ecclesiae Parisiensis'; but his name does not occur in the *Cartulary* of Nôtre Dame published in four volumes in 1850, nor in the *Gallia Christiana*, nor in *La France Pontificale*.

Beyond 1339 the existence of De Muris can be traced down to 1350 or a little later. The authors of the *Gallia Christiana*, writing in 1744 (vol. vii. p. 1636), speak of 'epistolae Johannis Muri famosi theologi anni 1340' as attesting Philip de Vitry's skill in music; but the letters are not now known, unless that mentioned below should prove to be one of them, and it may be doubted whether De Muris the musician is the person referred to. The Paris MS. 7443 of the Bibliothèque Nationale contains a letter of De Muris to Pope Clement the Sixth, who succeeded to the Papacy in 1342. MS. Digby 176 of the Bodleian Library contains (at fol. 17*b*) an astrological treatise by De Muris on the conjunction of Saturn and Jupiter in 1345. Another Paris manuscript of the 15th century (Fonds Latin 14,736) is catalogued as containing (1) Theorica numerorum auct. Jo. de Muris (2) Ejusdem epistola metrica ad Philippum de Vitriaco, episcopum Meldensem (3) De arte mensurandi. If this description be correct, De Muris must have been living at least as late as 1350, the year in which Philip de Vitry was appointed Bishop of Meaux. Weiss in Michaud's *Biographie Universelle* (Paris, 1821) asserts that De Muris is known to have been still alive in 1358, but he gives no authority.

The reputation of De Muris, not only as musician, but as mathematician, astronomer and astrologer, is attested by the numerous manuscripts bearing his name to be found in most of the principal libraries of Europe. Mathematical treatises by him were printed at Vienna in 1515 and at Mainz in 1538. A copy of the latter is in the British Museum. The *Musica Speculativa*, an abridgment of Boetius attributed to De Muris, was printed at Frankfurt in 1508 and is probably the work cited by Panzer, i. 486, as 'Joann. Muris Musica manuscripta et composita. Lipsiae, 1496, fol.' As early as 1404 a commentary on his treatise on mensurable music was written by Prosdocimus de Beldemandis, and his authority is constantly appealed to by the theorists who followed him.

Of the musical works of De Muris by far the most important, and the only one of which the authenticity has never been questioned, is the *Speculum Musice*, preserved in two manuscripts of the Bibliothèque Nationale at Paris, Nos. 7207 and 7207A, the former of which is said to date from the end of the 14th century. It is a treatise in seven books, the first five of which deal with the theory and the last two with the practice of music. Owing to its great length it has never been printed in its entirety, but Coussemaker has included the last two books in the second volume of his *Scriptores*, and has also, in the preface to that volume, given us the chapter-headings of the first five books. These treat of intervals and ratios, consonances, proportions, scales, tetrachords and the like, and are professedly based on Boetius. The sixth book is devoted to the church modes, and expounds the doctrines first of Boetius, then (cap. xv.) of Guido and his successors, and finally (cap. lx. to cxiii.) of the moderns. The seventh book deals with mensurable music, and is remarkable for the protest it contains against modern divergence from the theory and practice of Franco and his school, against innovations in notation, exaggerated sentiment in discant, the liberties taken by singers in the matter of embellishment, the excessive use of discords and the abandonment of the old Organum and Conductus in favour of the Motet and Cantilena. De Muris never refers to contemporary musicians by name, but the passages he cites from their writings show that Philip de Vitry, the champion of the 'ars nova,' was one of those attacked. This lends point to the sentence at the end of his first chapter in which De Muris disclaims any personal enmity against those whose doctrines he controverts. It has been thought that the *Speculum Musice* is the treatise mentioned with three others at the end of the mathematical treatise of 1321 as having been completed in the same year, and that its publication was the immediate cause of the Papal decree of 1322 prohibiting the use of discant in churches (see Ambros, ii. 347). The passage in MS. Digby 190 is as follows:—'Eodemque anno noticia artis musice proferende, figurande, tam mensurabilis quam plane, quantum ad omnem modum possibilem discan-

tandi, non solum per integra sed usque ad minutissimas fracciones ; Cognicioque circuli quadrature perfectissime demonstrata ; Exposicioque tabularum Alphonsi regis Castelle ; ac Geneologia Astronomie nobis claruit.' This is not a very apt description of the *Speculum Musice*, nor is the expression 'nobis claruit' such as one would expect an author to use of his own work. On the other hand, it is unlikely that De Muris would have troubled to note down such a list of works unless they were his own, and no other musical treatise of his is known to which the description would at all apply. A further difficulty is caused by the fact that in the *Speculum* De Muris speaks of himself as old and feeble, which is hardly consistent with his having lived another thirty years, and it may be doubted whether the 'ars nova' could have won by 1321 such general acceptance as is indicated by the language of the seventh book of the *Speculum*.

Several minor treatises attributed to De Muris have been printed by Gerbert and Coussemaker. Some of them do not profess to be more than epitomes of his teaching ; such are the *Summa Magistri Johannis de Muris* (Gerbert, iii. 190), and the *Ars Contrapuncti secundum Johannem de Muris* (Coussemaker, iii. 59). Others contain details of notation which did not come into use till long after his death, and doctrines which are entirely at variance with those of the *Speculum*. Such are the *Libellus Practice Cantus Mensurabilis* (Coussemaker, iii. 46), which authorises the use of white or open-headed notes in *proportio sesquialtera*, and the *Ars Discantus*, which is not only inconsistent with the *Speculum* in many respects, but actually cites De Muris as an authority (Coussemaker, iii. 68, 108). Others again contain passages which are quoted verbatim and confuted in the *Speculum*. Such are the *Musica Speculativa* and the *Quaestiones super partes Musicae* (Gerbert, iii. 256, 301) ; see Dr. Robert Hirschfeld's *Johann de Muris*, Leipzig, 1884, pp. 11-26. For these reasons the *Speculum Musice* is the only work which, in the present state of our knowledge, can be attributed without hesitation to De Muris. The treatises with the next best claim to authenticity are the *Summa Musice*, the *Libellus* and the *Musica Speculativa*. The *Summa Musice* is not inconsistent with the *Speculum*, and the difference of style may be accounted for by supposing it to be an early work written for the use of students. The *Libellus* is accepted and quoted as the work of De Muris by Prosdocimus de Beldemandis and all the early theorists. The anachronism above referred to may perhaps be explained as a later addition intended to bring the book up to date. On the other hand, in all the manuscripts, it is entitled *Libellus secundum* (not *per*) *J. de Muris*, and the mention by name of the contemporary Gulielmus de Mascandio (Guillaume de Machaut) is not in accordance with the practice of the *Speculum*. The *Musica Speculativa* follows immediately after the *Speculum* in the Paris MS. 7207, and was printed as the work of De Muris in 1508, but Dr. Hirschfeld's demonstration of the attack made upon it in the *Speculum* seems fatal to its authenticity.

At the present day it is perhaps unnecessary to refer to the extravagant claims formerly made for De Muris as a pioneer and inventor. Nicola Vicentino first made the astonishing statement that musical notes, the long, breve, etc., were the invention of De Muris (*L'Antica Musica*, Rome, 1555, p. 9). Prior to the publications of Gerbert and Coussemaker this was repeated in many books of reference (as, for instance, in Grassineau's *Musical Dictionary* of 1740), though Mersenne and after him Rousseau (*Dict. de Musique*, 1767), both of whom were at pains to consult the Paris manuscripts, had no difficulty in refuting it. If we ask what was the contribution of De Muris to the progress of the Art of Music, the answer must be that his was purely a restraining influence. Neither on the theoretical nor on the practical side of the art did he take any step forward. On the contrary, he regarded with distrust the innovations that were springing up round him, many of which were nevertheless, as we can now see, essential to musical development. He would gladly have confined music and musicians within the four corners of the Franconian theory and practice. It may be that as 'Verfechter des Classischen in der Tonkunst,' to use Dr. Hirschfeld's phrase, he did a good and necessary work in upholding the dignity of the Art, and in chastening the exuberance of younger spirits by insisting on the importance of formality in composition and restraint in utterance ; but this alone would never have commanded the respect and admiration of his age. It is to his personality as a teacher, his vast erudition and his lucidity in definition and exposition that his reputation as a musician must be attributed. J. F. R. S.

MURSCHHAUSER, Franz Xaver Anton, born at Zabern in Alsace, 1663 (baptized July 1), came early to Munich, and became a pupil of Johann Caspar Kerl, with whom he remained till his death in 1690. From the title-page of his book 'Vespertinus Latriae, et Hyperduliae Cultus' (Ulm, 1700 ; for four voices, two principal and four ripieno violins), we learn that he was then capellmeister to the Frauenkirche at Munich. He died there Jan. 6, 1738. Besides the work already mentioned, he left : —'Octitonium novum Organum' (Augsburg, 1696) ; 'Prototypon longobreve organicum' (Nuremberg, 1700)—preludes and fugues for organ, lately re-edited by Franz Commer. A second part appeared later : 'Fundamentalische . . . Handleitung gewohl zur Figural- als Choral-Musik' (1707) ; 'Opus Organicum tripartitum' (1712, 1714). His most important and best-known work is the *Academia Musico-poetica*

bipartita, oder hohe Schule der musikalischen Composition (Nuremberg, 1721). Towards the close of the first part he incautiously used the words 'to give a little more light to the excellent Herr Mattheson,' for which he was so severely taken to task by that irascible musician in a pamphlet *Melopoetische Lichtscheere in drei verschiedenen Schneutzungen* (*Critica Musica*, pp. 1-88), that he relinquished the publication of the *Academia*. An 'Aria pastoralis variata' of his is given in Pauer's 'Alte Klaviermusik' (Senff). F. G.

MURSKA, Ilma de, a native of Croatia, born in 1836, and taught singing at Vienna and Paris by Madame Marchesi; made her début in opera at the Pergola, Florence, in April 1862, sang at Pesth, Berlin, Hamburg, Barcelona, etc.; obtained an engagement in Vienna as a bravura singer in parts such as Constanze ('Seraglio'), Martha, Inez ('L'Africaine'), etc., and appeared in London at Her Majesty's Theatre, as Lucia, May 11, 1865. She played also Linda, Amina, and Astrifiammante, and sang at the Philharmonic, May 29, and always with great applause. Between this date and 1873 she acted and sang repeatedly in London, at Her Majesty's, Covent Garden, and Drury Lane, returning to the continent in the off seasons. One of her most congenial parts and best achievements was Senta in the Italian version of the 'Flying Dutchman,' July 23, 1870. Between 1873 and 1876 she visited America, Australia, New Zealand, etc., returning to this country in 1879. On Dec. 29, 1875, she married for the second time (her first marriage having taken place many years before), Alfred Anderson at Sydney; and, after his death, she took for her third husband J. T. Hill, at Otago, New Zealand, May 15, 1876. Her voice was a soprano of nearly three octaves compass, with great execution. Her acting was brilliant and original, though sometimes bordering on extravagance. Her parts, besides those mentioned, included Dinorah, Isabella, Ophelia, Marguerite de Valois, Gilda, Marta, Leonora ('Trovatore'), etc. After spending some time from 1879 onwards in London, she went to New York as a teacher of singing, but finding this work uncongenial, returned to Munich, to live with a married daughter; she died Jan. 14, 1889, and her daughter was so distraught by her death that she poisoned herself. Interesting and amusing particulars of Murska's career may be read in *Marchesi and Music*, Santley's *Student and Singer*, and *The Mapleson Memoirs*. A. C.

MUSARD, Philippe, born in Paris in 1793, was not educated at the Conservatoire, but took private lessons for some years from Reicha, to whom he dedicated his *Nouvelle Méthode de Composition musicale* (1832). This long-forgotten work, of which only eight chapters appeared, contains the announcement of a *Traité complet et raisonné du système musical*, with curious historical notes, implying that Musard was dissatisfied with his position as an obscure violinist and conductor, and proposed to make his mark as a solid and erudite musician. A series of concerts and 'bals masqués,' held in the bazaar in the Rue St. Honoré (afterwards the Salle Valentino), however, gave him the opportunity of distinguishing himself in a different direction. The most salient feature of these promenade concerts (instituted Nov. 1833) was the introduction of the cornet-à-pistons. In fact Dufresne, the cornet-player, owed much of his success to the solos composed for him by the conductor. In 1835 and 1836 Musard conducted the balls at the Opéra, and his band of seventy musicians was rapturously applauded. 'Gustave III.' had set the fashion of the galop, and with Musard's music, and the 'entrain' of the orchestra, the new dance deserved its nickname of 'Le galop infernal.' Meantime a better room had been built in the Rue Vivienne, and thither Musard removed in 1837. Here he had to sustain a competition with Johann Strauss of Vienna, whose waltzes were so superior to his own, that in order to avoid sinking to the level of a mere composer of quadrilles, Musard was driven to expedients. His first experiment, the introduction of a chorus, having succeeded, he next attempted classical music, and in Holy Week gave a 'concert spirituel,' consisting of Handel's music only. This opened the way for numerous imitators. Having secured a reputation in France he came to England, and made his first appearance at Drury Lane on Monday, Oct. 12, 1840, as conductor of the Promenade Concerts, or Concerts d'hiver, given there under the management of Eliason. The series terminated in March 1841, and on Sept. 30, Musard appeared again as conductor of a set of Promenade Concerts at the Lyceum, under the management of Henri Laurent, which continued up to Christmas. He was long remembered in London, and his appearance is well described by Hood:—

> From bottom to top
> There's no bit of the *Fop*,
> No trace of your Macaroni;
> But looking on him,
> So solemn and grim,
> You think of the Marshals who served under Boney.

Up to 1852 Musard was considered the best composer of dance-music and conductor of promenade concerts in France. His quadrilles—'Venise,' 'Les Echos,' etc.—contain many happy and at that time novel effects, and his music is well written and well scored. Having made money he bought a house at Auteuil, where he lived, much respected. Symptoms of paralysis appeared in 1852, and he died March 31, 1859. His son Alfred, born 1828 in Paris, followed his father's profession. As early as 1847 he conducted the orchestra at a ball given at the

Opéra-Comique, and in 1856 Besselièvre selected him to conduct the 'Concerts des Champs Elysées,' but he did not retain the post, and never rose above mediocrity — at least in music. G. C.

MUSETTE, diminutive of the old French 'muse,' both meaning (1) an instrument of the bagpipe family, consisting of two pipes or reeds and a drone, supplied with wind from a leathern reservoir. [See BAGPIPE.] Like the Irish bagpipe it is inflated by bellows placed under the performer's arm. The original compass was ten notes (*a*); but by the addition of holes and keys the scale was increased to thirteen (*b*):—

Limited as were its resources, this instrument was once a favourite, and under Louis XIV., was introduced, first into the court ballets, and then into the divertissements or entr'actes of operas. Ladies even learned to play it, and had highly ornamented instruments made for their use.

The best information on the subject is to be obtained from Mersenne's *Harmonie Universelle*, Borjon's *Traité de la Musette*, a folio with plates (Lyons, 1672), and *Méthode pour la Musette* (Paris, Ballard, 1737), by Louis Hotteterre, a well-known flute player, the son (according to his own statement) of Martin Hotteterre, composer and virtuoso. From these works we learn that the best makers were Le Vacher; the Hotteterres, father and two sons, Nicolas and Jean; Lissieux; Perrin, etc. The best-known players were Philippe Chèdeville (died in Paris, 1782), a valued member of the orchestra at the Opéra from 1725 to 1749, and his brother Nicolas. Both published pieces for two musettes, now in the library of the Paris Conservatoire.

(2) Also a small oboe without keys, generally in G; not to be confounded with the 'hautbois de forêt' or 'oboe piccolo.'

(3) The term is also applied to an air in 2–4, 3–4, or 6–8 time, of a moderate tempo, and smooth and simple character, appropriate to the instrument from which it takes its name. Thus a musette generally has a pedal-bass answering to the drone or *bourdon*, and the upper part abounds in grace-notes and rapid passages. To these airs were arranged pastoral dances, also called musettes, which were in great favour under Louis XIV., and Louis XV., especially the latter, as may be seen by the pictures of Watteau and others of that school.

Among the most celebrated musettes may be mentioned those in 'Callirhoé' and 'Nina,' operas by Destouches and Dalayrac. They are to be found in Bach's English Suites, Nos. 3 and 6, and in the sixth of Handel's Grand Concertos. G. C.

MUSIC-PRINTING. There are several ways in which an unlimited number of copies of designs or characters may be produced. If a block of wood or metal is cut away so as to leave *in relief* the required shapes of the characters, then by inking the raised surface an impression is easily obtained on paper. A great improvement on such block-printing was effected by making each letter a separate type in cast metal, so that the types might be used over and over again for different works. The converse of surface printing is copper-plate printing; here the design is engraved *in intaglio* on a sheet of metal, and the ink is contained in the sunken lines of the engraving and not on the surface of the plate. A third way is by lithography, in which characters are drawn with peculiar greasy pencils on the surface of certain porous stones. The stone being wetted, the ink is applied; and it adheres to the drawing, but refuses the stone. All these methods have been applied to the printing of music.

I. So far as is at present known, the earliest music-printing entirely from type occurs in a missal printed by Ulrich Hahn at Rome in 1476, a copy of which is in the Biblioteca Magliabecchiana at Florence. He was followed in 1481 by Jörg Reyser at Würzburg and by Octavianus Scotus at Venice, in close succession to whom came S. Planck (1482), J. Sensenschmidt (1485), Erhard Ratdolt (1487), and others. In these the stave-lines were red and the notes black, all being from type, but at two printings, one for the stave and another for the notes. Figurated or florid song, however, presented greater difficulties to the type-printer, and block-printing, therefore, was employed for the musical portions of such books as the *Musices Opusculum* of Nicolaus Burtius, printed at Bologna in 1487, by Ugo de Rugeriis, in open lozenge-shaped notes; and the *Practica Musicæ* of Franchinus Gafurius, printed at Milan, 1492. Even as late as 1520, Conrad Peutinger published at Augsburg a collection of motets for five voices in wood-engraving.[1] On the following page we give a facsimile from Burtius's work.

Meanwhile Ottaviano dei Petrucci (born at Fossombrone, 1466) so advanced the art that, practically speaking, he may be considered as the inventor of printing florid song with movable types. He was settled in Venice, and there produced his first work, a collection of ninety-six songs, in 1501. Another of his publications appeared in 1503, and is a collection of masses by Pierre de la Rue, a copy of which may be seen in the British Museum. The stave lines and the notes are produced at two separate printings; the lines being unbroken and perfectly continuous, and the notes set up in movable types. The only objection to this

[1] See Eitner's *Bibliographie*, p. 14. The illustrations to Oulibichef's great work on Mozart (Moscow, 1843) are all cut in wood.

system was the expense of the double printing; and this was not overcome, so far as is at present known, until 1525, when Pierre Haultin (see below) used a single printing. His system was followed by the Gardano family at Venice from 1536 for about a century and a half, and the process used at the present day is pretty nearly the same, only greatly improved in all its details.

In England the first known attempt at Music-printing is in Higden's *Policronicon*, printed at Westminster in 1495 by Wynkyn de Worde. The characters (see reduced facsimile opposite) represent the consonances of Pythagoras. This

Page (Tractatus 2dus, p. 76) from the *Opusculum* of Burtius (Burzio), in the Library of A. H. Littleton, Esq.

appears to have been set up piecemeal and not engraved on a solid wood-block. It is, however, the only bit of music in the book. There is a mistake in the double-octave, which has one note more than the proper interval. In the first edition of this work, printed by Caxton 1482, a space was left for the musical characters to be filled in by hand. Both editions are in the British Museum. In Marbeck's *Boke of Common Prayer noted* (Grafton, London, 1550) the four lines of the stave are continuous and not made up of small pieces, and are printed in red ink; the square notes are black and appear to be each a separate type. Only four sorts of notes are used, and are thus explained in a memorandum by the printer. 'The first note is a strene[1] note and is a breve; the second is a square note and is a semybreve; the third is a pycke and is a mynymme; the fourth is a close, and is only used at the end of a verse, etc.'

A book in the British Museum (K. 1, e. 1), proves that florid music was printed in England in 1530. It is the bass part of a collection of twenty songs, printed by Wynkyn de Worde, the successor of Caxton. The typography is identical with that of Petrucci, already mentioned as being produced by means of two impressions. John Day of Aldersgate, in 1560, published the Church Service in four and three parts in an improved style of typography, and in 1562 the whole Book of Psalms. And Thomas Vautrollier in 1575 published the Cantiones of Tallis and Byrd under a patent from Queen Elizabeth, the first of the kind granting a monopoly or sole right of printing music. To them succeeded Thomas Este—who changed his name to Snodham—John Windet, William Barley, and others who were the assignees of Byrd and Morley, under the patents respectively granted to them for the sole printing of music. In 1641 Edward Griffin of Paul's Alley, London, printed a collection of church music in score and parts selected by John Barnard, a minor canon of St. Paul's. The notes were of lozenge shape, and the stave lines not very well joined together, the whole being inelegant though very legible, after this fashion. But the expense of two printings was saved.

[There was little or no improvement in the principle of setting up movable music type for some time. Nothing could be more excellent than the book printed by Wynkyn de Worde alluded to above, but that was the result of double printing; and both ancient and modern printers who have tried the method have found its disadvantages so great that they have abandoned the process. Therefore the only method of music typography used in England in the 16th and 17th centuries (until 1690) was a single printing. The notes had lozenge-shaped heads, and each quaver and semiquaver stood alone. In manuscript and in engraving it was quite easy to unite the tails with pen or graver, but the difficulty of setting this form up in movable notes was too great for the earlier printers. About 1690 came 'the new ty'd note,' the first attempt at a reform in this matter. It was made by JOHN HEPTINSTALL (*q.v.*) who had then just commenced music-printing. He used a type with round head, and united the quavers and semiquavers in a rather rude fashion. His fine bold note, though rough enough in appearance, was much easier read, and WILLIAM PEARSON (*q.v.*) still further improved it. This last named in 1699 issued 'Twelve New Songs [by Dr. Blow and Dr. Turner], chiefly to encourage William Pearson's new London Character,' 1699, folio. Gradually improvements were made, principally by Pearson, though Continental printers were conservative enough to keep to the older form of type for a considerable time. In 1729-31 and later, John Watts solved the difficulty of the 'tied note' by cutting the whole of the piece of music on a wood-block; his *Musical Miscellany* (6 vols. 1729-31) and his editions of the ballad operas are examples. This woodcut process was carried to great perfection in a Liverpool work issued by John Sadler, 'The Muses Delight,' 1754; and very rude woodcut music was given in those periodicals which boasted a music page, such as the *Universal* and the *Gentleman's Magazine*. Some locally printed psalm-books (Wakefield and Leeds) also had rough woodcut music. In 1767 HENRY FOUGT (*q.v.*) made such improvements in setting movable music type that he obtained a medal from the Society of Arts, and claimed a patent, which no doubt could not have been maintained. Fougt who was, according to Hawkins, a Laplander, had to quit the country, leaving his founts to R. Falkener, who employed Fougt's same method.

In Scotland music-printing had a place, and many editions of the psalms were printed, both at Edinburgh and at Aberdeen. Robert Lekprevik, an Edinburgh and St. Andrews printer, was the first to employ music type in *The Forme of Prayers*, 1564 and 1565. Other Edinburgh printed Psalters are by T. Bassandine, 1575; Henrie Chatteris, 1595; Andro Hart, 1611, etc. In Aberdeen music-printing began with Edward Ruban, who printed a Psalter in 1633. It was John Forbes in his 'Cantus' (1662-66 and 1682) who first printed secular music in Scotland. He suffered fine

[1] Strene, *i.e.* strained or stretched out, perhaps from its being the longest note used in chanting.

and imprisonment for printing contrary to the monopoly granted to Andrew Anderson and his widow. Between 1682 and quite late years little music typography was done in Scotland, though music-engraving and punching was freely practised from the early part of the 18th century. F. K.]

As regards France, Fournier (*Traité historique et critique sur l'origine et les progrès des caractères de fonte pour l'impression de la musique*, Berne, 1765) says that Pierre Haultin of Paris made the first types for printing music about the year 1525. The notes and the stave were represented on the type, consequently the whole was printed at once. These types he used himself, as well as selling them to Pierre Attaingnant and other printers. Haultin printed as late as 1576. Guillaume le Bé in 1544-45 engraved music types for printing first the lines and then the notes; but this inconvenient system was abandoned. Nicholas Duchemin printed music at one printing in the years 1550 to 1556. Robert Granjon printed music at Lyons about 1572. The works of Claude Le Jeune were printed in France by Pierre Ballard in 1603 and 1606; the beauty and elegance of the characters employed showing that the French had greatly the advantage of their neighbours. About this time also madrigals were printed at Antwerp by Phalèse and sold at his shop, the sign of King David.

The above-named eminent house of Ballard in Paris was established in the middle of the 16th century by Robert Ballard and his son-in-law Adrien Le Roy, and continued from father to son for two centuries, enjoying a royal privilege or patent until the time of the Revolution of 1789. [See vol. i. p. 173; and vol. ii. p. 681.]

Type music was greatly improved in the 18th century. Fournier (Paris, 1766) published a *Manuel typographique*, the musical specimens in which are very good and clear. But still finer are the types cut by J. M. Fleischman of Nuremberg in 1760. The stave and notes are equal to any plate-music for clearness and beauty. These types now belong to J. Enschede & Son of Haarlem.

Henry Fougt's Patent, of which the specification may be read in the Patent Office (No. 888, year 1767) states that the old 'choral' type consisted of the whole figure of the note with its tail and the five lines; but that in his system every note with its five lines is divided into five separate types. The modern system is therefore very similar to this.

In 1755 Breitkopf of Leipzig effected improvements in the old system of types, which his son (in conjunction with his partner Härtel) carried still farther. [See vol. i. pp. 394-5.] Gustav Schelter of Leipzig entirely reformed the system, while Carl Tauchnitz of Leipzig was the first to apply stereotype to music-notes.

Clowes, the eminent London printer, did much to improve music types. The *Harmonicon* (1823-33), the *Musical Library* (1834), and the *Sacred Minstrelsy* (1835), are excellent specimens of the art, the stave lines being more perfectly united than before.

Professor Edward Cowper invented a beautiful but expensive process of printing music from the raised surface of copper or brass characters inserted in a wooden block, the stave lines being also of copper inserted in another block and printed separately from the notes. The words were set up in ordinary types, then stereotyped and inserted in grooves in one of the blocks. His patent is dated April 5, 1827, and numbered 5484. [This process was used with great success by Stephen Chappell and Messrs. Goulding and D'Almaine, but in spite of the excellent results obtained, it was given up after a time. F. K.]

In Scheurman's process (1856) the notes, set up in type, were impressed on a wax mould and the stave lines superadded to the same mould, from which a stereotype cast was taken. But the double operation was difficult, and the mould liable to damage; and the plan was abandoned.

The old system, however, of using separate types has been so much improved upon by Messrs. Novello & Co., Henderson, Rait, and Fenton, and other printers, and the stave lines are now so well joined, that the appearance and distinctness of type-music leave little to be desired. This result is due chiefly to the use of stereotype, which enables printers to employ the most perfect, and consequently very expensive, kind of types. If these were used to print a large edition, they would soon be damaged; and even if this were not the case, it would never pay the publisher to keep such a mass of type set up against the time when a fresh edition might be required. The types must be distributed and used for other works; and the expensive labour of setting up must be incurred afresh for each new edition. All this is avoided by taking a stereotype cast from the types, which can be done at a small cost, and kept in store to be printed from whenever there is a fresh demand for copies. The type is then released, and serves over again for other works or other pages of the same work, retaining its sharpness unimpaired. Another advantage of stereotyping is that many little defects in the types can be remedied in the plate—greatly to the advantage of the impression.

An inspection of the following examples will show how type-music is built up of many small parts. Thus the single quaver and its stave are composed of seven small pieces, which are dissected and shown separately in the second example. The same is done for the group of three quavers, which is made up of sixteen separate pieces.

II. The printing of music from *engraved* copper-plates is supposed to have begun at Rome, where a collection of Canzonets—'Diletto spirituale'—was engraved by Martin van Buyten, and published by Simone Verovio in 1586, and subsequently books of airs, etc., composed by Kapsperger, dated 1604-12. In France the great house of Ballard, already mentioned, began to use engraving towards the end of Louis XIV.'s reign; some of Lully's operas being printed from types and some from engraved copper-plates. The Germans practised the art. In England the same process was used for a collection of pieces by Bull, Byrd, and Gibbons, entitled 'Parthenia,' engraved by Wm. Hole, and published in 1611; for single songs engraved by Thomas Cross before and after 1700; by Cluer for Handel's 'Suites de Pièces,' and other music (1720, etc.), and for Dr. Croft's 'Musicus Apparatus Academicus' (1713 ?), and 'Musica Sacra' (1724). [See Cross, Cluer, Croft, Engraving.]

The process of scratching each note separately on the copper with a graver was obviously an expensive one; but the Dutch contrived to soften the metal so as to render it susceptible of an impression from the stroke of a hammer on a punch, the point of which had the form of a musical note—a method not only much cheaper, but also ensuring greater uniformity of appearance; and accordingly they were very successful with their numerous publications from and after the year 1700. A punched copper-plate from Dublin, only about forty years old, was shown at the Caxton Exhibition in 1877.

[Prior to the 18th century engraved music was always cut upon copper. Thomas Cross (*q.v.*) was the greatest worker in this field, but from the appearance of some of his later work the present writer is inclined to believe that he found a cheaper substitute in either zinc or pewter, also that he introduced a method of etching by acid. While he was still cutting or etching his music-sheets, the process (said by Hawkins to have been introduced by Walsh and Hare (*q.v.*) in 1710) of stamping, at first on copper and afterwards on pewter, became common. Cross engraves at the foot of one of his sheets (in possession of the present writer):—'Beware of ye nonsensical punch't ones,' which proves that stamped music was then gaining ground. It soon superseded engraving, and during the 18th century, to as late as 1830-40, remained with typography practically the only method employed. At the present day it is still in use, with the advantage that a proof being pulled in transfer ink and laid on a lithographic stone, the whole impression comes from this while the plate remains for future use.

After Walsh had introduced stamped music, both his firm and his apprentices carried on the method; one, Wm. Smith (*q.v.*), about 1729-30 engraved certain musical works, though he afterwards became one of the principal persons who stamped the plates. John Phillips and his wife Sarah, Welsh people settled in London, were also famous in this latter way from about 1750 to 1770.

In Dublin, one Robert Thornton in 1686 advertised music 'fairly engraven on copper plates,' but none of his work has been identified.

In Scotland music-engraving probably commenced with Richard Cooper of Edinburgh, who engraved about 1728 and later. Other Edinburgh engravers were Baillie, Phinn, and Read, also later; while James Johnson (*q.v.*), who commenced with engraving, ended by being the chief person who stamped music in Scotland. F. K.]

This is the process that continues to be used to the present day, and by which such magnificent specimens as the editions of the Bachgesellschaft, and those of the great classical masters (by Breitkopf & Härtel), or the edition of Handel by Dr. Chrysander, are produced. Messrs. Novello & Co. imported German workmen, and their edition of Mendelssohn's PF. works in one volume (1879), or the publications of the Purcell Society, rival the best productions of Leipzig for clearness and elegance. In order to save the pewter plates from wear, it is now the custom to transfer an impression from the plate to a lithographic stone or to zinc, and then print copies at the lithographic press. This also enables the printer to use a better and blacker ink than if the plates themselves had to be printed from; but the impressions are liable to smudge, and are inferior in clearness to those from the plates, unless indeed these are engraved in a very superior style of sharpness. In Germany, zinc has of late been used instead of pewter; the punches make a clearer impression, and the plates allow of a larger number being printed without damage.

In estimating the relative merits of type and plate printing from a commercial point of view, it must be borne in mind that it is cheaper to engrave a pewter plate than to set up a page of type, but that the cost of *printing* from the plate is greater than from the types. If therefore a small number of copies only is required, say 1000, it is cheaper to engrave. But if several thousands are likely to be sold, then the type system is more profitable.

III. Lithography, [which appears to have been first used in music-printing by a Birmingham lithographer named William Hawkes Smith in sheet-songs, etc., about 1820,] has in a few instances been used to multiply manuscript music, which is transferred to the stone from a paper copy written with a special ink. This may be useful when a few copies are

wanted on an emergency, as any copyist would be able to write on the transfer paper. But by employing trained copyists, accustomed to write backwards, the music may be written at once on the stone; and in this way Breitkopf & Härtel of Leipzig have produced useful editions of Mozart's operas and other works, both notes and words being very clear and neat. Alfieri's edition of Palestrina (six vols. Rome, 1841-45) is a splendid specimen of lithographed music.

[IV. Photography has been applied in many instances to the miniature reproductions of full and vocal scores, such as the small editions of 'Messiah' and 'Elijah' published by Bagster & Co., but the beautiful miniature scores of Wagner's operas (Schott & Co. and Breitkopf & Härtel), Brahms's symphonies and other works (Simrock), and of the classical chamber compositions (Payne, Leipzig) are specimens of genuine engraving.]

A new process for printing music is that called 'Gravure Chimique,' examples of which have been occasionally seen in the French *Figaro*. The music is first punched on a pewter plate in the ordinary way, from which a paper proof is taken and transferred to a zinc plate. Nitric acid is then applied, which dissolves the zinc where it is not protected by the ink, and leaves the notes in relief. This stereotype plate is then used to print from in the ordinary typographic press. M. Lefman, 57 Rue d'Hauteville, Paris, who kindly explained the process to the writer, also informed him that these clichés, of the ordinary music size, can be made for 50 francs (£2) each.

Messrs. Augener have produced some beautiful specimens of music-printing. The music is first punched on pewter plates in the usual way, and is then transferred to a stone, from which it is printed. The ornamental title-pages are equal to the finest copper-plate engravings.

[A 'patent union musical notation,' invented by John Lang, in which the Tonic Sol-Fa initial was shown in the head of each note, was employed by William Hamilton, a Glasgow music-printer, about 1860-75; it was used in elementary works, but found little favour. F. K.]

[See a series of articles by Dr. Chrysander in the *Musical Times* of 1877; Goovaert's *Histoire et Bibliographie de la Typographie musicale dans les Pays-Bas*, 1880; *Proceedings of the Mus. Assoc.*, 1884-85, p. 99; F. Kidson's *British Music Publishers*, 1900; and Robert Steele, *Earliest English Music Printing*, 1903; and the article 'Notendruck' in Riemann's *Lexikon* (1905).] V. DE P.

MUSIC SCHOOL, THE, OXFORD, is situated on the south side of the Schools quadrangle, under the Bodleian Library. This building was rebuilt in its present form at the beginning of the 17th century, but the interior of the Music School was altered in 1780 by the architect Wyatt under the direction of the then Professor of Music, Dr. Philip Hayes. The expenses of these alterations were defrayed by a grant of £50 from the University and by the proceeds of three choral concerts given at the following Commemoration, at one of which Dr. Hayes's oratorio 'Prophecy' was performed. The Music School was formerly used for the performance of the exercises for the Degree of Mus.B. and Mus.D., but during the last twenty-five years the orchestra has been removed, and the room is now used for the University Examinations. The collection of music (noticed in the article LIBRARIES) which belongs to the Music School is no longer preserved there, having been removed to the Bodleian; and the famous collection of portraits, of which a list is appended, was moved in 1887 to the New Schools. They were shown at the Music and Inventions Exhibition of 1885, where Salomon's portrait was identified. See Brit. Mus. Add. MS. 23,071, folio 65, for a list of them in 1733-34.

C. F. Abel.	Sir John Hawkins.

Handel.	Christopher Simpson.
Dr. Heather.	Dr. Thomas Tudway.
	Dr. Wilson.

In Anthony à Wood's account of the University, he states that the Music School also possessed busts of King Alfred, Dr. W. Hayes, and H. Purcell, as well as portraits of W. Hine, Dr. Parsons, and John Weldon. W. B. S.

MUSICA ANTIQUA. A collection of music compiled and edited by John Stafford Smith, and published in 1812 in two vols. folio, with a preface and translations of the Provençal songs inserted in the work by John Sidney Hawkins, and some notes by the editor. Its nature and objects will be best described by quoting the very ample title—'Musica Antiqua. A Selection of Music of this and other countries from the commencement of the twelfth to the beginning of the eighteenth century, comprising some of the earliest & most curious Motetts, Madrigals, Hymns, Anthems, Songs, Lessons & Dance Tunes, some of them now first published from manuscripts and printed works of great rarity & value. The whole calculated to shew the original sources of the melody & harmony of this country, & to exhibit the different styles and degrees of improvement of the several periods.' The work contains 190 separate

pieces. The selections are made with great skill and judgment, but are very ill digested, as instead of being arranged in strict chronological order, they are intermingled in a very confused manner. The composers from whose works the specimens are selected are John Ambrose, Hugh Aston, Thibaut de Blason, Dr. John Blow, Gaces Brulez, William Byrd, Dr. Thomas Campion, Peter Certon, Dr. William Child, Clemens non Papa, John Cole, Raoul de Coucy, Perrin Dangecourt, John Dowland, John Earsden, Jehan Erars, Thomas Erars, Francesco Geminiani, Jhan Gero, Orlando Gibbons, Heath, Henry VIII., Pelham Humfrey, Simon Ives, John Jenkins, Robert Johnson, Robert Jones, Nicholas Laniere, Orlando di Lasso, Jehan de Latre, William Lawes, Matthew Lock, George Mason, Tiburtio Massaino, Christofero Morales, Thibaut King of Navarre, Jacob Obrecht, Johannes Okeghem, Parker, monk of Stratford, Francis Pilkington, Jodocus Pratensis, Daniel Purcell, Henry Purcell, Richafort, Dr. Nicholas Staggins, Thomas Tallis, Thierres, Orazio Vecchi, Thomas Weelkes, Giaches Wert, Adrian Willaert and Gioseffo Zarlino, besides others whose names are unknown. The principal pieces include four ancient chants for the 'Te Deum' as given by Meibomius, Diruta, Lucas Lossius, and Marbeck; the canon, 'Sumer is icumen in'; Chansons by Troubadours of Navarre and Normandy; part of Robert Johnson's music for Middleton's 'Witch'; two or three masques of the time of James I., copious extracts from 'Musick's Handmaid,' two parts, 1678 and 1689; etc. etc. W. H. H.

MUSICA DIVINA. A collection of church music, edited by Carolus Proske, priest and capellmeister of the Cathedral at Ratisbon, and published there by Pustet. The materials were collected by Proske himself from the libraries of the Papal Chapel, St. Peter's, St. John Lateran, S. Maria Maggiore, S. Maria in Vallicella, the Vatican, the Roman College, and other libraries in Rome, and also from the best collections in Naples. The prospectus was issued in January 1853, and the first volume was published in the same year. The second volume followed in 1854, the third in 1859, and the fourth at Easter 1862. All these contained compositions for four voices, and belong to the 'first year.' The publication was continued by a 'Selectus novus missarum' in two vols. (1857-61), after which Proske died, Dec. 20, 1861. An 'Annus secundus' has since been issued containing a vol. of masses, a vol. of motets, a vol. of litanies, and a Liber Vespertinus. The work is an upright quarto, in bold clear music type; each volume of the scores has a preface, a table of contents, a list of clefs of the originals, etc., and short biographical notices of the composers. The voice parts are also printed separately. The list of the entire work is as follows:—

ANNUS PRIMUS

Tom. I. Liber Missarum.

1. Missa brevis. Palestrina.
2. Do. Iste confessor. Do.
3. Do. Dies sanctificatus. Do.
4. Do. Octavi toni. O. Lasso.
5. Do. 'Puisque j'ay perdu.' Do.
6. Do. Quarti toni. Vittoria.
7. Missa brevis. A. Gabrieli.
8. Do. 'Dixit Maria.' Hasler.
9. Do. 'In Nat. Domini.' Pitoni.
10. Do. Lotti.
11. Do. pro defunctis. Asola.
12. Do. do. Pitoni.

Tom. II. Liber Motettorum.

Advent.
Domine. J. J. Fux.
Ecce concipies. J. Handl.
Pt. 2. Super solium David.
Obsecro domine. Do.
Cum audisset. M. Cardoso.
Dicite pusillanimes. J. J. Fux.
Egredietur virga. J. Handl.
Pt. 2. Radix Jesse.
De coelo veniet. Do.
Ave Maria. P. Canniciari.

Nativity of Christ.
Dies sanctificatus. Palestrina.
Hodie Christus. G. M. Nanini.
O magnum mysterium. Vittoria.
Hodie nobis de coelo. C. Porta.
Natus est nobis Deus. J. Handl.
Hodie Christus. Gr. Turini.

St. Stephen.
Lapidabunt Stephanum. G. M. Nanini.
Sepelierunt Stephanum. L. Marenzio.

St. John.
Hic est beatissimus. G. M. Nanini.
Valde honorandus. Palestrina.

Innocents.
Vox in Rama. Clemens non Papa.

Circumcision.
O admirabile commercium. F. Constantini.
Ecce Maria genuit. Rud. Lasso.

Epiphany.
Tribus miraculis. L. Marenzio.
Ab oriente. J. Handl.

Sundays after Epiphany.
Jubilate. O. Lasso.
Dextera domini. Do.

Septuagesima.
Ubi est Abel? G. Aichinger.

Sexagesima.
Exurge. J. de Kerle.
Pt. 2. Exurge.

Quinquagesima.
Benedictus es. O. Lasso.

Quadragesima.
Exaltabo te. G. Croce.
Angelis suis. M. Cardoso.
Meditabor. O. Lasso.
Erat Jesus. Orazio Vecchi.
Laetatus sum. A. Scarlatti.

Passion Sunday.
Eripe me de inimicis. O. Lasso.
Pt. 2. Confitebor tibi.

Palm Sunday.
Pueri Hebraeorum. Palestrina.
Improperium. O. Lasso.

Coena Domini.
Christus factus est. Asola.

Good Friday.
Populo meus. Vittoria.
Adoramus. Aichinger.

Easter Eve.
Vespere autem. J. Handl.

Easter Day.
Haec dies. Palestrina.
Angelus autem. F. Anerio.
Alleluja Christus. Do.
Maria Magdalenae. A. Gabrieli.
Christus resurgens. O. Lasso.
Et respicientes. Marenzio.

Sundays after Easter.
Surrexit Pastor. Palestrina.
Virtute magna. G. Croce.
Lauda anima mea. G. Aichinger.
Cantate Domino. G. Turini.
Benedicite gentes. O. Lasso.
O rex gloriae. Marenzio.
Ascendens Christus. J. Handl.
Omnes gentes. G. M. Casini.

Whitsunday.
Loquebantur. Palestrina.
Veni Sancte Spiritus. G. Allegri.
Factus est repente. G. Aichinger.
Pt. 2. Confirma hoc Deus.

Trinity Sunday.
Te Deum Patrem. A. Gabrieli.
Tibi laus. O. Lasso.
Benedicta sit. Agazzari.

Corpus Christi.
O sacrum convivium. G. Croce.
O sacrum convivium. G. A. Bernabei.
Caro mea. A. Gabrieli.
Ego sum panis. A. Constantini.
Do. P. Agostini.
In voce exultationis. Pitoni.
Ex altari tuo. Do.
Qui terrena triumphat. Do.
Transfige. G. Biordi.
Domine non sum dignus. Vittoria.
Pt. 2. Miserere mei.
Duo Seraphini. Vittoria.
Pt. 2. Tres sunt qui.
Domine convertere. O. Lasso.
Sperent in te omnes. Do.
Illumina. Do.
Benedicam. Do.
In te speravi. Do.
Expectans. Do.
Domine in auxilium. Do.
Super flumina. Do.

St. Andrew.
Doctor bonus. Vittoria.

St. Nicholas.
Beatus Nicolas. Anon.

Conception.
Quam pulchri. Palestrina.
Conceptio tua. Marenzio.
Do. C. Porta.

MUSICA FICTA, or FALSA, or COLORATA (*Cantus fictus*), *i.e.* Feigned or Artificial Music. One of the earliest discoveries made by the inventors of Figured Music was the impossibility of writing a really euphonious counterpoint upon a given *Canto fermo*, without the use of occasional semitones foreign to the Mode. The employment of such semitones in plain-song was as strictly forbidden by the good taste of all educated musicians as by the Bull of Pope John XXII. Hence they were never permitted to appear in the *Canto fermo* itself. But it soon became evident that unless they were tolerated in the subordinate parts, no further progress could be made in a style of composition which was already beginning to attract serious attention. It was indispensable that some provision should be made for the correction of imperfect harmonies, and—as Zarlino justly teaches[1]—Nature's demand for what we should now call a 'Leading-Note' was too strong to be resisted. On these points a certain amount

[1] *Istitutioni Harmoniche*, Venice, 1558, p. 222.

of concession was claimed by composers of every school. Nevertheless the early contrapuntists yielded so far to prejudice as to refrain from committing their accidentals to writing, whenever they could venture to do so without danger of misconception. Trusting to the singer for introducing them correctly, at the moment of performance, they indicated them only in doubtful cases, for which no singer could be expected to provide. The older the part-books we examine the greater number of accidentals do we find left to be supplied at the singer's discretion. Music in which they were so supplied was called *Cantus fictus* or *Musica ficta* ; and no chorister's education was considered complete until he was able to sing *Cantus fictus* correctly at sight.

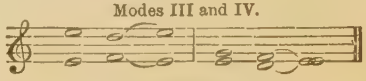
In an age in which the functions of composer and singer were almost invariably performed by one and the same person this arrangement caused no difficulty whatever. So thoroughly was the matter understood that Palestrina thought it necessary to indicate no more than two accidentals in the whole of his 'Missa brevis,' though some thirty or forty at least are required in the course of the work. He would not have dared to place the same confidence either in the singers or the conductors of the present day. Those who would really understand the music of the 15th and 16th centuries must learn to judge for themselves how far the modern editor is justified in adopting the readings with which he presents[1] them; and to assist them in so doing we subjoin a few definite rules, collected from the works of Pietro Aron (1529), Zarlino (1558), Zacconi (1596), and some other early writers whose authority is indisputable.

1. The most important of these rules is that which relates to the formation of the *Clausula vera* or true Cadence—the natural homologue, notwithstanding certain structural differences, of the Perfect Cadence as used in Modern Music. [See CADENCE, I. vol. i. pp. 434-5.]

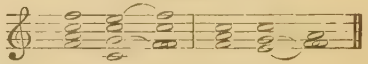
The perfection of this Cadence—which is always associated, either with a point of repose in the phrasing of the music or a completion of the sense of the words to which it is sung—depends upon three conditions. (*a*) The Canto fermo, in whatever part it may be placed, must descend one degree upon the Final of the Mode. (*b*) In the last chord but one the Canto fermo must form, with some other part, either a Major Sixth, destined to pass into an Octave, or a Minor Third, to be followed by Unison. (*c*) One part, and one only, must proceed to the Final by a Semitone—which, indeed, will be the natural result of compliance with the two first-named laws.

In Modes III, IV, V, VI, XIII, and XIV, it is possible to observe all these conditions without the use of accidentals. For in the Third and Fourth Modes the Canto fermo will naturally descend a Semitone upon the Final; while in the others the Counterpoint will ascend to it by the same interval, as in the following examples, where the Canto fermo is shown sometimes in the lower, sometimes in the upper, and sometimes in a middle part, the motion of the two parts essential to the Cadence being indicated by slurs.

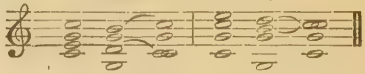
Modes III and IV.



Modes V and VI.



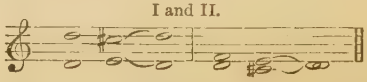
Modes XIII and XIV.



But accidentals will be necessary in all other Modes, whether used at their true pitch or transposed (see MODES, THE ECCLESIASTICAL).

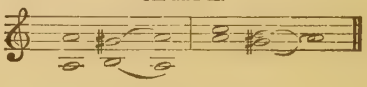
NATURAL MODES.

I and II.



VII and VIII.

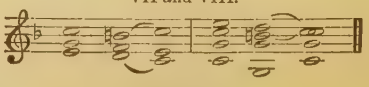
IX and X.



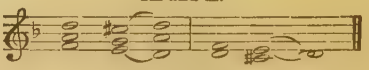
TRANSPOSED MODES.

I and II.

VII and VIII.



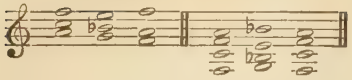
IX and X.



Moreover, it is sometimes necessary, even in Modes V and VI, to introduce a B♭ in the penultimate chord, when the Canto fermo is in the lowest part, in order to avoid the False Relation of the *Tritonus*, which naturally occurs when two Major Thirds are taken upon the step of a Major Second; although, as we have already shown, it is quite possible as a general rule to form the true cadence in those Modes without the aid of accidentals.

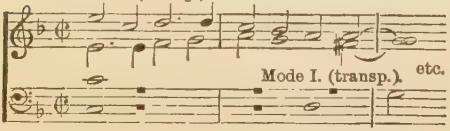
[1] Proske, in his 'Musica Divina,' has placed all accidentals given by the composer in their usual position, *before* the notes to which they refer; but those suggested by himself *above* the notes. It is much to be desired that all who edit the works of the old masters should adopt this most excellent and conscientious plan.

Modes V. and VI.



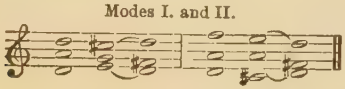
II. In the course of long compositions True Cadences are occasionally found ending on some note other than the Final of the Mode. When these occur simultaneously with a definite point of repose in the music, and a full completion of the sense of the words, they must be treated as genuine Cadences upon one of the Regular or Conceded Modulations of the Mode in question, and the necessary accidentals must be introduced accordingly, as in the Credo of Palestrina's Missa Brevis—

Mode XIII. (transp.).



III. An accidental is also frequently needed in the last chord of a Cadence. The rule is, that every Cadence which either terminates a composition or concludes a well-defined strain, must end with a Major Chord. It naturally does so in Modes V, VI, VII, VIII, XIII, and XIV. In Modes I, II, III, IV, IX, and X, it must be made to do so by means of an accidental. The Major Third, thus artificially supplied, in Modes in which it would naturally be Minor, is called the 'Tierce de Picardie,' and forms one of the most striking characteristics of Mediæval Music.[1]

Modes I. and II.

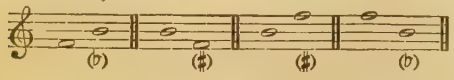


Modes III. and IV.

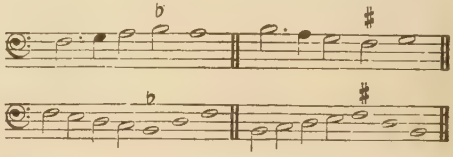
Modes IX. and X.

It is not, however, in the Cadence alone that the laws of 'Cantus Fictus' are to be observed.

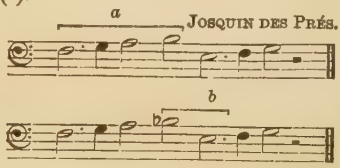
IV. The use of the Augmented Fourth (*Tritonus*) and the Diminished Fifth (*Quinta Falsa*), as intervals of melody, is as strictly forbidden in polyphonic music as in plain-song [see MI CONTRA FA]. Whenever, therefore, these intervals occur they must be made perfect by an accidental; thus:



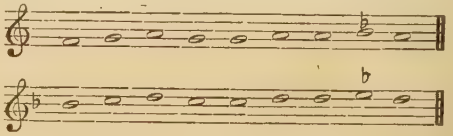
It will be seen that in all these examples it is the second note that is altered. No singer could be expected to read so far in advance as to anticipate the necessity for a change in the first note. For such a necessity the text itself will generally be found to provide, and the singers of the 16th century were quite content that this should be the case; though they felt grievously insulted by an accidental prefixed to the second note, and called it an 'Ass's mark' (Lat. *Signum asininum*; Germ. *Eselszeichen*). Even in conjunct passages they scorned its use; though the obnoxious intervals were as sternly condemned in conjunct as in disjunct movement.



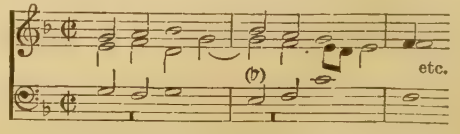
These passages are simple enough, but sometimes very doubtful ones occur. For instance, Pietro Aron recommends the student in a dilemma like the following, to choose, as the least of two evils, a *Tritonus*, in conjunct movement as at (*a*), rather than a disjunct *Quinta falsa*, as at (*b*).



V. In very long or crooked passages the danger of an oversight is vastly increased; and in order to meet it, it is enacted by a law of frequent, though not universal application, that a B between two A's—or, in the transposed Modes, an E between two D's—must be made flat, thus:



VI. The *Quinta falsa* is also forbidden as an element of harmony; and, except when used as a passing note, in the second and third orders of counterpoint, must always be corrected by an accidental; as in the following example from the Credo of Palestrina's 'Missa Æterna Christi munera' [see FA FICTUM, vol. ii. p. 1].

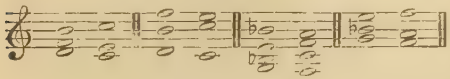


The *Tritonus* is not likely to intrude itself as an integral part of the harmony; since the chords of 6–4 and 6–4–2 are forbidden in strict

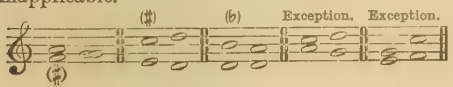
[1] Except in compositions in more than four parts, Mediæval Composers usually omitted the Third, altogether, in the final chord. In this case a Major Third is always supposed.

counterpoint, even though the Fourth may be perfect.

VII. But both the *Tritonus* and *Quinta falsa* are freely permitted, when they occur among the upper parts of a chord, the bass taking no share in their formation. In such cases, therefore, no correction will be required.



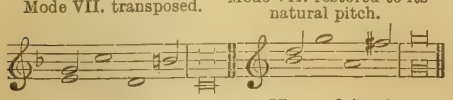
VIII. The last rule we think it necessary to mention is strongly enforced by the learned Padre Martini, though Zarlino points out many exceptions to its authority. Its purport is that Imperfect Concords, when they ascend, must be made Major, and, when they descend, Minor. That this is true in some of the progressions pointed out in the subjoined example is evident, but it is equally clear that in others the law is inapplicable.



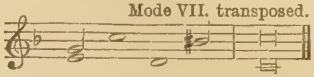
These laws will suffice to give a fair general idea of a subject, the difficulties of which seem greater at first sight than they really are. It is impossible but that we should sometimes meet with ambiguous cases—as for instance when it seems uncertain whether a point of repose in the middle of a composition is or is not sufficiently well marked to constitute a True Cadence ; or the conclusion of a strain definite enough to demand a *Tierce de Picardie*. But a little experience will soon enable the student to form a correct judgment, whenever a choice is presented to him ; if only he will bear in mind that it is always safer to reject a disputed accidental, than to run the risk of inserting a superfluous one.

On one other point only will a little further explanation be necessary.

Among the few accidentals introduced into the older part-books we rarely find a Natural. Composers limited themselves to the use of the Sharp and Flat, in order to remove a trifling difficulty connected with the process of transposition. It constantly happens that for the convenience of particular singers pieces, originally written in transposed Modes, are restored, in performance, to their natural pitch. In this case the B flat of the transposed scale, raised by a Natural, is represented at the true pitch by an F, raised by a Sharp ; thus—



Now to us this use of the Natural in the one case, and of the Sharp in the other is intelligible enough. But when accidentals of all kinds were exceedingly rare, there was always danger of their being misunderstood ; and the early composers, fearing lest the mere sight of a Natural should tempt the unwary in the act of transposing to transfer it from the B to the F, substituted a Sharp for it ; thus—



This method of writing, which is found as late as the 18th century, is exceedingly puzzling to the beginner ; but all difficulty will vanish if he will only remember that notes, flat by the signature, simply become Natural when a Sharp is prefixed to them. W. S. R.

MUSICA FIGURATA (Figured music). I. In its earliest sense this term was applied to Plain-song melodies, corrupted by the introduction of forbidden intervals, and overloaded with those ill-conceived embellishments which, in the year 1322, were so sternly condemned by the celebrated Bull of Pope John XXII. [see MACICOTATICUM]. II. In later times it was more generally understood to indicate the polyphonic music of the 14th, 15th, and 16th centuries, in which the beauty of a Plain-song *Canto fermo* was enhanced by the addition of an elaborate and regularly constructed counterpoint. W. S. R.

MUSICA MENSURATA, or CANTUS MENSURABILIS (Measured Music). The notes of Plain-song were originally of indeterminate length ; and were lengthened or shortened indefinitely, in accordance with the rhythm or accent of the words to which they were adapted. But after the invention of Figured Music it became necessary to design a system of notation capable of expressing the relative duration, as well as the pitch, of every note intended to be sung ; and thus arose a new species of song, called *Cantus mensurabilis* or Measured Music.

One of the earliest known writers on this subject was the celebrated Franco of Cologne who, upon the strength of his Tract entitled *Ars cantus mensurabilis* written during the later half of the 11th century, has frequently been credited with the invention of the Time-Table. It is but fair, however, to say that in this very tract Magister Franco himself speaks of 'many others, both recent, and ancient' (*multos tam novos quam antiquos*), who have written on the same subject ; whence, notwithstanding the testimony of Marchettus of Padua, who wrote two centuries later, we must infer that we are indebted to our author rather for a compendium of what was already known at the time when he flourished, than for a new or original discovery. In confirmation of this view Coussemaker, in his *Scriptores de musica medii aevi*, cites several MSS. which appear to be of earlier date than the treatise of Franco ; and prints, *in extenso*, examples which set forth systems far less completely developed than that which Franco describes.

Next in point of antiquity to Franco's treatise is one written by our own countryman, Walter Odington of Evesham, in the 13th cent. Others follow, by Marchettus of Padua, in 1274; Johannes de Muris, in 1321; Robert de Handlo —another Englishman—in 1326; Prosdocimus de Beldemandis, in 1410; Franchinus Gafurius, in 1480; and numerous other authors, who all concur in representing Franco as an authority entitled to the utmost possible veneration.

A detailed analysis of these interesting works would far exceed the limits of the present article. The systems they set forth are, of course, progressive; and a sufficiently explicit summary of their successive stages of development will be found in the Articles NOTATION, TIME-TABLE, and others therein mentioned. W. S. R.

MUSICA TRANSALPINA. The name of the first printed collection of Italian madrigals with English words. It was published in London in 1588 (the dedicatory epistle is dated Oct. 1), soon after Byrd had issued his 'Psalmes, Sonets, and Songs,' the first printed collection of English madrigals. The title is 'Musica Transalpina. Madrigales translated of foure, five and sixe parts, chosen out of diuers excellent Authors, with the first and second part of *La Verginella*, made by Maister *Byrd* vpon two Stanz's of *Ariosto*, and brought to speak English with the rest. *Published by* N. Yonge, *in fauour of such as take pleasure in Musick of voices.* Imprinted at London by Thomas East, the assignè of William Byrd, 1588. *Cum Priuelegio Regiae Maiestatis.*' Nicholas Yonge, the compiler, tells us that during his residence in London he had annually received music-books from Italy and elsewhere, and that his house was much resorted to by gentlemen and merchants, English and foreign, attracted by the music which was daily performed there; that five years previously a gentleman had translated many Italian madrigals, and that he, having obtained copies, had often been importuned to publish them, and had at length done so. The number of madrigals in the collection is fifty-seven, viz. sixteen by Ferabosco, ten by Marenzio, four each by Palestrina and Filippo di Monte, three by Conversi, two each by Byrd, Faignient, Donato, Orlando Lasso, Ferretti and Felis, and one each by di Macque, Pordenoni, de Vert, Verdonck, Palestina, Rinaldo del Mel, Bertani, and Pinello. In the table of contents the original initial Italian words are given, side by side with the English. In 1597 Yonge published a second book under the same name, containing twenty-four madrigals, viz. six by Ferabosco, three each by Marenzio, Croce and Quintiani, two each by Eremita and Palavicino, and one each by Vecchi, Nanini, Venturi, Feliciani, and Bicci. The madrigals in both books are very judiciously chosen, and many are still in constant use. The English words are almost literal translations of the original Italian, and are generally well fitted to the notes, but as verses are singularly crude, and in some instances—notably the well-known 'Cynthia, thy song and chanting' of Giovanni Croce—almost unmeaning. W. H. H.

MUSICAL ANTIQUARIAN SOCIETY, THE, 'for the publication of scarce and valuable works by the early English composers,' was established in 1840, and commenced its publications in November of that year. Specimens of old English *melody* had been reproduced in 'A Collection of National English Airs,' then recently completed, and this Society was designed to afford specimens of the English school of *harmony* in and after the madrigalian era. As motets, madrigals, and other choral music were originally published only in separate parts, it became necessary, for this object, to reproduce them in score. The separate parts were difficult of attainment, and not in all cases correct; the editors had, therefore, a considerable amount of labour, and occasionally of thought, in making the scores. Nevertheless, the duties were willingly undertaken by eminent musicians of the time, some of whom added biographies of the composers, or other interesting introductory matter—all without remuneration, as the object was a national one.

Nineteen works were published, in large folio, and to these were added sixteen corresponding folios of compressed scores by Sir G. A. Macfarren. These were undertaken by the publisher on his own responsibility, with a view of increasing the subscription list. The council of the Society had decided against the addition of accompaniments under the vocal scores. Besides the editors, there were many eminent musicians who assisted on the council and at the rehearsal of each work, being then occasionally called upon to advise in cases of doubtful notes.

The Society lasted seven years, and in its second year numbered nearly a thousand members, but they gradually fell away, chiefly alleging as reasons that the works were more fitted for societies than for private families, in which there are rarely a sufficient number of voices; and, secondly, that the books occupied too much space. The annual subscription was one pound, and the works were supplied to the members at prime cost.

The nineteen works issued by the Society were:—

1. A Mass for five voices, by William Byrd. Edited by E. F. Rimbault.
2. The first set of Madrigals by John Wilbye. Edited by James Turle.
3. Madrigals and Motets for five voices, by Orlando Gibbons. Edited by Sir George Smart.
4. Dido and Æneas, a tragic opera by Henry Purcell. Edited by G. A. Macfarren.
5. The first set of Ballets for five voices by Thomas Morley. Edited by E. F. Rimbault.
6. Book I. of Cantiones Sacræ for five voices, by William Byrd. Edited by W. Horsley.
7. Bonduca, a tragedy by Henry Purcell. Edited by E. F. Rimbault.
8. The first set of Madrigals by Thomas Weelkes. Edited by Edward J. Hopkins.

9. Fantasies in three parts composed for Viols, by Orlando Gibbons. Edited by E. F. Rimbault.
10. King Arthur, an opera, by Henry Purcell. Edited by Professor Edward Taylor.
11. The whole Book of Psalms with their wonted tunes, in four parts, as published by Thomas Este. Edited by E. F. Rimbault.
12. The first set of Songs by John Dowland. Edited by William Chappell.
13. Airs or Fa las by John Hilton. Edited by Joseph Warren.
14. A collection of Anthems by M. Este, T. Ford, Weelkes, and Bateson. Edited by E. F. Rimbault.
15. Madrigals by John Bennet. Edited by E. J. Hopkins.
16. The second set of Madrigals by John Wilbye. Edited by George William Budd.
17. The first set of Madrigals by Thomas Bateson. Edited by E. F. Rimbault.
18. Parthenia, or the first music ever printed for the Virginals, by W. Byrd, John Bull, and Orlando Gibbons. Edited by E. F. Rimbault.
19. Ode composed for St. Cecilia's Day by Henry Purcell. Edited by E. F. Rimbault.

Among members of the council not included in the above list were Sir John Goss, Sir W. Sterndale Bennett, Sir Henry Bishop, Henry Smart, George Hogarth, William Hawes, Charles Lucas, Charles Neate, John Barnett, Tom Cooke, George Cooper, W. H. Callcott, J. Blackbourn, W. Bayley, E. Hawkins, I. Moscheles, and others. Dr. Rimbault acted throughout as hon. secretary, and W. Chappell, the projector of the Society, acted for about five years as treasurer and manager of the publications. He was then succeeded by his younger brother, Thomas P. Chappell. W. C.

MUSICAL ART SOCIETY OF NEW YORK, THE, was founded in 1894 for the cultivation of the works of Palestrina, Bach, and the ancient and modern composers of the *a cappella* style. It was the first organisation of the kind that developed stability in the United States, and the plan of it was formulated and carried out by Dr. Frank Damrosch, who was its conductor at the beginning, and still is at the present time (summer of 1906). Knowing how futile it is to rely upon amateurs merely for this kind of work, requiring as it does the highest degree of delicacy of execution, purity of intonation and capacity for intelligent interpretation, he appealed to the professional singers of New York for his choir. Of such he organised a chorus of fifty-five mixed voices, paying the singers for their services, and holding them to duty by a stringent system of fines. In addition to the regular members of the choir there is a supplementary body from which new members are drafted as older ones retire. Besides these active participants in the Society's work there are founders, patrons, and associate members who pay different sums for the maintenance of the organisation. The concerts are public. The first was given on March 3, 1894, and there have been two annually ever since, one in the Christmastide and one in Lent, the seasons being considered in the composition of the ecclesiastical portion of the programme. The programmes have included works by Palestrina, Nanino, Vittoria, Gabrieli, Corsi, Donato, Anerio, Caldara, Allegri, Leo, des Prés, Lasso, Sweelinck, Praetorius, Calvisius, Schütz, Eccard, Leisring, Bach, M. Haydn, Mozart, Wilbye, Morley, Tomkins, Gibbons, Wesley, Leslie, Schumann, Mendelssohn, Brahms, Franz, Liszt, Cornelius, von Othegraven, Herzogenberg, Dvořák, Arcadelt, Cherubini, Berlioz, Bortniansky, Gretchaninoff, Tanéïev, Kopyloff, Cui, and others. The middle number of the programme is generally an orchestral piece by Bach, Handel, or some other old composer. Stimulated by the success of the concerts in New York similar societies have been organised in Boston, the borough of Brooklyn (New York City), and Chicago. R. A.

MUSICAL ARTISTS' SOCIETY, THE. Among the numerous attempts made for the direct encouragement of British music towards the end of the 19th century, those for which this Society was responsible hold no small place. Projected in 1873 by Messrs. Arthur O'Leary, C. E. Stephens, and other musicians, the Society was finally established in the following year, when a series of semi-private concerts was inaugurated, at which performances were given of chamber music, chiefly by members of the Society,—Messrs. Algernon Ashton, J. F. Barnett, and F. Davenport, Dr. F. E. Gladstone, and Sir G. A. Macfarren being some of the composers whose works had a hearing. Among the list of original members may be mentioned, Messrs. J. F. Barnett, H. R. Bird, Alfred Gilbert, A. Randegger, and Olaf Svendsen; while the vice-presidents were Sir G. A. Macfarren, Sir Arthur Sullivan and others, the Duke of Beaufort being President. The first concert took place at the premises of Messrs. Stanley Lucas, Weber & Co., others (being three in number a year, though later this number was increased) at such places as the Royal Academy of Music, Grosvenor Gallery, and St. Martin's Town Hall, where the last concert was given on June 6, 1898, the Society dissolving itself early in 1899. In 1885 the concerts became of a more public character, as tickets for admission were on sale, and the press were invited. In 1891 it was decided to introduce occasionally into the programmes foreign music of recognised merit but little known in England; nevertheless the Society continued to meet with insufficient financial support, this being eventually the reason for its dissolution. N. G.

MUSICAL ASSOCIATION, THE, initiated by Sir John Stainer and the Rev. Sir F. A. Gore Ouseley, Bart., was established in 1874, after preliminary meetings at the house of Mr. W. Spottiswoode, F.R.S., and at South Kensington Museum, at the latter of which, on May 29, John Hullah presided, and several members were enrolled. On August 4, 1874, the first general meeting of the members was held, A. J. Ellis, F.R.S., in the chair; and it was resolved that the Society's title should be 'Musical Association for the investigation and discussion of subjects connected with the Science and Art of Music.' The members, according to

the rules, 'consist of practical and theoretical musicians as well as those whose researches have been directed to the science of Acoustics, the history of Music or other kindred subjects.' The Association met for many years at the Beethoven Rooms, Harley Street, on the first Monday of every month from November to June, when papers were read and discussed. From 1890 to 1894 the meetings were held at the Royal Academy of Music, and from the latter year at the Royal College of Organists, Hart Street, Bloomsbury, and the day of meeting is now the third Tuesday in the month. From 1905 the meetings were held at Messrs. Broadwoods'. The subscription is one guinea a year, and members are elected by ballot. The first President was the Rev. Sir F. A. G. Ouseley, Bart., whose successor was Sir John Stainer. The Vice-Presidents were G. Grove; J. Hullah; Prof. G. A. Macfarren, Mus.D.; W. Spottiswoode, and J. Tyndall. The Council included the vice-presidents and Messrs. W. Chappell, G. A. Osborne, Dr. W. Pole, Messrs. A. H. D. Prendergast, C. K. Salaman (the first Hon. Secretary), Dr. Stainer, and Dr. W. H. Stone. The Society's Proceedings were published annually by Chappell & Co. for the first three years, and then by Stanley Lucas & Weber, until 1887 inclusive; in 1888 Messrs. Novello's name appeared on the title-page as publisher. The early volumes of Proceedings are of extreme rarity. In 1900 the Association entered into special relations with the *Internationale Musikgesellschaft*, with certain privileges in the way of subscription, to members of both societies. In 1904 the Association became incorporated. In the present year (1906) the Council and officers are as follows:—

President—Sir C. Hubert H. Parry, Bart.; Vice-Presidents—Messrs. W. G. Adams, C. A. Barry, Sir J. Frederick Bridge, Dr. W. H. Cummings, Mr. Otto Goldschmidt, Sir A. C. Mackenzie, Dr. C. Maclean, Mr. A. H. D. Prendergast, Prof. E. Prout, Lord Rayleigh, Sir C. Villiers Stanford. Ordinary members of Council—Messrs. W. W. Cobbett, C. B. Edgar, Dr. C. H. Lloyd, J. A. Fuller Maitland, Dr. W. G. M'Naught, Dr. F. G. Shinn, Messrs. T. L. Southgate, W. Barclay Squire, J. F. R. Stainer, and F. G. Webb. Mr. C. B. Edgar is the Hon. Treasurer, and Mr. J. Percy Baker the Secretary. C. M.

MUSICAL BOX. [See AUTOMATIC APPLIANCES, vol. i. p. 136.]

MUSICAL FEASTS. The Musical Feasts which preceded the Musical Drama were so called because it was the custom in Italy to celebrate any joyful occasion, such as the marriage of princes, with feasts and games and melodramatic poetry, accompanied with theatrical representations. Feats of arms, jousts, and tournaments, also made part of the entertainment, which was in Italy of much the same character as the masques and pageants in England in the time of Elizabeth and James I. So much were these Musical Feasts in request that the most celebrated poets and musicians of the day were employed to arrange the scheme, celebrated architects devised the extraordinary and elaborate machinery brought in to enhance the effect, and great painters—in one instance a pupil of Perugino, Bastiano di San Gallo—condescended to paint the scenery.

'Like the musical feasts,' says Burney (*Hist.* ii. 50), 'the first Italian operas were performed in the palaces of princes, for the celebration of marriages, or on some particular occasion of joy and festivity, at the expense of the Sovereign or the Republic, and not in theatres supported by general contribution.' (See *Il Quadrio*, vol. v. p. 500.) C. M. P.

MUSICAL GLASSES. [See HARMONICA, vol. ii. p. 297.]

MUSICAL INSTRUMENTS, COLLECTIONS OF. Three or four centuries ago the distinction between a collection for practical use, such as often existed in royal and noble palaces, and a collection of musical curiosities was not so sharply defined as in the present day; but the Museum of Alphonso II. at Ferrara, the instruments acquired by King Henry VIII. of England and the Archduke Ferdinand of Austria in the 16th century, the Museum of Manfred Septala of Milan and the collections of the Venetian Contarini, of Ferdinand de' Medici at Florence, and of Dandeleu in Flanders in the 17th century show that great interest and value were attached, even then, to instruments of music other than for the expression of musical ideas. The Italian writer Saba (*c.* 1545) mentions, as a *new* fashion, the decoration of the interior of palaces with organs, clavecins, psalteries, lutes, viols, flutes, cornets, trumpets, and other instruments, and it is probable that from this custom (not unknown to-day) arose the more systematic and intelligent collection of ancient instruments. There was, however, one branch of this subject which these earlier enthusiasts were obliged to leave untouched, and the ethnological collections of musical instruments which now afford so much information as to the skill and practice of primitive races were as unknown as they were impossible.

In the subjoined list of museums and collections an attempt has been made to denote their object and extent, and the following abbreviations have been used:—S, European Stringed instruments. K, With keyboards. W, European Wind instruments. P, European instruments of Percussion. S W P, A collection of European instruments. E, Instruments collected for ethnological purposes. A, Archæological and prehistoric instruments. G, General collection, including European and ethnological specimens. C, Printed catalogue of special interest with date of latest issue known. An asterisk de-

notes a public collection or catalogue wholly devoted to musical instruments.

The difficulty of making the list correct and complete has been great, especially as regards collections in private hands which, as the new list shows, are continually changing locality and owner. Inquiries, however, have been carefully made, and information thankfully received from museums and well-known collectors, whilst the catalogues of all the musical exhibitions of recent years have been collated. Owing to the limitations of space very small collections and the ownership of single instruments, however rare, are not mentioned.

A. EUROPE

1. *Great Britain and Ireland*

LIVERPOOL. Public Museum including the Mayer collection (G).
LONDON. Victoria and Albert Museum, South Kensington (G); *C, 1874. Specimens are frequently lent to the Bethnal Green and Provincial Museums. *Museum of the Royal College of Music, S. MUSICAL LOAN EXHIBITIONS. The idea of bringing before the public the art treasures of private collectors under the form of a loan exhibition is essentially English, the Special Exhibition of Ancient Musical Instruments held at South Kensington in 1872 being acknowledged as the prototype of the many similar collections which have since been made in Europe and America. Although musical exhibitions for trade purposes only do not fall within the scope of the present article, students of musical history will find much information in the reports on the musical instruments in the two earliest London exhibitions (the Great Exhibition of 1851 and the International Exhibition of 1862) by Dr. William Pole, and the accounts by Clay and Pontécoulant of the musical section in the Paris Exhibition of 1867, whilst many recent exhibitions, though not arranged with this particular object in view, have afforded unusual opportunities of hearing the music of extra-European peoples performed by native artists. In the following list are included the names of the most important exhibitions, in which there have been loan collections of musical instruments and literature, those of marked value from an antiquarian standpoint being denoted by an asterisk. Official catalogues of exceptional interest, and treatises which have been published bearing on these exhibitions, are mentioned under the special occasion which produced them.

1872. LONDON. *Special Exhibition of Ancient Musical Instruments, South Kensington. Catalogue with introductions, notes, and photographs by Carl Engel, 1873. Cremona Violins and Varnish, by Charles Reade, 1873. Some account of the Special Exhibition, being Appendix 2 to Catalogue of the Musical Instruments in S. Kensington Museum, by C. Engel, 1874.
1878. PARIS. *Historical Exhibition, Trocadéro. Report by Gustave Chouquet.
1880. BRUSSELS. National Exhibition.
1881. MILAN. *Musical Exhibition. Official Catalogue with short notes.
1885. LONDON. *Loan Collection of Musical Instruments, Books, etc., Albert Hall. A very fine collection held in connection with the Inventions Exhibition. Guide to the Loan Collection with notes and preface by A. J. Hipkins. 1885. A Brief Description of Spinets, and other Keyboard Instruments in the Loan Collection, by William Dale (privately printed). Notes on Siamese Musical Instruments (Siamese Embassy, London). 1885. Musical Instruments, Historic, Rare, and Unique, by A. J. Hipkins, with illustrations in colour by W. Gibb. 1886.
1886. EDINBURGH. International Exhibition.
1887. MANCHESTER. Royal Jubilee Exhibition (Musical autographs).
1888. BOLOGNA. *International Exhibition of Musical Instruments. Official Catalogue with short notes
BRUSSELS. Industrial Art Exhibition.
1889. PARIS. *Universal Exhibition. Report on the Musical Instruments by Thibouville Lamy. La Facture instrumentale (wind instruments), with illustrations by Constant Pierre. 1890.
1890. LONDON. *Military Exhibition, Chelsea (no stringed instruments, but in all other respects very complete). Official Catalogue with short preface to the musical section. Descriptive Catalogue of the Musical Instruments with prefaces, illustrations, and appendices, by Captain C. R. Day. 1891 (Eyre & Spottiswoode).
EDINBURGH. International Exhibition.
1892. VIENNA. *International Exhibition of Music and the Drama. The most extensive exhibition at present held. Illustrated Catalogue with notes, issued in 'National' sections. Musical History in the International Exhibition at Vienna, by R. A. Marr. 1893. The International Exhibition of Music and the Drama, edited by Hipkins, Steinert, and Schneider, translated from the German. 1894.
LONDON. Musical Art Exhibition, Royal Aquarium. Catalogue with short prefaces and notes.
1893. CHICAGO. The World's Columbian Exhibition. Illustrated and annotated Catalogue of the Steinert Collection of Keyed and Stringed Instruments. 1893.
1894. EDINBURGH. Loan Exhibition of the Society of Musicians.
1897. LONDON. Victorian Era Exhibition, Earl's Court (especially Musical Literature).
BRUSSELS. Universal Exhibition.
1898. BERLIN. Musical Exhibition. Official Catalogue with short notes.
1900. LONDON. *Musical Exhibition, Crystal Palace. The first Exhibition in which the whole collection was systematically arranged to show classification and development. Annotated Catalogue with prefaces and Lectures. 1900. *Musical News* Office.
PARIS. *Universal Exhibition. Musée rétrospectif, illustrated Report of the Committee on the Musical Instruments. 1905 (privately printed).
1902. BOSTON, U.S.A. Historical Musical Exhibition. Illustrated Catalogue with notes by Chickering.
1904. LONDON. *Tercentary Exhibition of the Musicians' Company, Fishmongers' Hall. An important feature was the system of Daily Lectures. Official Catalogue with prefaces and notes. 1904. The Lectures with illustrations. 1906 (Walter Scott Publishing Co.). Illustrated and Annotated Catalogue (Novello) in the press.

MUSICAL PERIODICALS. See PERIODICALS, MUSICAL.

MUSICAL SOCIETY OF LONDON, THE. This Society was founded in April 1858 by a body of musicians, professional and amateur, who had originally been members of the New Philharmonic Society, and wished to re-constitute it. This being found impracticable, they established a new institution, under the name of the Musical Society of London. Among the names of this body are found those of Charles Salaman, Esq., the chief mover of the project (to whose kindness the present writer is indebted for his information), who held the post of Honorary Secretary until 1865, when Mr. G. C. Verrinder succeeded him; Augustine Sargood, Esq. (Treasurer); C. E. Horsley, Esq. (Honorary Librarian); W. V. Wallace; G. A. Macfarren; Henry Smart; Jules Benedict; Stephen Elvey; John Goss; E. J. Hopkins; B. Molique; Sir F. A. Gore Ouseley, Bart.; and Dr. S. S. Wesley; besides other prominent musicians. The objects of the Society, as stated in its early prospectuses, were :—To promote social intercourse among its members and with musicians of this and other countries; to form a musical library for the use of members; to hold conversazioni, at which papers on musical subjects might be read, and subjects of musical interest discussed; to give orchestral, choral, and chamber concerts, and occasionally lectures; to afford the opportunity of trying new compositions; to publish occasional papers, calculated to extend the theoretical and historical knowledge of music. The members consisted of fellows, associates, and lady-associates, whose subscription was fixed at one guinea. The following were honorary fellows :—Auber, Berlioz, Ernst, Joachim, Meyerbeer, Moscheles, Rossini, and Spohr. The conductor of the Society during the whole period of its existence was Mr. Alfred Mellon. The first concert took place on Jan. 26, 1859, when the C minor Symphony of Beethoven, the 'Melusina' Overture of Mendelssohn, and a cantata by G. A. Macfarren, 'May-Day,' etc., were given. Gade's

Highland Overture was performed at the second concert. Among the most interesting items of the programme may be mentioned, Schumann's Symphony (No. 1), May 1861; Joachim's Concerto in the Hungarian style, played by the composer, March 12, 1862; the Choral Symphony of Beethoven, April 30, 1862, on which occasion Stephen Heller played Mozart's Concerto for two pianos with Charles Hallé; Sullivan's 'Tempest' Music, May 21, 1862; Schumann's Symphony in E♭, June 13, 1866. Besides the regular concerts, conversazioni were occasionally given, at which the programmes were frequently remarkable, and objects of antiquarian and artistic interest were exhibited. At the first conversazione, for example, Mr. Charles Salaman played two pieces by Orlando Gibbons on a virginal. At the last concert, March 20, 1867, the most interesting feature of the programme was Beethoven's Choral Fantasia, the pianoforte part of which was played by Mme. Schumann. On April 15 following the operations of the Society were suspended, in consequence of the inadequacy of the funds for carrying out the proposed schemes, and the proceedings were never resumed. M.

MUSICAL UNION, THE. An association, managed by a President, Vice-President, Committee of fifteen noblemen and gentlemen, and a Director (John Ella), which gave eight matinées of classical chamber music for many seasons in London. The Musical Union took its origin in social gatherings held at Mr. Ella's residence, but in 1844 the Society assumed greater importance, and its concerts never failed to sustain the high standard of excellence for which they were remarkable from the first. A list of all the artists who have appeared at the Musical Union would include the names of all the most celebrated executants of the middle of the 19th century, many of whom were first introduced into England by Ella. It is impossible to estimate too highly the important influence this Society had in disseminating a taste for good music amongst the upper classes in London. The system of placing the performers in the centre of a circle, which was adopted at these concerts, gave them a social charm to which a considerable share of their success was no doubt owing; but the greatest boon which musicians owe to the Musical Union was the introduction of analytical programmes, which were first adopted in London by Professor Ella at these concerts. [See ANALYSIS.] The programmes were delivered to the members a day or two before the performances took place—a plan highly to be commended. The association ceased to exist in 1880, and its founder, Mr. Ella, died Oct. 2, 1888. W. B. S.

MUSICIANS' COMPANY. The worshipful Company of Musicians of London has a history and associations which carry back the mind to the musical life of the Middle Ages, the days of the troubadours and minstrels. The Charter by which the Company received its corporate existence and legal status dates back no farther, it is true, than 1604, in which year it was granted by James the First. This was not, however, the first instrument by which minstrels in England had been empowered to form themselves into Guilds or Fraternities, for the Patent Roll gives us the Charter granted by King Edward IV. in 1469 to his 'beloved minstrels,' empowering them to constitute themselves into a guild and make rules and regulations for the government of the craft or 'mystery' of musicians, and to adopt measures to remedy grievances and improve the poor estate into which the calling had evidently then fallen from the high esteem in which it had been held in previous centuries. This Charter, preserved by Rymer in his well-known *Foedera*, where the original Latin text is given, possesses great interest, by reason of the light it throws upon the musical practitioners of those days. Though apparently the earliest on record, it cannot have been the first of its kind, for in it we are told that 'the brothers and sisters of the Fraternity of Minstrels' had established and ordained similar brotherhoods or guilds 'in times past.' Of these earlier Charters, unfortunately, no copy is known, but it will be safe to assume that the rules which they contained for the government of the guild differed little from those laid down in the document here referred to.

This earlier Charter was granted in response to the prayer of the King's Minstrels, whose names are given. They were Walter Halliday (Marshal), John Cliff, Robert Marshall, Thomas Grene, Thomas Calthorne, William Cliff, William Christean, and William Eynsham. They complain of the wrong done them by 'certain ignorant rustics and craftsmen of various callings, who falsely represent themselves to be minstrels; although they are in that art by no means learned or skilled, they nevertheless move from place to place on festival days and collect all those profits by means of which the King's Minstrels should obtain their living'; and furthermore, that thus 'much disgrace is brought upon the art or occupation of minstrels.' To remedy the grievances thus complained of, the minstrels named were erected into a corporation with perpetual succession, and were given powers of examination, supervision, control, and correction of all minstrels throughout the Kingdom, the County of Chester excepted, for there the minstrels were under other special control (see Sir Peter Leycester's *Historical Antiquities of Cheshire*). What measure of success attended the efforts of the new guild to improve the condition of the members, or what was its eventual fate, is not recorded. Its existence must have been short-lived, however, for at the opening of the 16th century we find

mention of a new guild, a 'Fellowship of Minstrels and Freemen of the City of London,' though when, and by whom it was instituted, there is nothing so far discovered to show. However, in the history of the Pewterers' Company by Welch, under date 1500 and 1501, it is stated that the Pewterers' Hall was frequently let, the Minstrels or Musicians being amongst the principal hirers.

It may be remarked in passing that the term 'Minstrel' is a loose one and has led to some confusion, a notable instance being the Henry Walker, 'citizen and minstrel of London,' from whom Shakespeare held his house in Blackfriars. Walker's connection with the Musicians' Company is mentioned in his will with codicil proved August 30, 1616, where he describes himself as a 'Musitian of London.'

The association that existed between music and players leads one to suppose that in all probability Shakespeare, too, was a member of the Musicians' Company, but owing to the Roll of the Freemen connected with the Company at that period having been destroyed, we are unable to find any proof for this supposition.

In the early days, one of the principal duties of these City Musicians or 'waits,' as they were commonly called, was to supply the music for the City Pageants and Festivities.[1]

The Fellowship of the Freemen and Minstrels of the City of London have many complaints to make of precisely the same character as those raised by the minstrels of Edward IV., 'the povertie and decay' to which they are brought by the 'continuell recorse of foreign minstrels daily resorting to the City out of all the Contrays of England.' For the remedy of this, and for the better government of the London Minstrels, the testing of 'their sufficiency in their art,' and the control and regulation of the teaching of music and dancing, we find that rules were continually enacted and re-enacted, but without, as it would seem, any permanent measure of success.[2]

Eventually the Fellowship appears to have been reduced to such a condition that it was deemed necessary to reconstitute it upon a new basis. This was furnished by the Charter of James I., which brought into existence the Worshipful Company of Musicians. It was incorporated at the prayer of the above-mentioned Fellowship of the Minstrels of London (of which it was consequently the direct successor and representative), under the style and title of 'the Master, Wardens and Commonalty of the Musicians of London.' It was to be governed by a Master, two wardens, and a body of assistants numbering not less than thirteen and not more than twenty, and it was to be invested with full powers for the control and government of all minstrels and musicians in the City of London and within three miles thereof. In accordance with the authority conferred in the Charter, the Company drew up an elaborate series of by-laws for the regulation of the teaching of music within its jurisdiction. These rules, which are too elaborate and extensive to quote here, afford some interesting matter for readers of to-day. It must be admitted, however, that they exhibit a business-like and wise regard for the interests of its members, their proficiency in their art, and also for the training and morals of the apprentices.

The Arms of the Company were granted by Camden, Oct. 15, 1604, and approved by Sir Henry St. George Richmond, 1634, Philip Pikeman being Master, Walter Clarke and Philip Janvrin, Wardens, and Nicholas Pinny, Clerk. We may add that the principal charge of the Arms is the Swan, the bird of Apollo and emblem of the musician's or poet's song.

The state of decline into which the art of music as a profession had fallen during the 17th century is no doubt due to the Revolution and Puritan domination. It is therefore not surprising that the Musicians' Company should have sunk into comparative obscurity, as is proved by a MS. dated about 1660, which is preserved in the Bodleian Library, wherein the members of the Company are enumerated as being thirteen in number. Later on, however, it appears to have come once more to the front, for in 1700 the Company was authorised by an Act of Common Council to exercise jurisdiction over dancing-masters. It likewise appears that the Company's jurisdiction was enforced as late as 1763, in which year an action was successfully brought by the Musicians' Company before the Recorder of London, against Barton Hudson, for employing persons not free as musicians at a Lord Mayor's Banquet.

Though the Company is still in active existence, it possesses, unfortunately, no records of its history and acts during the greater part of the three last centuries. These have been lost, and with them, of course, many interesting details of the musical life of London during that period. However, some glimpses of the Company's history may be found in the Records of the City of London.

Times are changed since the Guilds were potent factors in the political and social life of England, when it was necessary for those living in the City to take up the Freedom and Livery

[1] The livery of the London Waits in 1575 is described in Fairholt's *Lord Mayors' Pageants*, Pt. 1, p. 23, as follows: 'Blue gowns, red sleeves and caps, every one having his silver collar about his neck.' The gowns worn by the Masters and Wardens of the present day are blue, trimmed with fur. In the Diary of Henry Machyn, citizen and merchant-taylor of London, 1550-63, may be seen such entries as the following:—

'The furst day of September (1556) was Sant Gylles day, and ther was a goodly processyon abowt the parryche with the whettes (waits) and the canepe borne, and the Sacrement, and ther was a goodly masse songe as bene hard; and master Thomas Grenelle, wax-chandler mad a grett dener for master Garter and my ladye, and master Machylle the shreffe and ys wife, and both the chamburlayns, and mony worshipfull men and women at dener, and the whettes playng and dyvers odur mynysterelles, for ther was a grett dener.'

[2] Thomas Morley writes as follows in the 'Dedication of First Booke of Consort Lessons,' 1599:—'The ancient custome of this honourable and renowned Citie hath been ever to retaine and maintaine excellent and expert Musicians.'

of the City Guilds in order to be allowed to carry on their trade or profession in the confines of the City. Nevertheless, many of them still exist, and although they no longer discharge to the full the functions for the exercise of which they were originally founded, most of them have adapted themselves to the new conditions and seek to the best of their power to further the interests of the calling with which they have been so long associated. Such is the case with the Musicians' Company. It is doing all that lies within its limited means, by the institution of scholarships, competitions, the award of medals and in other ways, to stimulate and promote the study and practice of the art which it was established to supervise and control. We may add in passing, however, that the Musicians' Company has never possessed any great wealth.

In addition to the above-mentioned awards, a sum is granted annually for a scholarship in composition to be held at the Guildhall School. Mr. Andrew Carnegie has founded in connection with the Company, of which he is an honorary freeman, two scholarships entitling the holders to three years' free tuition at the Guildhall School, and Mr. S. E. Palmer, whose benefactions to the musical world are so well known, has presented to the Company, of which he also is an honorary freeman, the sum of £1250. With the interest derived therefrom two other scholarships have been created, tenable, at the same Institution, the one by a boy and the other by a girl. In 1904, in connection with the tercentenary of the granting of the Company's Charter, prizes were given by Mr. Charles T. D. Crews, the Master, and the Rev. H. Cart, liveryman of the Company, for various musical compositions, including a grace for the use of the Company. In addition, Mr. Crews presented fifty guineas to the Guildhall School to be employed in assisting poor students. Mr. W. W. Cobbett, liveryman of the Company, has also given a prize of £50 for a 'Phantasy' for string quartet.

Specially worthy of mention is the Exhibition held by the Company in commemoration of its Tercentenary at the Fishmongers' Hall, which was opened by the Prince and Princess of Wales on the 28th of June 1904, under the patronage of the King and Queen, His Majesty heading the list of lenders. Then was brought together a remarkable collection of instruments, books, manuscripts, portraits, and other objects bearing upon the history and practice of music, probably more complete, valuable, and instructive than anything of the kind that had ever before been got together. A finely illustrated catalogue of the entire collection is now (1906) in course of preparation.

In order that all possible advantage might be derived from the Exhibition, a series of lectures on the exhibits, with musical illustrations, was delivered. (These have since been published in book-form.)

Among the throngs who flocked to this Exhibition, those who possessed sufficient knowledge to estimate its value could not fail to recognise and admit that in promoting it the Musicians' Company had furnished a convincing proof of their usefulness, and a striking testimony of their zeal for the best interests of their art.

At the present time, 1906, the Musicians' Company consists of about a hundred Liverymen. Election to the Company rests with the Court, which consists of the Master, two Wardens and not less than thirteen assistants. Fees amounting to £42 : 16s. are payable on taking the Livery. The Livery of the Company carries with it the Freedom of the City, the privilege of a vote in the City for Parliamentary Elections and for certain Civic affairs. The Musicians' Company is the only City Company concerned with the exercise of a profession.

By arrangement the Musicians' Company now enjoy the use of the Worshipful Company of Stationers' magnificent old Hall.

The Company, as regards members and influence, is at present in a stronger position than it has been for upwards of a century, and the greater number of the Liverymen are connected with and interested in the art of music. The majority are musicians, both professional and amateur, and the Madrigal Society and other important bodies are well represented.

The officers are as follows: Master, Mr. E. E. Cooper (Treasurer of the Royal Academy of Music); Wardens, Sir Homewood Crawford and Mr. A. C. Hunter; Assistants, Mr. C. T. D. Crews, Mr. T. P. Jones, Mr. H. R. Frisby, Mr. J. H. Skilbeck, Mr. R. B. Warwick, Sir J. F. Bridge, Mus.Doc., Mr. J. C. Collard, Mr. C. D. Hoblyn, Mr. F. Harwood Lescher, Mr. W. Cordy Herring, Mr. T. L. Southgate, the Rev. R. H. Hadden, M.A., Mr. Alfred H. Littleton, Mr. Arthur F. Hill, Mr. W. P. Fuller, and Col. T. B. Shaw-Hellier; Hon. Chaplain, Canon Duckworth; Clerk, Mr. T. C. Fenwick.

The Livery Club of the Musicians' Company, founded in 1902, to promote the interests of the Company and its usefulness to the Art of Music, has issued for private circulation two handbooks dealing with the history of the Company, reprinting the two Charters and giving the By-Laws and other information of interest to the Liverymen. In 1904 the Livery Club re-instituted a private celebration of the Feast of St. Cecilia. A. F. H.

MUSIKALISCHES OPFER, *i.e.* Musical Offering. One of Bach's works, containing various treatments of a subject given him by Frederick the Great to extemporise upon during his visit to Potsdam in May 1747. The work, as published by Breitkopf & Härtel (Nov. 1831) contains two Ricercari, one for three voices and one for six voices (the latter in score), one Fuga

canonica for two voices, five Sonatas for Flute (the king's own instrument), Violin, and Continuo, and eight Canons ; sixteen pieces in all. The work was published by Bach with a dedication dated July 7, 1747—a curious medley of five sheets oblong folio and one sheet upright folio, containing the Ricercar *a* 3, and a Canon perpetuus (the third in B. & H.'s edition), five Canons, and the Fuga canonica. In the Dedication copy, now in the Amalienbibliothek at Berlin, Bach has written 'Regis Iussu Cantio Et Reliqua Canonica Arte Resoluta'—'the theme demanded by the king with other things developed by canonical art.' Four more oblong folio sheets seem to have been afterwards added, containing the Ricercar *a* 6 and two Canons, and lastly three sheets containing the Sonatas and one Canon. (See Spitta's *Bach*, Engl. transl. iii. 191-7, 233, 292, 294.) G.

MUSIN, Ovide, born at Nandrin, near Liège, Belgium, Sept. 22, 1854. Entered Liège Conservatoire in 1863 ; pupil of Hyneberg, and two years later took first prize for violin playing. In 1870 Henri Léonard was appointed professor at the Liège Conservatoire ; Musin studied with him, and eventually followed him to the Paris Conservatoire, where—at the age of fourteen—he was awarded the gold medal for solo and quartet playing. A year later he made his début, replacing Léonard at a concert. After touring in France, he visited Holland in 1875, and, meeting the impresario Jarreth, was engaged by him for a prolonged tour. Under Mapleson's direction he came to London in 1877, remaining here for five years. Finally he made a tour round the world, returned to Liège in 1897, and succeeded César Thomson as violin professor at the Conservatoire. His last appearance in London was on May 6, 1888, at the Prince's Hall, where he played Leopold Damrosch's Concertstück for violin and orchestra, under the baton of Walter Damrosch. He now resides at Brussels, but spends six months of the year in New York, where he holds preparatory classes for admittance to the Liège Conservatoire. (*Liège Artiste*, Sept. 30, 1905 ; Baker's *Biog. Dict. of Musicians.*) E. H-A.

MUSTEL, Victor, a manufacturer of harmoniums, whose long struggles against poverty, and final success, entitle him to be called the 'Palissy of music,' was born at Havre in 1815. Left an orphan at the age of twelve, he was apprenticed to a shipbuilder, and in 1838 set up in business for himself in that trade at the little hamlet of Sanvic. Endowed from youth with a peculiarly constructive genius, his first attempts at making musical instruments were devoted to the improvement of an accordion which he had bought in Havre. Elated with his success, he disposed of his workshop in May 1844, and set out for Paris with his wife and two children. For the next nine years he worked in several different workshops, but never obtained high wages. In 1853 he determined to start in business for himself as a harmonium maker, and in 1855 exhibited his harmonium with 'Double Expression,' and a new stop 'Harpe Éolienne,' for which he gained a medal of the first class. For the first year after this, Mustel (now assisted by his two sons) did fairly well, but business rapidly declined, and he would perhaps have been obliged to succumb, but for the sale of a little land which he had inherited from his father. Even in 1866 his receipts did little more than cover the costs, but since that date the firm of 'Victor Mustel et ses Fils' has gained a reputation that has been as noteworthy in England as in France.

The inventions due to MM. Mustel are—'La Double Expression' (patented 1854), whereby the natural preponderance of the bass tones over those of the treble is, with complete power of increase and decrease in either half, brought under direct control of the player by means of knee pedals (genouillères) that control the energy and pressure of the wind ; 'Le Forté expressif,' a divided swell governed by pneumatic agency ; and 'La Harpe Éolienne,' a tremolo register of two ranks of vibrators, 2 ft. pitch, which offer a gently beating variation to the unison by being slightly less and more than the normal pitch of the instrument, the impression of which remains unimpaired. M. Mustel subsequently invented 'Le Typophone,' and 'Le Métaphone.' The first of these is a keyboard percussion instrument, made of tuning-forks in resonance boxes of the proper acoustic capacity. The principle is very similar to that of the Celesta (see vol. i. p. 491). The Métaphone (patented in 1878) is an invention to soften at pleasure the somewhat strident tones of the harmonium. It is produced by a sliding shutter of leather to each compartment, and is governed by drawstops, as with other modifications of tone and power. A. J. H.

MUSURGIA UNIVERSALIS. The name of a voluminous work, published at Rome in the year 1650, by the Jesuit Father, Athanasius Kircher, and translated into German by Andreas Hirsch, of Hall, in Suabia, in 1662.

The ten Books into which the treatise is divided contain much useful matter, interrupted, unfortunately, by a host of irrelevant disquisitions, and an inordinate amount of empty speculation.

In the First Book the author describes the Construction of the Ear, the Comparative Anatomy of the Vocal Organs, and the sounds emitted by different animals. The Second Book treats of the Music of the Hebrews and the Greeks. In the Third are contained discussions on the Theory of Harmonics, Proportion, the Ratios of Intervals, the Greek Scales, the Scale of Guido d'Arezzo, the system of Boëthius, and the Ancient Greek Modes. The Fourth Book is devoted to a description of the Monochord

and its minute divisions. The Fifth Book treats of Notation, Counterpoint, and other branches of Composition; and contains a Canon which may be sung by twelve million two hundred thousand voices. [See NODUS SALOMONIS.] The Sixth Book—founded chiefly on the *Harmonicorum libri XII* of Mersennus—contains a long dissertation upon Instrumental Music. The Seventh Book describes the difference between Ancient and Modern Music.—The Eighth, Ninth, and Tenth Books are filled with discussions of a very transcendental character; and, dealing largely in 'the Marvellous,' treat of the Bite of the Tarantula and its musical cure, the Harmony of the Spheres, and of the Four Elements, the Principles of Harmony as exemplified in the Proportions of the Human Body and the Affections of the Mind, and other subjects equally visionary and recondite, some compensation for the absurdity of which will be found in a really practical description of the Æolian Harp, of which Father Kircher claims to be the inventor.

A careful perusal of this curious work will be found neither useless nor uninteresting, provided its statements be received *cum grano salis*. Remembering that its author was rather a well-read scholar than a practical musician, we can scarcely wonder at the errors it contains. Its merits are the result of laborious research. Its faults arise from Father Kircher's inability to form a correct judgment on points which, to a more experienced artist, would have presented but little difficulty. And the like may be said of the same writer's *Phonurgia nova*—a work on the Nature and Properties of Sound—which appeared in 1673. W. S. R.

MUTA (Italian), *i.e.* change. A word often seen attached to Horn parts—'muta in Es,' 'muta in B,' etc., meaning simply 'change to E♭ or B♭,' etc.; that is, take off the crook in which you are playing and put on that which will make the horn sound in E♭ or B♭. G.

MUTATION. (Lat. *Mutatio*, from *muto*, 'I change.') I. When in the Solmisation of a plain-song melody it becomes necessary to pass from one Hexachord to another, the process by which the transfer is effected is called a Mutation. [See HEXACHORD.] In ascending from the *Hexachordon durum* to the *Hexachordon naturale*, the change may be conveniently made by substituting the *re* of the latter for the *sol* of the former, at the note D—whence this particular Mutation is known as that of SOL RE. [See example, vol. ii. p. 391.]

In descending from the *Hexachordon naturale* to the *Hexachordon durum*, the *sol* of the latter must be taken, instead of the *re* of the former at the same note; and the Mutation is then called RE SOL. The same process will also serve for the mutual interchange between the *Hexachordon naturale* and the *Hexachordon molle*, at the note G.

But, in ascending from the *Hexachordon naturale* to the *Hexachordon durum*, the *re* of the latter must be substituted for the *la* of the former, at the note A, by means of the Mutation LA RE; and, in descending from the *Hexachordon durum* to the *Hexachordon naturale*, the *la* of the second will be sung instead of the *re* of the first—RE LA.

Direct communication between the *Hexachordon durum* and the *Hexachordon molle* is rarely used, on account of the False Relation described under the head of MI CONTRA FA.

Many different systems of Mutation have been recommended by early writers; but all agree in the necessity of so arranging that the Semitone shall always fall between the syllables *mi* and *fa*. Lucas Lossius (*Erotemata musicae*, 1565) directs the change to be always made by means of *re* in ascending, and *la* in descending; and enforces his rule in the following distich—

> Vocibus utaris solum mutando duabus:
> Per *re* quidem sursum mutatur, per *la* deorsum.

[See also Prof. Wooldridge's *The Polyphonic Period*, vol. ii. of *The Oxford History of Music*, pp. 78-81.]

II. The term is also applied to the change which takes place in a boy's voice, when it passes from treble or alto into tenor or bass. The period of this transformation is uncertain; but it generally declares itself between the ages of fourteen and sixteen, and is very rarely deferred later than the completion of the seventeenth year. During the time that it is in progress, the vocal organs undergo so much disturbance, that great care is necessary in order to prevent them from being seriously injured by incautious exercise.

III. More rarely, the word is used to denote that change in the position of the hand upon the violin, which, by English violinists, is called the Shift. W. S. R.

MUTATION STOPS, in an organ, are those registers which do not produce a sound agreeing with the name of the key pressed down, but either the perfect fifth or the major third to it, as G or E on the C key. The former are called fifth-sounding, or Quint stops; the latter third-sounding, or Tierce stops. The proper relative size of the largest fifth-sounding stop is one-third that of the Foundation stop from which it is deduced; as $10\frac{2}{3}$, $5\frac{1}{3}$, or $2\frac{2}{3}$, from the 32, 16, or 8-foot stops respectively. The largest Tierce-sounding stops are one-fifth the size of the Foundation stops from which they are deduced; as $6\frac{4}{5}$, $3\frac{1}{5}$, and $1\frac{3}{5}$ feet respectively. The third-sounding rank on the manual has been much more sparingly used since the introduction of Equal Temperament, as it does not sound agreeably with that system of tuning; and an additional rank of pipes consequently becomes available for some other purpose.

The only Mutation stop in use in England

previously to the arrival of Smith and Harris (1660) was the twelfth (2⅔ feet). After that date the Tierce (1⅗ foot), Larigot (1⅓ foot), and their octaves (among the small Mixture ranks) became not uncommon. E. J. H.

MUTE. See SORDINO.

MY MOTHER BIDS ME BIND MY HAIR. The third, and one of the most favourite of Haydn's Twelve Canzonets. The words were originally written by Mrs. John Hunter, the wife of the eminent surgeon, and a great friend of Haydn's, to the andante of a sonata by Pleyel. The stanzas were reversed by Haydn, so that the present first verse was originally the second. G.

MYSLIWECZEK, JOSEF, a Bohemian composer, son of a miller, born near Prague, March 9, 1737; had a good education in the common school, and after his father's death devoted himself to music. After many attempts at composition, and much wandering, he went to Venice, studied with Pescetti, and fell upon his feet at Parma, in 1764, with an opera, 'Il Bellerofonte,' the success of which was so great as to make his reputation; though he returned to the north of Italy he was recalled to Naples no less than nine times. [In 1773 his 'Erifile' was given in Munich, and in 1775 his 'Ezio' at Naples. An oratorio 'Abramo ed Isacco' (1777) was for some time ascribed to Haydn.] Mozart met him at Bologna in Nov. 1772, and again at Munich in 1777. He was evidently very gifted. Mozart says of his sonatas that 'they are bound to please, not difficult, and very effective,' and urges his sister to learn them by heart.[1] Elsewhere he speaks of him as a prize difficult to replace.[2] He was evidently very fascinating,[3] but as evidently a loose fish, unable, with all his engagements, to keep himself respectable.[4]

In 1778 he gave his 'Olimpiade' at Naples, which threw every one into transports of enthusiasm. The famous singer Gabrielli sang his songs everywhere, and was accustomed to say that none were so well suited to her voice. He died at Rome, Feb. 4, 1781, adding another to the long list of musicians whose great popularity during their lifetime was not sufficient to preserve their works from swift oblivion. Mysliweczek is said to have had a young English friend named Barry, who buried him in San Lorenzo in Lucina, and erected a monument to him there. The Italians called him Il Boëmo, in despair at the pronunciation of his proper name. [Four oratorios, fifteen operas, many symphonies, concertos, sonatas, and arias, are mentioned in the *Quellen-Lexikon*.] G.

MYSTÈRES D'ISIS, LES. An arrangement, or derangement, of Mozart's 'Zauberflöte,' words by Morel, music adapted by Lachnith; produced at the Académie, August 23, 1801. The opera was torn to pieces; some of the best numbers (*e.g.* the second quintet, the terzet, the chorus 'O Isis,' Pamina's song) were taken out, numbers from other operas inserted (*e.g.* 'Fin ch' han dal vino' as a duet). The concluding chorus opened the opera, and great liberties were taken with what was left. But such was the beauty and spirit of the music that its success was immense, and it kept the boards till May 2, 1827. The real 'Zauberflöte' was first produced in Paris in 1829. Lachnith was much ridiculed at the time; he was called 'le dérangeur,' and his work 'Les misères d'ici.' [See LACHNITH, vol. ii. p. 618.] G.

[1] Letter, Nov. 13, 1777. [2] August 7, 1778. [3] Oct. 11, 1777. [4] Feb. 22, 1778; Oct. 11, 1777.

N

NAAMAN. An oratorio in two parts; the words by W. Bartholomew, the music by Costa. Composed for the Birmingham Festival, and produced there Sept. 7, 1864.

NABUCCO, or NABUCODONOSOR. Opera in three acts; libretto by Solera, music by Verdi. Produced at the Scala, Milan, March 9, 1842; at Paris, Oct. 16, 1845; in London as 'Nino' at Her Majesty's, March 3, 1846. G.

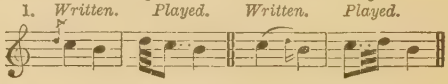
NACHBAUR, FRANZ, a noted German tenor, born March 25, 1835, at Schloss Giessen, near Friedrichshafen, Wurtemberg. He was educated at the Polytechnic School, Stuttgart. As a member of a Gesangverein, his fine voice attracted the notice of Pischek, who advised him to take regular instruction in singing. He began his career as a chorister at Basle, and afterwards became a member of a German troupe travelling in France. Through the liberality of M. Passavant, a banker at Lunéville, he found means for the culture of his voice, first through Orth, the bass singer, and afterwards with Lamperti of Milan. He afterwards sang in opera at Mannheim, Prague, Darmstadt, Vienna, and in 1866 at Munich, where he obtained a permanent engagement at the opera, enjoying a great reputation until his retirement in 1890. He created the part of Walther in 'Die Meistersinger' in 1868, and that of Froh in 'Das Rheingold' in 1869. He also sang in Italy, and appeared as Lohengrin at Rome in 1878. In 1882 he was a member of the German Opera Company at Drury Lane, and on June 3 sang the part of Walther in 'Die Meistersinger.' He also appeared as Adolar in 'Euryanthe' on June 13, but came to England too late to account for the great reputation he enjoyed in Germany. He died at Munich, March 21, 1902. A. C.

NACHDRUCK, MIT ('With pressure,' 'Heavily'; corresponding nearly to the Italian *pesante*). A direction used by Beethoven in the Rondo of the Pianoforte Concerto in E♭, No. 5, op. 73 (Bars 9, 102, 106), to indicate that the bass is to be well emphasised. The term *espressivo* is coincidently used in the treble. M.

NACHEZ, TIVADAR, violinist, was born on May 1, 1859, at Budapest. His first teacher was Sabathiel, leader of the orchestra at the Royal Hungarian Opera. With him he remained till his sixteenth year, when he gained one of the travelling scholarships founded by the King of Hungary. With this he went to Berlin, and was for three years a pupil of Joachim. His studies concluded at Paris, where he was a pupil of Léonard for a year, and where he established himself for a time, playing at the Pasdeloup and other concerts. He made several tours on the continent, and finally settled in London in 1889. He is a brilliant soloist, and produces an excellent tone. As a composer he has been mainly successful in writing violin solos based upon Hungarian melodies. W. W. C.

NACHRUF, *i.e.* Farewell. The German word expresses the idea, not merely of farewell, but of fame after death; thus 'Elegy' would be a more accurate translation. The title given by Mendelssohn to the slow movement which he composed to his Quintet in A, in Paris, after hearing of the death of his great friend Edward Ritz. It replaced a minuet and trio in F♯ and D, the trio in double canon. G.

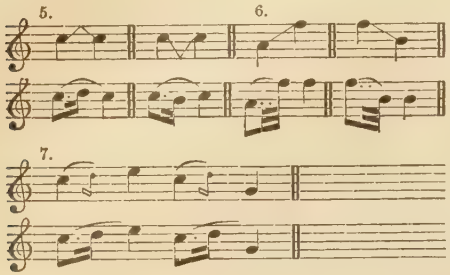
NACHSCHLAG. The German name for one of the graces of instrumental and vocal music. It consists of a note played or sung at the end of the note to which it serves as an ornament, and it thus forms, as its name indicates, the antithesis to the *Vorschlag*, or short appoggiatura, which is played at the beginning. [APPOGGIATURA.]



Like all graces, the Nachschlag forms part of the value of its principal note, which is accordingly curtailed to make room for it, just as in the Vorschlag the principal note loses a portion of its value at the beginning. Emanuel Bach, who is the chief authority on the subject of grace-notes, does not approve of this curtailment. He says—'All graces written in small notes belong to the next following large note, and the value of the preceding large note must therefore never be lessened.' And again—'The ugly Nachschlag has arisen from the error of separating the Vorschlag from its principal note, and playing it within the value of the foregoing note,' and he gives the following passage as an instance, which he considers would be far better rendered as in Ex. 4 than as in Ex. 3.

Nevertheless, Emanuel Bach's successors, Marpurg, Türk, Leopold Mozart, etc., have all recognised the Nachschlag as a legitimate grace, though they all protest against its being written as a small note, on account of its liability to be confounded with the Vorschlag. Marpurg refers to an early method of indicating it by means of a bent line ⌒, the angle being directed upwards or downwards according as the Nachschlag was above or below the principal note (Ex. 5), while for a springing Nachschlag, the leap of which was always into the next following principal note, an oblique line was used (Ex. 6). 'But at the present day (1755),' he

goes on to say, 'the Nachschlag is always written as a small note, with the hook *turned towards its own principal note*' (Ex. 7).

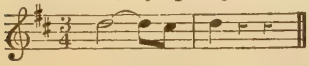


The Nachschlag was not limited to a single note, groups of two notes (called by Türk the double Nachschlag) forming a diatonic progression, and played at the end of their principal note, being frequently met with, and groups of even more notes occasionally.

In the works of the great masters, the Nachschlag, though of very frequent occurrence, is almost invariably written out in notes of ordinary size, as in the following instances, among many others.

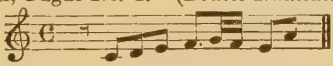
9. HANDEL, 'Messiah.'

BEETHOVEN, Symphony No. 7.



MENDELSSOHN, Violoncello Sonata, Op. 45.

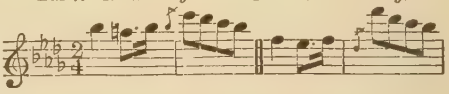
BACH, Fugue No. 1. (*Double Nachschlag.*)



Modern composers, on the other hand, have returned to some extent to the older method of writing the Nachschlag as a small note, apparently not taking into account the possibility of its being mistaken for a Vorschlag. It is true that in most cases there is practically little chance of a misapprehension, the general character and rhythm of the phrase sufficiently indicating that the small notes form a Nachschlag. Thus in many instances in Schumann's pianoforte works the small note is placed at the end of a bar, in the position in which as Nachschlag it ought to be played, thus distinguishing it from the Vorschlag, which would be written at the beginning of the bar (Ex. 10). And in the examples quoted below from Liszt and Chopin, although the same precaution has not been taken, yet the effect intended is sufficiently clear—the small notes all fall within the time of the preceding notes (Ex. 11).

10. SCHUMANN, 'Warum,' Op. 12.

Bar 7. *Nachschlag.* Bar 11. *Vorschlag.*



11. LISZT, 'Rhapsodie Hongroise,' No. 2.

CHOPIN, Nocturne, Op. 32, No. 2.

Although the employment of the Nachschlag is so general in composition, it appears to have no distinctive name in any language except German. Some English authors[1] have adopted the translation *Afternote*, but it has never come into general use, while among the old French *agrémens* there is one called *Accent*, which is identical both as to sign and execution with the Nachschlag described by Marpurg (Ex. 5), but which, according to Rousseau, who speaks of it as a *coup de gosier*, only belonged to vocal music.

The term Nachschlag also signifies the turn of a trill. [See TRILL.] F. T.

NACHSPIEL, *i.e.* Afterpiece. A name given by the modern German school of organists to voluntaries intended to be played at the conclusion of the service, while the congregation is leaving the church. This form of composition is also called Postludium, and has even been Englished as 'Postlude.' The German title corresponds to the word Vorspiel, used as an equivalent to Präludium or Prelude. Examples of the name (Nachspiel) may be found in the works of Joseph André and Rinck, and examples of Postlude in those of Henry Smart and many others. M.

NACHTLAGER VON GRANADA, DAS. Opera in two acts, from Fr. Kind's drama, by Frhr. von Braun, composed by Conradin Kreutzer, produced at Vienna, 1834.

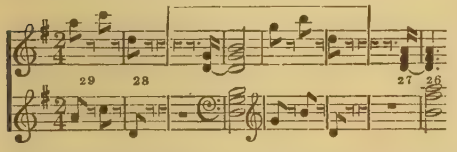
NACHTSTÜCKE (Night Pieces). The name of four pieces for pianoforte solo by Schumann, constituting op. 23 of his published works. They were written in Vienna in 1839 (the same year as the 'Fasschingsschwank aus Wien,' the Three Romances, the Humoreske, etc.), and are dedicated to F. A. Becker of Freiberg. The name is taken from the title of a series of tales by

[1] Dr. Callcott's *Grammar of Music.*

Hoffmann, whose works, like those of Jean Paul Richter, had a great fascination for Schumann at this period of his life. [See KREISLERIANA, which were written the year before the 'Nachtstücke.'] They are entirely distinct in character from the ordinary NOCTURNE, though the name would seem to imply a resemblance ; in fact, they are much more like the 'Nuits Blanches' of Stephen Heller, being, with one exception (No. 4, the simplest and most popular, as well as the quietest of the series), excited and restless, yet full of vigour. M.

NADESHDA. Romantic opera in four acts ; words by Julian Sturgis ; music by A. Goring Thomas. Produced by the Carl Rosa Company at Drury Lane, April 16, 1885. M.

NÄGELI, JOHANN GEORG, an eminent music publisher, and also a composer and *littérateur*, born near Zurich, May 16, 1773. He started his music business in his native town in 1792, and quickly issued editions of Handel, Bach (forty-eight Preludes and Fugues, Art of Fugue) and other classics, large oblong folio, in a style of great clearness and beauty for the time. In 1803 he started the 'Répertoire des clavecinistes,' a periodical publication in which new works by Clementi, Cramer, Beethoven, and others appeared. For Beethoven he published the three grand solo sonatas now known as op. 31, which appeared without opus number, the first and second in 1803 in Pt. 5 of the Répertoire, the third in 1804 in Pt. 11. It is in connection with the first of the three that the circumstance occurred which will prevent Nägeli from being forgotten as long as Beethoven's sonatas are studied. He actually interpolated four bars into the first movement of that sonata, between the 28th and 27th bars from the end :—



Beethoven, however, must have pardoned this crime ; for several of his later letters to Nägeli are couched in terms of affection, and he did his utmost to induce the Archduke Rodolph to subscribe to a volume of Nägeli's poems in 1824.

Nägeli's compositions were chiefly vocal—choruses for Church and School use, etc., popular enough in their day. He founded an association for the encouragement of music, and acted as its President. He was a great adherent of the Pestalozzi system of education, and wrote in support of it. But these and his other active labours for his beloved art, his disputes with Thibaut and with Hottinger, were brought to an end by his death at Zurich, Dec. 26, 1836, and are all now forgotten. An exception may be made for his 'Lied vom Rhein' (Scherer's Collection, p. 76) and for an air which was long highly popular in England under the name of 'Life let us cherish,' [published in Zurich, 1794] and upon which the Finale in Woelfl's sonata 'Non plus ultra' is a set of variations. G.

NÆNIA. A cantata for chorus and orchestra on Schiller's words, 'Auch das Schöne muss sterben,' set by Hermann Goetz, op. 10, and by Brahms, op. 82. Nænia or Nenia was a classical term for a funeral dirge. G.

NAGEL, WILIBALD, born Jan. 12, 1863, at Mülheim on the Ruhr, the son of a well-known singer, Siegfried Nagel ; he studied music at Berlin under Ehrlich, Treibs, Spitta, and Bellermann, and after spending some years as a teacher of musical history at Zurich, came to England in order to study the records of our national music. He made many minute and valuable researches, which were afterwards embodied in two books, *Geschichte der Musik in England*, two volumes, 1891 and 1897, and *Annalen der Englischen Hofmusik*, 1894-95, published as a supplement to the *Monatshefte für Musik*. Among his other works are : *Ueber die dramatisch-musikalischen Bearbeitungen der Genovefa-Legende* (1888), and *Beethoven und seine Claviersonaten* (1903), as well as a life of Brahms. In 1896 he went back to Germany and took up his residence at Darmstadt, where since 1898 he has been teacher of musical science in the Technische Hochschule. He conducts the academical Gesangverein of the same place. A *Geschichte der Musik am Darmstädter Hofe, 1570-1800*, is still in preparation. M.

NAICH, HUBERT, one of the earlier madrigal composers, of whose life nothing is known except that he was a Netherlander, living in Italy towards the middle of the 16th century. The only publication which bears his name exclusively is a collection of thirty Italian madrigals *a* 4 and 5, printed at Rome, but bearing no date, though probably about 1540. It is dedicated to Bindo Altoviti, the friend of Raphael and patron of Benvenuto Cellini, and at the end Naich himself is described as a member of the Accademia degli Amici at Rome. Other madrigals by Naich appeared in the various collections of Arcadelt and Rore. Among the half-dozen Italian madrigals contained in Ott's *Liederbuch*, 1544, there is one by Naich, 'Rara beltà divina,' a very good specimen of early madrigal composition, and the only means we have at present of judging Naich's work. (See Eitner's reprint of Ott.) J. R. M.

NAIL VIOLIN. (In German 'Nagelgeige,' 'Nagelharmonika,' 'Eisenvioline'). This curious musical instrument was invented in the year 1740 by a German violinist named Johann Wilde, at that time living in St. Petersburg. The suggestion for its construction originated in Wilde's accidentally scraping the hair of his bow across the metal peg, upon which he was about to hang it, and in so doing producing a musical sound of distinctive quality. The flat

wooden sounding-board is in the shape of a half moon, and the metal nails are firmly fastened perpendicularly around the edge of the curved side. These nails diminish in height as the notes rise in pitch, and the chromatic nails are distinguished by being slightly bent. It was held in the left hand by a hole underneath, and sound was produced by rubbing a strong, well-rosined, black-haired bow across the nails. In 1780 it was improved by the addition of sympathetic strings; and Senal—a Viennese artist—excelled upon it. In 1791 a new arrangement of it, called the 'Nagelclavier,' was produced by Trager of Bamberg, who made it of an oblong shape. It was played upon with a band coated with rosin, instead of a bow, which band was worked by keys. (Carl Engel, *Catalogue of Musical Instruments at South Kensington.*) E. H-A.

NALDI, Giuseppe, born at Bologna, Feb. 2, 1770, was the only son of Giuseppe Naldi, of the same city, who held a government appointment of high trust. The son was educated in the universities of Bologna and Pavia, where he made very rapid progress in his studies for the law, the profession of his choice. Finding this, however, uncongenial after a short time, he obtained, at the personal request of the Marchese Litta, a secretary's place in a government department, where he gave promise of ability and distinction; but the Italian Revolution put an end to his career in this direction, and he left the country.

He next appeared at Milan, where he was persuaded to give way to his natural genius for music, and where he achieved his first success upon the stage. According to Fétis (who, however, is incorrect in some details of his biography), Naldi appeared at Rome in 1789, then at Naples, and next at Venice and Turin. In 1796 and 1797 he reappeared at Milan. In London he made his début April 15, 1806, and he continued to sing here every subsequent season up to 1819 (inclusive). His principal characters were in 'Le Cantatrici Villane,' 'Così fan tutte,' and 'Il Fanatico per la musica.' In the latter, he showed his skill in playing the violoncello, on which he was no mean performer. Lord Mount-Edgcumbe describes his voice as 'weak and uncertain'; while another critic calls it 'sonorous and powerful,' but excepts from his successful rôles that of Sancho in the 'Villeggiatori bizarri,' which he rather foolishly excuses on the plea that he was 'too much the gentleman to play the clown' (*Monthly Mirror*). All agree, however, that Naldi was extremely clever, could write very fair verses and compose very tolerable music; had an accurate ear; could play the piano and violoncello very well; and read at sight with perfect ease and intonation. As an actor, he was excellent, and played with 'irresistible humour, effect, judgment, and truth.' A good portrait-sketch of him, as Figaro in 'Le Nozze,' 'Drawn and Etched expressly for the British Stage,' appeared in Feb. 1818. In the next year, he was engaged at Paris, where he made his début in 'Così fan tutte'; but his powers were much faded. He returned once more to London in that, his last, season; and in the following year, at Paris, met an untimely death, in the apartments of his friend Garcia, by the bursting of a newly-invented cooking-kettle, a trial of which he had been invited to witness. [According to the *Gentleman's Magazine*, he died on Thursday, Dec. 15, 1820. W. H. G. F.] His daughter, Mlle. Naldi, made her début in 1819. She sang at Paris in 1822-23, and is said (by Fétis) to have 'shared the public applause with Pasta for some years, particularly in 'Tancredi' and 'Romeo e Giulietta.' Without attaching implicit credit to this statement, we may believe that she was an excellent singer, and that she was a loss to the stage when she retired (1824), having married the Conte di Sparre, after which she was no more heard, except in her own *salon*, or those of her friends. J. M.

NALSON, Rev. Valentine, Sub-chanter of York Cathedral in the early part of the 18th century, composed an Evening Service in G, and also, on the occasion of the Peace of Utrecht in 1713, a Morning Service in the same key, both which are contained in the Tudway Collection, Harl. MSS. 7341 and 7342. Some anthems by him are also extant at Ely. He died in 1722. W. H. H.

NANINI, or NANINO, Giovanni Bernardino, was born, about the middle of the 16th century, at Vallerano, where he studied counterpoint under his elder brother, Giovanni Maria. Removing at a later period to Rome, he held the appointment of Maestro di Cappella, first in 1599 at the Church of S. Luigi de' Francesi, and afterwards at that of S. Lorenzo in Damaso. Beyond this little is known of his personal history; though it is certain that he took a prominent part in the management of his brother's music school,—an institution to which some of the most celebrated composers of the period were indebted for their early training. [The exact date of his death has not been ascertained, and can only be surmised as between 1612 and 1618, as the works which appeared after the latter year were edited by others.]

As a composer G. B. Nanini takes rank among the best masters of his time; but his works are, for the most part, far less characteristic of the true polyphonic style than those of his brother. He was one of the first who ventured so far to depart from the traditions of the Roman School as to write church music with organ accompaniment; and his later productions bear evident marks of that 'progress' which ultimately led to its extinction. His

published works are: a volume of delightful Madrigals entitled, 'Madrigali, a 5 voci, Lib. I.' (Venice, 1588, 1598); *Idem.* Lib. II. (Venice, 1599); *Id.* Lib. III. (Rome, 1612); 'Motecta, a i. ii. iii. iv. v. voc. una cum gravi voce ad organi sonitum accomodata, Lib. I.' (Roma, 1610); *Id.* Lib. II. (Rome, 1611); *Id.* Lib. III. (Rome, 1612); *Id.* Lib. IV. (Rome, 1618); 'Salmi, a 4 voc. con. l' organo' (Rome, 1620); and 'Venite, exultemus Domino, a 3 voc. coll' organo' (Assisi, 1620). In addition to these important works, many Madrigals, and other detached compositions, will be found in the collections published by Phalesius, and others, at the beginning of the 17th century; and many more still remain in MS. (See the *Quellen-Lexikon.*) Of these last, the most important are, some Psalms and Motets for eight Voices and a Salve Regina for twelve, formerly in the collection of the Abbé Santini; and a Treatise on Counterpoint, written, in conjunction with Giov. Maria, perhaps for the use of the pupils in the Music School. Proske has included four of his Psalms in the 'Musica Divina.' W. S. R.

NANINI, or NANINO, Giovanni Maria, elder brother of the preceding, was a native of Tivoli, where he is believed to have been born between 1545 and 1550. [In early youth he was a chorister at Vallerano, and studied Counterpoint, at Rome, under Gaudio Mell; and, on the completion of his education, he obtained a place as tenor singer in Sta. Maria Maggiore in Rome, was appointed in 1575 maestro at San Luigi de' Francesi, in 1577 a singer in the Papal Chapel, and in 1579 maestro at Sta. Maria Maggiore.]

Finding his talents now fairly appreciated, Giov. Maria established a public Music School—the first ever opened in Rome by an Italian—in the management of which he was assisted by his brother, Giov. Bernardino, as well as by Palestrina himself, who constantly gave instruction to the pupils, and took a lively interest in the institution. The school prospered exceedingly; and was frequented by more than one talented youth whose genius afterwards bore abundant fruit. Nanini's reputation as a learned contrapuntist, and gifted composer, was secured. His works were received at the Sistine Chapel with marks of special approbation, and in 1604 he was appointed maestro in that chapel. His death took place on March 11, 1607; and his remains were deposited in the Church of S. Luigi de' Francesi.

Nanini was one of the brightest ornaments of the great Roman school, the highest qualities of which he cultivated in a remarkable degree. His motet, for six voices—'Hodie nobis cœlorum rex'—annually sung, in the Sistine Chapel, on the morning of Christmas Day, is a noble composition; and he has left us many others, of equal merit, a large proportion of which still remain in MS. among the archives of the pontifical choir, the Vatican Basilica, the Collegium Romanum, the oratory of S. Maria in Vallicella, and other noted collections. P. Martini mentions a MS. collection of Canons, entitled 'Cento cinquanta sette Contrappunti e Canoni a 2, 3, 4, 5, 6, 7, 8, e 11 Voci, sopra del Canto fermo intitolato La Base di Costanzo Festa,' which contains some miracles of ingenuity and learning. Some of these, at least, have already appeared among his published works; but a dissertation on counterpoint, called 'Regole di Giov. Maria e di Bernardo Nanini, per fare contrappunto a mente sopra il Canto fermo,' written, conjointly, by himself and his younger brother, in 1619, exists only in a MS. copy—unhappily, imperfect—transcribed by Orazio Griffi, and preserved in the library of the Palazzo Corsini alla Lungara. [For other copies see the *Quellen-Lexikon.*]

The published works of Nanini comprise a volume of 'Motetti a 3-5 voci' (Venice, 1586); 'Madrigali,' Lib. I. (1579); *Idem.* Lib. II. (1581, etc.); *Id.* Lib. III. (1586); 'Canzonetti a 3 voci, per Alessandro Nanini raccolte' (1593); all published, at Venice, in 4to, by Gardano; some 'Salmi, a 8 voci,' printed in the well-known collection of Fabio Costantini (Napoli, 1615); and a number of motets, madrigals, and other isolated works, included in Costantini's 'Motetti,' Waelrant's 'Symphonia Angelica,' and other collections published in Italy, and by P. Phalèse of Antwerp. Some very fine motets—including a masterly 'Hodie Christus natus est,' in which the characteristic Noè! Noè! is introduced with great effect—will be found in Proske's 'Musica Divina.' [See Noël.] Others are given in the collections of the Prince de la Moskowa, Rochlitz, etc. [See the *Quellen-Lexikon.*] W. S. R.

NANTIER-DIDIÉE, Constance Betsy Rosabella, was born at St. Denis in the Isle of Bourbon (now Ile de la Réunion), Nov. 16, 1831. Mlle. Nantier, who derived her second name from her marriage with a singer, was at the Paris Conservatoire under Duprez, from 1847 to 1849, and obtained an *accessit* in the latter year in his class, and the first prize in the opera class. She made her début on the stage at the Carignan Theatre, Turin, in Mercadante's 'La Vestale.' She played in Paris at the Salle Ventadour in 1851, and afterwards joined an Italian company, of which Giuglini was one, playing at Lyons, Nîmes, Montpelier, etc.

Madame Nantier-Didiée made her first appearance in England at Covent Garden in 1853 as the Chevalier de Gondi, in 'Maria di Rohan,' afterwards as Maddalena in 'Rigoletto' on its production here, and as Ascanio in 'Benvenuto Cellini'; and in all three parts was successful. From 1853 to 1864 inclusive she sang here every year in Italian opera, at Covent Garden and the Lyceum, the usual mezzo soprano or

contralto parts, creating amongst others Nancy in 'Marta,' Rita on the revival of 'Zampa,' L'Amore in 'Orfeo,' Ulrica in Verdi's 'Ballo,' and Siebel in 'Faust.' In this last opera Gounod wrote the popular air 'Quando a te lieta' expressly for her. During this time Madame Nantier-Didiée sang at Court and public concerts, made an operatic provincial tour in 1855, later in that year and the early part of 1856 played in opera in America, and took part at the Bradford Festival of 1859. The rest of each year she was engaged at the Italian Opera of Paris, St. Petersburg, Moscow, Madrid, etc., or sang at concerts in the French provinces. She died at Madrid, Dec. 4, 1867. Apropos of Maddalena, Mr. Chorley remarks, 'Her gay handsome face, her winning mezzo-soprano voice, not without a Cremona tone in it, redeeming the voice from lusciousness, and her neat lively execution, were all displayed in this part, short as it is.[1] For such occupation as falls to the share of a first-rate singer of the second class, this lady has never been exceeded. Subsequently when . . . she tried to win first honours as a contralto, the natural limits of her powers made themselves felt, and she lost rather than gained in public favour.' A. C.

NAPIER, William, a Scottish musician and music-publisher born about 1740. For a number of years he played the violin in the private band belonging to George the Third, until gout in his hands prevented this. He was an energetic music-publisher, quick to see latent talent in new composers. His publications include a quantity of instrumental works, and he held the valuable copyright of such ballad operas as 'Rosina,' 'Maid of the Mill,' etc. He disposed of some of these copyrights to Dale for £540. His best-known publication is 'A Selection of Original Scots Songs,' three vols. folio 1790-94, with Bartolozzi frontispieces. His earliest address (before 1773) was 474 Strand, at the corner of Lancaster Court. About 1788 he removed from here to 49 Great Queen Street, and finally, about 1800, to 8 Lisle Street. He died in his seventy-second year in 1812, at Somers Town (see obituary notice in *The Scots Magazine* for August 1812). F. K.

NAPLES. The first school of music at Naples was founded towards the middle of the 15th century by John Tinctor. His school was short-lived, but it was immediately succeeded by the illustrious Neapolitan Conservatorios, which were both the first examples and models of all similar musical institutions, not only in Italy but in the other countries of Europe.

The Conservatorios of Naples, four in number —(1) Santa Maria di Loreto, (2) San Onofrio, (3) De' Poveri di Gesù Cristo, (4) Della Pietà de' Turchini—were originally founded by private benefactors for the purpose of affording both shelter and instruction to the homeless orphans of Naples. The children were taken out of the streets and clad in a particular dress, each Conservatorio being distinguished from the others by its peculiar colour. They were, moreover, closely shaven, and this, coupled with the clerical character of their dress, caused them to be called 'Preterelli' (little priests). Many of them were indeed destined for Holy Orders. Ecclesiastical music was at first the primary object of these institutions. They were governed after the pattern of a priests' seminary, and each had a church of which the pupils formed the choir. The funds of the institution were increased by the services of the pupils in other city churches and in the Royal Chapel, for which they received a monthly salary; also by other pious offices, such as watching and chanting hymns and prayers over the dead previous to burial. This was the task of the younger pupils, while the elder ones would carry the dead to the grave and even bury them. These elder pupils were called 'Paranze' (*i.e.* a small corps or company) and the younger ones 'Sopranelli' and Contraltini,' according to their voices. Besides these pious services, which were almost daily in request, the pupils were engaged to sing in the great musical processions, or 'Flottole'—so called from 'Flotto,' a term for the choir, a corruption of 'Frotta,' a crowd, because of the number of the pupils. Afterwards, when dramatic music began to revive, they represented the mysteries in the monasteries and convents during carnival, and later still performed in the theatres, more especially in that of San Carlo, for which the pupils of the Pietà de' Turchini were principally selected on account of their proximity to it. These efforts of the pupils brought in to each Conservatorio an average of 1000 ducats a year, but despite these and the private benefactions of individuals, the endowment of each institution was hardly sufficient to supply the bare necessaries of life to the pupils, while the space was so cramped that many of them had to sleep in the corridors and refectories, and the supply of musical instruments was far too scanty for the performers. Yet from this humble origin sprang the great masters of music whose compositions are inseparably associated with Italy.

(1) Santa Maria di Loreto. This originated in 1535 with a poor artisan of the name of Francesco, who received into his house on the Mercato orphans of both sexes, and caused them to be fed and clothed and instructed in music. The rich citizens of the Mercato assisted his pious design by every means in their power. The fame of the school reached the ears of Giovanni da Tappia, a Spanish priest domiciled in Naples, and he, having the progress of music greatly at heart, volunteered to direct it, and extend its powers of usefulness by a permanent endowment. This he obtained by begging alms

[1] The earlier portion of this quotation was reprinted in the first volume of the Dictionary, under article Bosio, by an error. It refers to Mme. Nantier-Didiée.

from house to house through the Neapolitan Provinces. At the end of nine years he returned to Naples with a sufficient sum for the purpose. The original humble institution was transferred to a larger building close to the Church of Sta. Maria de Loreto. This building was formally ceded by the government to da Tappia, received the title of 'Conservatorio,' and was endowed, in 1566, with the 'Jus del forno' and 'della beccaria.' Thus established, rich citizens from time to time left their fortunes to this institution, which grew and flourished. The pupils of both sexes reached the number of 800. Among the illustrious musicians whose names are connected with Santa Maria di Loreto are Alessandro Scarlatti, Durante, Porpora, Traëtta, Sacchini, Perez, Guglielmi, and many more.

In 1797 the two Conservatorios of San Onofrio and Santa Maria di Loreto were united, the former being absorbed in the latter. In 1806, by order of Joseph Buonaparte, the Conservatorio of Loreto was united to that of the 'Pietà de' Turchini,' and the building of Santa Maria di Loreto then became a hospital. It is still called l' Ospedale del Loreto, and over the doorway the following inscription may still be read :—

Un di ad Apollo, ad Esculapio or sacro.

'Once dedicated to Apollo, now to Aesculapius.'

(2) San Onofrio a Capuana. So called because it was situated in the district of Naples known as Capuana. It was founded in 1576 by private benefactions under the name of the 'confraternity of the Bianchi.' It received 120 orphans, who were instructed in religion and music. The funds of this, as of the other similar institutions, were augmented by the exertions of the pupils as already described. In course of time it was taken out of the hands of the confraternity and established as a Conservatorio by royal warrant, with the title of San Onofrio. The dress of the pupils was black and white—hence the name 'de' Bianchi.' At a later date foreign pupils were admitted on terms of monthly payment, and on the understanding that they should continue to give their services for a few years after the end of their term of instruction. In 1797 the building of San Onofrio was turned into barracks, and the pupils were transferred to Santa Maria di Loreto. A. Scarlatti was a teacher in this Conservatorio also, likewise Durante, Leo, Feo, Cotumacci; amongst their pupils were Gizzi, Jommelli, Piccinni, Terradellas, and Paisiello. Gizzi, by the advice of Scarlatti, opened in 1720 a school of singing in connection with this Conservatorio, the famous singer Gioacchino Conti di Arpino was one of his pupils, and out of gratitude to his master, took the name of Gizziello. [See Gizziello.]

(3) De' Poveri di Gesù Cristo. This was established in 1589 by a Franciscan, Marcello Foscataro di Nicotera, for the foundlings of Naples. By means of alms collected from the Neapolitans, he obtained the necessary funds, and drew up the rules, which were ratified by Alfonso Gesualdo, the then Cardinal Archbishop of Naples. The pupils, 100 in number, varying in age from seven to eleven, and literally taken out of the streets, were clothed at first in the sober dress of the Franciscan order, afterwards in blue and red, were fed and instructed in their own language and in music, and were governed by two canons of the cathedral of Naples.

This Conservatorio existed till 1744, when by order of Cardinal Spinelli it was converted into a Diocesan Seminary. It now bears the title of 'Seminarium Archiepiscopale Diocesanum,' whereas it had for years borne the inscription of 'Pauperum Jesu Christi Archiepiscopale Collegium.' The pupils were distributed among the three remaining Conservatorios—San Onofrio, Loreto, and the Pietà de' Turchini.

This Conservatorio is by some considered as the oldest of all, and as the cradle of the great Neapolitan School of Music. Feo, Greco, Durante, Vinci—all pupils of Scarlatti—Cotumacci, Porpora, Ignazio Gallo, and Pergolesi, were among the most famous composers which it produced.

(4) Della Pietà de' Turchini. This originated with the confraternity of Sta. Maria della Incoronatella, who, in the year 1583 made their house an asylum both for the homeless orphans of Naples, and also for children whose parents were unable to support them. At first the children were only taught to read and write, and were clad in long blue garments ('color turchino'), hence the name of 'Pietà de' Turchini,' which was adopted by the institution instead of that of the 'Incoronatella.' It was not till a century later that musical instruction was given to the pupils. In 1600 it was placed under the protection of Philip III. of Spain, and in 1670 Francesco Provenzale and Gennaro Ursino were appointed to be its Professors of Music, Provenzale having preceded Scarlatti as Maestro of the Palatine Chapel at Naples. It produced many famous composers, such as Fago, Carapella, Leo, Cafaro, Jommelli, and Sala. In 1806, on the abolition of the Conservatorio of Sta. Maria di Loreto, the pupils were received into the Pietà de' Turchini. In 1808 this, the last of the Conservatorios, was also suppressed on the representation of Monsignore Capecelatro, Archbishop of Taranto, 'that the Neapolitan Conservatorios had fallen from their ancient glory on account of bad administration and lack of discipline, and that the only remedy was to re-organise them in one great college established on a broader basis.' Thus the 'Real Conservatorio di Musica' came into existence, first with the title of San Sebastiano, and afterwards

with that of S. Pietro a Maiella, which it still retains.

Tritta, Paisiello, and Feneroli were the first directors and general administrators of the new Real Conservatorio. They were succeeded in 1813 by Zingarelli. In 1817 'external' preparatory schools of music were added; and the pupils who passed creditable examinations there were admitted into the Real Conservatorio. In the revolution of 1820 half the building of San Sebastiano was seized for the use of the government, the other half was made over to the Jesuits, and the monastery of San Pietro a Maiella was assigned to the Conservatorio. In 1837 Zingarelli was followed by Donizetti, and he again in 1840 by Mercadante, who made great reforms in the discipline and efficiency of the college. In 1861, on account of his blindness, Carlo Conti was appointed his coadjutor. Conti died in 1868, and was succeeded by Paolo Serrao Mercadante, who retained his post as President till his death in 1870. Since that date the Conservatorio appears to have lost ground, and a fatal economy seems to have beset its management. In 1874 the scholarships were reduced from 100 to 50, and 25 of these were thrown open to women, with allowance for lodging; but in 1879 this allowance was abolished. The post of Director is now vacant, and the Conservatorio is governed by a board of professors and amateurs. Manfroce, Bellini, Luigi Ricci, and Michael Costa are the most distinguished names on the roll of the Neapolitan School of Music since the establishment of the Real Conservatorio di Napoli. [See LIBRARIES, vol. ii. p. 713.] C. M. P.

NAPOLEON, ARTHUR, son of Alexandre Napoleone, an Italian, and Doña Joaquina dos Santos, a Portuguese lady, was born at Oporto, March 6, 1843. He began to learn the piano at four years of age under the direction of his father, who was a professor of music in that city. At six years of age he played at the Philharmonic of Oporto. In 1850-52, he gave successful concerts at Lisbon and Oporto, and played several times before the Queen, Doña Maria II. In 1852 he went to London, and in 1853 he gave concerts in the Salle Herz, Paris, and played before the Emperor and Empress. Returning to London he played at the Musical Union. In Jan. 1854 he was engaged for twelve concerts at the Kroll Theatre, Berlin, and having been presented by Meyerbeer, played at the palace of Charlottenburg before the King of Prussia. He studied with Hallé at Manchester in the same year, and undertook tours in the United Kingdom. In 1856 he played in Germany and Poland, and made a tour in England in 1857 with Sivori and Piatti. In that year Arthur Napoleon went to the Brazils and was enthusiastically received by his countrymen. In the first four concerts he gave in Rio Janeiro he made a profit of over £3000. Having travelled through South America he returned to Portugal in 1858. From thence he went to the United States, making several long tours, and to the West Indies in 1860, where he played with Gottschalk in Havana, and resided for some time during 1860 and 1861 at Porto Rico. His reappearance in London at St. James's Hall in 1862, when he gave a concert with the sisters Marchisio, was not entirely satisfactory. He now perceived that serious study of the classical composers was essential to his artistic development and to the ultimate attainment of the position for which his natural talents fitted him. While not neglecting this discipline he continued his tours, going again to the Brazils and Portugal, where he was charged with the direction of the opening fête at the Exhibition at Oporto in 1865. His last tour was made in Portugal and Spain in 1866, when he played before Queen Isabella. Owing to circumstances entirely independent of art, Arthur Napoleon left off playing in public at a time when he might really have begun a distinguished career as one of the first pianists in Europe, for which he had all the requisites. In 1868 he established at Rio Janeiro a business in music and pianofortes that has become the first in South America, the present style of the firm being Arthur Napoleão & Miguez. He has written several successful pieces for piano and for orchestra. At the request of the Emperor of the Brazils he directed in 1876 the performance of Verdi's Requiem, and in 1880 undertook the direction of the Camoens tercentenary festival. A. J. H.

NAPRAVNIK, EDWARD FRANZEVICH, born August 12/26, 1839, at Beisht near Königgrätz, in Bohemia, was the son of a teacher. He learnt the rudiments of music from a colleague of his father's named Pugonny, and at thirteen was able to play for the service in the village church. In 1854 he was left an orphan in very poor circumstances. He was determined to become a musician, and succeeded in entering the School of Organists in Prague. He studied instrumentation with Kitel', and also at the Pianoforte School established by Maidel, where he was soon taken on as assistant teacher. Several essays in composition, comprising masses, symphonies, overtures on Czechish themes, songs, etc., date from this early period. In 1861, Napravnik was called to St. Petersburg to be director of Prince Youssipov's private orchestra. Two years later he was appointed, at Liadov's suggestion, to be his assistant, and the organist of the Imperial Theatres. He rose to be second conductor in 1867, and succeeded Liadov as chief capellmeister in 1869; a position which he still occupies.

At the time of his appointment Russian opera was in a neglected and languishing condition, and Napravnik carried on the work of restitution, begun by his predecessor Liadov, with tact and zeal. The existing repertory of the Maryinsky

Theatre—where Russian opera is usually performed in Petersburg—has been largely built up on his recommendation, and although some masterpieces of national opera are unduly neglected, it shows a great improvement on the past. The days when native works were entirely disregarded for those of the Italian and other schools are now at an end. Mention must be made of the admirable performances of Glinka's 'A Life for the Tsar,' Tchaikovsky's 'Eugene Oniegin,' 'The Oprichnik,' and 'Dame de Pique,' and Rimsky-Korsakov's 'Snow Maiden' and 'Sadko,' which have become distinguishing features of Napravnik's directorship. To his remarkable talent as a conductor Napravnik joins uncommon powers of organisation. Although a strict disciplinarian he shows great diplomacy in the management of his affairs. Not only has he so greatly improved the orchestra of the Imperial Opera—both as regards numbers and quality—that it now ranks as one of the finest in the world, but he has done much to raise the social and material position of the players. He is universally respected, and his opinion carries weight in all strata of the musical world of Russia.

At the close of thirty-five years' service, in 1898, Napravnik had conducted over 3000 operas, including sixty-two first productions, of which thirty-six were Russian, and thirty revivals, fifteen of these being by native composers. Besides his onerous work at the Opera, Napravnik has distinguished himself as a concert conductor. From 1869 to 1881 he conducted regularly the Concerts of the Russian Musical Society, and occasionally those of the Philharmonic Society.

In his compositions Napravnik shows the qualities and defects frequently characteristic of the conductor-composer; a consummate command of technical means and the eclecticism and good taste born of vast experience; but also a certain loss of individuality and distinction, which seems the unavoidable result of perpetually assimilating other men's creations. His operas have met with marked success, and are certainly not devoid of charm, although the nature of the music is often reminiscent.

Napravnik's early opus numbers, up to thirteen, represent his youthful works composed before leaving Bohemia. The following is a list of his known compositions:—

Operatic

'The Nije-Novgorodians,' opera in four acts, op. 15, first performance St. Petersburg, 1868 (revived in 1888); 'Harold,' opera in five acts, op. 45, St. Petersburg, 1886; 'Doubrovsky,' opera in four acts, op. 58, St. Petersburg, 1895; 'Francesca da Rimini' (libretto from Stephen Phillips's play), op. 71, St. Petersburg, 1903.

Orchestral

Four Symphonies, op. 17; 'The Demon,' op. 18, 1879; National Dances, opp. 20 and 23; Symphonic poem, 'The East,' op. 40; Suite, op. 49; Solemn Overture, op. 14; Marches, opp. 33 and 38.

Chamber Music

Three String Quartets, opp. 16, 28, 65; two Pianoforte Trios, opp. 24 and 62; Pianoforte Quartet, op. 42; String Quintet (two violoncellos), op. 19; Violin and Pianoforte Sonata, op. 52; two Suites for violoncello and pianoforte, opp. 29 and 36.

Instrumental and Orchestral

Pianoforte Concerto, op. 27; Fantasia on Russian themes for pianoforte and orchestra, op. 39; Fantasia for violin and orchestra, op. 30; Suite for violin and orchestra, op. 60.

Vocal

Music to A. Tolstoi's 'Don Juan,' for soli, chorus, orchestra, and declamation; ballads, with orchestral accompaniment, 'The Voyevode,' op. 22 (baritone), 'The Cossack,' and 'Tamara,' op. 26.

For chorus.—Three male-voice choruses, op. 41; five choruses a cappella, op. 50; four ditto, op. 55; four ditto, op. 63.

Songs, op. 21 (4), op. 25 (4), op. 31 (4), op. 35 (4), op. 44 (4), op. 56 (4), op. 59 (6), op. 68 (4), op. 70 (4 duets).

Pianoforte

Musical Pictures (5), op. 43; Bagatelles (4), op. 46; two Valses, op. 48; Dance Suite, op. 57; six pieces, op. 61; three pieces for violin and piano, op. 64; three pieces for violoncello and piano, op. 37; four ditto, op. 67.

R. N.

NARDINI, Pietro, an eminent violinist and composer, was born at Fibiana, a village in Tuscany, in 1722. He received his first musical instruction at Leghorn, and afterwards studied for several years under Tartini at Padua. We know nothing further of his early career. About the year 1753 he was appointed solo-violinist at the Ducal court at Stuttgart, where he remained for fifteen years. In 1767 he returned to Italy, settled at Leghorn, and stayed with his old master Tartini during his last illness. In 1770 he accepted an appointment as director of the music at the court of the Duke of Tuscany, and died May 7, 1793, at Florence.

Nardini was the most eminent of Tartini's disciples. Leopold Mozart, the best possible judge in matters of violin-playing, writes of him: 'The beauty, purity, and equality of his tone, and the tastefulness of his cantabile-playing, cannot be surpassed; but he does not execute great difficulties.' The well-known poet-musician Schubart relates in his flowery style: 'His playing brings tears into the eyes of stony-hearted courtiers—nay, his own tears run down on his violin!'

That Nardini was not a mere executant, but a thorough musician, is evident from the character of his compositions for the violin. Vivacity, grace, a sweet sentimentality, are the main characteristics of his style, which is altogether more modern in form and feeling than Tartini's. His Allegros are often largely developed, and already display the full sonata-form, while his slow movements are not unlike Viotti's. If nevertheless the greater part of his works appear to us old-fashioned and antiquated compared with those of Tartini, the reason is, that he has neither the depth of feeling, the grand pathos, nor the concentrated energy of his great master.

His published compositions are: six Concertos, op. 1 (Amsterdam); six Sonatas for violin and bass, op. 2 (Berlin, 1765; a new edition published by Cartier, Paris); six Sonatas for two violins (also numbered op. 2), London, Walsh: six Trios pour flute (London); six Solos pour violin, op. 5 (London, 1770); a solo for violin with thorough-bass (London, 1780); six Quartets (Florence, 1782); six Duos pour deux violons (Paris).

Some of his sonatas have latterly been re-edited by Alard in his 'Maîtres Classiques'; by

F. David in the 'Hohe Schule des Violinspiels,' and by G. Jensen in 'Classische Violinmusik.' Leoni di Pienza published an *Elogio di Pietro Nardini*, in Florence, 1793; see also J. B. de Rangoni's *Essai sur le goût de Musique*, 1790. P. D.; additions by E. H-A.

NARES, James, Mus. Doc., born at Stanwell, Middlesex, in 1715 (baptized April 19), was a chorister in the Chapel Royal under Bernard Gates, and Dr. Croft, and afterwards with Dr. Pepusch. He acted for some time as deputy for Pigott, organist of St. George's Chapel, Windsor, and in 1734 was appointed, on the resignation of Salisbury, organist of York Minster. On Jan. 13, 1756, he was appointed to succeed Dr. Greene as organist and composer to the Chapel Royal, and in the same year graduated as Mus. D. at Cambridge. In Oct. 1757 he was appointed Master of the Children of the Chapel Royal, *vice* Gates, his old master. In 1770 he gained a prize from the Catch Club for his glee, 'To all Lovers of Harmony.' He resigned the mastership of the Chapel boys July 1, 1780, died Feb. 10, 1783, and was buried in St. Margaret's, Westminster. Dr. Nares published 'Eight Sets of Harpsichord Lessons,' 1748; 'Five Harpsichord Lessons,' op. 2, 1758; 'Three Easy Harpsichord Lessons'; 'A Treatise on Singing'; 'Il Principio, or, A regular Introduction to playing on the Harpsichord or Organ' (1759, the first set of progressive lessons published on a systematic plan); 'The Royal Pastoral,' a dramatic ode, 1767; 'Collection of Catches, Canons, and Glees,' *c.* 1780; 'Six Organ Fugues'; 'Second Treatise on Singing, with a Set of English Duets'; and 'Twenty Anthems,' 1778. 'A Morning and Evening Service and Six Anthems' were published in 1788, with a portrait of him, ætat. sixty-five, engraved by Ward after Engleheart, prefixed. [A sketch of his life is also contained in the volume, by his son Robert.] His Service in F and three anthems are included in Arnold's 'Cathedral Music,' an anthem in Page's 'Harmonia Sacra,' and two anthems in Stevens's 'Sacred Music.' Two canons, two glees, two rounds, and a catch by him (the famous 'Wilt thou lend me thy mare?') are contained in Warren's collections, and one of his lessons, in three movements, from the set of 1758, was reprinted in the *Oxford Hist. of Mus.* vol. iv. *The Age of Bach and Handel.*

[The epithet 'poor,' first applied to Nares's music in the first edition of the Dictionary, has been copied into most of the books of reference; examination of his secular music shows how ill-founded is the impression, although his anthems are perhaps not very elevated in character.] W. H. H.

NATHAN, Isaac, born of Hebrew parents at Canterbury in 1791, being intended for the priesthood, was in 1805 sent to Cambridge to study Hebrew, but his natural bent being for music he was articled to Domenico Corri, and devoted his attention principally to singing and composition. He appeared at Covent Garden as Henry Bertram, in 'Guy Mannering.' After composing several songs, he produced in 1815-1822 'Hebrew Melodies,' to Lord Byron's poetry, with much success. [Byron became very intimate with Nathan, who set many of his poems to music. See *Dict. of Nat. Biog.*] In 1823 he supplied part of the music for the comedy 'Sweethearts and Wives'—one song in which, 'Why are you wandering here, I pray?' became very popular—and published *Musurgia Vocalis, An Essay on the History and Theory of Music and on the qualities, capabilities, and management of the Human Voice.* In 1824 he brought out 'The Alcaid,' comic opera, and in 1827 'The Illustrious Stranger,' operatic farce. In 1836 he published *The Life of Madame Malibran de Bériot.* In 1841 he emigrated to Sydney, where he produced 'Merry Freaks in Troublous Time,' 1851, and ran a periodical, *The Southern Euphrosyne and Australian Miscellany*, from 1846. He was accidentally killed by being run over by a tramway car, Jan. 15, 1864. He was much esteemed as a singing-master. W. H. H.; additions from *Dict. of Nat. Biog.*, *Brit. Mus. Biog.*, etc.

NATIONAL CONCERTS. A series of concerts given in Her Majesty's Theatre, in October, November, and December 1850, with Balfe and Charles d'Albert as conductors. The prospectuses contained a rarely-equalled list of performers, and promises of new works, most of them by English composers (probably the only origin of the name of the concerts), none of which, however, saw the light; while the performances consisted almost entirely of the ordinary ingredients of 'monster' concerts, with a very meagre number of features interesting enough to be recorded. During the season, however, the following works came to a hearing: Spohr's symphony, 'The Seasons'; Mendelssohn's 'Fingal's Cave' and 'Melusina' overtures, the latter so badly played that it had to be abandoned as impracticable; besides one or two symphonies, and a movement or two from a concerto by Beethoven. The following artists actually appeared: Hallé, Molique, Sainton, Piatti, Arabella Goddard (her first appearance), Stockhausen, and Sims Reeves. The concerts were in the hands of Cramer, Beale & Co., and proved an unequivocal failure, chiefly because of the enormous expectations that were excited but not fulfilled. An attempt was made in March 1852 to start another series with the same title, in Exeter Hall, but the scheme fell to the ground after a few concerts.

NATIONAL TRAINING SCHOOL FOR MUSIC, THE. This institution, which had been projected and discussed since 1854, and the idea of which had emanated from the Prince Consort, was not founded until 1873, when a

meeting was held at Clarence House, the Duke of Edinburgh in the chair, at which it was resolved that 'it is desirable to erect a building at a cost not exceeding £20,000 for the purposes of a Training School for Music at Kensington, in connection with the Society of Arts.' A site on the immediate west side of the Albert Hall was granted by the Commissioners of 1851, the construction of the building, on the design of Captain F. Cole, R.E., was undertaken by Mr. (afterwards Sir) Charles J. Freake, at his own cost; the first stone was laid on Dec. 18, 1873, and the School was opened at Easter 1876 with 82 free scholarships, of which 4 were founded by the Society of Arts, 2 by members of the Society, 5 by Mr. Freake, 10 by the Corporation of London, 14 by City Guilds, 33 by provincial towns, and the remainder by private donors. The scholarships were of the value of £40 a year each, and were founded for five years, by subscription renewable at the end of that term; they carried free instruction for the same period, and were obtainable 'by competitive examination alone.' The Duke of Edinburgh was chairman of the Council, Sullivan was appointed Principal, with a staff of Teachers; in 1881 he was succeeded by Stainer as Principal, and the School continued to flourish till Easter 1882, when it came to an end owing to the determination arrived at to establish the Royal College of Music on a wider and more permanent basis. The College, on its formation, took over the building, furniture, and fittings, organ and music, and a balance at the banker's of £1100. The instruction in the Training School was systematic and thorough, and in proof of its efficiency during the short period of its existence it is sufficient to name Eugene D'Albert, Frederick Cliffe, Annie Marriott, and Frederick King, as having received their education there. [See ROYAL COLLEGE OF MUSIC.] M.

NATURAL. A word formerly applied to the scale of C major, which was called 'the natural scale' because it has no accidentals. It thus became used for the sign (♮) which cancels a preceding sharp or flat, whether used as a chromatic accidental or occurring in the signature. In other words, when the use of a sharp or flat has indicated that the note a semitone above or below that in the diatonic series of C major is to be taken, the introduction of a Natural indicates that the unaltered note is to be resumed; and hence a naturalised note is always a white key on the pianoforte or organ, unless it be combined with a sharp or flat, as ♮♯ or ♮♭, to cancel a chromatic double-sharp or double-flat, and indicate the corresponding note of the diatonic series indicated by the existing signature.

Naturals do not occur in the signatures of keys, except when it is necessary to cancel all or part of a previous signature, at a change of key in the course of a piece of music; as at the change from C minor to C major in the Marcia Funebre of the Eroica Symphony, or the change from E♭ minor to E♭ major at the end of the Introduction of Spohr's Overture to 'Jessonda.' Where a complete change is made from a sharp key to a flat key, or *vice versâ*, the naturals are often indicated, but with very little reason, as the mere statement of the new signature must cancel the former one. C. H. H. P.

NAU, MARIA DOLORES BENEDICTA JOSEFINA, was born of Spanish parents at New York, March 18, 1818. Having entered the Conservatoire at Paris, July 23, 1832, she became a pupil of Mme. Cinti-Damoreau, and soon developed a clear and flexible voice. This, with a large share of intelligence, musical feeling, and application, enabled her to take the first prize at the *concours* of 1834.

On March 1, 1836, at the age of eighteen, Mlle. Nau made her first appearance at the Opéra, as the Page in the 'Huguenots,' and achieved a success, in spite of her inexperience. She remained six years at that establishment, but playing only secondary parts, which did not allow her real worth to appear; and at the end of that time her engagement was not renewed. Mlle. Nau determined, therefore, to travel in the provinces and abroad, where she soon was appreciated much more highly; in Brussels, particularly, her excellent vocalisation and phrasing produced a marked impression. In October and November 1844, she sang in London. Her foreign successes opened the eyes of the Opera-managers at Paris, where she was re-engaged at thrice her former salary. She reappeared there in December, receiving a warm welcome; and continued to sing on that stage till the end of 1848, with unabated éclat. Her farewell was on Oct. 11 of that year, in 'Lucia'; after which she went to London, and thence to the United States, where she had a triumphal progress. Returning to London, she sang at the Princess's Theatre for nearly eighteen months, with great success; and thence betook herself once more to the Opéra at Paris, where she remained during 1851, 1852, and 1853. Mlle. Nau re-visited her native country in 1854, and received extravagant adoration. She returned to Paris again in 1856, when she finally quitted the stage. J. M.

NAUDIN, EMILIO, born at Parma, Oct. 23, 1823, was taught singing by Giacomo Panizza of Milan, made his début at Cremona about 1845 in Pacini's 'Saffo,' and afterwards sang at the principal theatres of Italy, at Vienna and St. Petersburg. He made his first appearance in England, June 2, 1858, at Drury Lane, as the Duke in 'Rigoletto,' and remained for the season, playing Edgardo, Ernesto, and Arturo, and singing in concerts. After singing at Madrid, and Turin, he reappeared in England on May 30, 1862, at Mrs. Anderson's farewell concert at Her Majesty's, and on the 31st acted
